

USER GUIDE

**cnMaestro Cloud**

Release 5.1.1

## Copyrights

This document, Cambium products, and 3<sup>rd</sup> Party software products described in this document may include or describe copyrighted Cambium and other 3<sup>rd</sup> Party supplied computer programs stored in semiconductor memories or other media. Laws in the United States and other countries preserve for Cambium, its licensors, and other 3<sup>rd</sup> Party supplied software certain exclusive rights for copyrighted material, including the exclusive right to copy, reproduce in any form, distribute and make derivative works of the copyrighted material. Accordingly, any copyrighted material of Cambium, its licensors, or the 3<sup>rd</sup> Party software supplied material contained in the Cambium products described in this document may not be copied, reproduced, reverse engineered, distributed, merged or modified in any manner without the express written permission of Cambium. Furthermore, the purchase of Cambium products shall not be deemed to grant either directly or by implication, estoppel, or otherwise, any license under the copyrights, patents or patent applications of Cambium or other 3<sup>rd</sup> Party supplied software, except for the normal non-exclusive, royalty free license to use that arises by operation of law in the sale of a product.

## Restrictions

Software and documentation are copyrighted materials. Making unauthorized copies is prohibited by law. No part of the software or documentation may be reproduced, transmitted, transcribed, stored in a retrieval system, or translated into any language or computer language, in any form or by any means, without prior written permission of Cambium.

## License Agreements

The software described in this document is the property of Cambium and its licensors. It is furnished by express license agreement only and may be used only in accordance with the terms of such an agreement.

## Accuracy

While reasonable efforts have been made to assure the accuracy of this document, Cambium Networks assumes no liability resulting from any inaccuracies or omissions in this document, or from use of the information obtained herein. Cambium reserves the right to make changes to any products described herein to improve reliability, function, or design, and reserves the right to revise this document and to make changes from time to time in content hereof with no obligation to notify any person of revisions or changes. Cambium does not assume any liability arising out of the application or use of any product, software, or circuit described herein; neither does it convey license under its patent rights or the rights of others. It is possible that this publication may contain references to, or information about Cambium products (machines and programs), programming, or services that are not announced in your country. Such references or information must not be construed to mean that Cambium intends to announce such Cambium products, programming, or services in your country.

## High Risk Materials

Cambium and its supplier(s) specifically disclaim any express or implied warranty of fitness for any high-risk activities or uses of its products including, but not limited to, the operation of nuclear facilities, aircraft navigation or aircraft communication systems, air traffic control, life support, or weapons systems (“High Risk Use”).

This product is not restricted in the EU. Any High Risk is unauthorized, is made at your own risk and you shall be responsible for any and all losses, damage or claims arising out of any High-Risk Use.

# Introduction

cnMaestro is Cambium Networks next-generation network management platform. It is available in two versions: **cnMaestro Essentials** and **cnMaestro X**.

- cnMaestro Essentials is free and provides basic network management support for Cambium Networks devices.
- cnMaestro X is a paid service that includes advanced features such as long-term statistics.
- Both versions are available in cloud and on-premises deployments.

This section covers the following topics:

- [Supported Devices and Features](#)
- [Quick Start](#)
- [Creating a Cloud Account](#)
- [cnMaestro X](#)
- [UI Navigation](#)
- [Device Onboarding](#)

## Supported Devices and Features

### Devices and minimum software versions

The following table lists the device model and the minimum software version supported by cnMaestro (not the recommended software version).

**Table 1** *Supported devices and minimum software versions*

Device	Minimum Software Version
60 GHz cnWave V1000	1.1
60 GHz cnWave V2000	1.2.2
60 GHz cnWave V3000	1.1
60 GHz cnWave V5000	1.1
cnMatrix	2.1-r5
cnPilot e400/e500	3.11.4.1-r3
cnPilot e425H/e505	4.1-r3
cnPilot e430W/e410/e600	3.11.4.1-r3
cnPilot e501S	3.11.4.1-r3
cnPilot e502S	3.11.4.1-r3
cnPilot e510	3.11.4.1-r3
cnPilot e700	3.11.4.1-r3
cnPilot r190V/r190W	4.6-R16
cnPilot r195P	4.7-R6
cnPilot r195W	4.6-R16

**Table 1** Supported devices and minimum software versions

Device	Minimum Software Version
cnPilot r200/r200P/r201/r201P	4.6-R16
cnRanger Sierra 800	1.1-r3
cnRanger Tyndall 101	1.1-r3
cnRanger Tyndall 201	2.0-r1
cnReach N500	5.2.19h
cnVision Client	4.6
cnVision Hub	4.6
cnWave 5G Fixed B1000	2.0
cnWave 5G Fixed C100	2.0
ePMP 1000	4.5.0
ePMP 2000	4.5.0
ePMP 3000	4.5.0
ePMP 3000L	4.5.0
ePMP 4600	5.4.0
ePMP 4600L	5.4.0
ePMP Elevate	3.2
ePMP Elevate SXGLIT5/LHG5	4.5.0
ePMP Elevate XM/XW	4.5.0
ePMP Force 130 2.4 GHz	4.5.0
ePMP Force 130 5 GHz	4.5.0
ePMP Force 180/200	4.5.0
ePMP Force 190	4.5.0
ePMP Force 200L	4.7.0
ePMP Force 300	4.5.0
ePMP Force 300-13	4.5.0
ePMP Force 300-13L	4.5.0
ePMP Force 300-13LC	4.5.0
ePMP Force 300-19	4.5.0
ePMP Force 300-19R	4.5.0
ePMP Force 300-22L	4.6
ePMP Force 300-25L	4.6
ePMP Force 300 CSM	4.3.2
ePMP Force 400	5.1.0.18
ePMP Force 425	5.1.0.18
ePMP Force 4500	5.4.0
ePMP Force 4525	5.4.0
ePMP Force 4600C	5.4.0
ePMP Force 4625	5.4.0

**Table 1** Supported devices and minimum software versions

Device	Minimum Software Version
ePMP MP 3000	4.5.0
ePMP PTP 550	4.5.0
ePMP PTP 550E	4.5.0
NSE 3000	1.0
PMP 450i	22.1.2
PMP 450 MicroPoP Omni	22.1.2
PMP 450 MicroPoP Sector	22.1.2
PMP 450b Retro	22.1.2
PMP 450v	23.0
PON (OLT and ONU)	1.1.0
PTP 650	01-50
PTP 670 (650 Emulation)	01-50, 03-12
PTP 670, PTP 700	03-11
PTP 820, PTP 850	11.9
XE3-4	6.4
XE3-4TN	6.5.1
XE5-8	6.4.1
XV2-2	6.1
XV2-2T0	6.4
XV2-2T1	6.4.1
XV2-22H	6.5
XV2-21X	6.5
XV2-23T	6.5
XV3-8	6.0
X7-35X	7.0
RV22 Home Mesh Router	1.0.0

**Table 2** Supported Xirrus device models

Device Model	Minimum Software Version
<b>Wave 2 APs:</b> <ul style="list-style-type: none"> <li>• XA4-240</li> <li>• XD2-230</li> <li>• XD2-240</li> <li>• XD4-240</li> <li>• XH2-240</li> </ul>	8.7.0
<b>Wave 1 APs:</b> <ul style="list-style-type: none"> <li>• XD4-130</li> <li>• XH2-120</li> <li>• XR-630</li> </ul>	8.7.0

**Table 2** Supported Xirrus device models

Device Model	Minimum Software Version
<ul style="list-style-type: none"> <li>XR-620</li> </ul>	
<b>Wave 1/2 Modular 4-radio:</b> <ul style="list-style-type: none"> <li>XR-2436/Wave 2</li> <li>XR-2426</li> <li>XR-4436</li> <li>XR-4426</li> <li>XR-2226</li> <li>XR-2236</li> <li>XR-2247</li> <li>XR-2447</li> <li>XR-4447</li> </ul>	8.7.0
<b>Wave 1 Modular 8-radio:</b> <ul style="list-style-type: none"> <li>XR-4836/Wave 2</li> <li>XR-4826</li> </ul>	8.7.0

## Supported browsers

The following table lists browsers supported by cnMaestro on different operating systems:

**Table 3** Supported browsers

Operating System	Browser	Version
Linux	Chrome	49 and above
	Firefox	45 and above
macOS	Safari	9 and above
MS Windows	Chrome	49 and above
	Firefox	45 and above
	Microsoft Edge	44.17763.1.0 and above

## Network connectivity

Cambium devices use <https://cloud.cambiumnetworks.com> over port 443 to access cnMaestro in the cloud. The devices initiate the connection, and they can be located in a private subnet behind a NAT firewall.

## cnMaestro features

The following table lists the features shared between the on-premises and cloud deployments.

**Table 4** Features supported by cnMaestro

Feature	Description	Cloud	On-Premises
Account Recovery	Ability to resolve password and account recovery issues locally.		✓
Advanced Troubleshooting	Display tower-to-edge status in a single graphic, which is used to:	✓	✓

**Table 4** Features supported by cnMaestro

Feature	Description	Cloud	On-Premises
	<ul style="list-style-type: none"> <li>View Wi-Fi client details and health.</li> <li>Troubleshoot client connectivity directly on the AP.</li> </ul>		
Access Control Policies	Configure policies that define who can connect to the network, and when they are allowed to connect and access a specific device.	✓	✓
Automated Frequency Coordination (AFC) X	Manage and allocate radio frequencies efficiently for a specific region or country.	✓	
Analytics X <sup>A</sup>	View the health of Wi-Fi client connections, including root cause analysis of failures and possible remediations.	✓	
AP Group Configuration	Support configuration of Enterprise Wi-Fi and cnPilot Home devices.	✓	✓
AP Group Dashboard	Display aggregate Wi-Fi AP statistics for the configured AP Group.	✓	✓
API Client X	Create API clients and access tokens to programmatically manage deployments using customer's own client applications.	✓	✓
Applications X	View details of applications accessed by users in a particular site.	✓	✓
Auto-Provisioning X	New devices, such as cnPilot Home (R-Series), cnVision, Enterprise Wi-Fi, Enterprise Wi-Fi (Xirrus-Series), ePMP, and PMP, can automatically be approved and onboarded using the subnet.	✓	✓
Assists X	Assists scans the configurations and generates assists scores.	✓	✓
Association ACL	Configure a MAC association list that is used to allow or deny client associations with the APs.	✓	✓
Audit Logs X	Record administrator activities.	✓	✓
60 GHz cnWave Auto Manage Routes	Support automated IPv6 routes for Distribution Node (DN) and Client Node (CN) based on topology and status of Point of Presence (PoP) Node.	✓	✓
Automatic Device Software Updates	Automatically update device software during onboarding or reconnection.	✓	✓
Backup and Restore	Backup or restore configuration and monitoring data from cnMaestro.		✓
Bulk Acknowledge Alarms	Acknowledge multiple alarms and clear them in a single action.	✓	✓
Bulk Image Upgrade	Schedule software image upgrades across sectors and device groups.	✓	✓
Certificate Management	SSL certificate management is available for the UI and Guest Access Portal.		✓
Citizen Broadband Radio Service Subscription (CBRS)	Support CBRS-compliant devices in the 3.6 GHz band (from 3550 MHz to 3700 MHz).	✓	✓
Client -Application Visibility X	Allows methods to control or block applications, or terminate based on consumption of applications.	✓	✓

**Table 4** Features supported by cnMaestro

Feature	Description	Cloud	On-Premises
Client - Renaming the host-name	Rename wireless and wired client host-names to more appropriate names for easy reference.	✓	✓
Cloud Connectivity	Automatically download device software from the cloud.	✓	✓
Cloud Synchronization	Allows connection to the Cloud Anchor account and also push announcements from Cloud Anchor account to On-Premises instances.		✓
cnArcher Installation Summary <b>X</b>	Displays the installation summary of PMP & ePMP SMS.	✓	✓
Configuration Backup	Backup configuration from fixed wireless devices (cnVision, PMP and ePMP) and cnReach devices that are currently online.		✓
Custom Applications <b>X</b>	Configure applications with a specific IP address or a domain name, and apply filter rules.	✓	✓
Deployment—cnMaestro	The Cloud version is fully hosted and maintained by Cambium Networks at <a href="https://cloud.cambiumnetworks.com">https://cloud.cambiumnetworks.com</a> .  The cnMaestro On-Premises version is released as an OVA (Open Virtualization Archive) file that needs to be installed on either VMware or VirtualBox.		✓
Device Auto Refresh <b>X</b>	Device Auto Refresh allows to refresh data automatically in the E2E Network.		✓
Device Connectivity	In the Cloud version, all devices can be accessed through <a href="https://cloud.cambiumnetworks.com">https://cloud.cambiumnetworks.com</a> .  In the cnMaestro On-Premises version, all devices contact the local cnMaestro server. The devices must be configured to access the server before they can be managed. Alternatively, DHCP options can be configured to provide the cnMaestro URL when the device boots up.	✓	✓
Device Image Management	In the Cloud, device images are automatically available.  In the cnMaestro On-Premises device, new images need to be downloaded from Support Center and added to the cnMaestro server.  Device image can be downloaded from the anchor.	✓	✓
Device Inventory	Aggregate inventory data for a group of devices at the System, Network, Tower, Sector, or Site level in PDF or CSV format.	✓	✓
EasyPass	Create captive portal to allow clients to access the network through the following portal types: <ul style="list-style-type: none"> <li>• One Click</li> <li>• Paid <b>X</b></li> <li>• Self Registration <b>X</b></li> <li>• Sponsored Guest <b>X</b></li> <li>• Voucher</li> </ul>	✓	✓

**Table 4** Features supported by cnMaestro

Feature	Description	Cloud	On-Premises
	<ul style="list-style-type: none"> <li>WiFi4EU—Available only in the European Union</li> </ul>		
EasyPass—Microsoft Azure, Google Login	Create captive portal to allow clients to access the network through the following portals: <ul style="list-style-type: none"> <li>Microsoft Azure <b>X</b> and Google Login <b>X</b> portals.</li> </ul>	✓	
Edge Controller	Configure Edge Controllers to discover PTP 820/850 devices in a network using SNMP protocol.	✓	✓
Email Notifications	Send email when the alarm status changes.	✓	✓
Enterprise View	Display a simplified UI tailored for Enterprise Wi-Fi.	✓	✓
Hierarchical Dashboards	Visualize devices from tower to edge through customized dashboards for each device type.	✓	✓
IPv6 Support	Provide IPv6 support for cnPilot Enterprise devices.	✓	✓
High Availability (HA)	Support the High Availability of Layer 2 through an Active-Standby (1+1) architecture.	✓	✓
Home Mesh Routers	Onboard and manage Home Mesh Routers (RV22).	✓	
Local and Authentication Server Administrators	Multiple types of administration access for local administrators (with a username and password maintained by cnMaestro) or authentication services (including TACACS+, RADIUS, LDAP, Active Directory, OpenID Connect, and SAML).		✓
Long Term Historical Data <b>X</b>	Display long-term performance graphs for the following: <ul style="list-style-type: none"> <li>Fixed Wireless Broadband up to 2 years.</li> <li>Wi-Fi APs, IIoT, and cnMatrix up to 1 year.</li> </ul>	✓	✓
LTE	Manage cnRanger LTE devices.	✓	✓
Managed Services <b>X</b>	Allow cnMaestro account owners to split their installation into separate Managed Accounts. Each Managed Account contains independent administration and configuration.	✓	✓
Maps and Map Modes—Street View	Leverage maps to position devices and visualize their health and connectivity. Change the map mode to display various wireless key performance indicators.	✓	✓
Maps and Map Modes—Satellite and Terrain <b>X</b>		✓	✓
Mesh Peers <b>X</b>	Display details of available Mesh clients.	✓	✓
Multiple Administrators	Invite colleagues by email to manage the account with an assigned role.	✓	✓
Multiple UI Views	Support the following tailored views in the cnMaestro UI: <p><b>Access and Backhaul View:</b> Used for managing Fixed Wireless and Wi-Fi deployments, including the following:</p> <ul style="list-style-type: none"> <li>60 GHz cnWave</li> <li>cnMatrix</li> <li>cnPilot Home (cnPilot R-Series)</li> </ul>	✓	✓

**Table 4** Features supported by cnMaestro

Feature	Description	Cloud	On-Premises
	<ul style="list-style-type: none"> <li>• cnRanger</li> <li>• cnVision</li> <li>• cnWave 5G Fixed</li> <li>• Enterprise Wi-Fi (E-Series and XE/XV/X7-Series) and cnPilot Enterprise APs</li> <li>• Enterprise Wi-Fi (Xirrus-Series)</li> <li>• ePMP</li> <li>• NSE</li> <li>• PMP</li> <li>• PON</li> <li>• PTP 650/670/700</li> <li>• PTP 820/850</li> <li>• RV22 Home Mesh</li> <li>• PON</li> </ul> <p><b>Enterprise View:</b> Used for managing Wi-Fi deployments, including the following:</p> <ul style="list-style-type: none"> <li>• cnMatrix</li> <li>• Enterprise Wi-Fi (E-Series and XE/XV/X7-Series) and cnPilot Enterprise APs</li> <li>• Enterprise Wi-Fi (Xirrus-Series)</li> <li>• NSE</li> </ul> <p><b>Industrial Internet View:</b> Used for managing Fixed Wireless, Wi-Fi, and IIoT deployments, including the following:</p> <ul style="list-style-type: none"> <li>• 60 GHz cnWave</li> <li>• cnMatrix</li> <li>• cnPilot Home (cnPilot R-Series)</li> <li>• cnRanger</li> <li>• cnReach</li> <li>• cnVision</li> <li>• cnWave 5G Fixed</li> <li>• Enterprise Wi-Fi (E-Series and XE/XV/X7-Series) and cnPilot Enterprise APs</li> <li>• Enterprise Wi-Fi (Xirrus-Series)</li> <li>• ePMP</li> </ul>		

**Table 4** Features supported by cnMaestro

Feature	Description	Cloud	On-Premises
	<ul style="list-style-type: none"> <li>• NSE</li> <li>• PMP</li> <li>• PON</li> <li>• PTP 650/670/700</li> <li>• PTP 820/850</li> <li>• RV22 Home Mesh</li> </ul>		
Multi-Floor Plans	Multiple floor plans for Sites.	✓	✓
Notifications	Communicate immediate status with stateful alarms and events. Notifications help troubleshoot customer issues.	✓	✓
NSE	Onboard and Manage Network Service Edge (NSE) devices.	✓	
Onboarding	<p>In the Cloud version, devices onboard using either the device Manufacturer Serial Number (MSN) or through the Cambium ID or Onboarding Key (entered on the device).</p> <p>In the cnMaestro On-Premises version, all the cloud modes of onboarding or devices contacting cnMaestro are added to the Onboarding Queue, where they are approved and managed.</p>	✓	✓
On-Premises Console	Configure networking parameters and update the system password using the CLI available through the virtual machine console.		✓
Organization <b>X</b>	Allow users to manage multiple accounts through a single CBRS payment subscription.	✓	✓
PON (OLT/ONU)	Onboard and manage Passive Optical Network (PON) devices, including Optical Line Terminal (OLT) and Optical Network Unit (ONU).	✓	✓
RADIUS Proxy <b>X</b>	Proxy RADIUS packets are sent through cnMaestro (On-Premises) instead of directly to the RADIUS server from the AP.		✓
Reports <b>X</b> (Data, Graphical, and Graphical Report Template)	<ul style="list-style-type: none"> <li>• Export device, performance, alarm, and event statistics data in CSV format.</li> <li>• Generate various data in graphical format and export the details in a PDF file.</li> </ul>	✓	✓
RESTful API <b>X</b>	Support HTTPS RESTful API for inventory, monitoring, performance, notification, and basic provisioning.	✓	✓
Role-Based Access	<p>Assign the following roles to users:</p> <ul style="list-style-type: none"> <li>• Super Administrator</li> <li>• Administrator</li> <li>• Operator</li> <li>• Monitor</li> <li>• CPI</li> </ul>	✓	✓
Scheduled	Specify a time to configure devices.	✓	✓

**Table 4** Features supported by cnMaestro

Feature	Description	Cloud	On-Premises
Configuration Update			
Scheduled Software Update	Specify a time to install device software.		✓
cnMaestro Software Upgrade	<p>Enable three types of software upgrade:</p> <ul style="list-style-type: none"> <li>• <b>Virtual machine upgrade</b> requires the customer to replace the entire virtual machine with a new instance. The configuration and the data are exported from the old instance and imported to the new.</li> <li>• <b>Package upgrade</b> only updates the cnMaestro software. It does not require a virtual machine reinstallation.</li> <li>• <b>OVA upgrade</b> only overwrites the OS partition.</li> </ul>		✓
Server Management	<p>Monitor virtual machine parameters such as disk, memory, and CPU utilization through the UI.</p> <p>This feature is available only on cnMaestro On-Premises.</p>		✓
Site Dashboard	Aggregate Wireless LAN AP statistics by location.	✓	✓
SNMP <b>X</b>	Basic SNMP for inventory and alarms.		✓
Spectrum Analyzer <b>X</b>	Analyze and monitor the wireless spectrum for optimizing network performance on PMP devices.	✓	✓
Statistics and Trending	Present historical radio and network statistics.	✓	✓
Syslog	Forward audit and event logs to a configured external Syslog server.	✓	✓
Switch Groups	Support shared configuration across cnMatrix switches.	✓	✓
System Events	System events for cnMaestro On-Premises server instance.		✓
System Log	<p>Forward events to a remote system log server.</p> <p>This feature is available only on cnMaestro Cloud.</p>		✓
Template-Based Configuration	Schedule configuration of single devices or a group of devices across your network by using templates for cnPilot Home (R-Series), cnMatrix, cnReach, cnVision, ePMP, PMP, and PTP 820/850 devices.	✓	✓
Topology Scan <b>X</b>	Toposcan Discovery tool allows a user to select a DN and scan for nodes on the same channel sector.		✓
User Session Management <b>X</b>	Track current cnMaestro users and support forced logoff.	✓	✓
Webhooks <b>X</b>	Send alarm notifications to the external servers.		✓
Wi-Fi Speed Test	Test the speed between the Wi-Fi APs and cnMaestro.		✓
WLANs Dashboard <b>X</b>	View details of all WLANs that are applied on devices at a given site. Also view the details of APs connected to these WLANs.	✓	✓
Zero Touch Onboarding	Allow cnVision Client, PMP SMs, and ePMP SMs to automatically appear in the onboarding queue if the parent AP is already onboarded.	✓	✓

# Quick Start

This section guides users through the initial process of creating an account; logging into cnMaestro; and claiming and onboarding devices.

You must perform the following procedures to create an account and onboard devices.

- **For account management:**
  1. [Create a Cambium Support Center login](#) (if you do not have one already).
  2. [Create a cnMaestro account.](#)
  3. [Login to cnMaestro.](#)
- **For claiming devices:**
  1. [Claim devices using a Manufacturer Serial Number \(MSN\).](#)
  2. [Claim devices using a Cambium ID.](#)

## Create and manage accounts

To access cnMaestro, you must create a Cambium Support Center account, which sets your username and password.

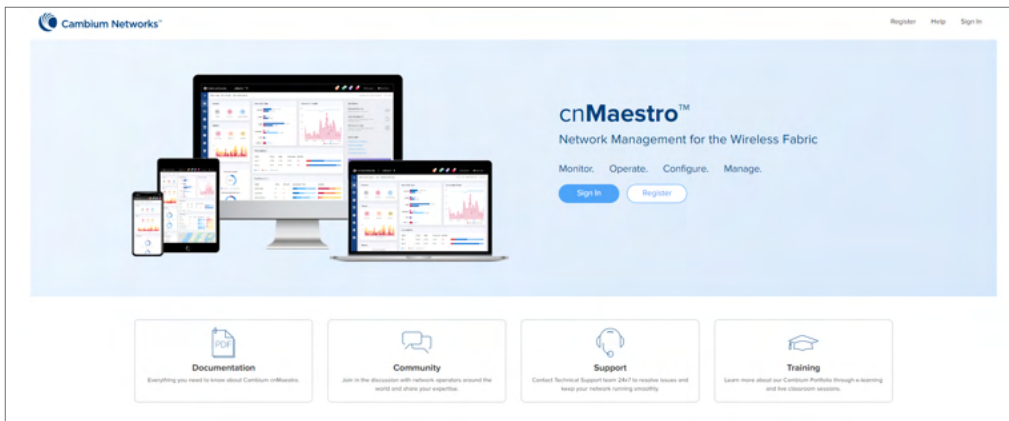

### Create a Cambium Support Center login

cnMaestro uses an existing Cambium Support Center account. If you do not have an account, you must create one.

To create a Cambium Support Center account, perform the following steps:

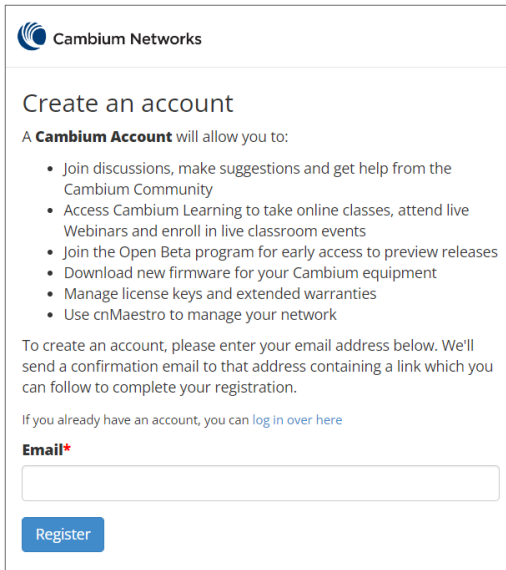

1. Open a web browser and enter <https://cloud.cambiumnetworks.com> into the address bar.  
The cnMaestro Main login page appears, as shown in [Figure 1](#).
2. Click **Register**.

**Figure 1** The main login page

A registration form appears, as shown in [Figure 2](#).

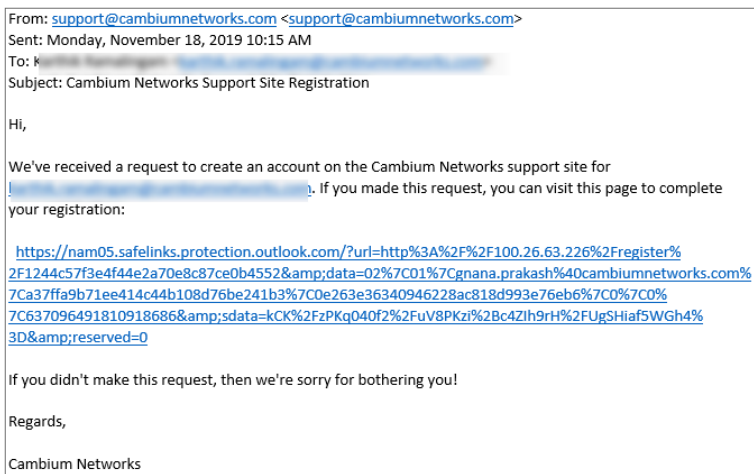

**Figure 2** Initial registration form

The screenshot shows the Cambium Networks registration page. At the top left is the Cambium Networks logo. The main heading is "Create an account". Below it, a sub-heading states "A Cambium Account will allow you to:" followed by a bulleted list of benefits: joining discussions, accessing Cambium Learning, joining the Open Beta program, downloading firmware, managing license keys, and using cnMaestro. Below the list, a paragraph explains that a confirmation email will be sent to the email address provided. A link "log in over here" is provided for existing users. There is a text input field labeled "Email\*" and a blue "Register" button below it.

3. Enter your email address and click the **Register** button.  
An email from Cambium Support Center is sent with a link for validation.
4. Check email and click the validation link, as shown in [Figure 3](#).

**Figure 3** Email from Cambium Support to validate account

**Note**

If you do not receive the email, check your spam folder.

The **Finish registering** form appears, as shown in [Figure 4](#).

Figure 4 Finish registering form

Cambium Networks

## Finish registering

Thanks for being patient. We just need a few more details and then you're done.

**Your Full Name\***

**Company Name\***

**Country\***

Please select a country ▼

**Street Address\***

**Town / City\***

**State / Province\***

**Zip / Postal Code\***

**Password\***

Passwords must be at least 8 characters long, and they cannot have appeared in any data breaches. See [this Knowledge Base article](#) for more information about our password requirements.

Register

5. In the registration form, you must enter details such as your name, company name, country name, and password.
6. Click **Register** to complete the process.

## Create a cnMaestro account

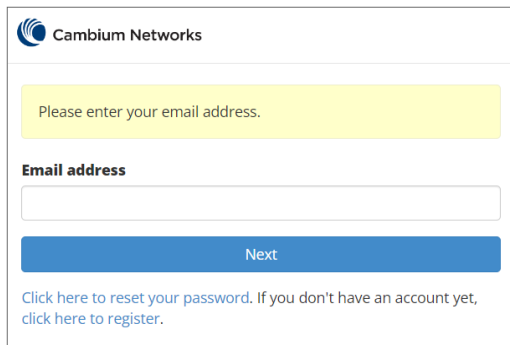

Use the Cambium Support Center account to log on to cnMaestro and create a cnMaestro account.

1. Open a web browser and enter <https://cloud.cambiumnetworks.com> into the address bar.  
The main login page appears.
2. Log on to cnMaestro using your Cambium Support Center account.  
**Create a New Cloud Account** window appears.
3. Click **Add New Account**.  
The **Create a New Cloud Account** page appears, as shown in [Figure 5](#).

**Figure 7** *Email address page*

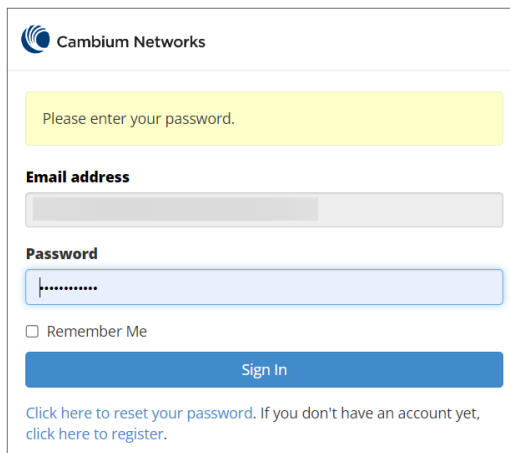

The screenshot shows the Cambium Networks logo at the top left. Below it is a yellow instruction box that says "Please enter your email address." Underneath is a label "Email address" followed by a text input field. A blue "Next" button is positioned below the input field. At the bottom, there is a link: "Click here to reset your password. If you don't have an account yet, click here to register."

3. Enter your **Email address**.
4. Click **Next**.

**Please enter your password** page appears as shown in [Figure 8](#).

**Figure 8** *Password page*

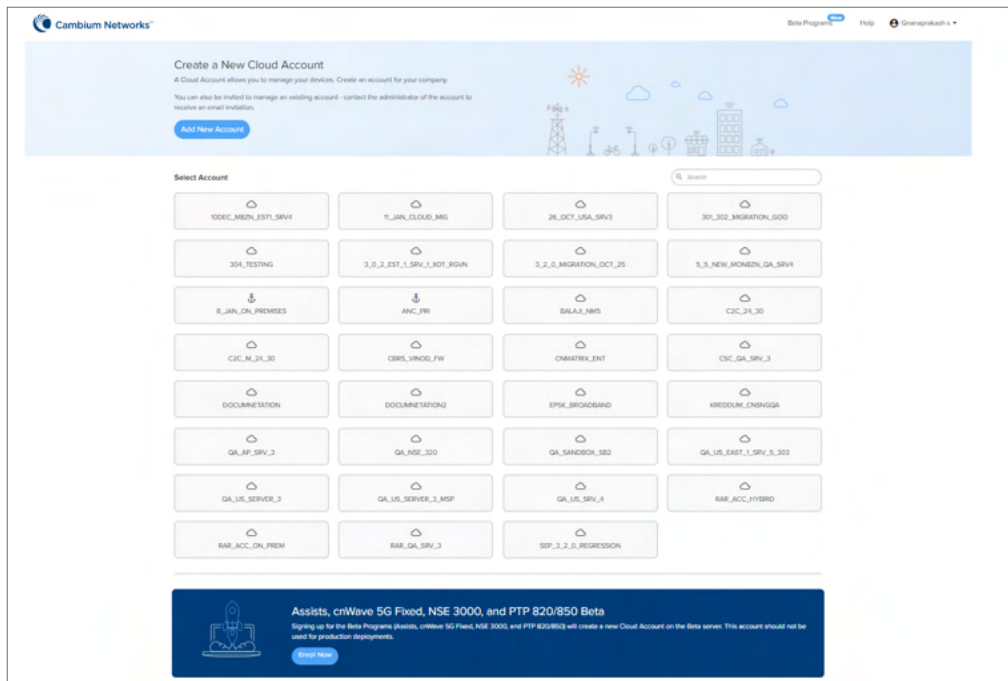

The screenshot shows the Cambium Networks logo at the top left. Below it is a yellow instruction box that says "Please enter your password." Underneath is a label "Email address" followed by a greyed-out text input field. Below that is a label "Password" followed by a blue text input field with a password mask. A "Remember Me" checkbox is located below the password field. A blue "Sign In" button is positioned below the "Remember Me" checkbox. At the bottom, there is a link: "Click here to reset your password. If you don't have an account yet, click here to register."

5. Click **Sign in**.

**Select Account** page appears as shown in [Figure 9](#).

Figure 9 Select account page

In **Select Account** page you can use search option to search the account.

6. Click the selected account.

The cnMaestro **Home** page appears, as shown in [Figure 10](#).

Figure 10 cnMaestro Home page

## Claim and onboard devices

To manage devices in cnMaestro, it is necessary to claim and onboard them.

Claiming specifies who owns a device. After a device is claimed, it is listed in the Onboarding Queue, where it can be pre-provisioned or approved. Once devices are approved, they are managed by cnMaestro.

### Claim devices by serial number

You can claim a device by using the Manufacturer Serial Number (MSN). The system prompts the user to validate the devices before applying them. After being claimed, devices are placed into the Onboarding Queue, where they can be pre-provisioned to update software or configuration before onboarding.

To claim and onboard a device, perform the following steps:

1. From the Home page of cnMaestro, navigate to **Onboard > Device** tab.

The Onboard page appears with details of the devices and their serial numbers, as shown in [Figure 11](#).

Figure 11 Onboard page

Type	Serial Number	Name	MAC	Tier	IP Address	Source IP	Managed Account	Onboarding Mode	Status	Onboarding Status	Subscription Status	Duration
PMP 450 SM		PMP-677823		N/A	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	Will attempt after appr...	1d 1h 52m
PMP 450 SM		PMP-43BE50		N/A	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	Will attempt after appr...	2d 2h 0m
crMatrix		crMatrix-F5AAE0		Tier 20	N/A	N/A	Application issue tet	Using Serial Number	Offline	Waiting for Device	Completed	0d 22h 37m
ePMP		ePMP Force 300...		Free Tier	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	Completed	5d 22h 10m
ePMP		ePMP Force 300...		Free Tier	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	Completed	5d 22h 10m
PMP 450 SM		PMP-894356		Free Tier	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	Completed	5d 22h 10m
PMP 450 AP		PMP-678954		Free Tier	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	Completed	5d 22h 10m
PMP 450i SM		PMP-4546A7		Free Tier	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	Completed	5d 22h 10m
PMP 450b High ...		PMP 450i SM BE...		Free Tier	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	Completed	5d 22h 10m
PMP 450b High ...		PMP 450i SM BE...		Free Tier	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	Completed	5d 22h 10m

2. Click **Claim Devices** located at the right side of the Onboard page (as shown in [Figure 11](#)).

The **Claim Devices with Serial Number** page appears, as shown in [Figure 12](#).

3. Enter the Serial Number(s) of the device(s) in the text box, as shown in [Figure 12](#).

If MSP is enabled, select the **Managed Account** from the drop down and Enter the Serial Number(s) of the device(s) in the text box.

**Note**

You can also place a cursor in the text box and use a barcode scanner to quickly claim the devices.

Figure 12 Claim Devices with Serial Number page

Claim Devices with Serial Number

Enter the Serial Numbers (MSNs) of the devices you want to add to your account (comma-separated or one per line). Once a device is claimed, it is placed in the Onboarding Queue when it comes online.

**Note:** All devices with 12 digit strong Serial Numbers can be claimed here. Other devices can be claimed using [Cambium ID](#)

Managed Account:  
Base Infrastructure

Enter / Place a cursor in the box and use a barcode scanner to quickly claim devices.

Clear Claim Devices

4. Click **Claim Devices**.

5. To onboard the device when it contacts cnMaestro, click the **Approve Device** (🗑️) icon or **Approve All** at the right side of the Onboard page, as shown in [Figure 13](#).

**Figure 13 Onboarding Queue**

Type	Serial Number	Name	MAC	Tier	IP Address	Source IP	Managed Account	Onboarding M...	Status	Onboarding Status	Duration
cnPilot e600		Migration_10_E...		Tier 3	10.110.209.190	115.110.225.242	Base Infrastructure	Using Serial Number	Online	Waiting for Approval	0d 10h 20m
cnMatrix TX2012R-P		Migration-cnMat...		Tier 20	10.110.209.111	115.110.225.242	Base Infrastructure	Using Serial Number	Online	Waiting for Approval	1d 19h 42m
PMP 450 SM		PMP -347867		Free Tier	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	0d 0h 50m
PMP 450i AP		PMP -449086		Tier 2	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	0d 0h 50m
PMP 450 SM		PMP -43BE49		Free Tier	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	0d 0h 59m

**Note**

If you do not click the **Approve Device** button, the device remains in the Onboarding Queue.

## Claim devices by Cambium ID

The Cambium ID, set during the Cloud account creation can also be used to claim devices. You can see the Cambium ID on the user drop-down, as shown in [Figure 14](#).

**Figure 14 Cambium ID**

A Cambium ID with an Onboarding Key is:

- Required to claim legacy devices that do not have a 12-character serial number (these devices are usually 5+ years old).
- Optional for devices that have 12-character serial numbers (though generally not used).

The administrator must approve all devices added to the Onboarding Queue using the Cambium ID.

## Cambium ID configuration

You must configure the Onboarding Key in order to claim devices with Cambium ID, as shown in [Figure 15](#).

**Figure 15** Cambium ID configuration

Onboard

Devices 60 GHz cnWave Edge Controller PON Settings

You can add devices to your account by logging into the Device UI directly and entering the Cambium ID and Onboarding Key (these were set when you created your Company Account, and they can be modified below), ePMP 1000, PMP 430/450 and ePMP 1000 Hotspot must be claimed using this method. ⓘ

**Cambium ID:** [Redacted]

Allow device to be claimed using Cambium ID

Enabling this feature allows a device to be claimed by entering the Cambium ID and Onboarding Key on the device. This information can be set on the device via its user interface (or SNMP or CLI on some devices). Each user can have their own Onboarding Key. [Learn more](#)

The following users can claim devices using the cnMaestro Cambium ID and the user's Onboarding Key.

User: [Redacted]	Onboarding Key: [Redacted]	[Edit]	Delete
User: [Redacted]	Onboarding Key: [Redacted]	[Edit]	Delete
User: [Redacted]	Onboarding Key: [Redacted]	[Edit]	Delete
User: [Redacted]	Onboarding Key: [Redacted]	[Edit]	Delete
User: [Redacted]	Onboarding Key: [Redacted]	[Edit]	Delete

Save Cancel Add New

## Onboarding Key configuration

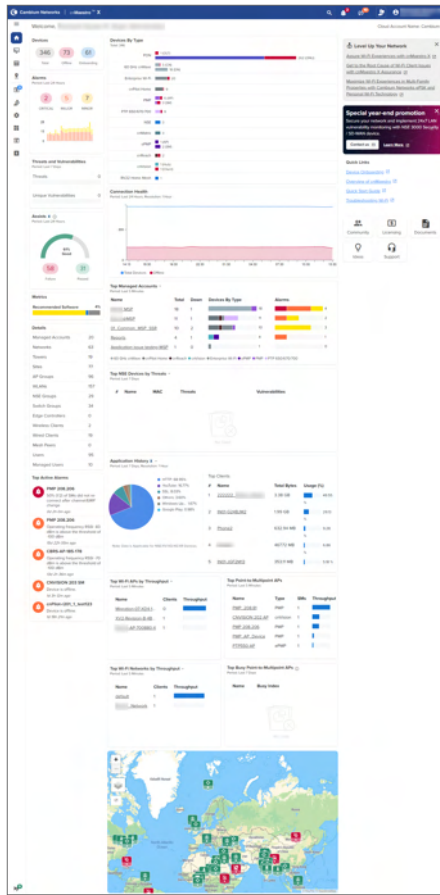

Each Onboarding Key is mapped to an individual User account. This mapping allows Cambium Cloud to know who is onboarding a device, and the key can be revoked if needed.

To configure the Onboarding Key, perform the following steps:

1. Log on to your cnMaestro account.

The Home page appears, as shown in [Figure 16](#).

Figure 16 Home page

- From the Home page, navigate to the **Onboard > Settings** tab.

Figure 17 Onboard settings page

Onboard

Devices 60 GHz cnWave Edge Controller PON Settings

You can add devices to your account by logging into the Device UI directly and entering the Cambium ID and Onboarding Key (these were set when you created your Company Account, and they can be modified below). ePMP 1000, PMP 430/450 and ePMP 1000 Hotspot must be claimed using this method. ⓘ

**Cambium ID:** [REDACTED]

Allow device to be claimed using Cambium ID

Enabling this feature allows a device to be claimed by entering the Cambium ID and Onboarding Key on the device. This information can be set on the device via its user interface (or SNMP or CLI on some devices). Each user can have their own Onboarding Key. [Learn more](#)

The following users can claim devices using the cnMaestro Cambium ID and the user's Onboarding Key.

User: [REDACTED]	Onboarding Key: [REDACTED] ✎	Delete
User: [REDACTED]	Onboarding Key: [REDACTED] ✎	Delete
User: [REDACTED]	Onboarding Key: [REDACTED] ✎	Delete
User: [REDACTED]	Onboarding Key: [REDACTED] ✎	Delete
User: [REDACTED]	Onboarding Key: [REDACTED] ✎	Delete

- Select the **Allow device to be claimed using Cambium ID** checkbox.  
Enabling this feature allows one to add Onboarding Keys mapped to individual Users.
- Click **Add New** to add a User and Onboarding Key.

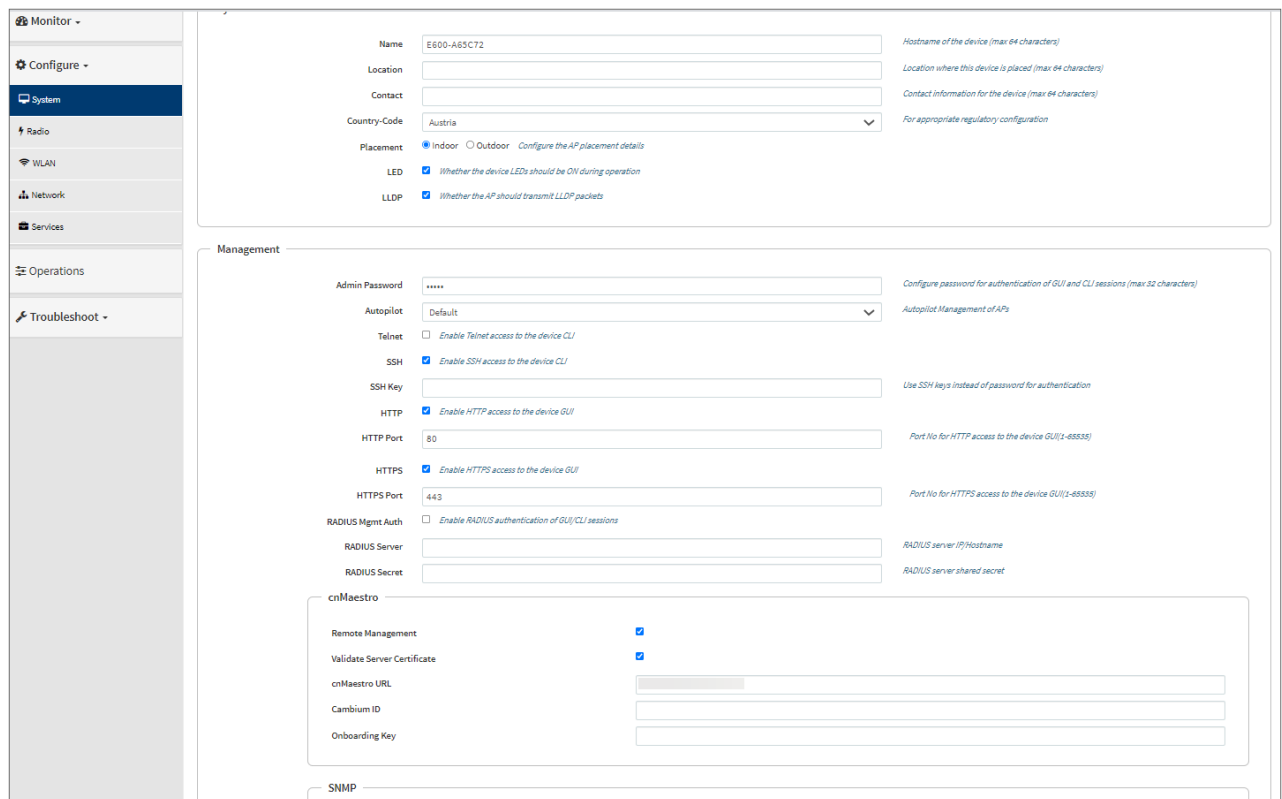

**Figure 20** Device home page

- From the Home page, navigate to **Configure > System > Management**. System configuration page appears, as shown in [Figure 21](#).

**Figure 21** cnMaestro configuration

- Enter URL in **cnMaestro URL** to connect the server (by default it will be [cloud.cambiumnetworks.com](https://cloud.cambiumnetworks.com)), as shown in [Figure 21](#).
- Enter the **Cambium ID**.

7. Enter the **Onboarding Key**.

8. Click **Save**.

Once in the Onboarding Queue, the devices can be provisioned and managed by clicking the **Approve Device** button, as shown in [Figure 22](#).

**Figure 22** Device approval

## Creating a Cloud Account

This section provides an overview of cnMaestro Cloud Accounts. This section includes the following:

- [Overview](#)
- [Creating a Support Center User ID](#)
- [Creating a Cloud NMS Account](#)
- [Creating an Anchor Account](#)
- [Multiple Cloud Accounts](#)

### Overview

There are two types of accounts for cnMaestro cloud management.

**Table 5** Account types

Account	Description
Cloud NMS	Cloud NMS accounts allow users to manage their devices through <a href="https://cloud.cambiumnetworks.com">https://cloud.cambiumnetworks.com</a> . Devices can be claimed, onboarded, and fully managed through the cloud service.
Cloud Anchor	Cloud Anchor Accounts are needed for on-premises installations of cnMaestro. After cnMaestro is deployed in a local data center, it connects to a Cloud Anchor Account. See the following section for more details on <a href="#">Creating an Anchor Account</a> .

Both Cloud NMS and Cloud Anchor Accounts require a Support Center ID to login.

### Creating a Support Center User ID

New Cambium Cloud users need to register with Cambium Support Center to create a Support Center ID.

1. Navigate to <https://cloud.cambiumnetworks.com> and click **Sign In**.
2. In the **Sign In** page, click **Register**.

3. Enter your email address in the text box and click **Register**.
4. An email will be sent to the address provided. Open the email and click the link.
5. Fill in details on the registration completion form, such as your name, the name of your company, and a password.
6. Click **Sign in** to log into the UI.

## Creating a Cloud NMS Account

If you do not have a Cloud NMS Account, you will be asked to create one after logging in and accessing cnMaestro Cloud. The NMS Account allows you to access cnMaestro functionality and start claiming devices.

1. Log in to the cnMaestro UI <https://cloud.cambiumnetworks.com>.
2. Click **Add New Account**. You will be redirected to the **Create a New Cloud Account** page.
3. Enter details such as **Cambium ID**, **Friendly Name**, **Country**, **Time Zone**, **Account Type**, and **Account View**. The **Account Type** should be set to **NMS**.
4. Enable **I agree to the cnMaestro Terms of Service**.
5. Click **Create Account**.

**Figure 23** Create Cloud NMS account

The screenshot shows the 'Create a New Cloud Account' page. At the top, there's a header with the Cambium Networks logo and a 'Help' link. The main heading is 'Create a New Cloud Account' with a sub-heading 'A Cloud Account allows you to manage your devices. Create an account for your company.' Below this, there's a note: 'You can also be invited to manage an existing account - contact the administrator of the account to receive an email invitation.' The form fields are: 'Cambium ID' (with a hint: 'Create a Cambium ID. For example, ACME\_@roadband\_inc'), 'Friendly Name' (with a hint: 'A friendly name for this account. This could be the name of the company.'), 'Country' (set to 'India'), and 'Time Zone' (set to 'Etc/GMT+12 (UTC-12:00)'). There are two 'Account Type' options: 'NMS' (selected, 'Use cnMaestro cloud for device management') and 'Anchor' ('Host a copy of cnMaestro in your own data center, connected to this account'). Below these are three 'Account View' options: 'Access and Backhaul' (selected, listing various device models), 'Enterprise' ('Enterprise Wi-Fi and cnMatrix'), and 'Industrial Internet' ('60 GHz cnWave, cnMatrix, cnPilot...'). At the bottom, there's a checkbox for 'I agree to the cnMaestro Terms of Service' and two buttons: 'Create Account' and 'Cancel'.

The required fields are defined below:

**Table 6** NMS Cloud management fields

Parameter	Description
Account	The <b>Account Type</b> is either <b>NMS</b> or <b>Anchor</b> . Select <b>NMS</b> to manage devices through

**Table 6** NMS Cloud management fields

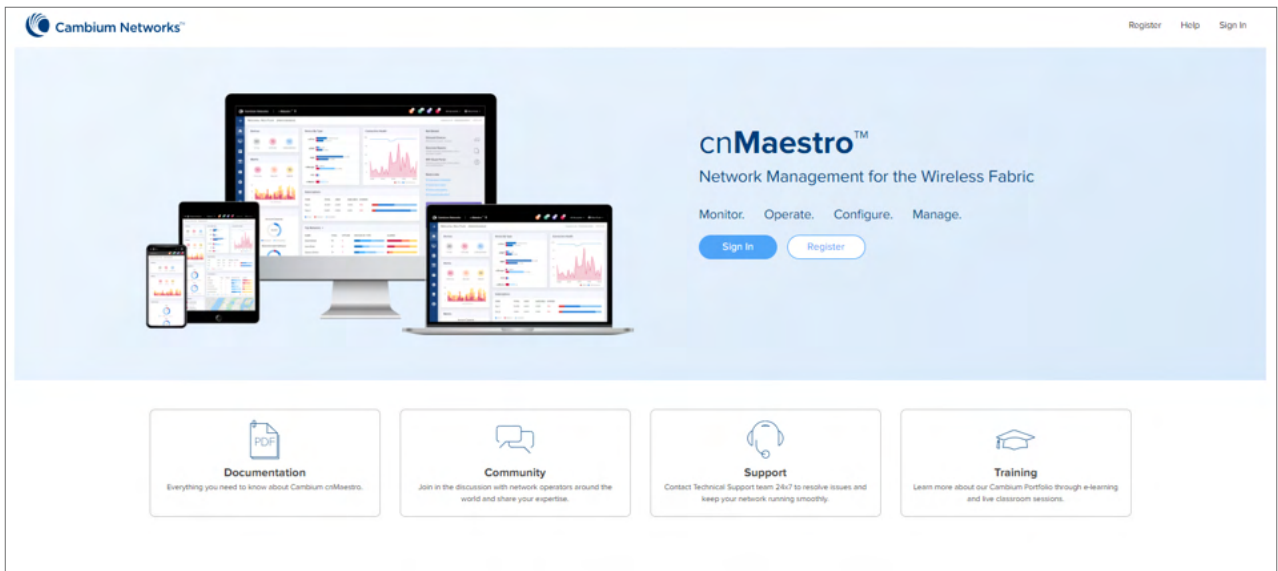

Parameter	Description
Type	cnMaestro Cloud. Select <b>Anchor</b> if installing cnMaestro On-Premises.
Account View	Select the <b>Account View</b> based on the devices you intend to manage. Select <b>Enterprise</b> if only cnMaestro Enterprise devices will be managed (these include the cnMatrix, Enterprise Wi-Fi (E-Series, XE/XV/X7-Series) and cnPilot Enterprise, Enterprise Wi-Fi (Xirrus-Series), and NSE). The <b>Account View</b> can be changed later by navigating to <b>Administration &gt; Settings &gt; General</b> .
Cambium ID	The <b>Cambium ID</b> identifies this account externally. Once created, it can only be changed by contacting Cambium Support.
Friendly Name	The <b>Friendly Name</b> is generally the same as the Company that owns the devices. It is informational.
Country	The <b>Country</b> determines where to store the device data. Cambium has data centers in North America, Europe, and Asia. If your devices are located in more than one region, you should create a separate account for a country in each region.
Time Zone	The <b>Time Zone</b> aggregates daily device statistics. Daily statistics are collected starting at 12:00 AM in the time zone selected.

- Click the drop-down next to the username or search option to view the created Cloud account.  
Once you have created a Cloud NMS Account, you will be directed to the home page on subsequent login.

## Creating an Anchor Account

An Anchor Account is required only if installing cnMaestro On-Premises.

- Log in to the cnMaestro UI <https://cloud.cambiumnetworks.com>.

- In **Account Type**, select **Anchor**.

- Once the Anchor Account is created, an Onboarding Key must be set to allow On-Premises instances to connect.
- Navigate to the **Manage Instances** page as shown below and edit the **Onboarding Key**. This key needs to be entered in the cnMaestro On-Premises UI to connect to the Anchor Account.

