

cnMaestro MarketApps

MarketApps Quick Look

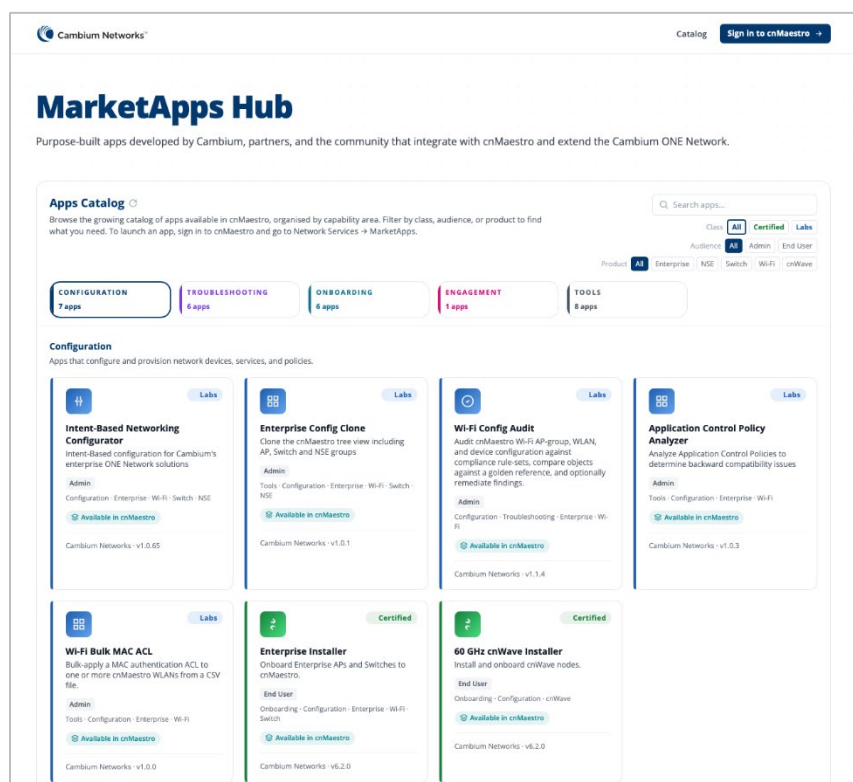

MarketApps is an application platform and marketplace that extends cnMaestro™ X with simple, purpose-built web apps created by Cambium Networks, our partners, and our customers.

- Allows admins, site managers, and end users to execute exactly the workflow needed
- Offers MarketApps Hub, a governed marketplace where apps are discovered, published, and launched
- Is included with a cnMaestro X subscription without a separate license

Key Highlights

- **Simple web apps for all types of users:** Guests, residents, site managers, installers, and IT admins
- **Ultra-customized workflows:** Personalized workflows vs general-purpose applications that may not solve all problems
- **Five app classes with clear accountability:** Every app is labeled by who builds it and how it is supported—from Cambium-certified to customer-private.
- **Built for the AI era:** AI makes apps easy to build; MarketApps offers hosting, security, and distribution to the right audience with the right support.
- **Seamless cnMaestro integration:** Apps launch from cnMaestro with single sign-on and are powered by cnMaestro public APIs.
- **Faster capabilities:** Purpose-built apps are created in as little as hours or days with capabilities aligned to specific verticals and workflows.