- Once the On-Premises server has been onboarded with the Key, it will be included in the **Instances** page. Multiple On-Premises installations can be added to a single Anchor Account.

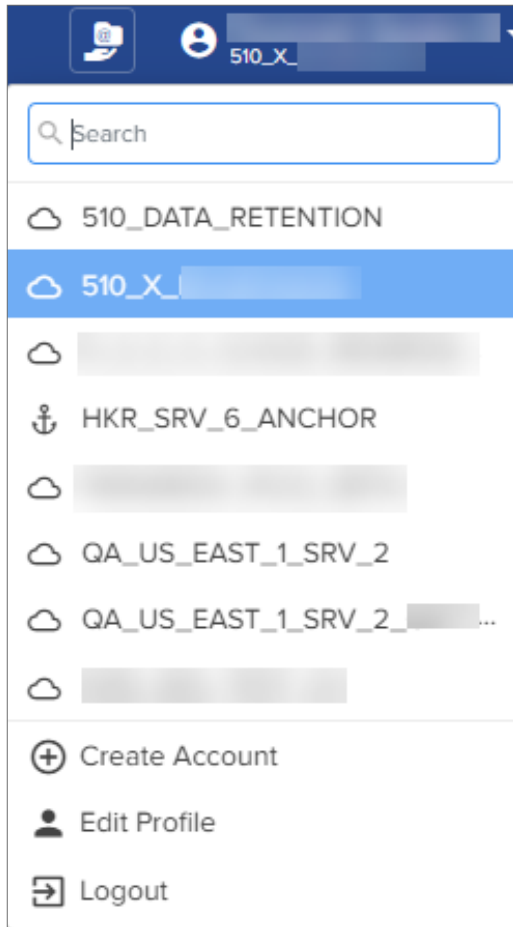

Name	Subscription	Expiring In	Type	Status	Last Connected	Onboarded	Uptime
CnMaestro-46	cnMaestro X	28 days	-	Online	Nov 01, 2022 11:22	1d 3h 54m ago	2d 1h 15m

Clicking the instance host name displays the server information collected.

## Multiple Cloud Accounts

Individuals can belong to multiple Cambium Cloud accounts. To create another Cloud Account (NMS or Anchor), select **Create Account** from the drop-down in the top-right corner. Enter the ID name in the **Search** field to filter the particular ID.

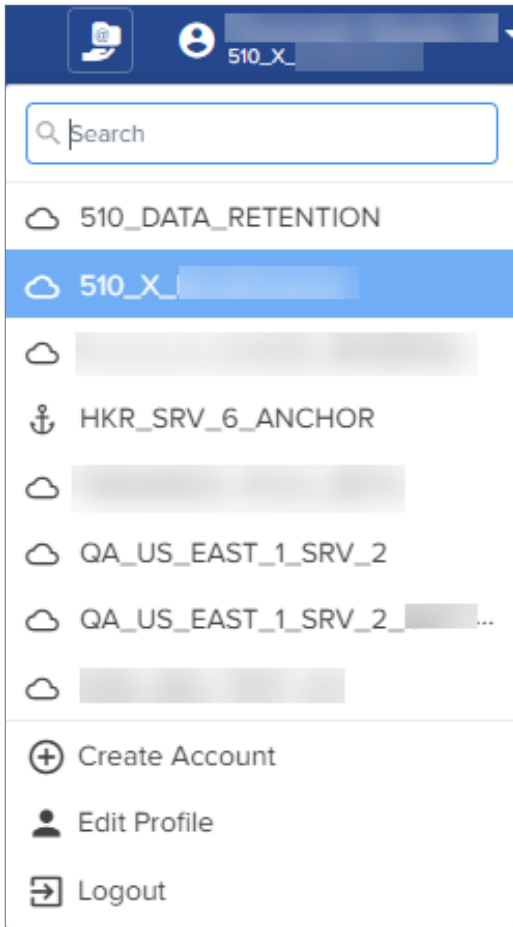

**Figure 24** Multiple Cloud Management Accounts

### Account selection

To switch between accounts, use the drop-down in the top-right corner of the UI. It displays all accounts to which the user has access.

Figure 25 Account selection

## Concurrent access

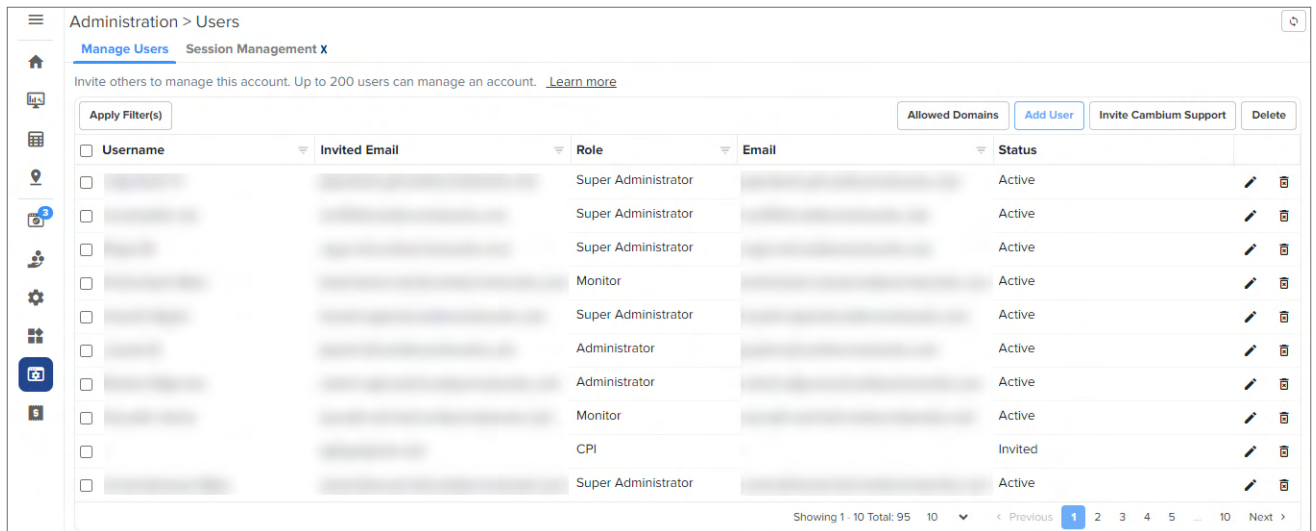

The same user can access multiple accounts simultaneously; however, each account needs to be opened in a separate browser window or tab.

## Managing users

A user can add additional administrators to their cloud management accounts and assign roles such as **Super Administrator**, **Administrator**, **Operator**, **Monitor**, and **CPI**.

Figure 26 Managing users

## Creating Users and Configuring User Roles

To add a user:

1. Navigate to **Administration > Users Page > Manage Users**.
2. Click **Add User**.

3. Enter the Email address in the **Email** text box.
4. To configure user role, select from the **Role** drop-down:
  - Super Administrator
  - Administrator
  - Operator
  - Monitor
  - CPI

For more details on user Roles, refer to [Role-Based Access](#).

5. Click **Send**.
6. Cambium Cloud sends an email with directions on how to access the Cloud management account.

### Note

The email does not need to match the email address of an existing Cambium user.

7. The email contains a link that directs you to the Cambium Cloud website <https://cloud.cambiumnetworks.com>.
8. Login using an existing Cambium Support Center account or create a new Cambium Support Center account.

## Organization

Organizations allow multiple Cloud NMS Accounts and Anchor Accounts to consolidate CBRS billing into one Primary Account.

- Primary Account: provides services such as Shared SAS ID and Unified Payments to multiple accounts.
- Secondary Account: shares services such as CBRS billing SAS ID; the Secondary Account is linked with the Primary Account.

Organizations are currently only used with CBRS. Refer [CBRS](#) on how they can simplify CBRS management across multiple accounts.

General details of Organizations include:

1. One Organization can include accounts created in different countries and regions.
2. The maximum number of accounts managed by an Organization is 5.
3. There is one required Primary Account in an Organization and optionally multiple Secondary Accounts.
4. Removing the Primary Account will dissolve the Organization.
5. Both NMS and Anchor Accounts can be included in an Organization, and either can be Primary.

## cnMaestro X

cnMaestro works in two different modes: Essentials, and X. cnMaestro Essentials is free and supports basic network management functionality. cnMaestro X is paid and requires subscriptions.

New accounts are created with cnMaestro Essentials capabilities. cnMaestro X features can be activated with the **Entitlement ID** provided by Cambium Networks. For more details, refer to [cnMaestro Features](#). You can purchase the **Entitlement ID** from an authorized **Cambium Reseller or Distributor**. The subscriptions available for 1 year, 3 years, and 5 years per device type and device count. Pricing is based on [Device Tiers](#). You need an **Entitlement ID** with equal or more device counts for each tier shown in the [Device Summary](#).

cnMaestro X part numbers are available at <https://www.cambiumnetworks.com/products/software/cnmaestro-x/>. Once your order is processed, you will receive an email from Cambium containing your **Entitlement ID**.

### Note

Some features are tagged **XA** which indicate that cnMaestro will have a different subscription mode for them in upcoming releases.

Your Order Reference:	

Product Details		
Product Number	Description	Quantity
MSX-SUB-T1-S 1	cnMaestro X for FWB SM, Tier1 5-year subscription per device	20
MSX-SUB-T2-S 1	cnMaestro X for FWB AP/PTP/IOT, Tier2 5-year subscription per device	20
MSX-SUB-T3-S 1	cnMaestro X for Enterprise W-Fi, Tier3 5-year subscription per device	20

### Note

- If you are creating new accounts after cnMaestro 3.0.0, then you can request a 90-day free trial either through the link available on the cnMaestro home page or <https://www.cambiumnetworks.com/cnmaestro-x/>.
- The 90 days free trial gets activated automatically for the accounts created before cnMaestro 3.0.0.

### NSE Subscription:

- The NSE device subscription is supported in cnMaestro Essentials as well as cnMaestro X in the cnMaestro Cloud deployment.
- You can avail the Entitlement ID for NSE with the required device slots according to the [Device Tiers](#) by contacting the reseller or distributor.
- When you move other devices from cnMaestro Essentials to cnMaestro X, you can continue to use the same NSE subscription.
- When you have only Free Tier devices and a subscription for NSE, you can manually upgrade to cnMaestro X and downgrade to Essentials on your own.

## cnMaestro X Activation

To activate the cnMaestro X account, perform the steps below:

1. Navigate to <https://support.cambiumnetworks.com/entitlements>, or from the cnMaestro home page click the **Licensing** tile.
2. In the Licensing page under **Entitlements** select **Activate Entitlements**.
3. Enter the **Entitlement ID** received from licensing@cambiumnetworks.com.
4. Click **Check**.

5. Once the **Entitlement ID** is validated, the **Activate** button is enabled.

**Note**

All subscribed part numbers must be activated under each **Entitlement ID**.  
The part numbers subscribed with **MSX** must be activated together.

6. Click **Activate**.

7. Select the Cambium ID from the list and click **Next**.

8. The **Ready to Upgrade** page displays.

**Account Details**

**Cambium ID:** EPSK\_BROADBAND  
**Name:** Cambium Networks  
**Type:** cnMaestro Essentials

**Ready to Upgrade**

Tier1: 6 | Tier2: 6 | Tier3: 12 | Tier100: 1

## Slot Deficit

A Slot Deficit occurs when the number of slots (one for each device) activated from the entitlement is less than the slots required. This can occur if there are more devices in the account than slots.

Upgrading to cnMaestro X will be pending until either devices are removed to match the available slots or more slots are added to cover the deficit.

1. Select the **Cambium ID** from the list and click **Next**.

The screenshot shows the 'Licensing' page in the Cambium Networks Support Center. On the left, there are sections for 'Entitlements' (with 'Activate Entitlements' selected), 'Fixed Wireless License Keys', and 'cnVision'. The main content area displays a table of entitlements:

Part Number	Description	Available Quantity
MSX-SUB-T1-1	cnMaestro X for PWB; Free Tier 1-year subscription per device	6
MSX-SUB-T2-1	cnMaestro X for PWB; Tier 2 1-year subscription per device	6
MSX-SUB-T3-3	cnMaestro X for Enterprise Wi-Fi; Tier 3 3-year subscription per device	12
MSX-SUB-T100-1	cnMaestro X for Third Party; Tier 100 1-year subscription per device	1

Below the table, it says 'Select cnMaestro Account' and lists several accounts with their Cambium ID, Account Name, and Type. Each row has a 'Next' button.

Cambium ID	Account Name	Type
10NOVSHEMNA_QA	cambium	cnMaestro X Trial
240_300_AFTER_MIG	cambium	cnMaestro X Trial
242_TO_300_MIGRATION	Cambium Networks	cnMaestro X Trial
27_NOV_ESS_PRO_MON8ZN	CMBM CONNECT	cnMaestro X
300_ENTERPRISEVIEW	cambiumnetworks.com	cnMaestro X
30_NOV_MON8ZN	cambium	cnMaestro Essentials
3_DEC_MON8ZN	cambium	cnMaestro Essentials
ABCD_1234	cambium	cnMaestro Essentials
C2C_24_30	Cambium Networks	cnMaestro X Trial
C2C_IR_TRY_01	Cambium Networks	cnMaestro X Trial
C2C_M_24_30	Cambium Networks	cnMaestro X Trial
C2C_M_RETRY_01	Cambium Networks	cnMaestro Essentials
EMS_CHECKING	cambium	cnMaestro X
EPSK_BROADBAND	Cambium Networks	cnMaestro Essentials

2. The **Active Entitlement** page displays **Not enough slots** when there is a slot deficit.

The screenshot shows the 'Licensing' page with 'Account Details' for the selected account. It displays the Cambium ID, Name, and Type. A red warning icon and text state: 'Not enough slots. To upgrade to cnMaestro X, you must have an active subscription for every device in your account.'

Tier	Required	Already Activated	Available on Entitlement	OK to Upgrade?
Free Tier	6	0	0	No (6 slot deficit)
Tier2	6	0	0	No (6 slot deficit)
Tier3	11	0	1	No (10 slot deficit)
Tier100	1	0	0	No (1 slot deficit)

Below the table, a warning icon and text state: 'This entitlement is not sufficient to upgrade your account to cnMaestro X. You can activate this entitlement, and the subscriptions will be added to your account, but you will not be able to access cnMaestro X features until you have added enough subscriptions to make up the deficit.'

At the bottom, there is an 'Entitlement' table with one row:

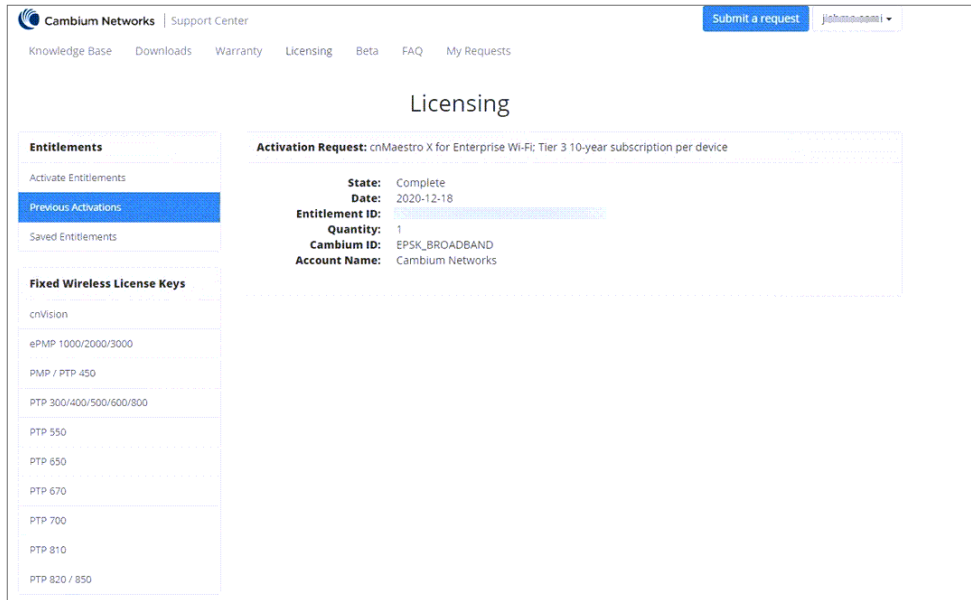

Part Number	Description	Quantity
MSX-SUB-T3-10	cnMaestro X for Enterprise Wi-Fi; Tier 3 10-year subscription per device	1

An 'Activate' button is visible at the bottom of the page.

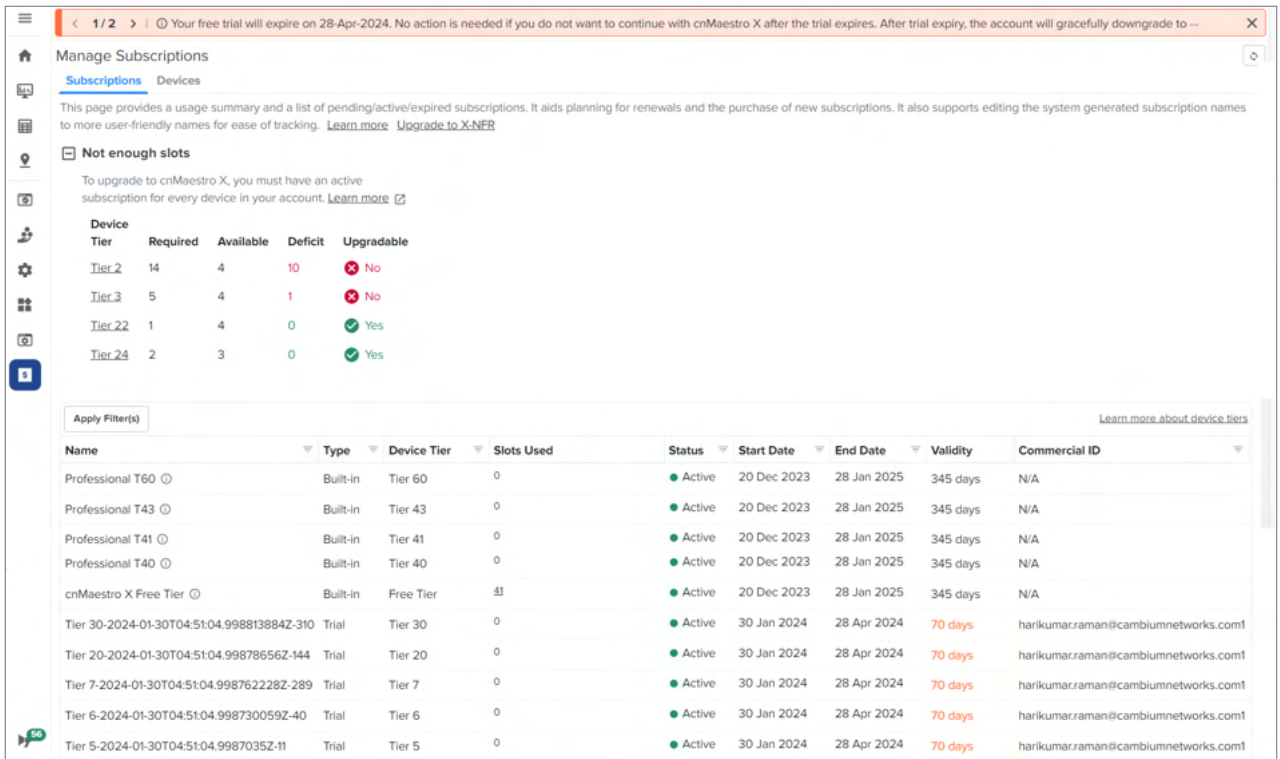

3. If the user activates even with the slot deficit warning.

- Activation process completes.

- cnMaestro X upgrade will be pending, since there are not enough slots to match the devices in the account. Refer to **Not enough slots** in the **Manage Subscriptions** tab to identify the slot deficit.
- It also displays the notification message shown below.

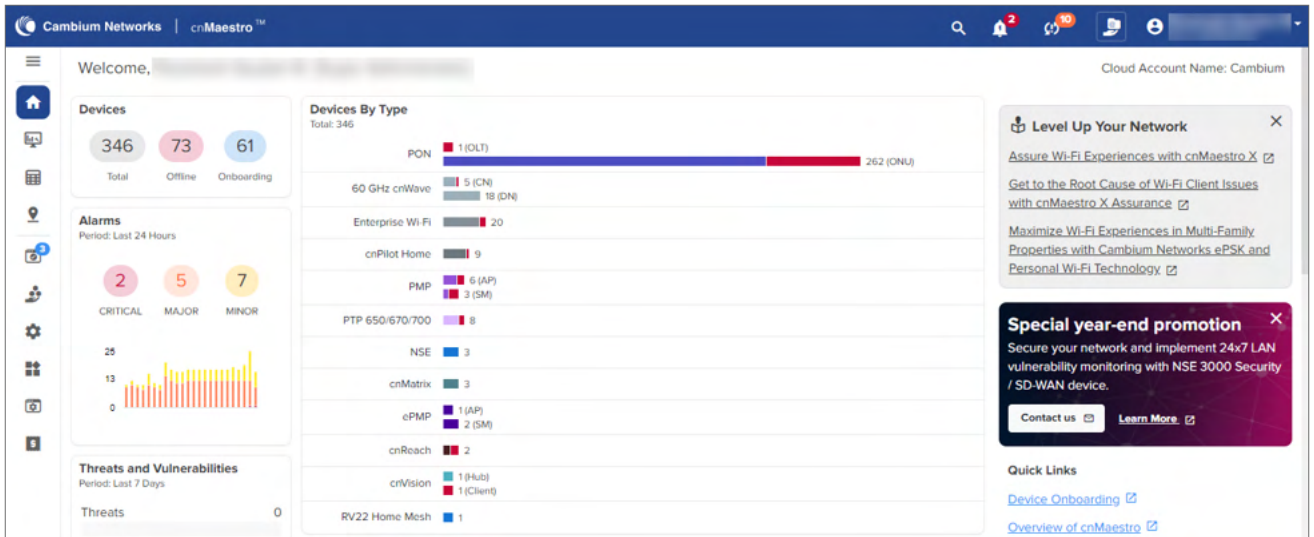

4. Once the user removes the deficit, the account automatically upgrades to cnMaestro X.

## Subscription Management

A cnMaestro Essentials account can be identified as shown below.

If a subscription is active, the cnMaestro X banner will display.

## Manage Subscriptions

Users can view, edit, check the validity and status of subscriptions.

1. Navigate to the **cnMaestro > Manage Subscriptions > Subscriptions** page.

**Device**

Device Tier	Required	Available	Deficit	Upgradable

Tier 7	0	49	1	1	0
Tier 20	0	50	0	0	0
Tier 30	0	151	1	0	0

Usage summary displays the number of slots that are **Pending**, **Available**, **Used**, and **Expired**.

## Device Tiers

Device Tiers display the classifications allotted for each device.

Tier	Family	Models
Free Tier	60 GHz cnWave	V1000, V2000, V3000
	cnPilot Enterprise (ePMP Hotspot)	1000 Hotspot
	cnPilot Home	All R-Series Access Points
	cnRanger	All SM Models
	cnVision	MAXr, MAXrp, MICRO, MINI
	ePMP	All SM Models
	PMP	All SM Models
Tier 3	Enterprise Wi-Fi	All E-Series, XE/XV/X7 Series and Xirrus(AOS) Access Points
Tier 5	60 GHz cnWave	All Distribution Nodes
Tier 6	cnWave 5G Fixed	All CPE Models
Tier 7	cnWave 5G Fixed	All BTS Models
Tier 20	cnMatrix	All cnMatrix Switches
Tier 21	cnVision	FLEXr, HUB360
	ePMP	All AP Models
Tier 22	PMP	All AP Models except 450m and 450mv
Tier 23	PMP	450m
Tier 24	cnRanger	All BBU Models
	cnReach	All cnReach Models
	PTP	All PTP Models
Tier 30	NSE	NSE3000
Tier 40	PON	Fiber OLT-8 Port
Tier 41	PON	Fiber ONT-GPON-Indoor, Fiber ONT-GPON-Outdoor, Fiber ONT-XGS-PON-Indoor, Fiber ONT-XGS-PON-Outdoor
Tier 43	PON	Fiber OLT-16 Port
Tier 60	RV22 Home Mesh	RV22

Unlisted devices do not require paid subscription. They are part of the Free Tier (Tier 0). All Tier 0 through Tier 7 devices can be used with an Essentials account. Tier 20 and Tier 30 require paid subscription even in Essentials mode.

#### Note

To manage NSE devices under Essentials account, you need a subscription. If your account is upgraded to cnMaestro X, the Essentials NSE subscription will automatically be transferred to cnMaestro X. You will not need any additional subscription for NSE again.

## Devices

The Devices page displays devices mapped to their subscription, and it allows changing or swapping a subscription. **Device Summary** displays device counts per tier.

**Manage Subscriptions**

Subscriptions **Devices**

## Swap Subscription

Swap Subscription allows the user to swap one device subscription with another device of the same tier. It can be performed at any time.

### Note

To manage NSE devices under Essentials account, you need a subscription. If your account is upgraded to cnMaestro X, the Essentials NSE subscription will automatically be transferred to cnMaestro X. You will not need any additional subscription for NSE again.

To swap subscriptions:

1. Navigate to the **Manage Subscriptions > Devices** and copy the **MAC address** to which the device subscription needs to be swapped.

A success notification is displayed on successful subscription swapping.

## Change Subscription

Change Subscription changes the device from one subscription to another of the same tier when slots are available.

### Note

Change subscription operation is not allowed for devices belonging to Free Tier, Tier 40, Tier 41, Tier 43, Tier 60.

To change subscription:

1. Navigate to the **Manage Subscriptions > Devices** and select the device.
2. From the **Actions** drop-down list, click **Change Subscriptions**.

**Manage Subscriptions**

A success notification is displayed on successful subscription change.

## Delete on Expiry

### Note

- Once a device state is changed to **Delete on Expiry**, this action cannot be undone.
- Tier 30 (NSE) devices also support **Delete on Expiry** in cnMaestro Essentials.

User can select the device and set the subscription state to **Delete on Expiry**, once the device is expired, it automatically is deleted from the device list.

To set the delete on expiry option:

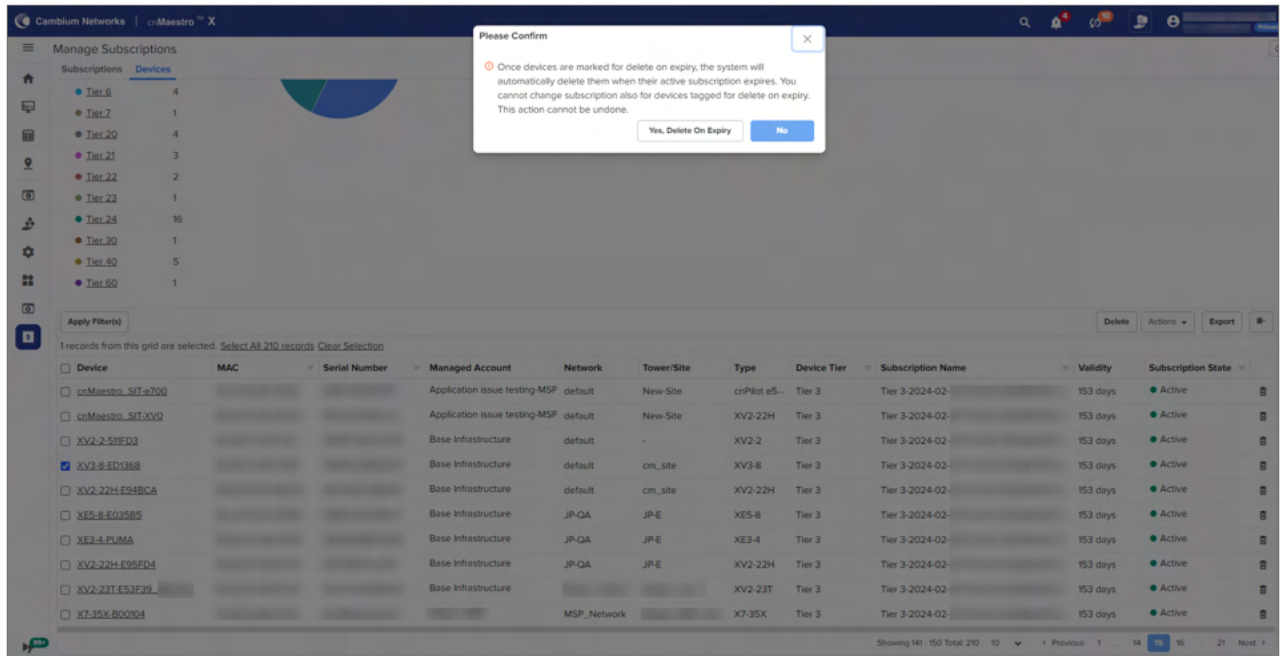

1. Navigate to the **Manage Subscriptions > Devices** and select the device.

The screenshot displays the 'Manage Subscriptions' interface with the 'Devices' tab selected. A 'Device Summary' pie chart shows the distribution of devices across various tiers. Below the chart is a table listing device subscriptions with columns for Device, MAC, Serial Number, Managed Account, Network, Tower/Site, Type, Device Tier, Subscription Name, Validity, and Subscription Status.

Device	MAC	Serial Number	Managed Account	Network	Tower/Site	Type	Device Tier	Subscription Name	Validity	Subscription S...
<input type="checkbox"/> PMP-677823			Base Infrastructure	-	-	PMP 450 SM	Free Tier	cnMaestro X Free Tier	182 days	Active

<input type="checkbox"/> Migration_PMP_450I_SM_01			Base Infrastructure	default	-	PMP 450i SM	Free Tier	cnMaestro X Free Tier	182 days	Active
<input type="checkbox"/> Migration_03_R195W_01			@MSP	default	HS1_567	cnPilot r195W	Free Tier	cnMaestro X Free Tier	182 days	Active
<input type="checkbox"/> ePMP1000_r123f4			Base Infrastructure	default	-	ePMP Force 180 SM	Free Tier	cnMaestro X Free Tier	182 days	Active
<input type="checkbox"/> ePMP1000_r0f3c4			Base Infrastructure	default	-	ePMP Force 180 SM	Free Tier	cnMaestro X Free Tier	182 days	Active
<input type="checkbox"/> ePMP1000_r13du6			Base Infrastructure	default	-	ePMP Force 180 SM	Free Tier	cnMaestro X Free Tier	182 days	Active
<input type="checkbox"/> ePMP1000_r7cdfa			Base Infrastructure	default	-	ePMP Force 180 SM	Free Tier	cnMaestro X Free Tier	182 days	Active

2. From the **Actions** drop-down list, click **Delete on Expiry**.
3. Click **Yes, Delete On Expiry** in the confirmation window.

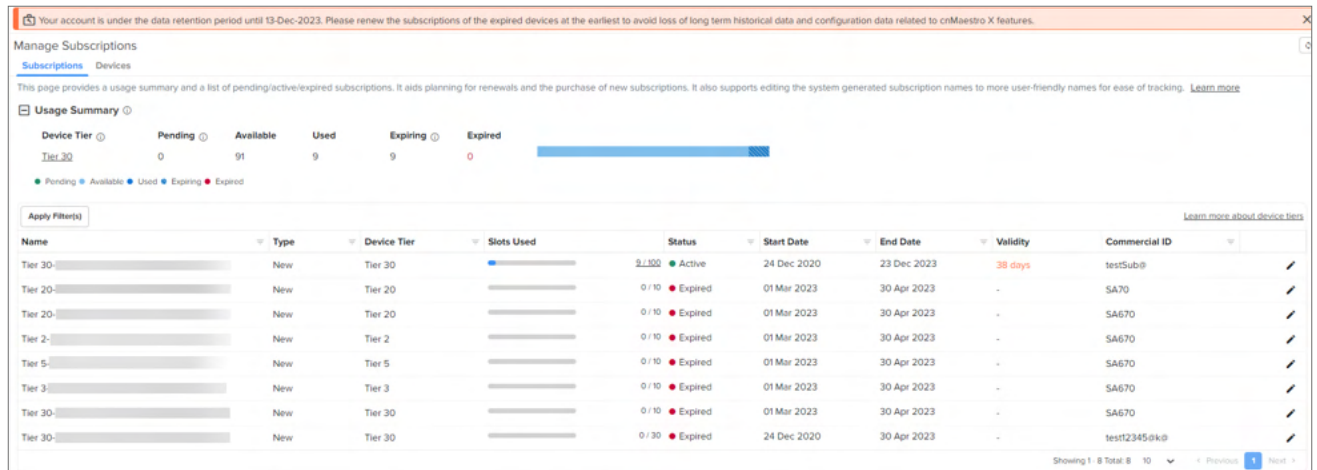

4. The subscription state changes to **Delete on Expiry** from **Active**.

## Expiry Notification

If the subscription validity is less than 90, in the **Validity** column the number of days left are highlighted in red color. Also, a notification message will be displayed as shown below.

The expired subscription slots are automatically moved to the active subscription, if the number of expired subscription slots is equal to or less than the number of available subscription slots.

## Expired Device

Once the device expires, all device level features become inaccessible. The device should either be deleted from the account or added to a new subscription as shown below:

### Note

In the expired device dashboard:

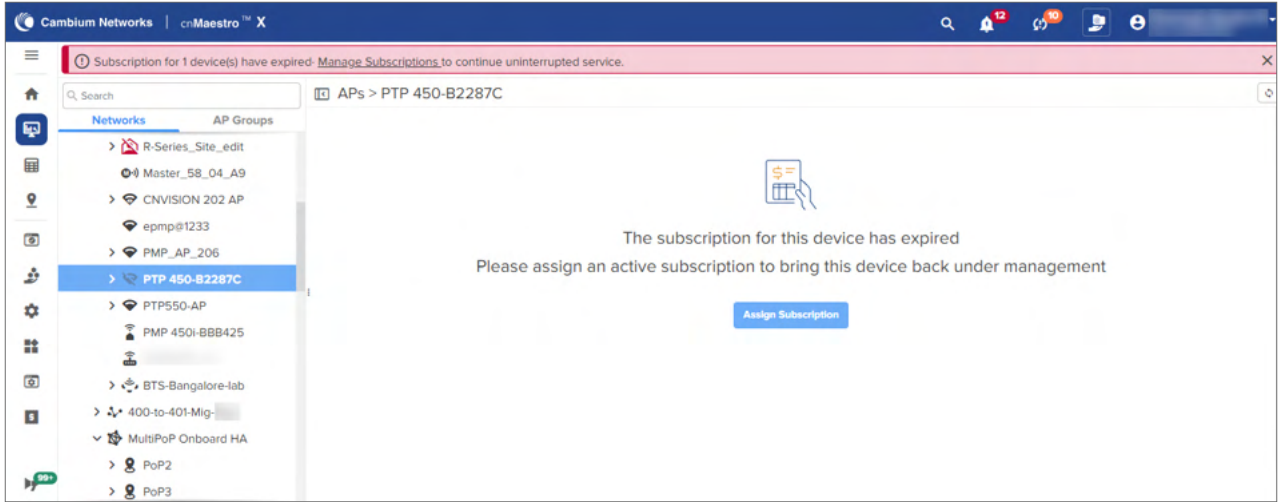

- If any free slots are available Change Subscription will be enabled.
- If free slots are not available Swap Subscription will be enabled with the specific device MAC address.

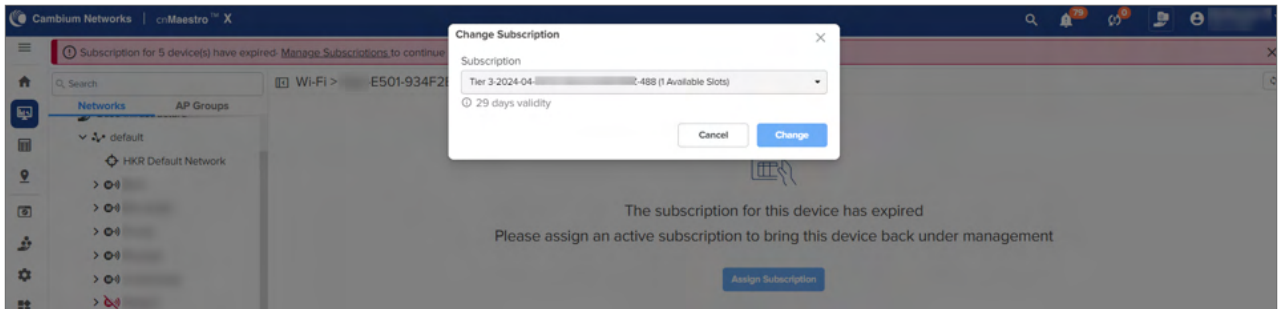

- If you have an X account with expired devices, you can downgrade to Essentials and manage all devices without X features. The activated subscriptions will be moved to pending state.

## Change Subscription at device level

1. Navigate to **Manage > Network >** and select the expired device.

2. Click **Assign Subscription** and select the **Subscription** from the list.

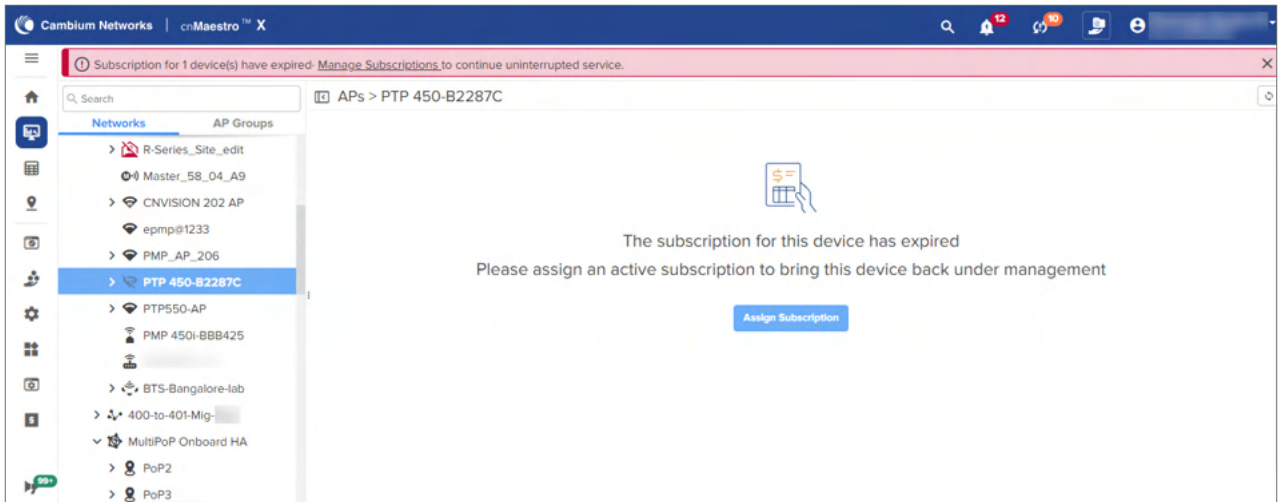

3. Click **Save**.

The following message displays if successful and the device becomes active.

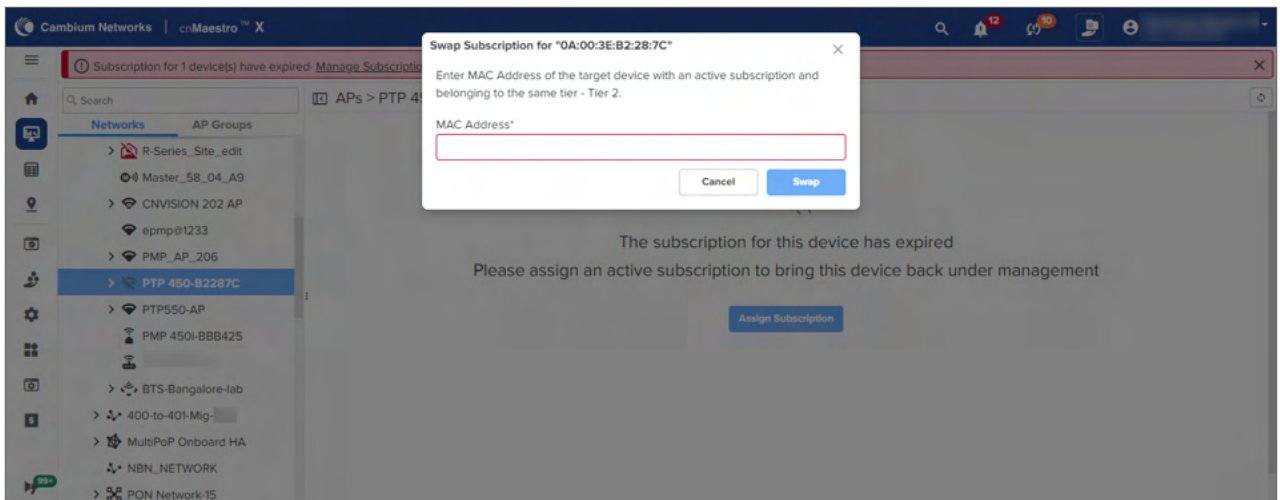

## Swap Subscription at device level

1. Navigate to **Manage > Network >** and select the expired device.

2. Click **Assign Subscription**. The **Swap Subscription** window pops up.

3. Enter the **MAC address** and click **Swap**.

## Retention of Data After Expiry and Reinstatement of Service

If subscriptions are not renewed in time, devices under those subscriptions will expire and are no longer managed by cnMaestro. Once all subscriptions are expired, the account transitions to cnMaestro Essentials with a data retention period for historical data of 90 days. All historical data beyond one week, and cnMaestro X specific configuration, will be retained until the data retention period of 90 days, after which it will be deleted. This is done to ensure no data loss if subscriptions are renewed before the data retention period ends.

## cnMaestro X features behavior state

cnMaestro X subscriptions can be purchased for 1 year, 3 years, and 5 years. Pricing is based on device tiers. Device slots are purchased for each device tier needed for a deployment. Devices require free slots in order to onboard.

### Note

To manage NSE devices under Essentials account, you need a subscription. If your account is

upgraded to cnMaestro X, the Essentials NSE subscription will automatically be transferred to cnMaestro X. Thereafter, no additional subscription for NSE is required.

The following table describes about the cnMaestro feature behavior state in different modes such as cnMaestro X, data retention period, and after data retention period.

**Table 7** cnMaestro X Feature behavior state matrix

Feature	cnMaestro X	On Downgrading cnMaestro X to Essentials and Data Retention Period	After Data Retention Period

Session Management	Tracks the current cnMaestro user sessions and optionally allows to logout cnMaestro user sessions.	Not accessible	Not accessible
Spectrum Analyzer	Analyzes and monitors the wireless spectrum for optimizing network performance on PMP devices.	Not accessible	Not accessible
Terrain View	It allows to view maps in Terrain view.	Not accessible	Not accessible
WIDS	<ul style="list-style-type: none"> <li>WIDS data is processed</li> <li>APIs are supported</li> </ul>	Statistics is not available through API	Not accessible
WLANs Dashboard	View details of all WLANs that are applied on devices at a given site. Also view the details of APs connected to these WLANs.	Not accessible	Not accessible

## Navigating the cnMaestro UI

cnMaestro provides a number of ways to navigate the UI.

This section includes the following topics:

- [Account View](#)
- [Home page](#)
- [Page structure](#)
- [Page navigation](#)
- [Access and Backhaul View](#)
- [Enterprise Account view](#)
- [Side menu](#)
- [Section tabs](#)
- [System status](#)
- [Data Tables and Chart UI Controls](#)
- [Logout](#)

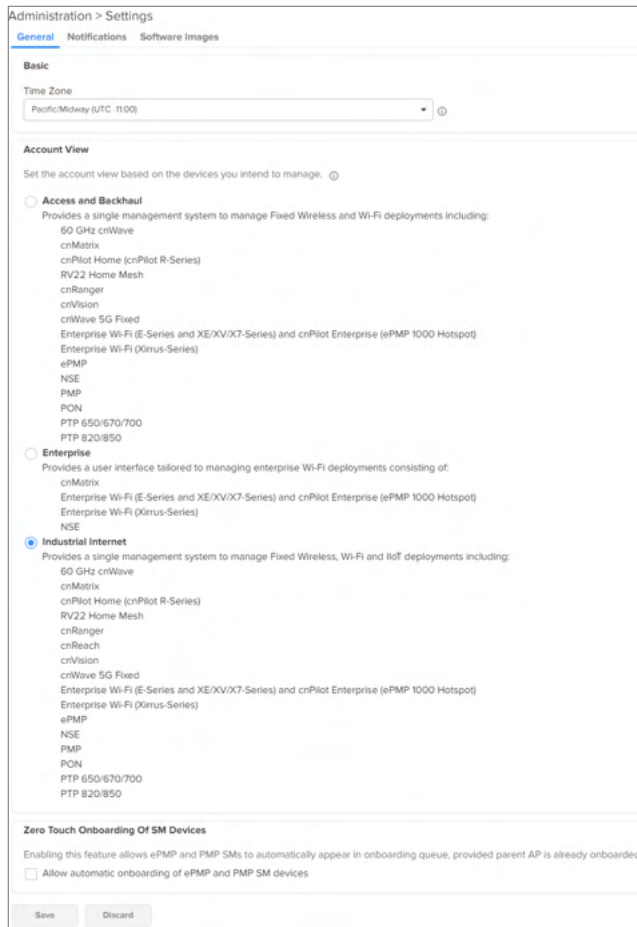

## Account View

cnMaestro supports three different account views, based upon the composition of devices.

- Access and Backhaul view
- Enterprise view
- Industrial Internet view

The account view is selected when the account is created but it can be changed later through the **Administration > Settings > General** page.

**Figure 28** *Account View*

## Access and Backhaul View

The Access and Backhaul View supports all Fixed Wireless and Wi-Fi deployments. The device types include 60 GHz cnWave, cnMatrix, cnPilot Home (cnPilot R-Series), cnRanger, cnVision, cnWave 5G Fixed, Enterprise Wi-Fi (E-Series and XE/XV/X7-Series), cnPilot Enterprise (ePMP 1000 Hotspot), Enterprise Wi-Fi (Xirrus-Series), ePMP, NSE, PMP, PTP 650/670/700, PTP 820/850, RV22 Home Mesh, and PON.

## Enterprise View

The Enterprise View supports the Enterprise Wi-Fi portfolio, which includes the cnPilot Enterprise APs, cnMatrix, and Enterprise Wi-Fi APs (E-Series, and XE/XV/X7-Series), and Enterprise Wi-Fi (Xirrus-Series), and NSE. It provides a simplified UI for Wi-Fi components (hiding fixed wireless features such as Towers).

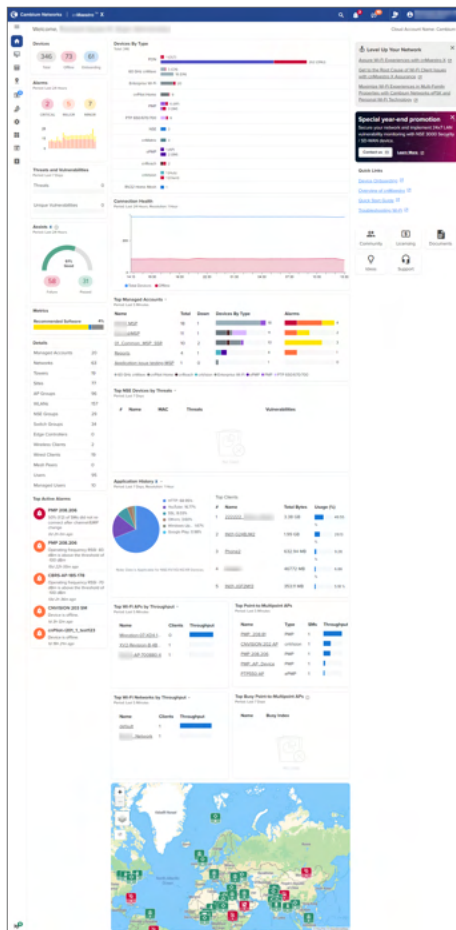

## Industrial Internet View

Industrial Internet View provides a single interface for Fixed Wireless, Wi-Fi, and IIoT deployments. The device types include 60 GHz cnWave, cnMatrix, cnPilot Home (R-Series), cnRanger, cnVision, cnWave 5G Fixed, ePMP, PMP, cnReach, PTP 650/670/700, PTP 820/850, Enterprise Wi-Fi (E-Series, and XE/XV/X7-Series) and Enterprise (ePMP 1000 Hotspot), Enterprise Wi-Fi (Xirrus-Series), NSE, RV22 Home Mesh, and PON.

## Home page

The **Home** page is displayed when the user logs into the cnMaestro. It provides links to the core functional areas in the UI, such as Cambium **Support Center**, **Community**, **Documents**, and **Licensing**. It can be accessed from any page in the UI by clicking the **Home** tab.

Figure 29 cnMaestro Home page

## Page structure

cnMaestro follows a standard page structure, which consists of a left-side menu and a content area. In many pages, tabs provide additional content navigation.

Figure 30 cnMaestro page structure

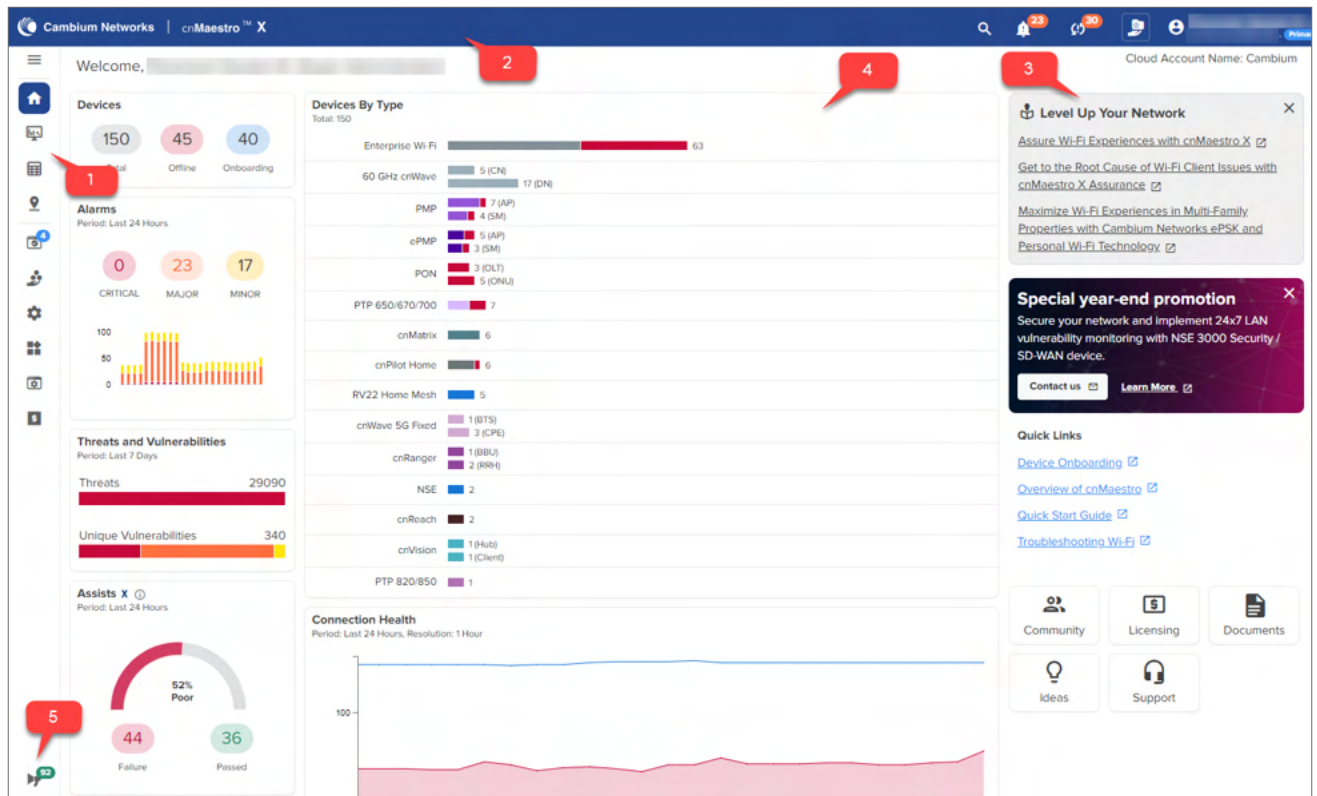

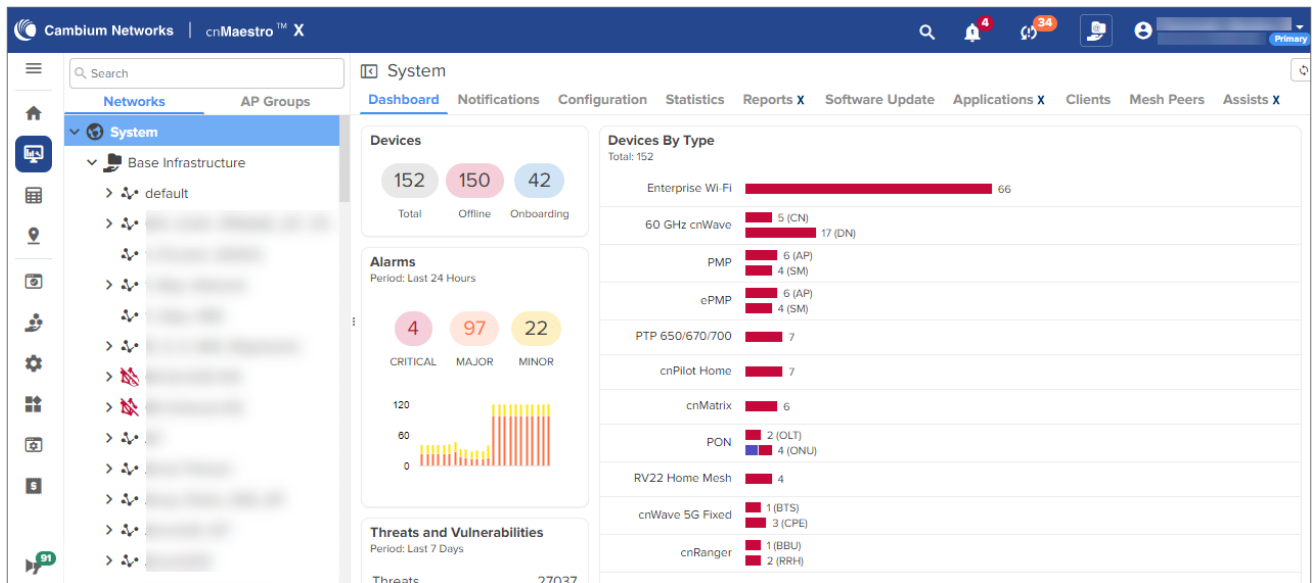

Table 8 UI description

Number	Elements	Description
1	Left menu	Shows the functional areas of the UI. This menu can be expanded or collapsed to view the submenu by clicking the top arrow.
2	Header	Shows the basic counters for <b>Major Alarms</b> , <b>Devices Awaiting for Approval</b> , <b>Software Updates Jobs</b> , and <b>Out of Sync Devices</b> .
3	Right menu	Provides links to Cambium <b>Ideas</b> , <b>Support</b> , <b>Community</b> , <b>Documents</b> , and <b>Licensing</b> .
4	Functional area	Shows the detailed view of the section selected in the left menu.
5	Announcements	Displays announcements about availability of newer firmware versions of devices.

## Page navigation

The cnMaestro pages include items such as **Dashboard**, **Notifications**, **Configuration**, **Statistics**, **Report**, **Software Update**, **Applications**, **Clients**, **Mesh Peers**, and **Assists**. The content of a page differs depending upon its context. For example, a **Dashboard** page will be different at the **System/Network/Tower/Site/Device** levels. The context, or level in the hierarchy, is selected in the Device tree as shown in [Table 11](#).

## Access and Backhaul View

### Overview

The Access and Backhaul view leverages a hierarchical tree to display device installations. In this view, customers can group their fixed wireless devices into Networks, and display their Point-to-Multipoint devices in Tower-based sectors. Navigation is performed using the tree. The device tree is segmented into two tabs: Network and Wi-Fi AP Groups.

### Networks tab

The **Network** tab displays a hierarchical view of the devices. It consists of Systems, Networks, Towers, Sites, and Devices. There is a strict ordering for how nodes can fit in the hierarchy, and as one navigates through and selects nodes, the pages display the node chosen.

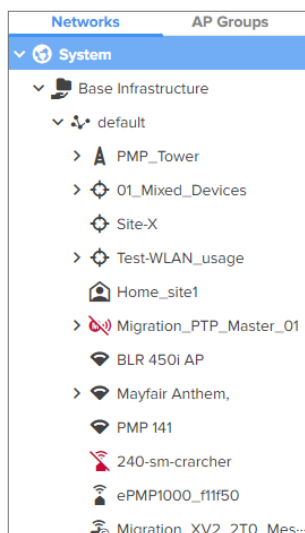

Selecting an arrow icon will expand the node and display the next level of hierarchy.

#### Note

- Towers are only visible in the Fixed Wireless view and 60 GHz cnWave devices are only visible in the 60 GHz cnWave E2E Network. cnMatrix devices are visible only in Access and Backhaul, and the Industrial Internet views.
- Japanese characters are supported in Network, Tower, and Site names.
- Select a node in the hierarchy tree and expand to open the node.
- Opening the node does not automatically select a node in the new hierarchy, instead you must click the desired node.
- PON devices are visible only in the PON networks.

Figure 31 Networks

The structured hierarchy has the following nodes:

Table 9 Structured hierarchy nodes

Icon	Name	Description
	60 GHz cnWave CN	CN is mapped to a <b>Site</b> in E2E Network.
	60 GHz cnWave DN	DN is mapped to a <b>Site</b> in E2E Network.
	60 GHz cnWave Onboard E2E Network	60 GHz cnWave devices are located within a <b>Network</b> deployed through the Onboard E2E controller.
	60 GHz cnWave External E2E Network	60 GHz cnWave devices are located within a <b>Network</b> deployed through the external E2E controller.
	60 GHz cnWave PoP	PoP is mapped to a <b>Site</b> in E2E Network and deployed through the External E2E controller.
	60 GHz cnWave PoP Onboard E2E Network	PoP is mapped to a <b>Site</b> in E2E Network and deployed through the Onboard E2E controller.
	60 GHz cnWave Unmanaged Node	60 GHz cnWave Unmanaged Node
	60 GHz cnWave Site	<b>Sites</b> are located within E2E Networks. A site maps to a single area and represents a location on a map that has 60 GHz cnWave devices.
	cnMatrix	cnMatrix devices are located within a <b>Network</b> . Optionally they can also be mapped standalone to a <b>Tower</b> or a <b>Site</b> .
	cnRanger RRH	cnRanger RRH access points are located in a <b>Network</b> and are mapped to a <b>BBU</b> .
	cnRanger Sierra 800	cnRanger Sierra 800 are located in a <b>Network</b> and are optionally mapped to a <b>Tower</b> .
	cnRanger SM	cnRanger SM devices are located in a <b>Network</b> and are optionally mapped to a RRH.

**Table 9** Structured hierarchy nodes

Icon	Name	Description
	cnReach	cnReach device which could have zero, one, or two radios, and support one or two roles, including Point-to-Point (PTP), Point-to-Multipoint (AP or EP) (PTMP), or IO Expander.
	cnPilot Home	Wi-Fi devices are generally matched to a local SM and inherit its <b>Network</b> . They can also be mapped standalone to a <b>Network</b> or a <b>Site</b> .
	cnVision Client	cnVision Client Subscriber Modules are located in a <b>Network</b> (if they are standalone, which is only used for bootstrapping) or they are associated with an AP. The SM will inherit the <b>Network</b> and <b>Tower</b> of the AP to which it is associated.
	cnVision Hub	cnVision Hub are located in a <b>Network</b> and are optionally mapped to a <b>Tower</b> .
	cnWave 5G Fixed BTS	cnWave 5G Fixed BTS devices are located within a Network.
	cnWave 5G Fixed CPE	cnWave 5G Fixed CPE devices connected through cnWave 5G Fixed BTS device in a Network.
	Enterprise Wi-Fi	Enterprise Wi-Fi devices are generally matched to a local SM and inherits its <b>Network</b> . They can also be mapped standalone to a <b>Network</b> or to a <b>Site</b> .
	ePMP AP	ePMP Access Points are located in a <b>Network</b> and are optionally mapped to a <b>Tower</b> .
	ePMP SM	ePMP Subscriber Modules are located in a <b>Network</b> (if they are standalone, which is only used for bootstrapping) or they are associated with an AP. The SM inherits the <b>Network</b> and <b>Tower</b> of the AP to which it is associated.
	Home Site	Home sites are located within networks and contain cnPilot Home Router (r-series) APs and Home Mesh routers.
	Network	All devices are placed within <b>Networks</b> . Networks represents the geographical regions or collections of devices with a shared responsibility. Accounts can have one network or many networks. Networks allow one to provide structure to accounts with many devices and also provides aggregation buckets for cnMaestro statistics (essentially the system pre-calculates statistics, so they are displayed quickly).
	NSE 3000	NSE device located in the <b>Network</b> .
	OLT	Optical Line Terminal (OLT) device located in the PON network
	ONU	Optical Network Unit (ONU) device located in the PON network.
	PMP AP	Point-to-Multipoint Access Points (PMP AP) are located in a <b>Network</b> and are optionally mapped to a <b>Tower</b> .
	PMP SM	Point-to-Multipoint Subscriber Modules (PMP SM) are located in a <b>Network</b> (if they are standalone, which is only used for bootstrapping) or they are associated with an AP. The SM will inherit the <b>Network</b> and <b>Tower</b> of the AP to which it is associated.
	PON Network	All PON devices are placed within PON networks.
	PON Site	PON sites are located within PON networks and hold OLT and ONU devices.

**Table 9** Structured hierarchy nodes

Icon	Name	Description
	PTP Master	Point-to-Point (PTP) Master device located in a network and optionally mapped to a Tower.
	PTP Slave	Point-to-Point (PTP) Slave device located in a network and optionally mapped to a Tower.
	PTP 820/850	Point-to-Point (PTP 820/850) device located in a network.
	RV22 Home Mesh Router—Base	RV22 Home Mesh routers (deployed as a standalone or the base in a mesh setup) located in the network and are mapped to a home site.
	RV22 Home Mesh Router—Node	RV22 Home Mesh routers (deployed as the node in a mesh setup) located in the network and are mapped to a home site.
	Enterprise Site	<b>Enterprise Sites</b> are located within networks and hold Wireless Access Points. A site maps to a single area and represents a location on a map that has APs or a building.
	System	The <b>System</b> node is at the top level of the hierarchy, though it does not have an explicit node in the tree. Its pages are displayed when the user logs in for the first time, when one selects the <b>System</b> button in the hierarchical tree (displayed when Networks are shown) or selects the <b>System</b> node in the breadcrumbs. The System level aggregates data from all devices within the account.
	Tower	<b>Towers</b> are located within networks and hold cnRanger, cnReach, PTP, or Point-to-Multipoint APs. All the devices on a Tower are mapped to the same Network, and all their children devices such as Subscriber Modules or Home APs are also mapped to the same network.
	GPON port	GPON port of the PON OLT device. PON ONU devices are connected.
	XGSPON port	XGSPON port of the PON OLT device. PON ONU devices are connected.

## Default network

cnMaestro has a default network into which unmapped devices will be placed. These can remain in the default network or moved to a named network. The default network cannot be deleted.

## Tree menu

Each node in the device tree has a menu icon (☰) that supports node-specific actions.

For example, the system node lets you to **Add Network** or launch the **Update Software** page, while individual devices allow you to **Edit** their cnMaestro settings, **Reboot**, or even **Delete** the device from management (so it can be transferred to another account). The actions supported across the tree include the following:

**Table 10** Tree menu

Action	Node	Description
<b>All Devices</b>		
Add Network	System	Add a new Network as a child to the System node.
Add Site	Network	Add a new Site as a child to the Network node.
Add Tower	Network	Add a new Tower as a child to the Network node.
Claim Devices	Site	Claim devices in a site

**Table 10** *Tree menu*

Action	Node	Description
Delete	Most Nodes	Delete a node from the tree. This is available for all nodes except System and the default network. Deleted devices will be removed entirely from the management system (along with their historical statistics). In order to delete a container, such as Network or Site, all nodes inside the container must be deleted first.
Edit	Most Nodes	Edit the cnMaestro settings, including node name and location. This is available for all nodes except System.  For 60 GHz cnWave, edit option applies for E2E Network and nodes. Node name can be edited.
Flash LEDs	Enterprise Wi-Fi	The LEDs of the device enables to identify and locate the device.
Reboot	Devices	Reboot the device.
Refresh	All	Refresh the node in the tree. This refreshes the node and its children only, not the entire tree.
Update Software	All	Update device software.
<b>60 GHz cnWave Network</b>		
Add Link	Network and Most Nodes	Add a new link to the System.
Add Node	Site	Add a new Node as a child to the Site.
Add Site	Network	Add a new Site to the E2E Network.
Refresh	Network	Refresh the network details
Download PoP(s) Onboarding Config	Network and PoP Nodes	Download PoP(s) Onboarding Configuration data.
Edit	Network	Edit name of the network
Hide or Show Sites	Network	Allows to hide or show sites in the E2E Controller Network tree menu.
Sync Topology	Network	To sync the Topology of E2E Network and cnWave 60GHz device.
Update Software	Network and Nodes	Allows the user to update the 60 GHz cnWave nodes software.
<b>PON Network</b>		
Sync Topology	Network	To sync the topology of PON devices (OLT/ONU).

## Wi-Fi AP Groups tab

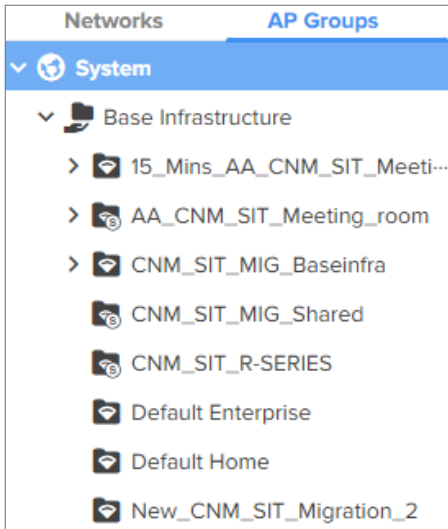

### Note

From cnMaestro release 5.1.0 onwards, the **Wi-Fi AP Groups** tab is deprecated.

The **Wi-Fi AP Groups** tab displays the Wi-Fi AP Groups configured in cnMaestro (and the devices mapped to them). AP Groups allow you to share configuration across many access points. They also display the aggregated statistics for the devices managed and present them within the AP Groups dashboard.

Figure 32 Wi-Fi AP Group tab

## Map navigation

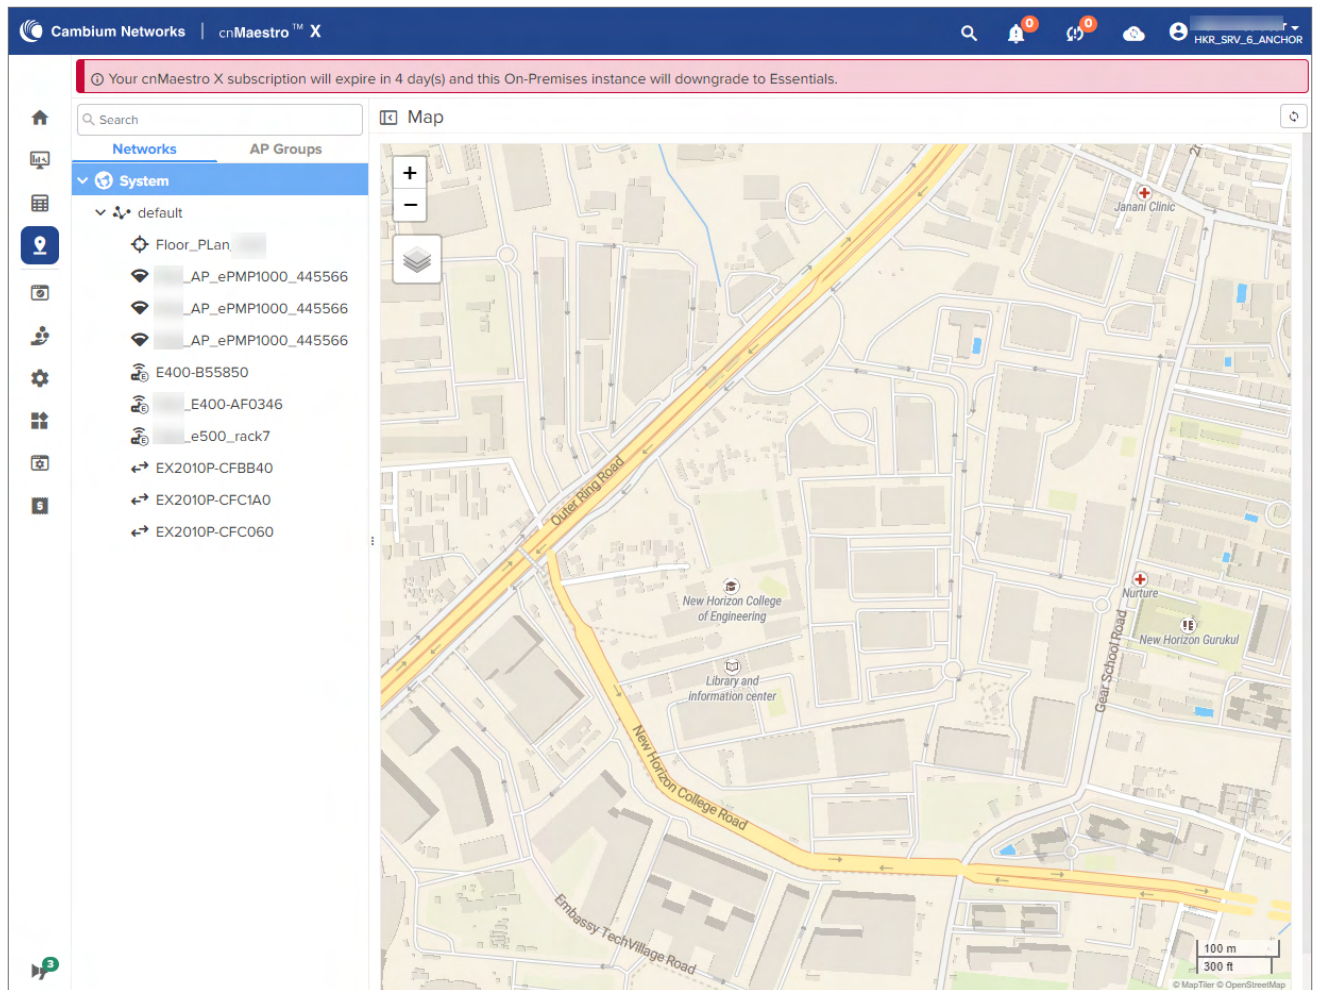

Maps are presented in Main menu with dedicated Map display. Maps often show Towers and Devices located in proximity. You can double-click the map nodes to navigate to the Device, Site, or Tower. By selecting a node in the map, the Device tree gets updated to reflect that node.

### Note

- Map view is supported for devices 60 GHz cnWave, cnRanger, cnPilot Home, cnMatrix, cnVision, ePMP, Enterprises Wi-Fi Series, PMP, PTP, and RV22 Home Mesh at the site- and device-levels.

Figure 33 Map navigation

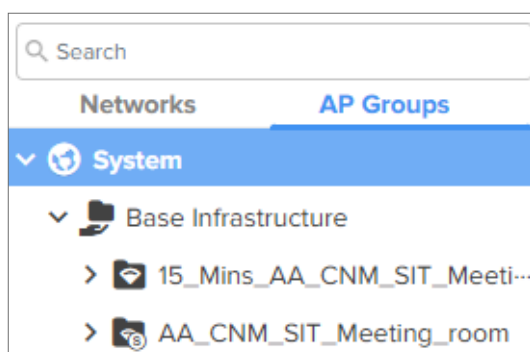

## Table navigation

Some tables display **Networks**, **Towers**, **Site**, or **Devices** and allow the user to click the node and navigate to the location of the node in the tree.

## Node search

Administrators can search for nodes within the device tree using the **Search** box. It allows the user to search based upon Device Name and MAC Address. Once the node is found and selected, one can navigate to it in the hierarchical tree.

Figure 34 Node search

# Enterprise Account view

## Overview

The Enterprise account differs from Access and Backhaul in that it is largely table-driven. It does not have the Quick Buttons or the Device Tree, instead, it has direct navigation for Devices, AP Groups, WLANs, Switch Groups, and Sites. Each of these is presented in tabular form.

## System

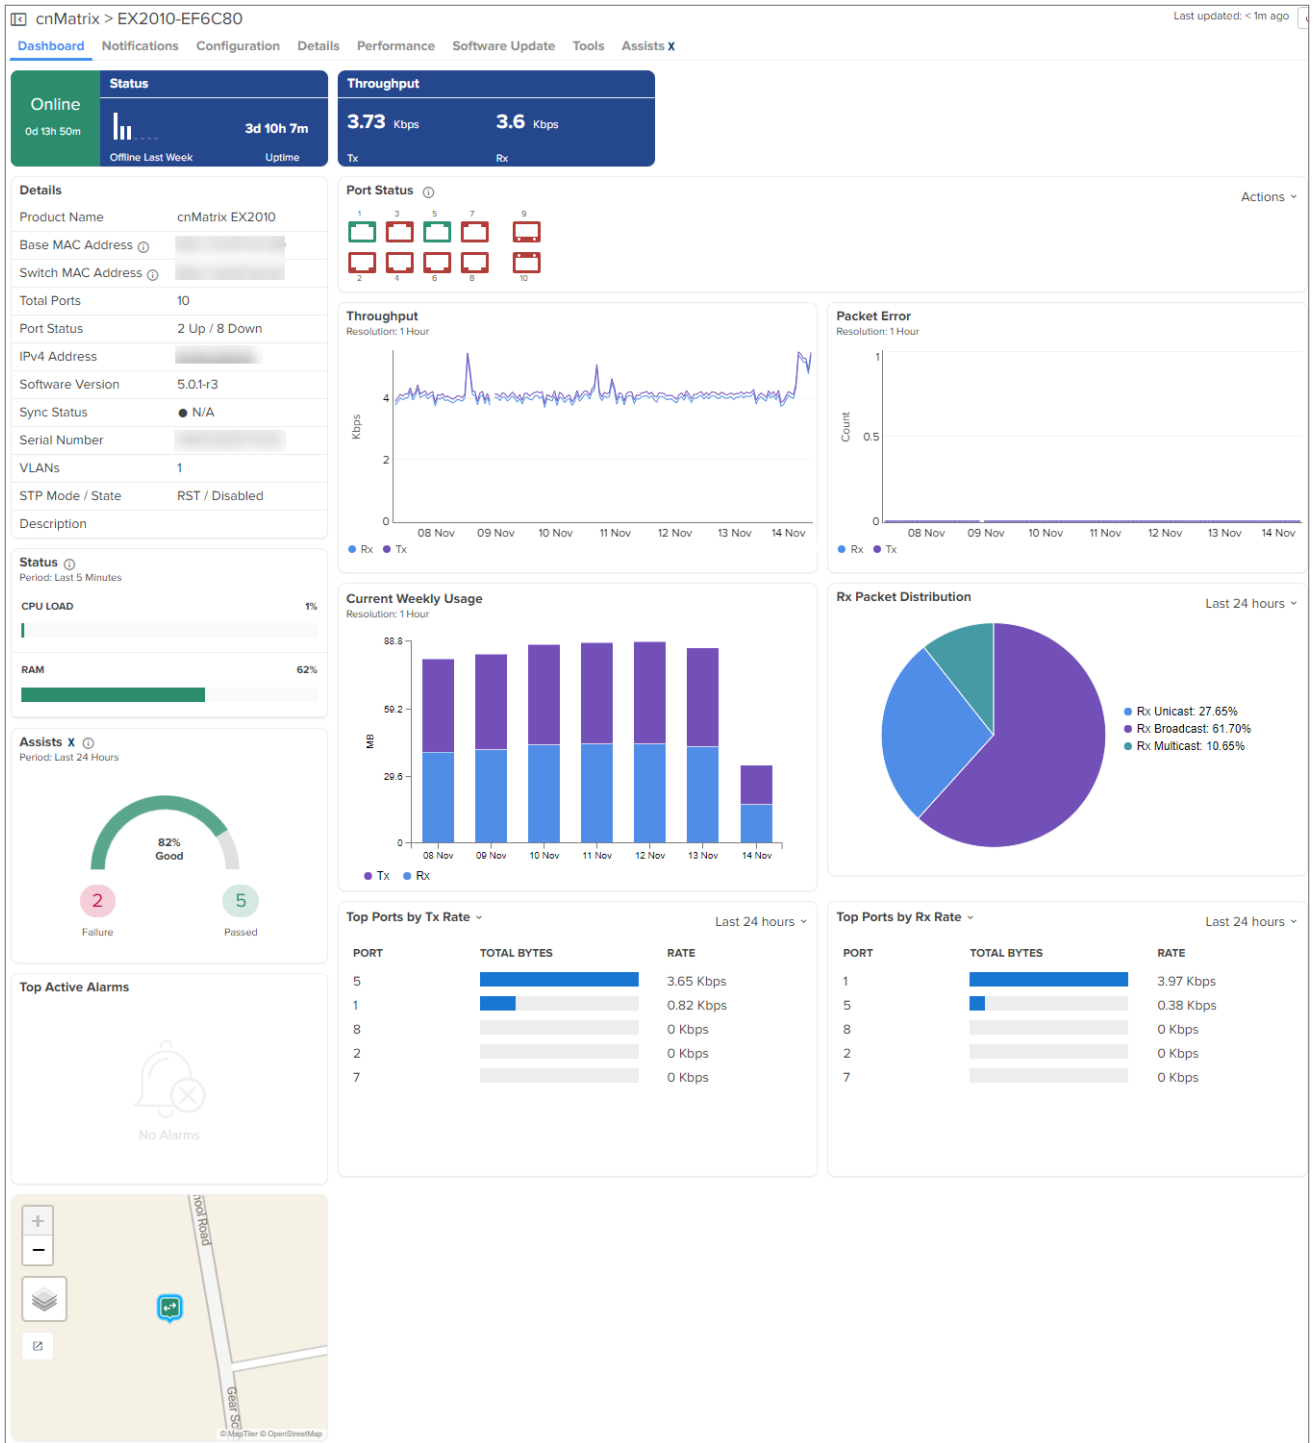

Global functionality is presented in the System menu. It aggregates data across the entire installation.

## Devices

The Devices section provides a searchable table listing all the devices in the system.

Device	MAC Address	Managed Account	Type	IPv4 Add...	IPv6 Add...	Status	Serial Number	Description	Onboard Duration	Active S/W Version
<input type="checkbox"/> F425_200dc5		Base Infrastructure	ePMP Force 425 SM		-	Offline (0d 12h 15m)			0d 12h 28m	5.4.1-RC15
<input type="checkbox"/> F409_200d16		Base Infrastructure	ePMP Force 400C AP		-	Offline (0d 12h 15m)			0d 12h 31m	5.4.2
<input type="checkbox"/> XV2-22H-E047Z		Base Infrastructure	XV2-22H		-	Offline (0d 12h 14m)			1d 7h 51m	6.6.0.2-b1
<input type="checkbox"/> XV2-22H-E53BE4		Base Infrastructure	XV2-22H		-	Offline (0d 12h 15m)			1d 14h 31m	6.6.0.1-r5
<input type="checkbox"/> XV2-2T0-3002D2		Base Infrastructure	XV2-2T0		-	Offline (0d 12h 15m)			1d 16h 59m	6.6.0.1-r5
<input type="checkbox"/> XV2-2-5342E5		Base Infrastructure	XV2-2		-	Offline (0d 12h 15m)			1d 17h 4m	6.6.0.1-r5
<input type="checkbox"/> XV2-23T-E5E987		Base Infrastructure	XV2-23T		-	Offline (0d 12h 15m)			2d 13h 32m	6.6.0.2-b1
<input type="checkbox"/> XV3-8-4EEEE0		Base Infrastructure	XV3-8		-	Offline (0d 12h 15m)			2d 13h 41m	6.6.0.1-r5

Selecting a device launches its management page.

## AP Groups

AP Groups manage shared configuration across APs. AP Groups also aggregate data for all the APs that map to them. This includes consolidating statistics and events/alarms and presenting AP Group centered pages for Dashboard, Notifications, Configuration, Statistics, Report, Software Update, Clients, and Mesh Peers.

Figure 35 AP Groups

Name	Type	AP Status	Scope	Clients Now	Clients 24 HR	Throughput (DL/UL)	WLANs	Auto Sync	Last Updated	Last Updated By	Origin

## WLANs

WLANs manage shared configuration across APs.

### Note

You can connect to or share a WLAN network using the QR code for the WLAN. Click the View QR Code (📄) icon.

Figure 36 WLANs

## Switch Groups

Switch Groups provide shared configuration for cnMatrix devices, and a subset of parameters can be overridden for each device. Administrators can simultaneously edit individual/bulk ports across all physical switches mapped to a Switch Group.

Figure 37 Switch Groups

Name	Offline Switches	Scope	Ports Up	VLANs	Active PoE Ports	Auto Sync	Last Updated	Last Updated By	Origin

## Sites

Sites are similar to AP Groups in that they aggregate statistics from many APs. The difference is a Site represents APs installed at a single physical location (and mapped to a Floor Plan). Sites also have their own Dashboard and aggregation pages.

## Side menu

The side menu provides high-level navigation through the cnMaestro UI. Click the menu (☰) icon in the left column to view the side menu names in the page.

Figure 39 Side menu

## Section tabs

All management sections are displayed in the context of the managed item, including System, AP, AP Group, Switch Groups, and Site. The options vary depending upon the menu selected. A breakdown is below:

**Table 11** *Section tabs*

Page	Tabs
System	Dashboard   Notifications   Configuration   Statistics   Report   Software Update   Applications   Clients   Mesh Peers   Analytics   Assists
Enterprise Sites	Dashboard   Notifications   Configuration   Statistics   Reports   Floor Plan   Devices   Applications   Clients   Mesh Peers   WIDS/WIPS   Analytics   Assists   WLANs
Home Sites	Dashboard   Notifications   Configuration   Reports   Software Update   Clients   Assists
PON Sites	Dashboard   Notifications   Configuration   OLTs   ONUs   Ports

## System status

The UI header has the following System status icons.

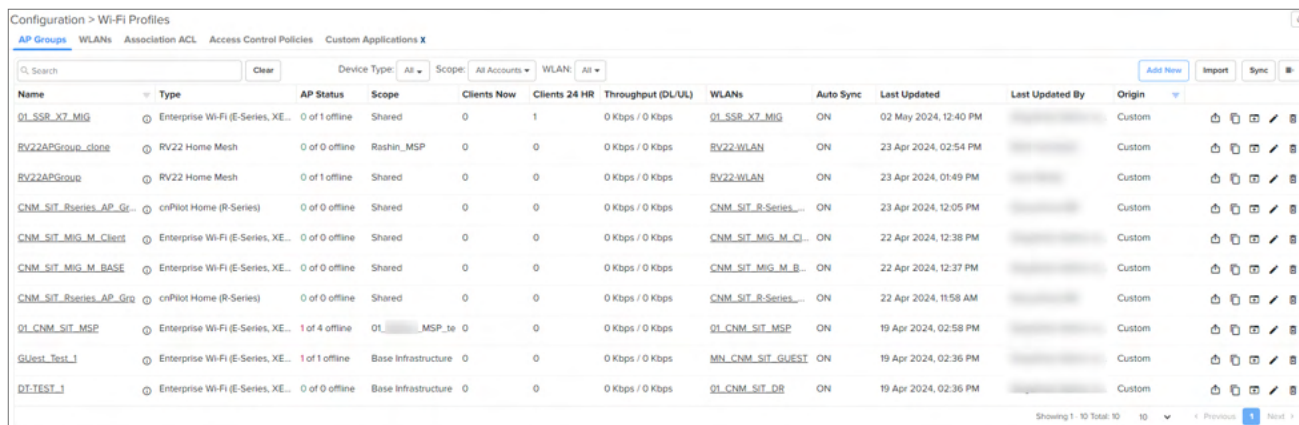

**Table 12** *System status icons*

Icon	Name	Description
	Announcements	Notifies the latest Device Software images, Package, or OVA to upload from Cloud.
	Major Alarms	The count of major alarms raised in the system.
	Out-of-Sync Devices	The number of Wi-Fi devices with unsynchronized configuration (which can occur when automatic synchronization is disabled in the AP Group or the configuration is changed directly on the device).

Clicking an icon navigates to the relevant management page.

## Data Tables and Chart UI Controls

Familiarize with UI controls required for working with the data tables and chart UI pages. An example of the data tables is displayed below:

Name	Type	AP Status	Scope	Clients Now	Clients 24 HR	Throughput (DL/UL)	WLANs	Auto Sync	Last Updated	Last Updated By	Origin
01_SSR_X7_MIG	Enterprise Wi-Fi (E-Series, XE...	0 of 1 offline	Shared	0	1	0 Kbps / 0 Kbps	01_SSR_X7_MIG	ON	02 May 2024, 12:40 PM		Custom

### Note

**Mouse Rollover Behavior**—In the data tables, when some of the columns on the right side are

hidden, if you move the mouse pointer over the row, the action icons on the right most side are displayed without having to move the scroll bar to the right.

## Logout

Log out of cnMaestro by clicking on the user icon in the upper-right corner and selecting **Logout**. You can also navigate to: **Administration > Users > Session Management > Sessions**.

## Device Onboarding

Onboarding is the process of adding a device into cnMaestro Cloud management.

This section includes the following:

- [Onboarding Overview](#)
- [Claiming Devices](#)
- [Device Onboarding](#)
- [Zero Touch Configuration](#)
- [Claiming Your First Wi-Fi AP \(Cloud\)](#)
- [Claiming multiple Wi-Fi APs from the AP Group](#)
- [Claiming multiple Enterprise devices from the Enterprise Site Dashboard](#)
- [Miscellaneous Onboarding Issues](#)
- [Onboarding Examples](#)
- [Device-Specific Onboarding Instructions](#)

## Onboarding Overview

The Onboarding flow includes claiming the device (which maps it to the correct management account) and optionally pre-provisioning the device by selecting its software image and configuration. It also supports setting Device Name, Location, Software Version, and Configuration. When the onboarding process completes, the device will be under full cloud management.

Type	Serial Number	Name	MAC	Tier	IP Address	Source IP	Managed Account	Onboarding Mode	Status	Onboarding Status	Subscription Status	Duration
PMP 450 SM		PMP-677823		N/A	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	Will attempt after appr...	1d 1h 52m
PMP 450 SM		PMP-438E5D		N/A	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	Will attempt after appr...	2d 2h 0m
cnMatrix		cnMatrix-F5AAE0		Tier 20	N/A	N/A	Application issue ter	Using Serial Number	Offline	Waiting for Device	Completed	0d 22h 37m

PMP 450b High ...		PMP 450i SM-BE...		Free Tier	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	Completed	5d 22h 10m
PMP 450b High ...		PMP 450i SM-BE...		Free Tier	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	Completed	5d 22h 10m

## Claiming Devices

A device is claimed when it is explicitly added to Cloud management using the Serial Number or Cambium ID. The difference between the two is the Serial Number is entered through the Cloud management UI and Cambium ID is entered via the Device UI or through SNMP.

### Note

- Only serial numbers with a length of 12 characters can be claimed through the Cloud management UI.
- Devices with serial numbers less than 12 characters for example, 10 or 11 characters, need to be claimed on the device UI using the Cambium ID.

All claimed devices are placed in the onboarding queue. The devices need to be approved in order to become fully managed.

## Claiming Devices with Serial Number

Claiming with Serial Number means entering the serial numbers of devices, one per line, and clicking the **Claim Devices** button. The system prompts the user to validate the devices before applying them. When complete, they will be placed into the onboarding queue, where they can be pre-provisioned to update software or configuration before onboarding.

**Figure 40** Claiming Devices with Serial Number

**Claim Devices with Serial Number** ✕

Enter the Serial Numbers (MSNs) of the devices you want to add to your account (comma-separated or one per line). Once a device is claimed, it is placed in the Onboarding Queue when it comes online.

**Note:** All devices with 12 digit strong Serial Numbers can be claimed here. Other devices can be claimed using [Cambium ID](#)

Managed Account:

Enter / Place a cursor in the box and use a barcode scanner to quickly claim devices.

To claim a device using the Serial Number:

1. Navigate to **Onboard** page > click **Claim Device**.

The screenshot shows the 'Onboard' page with a table of devices. The table has columns for Type, Serial Number, Name, MAC, Tier, IP Address, Source IP, Managed Account, Onboarding Mode, Status, Onboarding Status, Subscription Status, and Duration. The devices listed include PMP 450 SM, crMatrix, ePMP, and PMP 450i SM variants. Most devices are in a 'Waiting for Device' state with a status of 'Offline'.

**Claim Devices with Serial Number** window appears.

**Note**  
The user must manually select a PON network before approving the device.

The dialog box contains the following text: 'Enter the Serial Numbers (MSNs) of the devices you want to add to your account (comma-separated or one per line). Once a device is claimed, it is placed in the Onboarding Queue when it comes online.' Below this is a note: 'Note: All devices with 12 digit strong Serial Numbers can be claimed here. Other devices can be claimed using [Cambium ID](#).' There is a dropdown menu for 'Managed Account' set to 'Base Infrastructure'. A large text input area is provided for entering serial numbers, with a prompt: 'Enter / Place a cursor in the box and use a barcode scanner to quickly claim devices.' At the bottom are 'Clear' and 'Claim Devices' buttons.

2. Enter the serial number of the device.
3. Click **Claim Devices**.

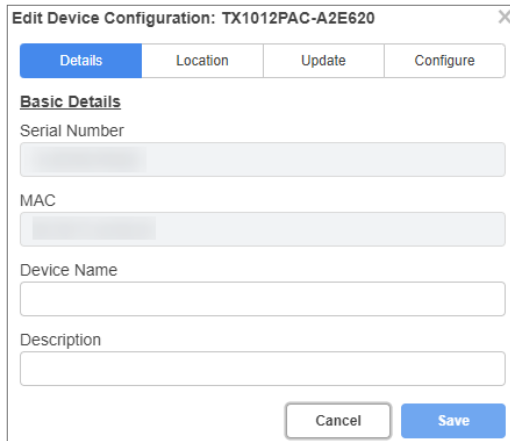

**Note**  
Slot availability is available only for cnMaestro X account users.

4. The device appears on the onboarding page.

While in the onboarding queue, the devices can be pre-provisioned with the following settings:

**Figure 41** Onboarding Queue Edit Device Configuration - Basic Details

- **Details**—Displays basic details of the device, such as Serial Number, MAC address, device name and description.  
You can edit only the device name and description parameters.
- **Location**—Displays details, such as network, tower/site to which you want to assign the device, and the location information.  
You can edit all parameters in this tab.
- **Update**—Update the software version on the device in this tab.
- **Configure**—Decides the configuration type that must be used for configuring the device.

5. Click **Approve**.

If slots are available, then cnMaestro approves the devices and automatically onboards the devices. However, if there are no slots available, then a corresponding error message is displayed in the **Subscription Status** column.

New devices periodically query cnMaestro Cloud to see if they have been claimed (it generally takes between 1 to 15 minutes to show up in an account, depending upon when the device was last rebooted). Once a device has been added to a Cloud management account, it will be visible in the Onboarding Queue.

**Note**

Devices must be able to access <https://cloud.cambiumnetworks.com> to be claimed and onboarded. HTTPS proxies are currently not supported. If your device is not showing up in the Cloud management UI, you should verify network connectivity and reboot the device to prompt more frequent connection attempts.

- **Not Enough Slots available in PTP 820/850 devices**

User receive the license failure message in PTP 820/850 device dashboard, when no slots are available.

## Approving Devices

Devices in the Onboarding Queue must be approved before they are updated and added to the Cloud Management. Click the approval button in the device to onboard. Unapproved devices will remain in the Onboarding Queue indefinitely.

### Note

- Once approved, connected devices are onboarded and added to the account immediately, and all configuration or software updates are applied. Approved devices will be onboarded as soon as they connect.
- To pre-provision devices, you should make all your changes before approving them. After devices have been onboarded, additional configuration or software updates must be done through the standard management user interface.

Devices that have completed onboarding remain in the Onboarding Queue for one week.

## Claiming Devices with Cambium ID

The Cambium ID is defined when the Cloud management is created. You can view it on the **Home** page; it uniquely identifies the account.

To claim a device with Cambium ID, you need to have access to the device. Cambium ID claiming is required for devices that do not have a 12-character Serial Number, and it is optional for devices with a 12-character Serial Number. There are two ways to claim a device with Cambium ID.

**Table 13** Types of Claiming Devices with Cambium ID

Type	Description
Device UI	Enter the Cambium ID/Onboarding Key directly into the device UI. This prompts the device to access Cambium Cloud and be placed in the onboarding queue.
Device SNMP	The Cambium ID/Onboarding Key can also be entered into the device over SNMP. This allows one to quickly onboard existing devices using an SNMP manager. The correct OID will be dependent upon the device type. The string entered into the OID should be of the format “<Cambium ID>:<Onboarding Key>”.

The directions for each specific device type are presented later in this chapter. Once devices are added to the Onboarding Queue using Cambium ID, the administrator must approve them prior to them being onboarded.

## Cambium ID Configuration

You must configure the Cloud Manager to support Cambium ID onboarding. Once enabled, Cambium ID onboarding will work for all device types.

**Figure 42** *Cambium ID Configuration*

Onboard

Devices 60 GHz cnWave Edge Controller PON **Settings**

You can add devices to your account by logging into the Device UI directly and entering the Cambium ID and Onboarding Key (these were set when you created your Company Account, and they can be modified below). ePMP 1000, PMP 430/450 and ePMP 1000 Hotspot must be claimed using this method. ⓘ

**Cambium ID:** 5\_0\_0\_X\_CLOUD\_REGRESSION

Allow device to be claimed using Cambium ID

Enabling this feature allows a device to be claimed by entering the Cambium ID and Onboarding Key on the device. This information can be set on the device via its user interface (or SNMP or CLI on some devices). Each user can have their own Onboarding Key. [Learn more](#)

The following users can claim devices using the cnMaestro Cambium ID and the user's Onboarding Key.

User: [redacted]	Onboarding Key: [redacted]	[edit]	Delete
User: [redacted]	Onboarding Key: [redacted]	[edit]	Delete
User: [redacted]	Onboarding Key: [redacted]	[edit]	Delete
User: [redacted]	Onboarding Key: [redacted]	[edit]	Delete
User: [redacted]	Onboarding Key: [redacted]	[edit]	Delete
User: [redacted]	Onboarding Key: [redacted]	[edit]	Delete

Save Cancel Add New

## Cambium ID Onboarding Key

An Onboarding Key must be associated with a Cambium ID before onboarding. This provides security and tracking benefits for onboarded devices. The Onboarding Key can be configured at **Onboard > Settings**.

Each onboarding key is mapped to an account administrator. This allows Cambium Cloud to know who is onboarding a device. Onboarding Keys can also be revoked if needed.

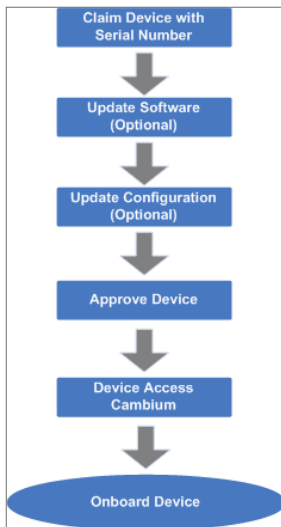

## Onboarding Queue

The Onboarding Queue holds a list of pending and recent (last 24 hours) device onboards. It allows the administrator to pre-provision device software and configuration, as well as signal a device is ready to be onboarded. The process flows for how the Onboarding Queue is used are slightly different based upon how the device was claimed.

## Serial Number flow

When onboarding with Serial Number, the device can be fully provisioned before it contacts Cambium Cloud and is placed in the Cloud Management. This allows it to be added immediately upon connection.

**Figure 43** Serial Number flow

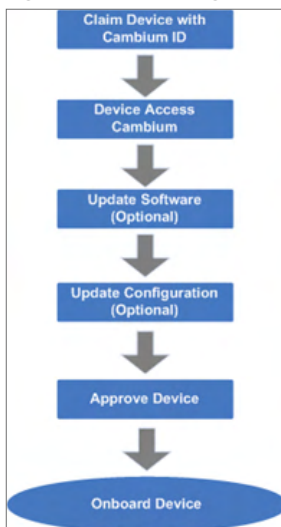

**Note**

When a user onboards using a Serial Number, the software update and configuration can be defined even before the device physically accesses the account.

## Cambium ID flow

The flow is a little different when using Cambium ID. Here devices must connect to Cambium Cloud before they are added to Cloud Management. The administrator needs to then approve them in the Onboarding Queue after optionally updating the software version and device configuration.

**Figure 44** Claiming Devices Using Cambium ID

## Onboarding fields

The following table details the columns in the Onboarding Queue. Some of these fields will be unknown or uncertain until the physical device has contacted Cloud Management.

**Table 14** Onboarding fields

Parameter	Description
Actions	<p>Before a device is onboarded, it must be approved. There are two buttons available:</p> <ul style="list-style-type: none"> <li>• <b>Approve:</b> Click <b>Approve</b> to enable the device for onboarding. If the device is connected, it will be onboarded immediately.</li> <li>• <b>Delete:</b> If the device has been added in error, you can delete it from the Onboarding Queue. This also disconnects the device and allows it to be added to another account. The Delete button is only enabled before the device has started the onboarding process.</li> </ul>
Added By	<p>The user who added this device for onboarding.</p> <p><b>Note:</b> If the Device is claimed by a tenant user, the user information is not shown on the Onboarding page.</p>
Configure	<p>This highlights configuration that is applied to the device before onboarding. It is presented as a set of icons that represent: software update, configuration update, and map placement. The icons have the following colors:</p> <ul style="list-style-type: none"> <li>• Gray: Indicates that nothing is applied.</li> <li>• Green: Indicates that the parameter is set and applied when onboarded.</li> </ul>
Device	The name of the device. This is set manually, or, if unset, it will be read from the device.
Duration	Displays when the status last changed for the device.
IP Address	The IP address of the device. This is only available after the device contacts cnMaestro.
MAC Address	The MAC address of the device (if known).
Serial No	The Serial Number of the device.
Status	<p>The current status of onboarding:</p> <ul style="list-style-type: none"> <li>• <b>Waiting for Approval:</b> The device has contacted cnMaestro, but it has not been approved, so it is in a waiting state.</li> <li>• <b>Waiting for Devices:</b> The user has claimed the device, but the device has not connected.</li> <li>• <b>Onboarded:</b> The device has completed onboarding and must now be managed through normal Configuration and Software Update processes.</li> </ul>
Type	The type of the device (if known or manually configured).

## Onboarding Configuration

Before a device has been approved, the administrator can pre-provision the device. This is presented through a set of icons (depicted below), which represent configuration update, software download, and device map position.

The color icon indicates the following:

- **Gray:** No changes are made to the device configuration (.
- **Green:** Changes are applied successfully (.

**Note**

Onboarding configuration can be modified until the onboarding process has begun. The approval however needs to be turned off before any changes can be made.

## Basic Details

The basic configuration includes Serial Number, MAC, Device Name, Mode, and Description. A Comment can also be specified to provide additional context to the device.

## Configure Device

Configure Device follows the standard template system (see the section on Template Configuration for full details). The administrator can select an existing configuration template and set any required variables.

### cnMatrix Configure Device

The administrator can select configuration method with the existing template or Switch Group.

User can configure the following Switch Group options while onboarding the devices:

- General
- IP Routes
- Spanning Tree
- VLANs

Set the device location using a map

Device Configuration [View Device Configuration](#)

Configuration Method  
 Switch Group  Template

Switch Group  
SwitchGroup27 [Edit](#) [Edit Ports](#) [Create](#)

Note: Click on 'Edit Ports' link for Port configuration.

Advanced Settings

**VLANs** Spanning Tree IP Routes General

VLAN ID	IGMP Snooping	IGMP Querier	Querier IP ...	Vlan Interface S...	DHCP Client	IP Address	Subnet Mask
1	Disabled	Disabled	N/A	Enabled	Disabled	10.110.209.111	255.255.25...

[Add New](#) Showing 1 - 1 Total: 1 10 < Previous 1 Next >

## Software Update

Software Update pushes a software image to the device. The administrators can select an image version and push to all ePMP (AP or SM) device selected in a job.

## Device Location

The Device location configuration includes Network, Tower, Latitude, and Longitude on a map.

## Onboarding Actions

### Approve Device

An administrator needs to approve devices before onboarding can begin. This is done by selecting Approve. As soon as a device is approved, it is eligible to start the onboarding process. This occurs immediately with connected devices. Any changes to the Onboarding Configuration need to be completed before Onboarding begins; the Approval check must also be disabled.

### Delete Device

Devices deleted from the Onboarding Queue are removed from Cloud management. They can then be added to other accounts. See below for how to delete devices that have already onboarded.

## 60 GHz E2E Controller Onboarding

The Onboarding Queue has a separate tab for 60 GHz cnWave E2E Controllers, which must be approved by the user before they are added to cnMaestro as an E2E Network and can manage 60 GHz cnWave devices. This approval can be done either through the Onboarding Queue or the Hierarchical Tree (where the E2E Network is placed).

Once the onboarding is approved, the 60 GHz cnWave E2E Network (and its devices) can be managed by cnMaestro.

Onboard

Devices **60 GHz cnWave** Edge Controller PON Settings

**E2E Controllers** Devices

The Onboarding Queue holds 60 GHz cnWave networks before they are added to your account. 60 GHz cnWave Network must be approved in order to complete the onboarding process and be managed by cnMaestro.

[Claim Onboard E2E](#)

Network Name	Management Address	IPv6 Address	Deployment	Managed Account	E2E Controller Version	Status	Duration
No Data Available							

Showing 0 - 0 Total: 0 10 < Previous Next >

\*Note: Network will remain in the queue for 1 week after onboarding successfully.

### Note

If **Auto Generate IPv6 Addresses** is enabled, E2E Controller fetches the IPv6 addresses automatically.

For information on how to onboard E2E devices, refer to [60 GHz E2E Controller Onboarding](#).

For details on how to onboard Edge Controller and PTP 820/850, refer to [Onboard Edge Controller](#)

## Header Notification

The header bar in cnMaestro displays the following UI controls:

These UI controls are located on the top right side of the UI page. The **Search** UI control allows you to provide keywords and search for the required knowledge base information (for example, onboarding devices to cnMaestro) available in Cambium community. The **Notifications** UI control provides the count of major alarms. The **Out of sync devices** UI control provides the count of devices that are out of sync. The **Administrator** UI control supports a drop-down list, which you can use to search and view account names, create account, edit profile, and log out.

## Zero Touch Configuration

Zero Touch Configuration allows PMP SMs and also ePMP SMs to automatically appear in the Onboarding Queue, provided parent AP is already onboarded.

Zero Touch Onboarding Of SM Devices

Enabling this feature allows ePMP and PMP SMs to automatically appear in onboarding queue, provided parent AP is already onboarded.

Allow automatic onboarding of ePMP and PMP SM devices

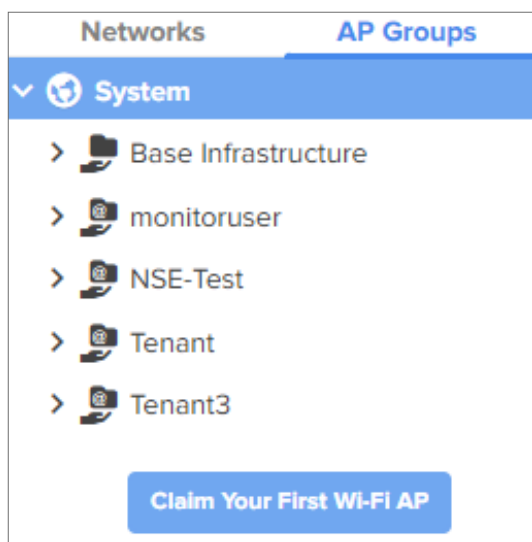

## Claiming Your First Wi-Fi AP (Cloud)

Irrespective of the account type, the **Claim Your First Wi-Fi AP** option has been introduced to simplify the Wi-Fi AP deployment. This option allows the claiming of Wi-Fi APs. This option is available when no APs have been claimed for your device.

Consider the following points for using the **Claim Your First Wi-Fi AP** option:

- For the access and backhaul account type, navigate to the **Wi-Fi AP Group** tree view. You can see this option for claiming your first Wi-Fi AP.
- For the Wi-Fi account type, the **Wi-Fi AP Groups** tree menu (available on the Monitor and Manage page) is launched with the **Claim Your First Wi-Fi AP** option automatically (as shown in [Figure 45](#)).
- For Cloud users who want to claim Wi-Fi AP for a single device (after onboarding the device for the first time and if no AP has been claimed), navigate to the main **Home** page. You can locate the **Claim Your First Wi-Fi AP** widget on the right side of the **Home** page (as shown in [Figure 46](#)).

**Figure 45** The Claim Your First Wi-Fi AP option

**Figure 46** The Claim Your First Wi-Fi AP widget on the Home page

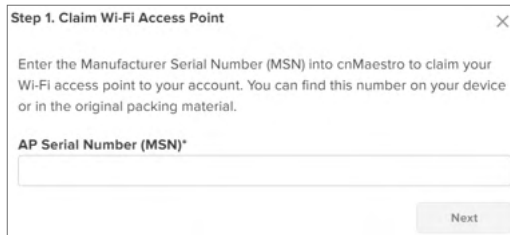

If there are any APs claimed already for the Wi-Fi devices, this **Claim Your First Wi-Fi AP** option is not available on Home and Monitor and Manage UI pages

## Claiming a single Wi-Fi AP from the Home page

To claim your first Wi-Fi AP for a single device, perform the following steps:

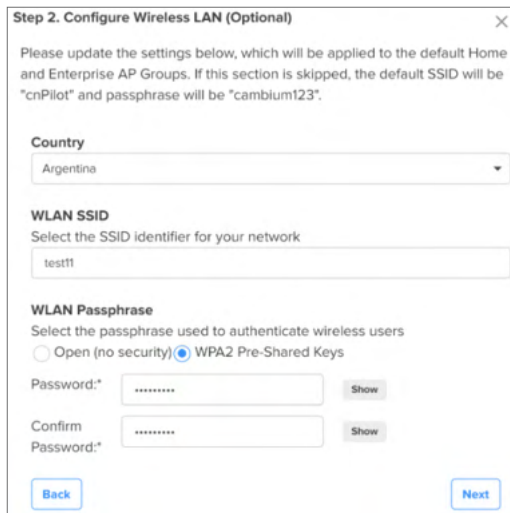

1. On the main **Home** page, locate the **Claim Your First Wi-Fi AP** widget on the right side of the page and click **Get Started** (as shown in [Figure 46](#)).

The **Claim Wi-Fi Access Point** screen appears.

2. Enter a valid value in the **AP Serial Number (MSN)** text box (for example, AxCx4040Q2V8) and click **Next**.

The **Configure Wireless LAN (Optional)** screen displays multiple settings, which are applicable to Wi-Fi APs (home and enterprise Wi-Fi).