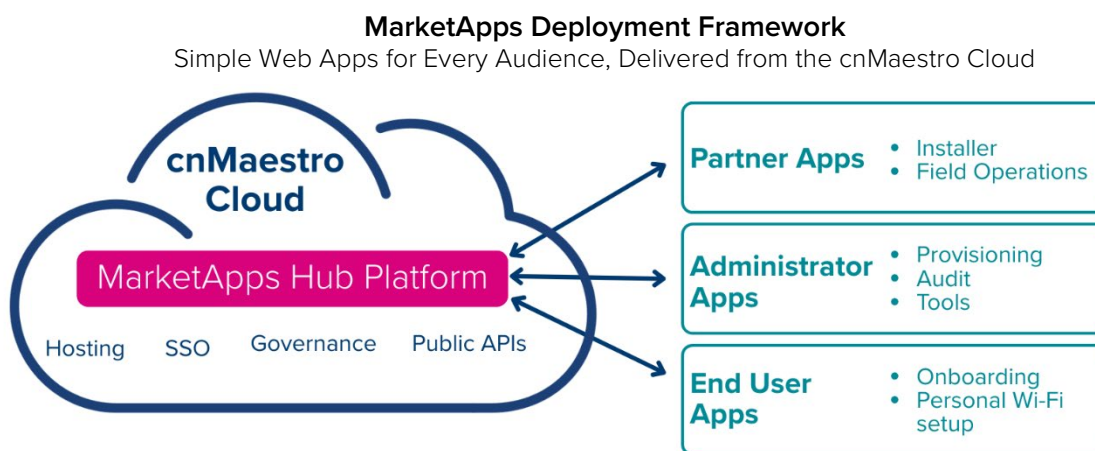

cnMaestro MarketApps

Simple Apps for Each Audience

MarketApps delivers single-page application (SPA) web apps from cnMaestro cloud to three audiences:

- **Partners and MSPs** speeding up deployments with installer and field-operations apps
- **Administrators** running provisioning, audit, and troubleshooting workflows
- **End Users**, such as guests or residents, onboarding to Wi-Fi or site managers provisioning service

Apps run on any browser-enabled device. End-user apps require no cnMaestro login, so the people using the network never need to touch the management console.

MarketApps Hub

Applications in the MarketApps Hub may be developed by Cambium, our partners, the developer community, or your own organization. Each app belongs to a class that indicates where it came from and how it is supported. Apps can graduate upward, for example, a community idea can become a Certified app or a native cnMaestro feature as adoption proves demand.

App Classes			
Class	Description	Support	Availability
Certified	Production-grade apps developed and certified by Cambium; platform-hosted and fully tested.	Covered under Cambium Terms of Service; standard Cambium support channels	Available now
Labs	Quick-to-market apps built by Cambium; behavior may evolve as we iterate; popular apps graduate to Certified.	Available as-is; Cambium reviews customer feedback	Available now
Partner*	Apps built and maintained by registered Cambium partners on their own release schedule.	Engage directly with the partner	Coming soon
Community*	Apps are open contributions from the developer community.	Managed by the community	Coming soon
Private*	Apps built by or for your organization; visible only inside your account (your apps, your data, your network).	Managed by your organization	Coming soon

*Partner, community, and private apps constitute third-party applications as defined under the Cambium Networks SaaS Terms of Service.

cnMaestro MarketApps

Available Apps

Certified	Labs*
Managed Wi-Fi: Property managers control Wi-Fi across entire properties: Community and personal SSIDs, unit assignment, and network health. Self-Service Personal Wi-Fi: Residents create their own secure, router-like Wi-Fi network in minutes via QR scan with no IT intervention. Enterprise Installer: Real-time AP and switch claiming, naming, GPS tagging, and photo documentation for on-site installation and zero-touch configuration. cnWave 60GHz Installer: Install and onboard cnWave™ Distribution and Client Nodes on site Senior Living: Managed Wi-Fi tailored for senior living, assisted living, and memory care communities. Outdoor Hospitality: Managed Wi-Fi tailored for RV parks, campgrounds, and marinas.	Intent-Based Networking Configurator: Intent-based config for Cambium's ONE Network solutions. Wi-Fi Config Audit: Audit cnMaestro Wi-Fi configuration against compliance rule sets, compare against a golden reference, and remediate findings. cnWave 60 GHz Health Checks: Tools to diagnose cnWave network links. Application Control Policy Analyzer: Analyze app control policies to detect backward compatibility issues. Wi-Fi Roaming Analyzer and Coverage Gaps: Analyze wireless client roaming behavior from tech support data, entirely in the browser. Wi-Fi Client Watcher: Real-time tracking of Wi-Fi client metrics using the watch remote CLI. Wi-Fi Channel Analyzer: Analyze Wi-Fi channel usage at a site level.