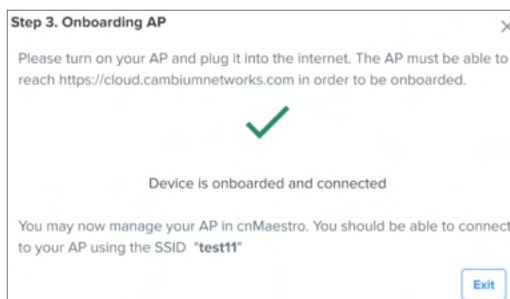

You can update the following settings based on your requirements.

- **Country:** Name of the country (used for the regulatory purpose).
- **WLAN SSID:** Unique name or ID that identifies your wireless network. Do not leave this field blank.
- **WLAN Passphrase:** The passphrase is supported only if the WPA2 Pre-Shared Keys option is selected as the security method. The minimum length of the passphrase is eight characters.

If you skip configuring this settings section, the default SSID and the security configuration of the device are retained.

3. Click **Next**.

The **Onboarding AP** screen displays the onboarding status (for example, waiting) for the device. If the device is successfully onboarded, the **Onboarding AP** screen displays the following message:

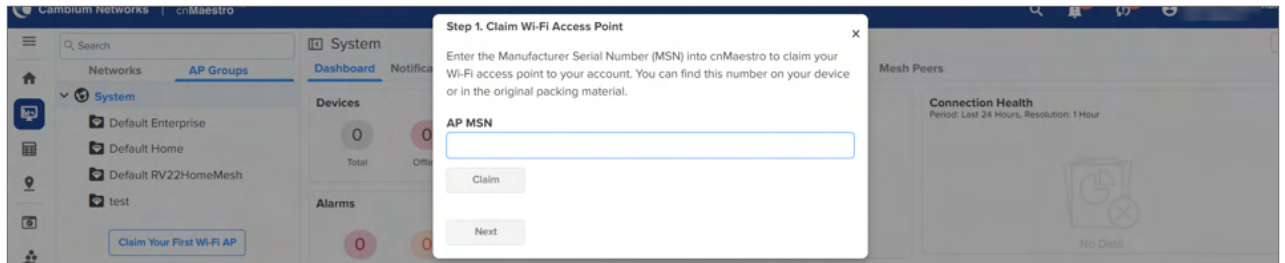

If the onboarding fails, the **Onboarding AP** screen displays a message indicating the failure status.

## Claiming a single Wi-Fi AP using the AP Group menu

To claim your Wi-Fi AP using the **Wi-Fi AP Groups** tree menu, perform the following steps:

1. Navigate to **Monitor and Manage > Wi-Fi AP Groups** tree menu, and click **Claim Your First Wi-Fi AP** (as shown in [Figure 45](#)).

The **Claim Wi-Fi Access Point** screen appears.

2. Enter a valid value in the **AP MSN** text box and click **Claim**.

The device is successfully claimed.

3. Click **Next**.

The **Configure Wireless LAN (Optional)** screen displays the following fields for configuration: Country, WLAN SSID, and WLAN Passphrase.

4. Enter the configuration details.

**Step 2. Configure Wireless LAN (Optional)**

Please update the settings below, which will be applied to the default Home and Enterprise AP Groups. If this section is skipped, the default SSID will be "cnPilot" and passphrase will be "cambium123".

**Country**  
India

**WLAN SSID**  
Select the SSID identifier for your network  
cnPilot1

**WLAN Passphrase**  
Select the passphrase used to authenticate wireless users  
 Open (no security)  WPA2 Pre-Shared Keys  
Password: [masked] Show  
Confirm Password: [masked] Show

**Back** **Finish**

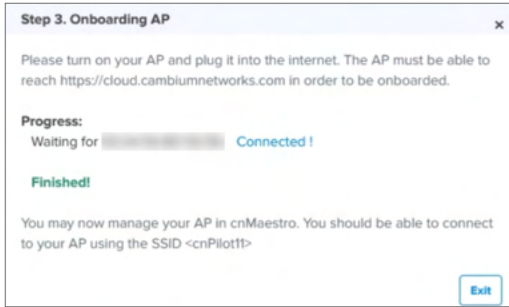

You can configure the following settings based on your requirements:

- **Country:** Name of the country (used for the regulatory purpose).
- **WLAN SSID:** Unique name or ID that identifies your wireless network. Do not leave this field blank.
- **WLAN Passphrase:** The passphrase is supported only if the WPA2 Pre-Shared Keys option is selected as the security method. The minimum length of the passphrase is eight characters.

If you skip configuring this settings section, the default SSID and the security configuration of the device are retained.

5. Click **Finish**.

The **Onboarding AP** page displays the onboarding status and configured actions for the device.

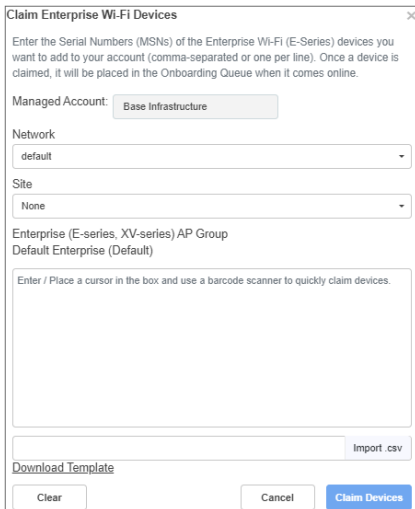

The device is mapped to the default Wi-Fi AP Group, and the configuration is updated in the Default Enterprise WLAN.

## Claiming multiple Wi-Fi APs from the AP Group

To claim multiple devices from the AP Group, complete the following steps:

1. Navigate to the AP Groups tree view and click the actions (⚙️) icon for the selected AP group.
2. Click **Claim Device(s)**.
3. In the **Claim Enterprise Wi-Fi Devices** pop-up dialog select the Network and Site under which these devices should be placed and by default devices claimed under this group will have its configuration settings.

4. Specify the Manufacturing Serial Numbers (MSNs) of the devices line-by-line or comma-separated, or click **Import .csv** to import the MSNs of the devices from a CSV file.

### Note

You can include the device host name in the CSV file while claiming Enterprise devices through the import CSV option.

**Figure 47** Example CSV file to include the device name

	A	B
1	Serial Number	Device Name
2	W8TYHR3UI9OP	South-East-1
3	HRU38SJ30SLT	North-Pole
4	UIE83YGHBS23	Point-Nemo

5. Click **Claim Devices** to add to the selected AP Group with the configuration applied.

### Note

In cnMaestro On-Premises the procedure is the same as Cloud, but instead of MSN, the user should use the Device MAC Addresses.

## Claiming multiple Enterprise devices from the Enterprise Site Dashboard

To claim multiple Enterprise devices (NSE, cnMatrix, Wi-Fi AP) from the Site Dashboard, perform the following steps:

1. Navigate to the **Manage > Network** tree view and click the actions (⚙️) icon for the site.
2. Click **Claim Device(s)**.

The **Claim Enterprise Devices** window is displayed.

**Figure 48 Claim Enterprise Devices** window

3. In the **Claim Enterprise Devices** window select the NSE group, Switch group, or the Enterprise AP Group that must be applied for the Enterprise devices.

The devices claimed under this site will have the configuration settings from the selected device group (NSE, switch, or AP).

4. Specify the MSNs of the devices line-by-line or comma-separated, or click **Import .csv** to import the MSNs of the devices from a CSV file.

Click **Download Template** to download a sample CSV file.

### Note

You can include the device host name in the CSV file while claiming Enterprise devices through the import CSV option.

**Figure 49 Example CSV file to include the device name**

	A	B
1	Serial Number	Device Name
2	W8TYHR3UI9OP	South-East-1
3	HRU38SJ30SLT	North-Pole
4	UIE83YGHBS23	Point-Nemo

5. Click **Claim Devices** to add the devices to the selected device group and click **Apply Configuration**.

## Miscellaneous Onboarding Issues

### Configuring Devices After Onboard

When Onboarding completes, the device will no longer be managed through the Onboarding Queue. Instead, Configuration and Software Upgrade needs to be performed through the standard cnMaestro UI sections.

### Deleting Devices

While a device is in the Onboarding Queue, it can be removed from the account by deleting it from the queue. After Onboarding, the device needs to be manually deleted. The device can be deleted either by right-clicking the device node in the tree and selecting the **Delete** option or from the **Inventory** page.

### Transferring Device Ownership

When a device is sold to a third-party, the device ownership needs to be transferred. This is done by deleting the device in one account, thereby opening it up to being claimed by another.

## Onboarding Examples

This section provides the following topics:

- [Onboarding Existing Networks](#)
- [Onboarding New Devices](#)

### Onboarding Existing Networks

Existing networks can be onboarded by setting Cambium ID on already-deployed devices over SNMP (see the section on Device-Specific Onboarding for details on the OID). These devices will contact Cambium Cloud and be mapped to the corresponding Cloud Management. To complete onboarding, the administrator should navigate to the Onboarding Queue and approve all devices.

### Onboarding New Devices

New devices are onboarded either using Cambium ID (which is a requirement for serial numbers less than 12 characters in length) or through the Serial Number.

#### Claiming Devices using Cambium ID and Device UI

- Configure cnMaestro to support Cambium ID

First, make sure Cambium ID support is enabled, and a password field is set.

1. Navigate to **Home > Onboard Devices** and click **Claim from Device**.
2. Select **Allow device to be claimed using Cambium ID**.

3. Click **Add New**.
  4. Choose the name of the user from the **Name** drop-down list.
  5. Enter the key for the user in the **Onboarding Key** textbox. The minimum length of characters for the key is 8.
  6. Click **Save**.
- Set Cambium ID on the device UI

Launch the device UI and enter the Cambium ID and password. The example below defines how to set for ePMP.

- Login to the device UI and navigate to **Configuration > System > cnMaestro tab**.
  - Enable the radio button for enabling **Remote Management**.
  - Enter the cnMaestro cloud URL in the **cnMaestro URL** textbox.
  - Enter Cambium ID in the **Cambium ID** textbox.
  - Enter the Onboarding key in the **Onboarding Key** textbox.
  - Click **Save** the device.
- Approve the device for onboarding:
    1. Navigate to **Home > Onboard Devices** and click the **Onboard** tab.
    2. Find the device and onboard using the Cambium ID.
    3. You can able to see who onboarded the device.
    4. The Status field should display **Waiting for Approval**.
    5. Make any additional onboarding configuration changes you want.
    6. Approve the device by clicking the **Approve** button under **Actions**.
    7. The device status will change to **Onboarded** after onboarding finishes under the **Status**.

## Claiming Devices Using Cambium ID and SNMP

Devices can be claimed over SNMP by using the Cambium ID and Onboarding Key. See [Claiming Devices with Cambium ID](#) section for devices you would like to onboard in this way.

## Device-Specific Onboarding Instructions

This topic describes the following sub-topics:

- [Onboarding cnMatrix](#)
- [Onboarding cnRanger](#)
- [Onboarding cnReach](#)
- [Onboarding cnPilot R-Series](#)
- [Onboarding cnVision](#)
- [Onboarding Enterprise AP](#)
- [Onboarding ePMP 1000](#)
- [Onboarding PMP](#)
- [Onboarding PTP 650/670/700](#)

- [Onboarding Xirrus device](#)
- [Onboarding a cnWave 5G Fixed BTS device](#)
- [Onboard Edge Controller](#)
- [Onboard PTP 820/850 devices](#)
- [Onboarding the NSE 3000 Devices to cnMaestro](#)
- [Onboarding PON devices to cnMaestro](#)

## Onboarding cnMatrix

You can onboard cnMatrix through device CLI and using the device UI.

Execute the following command to onboard cnMatrix device connection to cnMaestro:

```
cnMatrix(config) # cnMaestro url cloud.cambiumnetworks.com
```

Execute the following command to view the status of cnMatrix device connection to cnMaestro:

```
cnMatrix(config) # show cnMaestro
```

```

```

## Onboarding cnMatrix through UI

In the cnMatrix device UI, complete the following steps:

1. Navigate to **System > Remote Management**.
2. Enter the details in **Remote Management** section.

3. Click **Apply**.

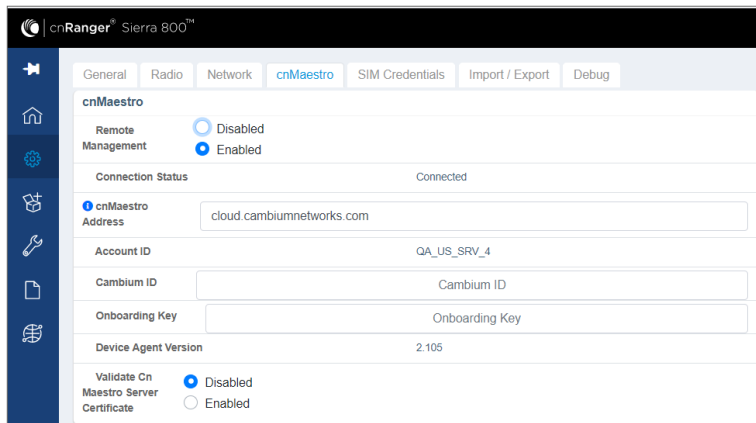

## Onboarding cnRanger

To view the status of Sierra 800 and Tyndall 101 connection to cnMaestro, complete the following steps.

### Setting static URL for cnMaestro on Sierra 800

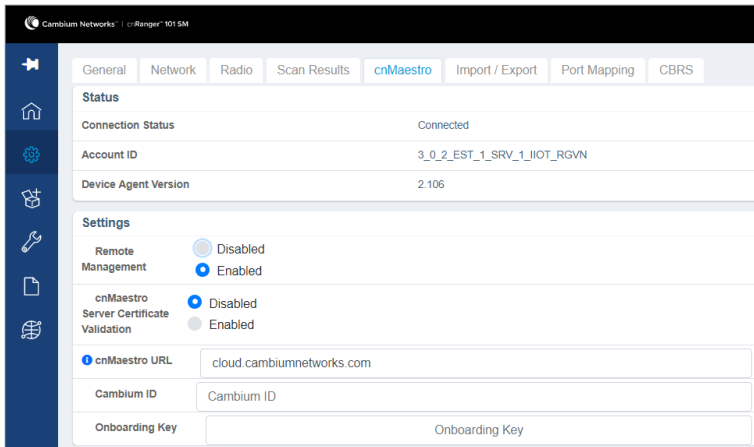

1. Navigate to **Configuration > cnMaestro**.
2. Under cnMaestro section, enter the URL in the cnMaestro Address.
3. Click **Save**.

### Setting static URL for cnMaestro on Tyndall 101

1. Navigate to **Configuration > cnMaestro**.
2. Under cnMaestro section, enter the URL in the cnMaestro URL.

3. Click **Save**.

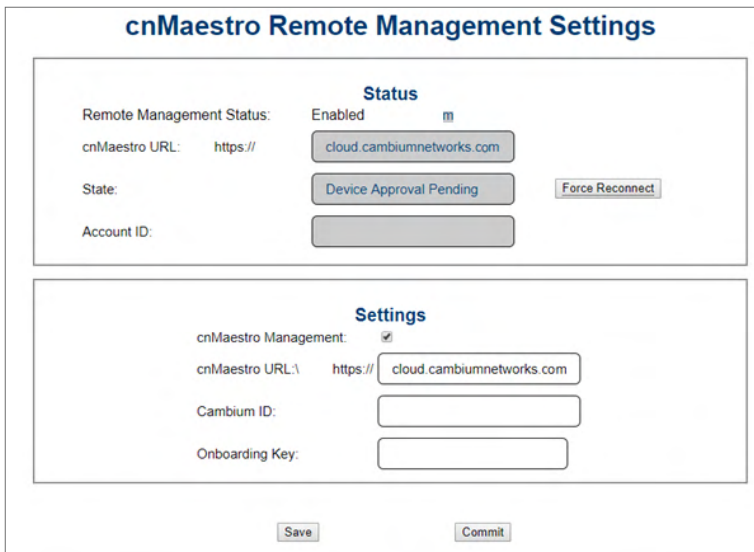

## Onboarding cnReach

### Onboarding through UI

In the cnReach device UI, complete the following steps:

1. Navigate to **cnMaestro > Management Settings**.
2. Enable **cnMaestro Management** in Settings section.
3. Enter your **Cambium ID** and **Onboarding Key**.
4. Click **Save**.
5. Navigate to home page to view the status of the cnReach device connection to cnMaestro.

**Figure 50** Onboarding cnReach through UI

To view the status of the cnReach connection in the cnMaestro:

## Onboarding cnPilot R-Series

### Onboarding through UI

To view the status of the cnPilot R-Series device connection to cnMaestro, complete the following steps:

1. Navigate to **Administration > cnMaestro**.
2. Under cnMaestro configuration section.
3. Enter the URL in the **cnMaestro URL**.
4. Click **Save**.

### Onboarding through SNMP

The following OIDs can be configured:

- cambium\_id
- cambium\_token
- cns\_staic\_url

## Onboarding cnVision

### Onboarding cnVision Client

In the cnVision Client device UI, complete the following steps:

1. Navigate to **Configuration > System**.
2. Under cnMaestro section, enter cnMaestro URL.
3. Click **Save**.

The screenshot shows the configuration page for a Client device. The top navigation bar includes the Cambium Networks logo, the device name 'Client\_MICRO', and the user 'Administrator'. The main content area is divided into two sections: 'cnMaestro' and 'Account Management'. In the 'cnMaestro' section, 'Remote Management' is set to 'Enabled', 'cnMaestro URL' is 'cloud.cambiumnetworks.com', and 'Onboarding Key' is masked with asterisks. The 'Account Management' section contains four account types: 'Administrator Account', 'Home User Account', 'Installer Account', and 'Read-Only Account'. Each account type has a 'Disabled' or 'Enabled' radio button and fields for 'Username' and 'Password'.

### Onboarding cnVision Hub

In the cnVision Hub device UI, complete the following steps:

1. Navigate to **Configuration > System**.
2. Under cnMaestro section, enter cnMaestro URL.
3. Click **Save**.

The screenshot shows the configuration page for a Hub device. The top navigation bar includes the Cambium Networks logo, the device name 'Hub\_360\_test\_1', and the user 'Administrator'. The main content area is divided into two sections: 'cnMaestro' and 'Account Management'. In the 'cnMaestro' section, 'Remote Management' and 'Zero Touch' are both set to 'Enabled', 'cnMaestro URL' is 'cloud.cambiumnetworks.comom', and 'Onboarding Key' is masked with asterisks. The 'Account Management' section contains four account types: 'Administrator Account', 'Home User Account', 'Installer Account', and 'Read-Only Account'. Each account type has a 'Disabled' or 'Enabled' radio button and fields for 'Username' and 'Password'.

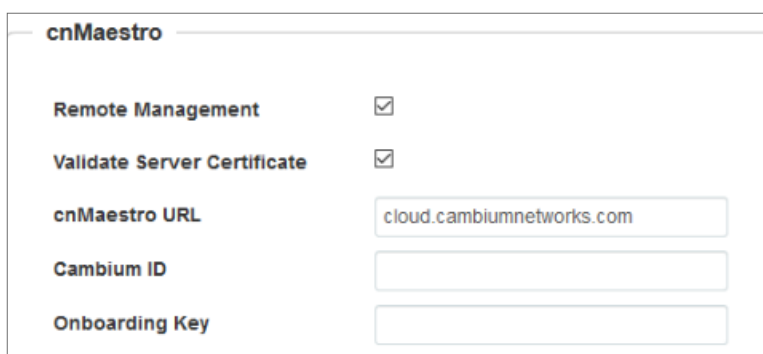

# Onboarding Enterprise AP

## Onboarding through UI

In the Enterprise AP device UI, complete the following steps:

1. Navigate to **Configure > System**.
2. Scroll to **Management > cnMaestro**.
3. Enable **Remote Management**.
4. Enable **Validate Server Certificate** if required.
5. Enter **cnMaestro URL**.
6. Enter **Cambium ID** and **Onboarding Key**.
7. Navigate to **Dashboard** to view the status of the Enterprise AP device connection to cnMaestro.

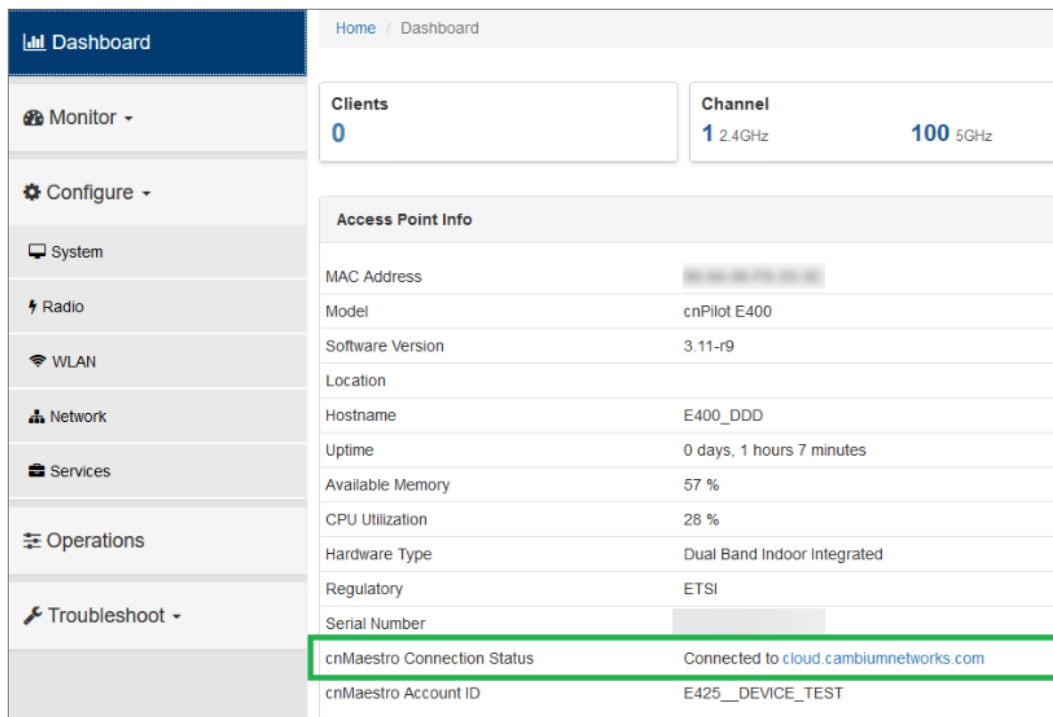

**Figure 53** Onboarding Enterprise AP through device UI

## Onboarding ePMP 1000

### Onboarding through UI

In the ePMP device UI, complete the following steps:

1. Navigate to **Configuration > System**.
2. Scroll to **cnMaestro**.
3. Select **Enable** and enter your Cambium ID and the user's Onboarding Password.
4. Navigate to **Monitor > System** to view the status of the ePMP device connection to cnMaestro.

**Figure 55** Onboarding ePMP 1000 through UI

The screenshot shows the configuration page for the ePMP 1000 device. The left sidebar contains navigation options: Status, Quick Start, Configuration, Radio, Quality of Service, System (highlighted), Network, Security, Monitor, and Tools. The main content area is titled 'system location' and includes a 'Traps' section with 'Disabled' selected and 'Enabled' as an option. Below this is the 'cnMaestro' section with 'Remote Management' and 'Zero Touch' both set to 'Enabled'. The 'cnMaestro URL' is 'cloud.cambiumnetwork...', and the 'Onboarding Key' is masked with dots. At the bottom, the 'Account Management' section shows 'Administrator Account' and 'Installer Account' both set to 'Enabled', with usernames 'admin' and 'installer' respectively.

To view the status of the ePMP device connection to cnMaestro:

**Figure 56** Viewing the ePMP device connection to cnMaestro

The screenshot shows the 'Monitor > System' page in the ePMP 1000 UI. The left sidebar has 'System' highlighted. The main content area displays a table of system information:

Hardware Version	Force 200
Serial number (MSN)	N/A
Firmware Version	U-Boot 9342_PX 1.1.4.a (Dec 10 2014 - 14:09:23)
Software Version	2.4.5
Date and Time	08 Aug 2015, 18:24:06 GMT
System Uptime	8 days, 18 hours
Wireless MAC Address	[REDACTED]
Ethernet MAC Address	[REDACTED]
DFS Status	Not Available
Contains FCC ID(s):	Z8H89F0015
Read-Only Users	0
Read-Write Users	1
Factory Reset Status	Enabled
Cambium Remote Management Status	UP_CONNECTED
Cambium Account ID	My_Cambium_ID

### Onboarding through SNMP

The following OIDs can be configured:

- cambiumDeviceAgentEnable
- cambiumDeviceAgentCNSURL
- cambiumCNSDeviceAgentID
- cambiumCNSDeviceAgentPassword

The following OID can be used to check the status of the device's connection to cnMaestro.

- cambiumCnsServConsStat

## Onboarding PMP

### Onboarding through UI

To onboard PMP device connection to cnMaestro:

In the PMP device UI, complete the following steps:

1. Navigate to **Configuration > cnMaestro**.
2. Under **Configuration**, provide the following details:
  - a. Select **Enable** under **Remote Management**.
  - b. Enter the URL to connect to cnMaestro in the **cnMaestro URL** textbox.
3. Under **Credentials**, enter the **Cambium ID** and the **Onboarding Key** in the respective textboxes. The Account ID field displays the account id of the user.

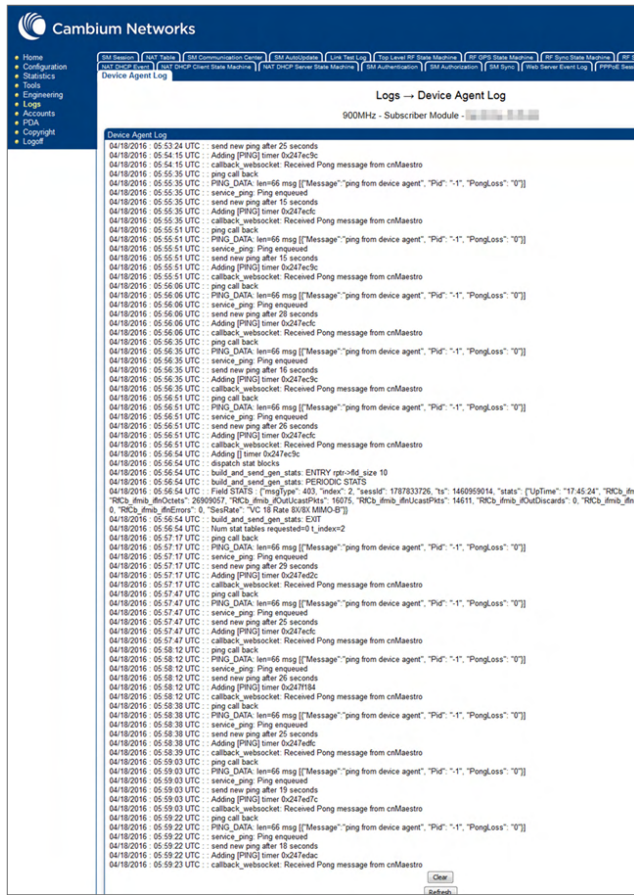

**Figure 57** Onboarding PMP through UI

To view the logs, navigate to **Logs > Device Agent Log** page:

Figure 58 Viewing Logs

## Onboarding through SNMP

The following OIDs can be configured:

- cnMaestro Enable
- cnMaestro Url
- cambium ID
- cam Onboard Key

The following OIDs can be used to check the status of the device's connection to cnMaestro.

- cam AcclID
- cnMaestro Status

## Onboarding PTP 650/670/700

1. Navigate to **Installation** click **Run Installation wizard** button.
2. In the **Management Configuration** window, under cnMaestro, select **Enabled**.

**Management Configuration**

Please enter the following configuration to manage this unit from cnMaestro.

Management configuration data entry

Attributes	Value	Units
cnMaestro	<input type="radio"/> Disabled <input checked="" type="radio"/> Enabled	
cnMaestro Server	<input checked="" type="radio"/> cnMaestro Cloud <input type="radio"/> cnMaestro On-Premises	
cnMaestro Server Internet Address	cloud.cambiumnetworks.com	
cnMaestro Server Port	443	
Onboarding Method	<input type="radio"/> Serial Number <input checked="" type="radio"/> Cambium ID	
Cambium ID	<input type="text"/>	
Onboarding Key	<input type="text"/>	
<input type="button" value="Submit Management Configuration"/> <input type="button" value="Reset Form"/>		
<input type="button" value="Back"/> <input type="button" value="Next"/>		

3. Select **cnMaestro Cloud** radio button.

**Management Configuration**

Please enter the following configuration to manage this unit from cnMaestro.

Management configuration data entry

Attributes	Value	Units
cnMaestro	<input type="radio"/> Disabled <input checked="" type="radio"/> Enabled	
cnMaestro Server	<input checked="" type="radio"/> cnMaestro Cloud <input type="radio"/> cnMaestro On-Premises	
cnMaestro Server Internet Address	cloud.cambiumnetworks.com	
cnMaestro Server Port	443	
Onboarding Method	<input checked="" type="radio"/> Serial Number <input type="radio"/> Cambium ID	
<input type="button" value="Submit Management Configuration"/> <input type="button" value="Reset Form"/>		
<input type="button" value="Back"/> <input type="button" value="Next"/>		

## Onboarding Xirus device

Perform the following steps to onboard Xirus device through CLI.

1. Connect to the device using any SSH tool.
2. Login as admin, the default password is admin.
3. Execute the following command in ssh console:

```
#ssh admin <device IP address>
#password <admin>
#configure
#management
#cloud server cloud.cambiumnetworks.com scheme cnmaestro enable
#save
#Saving configuration...OK
#cnMaestro-onboarding id cambium_ID key onboarding_key
#save
saving configuration...OK
#show management
Cloud Management enabled Cloud Timeout 50 seconds Cloud Port 443 Cloud Retry 5
Cloud Scheme cnMaestro Cloud Server cloud.cambiumnetworks.com
Cambium ID NOTSET Cambium Key Set cnMaestro Status Not Connected
```

4. Login to Cloud account.
5. Navigate to **Home > Onboard > Devices**.
6. In the **Devices** page, the device onboarded is shown in [Figure 59](#)

**Figure 59** Xirrus Device Waiting for Approval

Type	Serial Number	Name	MAC	Tier	IP Address	Source IP	Managed Account	Onboarding Mo...	Status	Onboarding Status	Duration
XD4-130		Migration-XD4-1...		Tier 3			Base Infrastructure	Using Cambium ID	Online	Waiting for Approval	3d 1h 52m
XV3-8		XV3-8-4EEEF0		Tier 3			Base Infrastructure	Using Serial Number	Offline	Waiting for Approval	1d 18h 31m
RV22 Home Mesh		RV22_800ID2		Tier 60			Base Infrastructure	Using Serial Number	Online	Waiting for Approval	2d 19h 38m
cnPilot e600		Migration_10_E6...		Tier 3			Base Infrastructure	Using Serial Number	Online	Waiting for Approval	2d 19h 38m

The Status field display **Waiting for Approval**.

It is optional to provision the device for location, software version update, and assign to an AP Group.

7. Click **Save**.
8. Click **Approve**.

For details to migrate Xirrus devices from XMS to cnMaestro X using a tool, see [XMS-Enterprise to cnMaestro X](#).

**Note**

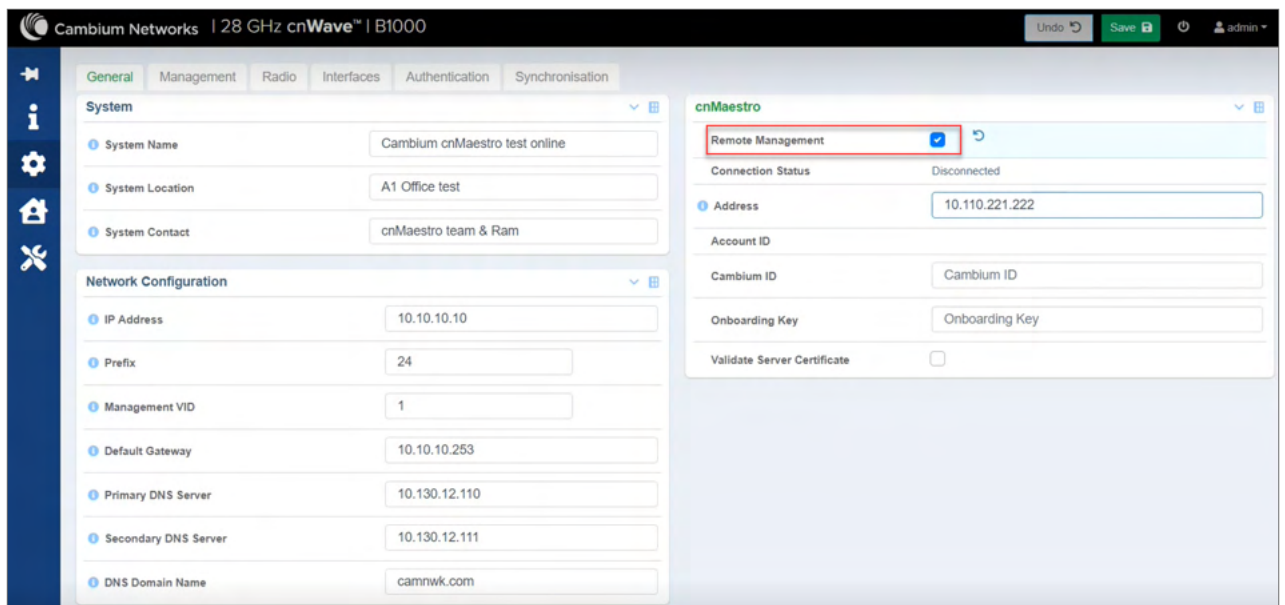

- Xirrus APs are onboarded only to cnMaestro X accounts not to cnMaestro Essentials.
- Tier 3 subscription is applicable to Xirrus APs.
- Xirrus devices can only be onboarded using Cambium Id and Onboarding Key for Cloud account.

## Onboarding a cnWave 5G Fixed BTS device

### Claiming the cnWave 5G Fixed BTS device

To claim the cnWave 5G Fixed BTS device, you must have access to the device GUI. In the cnWave 5G Fixed BTS device UI, complete the following steps:

1. From the main home page, navigate to **System > General**.
2. In the **cnMaestro** section, enable **Remote Management**.

- In the **Address** field, enter the cnMaestro URL or IP Address.
- Enter your **Cambium ID** and **Onboarding Key**. **Validate Server Certificate** is an optional field.

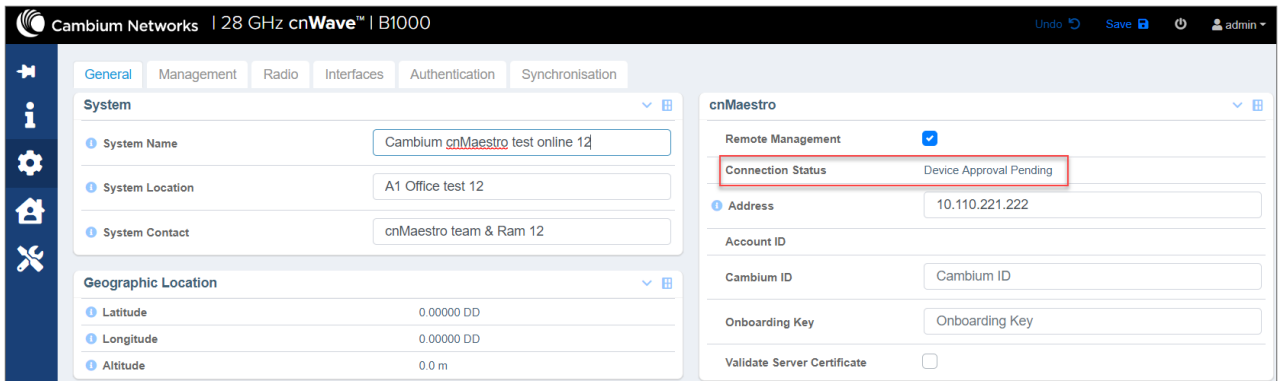

**Note**

You can enter a valid **Cambium ID** and **Onboarding Key** in the cnWave 5G Fixed BTS device UI, when **Allow device to be claimed using Cambium ID** option is enabled in the **Settings** section in the cnMaestro **Onboard** page.

- Click **Save**.

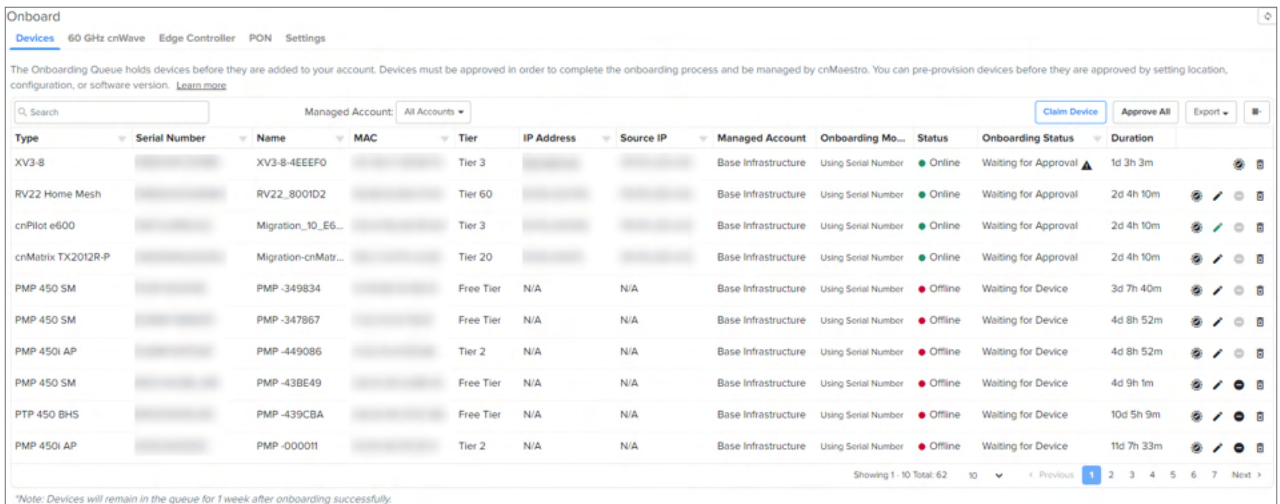

When the cnWave 5G Fixed BTS device is onboarded to the cnMaestro for the first time, the **Connection Status** field in the cnWave 5G Fixed BTS device UI displays **Device Approval Pending** as shown in [Figure 60](#).

**Figure 60** Device Approval Pending status in cnWave 5G Fixed BTS

- In the cnMaestro UI, navigate to **Onboard > Devices** and click **Approve**, as shown in [Figure 61](#).

**Figure 61** Approving the cnWave 5G Fixed device using the cnMaestro UI

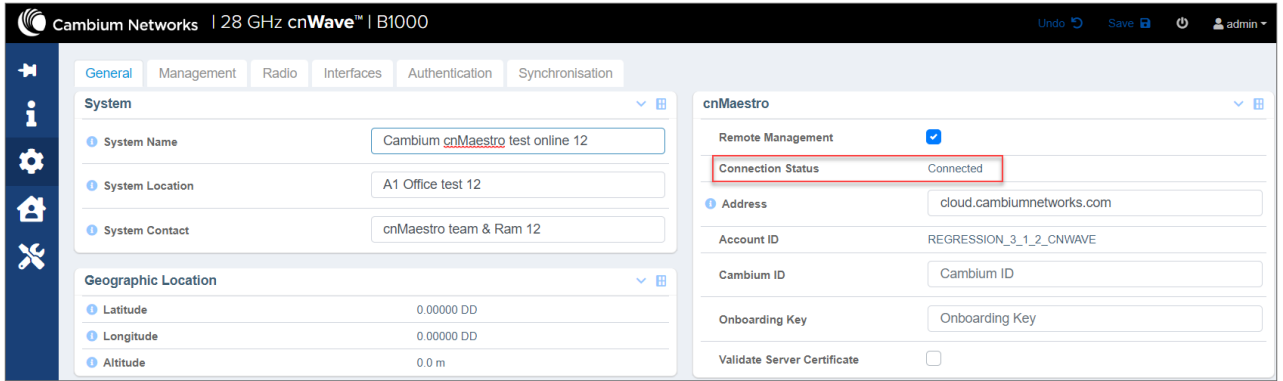

The cnWave 5G Fixed BTS device is onboarded to cnMaestro.

**Figure 62** Viewing the cnWave 5G Fixed BTS device onboarded in cnMaestro

The **Connection Status** field in the cnWave 5G Fixed BTS device UI displays **Connected**, on approval, as shown in [Figure 63](#).

**Figure 63** *cnWave 5G Fixed BTS device Connected*

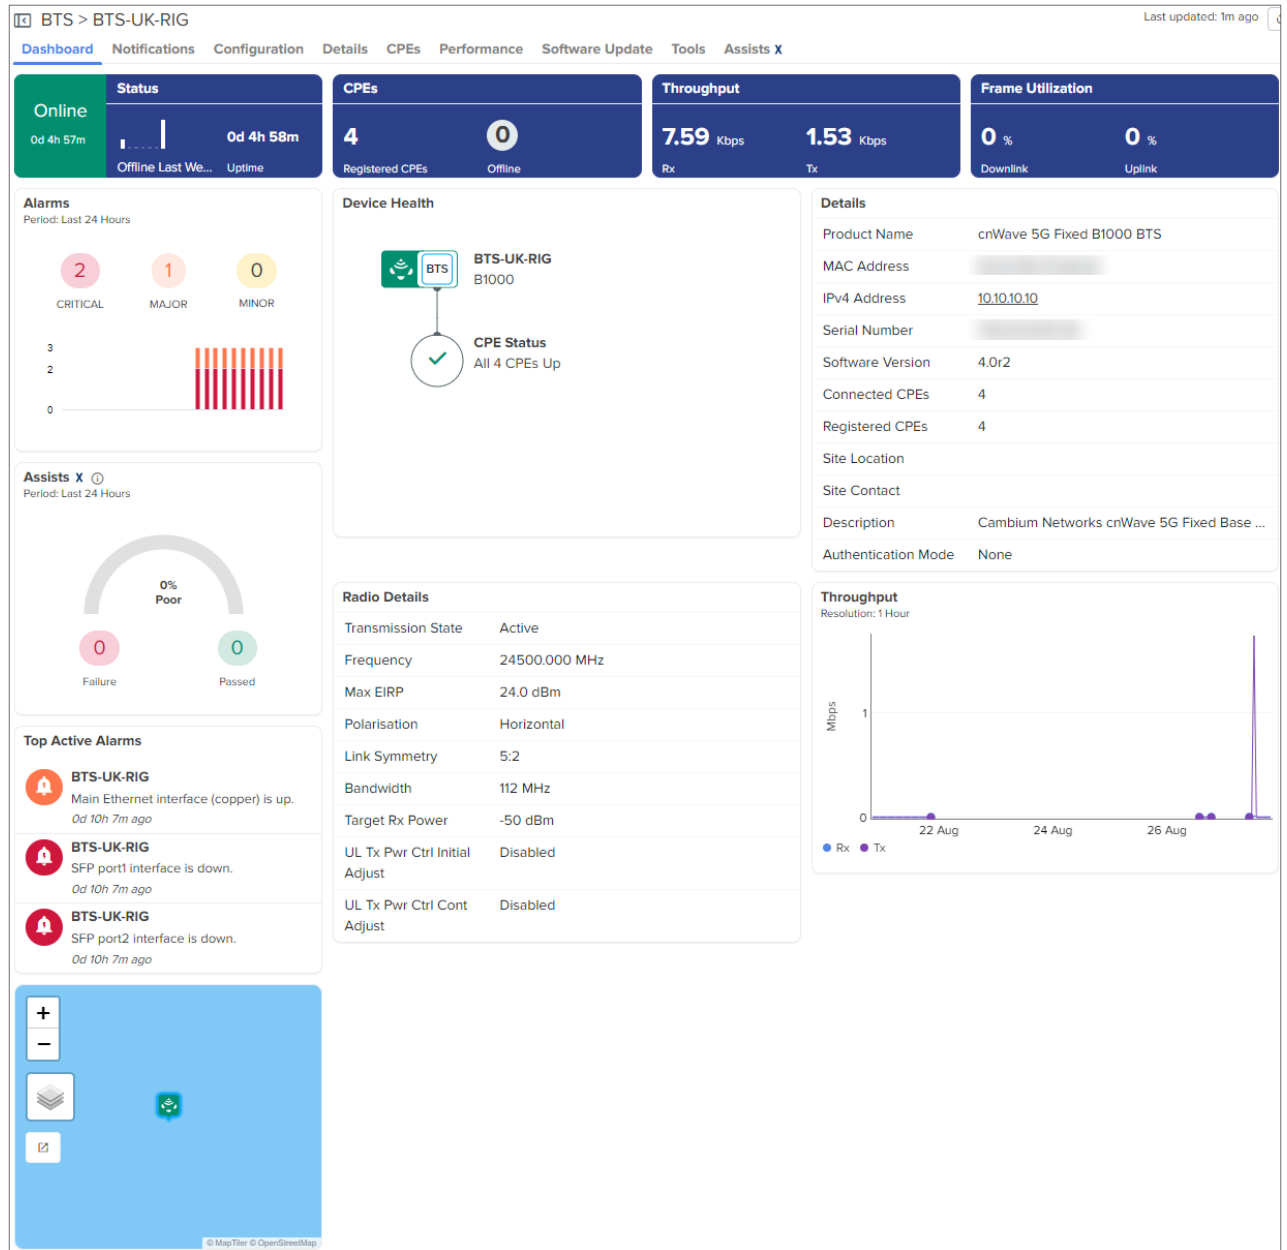

To view the cnWave 5G Fixed BTS device in cnMaestro, complete the following steps:

1. From the cnMaestro UI home page, navigate to **Monitor and Manage** > default network or navigate to **Onboard** > **Devices**.
2. Click on the **Onboarded** link.

Registered cnWave 5G Fixed CPE devices are also onboarded along with cnWave 5G Fixed BTS device.

**Figure 64** Viewing cnWave 5G Fixed BTS device and registered CPE devices

## Claiming the cnWave 5G Fixed BTS device with a Serial Number

To claim and onboard the cnWave 5G Fixed BTS device, complete the following steps:

1. From the home page of cnMaestro, navigate to **Onboard > Devices** tab.

The **Onboard** page appears with details of the devices and their serial numbers, as shown in [Figure 65](#).

Figure 65 Onboard page

Type	Serial Number	Name	MAC	Tier	IP Address	Source IP	Managed Account	Onboarding M...	Status	Onboarding Status	Duration
cnWave 5G Fixed BL...		BTS-test123		Tier 7	10.10.10.10	87.82.216.58	Base Infrastructure	Using Cambium ID	Online	Waiting for Approv

cnPilot e700		Meshbase_202...		Tier 3	10.110.202.70	115.110.225.242	Base Infrastructure	Using Cambium ID	Offline	Waiting for Device	0d 0h 2m
PMP 450 AP		PMP -903467		Free Tier	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	6d 4h 11m
PMP 450 AP		PMP -091227		Free Tier	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	6d 5h 35m
PMP 450 SM		PMP -092637		Free Tier	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	7d 2h 28m

2. Click **Claim Device** located at the right side of the **Onboard** page, as shown in [Figure 65](#).  
The **Claim Devices with Serial Number** page appears, as shown in [Figure 66](#).
3. Enter the serial number of the cnWave 5G Fixed BTS device in the text box, as shown in [Figure 66](#).

**Note**

You can also place the cursor in the text box and use a barcode scanner to quickly claim the devices.

Figure 66 Claim Devices with Serial Number page

Claim Devices with Serial Number

Enter the Serial Numbers (MSNs) of the devices you want to add to your account (comma-separated or one per line). Once a device is claimed, it is placed in the Onboarding Queue when it comes online.

**Note:** All devices with 12 digit strong Serial Numbers can be claimed here. Other devices can be claimed using [Cambium ID](#).

Managed Account  
Base Infrastructure

Enter / Place a cursor in the box and use a barcode scanner to quickly claim devices.

Claim Devices Clear

4. Click **Claim Devices**.
5. To onboard the cnWave 5G Fixed BTS device, click **Approve** located at the right side of the **Onboard** page, as shown in [Figure 67](#).

Figure 67 Onboarding Queue

Type	Serial Number	Name	MAC	Tier	IP Address	Source IP	Managed Account	Onboarding M...	Status	Onboarding Status	Duration
cnWave 5G Fixed BL...		BTS-test123		Tier 7	10.10.10.10	87.82.216.58	Base Infrastructure	Using Cambium ID	Online	Waiting for Approv	
XE3-4		W8ZA0926R96G		Tier 3	10.110.202.210	115.110.225.242	Base Infrastructure	Using Cambium ID	Online	Waiting for Approval	< 1m
cnPilot e700		Meshbase_202...		Tier 3	10.110.202.70	115.110.225.242	Base Infrastructure	Using Cambium ID	Offline	Waiting for Device	0d 0h 2m
PMP 450 AP		PMP -903467		Free Tier	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	6d 4h 11m
PMP 450 AP		PMP -091227		Free Tier	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	6d 5h 35m
PMP 450 SM		PMP -092637		Free Tier	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	7d 2h 28m

**Note**

If you do not click **Approve**, the device remains in the Onboarding Queue.

## Onboard Edge Controller

To onboard Edge Controller, complete the following steps:

1. Enter cnMaestro URL or IP address, Cambium ID, and Onboarding Key in CLI.
2. Navigate to **Onboard > Edge Controller > Controllers**.
3. Click **Approve**.

Figure 68 Edge Controller

Name	IP Address	Managed Account	Version	Status	Duration
ec-2ae3ecc4f00d	10.110.221.8	Base Infrastructure	1.0.0-r5	Onboarded	1d 7h 58m

\*Note: Edge controller will remain in the queue for 1 week after onboarding successfully.

## Onboard PTP 820/850 devices

To onboard PTP 820/850 devices, complete the following steps:

1. Ensure SNMP rules are added in Edge Controller configuration.

Network Services > Edge Controller > ec-2ae3ecc4f00d

Dashboard Configuration Tools Monitoring

Configuration Status: In Sync (4h 51m ago)

Next discovery in 8m  
Previous discovery ran 51m ago

Rules

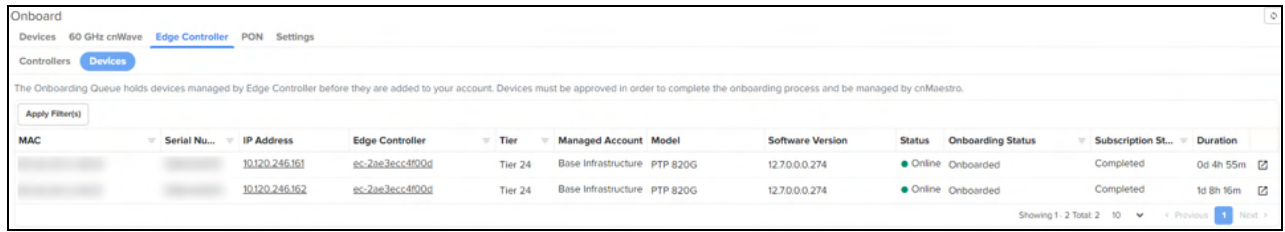

Subnet/Range	Port	Version
<input type="checkbox"/> 10.120.246.161/32	161	v2c
<input type="checkbox"/> 10.120.246.162/32	161	v2c

Note: PTP 820/850 management requires software version 11.9 or above.

2. Navigate to **Onboard > Edge Controller > Devices**.
3. Click **Approve**.

Figure 69 PTP 820/850 devices

The screenshot shows the 'Onboard' page in a web interface. It has tabs for 'Devices', '60 GHz cnWave', 'Edge Controller', 'PON', and 'Settings'. The 'Devices' tab is active. Below the tabs, there is a sub-tab for 'Devices'. A message states: 'The Onboarding Queue holds devices managed by Edge Controller before they are added to your account. Devices must be approved in order to complete the onboarding process and be managed by cnMaestro.' Below this is a table with columns: MAC, Serial Nu..., IP Address, Edge Controller, Tier, Managed Account, Model, Software Version, Status, Onboarding Status, Subscription St..., and Duration. Two rows of data are visible, both with 'Online' status and 'Completed' onboarding status. The first row has IP address 10.120.246.161 and the second has 10.120.246.162. Both are managed by 'ec-2ba3ecc4f00d' and are PTP 820G models with software version 12.7.0.0.274. The duration for both is 'Completed'.

MAC	Serial Nu...	IP Address	Edge Controller	Tier	Managed Account	Model	Software Version	Status	Onboarding Status	Subscription St...	Duration
		10.120.246.161	ec-2ba3ecc4f00d	Tier 24	Base Infrastructure	PTP 820G	12.7.0.0.274	Online	Onboarded	Completed	0d 4h 55m
		10.120.246.162	ec-2ba3ecc4f00d	Tier 24	Base Infrastructure	PTP 820G	12.7.0.0.274	Online	Onboarded	Completed	1d 8h 16m

## Onboarding the NSE 3000 Devices to cnMaestro

### Note

If the device needs static IP or other WAN configuration to be connected to the internet, refer to [Device UI Configuration](#).

This section describes the onboarding of NSE 3000 to the cnMaestro Cloud X account. The onboarding process requires the device Manufacturing Serial Number (MSN). The MSN of the device can be found at the bottom of the device as shown in [Figure 70](#).

Figure 70 : MSN of device

To onboard the device, complete the following steps:

1. Open a web browser and type the URL <https://cloud.cambiumnetworks.com>.  
The sign in page appears.
2. Create a new cnMaestro X account or select an existing cnMaestro X account. A tier 30 subscription is required.
3. Navigate to cnMaestro **Home > Onboard > click Claim Device**.

**Figure 71 Onboard page**

4. **Claim Devices with Serial Number** window pops up.

**Figure 72 Claim devices with Serial Number**

Enter the Serial Numbers (MSNs) of the devices you want to add to your account (comma-separated or one per line). Once a device is claimed, it is placed in the Onboarding Queue when it comes online.

**Note:** All devices with 12 digit strong Serial Numbers can be claimed here. Other devices can be claimed using [Cambium ID](#)

Managed Account  
Base Infrastructure

Enter / Place a cursor in the box and use a barcode scanner to quickly claim devices.

Claim Devices Clear

5. Select the **Managed Account** from the drop-down.
6. Enter the Serial Number (MSN) of the device in the text box.
7. Click **Claim Devices**.

The device will be listed in the Onboarding Queue.

8. Click the **Approve Device** (🔍) icon or **Approve All** at the right side of the Onboard page, as shown in

**Figure 73 Approve**

Type	Serial Number	Name	MAC	Tier	IP Address	Source IP	Managed Account	Onboarding M...	Status	Onboarding Status	Duration
NSE		NSE-700580		Tier 30	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	7d 22h 42m
cnPilot R195W		cnPilot-r195W-6...		Free Tier	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	9d 18h 8m
cnPilot R200		cnPilot-r200-08...		Free Tier	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	9d 18h 8m
PMP 450i AP		PMP-449086		Tier 2	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	0d 0h 42m

When device is approved appears on the Onboard page as shown below in [Figure 74](#).

Figure 74 NSE 3000 Device Onboard

## Onboarding Home Mesh Routers to cnMaestro

To onboard the Home Mesh Router to cnMaestro, see [Onboarding the Home Mesh Router to cnMaestro](#).

Claiming the Home Mesh Router on the cnMaestro Cloud's **Onboard** page is not supported.

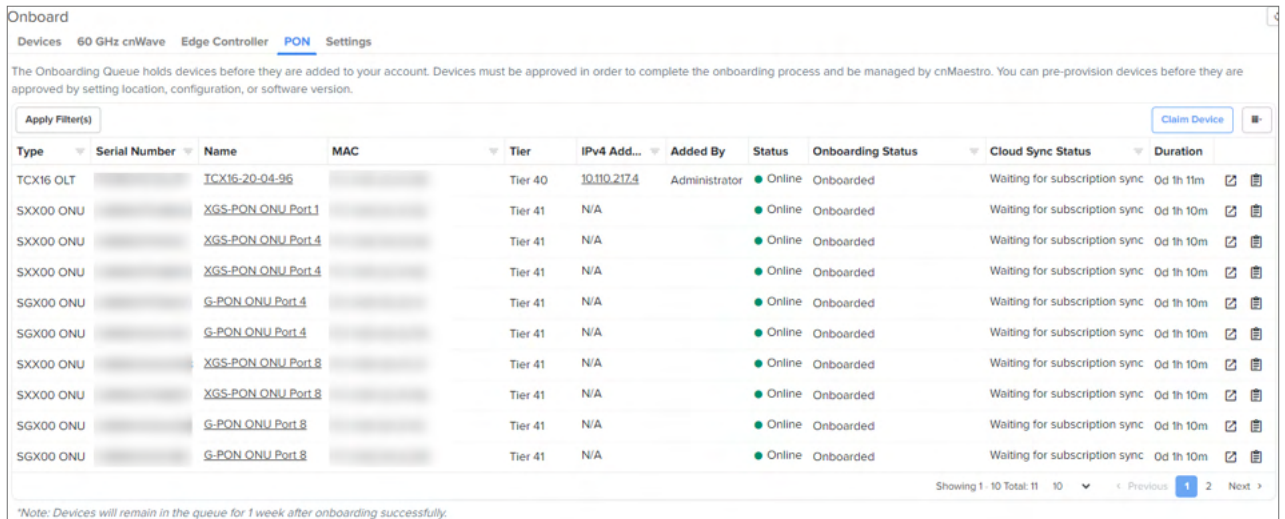

## Onboarding PON devices to cnMaestro

This section describes the onboarding of PON devices to the cnMaestro X account. The onboarding process requires the device Manufacturing Serial Number (MSN). The MSN of the device can be found at the bottom of the device as shown in [Figure 75](#).

To onboard the router, complete the following steps:

1. Navigate to cnMaestro **Home > Onboard**.

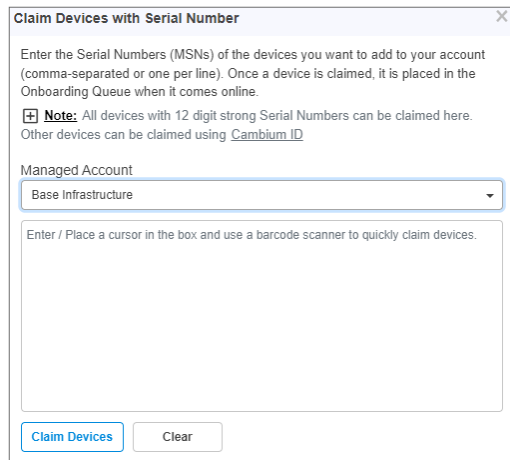

Figure 75 Onboard page for PON devices

2. Click **Claim Device**.

The **Claim Devices with Serial Number** window is displayed.

**Figure 76** Claim devices with Serial Number

3. Select the account from the **Managed Account** drop-down list .
4. Enter the Serial Number (MSN) of the device in the text box.
5. Click **Claim Devices**.  
The device will be listed in the Onboarding Queue.
6. Click the **Approve Device** (🔍) icon.

## Onboarding 60 GHz E2E Controller

There are two ways to deploy 60 GHz E2E Controller:

- External E2E Controller
- Onboard E2E Controller

### External E2E Controller Onboarding

To Onboard the External E2E Network through **Monitor and Manage** page:

1. Navigate to **Monitor and Manage > Network > select 60 GHz cnWave E2E Controller**.
2. Click **Approve** and **60 GHz cnWave–Network Onboard** window appears.

3. By default, **Auto-assign** is selected you can select **Auto-assign** or **Manual** to update IPv6 address in E2E Network and wait for a while until IPv6 address gets updated.

4. **Enable Layer 2 Bridge** if required.

**60 GHz crWave - Network Onboard** ✕

Name

Network Configuration (Device Interface)  
 Auto-assign  Manual  
Selecting this option will require the user to manage IPv6 addresses every time a PoP node is claimed in cnMaestro.

E2E Controller IPv6 Address/Prefix Length  
  
IPv6 Address must have prefix length (e.g. fd00:ba5e:ec0c:1ecb::1/64)

**Enable Layer 2 Bridge**  
Selecting this option will enable Layer 2 network bridging (via automatically created tunnels) across all nodes connected to a PoP. This will facilitate bridging of IPv4 traffic across the wireless networks.

**Apply**

5. Click **Apply**.

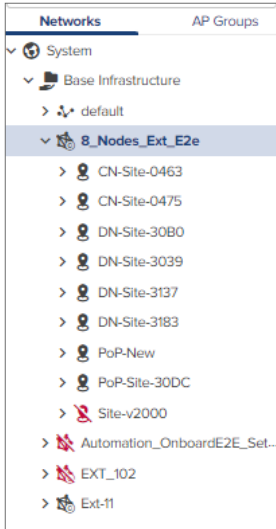

6. Wait for a while till network onboard is successful.

7. After successfully onboarded, the External E2E Network UI shows the Dashboard of the network as shown below:

The screenshot shows the '60 GHz crWave Network > 60 GHz crWave External E2E-232' dashboard. It features a sidebar with navigation options like 'System', 'default', and '60 GHz crWave External E2E-232'. The main area includes a 'Dashboard' with 'Nodes' (3 total, 0 offline), 'Links' (4 total, 0 offline), and throughput metrics for PoPs (Wireless: 5.08 Tx / 34.73 Rx kbps; Wired: 47.95 Tx / 4.03 Rx kbps). A map displays a network topology with nodes and links. Below the map is an 'E2E Controller Details' section with fields for Version (11), Management Address (10.110.221.232), IPv6 Address (fd20:ba5e::100), IPv6 Gateway (fd20:ba5e::5), Sites (4), Nodes (1/0/2), Deployment (External), Layer 2 Bridge (Disabled), Country (Other), Prefix Allocation (Centralized), Topology Sync (Success 4m ago), and System Clock (In Sync).

External E2E Controller network icon will be indicated with icon as shown below:

## Onboard E2E Controller (Running Onboard)

cnMaestro remote management details are configured through onboard E2E controller. The Onboard E2E Controller is hosted on a 60Hz cnWave device. (E2E Controller option to be enabled in the device UI).

To approve proceed as follows:

1. Navigate to **Monitor and Manage > Network > select 60 GHz cnWave E2E Network.**
2. Click **Approve.**

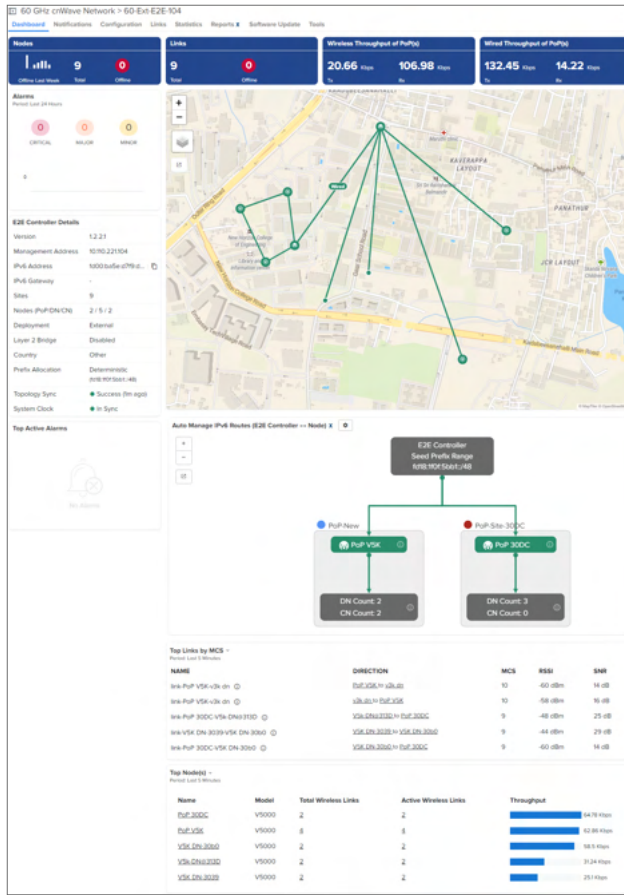

**60 GHz cnWave - Network Onboard** window appears. Edit network name and click **Save**.

3. Wait for a while till network onboard is successful.

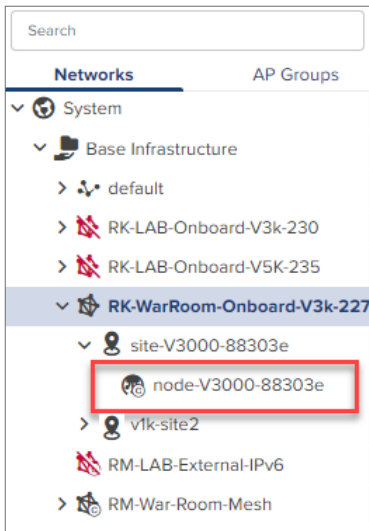

4. After the successful Onboard E2E Network, it can be managed through cnMaestro.

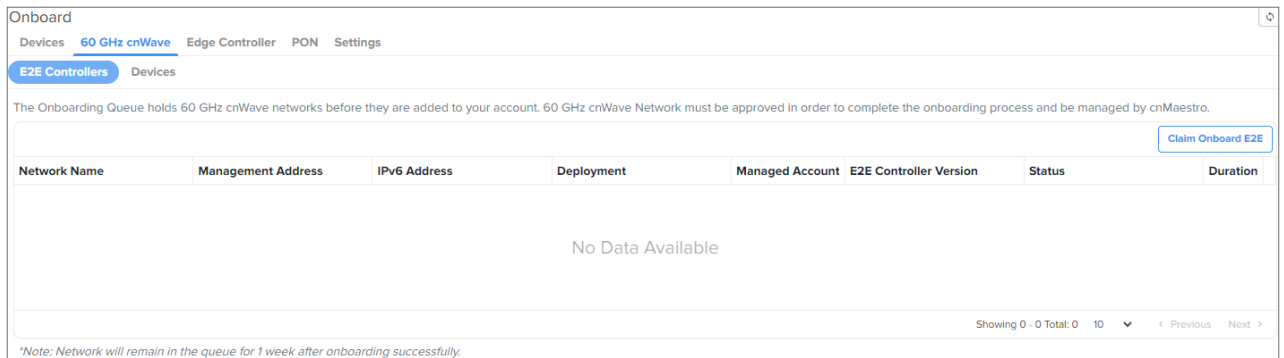

If PoP Node is running the Onboard E2E Controller then the PoP icon will be indicated with  as shown below:

## Onboard E2E Controller (Running Onboard) Onboarding with Serial Number

From homepage click Onboard icon in the left pane, to claim Onboard E2E devices.

1. Navigate to **Onboard > 60GHz cnWave Network > click Claim Onboard E2E.**

Claim Onboard E2E Network with Serial Number windows appears.

2. Enter **Serial Number** and click **Claim Devices.**

The dialog box is titled 'Claim Onboard E2E Network with Serial Number'. It contains the following fields and elements:

- Instruction: 'Enter the Serial Numbers (MSNs) of 60 GHz cnWave PoP nodes running onboard E2E.'
- Device Type: A dropdown menu with '60 GHz cnWave' selected.
- Managed Account: A dropdown menu with 'Base Infrastructure' selected.
- Serial Number Input: A large text area with a red border and a red cursor. The text inside says: 'Enter / Place a cursor in the box and use a barcode scanner to quickly claim devices.'
- Buttons: 'Claim Devices' and 'Clear'.

## Deleting Devices in Bulk

cnMaestro allows to delete devices in bulk. You can delete devices in bulk from the following pages in cnMaestro:

- Unmanaged devices from the **Onboard > Devices** page.
- Onboarded and managed devices from the **Inventory** page—at the System-, Network-, Tower-, and Site-levels.
- From the **Manage Subscriptions > Devices** page.

Deleting the devices creates a corresponding job in the **Administration > Jobs > Actions** page. The page displays the list of all the delete jobs corresponding to the devices that were deleted. In case a deletion task is unsuccessful, it also allows you to retry deleting the devices.

The following topics are described:

- [Device-specific restrictions](#)
- [Deleting devices in bulk](#)
- [Viewing the status of device deletion and retrying](#)

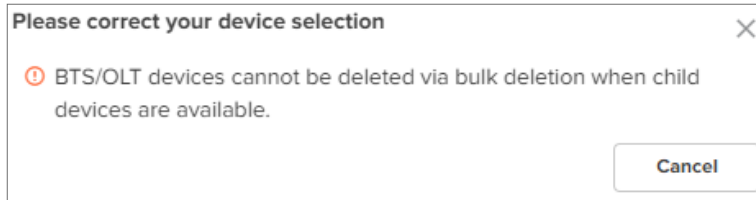

## Device-specific restrictions

When deleting devices in bulk, there are a few restrictions on some devices. The following are the device-specific restrictions and the corresponding messages that appear when you try to delete these devices in bulk:

- **cnWave 5G Fixed Wireless (BTS/CPE) and PON (OLT/ONU):** You cannot delete BTS or OLT devices in bulk when they are connected to CPE or ONU devices. The following message appears:

**Figure 77** Deleting BTS/OLT devices in bulk

However, you can delete a single BTS or OLT devices along with the associated devices (CPE or OLT) when you click the delete (🗑️) icon in the corresponding row.

**Figure 78** Deleting single BTS/OLT device

- **cnWave 60 GHz:** Bulk deletion works differently depending on the type of controllers you are deleting.
  - External E2E Controller: You can delete multiple devices under an External E2E controller in bulk.
  - Onboard E2E Controller: You cannot bulk delete the devices if a last pop node is also selected as one of the devices in addition to the DN and CN devices.

The following message appears:

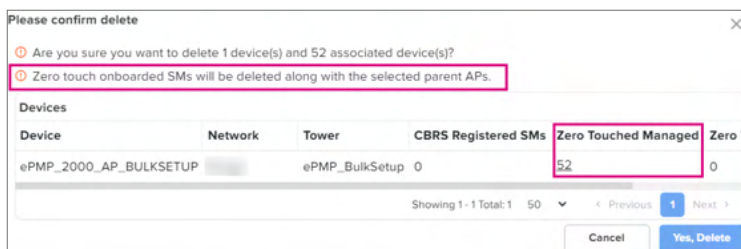

**Figure 79** Deleting Onboard E2E Controllers with last pop node

In this case, you must first delete the DN and CN devices, and then delete the last pop node.

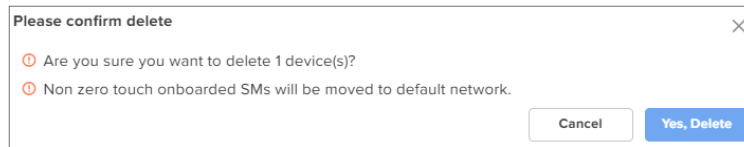

- **cnVision, PMP, and ePMP:** Bulk delete of PMP and ePMP devices depend on how the SMs were onboarded.
  - SMs onboarded using the zero touch method: Bulk deleting parent APs will also delete all the associated SMs.

**Figure 80** Deleting APs with SMs onboarded using zero touch method

- SMs onboarded without the zero touch method: Bulk deleting parent APs will delete only those APs. However, the associated SMs will be moved to the default network.

**Figure 81** Deleting APs with SMs onboarded without zero touch method

- **CBRS claimed APs:** If APs that are claimed by CBRS are deleted, then the child SMs that are claimed by CBRS are deregistered and deleted from the **Management Tool** page as well.

This occurs even when CBRS-claimed SMs are not selected for bulk deletion.

## Deleting devices in bulk

To delete devices in bulk, complete the following steps:

1. Navigate to one of the pages listed above, for example, **Onboard > Devices**.

**Figure 82** Onboard > Devices page

Type	Serial Number	Name	MAC	Tier	IP Address	Source IP	Managed Account	Onboarding Mode	Status	Onboarding Status	Subscription Status	Duration
PMP 450 SM		PMP-677823		N/A	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	Will attempt after appr...	1d 1h 52m

PMP 450b High ...		PMP 450i SM-BE...		Free Tier	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	Completed	5d 22h 10m

2. Select the checkboxes corresponding to the devices that you want to delete and click the **Delete** (  ) button.

**Figure 83** Select devices

Type	Serial Number	Name	MAC	Tier	IP Address	Source IP	Managed Account	Onboarding Mode	Status	Onboarding Status	Subscription Status	Duration
<input checked="" type="checkbox"/>		PMP-677823		N/A	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	Will attempt after appr...	1d 1h 57m
<input checked="" type="checkbox"/>		PMP-43BE5D		N/A	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	Will attempt after appr...	2d 2h 4m
<input checked="" type="checkbox"/>		crMatrix		Tier 20	N/A	N/A	Application issue ter	Using Serial Number	Offline	Waiting for Device	Completed	0d 22h 41m
<input type="checkbox"/>		ePMP		Free Tier	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	Completed	5d 22h 14m
<input type="checkbox"/>		ePMP		Free Tier	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	Completed	5d 22h 14m
<input type="checkbox"/>		PMP 450 SM		Free Tier	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	Completed	5d 22h 14m
<input type="checkbox"/>		PMP 450 AP		Free Tier	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	Completed	5d 22h 14m
<input type="checkbox"/>		PMP 450i SM		Free Tier	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	Completed	5d 22h 14m
<input type="checkbox"/>		PMP 450b High ...		Free Tier	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	Completed	5d 22h 14m
<input type="checkbox"/>		PMP 450b High ...		Free Tier	N/A	N/A	Base Infrastructure	Using Serial Number	Offline	Waiting for Device	Completed	5d 22h 14m

3. Click **Yes, Delete** in the confirmation dialog box that appears.

**Figure 84 Confirmation**

- The devices are removed from the page and a deletion job creation banner appears on the top of the page.

**Figure 85 Deletion job banner**

- Click the link in the banner to view the status of the deletion.

## Viewing the status of device deletion and retrying

When you delete bulk devices from any of the pages listed—Onboard, Manage Subscriptions, or Inventory—cnMaestro creates job for that activity.

To view the status of the bulk deletion activity, complete the following steps:

- Navigate to **Administration > Jobs > Actions** page.

**Figure 86 Administration > Jobs > Actions page**

The screenshot shows the "Administration > Jobs" page with the "Actions" tab selected. It features a table with columns: Type, Managed Account, Source, Occurrence, Created by, Created on, Completed on, and Status. The table lists several "Delete" actions for "Base Infrastructure" devices, all with a status of "Completed" and a green progress bar. A "Delete" button is visible in the top right corner of the table area. At the bottom, it shows "Showing 1 - 10 Total: 338" and pagination controls.

- To view the status of an ongoing bulk delete activity, click the show more (📄) icon.

The Delete Status window appears.

**Figure 87 Delete Status window**

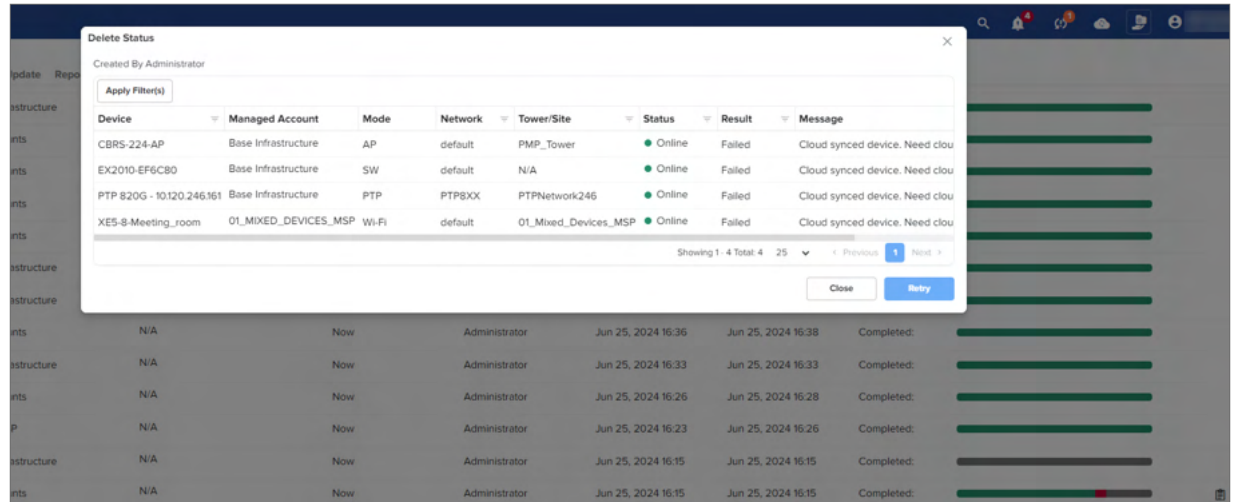

The following colors display the various statuses of the bulk delete activity:

- **Success** — Displays the number of devices deleted successfully
- **Skipped** — Displays the number of devices that were skipped from deleting.
- **Failed** — Displays the number of devices that were not deleted.

For the failed status, you can view the reason for the failure and the devices that failed to delete by clicking the show more (📄) icon.

**Figure 88** Delete status for failed delete

- **Unknown** — Number of devices whose delete status is unknown.

The Unknown status appears for those devices which cnMaestro failed to delete but were retried for deletion from another location other than the **Jobs > Actions** page (Onboard, Inventory or Subscriptions pages).

- **Remaining** — Number of devices that are yet to be deleted.

All the above values are also displayed as a percentage (%).

3. In the delete status window, click **Retry** to restart the bulk deletion of the failed devices.

- Once you click **Retry**, cnMaestro removes the current delete activity job and creates a new job for the retry.
- However, if you retry deleting the devices from another location (Onboard, Inventory or Subscriptions pages), the failed job status is changed to **Unknown**.

# Monitoring

This section includes the following topics:

- [Network Monitoring](#)
- [Network Service Edge](#)
- [Wireless LAN Dashboard](#)
- [Fiber OLT and ONUs](#)
- [Inventory](#)
- [Reports](#)

## Note

Following are the retention period for various data in cnMaestro:

- Wi-Fi AP performance data—1 year
- Wireless clients data—1 week
- Guest Access session and login events—1 week
- Wi-Fi events—24 hours

## Network Monitoring

The Monitoring tab displays the monitoring pane for cnMaestro. The section includes the following:

- [Assists](#)
- [Dashboard](#)
- [Notifications](#)
- [Statistics and Details](#)
- [Performance](#)
- [Maps](#)
- [Tools](#)
- [Wireless Intrusion Detection System \(WIDS\)](#)
- [Wireless Intrusion Prevention System \(WIPS\)](#)

### Assists

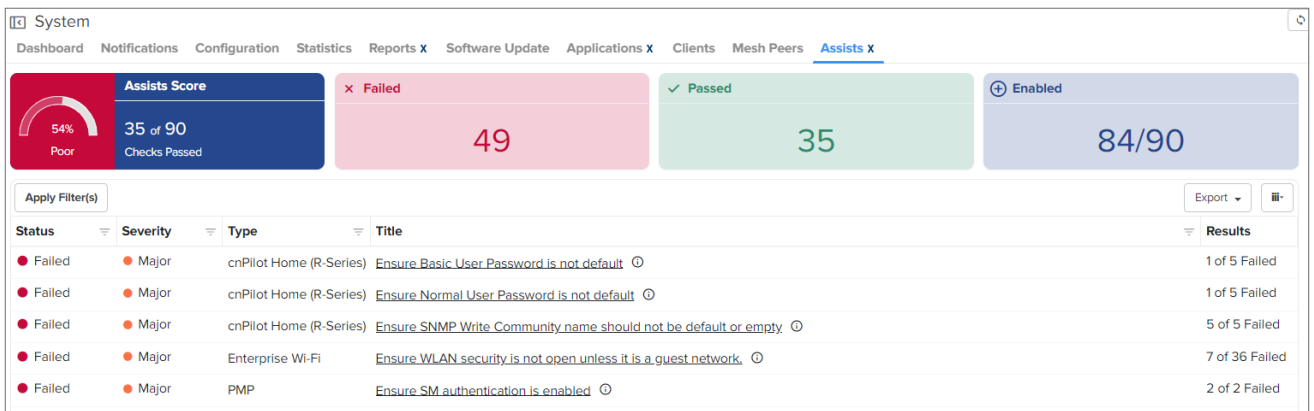

Assists displays scanned configuration scores and results for last 24 hours.

Assists scans the configurations and generates assists scores. It evaluates specific issues that might occur during deployment. Assists summarizes the scores and status results at System, Network, Site, Tower, and Device levels as shown in [Figure 89](#).

This enables prioritization of management traffic.

**Figure 89** Assists home page

**Note**

- Assists is a cnMaestro X feature available for cnPilot, cnMatrix, cnWave 5G Fixed, ePMP, PMP, PTP 670/700, and Enterprise Wi-Fi devices except AOS devices.
- Minimum software version for PTP 50670 and PTP 78700 is 04-10. For PTP 45700, the minimum software version is 04-02 for assist data to be generated.
- Minimum software version for cnWave 5G Fixed devices must be 3.1b5 for assist data to be generated.
- For ePMP, and cnWave 5G Fixed devices, the Assists X page generates data every 24 hours.
- For PMP devices with software version 21.1 or higher, the Assists X page generates data immediately after onboarding. For software versions lower than 21.1, this page continues to generate data on a 24-hour schedule.
- For cnPilot Home series, cnMatrix, and Enterprise Wi-Fi, PTP 670/700 devices, the Assists X page generates data immediately after onboarding.

Assists scores are shown in percentage values. The Assists scores guide users to isolate issues by scanning an environment and evaluating configuration and infrastructure. Assists scores are determined as shown in [Table 15](#).

**Table 15 Assist Scores**

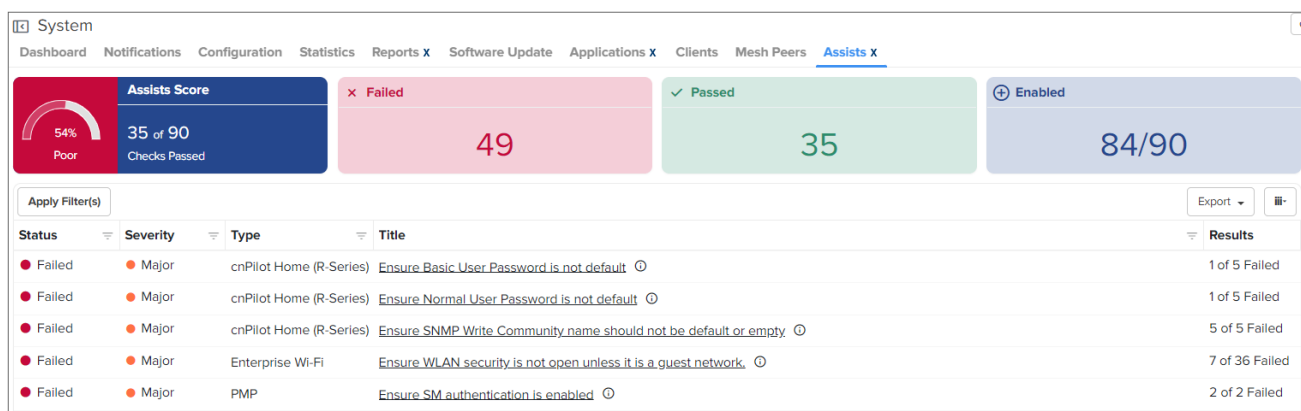

Score Value	Description
0-61%	Poor
61% to 90%	Good
91% and above	Excellent

**Table 16 Assists parameters**

Fields	Description
Status	Status of the Assists are shown as follows: <ul style="list-style-type: none"> <li>Passed</li> <li>Failed</li> <li>Disabled</li> </ul>
Severity	Severity level of the assists are shown as follows: <ul style="list-style-type: none"> <li>Critical: Catastrophic problem that makes the feature unusable.</li> <li>Major: Issue that greatly degrades the feature, but it is still usable.</li> <li>Minor: Limited issue that alters functionality in a targeted way.</li> <li>Notify: Message used primarily for information.</li> </ul>
Type	Type of the device.
Title	Short title describing the assist.
Category	Type of category such as Security, Network, Infrastructure, and Performance.
Group	Grouped based on Position, Access, and Configuration of cnMaestro.
Results	Result of Assists such as Passed, Failed, and Disabled. For more details on assists result description refer to <a href="#">Figure 90</a> .

Hovering the cursor on the **Results** column in the Assists home page displays a preview of the assist results as shown in [Figure 90](#).

**Figure 90 Assists Results**

**Table 17 Assist Result Status**

Assist Result	Description
Passed	Assists recommendations are met.
Failed	Assists has failed.

**Table 17 Assist Result Status**

Assist Result	Description
Disabled	Assists is disabled.  <b>Note:</b> Only Super Administrator and Administrator have access to change disable option.

## Export Assist

The Assist table can be exported in a CSV or PDF file format. The following export options are available:

- Export page as CSV
- Export page as PDF
- Export all as CSV

The screenshot displays the 'Assists' section of a system dashboard. At the top, there are navigation tabs: Dashboard, Notifications, Configuration, Statistics, Reports x, Software Update, Applications x, Clients, Mesh Peers, and Assists x. Below the navigation, there are three summary cards: 'Assists Score' (53% Poor, 35 of 90 Checks Passed), 'Failed' (48), and 'Enabled' (83/90). Below these cards is a table with columns: Status, Severity, Type, and Title. The table lists several assist items, all with a 'Passed' status and 'Major' severity. An 'Export' dropdown menu is open, showing options: 'Export page as CSV', 'Export page as PDF', and 'Export all as CSV'.

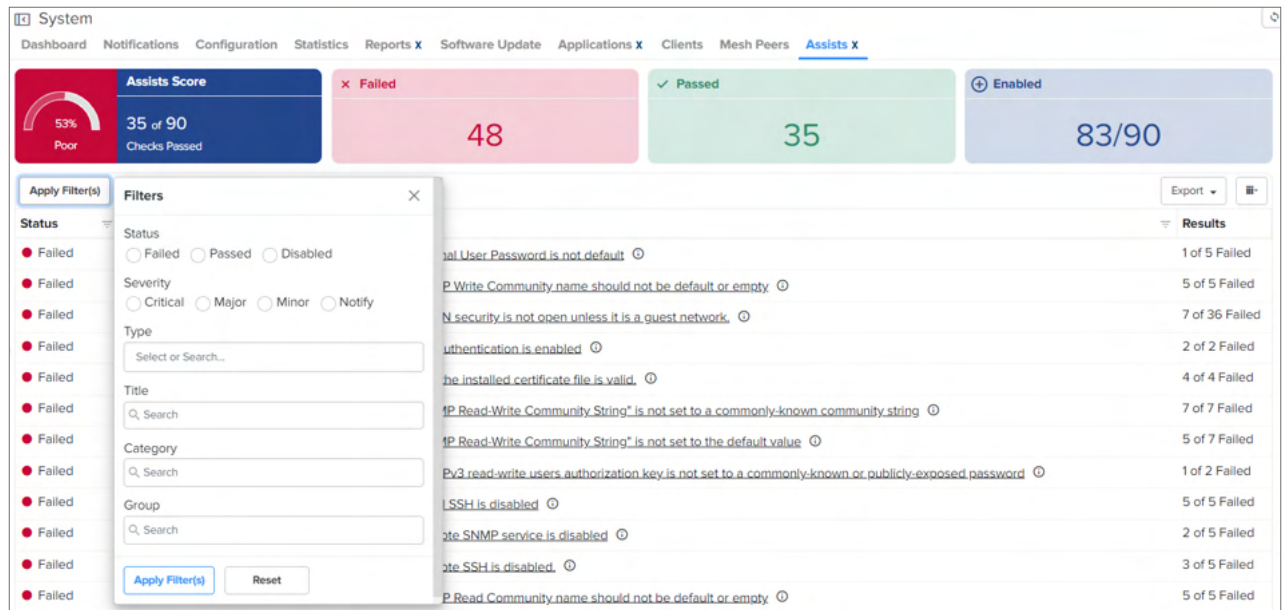

## Assist filter

To create custom filters for assists, perform the following steps:

1. In the Assists table, click **Apply Filter(s)**.
2. Enter the values in the fields for applying the filters.
3. Click **Apply Filter**.

Figure 91 Assists: New Filter

You can manually filter or search by typing parameters in the column header of the Assists table.

4. Click **Reset** to reset the filter option in the Assists table.
5. Click **Clear Filters** to clear all the filter options.

If you do not receive expected filter details, click **Change Filter(s)** in the Assists table to apply new filters.

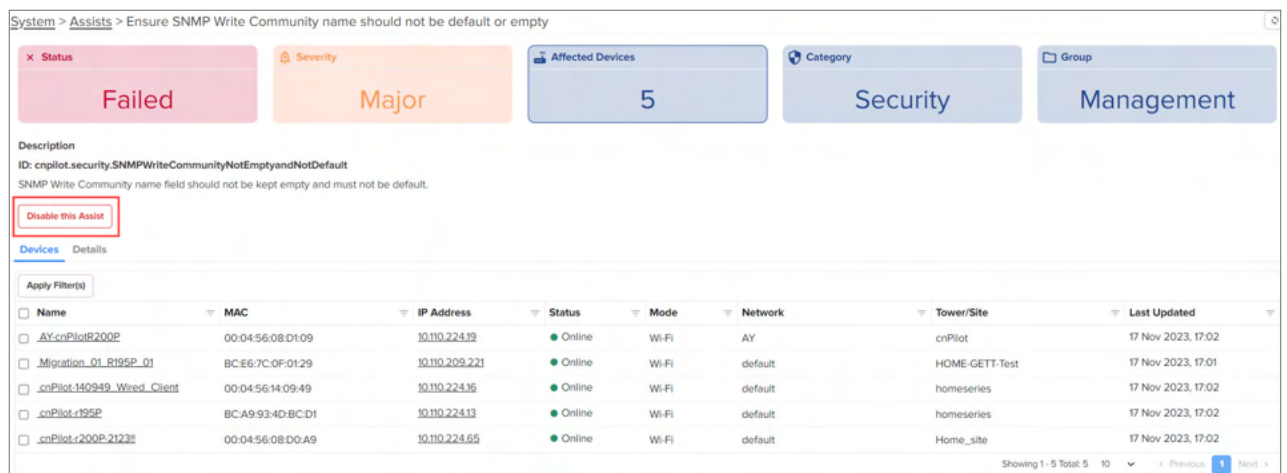

## Assists Status

To evaluate the Assists Status, click on the **Title** column with Affected Devices in the Assists table. A detailed Assists page appears with **Description** and **Remediation** as shown in [Figure 92](#).

To disable Assists, perform the following steps:

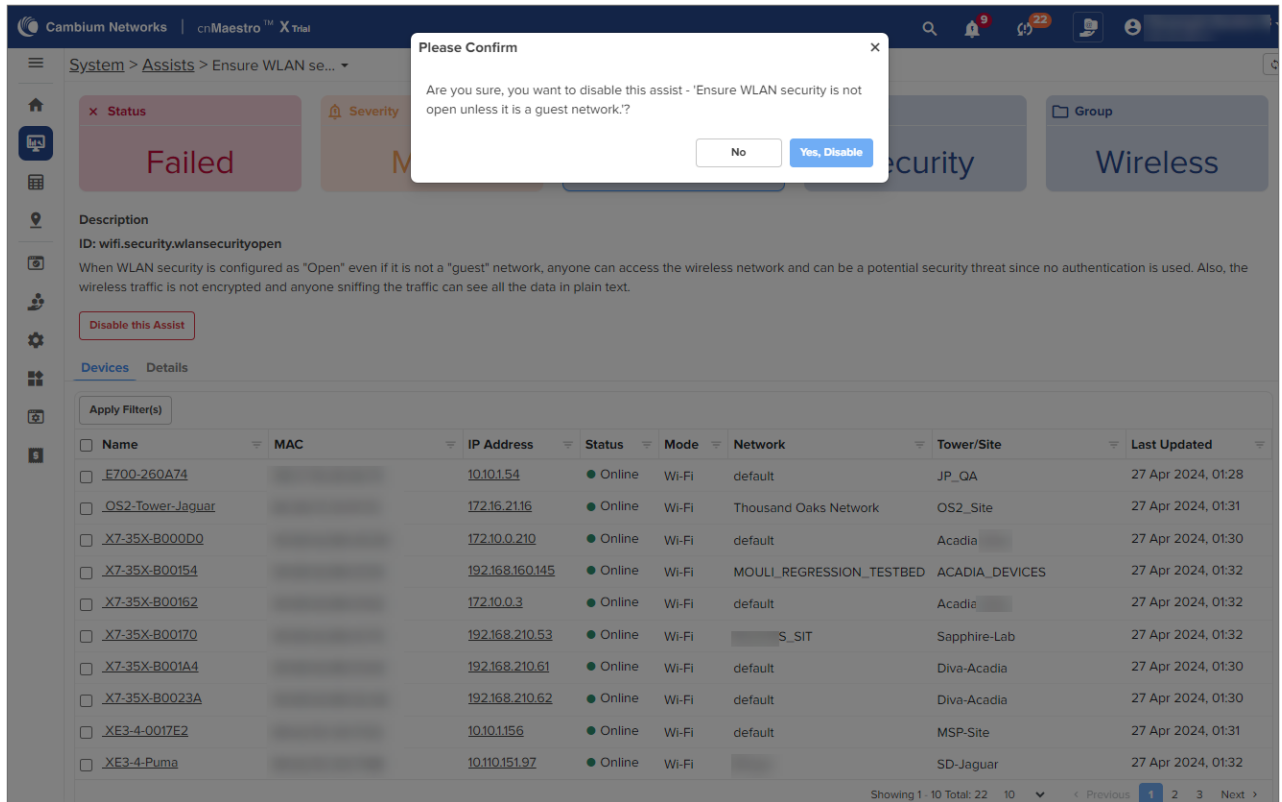

1. In the **Assist Status** page, click **Disable this Assist**.

Figure 92 Assist Status page

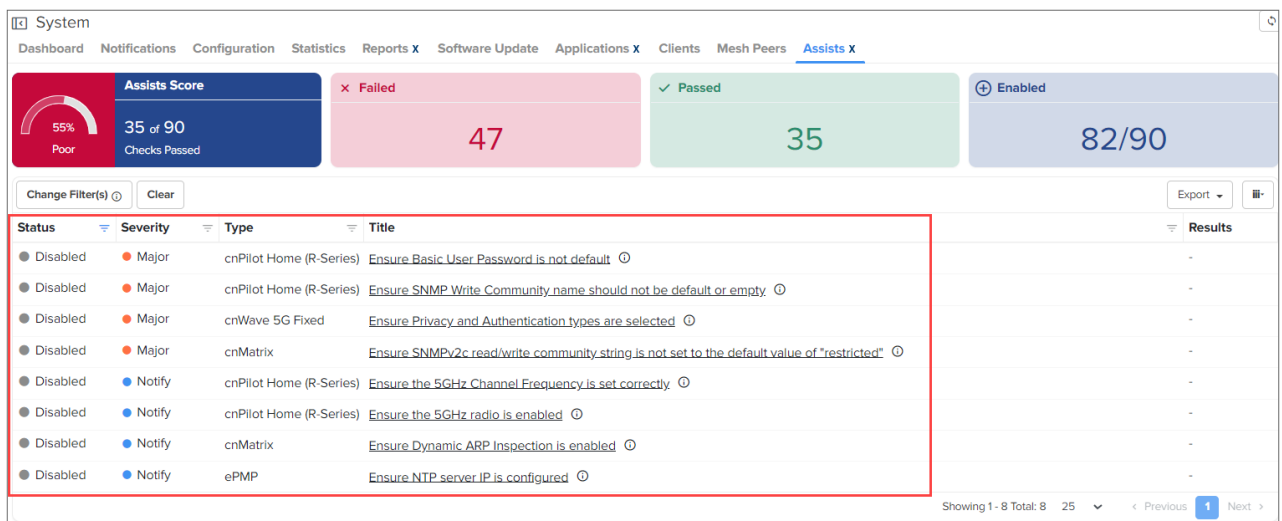

A confirmation message appears for the assist to disable.

2. Click **Yes, Disable**.

Assists disabled are listed at the bottom of the Assists home page. The **Results** column do not indicate the progress bar for the Assists Disabled as shown in [Figure 93](#). The total number of enabled Assists in the home page is reduced when Assists is disabled.

**Figure 93** Assists Disabled

3. In the **Assists Status** page, click **Devices** tab to view the list of devices failed for the specific assist.

System > Assists > Ensure WLAN security is not open unless it is a guest network.

**Status** Failed **Severity** Major **Affected Devices** 7 **Category** Security **Group** Wireless

**Description**  
 ID: wifi.security.wlansecurityopen  
 When WLAN security is configured as "Open" even if it is not a "guest" network, anyone can access the wireless network and can be a potential security threat since no authentication is used. Also, the wireless traffic is not encrypted and anyone sniffing the traffic can see all the data in plain text.

## Assists fix now

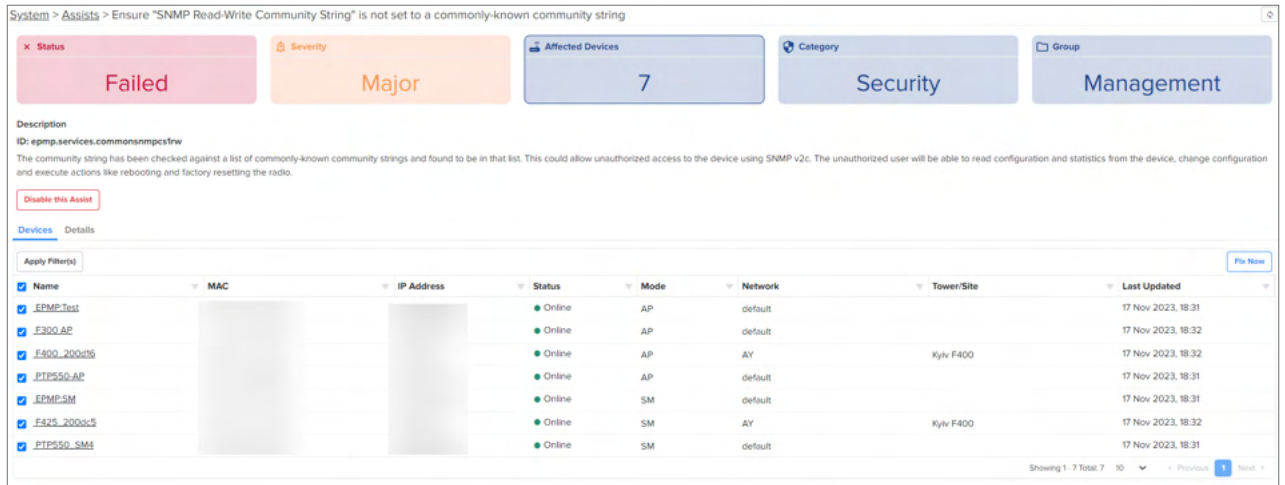

### Note

The Assists **Fix Now** feature is available only for ePMP and PMP devices.

**Assists Device** page allows the user to fix the failed assists.

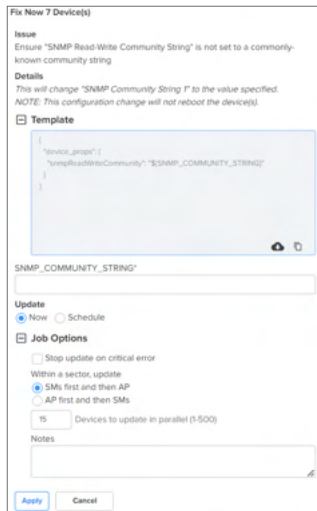

Perform the following steps to fix the failed assists:

1. Navigate to the **Assists Device** page.
2. Select the devices to be fixed.

3. Click **Fix now**.

The **Fix Now** window pops up.

4. Select from the following options under the **Update** field, to fix the issue now or at a later date:

- **Now**—Fix the issue immediately when you click **Apply** on this page.
- **Schedule**—Fix the issue at the selected date and time. Select the required date and time from the **Start Date** and **Start Time** fields.

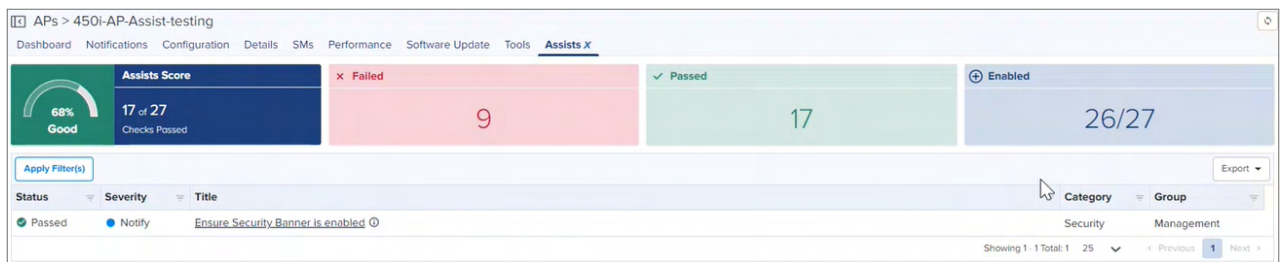

5. Click **Apply**.

Success window pops up.

ID	Details	Managed Account	Occurrence	Target	Created by	Created on	Completed on	Parallel	Stop on Error	Sector Priority	Status

14857	3 device(s)	All Accounts	Now		Auto-Sync	Nov 21, 2023 17:37	Nov 21, 2023 17:38	15	false	N/A	Completed
14856	3 device(s)	All Accounts	Now		Auto-Sync	Nov 21, 2023 17:36	Nov 21, 2023 17:37	15	false	N/A	Completed
14855	3 device(s)	All Accounts	Now		Auto-Sync	Nov 21, 2023 17:36	Nov 21, 2023 17:36	15	false	N/A	Completed

When the failed assists are fixed, the status is changed to **Passed** as shown in [Figure 95](#).

**Figure 95** *Passed Assists*

## Dashboard

The **Dashboard** page in cnMaestro is customized for each device type and aggregation level (such as System, Network, Tower, and Site). Pages representing devices provide information on location, significant configuration parameters, and performance. System, Network, Tower, and Site nodes aggregate dashboard data for devices they contain.

## KPI (Key Performance Indicators)

Each page has a set of KPIs tailored to the node type. These display a current value and often historical trend data over the last 24 hours.

**Figure 96 Device by Type**

**Note**

KPI widgets at network and Tower-level show minimum four widgets when no data is available in KPI's. Shows wireless clients KPI when at least one Wi-Fi device is available. Wireless clients KPI is moved beside Wi-Fi KPI. Machfu KPI is not supported any more.

## Application History

The Application History displays top client names and their top five application usage details for last 24 hours.

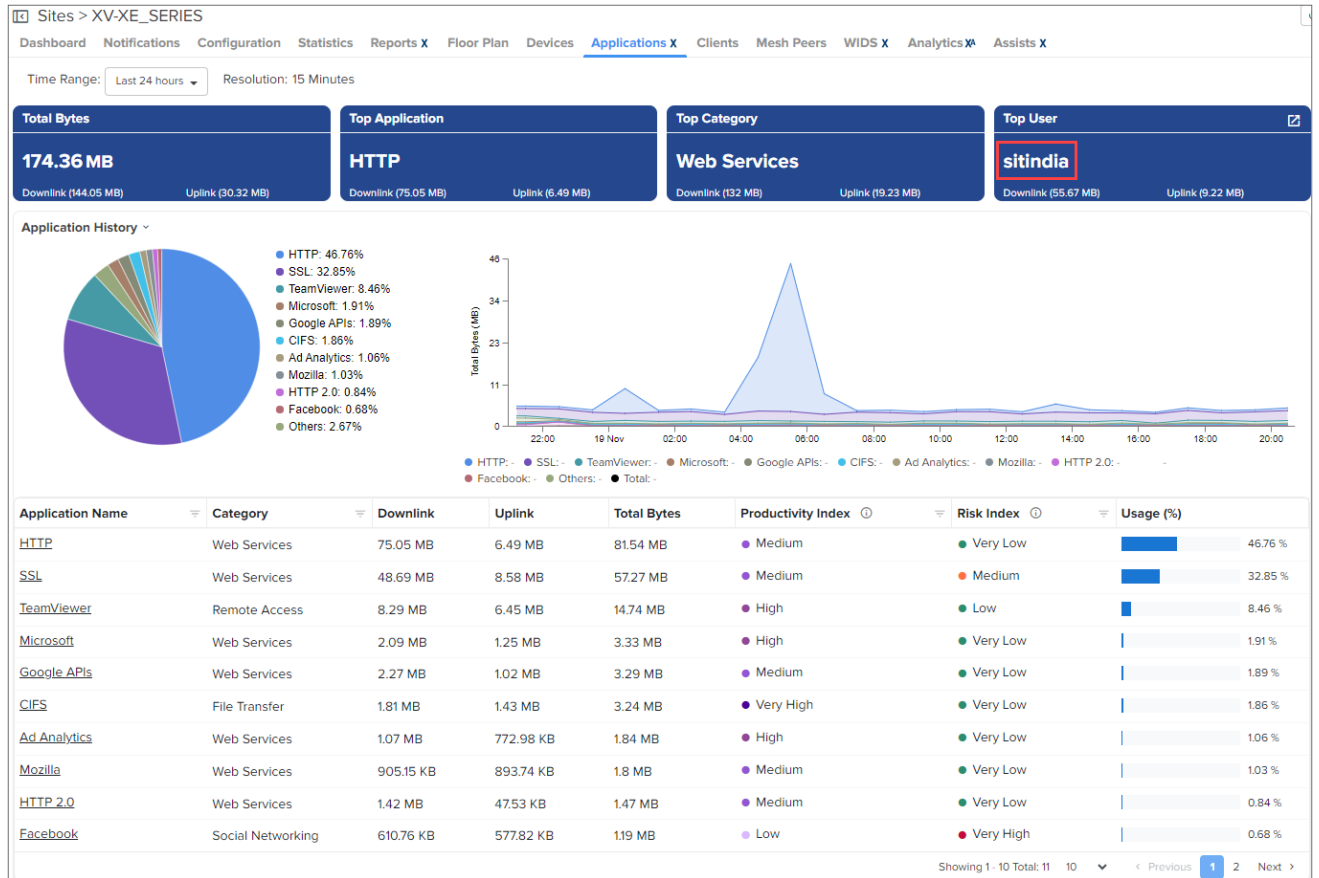

**Figure 97 Application History**

The **System Dashboard** page displays detailed system level application usage in **Application History** and **Category History**. It displays the **Top Clients** names and their top five application usage details. The Application Visibility parameter fields are explained in detail as shown below.

Figure 98 System > Application

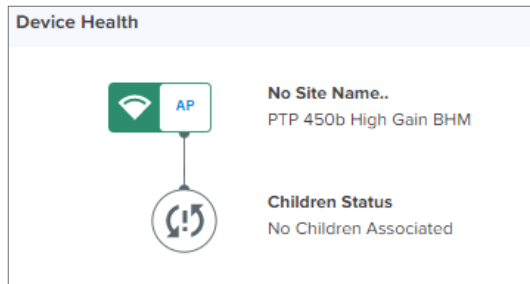

**Note**

- By default, the application statistics for last 24 hours is displayed.
- Application data is available for NSE and Enterprise Wi-Fi (XV, XD, and XE) devices only.
- Application data is available only for the clients connected to NSE in Essentials accounts.

## Device Health

Device Health displays the health of the network from the Tower to the edge Device.

Figure 99 Device Health

## Connection Health

Connection Health displays the health of the devices connected to the network.