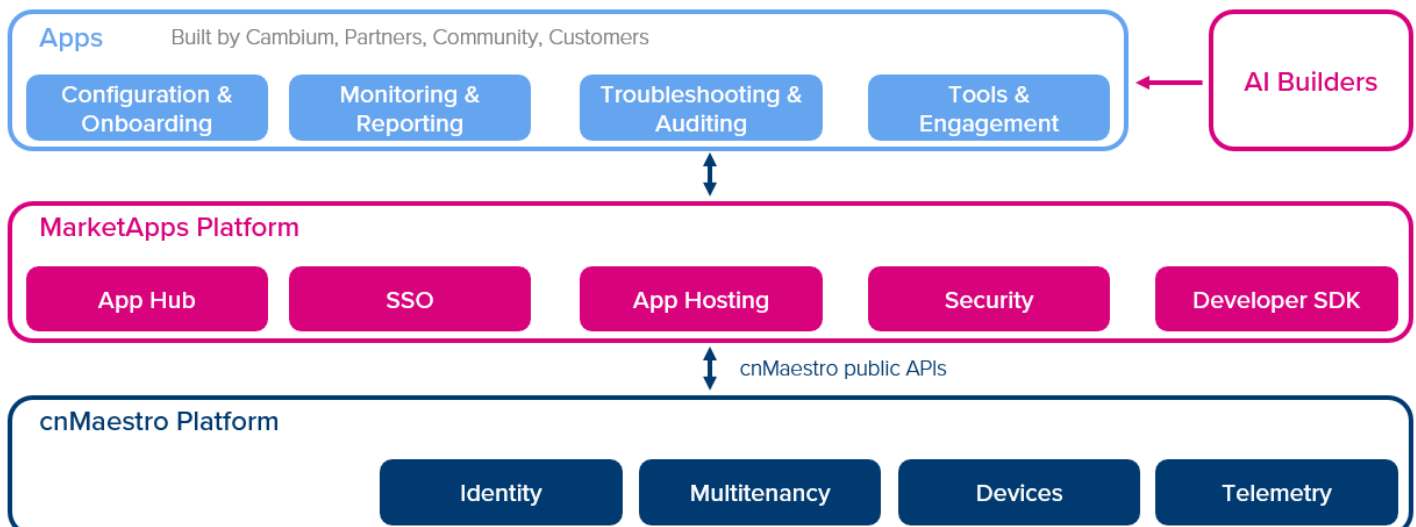

*The Labs app catalog expands over time; those listed here reflect a representative subset of those available.

Platform Architecture

MarketApps is a complete application platform layered on cnMaestro, providing an app catalog via the MarketApps Hub with single sign-on, app hosting, security, and developer SDK. Apps stay independent of the cnMaestro console (each is its own web application) while the platform ensures safety and **cnMaestro public APIs** (identity, multi-tenancy, devices, telemetry) power the foundation. Apps integrate at three levels:

1. Configurable apps with persistent settings
2. Simple one-click launch apps
3. Drill-down apps deeply integrated within the cnMaestro console (coming soon)

MarketApps Platform Architecture

cnMaestro MarketApps

Built for Builders in the AI Era

AI makes applications easy to build. The challenge can be hosting, securing, and distributing them to the right audience with the right support. MarketApps fills that gap. The MarketApps developer platform is designed for AI coding agents, providing a quick start boilerplate, an SDK, and local development against a live cnMaestro account with a single command. A single pull request publishes an app to the Hub. Developer resources, documentation, and submission workflows for partners and the developer community will open in upcoming cnMaestro releases.

Licensing

MarketApps is an advanced service included with cnMaestro X. No separate license is required. All devices in the account require a cnMaestro X subscription. Private- and partner-hosted apps are managed by their respective owners.

ABOUT CAMBIUM NETWORKS

Cambium Networks enables service providers, enterprises, industrial organizations, and governments to deliver exceptional digital experiences and device connectivity with compelling economics. Our ONE Network platform simplifies management of Cambium Networks' wired and wireless broadband and network edge technologies. Our customers can focus more resources on managing their business rather than the network. We make connectivity that just works.