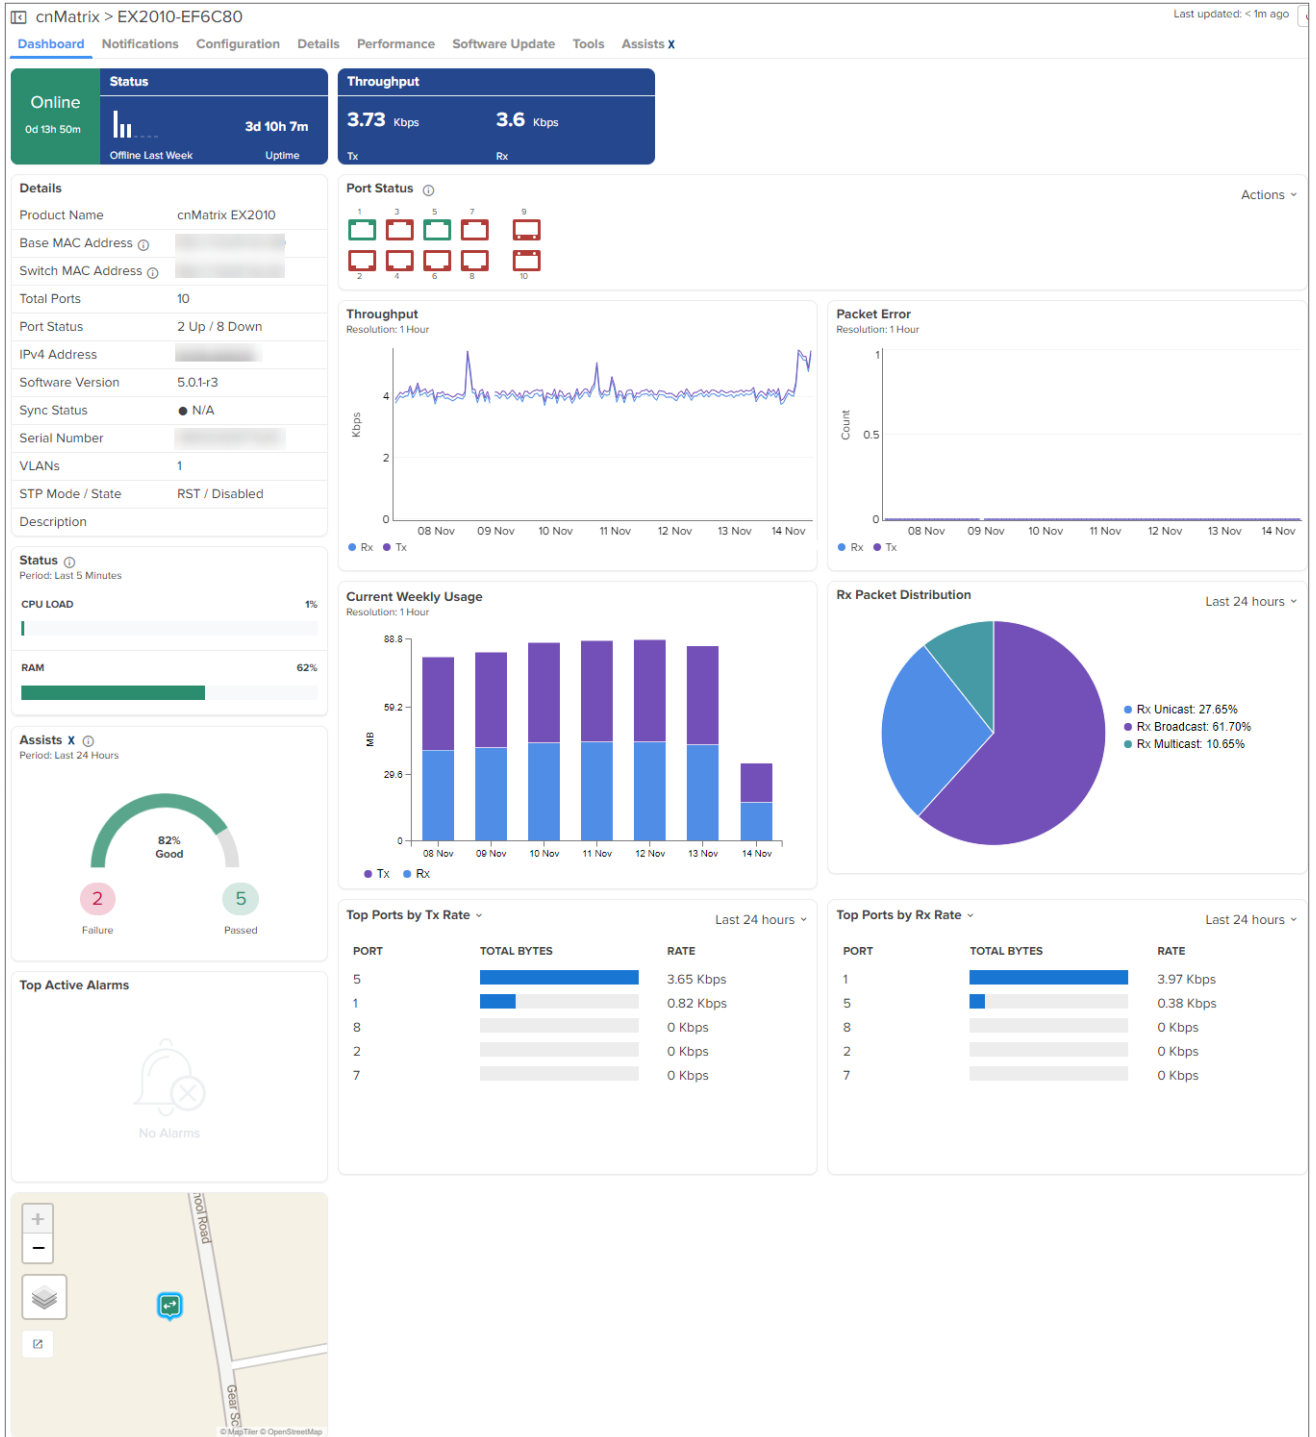

## Charts and Graphs

Contextual charts and graphs provide details on important dashboard metrics.

Figure 100 Charts and Graphs

# Notifications

The **Notifications** page displays details of alarms, alarm history, and events. These are synchronous messages that provide real-time system status.

**Table 18** Notification overview

Type	Description
Alarms	Alarms indicate state and persist as long as the problematic activity continues; they reflect the current health of the devices in the network.
Alarms History	Expired Alarms are added to the Alarm History. The Alarm History page displays historical active alarm counts.
Events	Events are stateless, transient messages that occur in response to an input or action, such as if the CPU exceeds a threshold or a device association fails. Events are fire-and-forget; they are stored in an Event Table and provide a history of device activity.
Wi-Fi Events	Details of the Wi-Fi events are displayed.

For PTP 820/850 devices, additional two other notifications are displayed as shown in [Figure 101](#) and [Figure 102](#):

- Device Alarms displays the following parameters:
  - Alarm ID
  - Severity
  - Origin
  - Description
  - Probable Cause
  - Raised Time
- Device Events displays the following parameters:
  - Raised Time
  - Sequence Number
  - Severity
  - State
  - Description
  - Origin

**Figure 101** PTP 820/850 Device Alarms

Alarm ID	Severity	Origin	Description	Probable Cause	Raised Time
907	Critical	Slot: 1	Activation key violation	The configuration doesn't match the act... <a href="#">View Details</a>	Sat Jul 16 2022 01:16:00 UTC +0530

**Figure 102** PTP 820/850 Device Events

Raised Time	Sequence Number	Severity	State	Description	Origin
Aug 13 2022, 01:14	551541	Warning	Event	Configuration file transfer successful	Slot: 1
Aug 13 2022, 01:14	551540	Warning	Event	Configuration file transfer in progress	Slot: 1
Aug 13 2022, 01:14	551539	Warning	Event	User issued command for transfer of configuration file	Slot: 1
Aug 13 2022, 01:14	551538	Warning	Event	Configuration file backup created	Slot: 1
Aug 13 2022, 01:14	551537	Warning	Event	Configuration file number 1 backup generation started	Slot: 1
Aug 11 2022, 23:35	551536	Warning	Event	Configuration file transfer successful	Slot: 1
Aug 11 2022, 23:35	551535	Warning	Event	Configuration file transfer in progress	Slot: 1
Aug 11 2022, 23:35	551534	Warning	Event	User issued command for transfer of configuration file	Slot: 1
Aug 11 2022, 23:35	551533	Warning	Event	Configuration file backup created	Slot: 1
Aug 11 2022, 23:35	551532	Warning	Event	Configuration file number 1 backup generation started	Slot: 1

## Event/Alarm Source

Identity of the source device for the event or alarm.

## Aggregation

Notifications are visible at every level of the device tree. Higher levels consolidate notifications for all devices at lower levels in the hierarchy. For example, the network level displays the events and alarms for all devices within that network. This aggregation is only available for System, Networks, Towers, and Sites. When a device is selected, such as an AP, the notifications will only be for it, and not its associated SMs (even though they are lower in the tree).

## Storage

Events and Alarms are stored in cnMaestro for an extended period. They will be removed when the total count across the account surpasses 1,000 multiplied by the number of devices in the account. The oldest entries are cleared first.

## Events

The Event Table stores a history of the most recent events for the selected node.

## Event Severity

Event Severity is mapped to the following levels:

**Table 19** Event Severity

	Severity	Definition
	Critical	Catastrophic problem that makes the product/feature unusable.
	Major	Issue that greatly degrades the product/feature, but it is still usable.
	Minor	Limited issue that alters product functionality in a targeted way.
	Notify	Message used primarily for information.

## Event Export

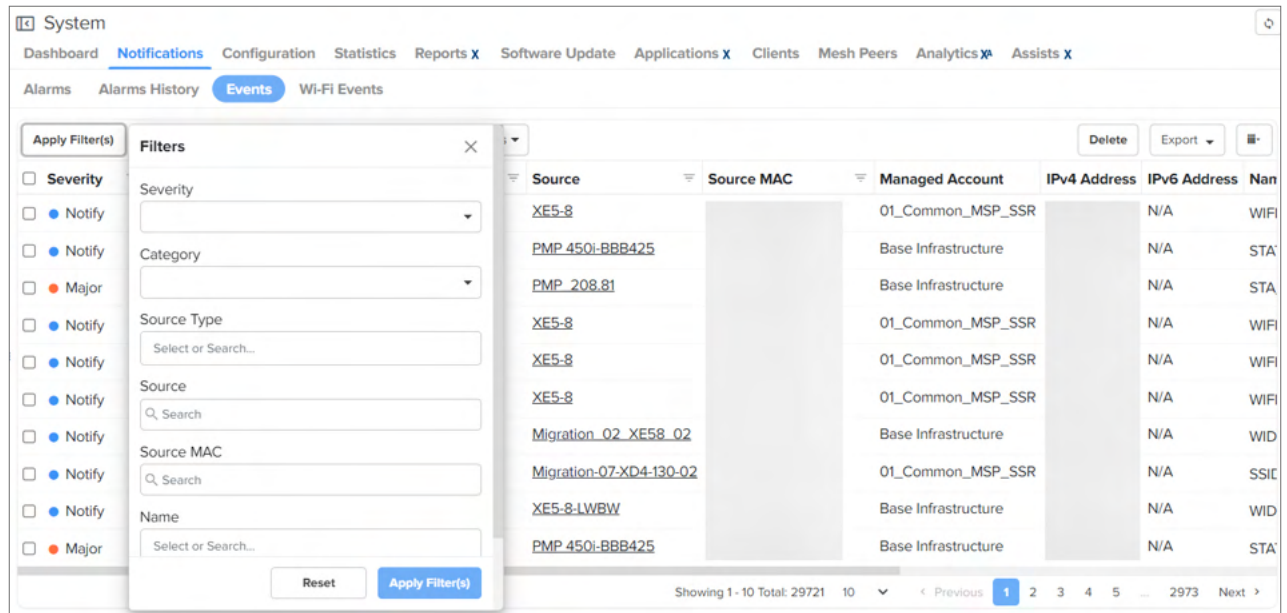

The data in the Event table is exported in a CSV or PDF file format. The following export options are available:

- Export page as CSV
- Export page as PDF
- Export all as CSV

You can create custom filters for events. To create a custom filter, perform the following steps:

1. In the Events table, click **Apply Filter(s)**.
2. Enter the values in the fields for creating the filters.
3. Click **Apply Filter**.

**Figure 103** Events: New Filter

You can manually filter or search by typing parameters in the column header of the Events table.

4. Click **Reset** to reset the filter option in the Events table.
5. Click **Clear Filters** to clear all the filter options.

If you do not receive expected filter details, click **Change Filter(s)** in the Events table to apply new filters.

**Figure 104** Events: Source Type filter

Severity	Category	Event Type	Source Type	Source	Source MAC	Managed Account	IPv4 Address	IPv6 Address	Name
Major	WIRELESS	Subscriber Modu...	PMP 450i S			Base Infrastructure		N/A	STA_DROP
Notify	WIRELESS	Status	XE5-8			Base Infrastructure		N/A	WIDS_DETECT_B
Notify	WIRELESS	Status	XE5-8			Base Infrastructure		N/A	WIDS_DETECT_B
Notify	NETWORK	Status	PMP 450i S			Base Infrastructure		N/A	STATUS_UP
Major	NETWORK	Status	PMP 450i S			Base Infrastructure		N/A	STATUS_DOWN
Major	WIRELESS	Subscriber Modu...	PMP 450i A			Base Infrastructure		N/A	STA_DROP
Notify	NETWORK	Status	PMP 450i S			Base Infrastructure		N/A	STATUS_UP

PMP 450i-BBB425		Base Infrastructure		N/A	STATUS_	1, 03:11

You have an option to delete the event(s). To delete an event(s), select the required event(s) from the table and then click **Delete**.

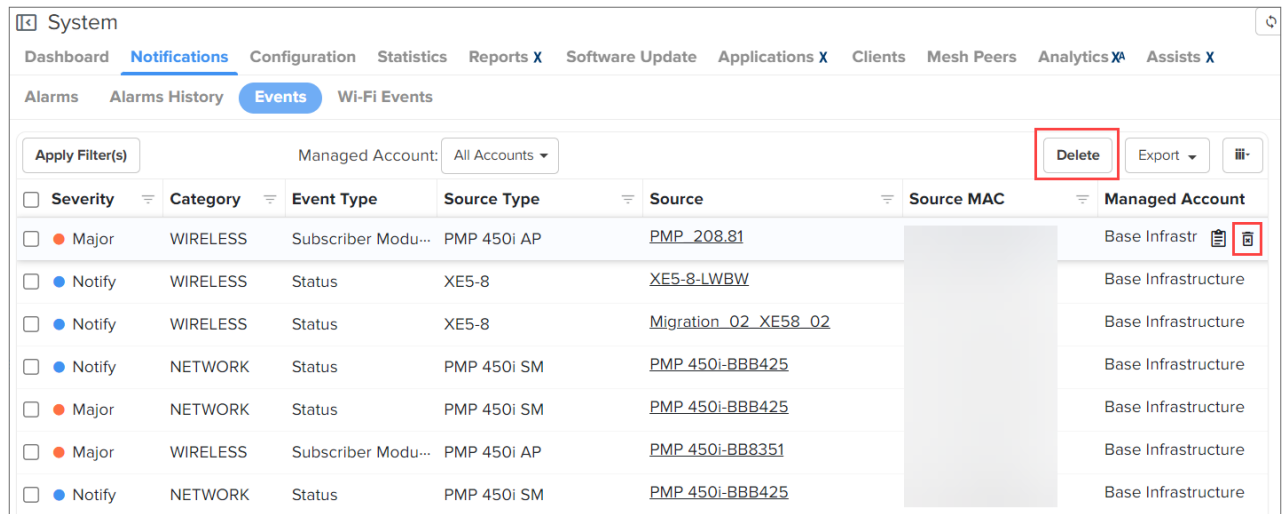

**Note**

- You can also delete an event by hovering the cursor over the event and then clicking the delete (🗑️) icon.
- Monitor** user cannot delete events. Only **Superadmin**, **Admin**, **Operator**, and **CPI** users can

delete events.

**Figure 106** Events: Delete event(s)

The following table describes the different types of system event categories and their descriptions.

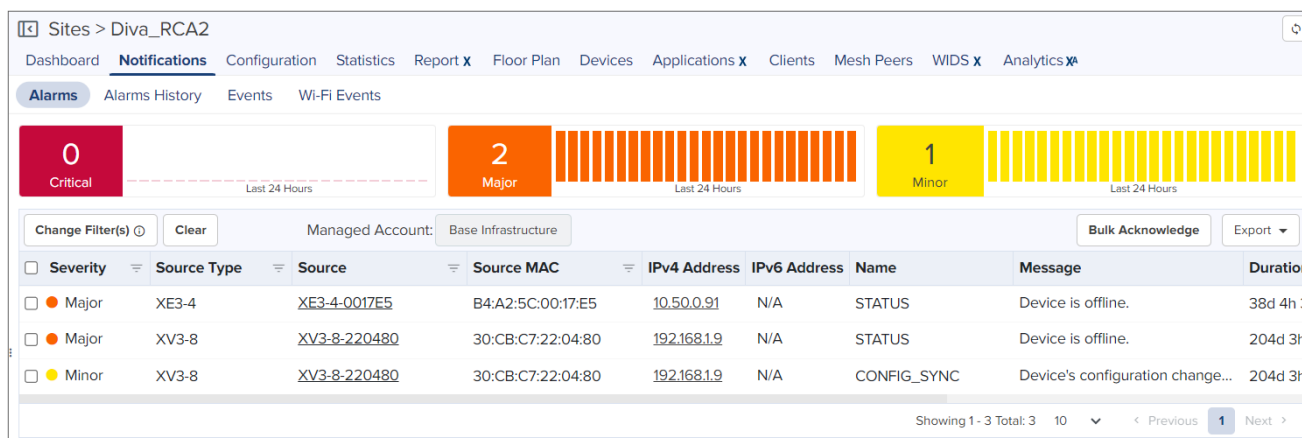

**Table 21** System Event Types and Definitions

System Event Category	Description
Infrastructure	Events related to infrastructure management – such as HA setup, interfacing with Message Bus or Database servers, Subscription, etc. Source: cnMaestro
Network	Events related to networking issues, such as link up/down. Source: Devices
Operations	Event related to system-level processes, such as pushing configuration, installing images, etc. Source: Devices
Other	Events related to miscellaneous categories. Source: Devices
Registration	Events related to managing/unmanaged devices. Source: Devices
Security	Events related to logging into the devices, establishing secure links, and potentially recognizing scans and security breaches in the future. Source: cnMaestro, Devices, and Clients
Services	Events related to additional services that may be added to the product in the future. There may not be any services events in the first release. Source: cnMaestro and Devices
Wireless	Events related to issues/notifications with the PTP/PMP radio connectivity, Wi-Fi Clients, etc. Source: Devices and Clients

## Alarms

### Alarm Life Cycle

The basic alarm life cycle has the following states:

**Table 22** Alarm Life Cycle

State	Description
Acknowledged	Active alarms can be acknowledged, which signifies they are known and being handled. Acknowledged alarms are not included in the total alarm count.

**Table 22** Alarm Life Cycle

State	Description
Active	The alarm remains active until the combination of inputs that generated it are cleared.
Inactive	Inactive alarms remain visible in the active Alarm Table for 10 minutes, before they are moved to Alarm History. An alarm becomes inactive when the inputs that generated it are no longer present. An Inactive alarm can be pulled back to the Active/Acknowledged states if a new event reactivates the alarm.
Raised	The creation of the alarm.

## Alarm Severity

Alarms have a severity that determines how they are handled.

**Table 23** Alarm Severity

	Severity	Definition
	Critical	Catastrophic problem that makes the product/feature unusable.
	Major	Significant issue that greatly degrades the product/feature, but it is still usable.
	Minor	Limited issue that alters product functionality in a targeted way.

## Alarm Types

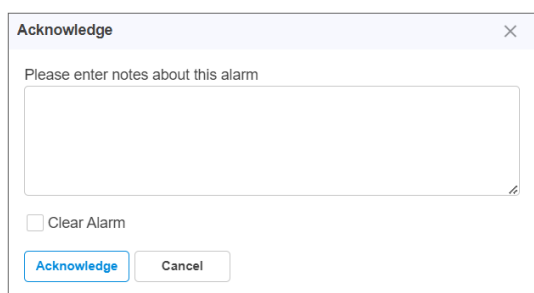

**Table 24** Alarm Types

Alarm Type	Definition
Configuration	Issues encountered during a device configuration update.
DFS State	Issues related to DFS operational status.
GPS State	Issues related to GPS synchronization.
Link State	Issues related to the status of device interfaces.
Status	Connectivity between cnMaestro and a device is lost.
Upgrade	Issues encountered during device software upgrade.

## Alarm Acknowledgment

Active alarms can be acknowledged in the Alarm Table. Acknowledgment makes the alarm less visible in the table, and the administrator can further add a note describing how the alarm is being resolved. Acknowledging an alarm will also remove it from the alarm counts. You can also select the **Clear Alarm** check box to clear the acknowledged alarm when acknowledging the alarms.

**Figure 107** Alarm Acknowledgment

The screenshot shows a dialog box titled "Acknowledge" with a close button (X) in the top right corner. Inside the dialog, there is a text area with the placeholder text "Please enter notes about this alarm". Below the text area is a checkbox labeled "Clear Alarm". At the bottom of the dialog, there are two buttons: "Acknowledge" (highlighted in blue) and "Cancel".

## Alarm Bulk Acknowledgment

To acknowledge multiple alarms at the same time, follow these steps:

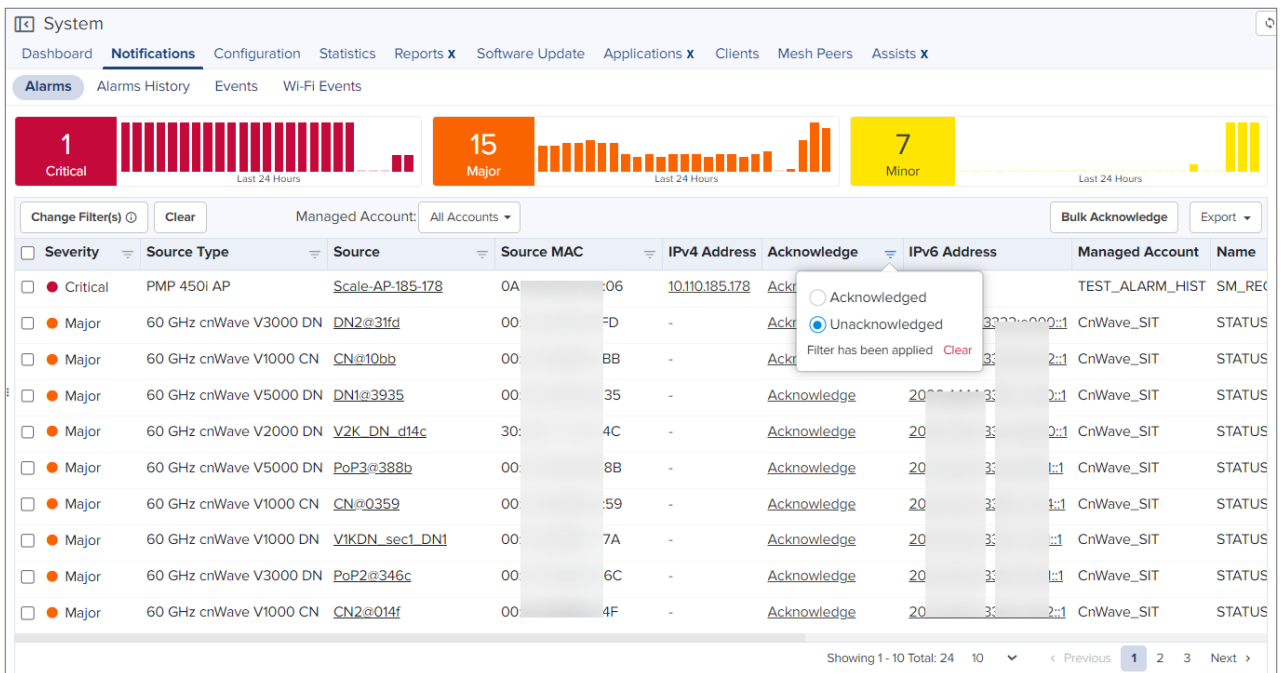

1. Navigate to the **Monitor and Manage > Notifications > Alarms** page.

**Figure 108 Alarm Bulk Acknowledgment**

2. Select the alarms from the alarms list and then click on the **Bulk Acknowledge** button on the top right corner of the list.
3. Enter **Notes** about the selected alarms.
4. (Optional) Select the **Clear Alarm** check-box if you would like to remove those alarms from the Alarms list after you acknowledge.
5. Click **Acknowledge**

You can filter the Acknowledged and Unacknowledged devices as shown below:

**Note**

Acknowledged alarms are not shown in **Top Active Alarms**.

### Alarm filters

You can create custom filters for **Alarms**. To create a custom filter, perform the following steps:

1. In the **Alarms** table, click **Apply Filter(s)**.
2. Enter the values in the fields for creating the filters.
3. Click **Apply Filter**.

Figure 109 Alarms: New Filter

The screenshot shows the 'System' dashboard with the 'Alarms' section active. At the top, there are three summary cards: '3 Critical' (red), '35 Major' (orange), and '33 Minor' (yellow), each with a bar chart for the 'Last 24 Hours'. Below these is a 'Filters' dialog box with the following sections:

- Severity:** A dropdown menu.
- Source Type:** A dropdown menu with 'Select or Search...' below it.
- Source:** A search input field.
- Source MAC:** A search input field.
- Status:** Radio buttons for 'Active' and 'Inactive'.
- Raised Time:** Radio buttons for 'Between', 'Before', and 'After'.

At the bottom of the dialog are buttons for 'Apply Filter(s)', 'Reset', and 'Clear Filters'. The background shows a table of alarms with columns: 'Severity', 'IPv4 Address', 'IPv6 Address', 'Managed Account', and 'Name'. The table contains several rows of data, including entries for 'NETWORK\_TUNNEL\_STATUS' and 'THRESHOLD\_CLIENT\_CONNECTION\_HEA'. At the bottom of the table, it says 'Showing 1 - 10 Total: 74' and has pagination controls.

You can manually filter or search by typing parameters in the column header of the Alarms table.

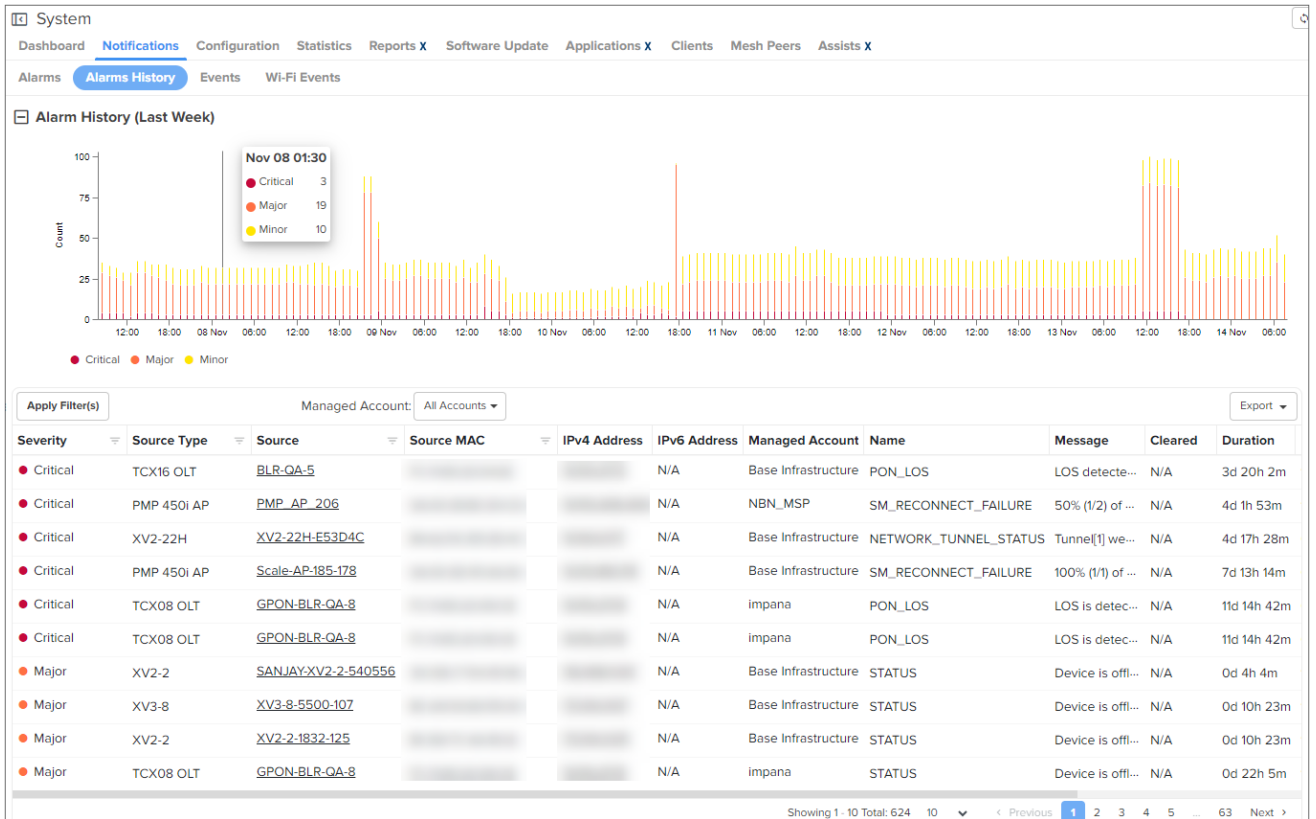

4. Click **Reset** to reset the filter option in the Alarms filter.
5. Click **Clear Filters** to clear all the filter options.

If you do not receive expected filter details, click **Change Filter(s)** in the Alarms table to apply new filters.

## Alarm History

Expired Alarms are added to the Alarm History. The Alarm History displays historical active alarm counts. Clicking the bar chart filters the table data underneath, allowing you to view which alarms were active at a specific time in the past.

Figure 110 Alarm History

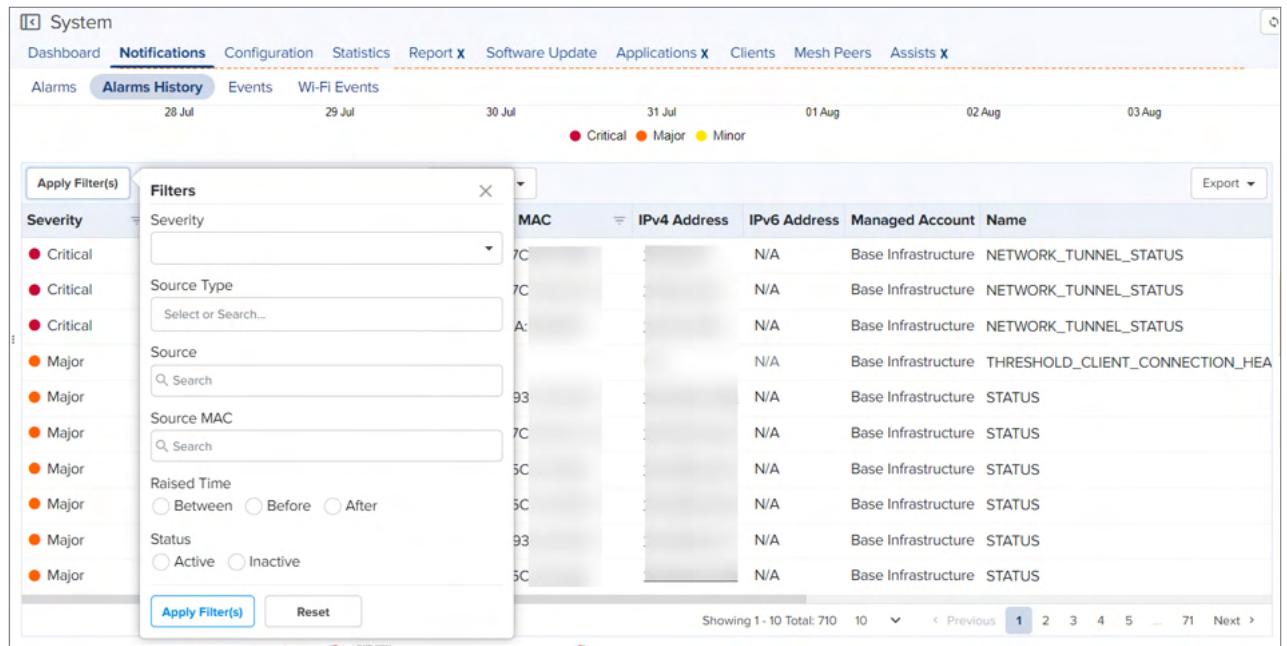

## Alarm History filters

You can create custom filters for **Alarms History**. To create a custom filter, perform the following steps:

1. In the **Alarms History** table, click **Apply Filter(s)**.
2. Enter the values in the fields for creating the filters.
3. Click **Apply Filter**.

**Figure 111 Alarm History: New Filter**

You can manually filter or search by typing parameters in the column header of the Alarm History table.

4. Click **Reset** to reset the filter option in the Alarms History filter.
5. Click **Clear Filters** to clear all the filter options.

If you do not receive expected filter details, click **Change Filter(s)** in the Alarm History table to apply new filters.

## Wi-Fi Events

Wi-Fi Events are listed as below:

Source	Managed Account	Source MAC	Source ...	Client Name	Client MAC	Name	Raised Time
XV3-8-4DDADC_raj	Base Infrastructure	BC557C4D8A	DC XV3-8	IN01-DK51LR2	645D266426	3D WIFI_CLIENT_CONNECTED	03 Aug 2023

## Statistics and Details

The **Statistics** page provide a tabular aggregation of data, including general information on the devices monitored, as well as wireless, network, and traffic metrics. The **Details** pages, however, provide information on a single

device.

This section contains information about the following topics:

- [Statistics page](#)
- [Details page](#)

## Statistics page

The following table highlights information that is displayed in the **Statistics** page at the System, MSP, Network, Tower, and Site-levels:

**Table 25** *Device Statistics*

# cnReach

The **Details** section displays following tabs for cnReach:

- Overview
- Interfaces
- Neighbors
- Radio 1 (BHM) Children

## Overview

**Figure 122** cnReach: Device > Details > Overview

The screenshot displays the 'Overview' tab for the device 'cnReach\_Dev\_AP'. The interface includes a navigation bar with tabs for Dashboard, Notifications, Configuration, Details (selected), Performance, Software Update, and Tools. Below the navigation bar are sub-tabs for Overview, Interfaces, Neighbors, and Radio 1 (BHM) Children. The main content area is divided into several sections:

- System:** A table with fields: Name (cnReach\_Dev\_AP), Device Type (cnReach BHM), System Uptime (0d 11h 10m), Coordinates (redacted), Description, Hardware (EB-EBB63), DA Version (2.68.20096), and Onboard Date (Jun 27 2024 15:56:06).
- Software Update:** A table with fields: Active Software Version (cn-EBX.5.2.18d), Inactive Software Version (cn-EBX.5.2.18g), and GPS Firmware Version.
- History:** A table with columns: Date, Status, and Version. The content area below is empty with the text 'Version History Unavailable'.
- Configuration Update:** A table with columns: Date, Status, and Template. The content area below is empty with the text 'Configuration History Unavailable'.
- Network:** A table with fields: LAN MAC (redacted), IPv4 Address (10.110.209.126), Subnet Mask (N/A), Gateway (N/A), and DNS Server(s) (N/A).
- Radio Details:** A table with fields: Type (Radio 1), MAC (redacted), Mode (AP), Network Type (PTP), Network Address (100), Device ID (301), Linked With (201), Tx Power (1007 mW), Software Version (1.57.20870), RSSI (-60 dBm), Margin (50 dB), Noise (-110 dBm), Room Temperature (39 °C), Parent MAC, Throughput (UL) (0 Kbps), and Throughput (DL) (0 Kbps).

## Interfaces

  - Frame Utilization (DL): N/A

## Wi-Fi APs

Figure 127 *cnVision Client: Device > Details > Wi-Fi APs*

The screenshot shows the 'Wi-Fi APs' page for the same device. The page features a search bar, a 'Managed Account' dropdown set to 'Base Infrastructure', and an 'Export' button. Below these is a table with the following columns: Device Name, MAC Address, Managed Account, Product Name, Network, Tower/Site, Radios, IPv4 Address, IPv6 Address, Status, and AP Group. The table is currently empty, displaying the message 'No Data Available'. At the bottom right, there is a pagination control showing 'Showing 0 - 0 Total: 0' and navigation buttons for 'Previous' and 'Next'.

## cnVision Hub

The **Details** section displays following tabs for cnVision Hub:

- Overview
- Wi-Fi APs

### Overview

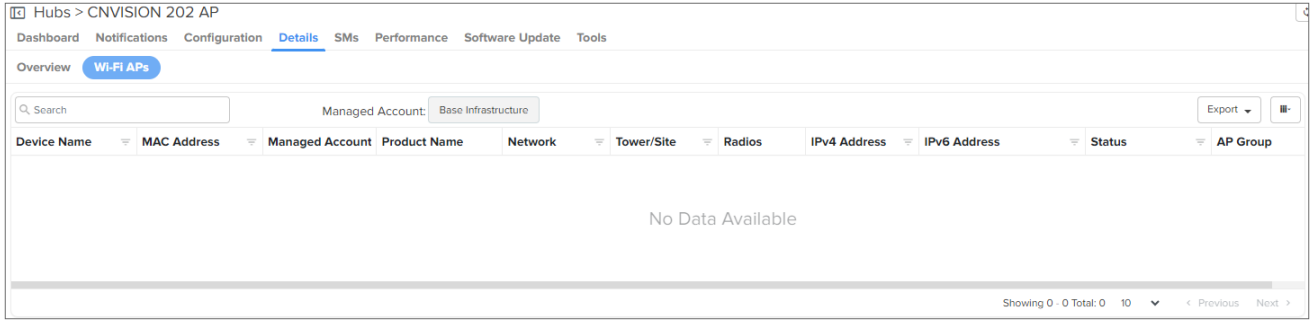

**Figure 128** *cnVision Hub: Device > Details > Overview*

The screenshot displays the 'Overview' tab for a 'CNVISION 202 AP' device. The interface includes a navigation bar with tabs for Dashboard, Notifications, Configuration, Details (selected), SMS, Performance, Software Update, and Tools. Below the navigation, there are sub-tabs for Overview and Wi-Fi APs. The main content is organized into several sections:

- System:** A table listing device details such as Name (CNVISION 202 AP), Device Type (cnVision HUB 360r), System Uptime (0d 10h 45m), Coordinates ([1, 1]), Description, Hardware (5 GHz HUB 360r Radio), DA Version (2.105.47), Onboard Date (Jul 02 2024 10:55:14), and Reboots (2).
- Software Update:** A table showing Active Software Version (4.6.0.1), Inactive Software Version (4.6.1-RC14), and GPS Firmware Version (N/A).
- History:** A table with columns for Date, Status, and Version, currently displaying 'Version History Unavailable'.
- Configuration Update:** A table with columns for Date, Status, and Template, currently displaying 'Configuration History Unavailable'.
- Network:** A table listing network parameters including LAN MAC, Ethernet Interface (Up), IPv4 Address (10.110.208.202), Subnet Mask (255.255.255.0), Gateway (10.110.208.254), DNS Server(s) (10.110.12.110, 10.110.12.111), and Management VLAN ID (Disabled).
- Wireless:** A table listing wireless configuration details such as Operating Frequency (5800 MHz), Channel Bandwidth (20 MHz), Transmitter Output Power (15 dBm), Maximum Transmit Power (N/A), Country Code (United States), External Antenna Gain (8 dBi), Internal Antenna Gain, DL/UL Ratio (30/70), SSID (Cambium-360r-HUB-4), Authentication (WPA2), DFS Status (N/A), and Wireless MAC.
- Limits:** A table showing Max Subscribers (64) and Max Range (3 Miles).

## Wi-Fi APs

**Figure 129** *cnVision Hub: Device > Details > Wi-Fi APs*

## cnWave 5G Fixed Details

### cnWave 5G Fixed BTS

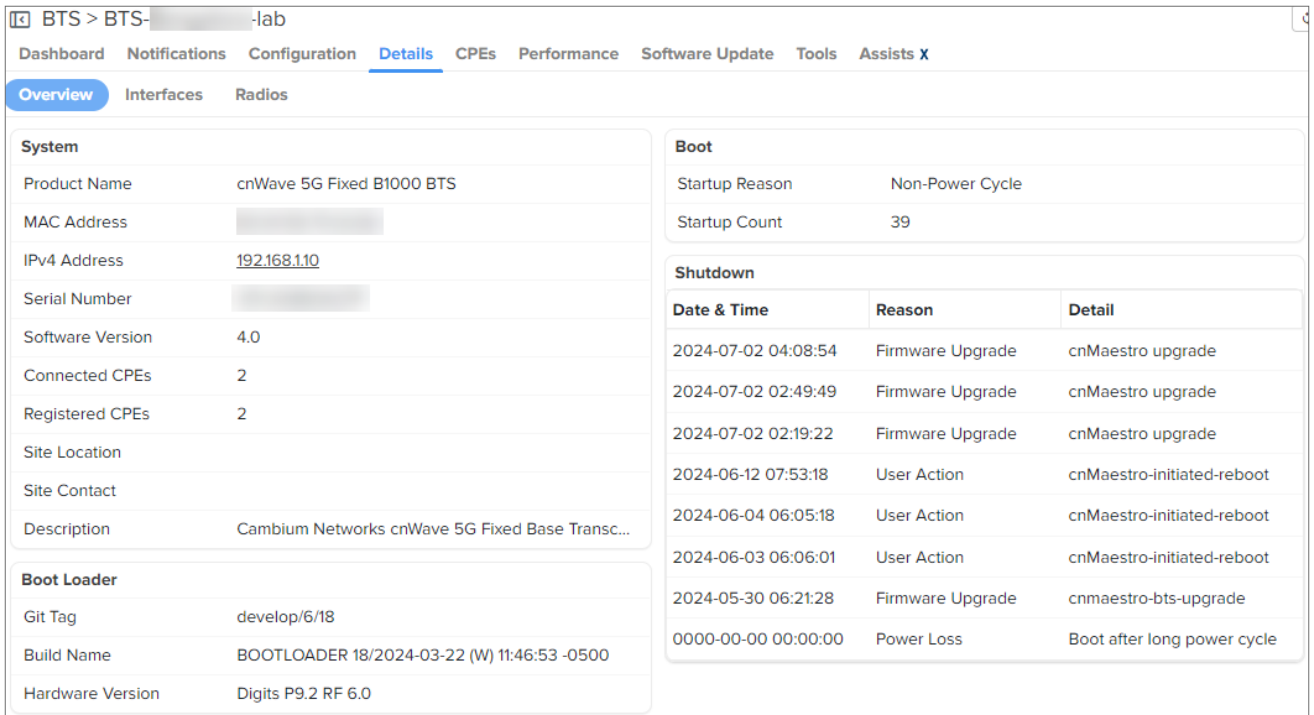

The **Details > Overview** section displays following tabs for cnWave 5G Fixed BTS device:

- Overview
- Interfaces
- Radios

### Overview

Overview page provides the information such as Details, Boot Loader, Boot, and Shutdown.

**Figure 130** *cnWave 5G Fixed: Device > Details > Overview*

### Interfaces

Interface page provides the information such as Interface Configuration, GNSS, Tx/Rx Errors, and Tx/Rx Counters.

**Figure 131** *cnWave 5G Fixed BTS: Device > Details > Interfaces*

The screenshot displays the 'Interfaces' section of the 'Details' page for a 5G Fixed BTS. The navigation bar includes 'Dashboard', 'Notifications', 'Configuration', 'Details', 'CPEs', 'Performance', 'Software Update', 'Tools', and 'Assists X'. The 'Interfaces' tab is selected, and the 'Radios' sub-tab is also visible.

**Interface Configuration**

SFP1 Speed	Autoneg 1000BASE-X
SFP2 Speed	Autoneg 10GBASE-R

**GNSS**

Tracking	3D Fix

## Activation Key

Activation Key provides the information of Feature Name, Feature Description, Feature Usage, Feature Credit, and Violation.

**Figure 152** PTP 820/850: Device > Details > Activation Key

PTP 820/850 > PTP 820C-10.120.109.102

Dashboard Notifications Configuration **Details** Performance Software Update

Overview Ethernet Security **Activation Key**

Feature Name	Feature Description	Feature Usage	Feature Credit	Violation Status
Services Mode	SL-0311-0: Smart-Pipe mode, SL-0312-0: Edge-CET-Node mode, SL-0313-0: Agg-Lvl-1-CET-Node mode, SL-0314-0: Agg-Lvl-2-CET-Node mode	Not Used	Smart Pipe	Ok
Number of Services	Number of allowed Ethernet services	2	10	Ok
H-QoS	SL-0320-0: Hierarchical QoS (Quality of Service)	Not Used	Not Allowed	Ok
Network Resiliency	SL-0327-0: Network resiliency protocols (Smart-TDM Path Protection, G.8032)	Not Used	Not Allowed	Ok
Eth. OAM-Fault Management	SL-0329-0: Enables Connectivity Fault Management (FM) per Y1731/ 802.lag and 802.3ah (CET mode only)	Not Used	Not Allowed	Ok
Eth. OAM-Perf. Monitoring	SL-0330-0: Ethernet OAM (Operation Administration and Maintenance) Performance Monitoring (PM) - Y1731	Not Used	Not Allowed	Ok
LACP	SL-0405-0: Enables Link Aggregation Control Protocol (LACP)	Not Used	Not Allowed	Ok
L1 Link Bonding	SL-0445-0: L1 Link Bonding feature	Not Used	Not Allowed	Ok
Synchronous Ethernet	SL-0322-0: ITU-T G.8262 SyncE and ITU-T G.8264 ESMC (Ethernet Synchronization Message Control)	Not Used	Not Allowed	Ok
IEEE 1588v2 Transparent Clock	SL-0324-0: IEEE 1588v2 Precision Time Protocol - Transparent Clock	Not Used	Not Allowed	Ok
IEEE 1588v2 Transparent Clock BRCM	SL-0443-0: IEEE 1588v2 Precision Time Protocol - Transparent Clock BRCM	Not Used	Not Allowed	Ok
IEEE 1588v2 Ordinary Clock	SL-0325-0: IEEE 1588v2 Precision Time Protocol - Ordinary Clock	Not Used	0	Ok
IEEE 1588v2 Boundary Clock	SL-0326-0: IEEE 1588v2 Precision Time Protocol - Boundary Clock	Not Used	Not Allowed	Ok
IEEE 1588v2 Boundary Clock BRCM	SL-0442-0: IEEE 1588v2 Precision Time Protocol - Boundary Clock BRCM	Not Used	Not Allowed	Ok
Main card redundancy	SL-0328-0: Enables the use of a second TCC in a 2RU chassis for TCC redundancy	Not Used	Not Allowed	Ok
TDM Pseudowire	SL-0352-0: Enables TDM Pseudowire services on units with TDM interfaces	Not Used	Not Allowed	Ok

## Home Mesh Routers

See [Viewing router system information and network traffic status.](#)

# Performance

Performance pages display a synchronized view of time-series data for devices. The data can be filtered using the interval ranges in the upper left (last 1 hours to last 1 year) , or by dragging the cursor on the graph to select a specific range. The data presented varies based upon device type.

**Note**

cnMaestro supports 14 months of historical data for the following devices:

- cnPilot Home (R-Series)
- Enterprise devices (Enterprise Wi-Fi and cnMatrix)
- IIoT devices

cnMaestro supports 26 months of historical data for the following devices:

- Fixed Wireless

Period = 1 day is available for a Time Range of more than 24 hrs.

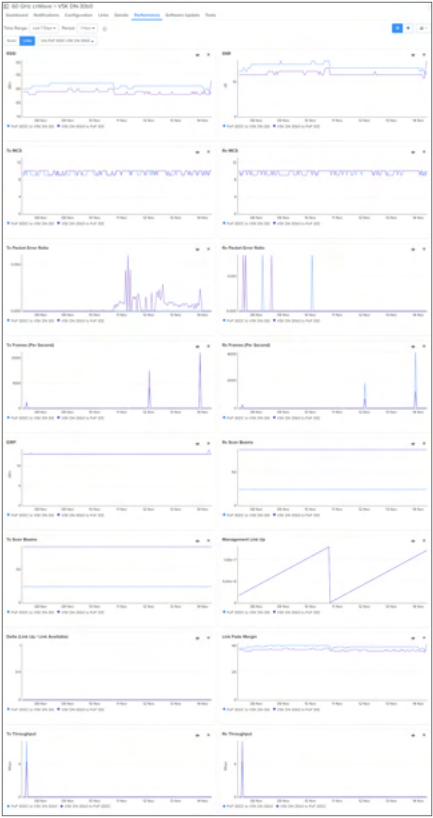

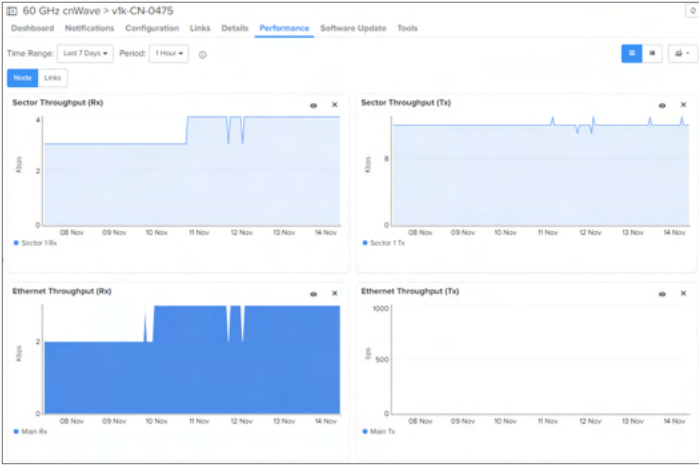

The following images represent the sample performance graphs for 60 GHz cnWave, cnMatrix, cnPilot Enterprise, cnPilot Home, cnRanger, cnReach, cnVision, cnWave 5G Fixed, ePMP AP, ePMP SM, PMP AP, PMP SM, PTP 650/670/700, and PTP 820/850 .

**Table 26** Performance graph

## Maps

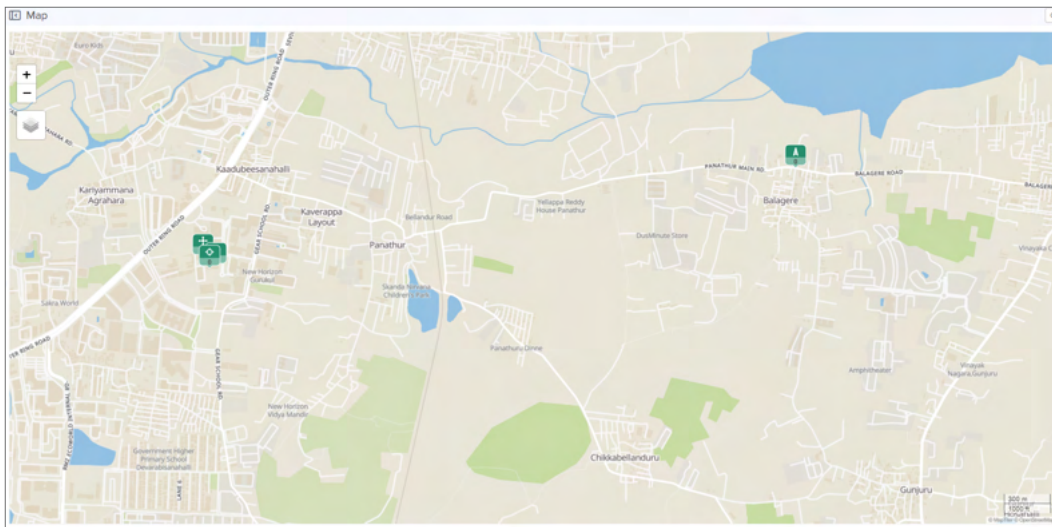

Maps provide visualization for Towers, Sites, and Devices. They display proximity to other devices, connectivity between devices, device health, and selectable status parameters. An example Map is presented below.

Three views are supported in System Maps and Network/Tower Dashboard Maps:

- Street View
- Satellite View
- Terrain View

**Figure 153** Map Street View

The Satellite View is supported in limited US and EU regions.

**Figure 154** Map Satellite View

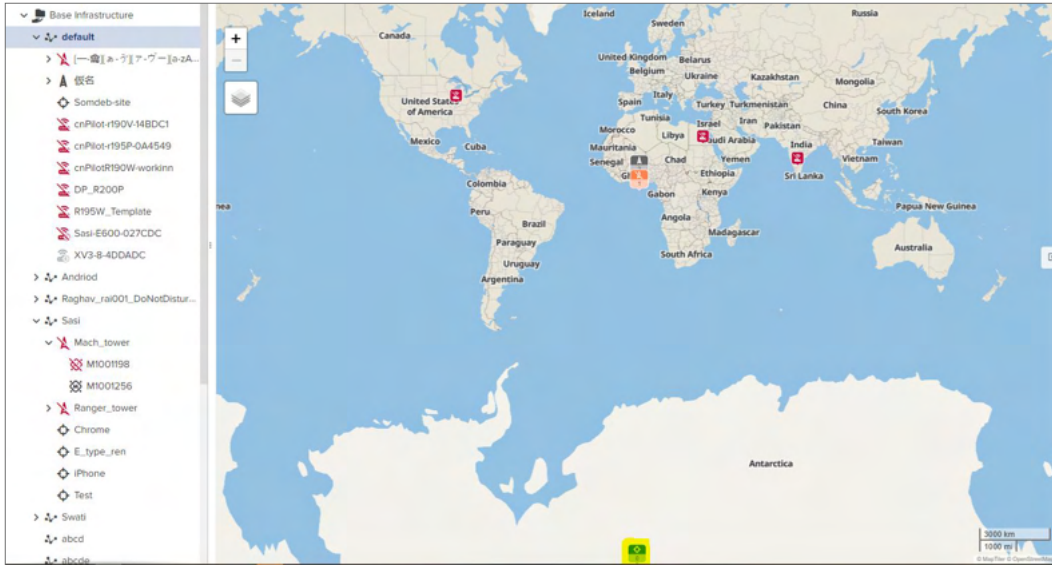

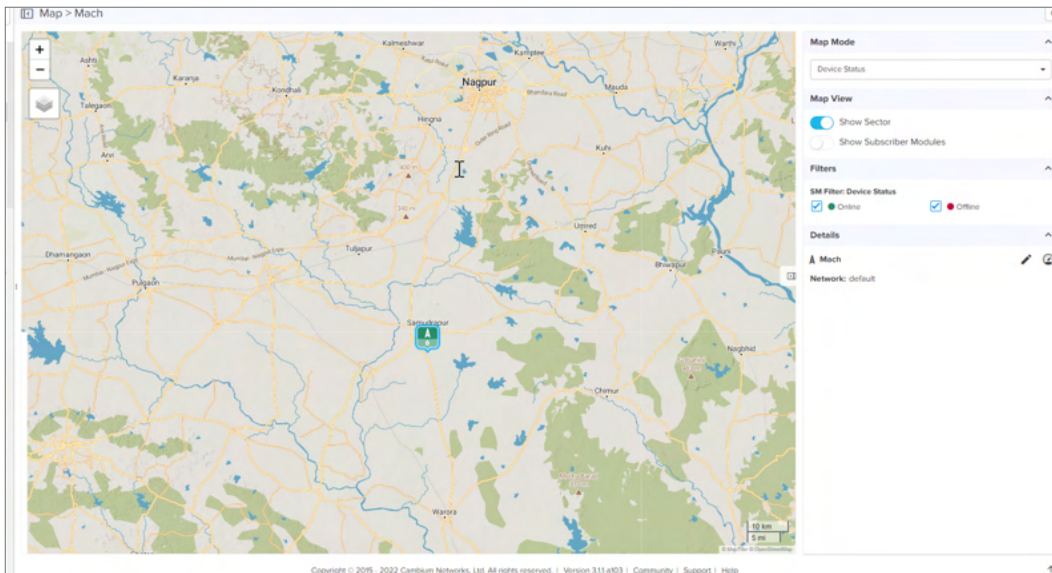

Figure 155 Map Terrain View

If latitude or longitudinal of Site or Tower or Device is (-90°, 90°, -180°, 180°) or (0,0) then they will not display in the map.

**Note**

- (0,0) is the default value for devices that do not have a location set cnMaestro does not plot devices with this location.
- (x, 180°) and (x, -180°) require the user to zoom out in order to see the markers.
- (90°, y) and (-90°, y) also displays incorrectly.

## Map Navigation

There are a various ways to navigate the map display.

Action	Description
Click	Click the following items on the Map to auto-select the same item in the Tree.

Action	Description
	<ul style="list-style-type: none"> <li>ePMP SM</li> <li>Tower</li> </ul>
Double-click	Double-click on the following items on the Map to auto-navigate to the Dashboard of that item. <ul style="list-style-type: none"> <li>ePMP SM</li> <li>Site</li> <li>Tower</li> </ul>
Hover	Hovering over a tower or device displays a tool tip that provides basic status information. Hovering over an RF link displays status on the link.
Standard Components	In the upper-left corner are generic map navigation components that allow one to zoom in and out. Use the mouse to drag and reposition the view, as well as turn on the satellite display.

## Mode

The map can be placed in a number of different modes, which define how the device status is presented.

**Table 27** *Mode*

Mode	Details
Alarm Status	Highlights devices based upon alarm count (Critical, Major, Minor).
Average MCS	Displays the Uplink or Downlink average MCS per device.
Device Status	Displays whether a device is Up (Green) or Down (Red).
Frequency	Displays the device sector frequency.
Link Quality Indicator (PMP)	Displays the Uplink or Downlink status.
Packet Loss	Displays the Uplink or Downlink packet loss per device.
Reregistration Count	Displays the nodes based upon the number of re-registrations in the last 24 hours. The more re-registrations, the larger the node is display.
Retransmission Percentage (ePMP and cnVision)	Displays the Uplink or Downlink percentage status.

## Embedded Maps

Maps are embedded into some additional UI views (most notably, the Dashboard). These embedded maps do not provide the full feature set of the map view.

## Sector Visualization

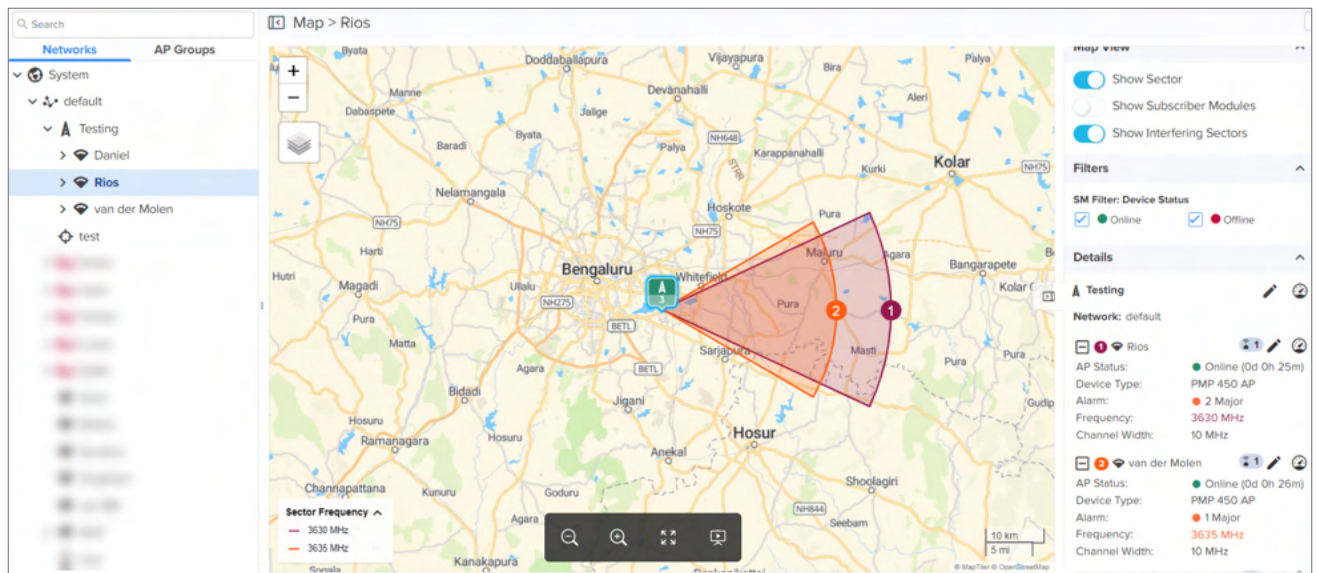

cnMaestro presents a basic sector View for ePMP and PMP fixed wireless devices. This requires configuration of Height, Azimuth, Elevation, and Beamwidth under cnRanger ePMP/PMP AP configuration. This configured data is used to generate the Sector View. The presentation is not based upon link planning or geographic topology.

**Figure 156 AP Configuration**

**Sector Visualization** is available in **Map View**. By selecting the **Show Sector** option, the following map is displayed:

**Figure 157 Sector Visualization**

**Show Subscriber Modules** option is available at System, Network, Tower, and AP levels. User can also choose to set the color of SMs based upon frequency or Online or Offline Status.

**Note**

- By default **Show Subscriber Modules** is disabled.

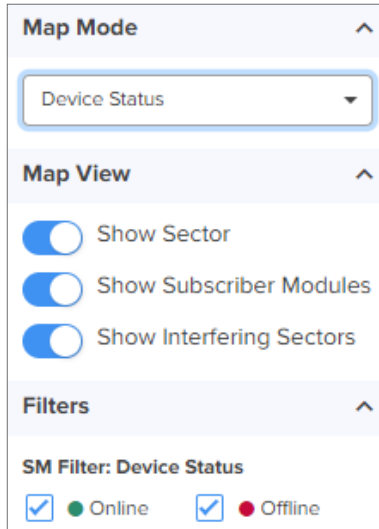

- Map view is supported for PMP, ePMP, cnRanger, cnPilot Home, PTP, 60 GHz cnWave, cnVision, cnMatrix, Enterprise Wi-Fi Series, and RV22 Home Mesh at site- and device-levels.

The **Show Interfering sector** option compares the frequency and bandwidth with all other devices in the network. The map displays the devices that have overlapping frequencies.

**Note**

**Show Interfering Sectors** is applicable only for PMP devices and is enabled only if the **Show Sector** button is **ON**.

Maps are available for the Site and Device levels. The right pane displays the device details in the map. To view the map device details, do one of the following:

- Click the (+) plus sign, next to Site or Device in the right pane of the Map page, to view the device and site details as shown in [Figure 158](#).
- Click the Dashboard(📊) icon next to the Site or Device name, to view the site or device dashboard details.

## Tools

This section provides the following details:

- [60 GHz cnWave Tools](#)
- [cnMatrix Tools](#)
- [cnPilot Home Tools](#)
- [cnRanger Tools](#)
- [cnReach Tools](#)
- [cnVision Tools](#)
- [Edge Controller Tools](#)
- [Enterprise Wi-Fi Tools](#)
- [ePMP Tools](#)
- [PMP Tools](#)
- [cnWave 5G Fixed Tools](#)
- [RV22 Home Mesh Tools](#)

## 60 GHz cnWave Tools

In E2E Network **Tools** tab you can view Operations, Diagnostics, Debug, Remote Command, Services, and Settings. Refer to [E2E Network Tools](#).

In Nodes **Tools** tab you can view the Status, Debug, and Remote Command of the device. Refer to [Node Tools](#).

## cnMatrix Tools

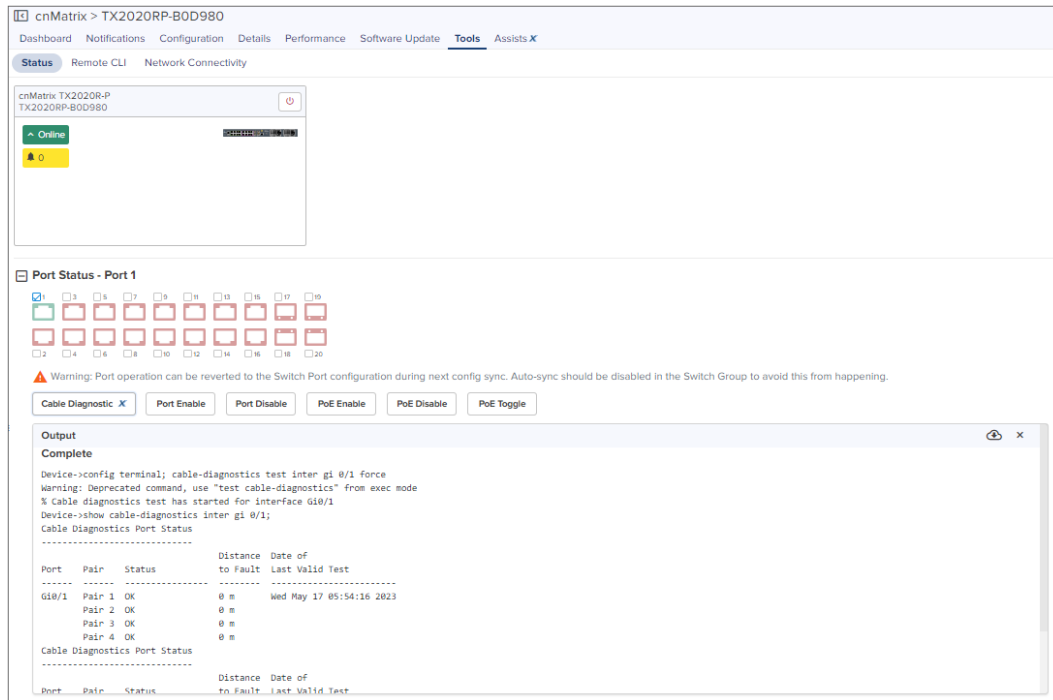

In **Status** tab you can view the status of the device (either Online or Offline). It allows one to reboot the device.

**Table 28** *cnMatrix Tools*

Field	Description
Network Connectivity	Executes Ping, DNS, or Traceroute tests.
Remote CLI	Enter CLI command in the command text box to execute on device. <ul style="list-style-type: none"> <li>• Only Show command is allowed for Operator users.</li> <li>• All CLI commands are supported by Super Admin and Admin users.</li> </ul>
Status	Displays the Status and Port Status.

The **Status** tab displays the status of the device (either Online or Offline). It also allows one to reboot the device.

**Port Status**, presents the following data for the **PoE Switches**:

- Cable Diagnostic
- Port Enable
- Port Disable
- PoE Enable
- PoE Disable
- PoE Toggle

### Cable Diagnostic

Navigate to **Tools > Status > Port Status**, select the Port and click **Cable Diagnostic**, the following output is displayed:

The screenshot shows the cnMatrix interface for device TX2020RP-BOD980. The 'Tools' menu is active, and the 'Status' section is expanded to 'Port Status - Port 1'. A 'Cable Diagnostic' window is open, displaying the following output:

```

Complete
Device->config terminal; cable-diagnostics test inter gi 0/1 force
Warning: Deprecated command, use "test cable-diagnostics" from exec mode
% Cable diagnostics test has started for interface Gi0/1
Device->show cable-diagnostics inter gi 0/1;
Cable Diagnostics Port Status
-----
Port   Pair   Status   Distance   Date of
       Pair           to Fault   Last Valid Test
-----

## PoE Toggle

Navigate to **Tools > Status > Port Status**, select the Port and click **PoE Toggle**, the following output is displayed:

The screenshot shows the cnMatrix web interface for device TX2020RP-B0D980. The 'Tools' tab is active, and the 'Port Status - Port 1' section is expanded. A grid of 20 port status icons is visible, with port 1 highlighted in green. Below the grid, a warning message states: "Warning: Port operation can be reverted to the Switch Port configuration during next config sync. Auto-sync should be disabled in the Switch Group to avoid this from happening." Below the warning are buttons for "Cable Diagnostic X", "Port Enable", "Port Disable", "PoE Enable", "PoE Disable", and "PoE Toggle". A terminal window titled "Output" is open, showing the following text:

```
Complete
Device->config terminal; int gi 0/1 ; power inline toggle
Device->config terminal; int gi 0/1 ; power inline toggle

## cnPilot Home Tools

The Tools page for cnPilot Home devices consolidates a number of operations into a single troubleshooting interface. The operations of cnPilot Home are listed in the table below:

**Table 29** *cnPilot Home*

Tools	Description
Debug	Displays the log details.
Network Connectivity	Executes Ping, DNS, or Traceroute tests.
Packet Capture	Lists packet capture details.
Status	Displays the Status of device.
Wi-Fi Analyzer	Displays radio traffic and signal.
Wi-Fi Performance	Wi-Fi performance measures the backhaul speed across devices with respect to cnMaestro.

**Figure 164** *cnPilot Tools*

**Figure 165** *cnPilot Debug Tools*

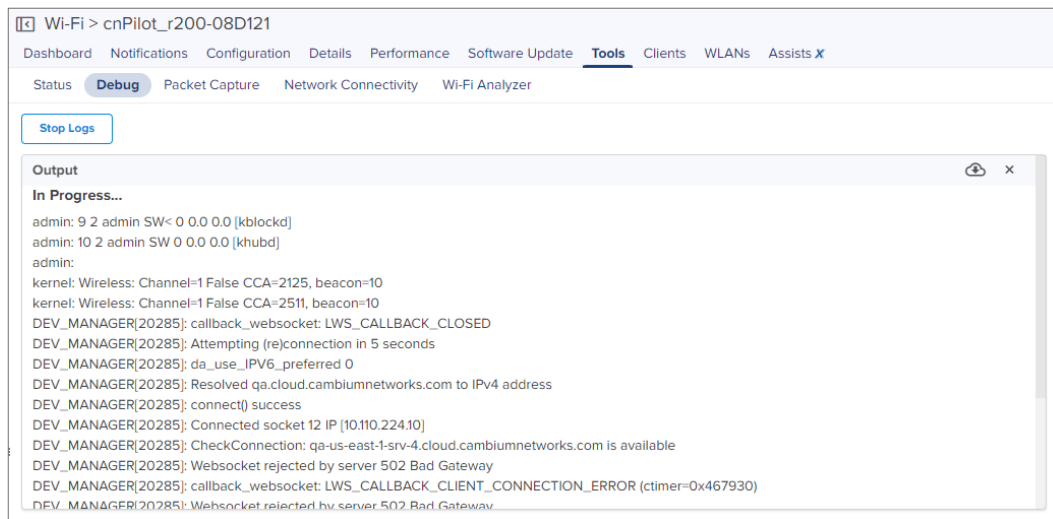

Figure 166 *cnPilot Tools Status*

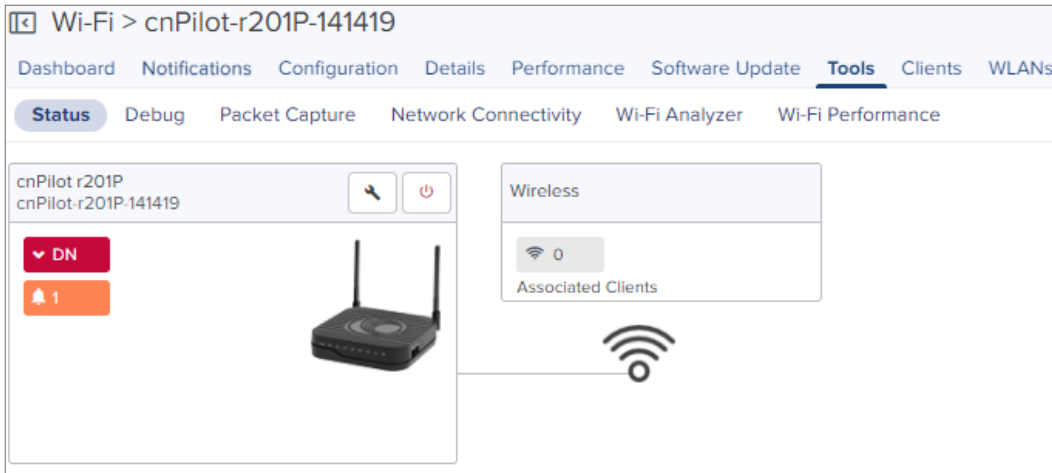

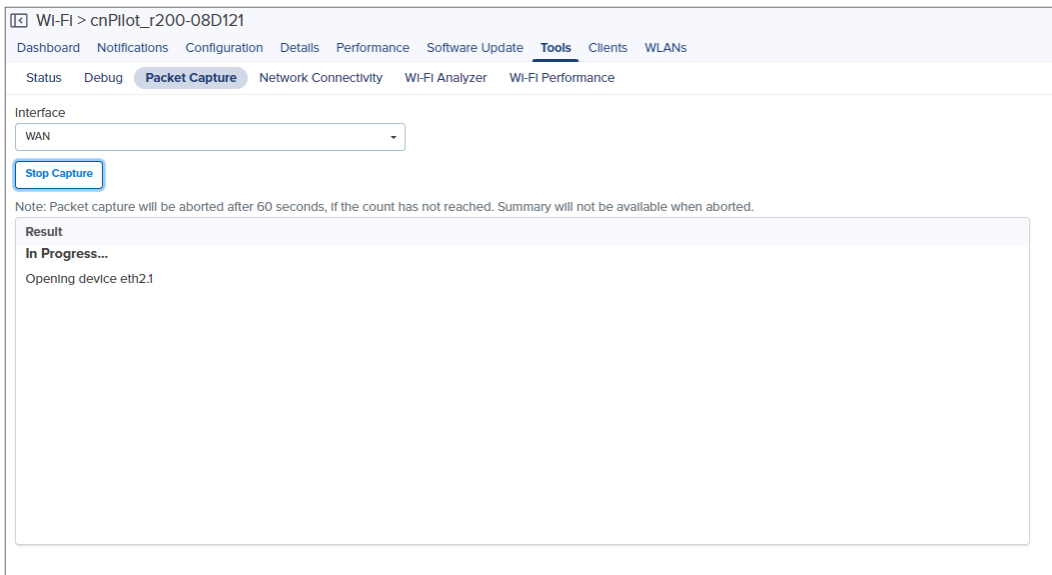

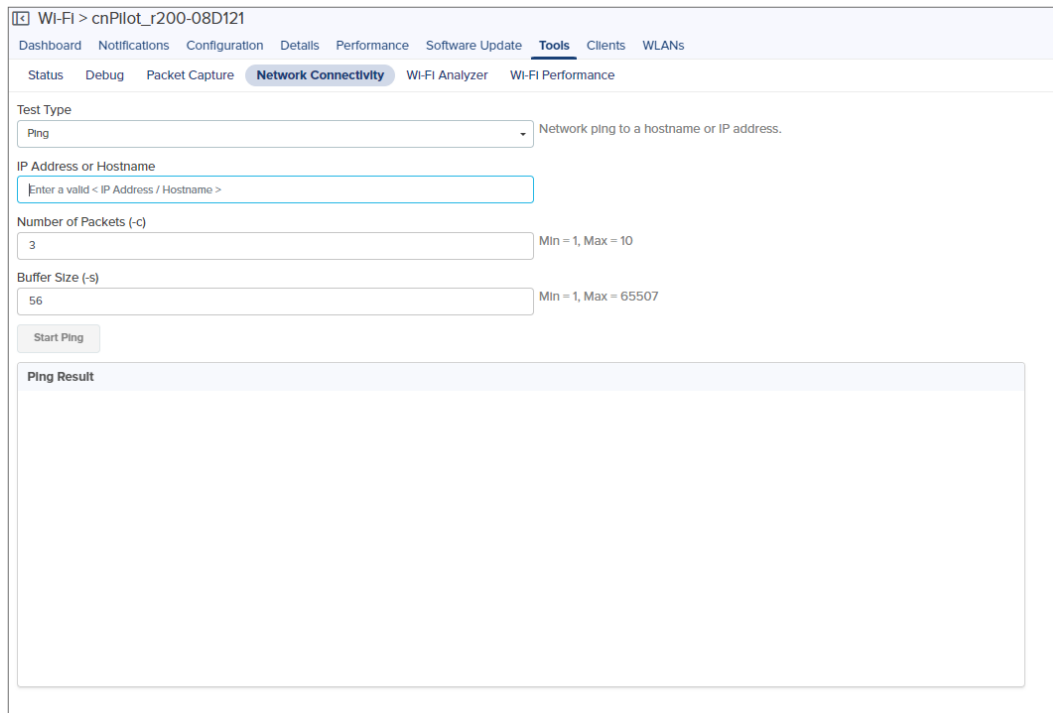

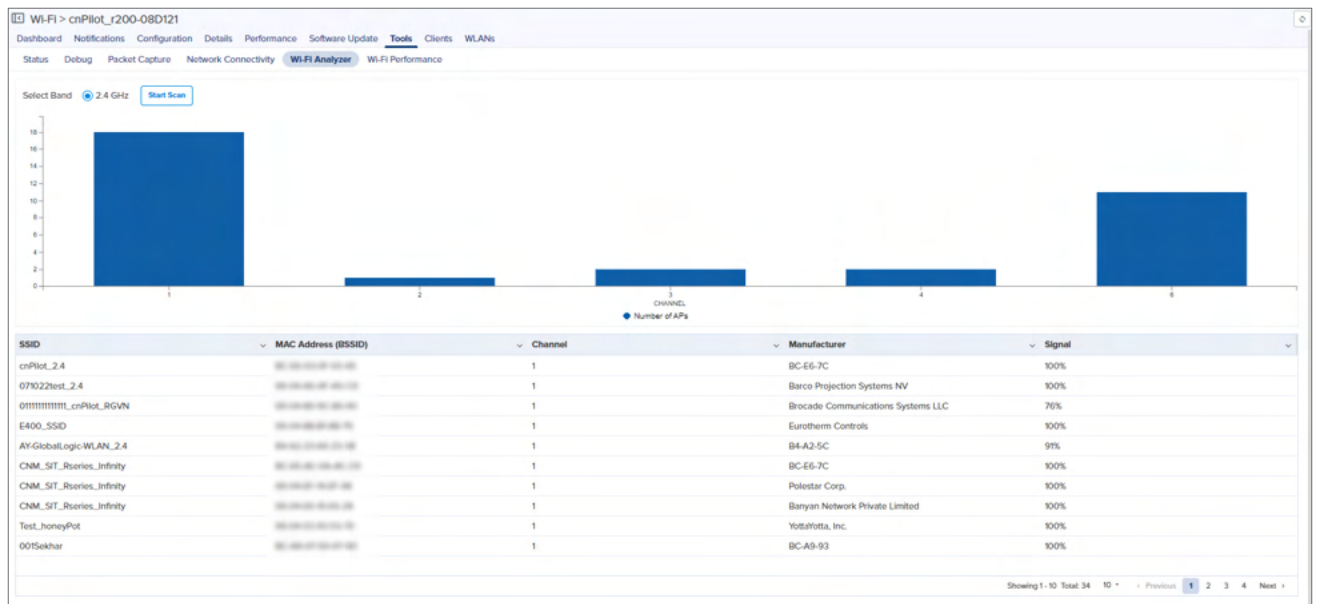

Figure 167 *cnPilot Tools > Packet Capture*

**Figure 168** *cnPilot Tools > Network Connectivity*

**Figure 169** *cnPilot Tools > Network Connectivity*

## cnRanger Tools

### Note

cnMaestro supports the tools page of cnRanger from device version 2.1.0.0-r3.

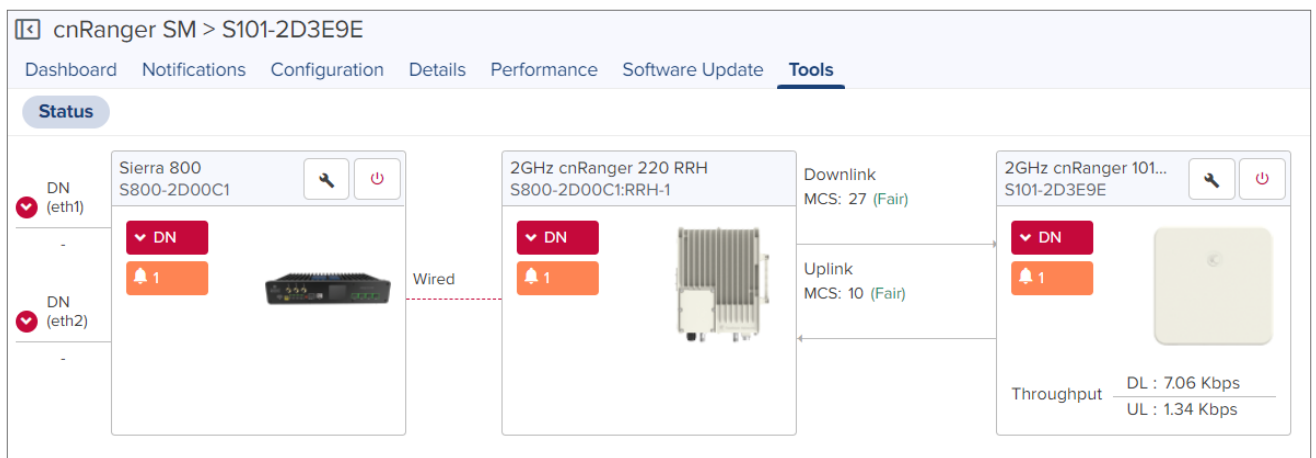

## cnRanger BBU

In **Status** tab, user can view the status of the device either Online or Offline. It also supports downloading Tech Support File and rebooting the device.

## cnRanger SM

In **Status** tab, user can view the status of the device (either Online or Offline), It also supports downloading the Tech Support File, displaying the wired connectivity status, and rebooting the device.

## cnReach Tools

The Tools page for cnReach devices consolidates a number of operations into a single troubleshooting interface. The operations are listed below:

**Table 30** *cnReach Tools*

Tools	Description
Ping	Network ping to a hostname or IP address.
RF Ping	RF reachability test between local radios that provides details on signal quality.
RF Throughput	RF throughput test between local radios that provides details on throughput.

**Figure 170** *cnReach Tools*

The screenshot shows the 'cnReach > Bridge\_Mode\_AP\_Edit\_11' interface. The 'Tools' tab is active, and the 'Network Connectivity' section is selected. The 'Test Type' is set to 'Ping'. The 'IP Address or Hostname' field contains 'www.cambiumnetworks.com'. The 'Number of Packets (-c)' is set to 5, and the 'Buffer Size (-s)' is set to 32. A 'Start Ping' button is visible. Below the configuration, the 'Ping Result' section shows a 'Complete' status for the hostname 'www.cambiumnetworks.com'. The results include a PING command and five successful responses with round-trip times ranging from 242.973 ms to 245.100 ms. Summary statistics show 5 packets transmitted, 5 received, and 0% packet loss.

## cnVision Tools

The Tools page for cnVision devices consolidates a number of operations into a single troubleshooting interface. The operations are listed below:

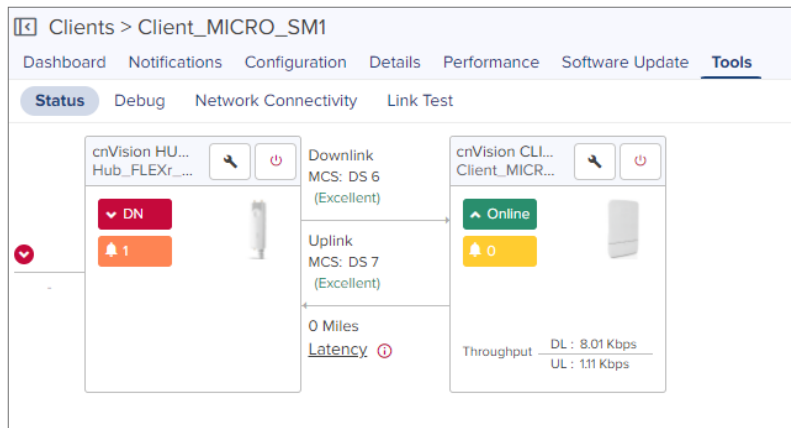

**Table 31** *cnVision Tools*

Field	Description
Debug	Displays the log details.
Network Connectivity	Executes Ping, DNS, or Traceroute tests.
Status	Displays the Status.
Subscriber Modules	Displays the SM linked to the Hub and supports reboot and download the Tech Support File.
Link Test	<p>The Link Capacity Test measures the throughput of the RF link between two cnVision modules. cnVision Link Test only utilizes the spare sector capacity for this test; therefore, sector traffic will not be disrupted. For the most accurate wireless link test results, it is best to run this test when there is minimal customer data traffic.</p> <p>Displays the link related test result for Throughput. Link Test can be performed on the cnVision Hub and its SM link. To run this operation, select the device and then the <b>Tools</b> tab.</p>

**Table 31** *cnVision Tools*

Field	Description
	<ul style="list-style-type: none"> <li>If <b>cnVision Hub</b> is selected you can choose the SM from the list and start the test.                     <div data-bbox="428 247 1083 590"> </div> <p>Displays the following fields:</p> <ul style="list-style-type: none"> <li><b>Packet Size:</b> Choose the Packet Size to use for the throughput test.</li> <li><b>Duration:</b> Choose the time duration in seconds to use for the throughput test.</li> </ul> </li> <li>If a <b>cnVision Client</b> is selected, click <b>Start Test</b> to run the Link Test.                     <div data-bbox="428 814 1083 1157"> </div> <p>Displays the following fields:</p> <ul style="list-style-type: none"> <li><b>Packet Size:</b> Choose the packet size to use for the throughput test.</li> <li><b>Duration:</b> Choose the time duration in seconds to use for the throughput test.</li> </ul> </li> </ul>

**Figure 171** *cnVision Tools*

## Edge Controller Tools

For details on Tools section, refer to Edge Controller User Guide.

## Enterprise Wi-Fi Tools

The Tools page for Enterprise Wi-Fi devices consolidates a number of operations into a single troubleshooting interface.

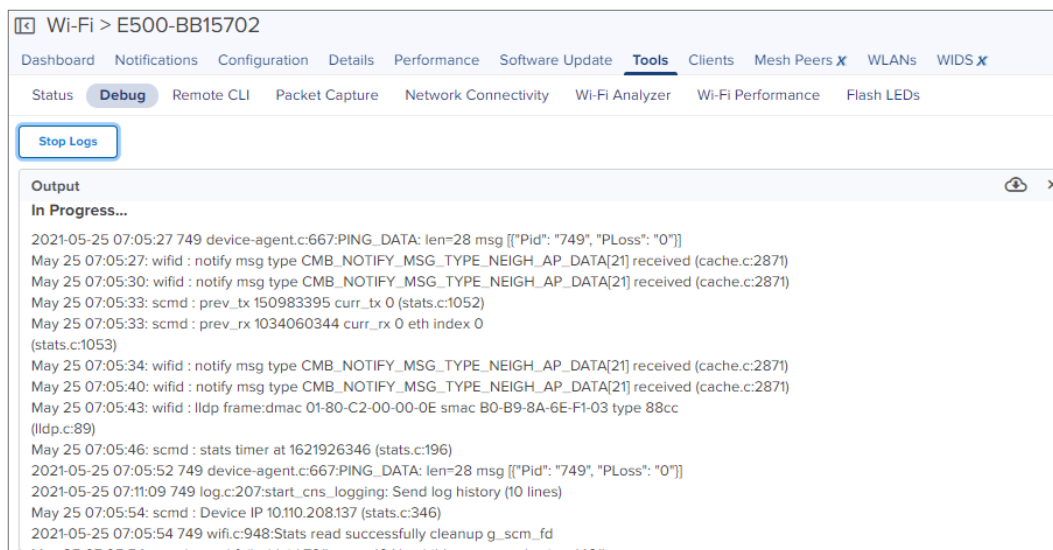

**Note**  
Both IPv4 and IPv6 addresses are supported for all the troubleshooting operations.

The operations of Enterprise Wi-Fi are listed below:

**Table 32** Enterprise Wi-Fi Tools

Tools	Description
Debug	Displays the log details.
Flash LEDs (only Enterprise Wi-Fi devices)	Flash LED indicates that a device is ready to receive the signal.
Network Connectivity	Executes Ping, DNS, or Traceroute tests.
Packet Capture	Lists packet capture details.
Remote CLI	Enter CLI command in the command text box to execute on device. <ul style="list-style-type: none"> <li>• Only Show command is allowed for Operator users.</li> <li>• All CLI commands are supported by Super Admin and Admin users.</li> </ul>
Status	Displays the Status of device.
Wi-Fi Analyzer	Displays radio traffic and signal.
Wi-Fi Performance	Wi-Fi performance measures the backhaul speed across devices with respect to cnMaestro.

Field	Description
Duration	Represents packet capture running duration in seconds versus maximum duration configured.
Expires In	Expiry time of packet capture. The default is 24 hours.
Filter	Type of filter.
Interface	The following interfaces are supported: <ul style="list-style-type: none"> <li>BRIDGE</li> <li>Ethernet</li> <li>PPPoE</li> </ul>

**Table 33** Packet Capture fields

Field	Description
	<ul style="list-style-type: none"><li>• Radio</li><li>• SSID</li><li>• TUNNEL</li><li>• VLAN</li><li>• Wireless LAN</li></ul>
Packets	Represents number of packets captured versus maximum limit of packet count configured.
Size	Current packet capture size versus maximum packet capture size configured.
Start Time	Start time of the capture.
Status	Status of packet captured is as follows: <ul style="list-style-type: none"><li>• Aborted</li><li>• Failed</li><li>• Queued</li><li>• Skipped</li></ul>

### Configuring a new packet capture

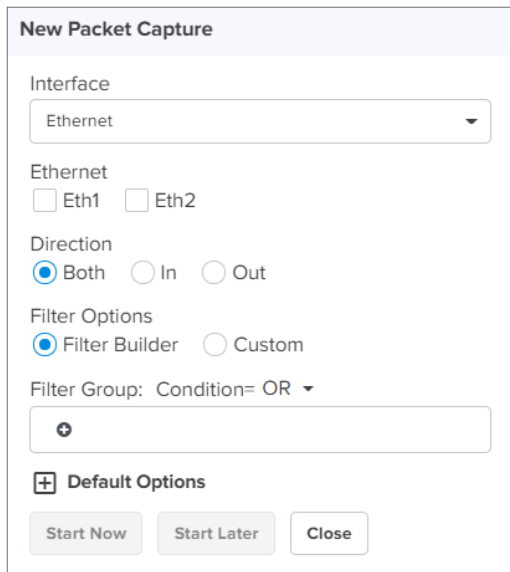

Perform the following steps to start a new packet capture:

#### Note

- Filter options vary for different interfaces (Radio, Wireless LAN, VLAN, SSID, TUNNEL, BRIDGE, and PPPoE. Radio, SSID has wireless 802.11 filters, other interfaces has wired 802.3 filters).
- User can also add custom filters if needed.
- Packet Capture on **Radio** interface is available only for online Enterprise Wi-Fi XV-Series and XE-Series.

1. Click **New Packet Capture** to start packet capture.

2. Select the **Interface** type from the drop-down.
3. Select **Ethernet** as **Eth1** or **Eth2**.
4. Choose the **Direction** as **Both**, **In**, or **Out**.
5. Select **Filter options** as **Filter Builder** or **Custom**.

You can filter the packets captured by specifying Cambium GRE, DHCP, DNS, ARP, ICMP, Radius, TCP, UDP, IP Address, and MAC Address.

6. Click **Default Options** to configure **Packets**, **Duration**, **Packet Length**, and **File Size**.

**New Packet Capture**

File Size: 10 (1 to 50 (default is 10 MB on 11ax APs))

Start Now Start Later Close

7. Click **Start Now** to capture the packets immediately, or start the capture later by selecting **Start Later** option. The progress of packets captured can be seen in the **Status** field.
8. Click the download (↓) icon to download the capture in **PCAP** file format.

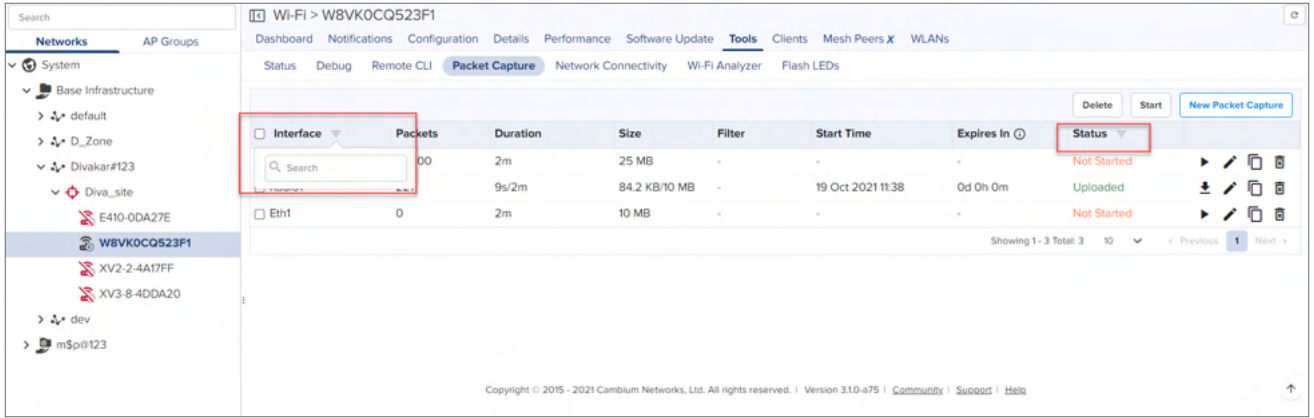

**Note**

For cnMaestro X, a maximum of four packet capture sessions are supported, whereas for cnMaestro Essentials a maximum of two packet capture sessions are supported.

The user can **Edit**, **Clone**, and **Delete** the packets capture entry. Packet Capture entries can be cloned depending on the type of interface selected for the capture.

Interface	Packets	Duration	Size	Filter	Start Time	Expires In	Status
<input type="checkbox"/> Radio1	227	9s/2m	84.2 KB/10 MB	-	19 Oct 2021 11:38	0d 15h 51m	Uploaded
<input type="checkbox"/> Eth1	0	2m	10 MB	-	-	-	Not Started

The user can search the packet capture by **Interface** type and **Status**.

**Note**

- User can start packet capture by clicking the **Play** button. This also works if the packet capture is stopped at **Not Started/Failed/ Expired**.
- **Bulk Start** and **Bulk Delete** are performed by selecting multiple packet capture.
- Expired packet capture is deleted from cnMaestro after 7 days.
- Packet capture is removed immediately, when device (AP) is deleted from cnMaestro.
- Packet captures cannot be started on same interface simultaneously.
- Only **Show** command works for the Operator user.

**Figure 176** Flash LEDs

**ePMP Tools**

The Tools page for ePMP devices consolidates a number of operations into a single troubleshooting interface. The operations are listed below:

**Table 34** ePMP Tools

Field	Description
Debug	Displays the log details.
Link Test	<p>The Link Capacity Test measures the throughput of the RF link between two ePMP modules. ePMP Link Test only utilizes the spare sector capacity for this test, therefore, sector traffic will not be disrupted. For the most accurate wireless link test results, it is best to run this test when there is minimal customer data traffic.</p> <p>Displays the link related test result with respect to Throughput. Link Test can be performed on the ePMP AP and its SM link. In order to run this operation, select the device and then the <b>Tools</b> tab.</p> <ul style="list-style-type: none"> <li>• If an ePMP AP is selected, choose the <b>SM</b> from the list and start the test.</li> </ul>

**Table 34 ePMP Tools**

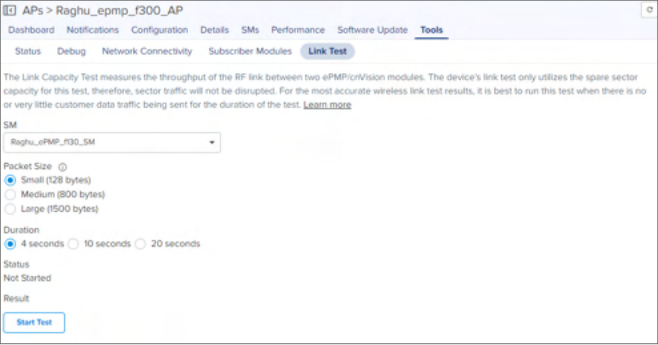

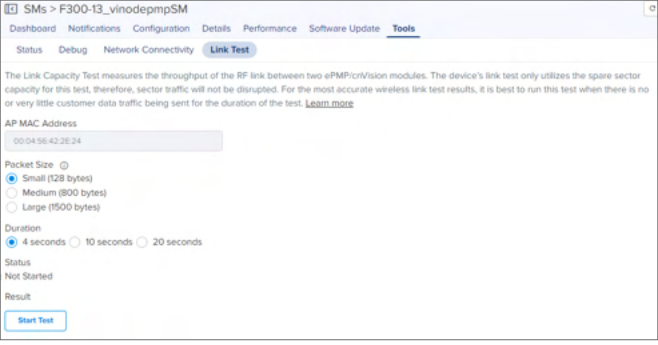

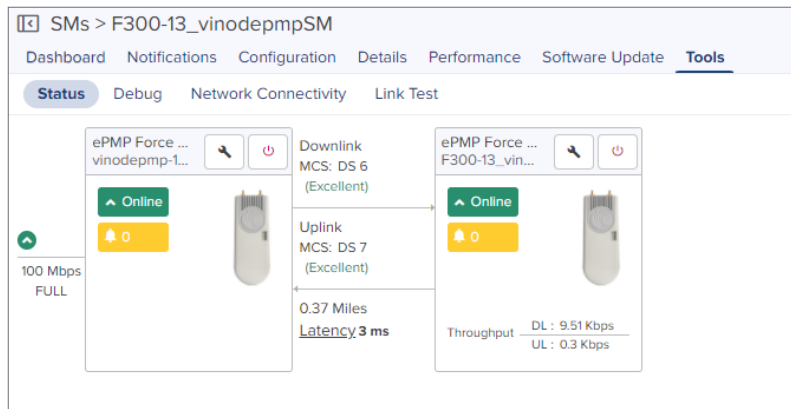

Field	Description
	 <p>Displays the following fields:</p> <ul style="list-style-type: none"> <li>○ <b>Packet Size:</b> Choose the Packet Size to use for the throughput test.</li> <li>○ <b>Duration:</b> Choose the time duration in seconds to use for the throughput test.</li> <li>• If an ePMP SM is selected, click Start Test to run the link test.</li> </ul>
	 <p>Displays the following fields:</p> <ul style="list-style-type: none"> <li>○ <b>Packet Size:</b> Choose the Packet Size to use for the throughput test.</li> <li>○ <b>Duration:</b> Choose the time duration in seconds to use for the throughput test.</li> </ul>
Network Connectivity	Executes Ping, DNS, or Traceroute tests.
Status	Displays the status.
Subscriber Modules	Displays the Subscriber Modules details.

Figure 177 ePMP Tools

## PMP Tools

The Tools page for PMP devices consolidates a number of operations into a single troubleshooting interface. The operations are listed below:

Table 35 PMP Tools

Field	Description
Debug	Displays the log details.
Link Test	<p>The Link Capacity Test measures the throughput and efficiency of the RF link between two PMP modules. Many factors, including packet length, affect throughput. Packets are added to one or more queues in the AP to fill the frame. Throughput and efficiency are then calculated during the test.</p> <p>The Link Capacity Test tool has the following modes:</p> <ul style="list-style-type: none"> <li> <b>Flood Link Test:</b> Tests the link's performance by flooding it with heavy traffic and assesses link's behavior under extreme network loads. An addition <b>Multiple LUIDs</b> option is available in the Current SM drop-down list. The Multiple LUIDs feature allows users to specify LUIDs, including single numbers (for example, 23, 32), or to conduct the flood test with ranges (for example, 2-22) as shown in <a href="#">Figure 178</a>. </li> </ul> <p><b>Figure 178 Flood Link Test: PMP 450m AP</b></p>

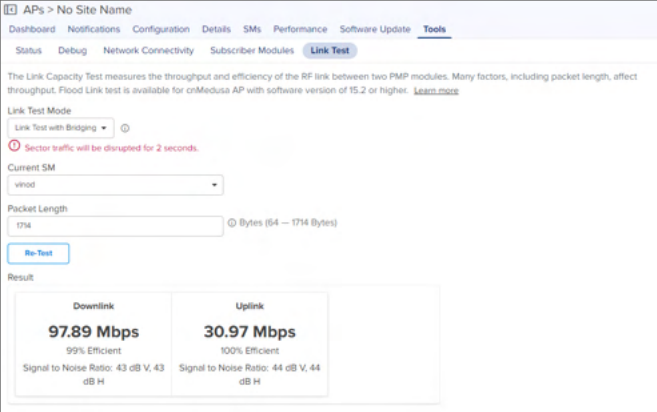

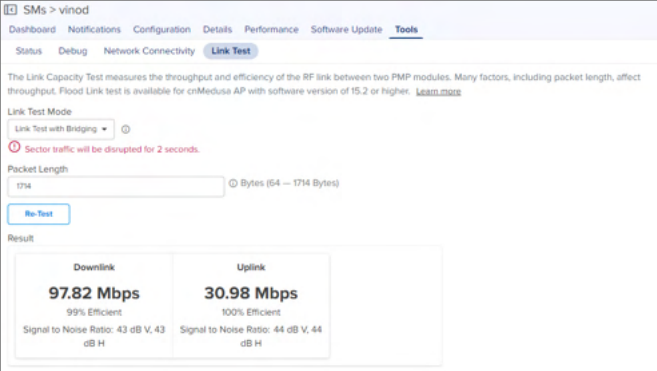

**Note**

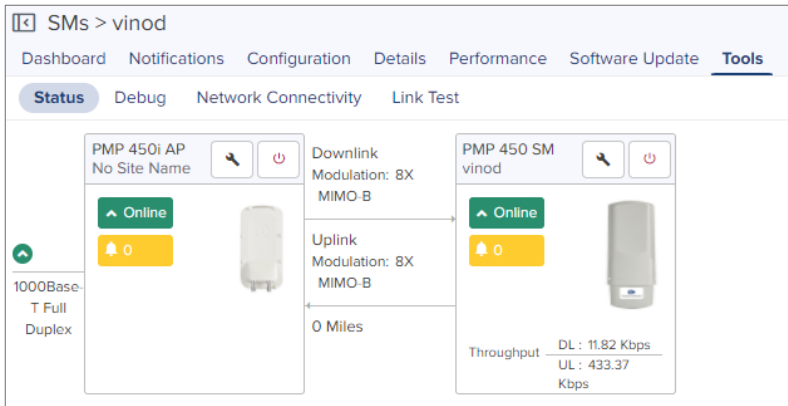

**Flood Link Test** is applicable only for 450m APs.

- Link Test without Bridging:** Tests radio-to-radio communication, but does not bridge traffic.
- Link Test with Bridging:** Bridges traffic to “simulated” Ethernet ports, providing a status of the

**Table 35 PMP Tools**

Field	Description
	<p>bridged link.</p> <ul style="list-style-type: none"> <li>• <b>Link Test with Bridging and MIR:</b> Bridges the traffic during test and also adheres to any MIR (Maximum Information Rate) settings for the link.</li> <li>• <b>Extrapolated Link Test:</b> Estimates the link capacity by sending few packets and measuring link quality.</li> </ul> <p>Displays the link related test result with respect to Throughput and Interference. Link Test can be performed on the PMP AP and its SM link. To run this operation, select the device and then the <b>Tools</b> tab.</p> <ul style="list-style-type: none"> <li>• If a PMP AP is selected you can choose the SM from the list and start the test.</li> </ul>  <ul style="list-style-type: none"> <li>• If a PMP SM is selected, click <b>Start Test</b> to run the Link Test.</li> </ul> 
Network Connectivity	Executes Ping, DNS, or Traceroute tests.
Status	Displays the status.
Subscriber Modules	Lists all the SMs connected to the selected AP. This is available for PMP APs only.

**Figure 179 PMP Tools**

## cnWave 5G Fixed Tools

For cnWave 5G Fixed products (BTS and CPE), the **Tools** page in cnMaestro contains the following tabs:

- **Status:** Displays device connection state (online or offline) for the BTS and a CPE.
- **Link Test** (applicable only to the BTS device): Allows you to test the links (uplink, downlink, or both), and analyze the link performance for a CPE. The test output helps in managing the traffic and troubleshooting the links for the selected CPE.

### Link Test

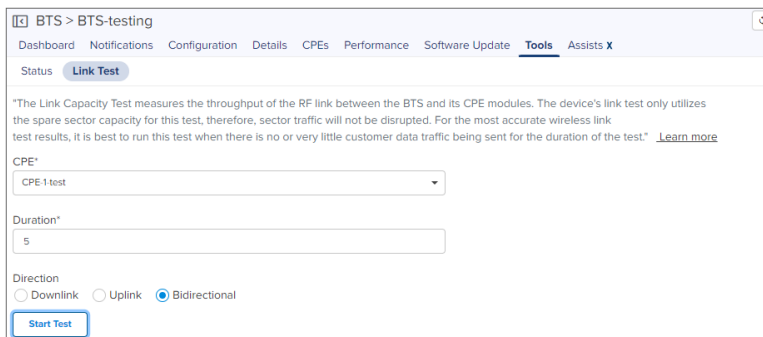

#### Note

Link Test is supported only on cnWave 5G Fixed devices running System Release version 3.1 or later.

Link test measures the throughput and utilization of RF link between the BTS and its CPE modules

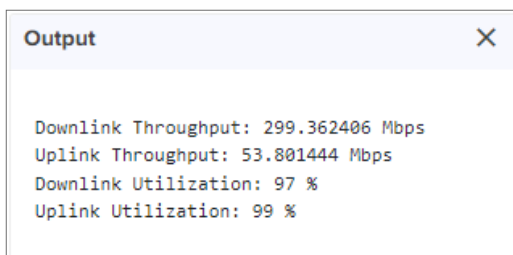

To conduct a link test between a BTS and its CPE modules:

1. Go to **Monitor and Manage > BTS > Tools > Link Test**.

2. Select appropriate values in **CPE**, **Duration** (between 5 and 60 seconds), and **Direction** (Downlink, Uplink, and Bidirectional) fields.
3. Click **Start Test**.

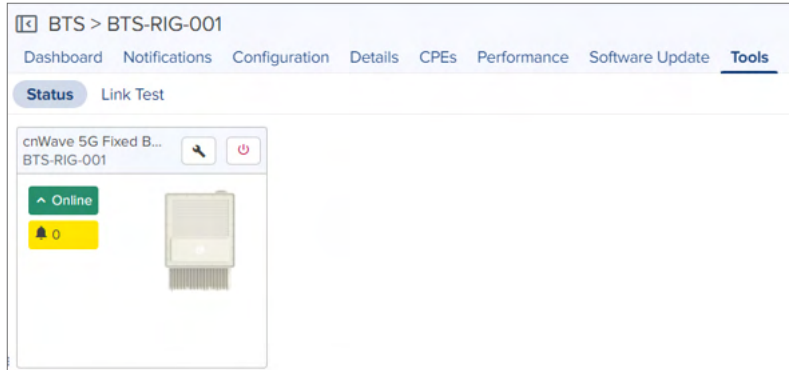

After the set duration completes, the **Output** window displays the results.

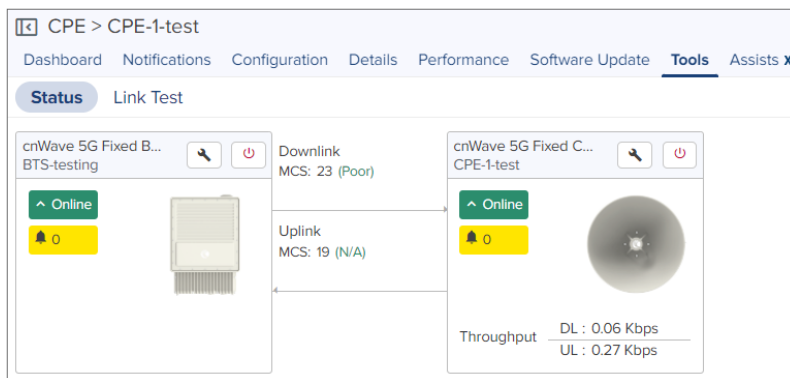

## Status

To access the cnWave 5G Fixed BTS Tools page, go to **Monitor and Manage > BTS > Tools**.

To view the status of the link between the BTS and CPE modules, access the **Status** page under **Monitor and Manage > BTS CPE > Tools > Status**.

## RV22 Home Mesh Tools

cnMaestro provides the following tools to troubleshoot and debug RV22 Home Mesh routers:

- [Status](#)
- [Debug](#)
- [Network Connectivity](#)
- [Wi-Fi Analyzer](#)
- [Speed Test](#)
- [Packet Capture](#)

To access these tools, navigate to **Monitor and Manage > <RV22-router-name> > Tools**.

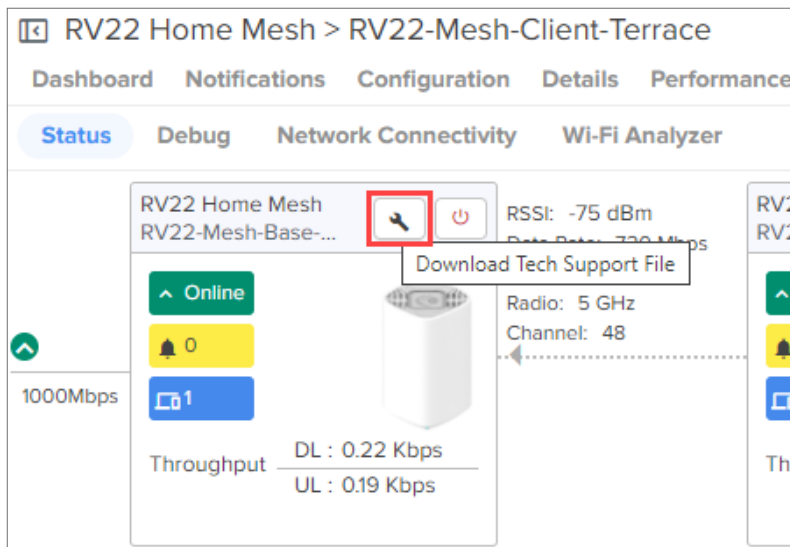

## Status

To view the status of the link between the RV22 Home Mesh base and client routers, access the **Status** page under **Monitor and Manage > <RV22-router-name> > Tools**.

## Downloading tech support file

To download the tech support file, on the **Status** page, click the **Download Tech Support File** () icon.

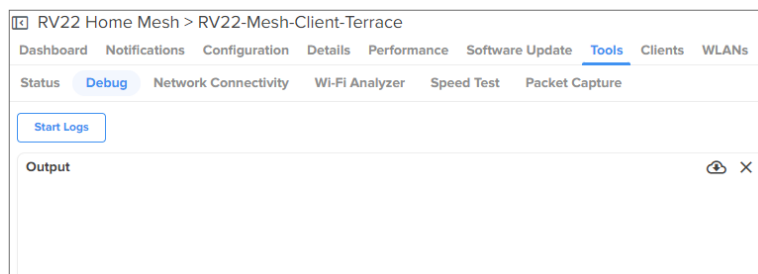

## Debug

Displays log information of the RV22 Home Mesh router. To view the debug information:

1. Navigate to **Monitor and Manage** > <RV22-router-name> > **Tools** > **Debug**.
2. Click **Start Logs**.

The log information is displayed in the **Output** window.

## Network Connectivity

Provides network connectivity information of the RV22 Home Mesh routers.

The following connectivity tests are available:

- Ping
- DNS Lookup
- Traceroute

To test network connectivity of the router:

1. Navigate to **Monitor and Manage** > <RV22-router-name> > **Tools** > **Network Connectivity**.
2. Select the test type and provide the corresponding parameters required for the test.
3. Click **Start Test**.

cnMaestro initiates the test and displays the result in the <Test Type> **Result** window as shown below.

The screenshot shows the 'Network Connectivity' test configuration page. The 'Test Type' is 'Ping'. The 'IP Address or Hostname' is 'www.cambiumnetworks.com'. The 'Number of Packets (-c)' is 3, and the 'Buffer Size (-s)' is 56. A 'Start Ping' button is present. The 'Ping Result' window shows the following output:

```

Complete
Hostname www.cambiumnetworks.com
common_ping: hostname www.cambiumnetworks.com
PING www.cambiumnetworks.com (141.193.213.10): 56 data bytes
64 bytes from 141.193.213.10: seq=0 ttl=57 time=26.367 ms
64 bytes from 141.193.213.10: seq=1 ttl=57 time=24.968 ms
64 bytes from 141.193.213.10: seq=2 ttl=57 time=25.795 ms

--- www.cambiumnetworks.com ping statistics ---
3 packets transmitted, 3 packets received, 0% packet loss
round-trip min/avg/max = 24.968/25.710/26.367 ms

```

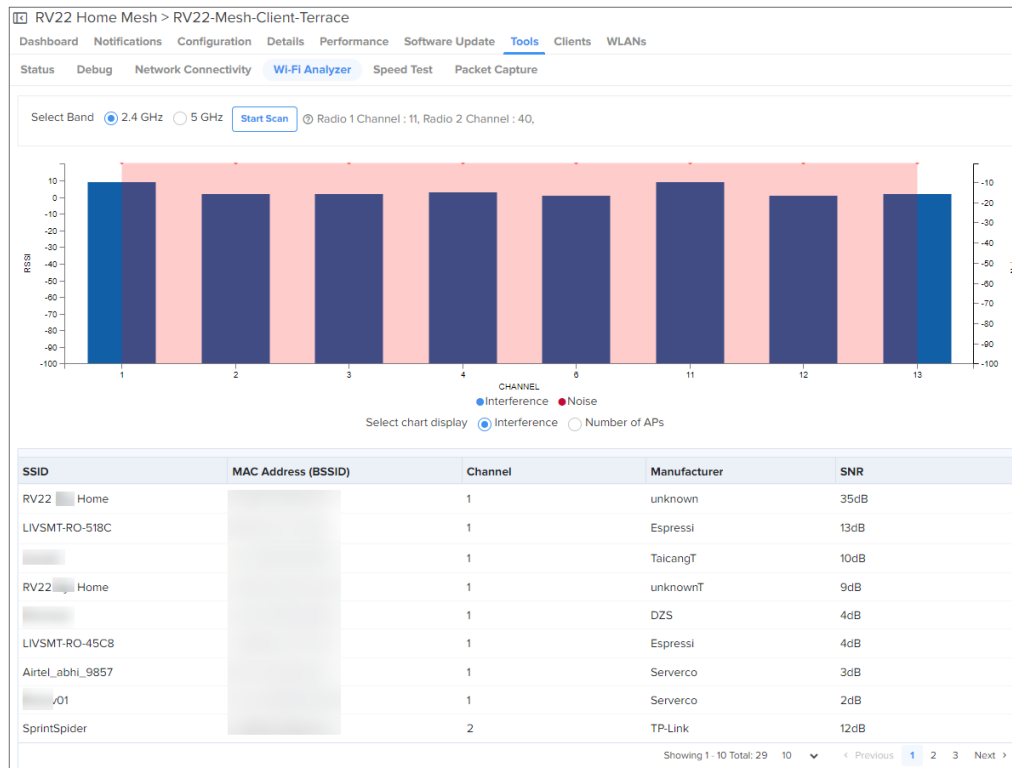

## Wi-Fi Analyzer

Displays radio traffic and signal information for the selected band. It displays the interference and noise measured for the selected band.

To view the Wi-Fi Analyzer details:

1. Navigate to **Monitor and Manage** > <RV22-router-name> > **Tools** > **Wi-Fi Analyzer**.
2. Select the required band (2.4 or 5 GHz).
3. Click **Start Scan**.

cnMaestro analyzes the band and displays the result in table as shown below.

## Speed Test

Displays the internet speed provided by the RV22 Home Mesh router.

To know the speed of the router:

1. Navigate to **Monitor and Manage** > <RV22-router-name> > **Tools** > **Speed Test**.
2. Provide the details in the fields provided.
3. Click **Start Speed Test**.

cnMaestro checks the speed and displays both download and upload speeds in megabytes per second (MBps).

The screenshot shows the 'Speed Test' configuration interface in the cnMaestro 'Tools' section. It includes several input fields for configuring the test parameters:

- Duration (Seconds):** Input field with value 15. Description: Test duration for each download and upload test - Min = 1, Max = 60
- Parallel Streams:** Input field with value 3. Description: Number of parallel streams to run the test - Min = 1, Max = 10
- Download Size (MB):** Input field with value 20. Description: Min = 1, Max = 1000
- Upload Size (MB):** Input field with value 20. Description: Min = 1, Max = 1000

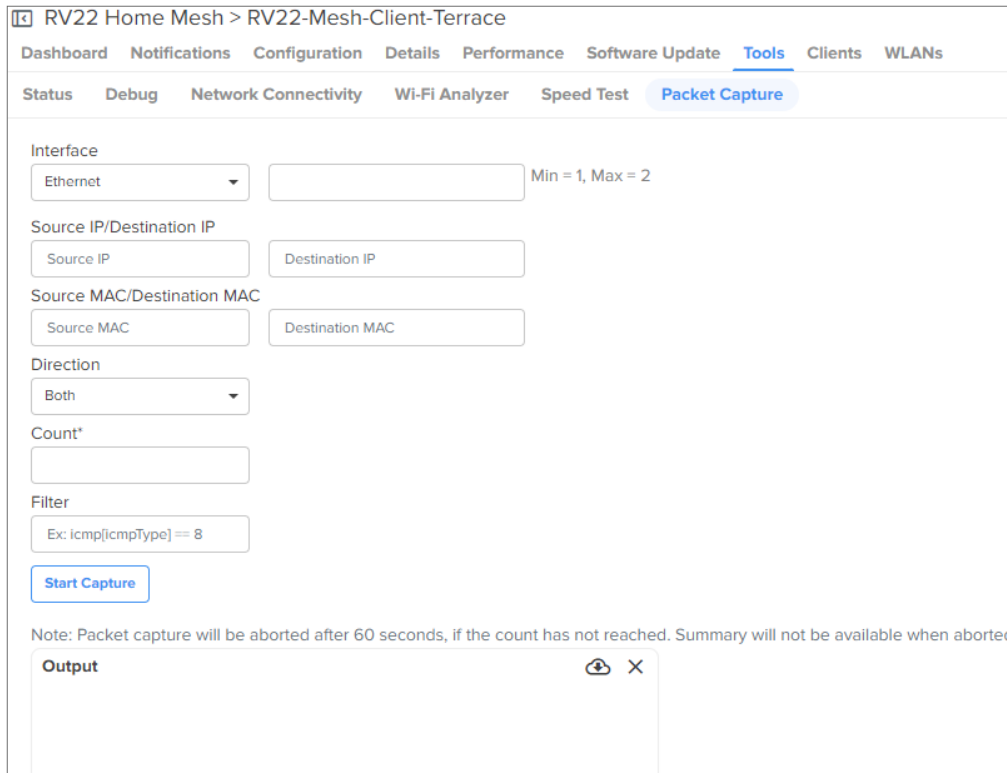

At the bottom of the form is a blue button labeled 'Start Speed Test'.

## Packet Capture

Packet Capture allows the user to capture all packets on a specified interface.

To capture packet data:

1. Navigate to **Monitor and Manage** > <RV22-router-name> > **Tools** > **Packet Capture**.
2. Select the required interface and provide the source and destination IP address or MAC address.
3. Provide the number of packets to be captured.
4. Click **Start Capture**.  
cnMaestro displays the information in the **Output** window.
5. To download the PCAP file, click the download () icon.

RV22 Home Mesh > RV22-Mesh-Client-Terrace

## Wireless Intrusion Detection System (WIDS)

### Note

This is a beta feature.

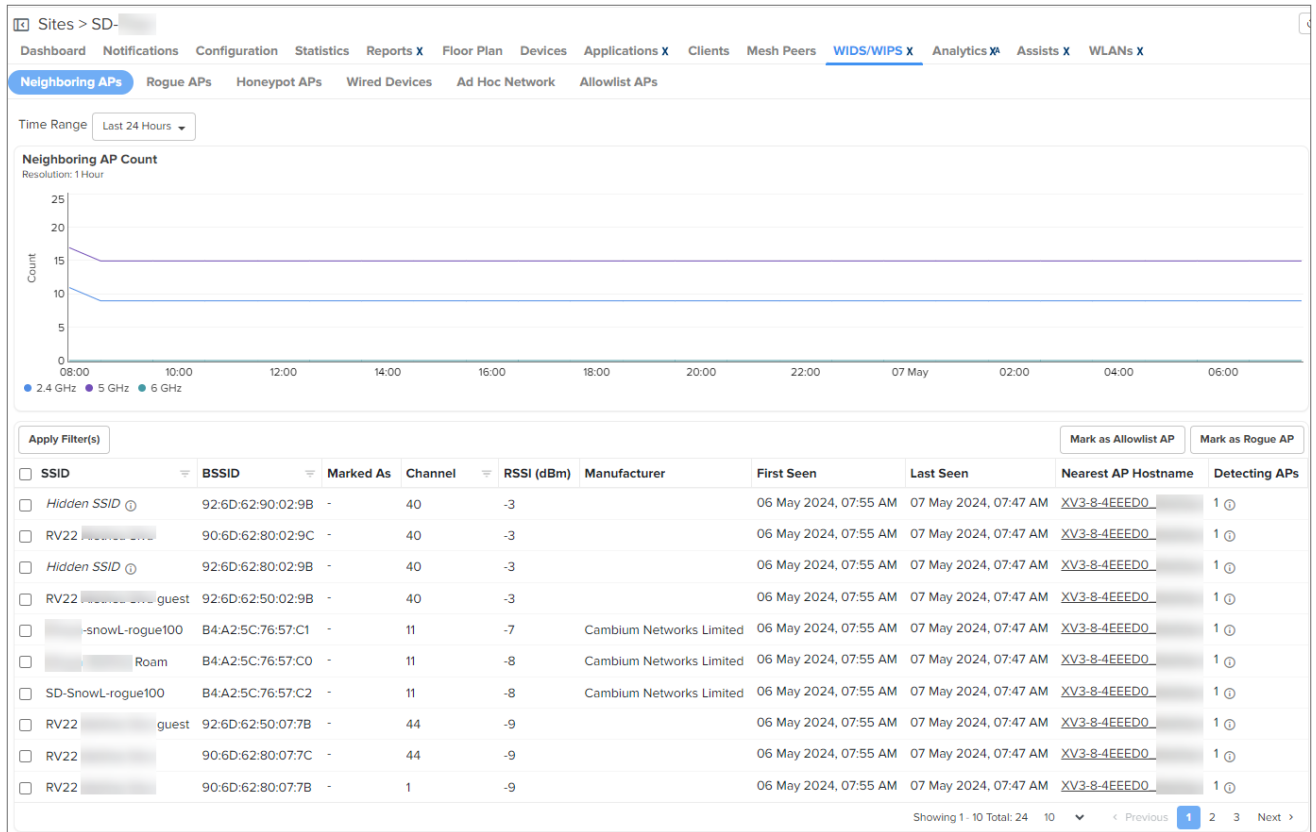

WIDS is a powerful feature within cnMaestro that helps administrators monitor and protect their wireless networks from unauthorized access and potential security threats. WIDS works by continuously scanning the wireless spectrum to detect and mitigate potential intrusions, ensuring the integrity and security of your network infrastructure.

This section provides detailed monitoring of various aspects including:

- Neighboring APs
- Rogue APs
- Honeypot APs
- Wired Devices

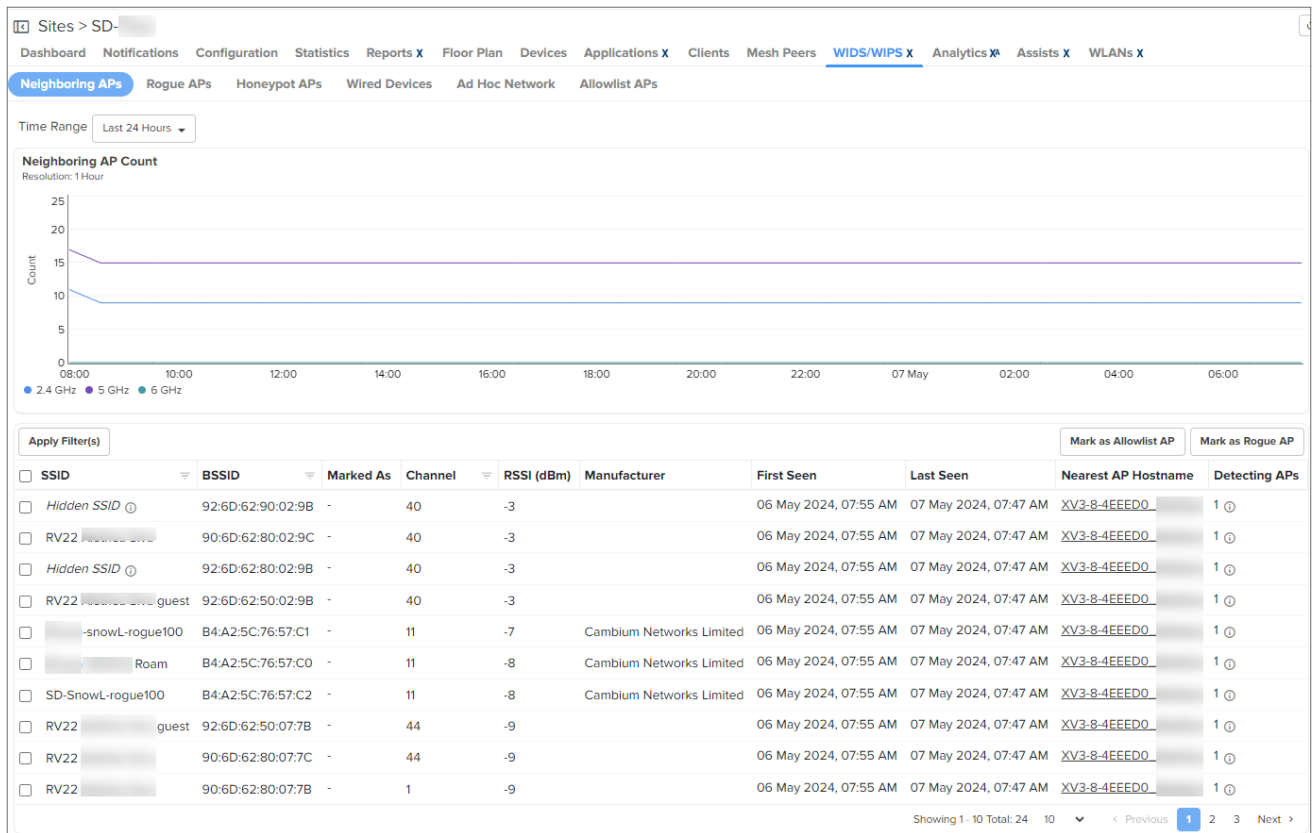

- Ad Hoc Network
- Allowlist APs

To view the WIDS page, navigate to **Network > Site > WIDS/WIPS** page.

## Neighboring APs

This feature allows user to monitor and manage neighboring APs effectively to ensure optimal network performance and security.

User can selectively mark neighboring APs as **Allowlist APs** or **Rogue APs** directly from the Neighboring AP page. This functionality enables administrators to categorize neighboring APs based on their legitimacy and take appropriate actions to manage them.

The neighboring APs that are marked as allowlist or rogue APs are moved to the **Allowlist APs** and **Rogue APs** tabs respectively.

The Neighboring AP page offers flexibility in analyzing data by providing options to select the **Time Range**. User can choose between **Last 24 hours** and **Last 7 days** to view neighboring AP data within the specified time frame.

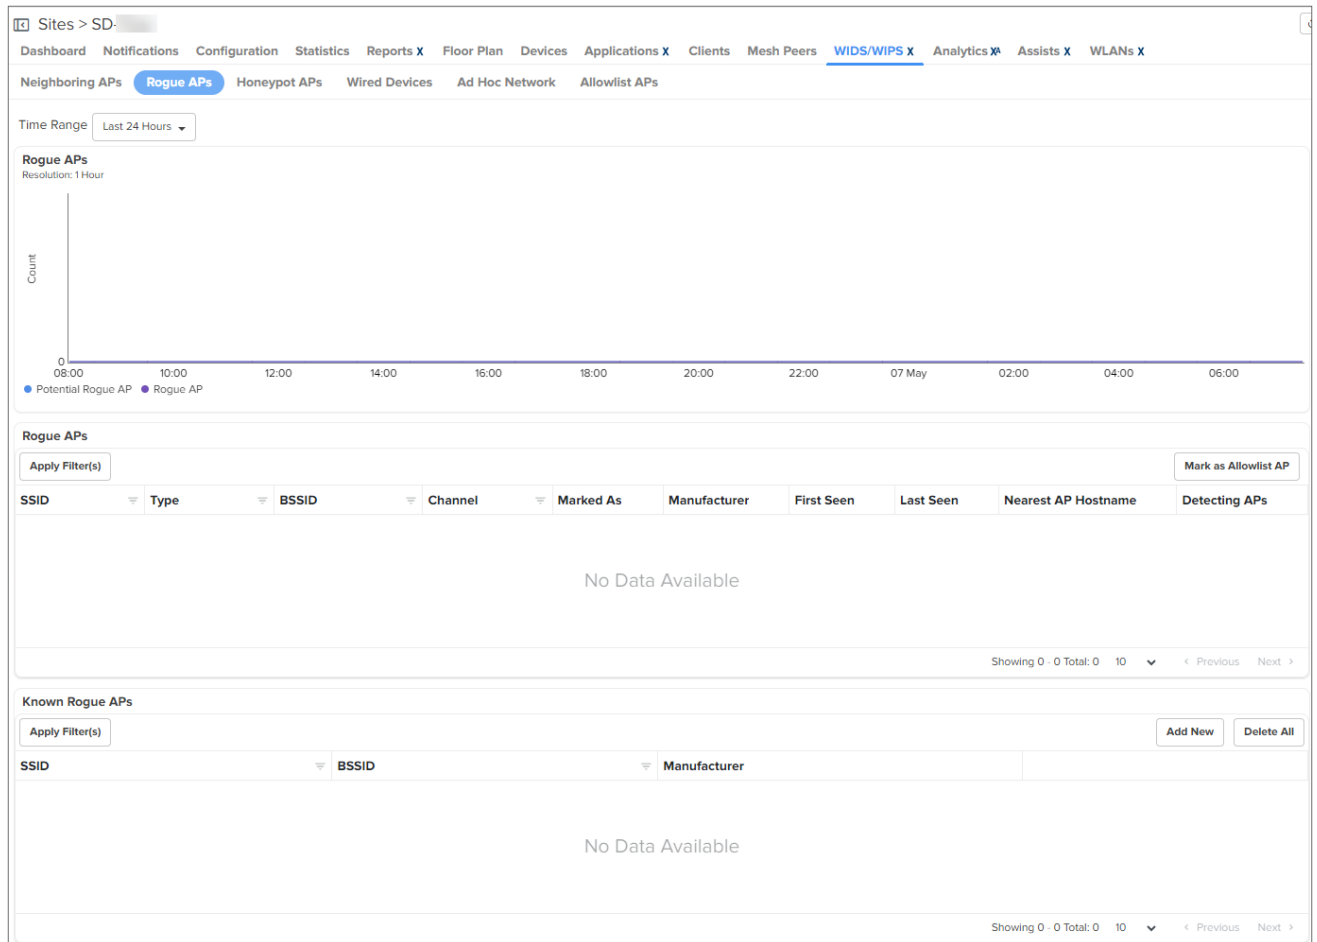

The following Neighboring APs parameters are displayed:

**Table 36** *Neighboring APs parameters*

Field	Description
SSID	Name of the wireless network.
BSSID	MAC address of the AP.
Marked As	Indicates whether the neighboring AP is marked as an allowlist AP or a rogue AP.
Channel	Radio frequency channel on which the neighboring AP operates.
RSSI (dBm)	Received signal strength indication, measured in decibels relative to one milliwatt (dBm).
Manufacturer	Manufacturer name of the neighboring AP (For example, TP-Link, NETGEAR).
First Seen	Date and time when the neighboring AP was first detected.
Last Seen	Date and time when the neighboring AP was last detected.
Nearest AP Host name	Hostname of the nearest AP to the neighboring AP.
Detecting APs	Number of APs that have detected the neighboring AP.

## Rogue APs

A Rogue AP is an unauthorized AP that is not onboarded to cnMaestro, which may include Cambium or non-Cambium devices causing interference. The authorized or onboarded APs scan all available channels and collect details about neighboring APs. They send this information to cnMaestro for monitoring and management.

The following Rogue AP parameters are displayed:

**Table 37** *Rogue APs parameters*

Field	Description
SSID	SSID of the rogue AP.
Type	Indicates the type of the rogue AP. Following are the supported values: <ul style="list-style-type: none"> <li>Rogue AP</li> <li>Potential Rogue AP</li> </ul>
BSSID	AP MAC address.
Channel	Channel in which the rogue AP operates.
Marked As	Indicates whether the rogue AP has been marked as an allowlist AP or a rogue AP.
Manufacturer	Manufacturer name of the neighboring AP (For example, TP-Link, NETGEAR).
First Seen	Time at which the rogue AP is detected for the first time.
Last Seen	Time at which the rogue AP was last detected.

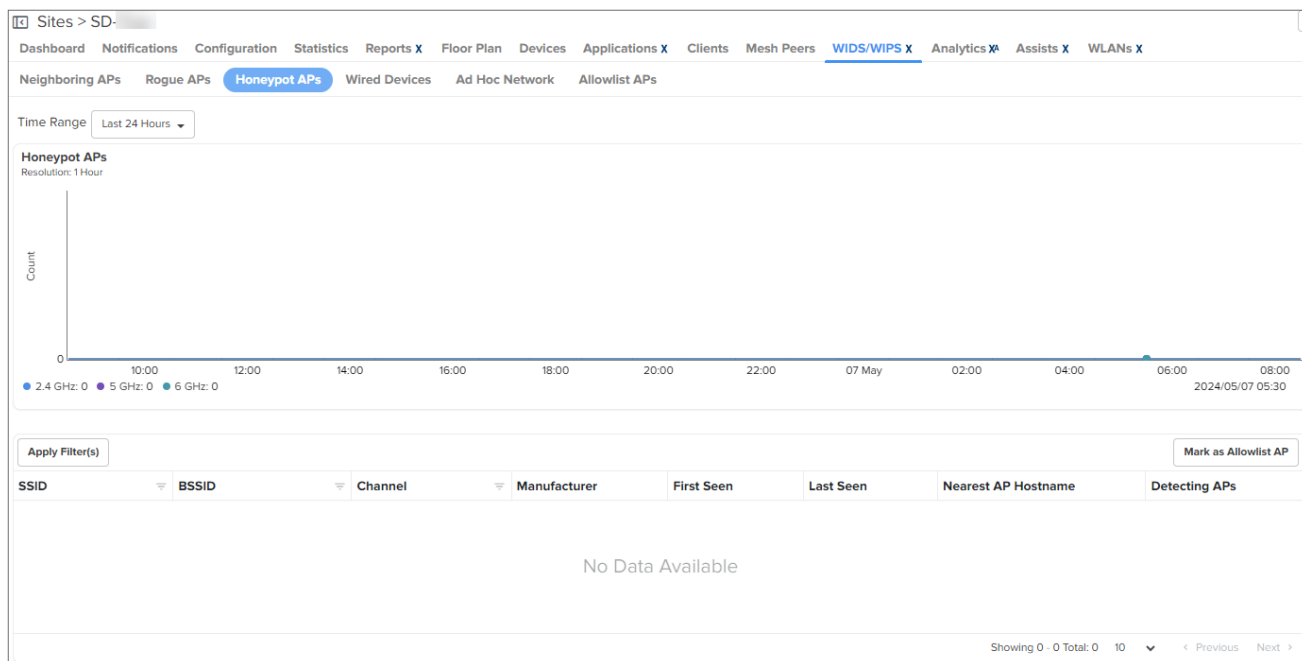

**Table 37** Rogue APs parameters

Field	Description
Nearest AP Hostname	Hostname of the nearest AP to the rogue AP.
Detecting APs	Number of APs that have detected the rogue AP.

## Honeypot APs

Honeypot APs are unauthorized APs that advertise the same SSID as managed or onboarded APs. Detecting and monitoring these APs is crucial to prevent threats to the network infrastructure.

The following parameters related to Honeypot APs are displayed:

**Table 38** Honeypot APs parameters

Field	Description
SSID	Name of the honeypot wireless network.
BSSID	AP MAC address.
Channel	Radio frequency channel on which the honeypot AP operates.
Manufacturer	Manufacturer name of the honeypot AP.
First Seen	Date and time when the honeypot AP was first detected.
Last Seen	Date and time when the honeypot AP was last detected.
Nearest AP Hostname	Hostname of the nearest AP to the honeypot AP.
Detecting APs	Number of APs that have detected the honeypot AP.

## Wired Devices

The Wired Devices section within cnMaestro provides administrators with insights into the wired devices connected to the network infrastructure. This feature allows administrators to monitor and manage wired devices effectively to ensure optimal network performance and security.

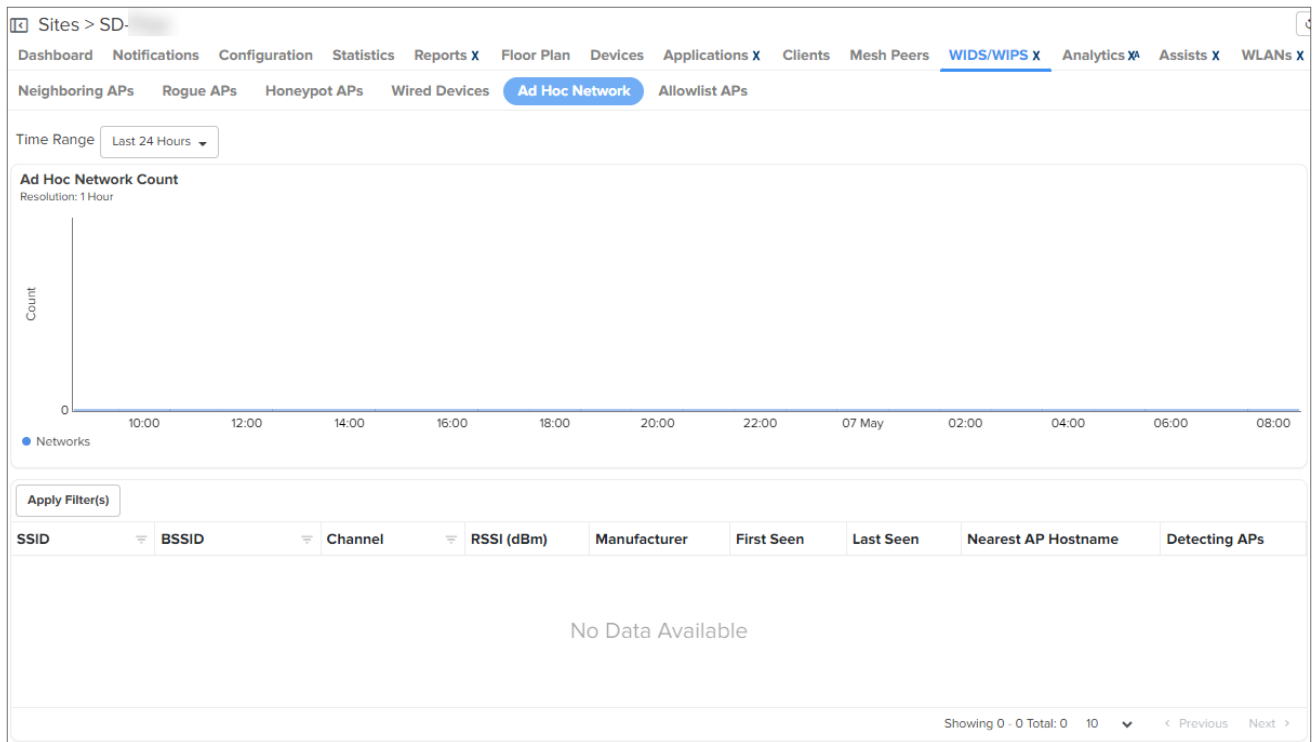

The following parameters related to Wired Devices are displayed:

**Table 39** *Wired Devices parameters*

Field	Description
MAC Address	The MAC address of the wired device.
Type	The type or category of the wired device.
First Seen	The date and time when the wired device was first detected.
Last Seen	The date and time when the wired device was last detected.

## Ad Hoc Networks

Ad hoc networks are temporary networks formed spontaneously by wireless devices for direct communication without the need for a central AP.

The following parameters related to Ad Hoc Networks are displayed:

**Table 40** *Ad Hoc Networks parameters*

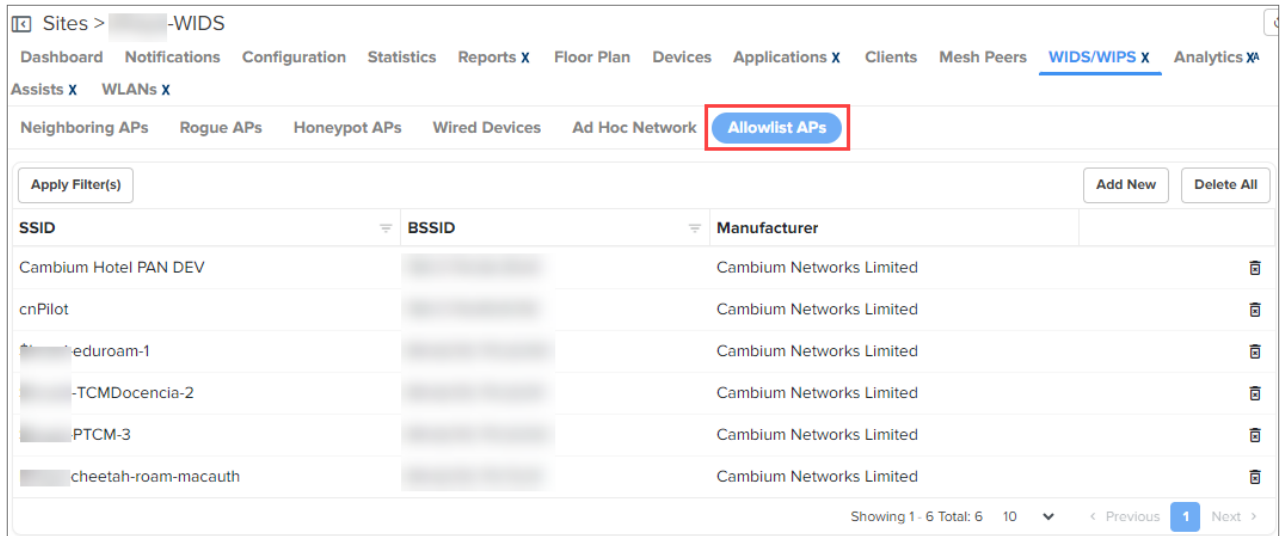

Field	Description
SSID	The name of the ad hoc wireless network.
BSSID	The MAC address of the ad hoc network.
Channel	The radio frequency channel on which the ad hoc network operates.
RSSI (dBm)	The received signal strength indication, measured in decibels relative to one milliwatt (dBm), of the ad hoc network.
Manufacturer	The manufacturer name of the device creating the ad hoc network.
First Seen	The date and time when the ad hoc network was first detected.
Last Seen	The date and time when the ad hoc network was last detected.
Nearest AP Hostname	The hostname of the nearest AP to the ad hoc network.
Detecting APs	The number of APs that have detected the ad hoc network.

## Allowlist APs

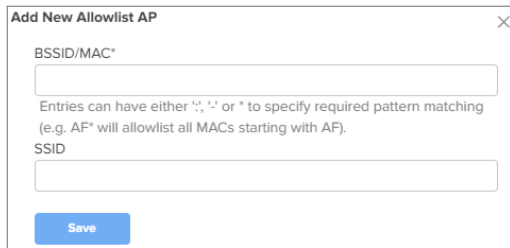

Allowlist APs allow administrators to configure the SSID and MAC addresses of authorized access points, providing control over permitted devices in the network infrastructure.

To add Allowlist APs, follow these steps:

1. Navigate to **WIDS > Allowlist APs**.

2. Click **Add New**. The **Add New Allowlist AP** windows appears.

3. Enter the **BSSID/MAC** address.
4. Enter **SSID**.
5. Click **Save**.

The following parameters related to Whiteilist APs are displayed:

**Table 41** Allowlist APs parameters

Field	Description
SSID	The name of the wireless network.
BSSID	The MAC address of the AP.
Manufacturer	The manufacturer of the AP.
Delete All	Allows to delete all Allowlist APs in the list.

## Configuring WIDS

To enable WIDS feature perform the following steps:

1. Navigate to **Configuration > Wi-Fi Profiles > AP Groups** tab.
2. Select the **AP Group** and navigate to **Security** page.

3. Select the **Wireless Intrusion Detection System (WIDS)** checkbox.

The screenshot shows the configuration page for AP Groups, specifically the Security tab. The left sidebar lists various configuration categories, with Security selected. The main content area is divided into sections: DoS Protection, WIDS, Wireless Flood Detection, and WIPS. The WIDS section has a red box around the 'Enable Wireless Intrusion Detection System (WIDS)' checkbox, which is checked. Below it, the 'Wireless Flood Detection' section has a plus sign icon and the 'Enable Wired Neighbor Discovery' checkbox is unchecked. The WIPS section has a warning icon and three unchecked checkboxes: 'Enable Honeypot Prevention' and 'Enable Rogue AP Prevention'.

## Configuring Wired Neighbor Discovery

To enable wired neighbor discovery, perform the following steps:

1. Navigate to **Configuration > Wi-Fi Profiles > AP Groups** tab.
2. Select the **AP Group** and navigate to the **Security** page.
3. Select the **Enable Wired Neighbor Discovery** checkbox.

The screenshot shows the configuration page for AP Groups, specifically the Security tab. The left sidebar lists various configuration categories, with Security selected. The main content area is divided into sections: WIDS, Wireless Flood Detection, and WIPS. The WIDS section has the 'Enable Wireless Intrusion Detection System (WIDS)' checkbox unchecked. Below it, the 'Wireless Flood Detection' section has a plus sign icon and the 'Enable Wired Neighbor Discovery' checkbox is checked. The WIPS section has a warning icon and two unchecked checkboxes: 'Enable Honeypot Prevention' and 'Enable Rogue AP Prevention'.

## Wireless Flood Detection

Wireless Flood Detection in cnMaestro is crucial for identifying and mitigating flood attacks in wireless networks. This feature provides administrators with the ability to monitor various parameters to detect potential flood attacks and take appropriate actions.

### Note

You need to enable the WIDS to configure the Wireless Flood Detection and Rouge AP detection.

Wireless Flood Detection is used to detect the flood attacks of Association, Authentication, Deauthentication, Disassociation, and EAP.

Wireless Flood Detection displays the following parameters:

**Table 42** *Wireless Flood Detection parameters*

Field	Description
Association	Detect floods of client associations from clients.
Authentication	Detect floods of client authentication from clients.
Deauthentication	Detect floods of client deauthentications from clients.
Disassociation	Detect floods of client disassociations from clients.
EAP	Detect floods of EAP messages from clients.

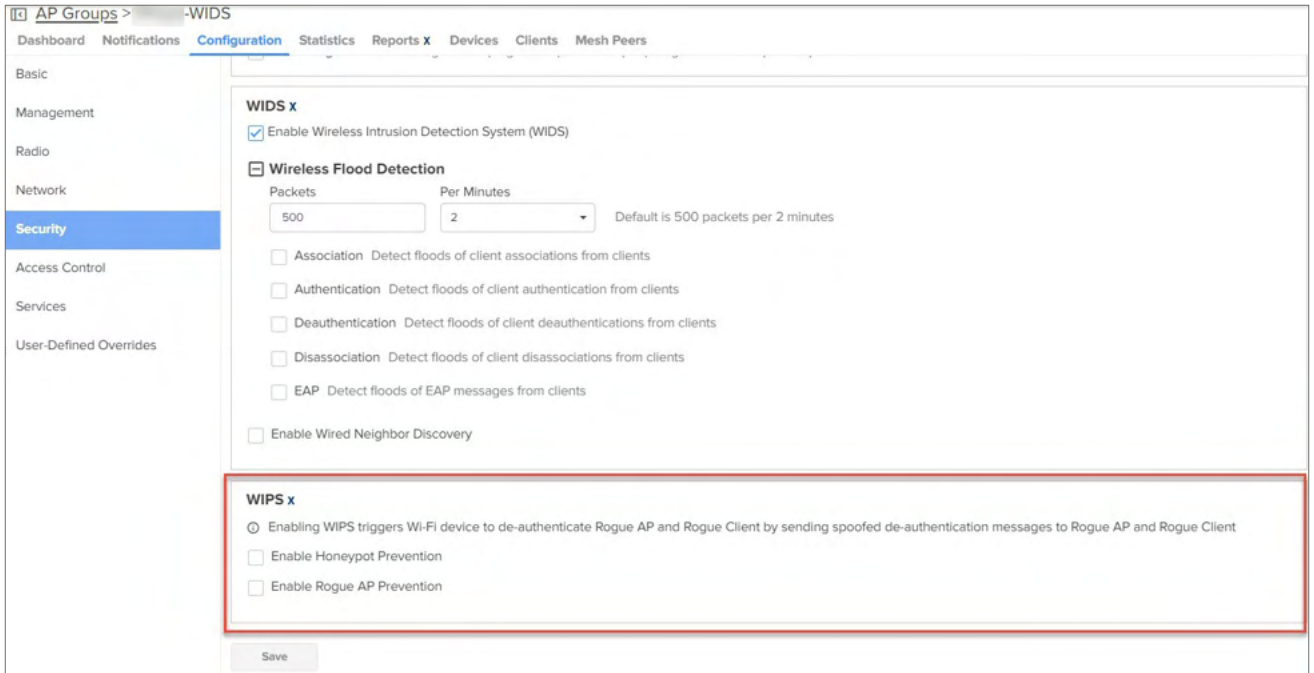

## Wireless Intrusion Prevention System (WIPS)

**Note**

This is a beta feature.

WIPS is a critical feature within cnMaestro designed to enhance the security of wireless networks. When enabled, WIPS triggers Wi-Fi devices to deauthenticate rogue APs and clients by sending spoofed deauthentication messages to the rogue APs and clients. You can also trigger Wi-Fi devices to deauthenticate honeypot APs and clients by enabling this feature.

## Off Channel Scan (OCS)

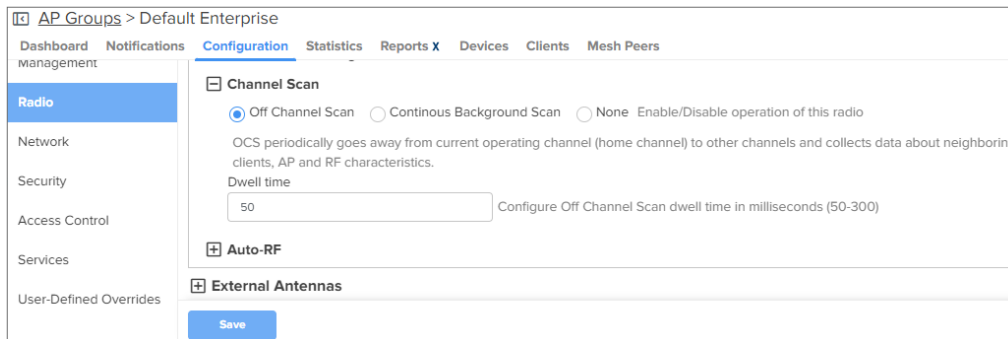

### Note

- OCS (on 2.4 GHz, 5 GHz and 6 GHz) and Rogue AP detection should be enabled for WIDS option to work at Site level in cnMaestro.
- It will take 20 minutes to detect Rogue AP on AP boot up.

To enable OCS (Off Channel Scan):

1. Navigate to **Configuration > Wi-Fi Profiles > AP Groups > Radio** (Available on all radios—2.4 GHz, 5 GHz, and 6 GHz) page.
2. Expand **Channel Scan** section and select **Off Channel Scan** option.
3. Click **Enable OCS** to periodically scan the network.

4. Enter **Dwell time** as required.
5. Click **Save**.

## Continuous Background Scan (CBS)

CBS reduces the dwell time, controls the channel switches and also monitors the voice data queues.

The screenshot shows the configuration page for the Radio section of an AP Group. The 'Channel Scan' section is expanded, and the 'Continuous Background Scan' option is selected. The 'Rest Time' is set to 6, 'Wait Time' to 2, 'Dwell Split Time' to 25, and 'Dwell Rest Time' to 100. The 'Channel Switch Announcement' checkbox is unchecked.

To enable CBS:

1. Navigate to **Configuration > Wi-Fi Profiles > AP Groups > Radio** (Available on all radios—2.4 GHz, 5 GHz, and 6 GHz) page.
2. Expand **Channel Scan** section and select **Continuous Background Scan** option.
3. Configure rest time in seconds (5-15).
4. Configure wait time in minutes to wait after all channels are scanned and before starting a new scan (1-10).
5. Configure dwell split time to spend on foreign channel.
6. Configure time interval between scans on same channel (100-1000).
7. Enable Channel Switch Announcement.
8. Click **Save**.

## Network Service Edge (NSE 3000)

The Network Service Edge (NSE 3000) delivers advanced security, routing and SD-WAN policies for small and medium enterprises. NSE 3000 model has two Gigabit WAN ports and four Gigabit LAN ports. It offers WAN throughputs of up to 1 Gbps. NSE 3000 is managed using the cloud-hosted cnMaestro (a management solution from Cambium Networks).

This section describes the following tabs available in cnMaestro for NSE 3000 model:

- [Dashboard](#)
- [Notifications](#)
- [Configuration](#)
- [Security](#)
- [Network](#)

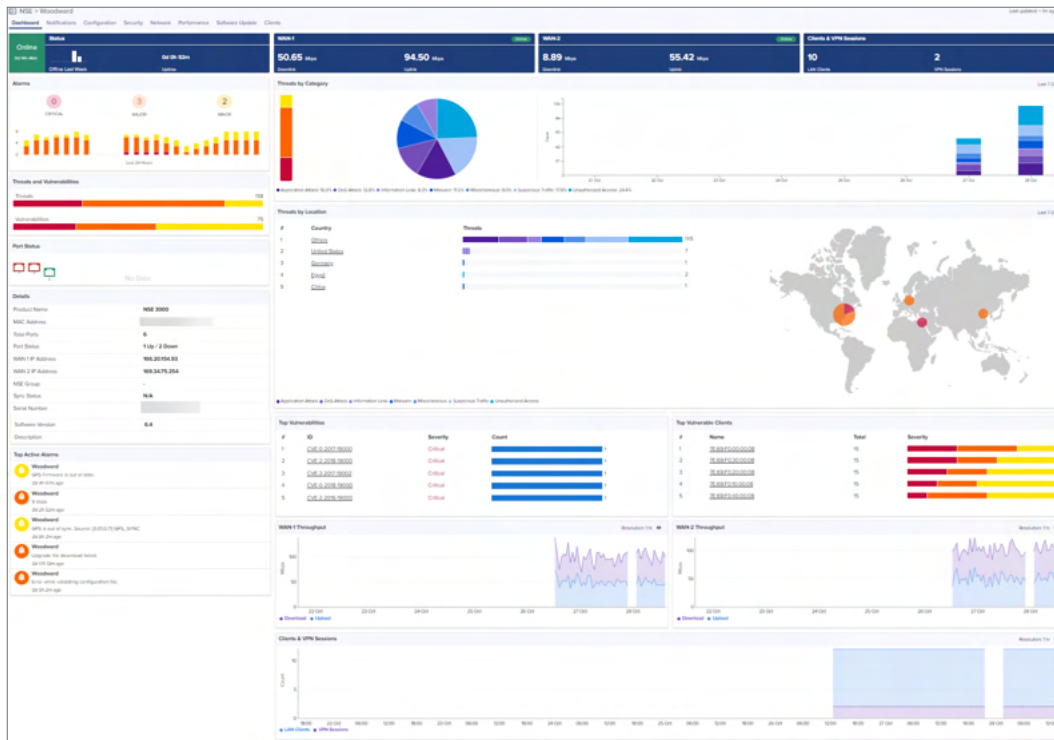

- [Tools](#)
- [Clients](#)
- [Certificate](#)

## Dashboard

Dashboard widgets provides you a comprehensive overview of NSE device and network health. The dashboard displays **Details** of NSE device, status of **WAN-1** and **WAN-2** usage, number of **LAN Clients & VPN Sessions**, **Alarms**, **Threats by Category**, **Threats and Vulnerabilities** categorized as **Critical, Major** and **Minor**, **Port Status**, **Top Vulnerabilities**, **Top Vulnerable Clients**, **Top Active Alarms**, **WAN-1** and **WAN-2 Throughput**, and **Clients and VPN Sessions**.

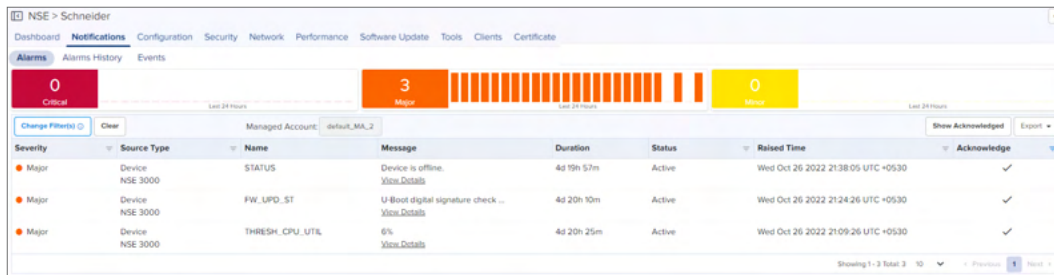

Figure 180 The NSE dashboard page

## Notifications

Notifications consist of Alarms, Alarms History, and Events. They are synchronous messages that provide real-time system status.

Figure 181 The Notifications page

**Table 43** Notification overview

Type	Description
Alarms	Alarms have a state and persist as long as the problematic activity continues; they reflect the current health of the devices in the network. The inactive alarms are removed from the alarms page after 10 minutes.
Alarms History	Expired Alarms are added to the Alarm History. The Alarm History displays historical active alarm counts. The history contains both the outstanding (active) and inactive alarms.
Events	Events are stateless, transient messages that occur in response to an input or action, such as if the CPU exceeds a threshold or a device association fails. Events are fire-and-forget; they are stored in an Event Table and provide a history of device activity.

## Configuration

The Configuration page allows you to configure the following for a device:

- [Advanced Settings](#)
- [Factory Reset](#)
- [User-Defined Overrides](#)
- [Configuration Lock](#)

To apply the Configuration Method, perform the following:

1. Navigate to the **Configuration** page.
2. In the **Device Configuration** section, select an NSE group from the **NSE Group** drop-down list.

**Device Configuration** [View Device Configuration](#)

NSE Group  
 Rashin\_NSE\_SCALE\_171 [Edit](#) [Create](#)

Advanced Settings

**Management** | WAN | VPN and Radius Server

Override	Field Name	Value	Default Value
<input type="checkbox"/>	Time Zone	<input type="text"/>	
<input type="checkbox"/>	NTP Server 1	time.google.com	time.google.com
<input type="checkbox"/>	NTP Server 2	<input type="text"/>	

To view the jobs, click **View Configuration Jobs** or navigate to **Administration > Jobs > Configuration Update**.

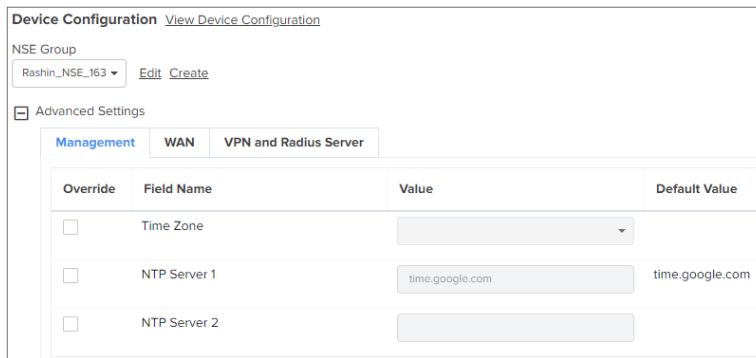

## Advanced Settings

In the **Advanced Settings** you can configure the following tabs:

- [Management](#)
- [WAN](#)
- [VPN and Radius Server](#)

## Management

1. In the **Management** tab, select the **Field Name** to override the settings.

The screenshot shows the 'Device Configuration' page for 'Rashin\_NSE\_163'. Under 'Advanced Settings', the 'Management' tab is active. A table lists fields that can be overridden:

Override	Field Name	Value	Default Value
<input type="checkbox"/>	Time Zone	[Dropdown]	
<input type="checkbox"/>	NTP Server 1	time.google.com	time.google.com
<input type="checkbox"/>	NTP Server 2	[Text Field]	

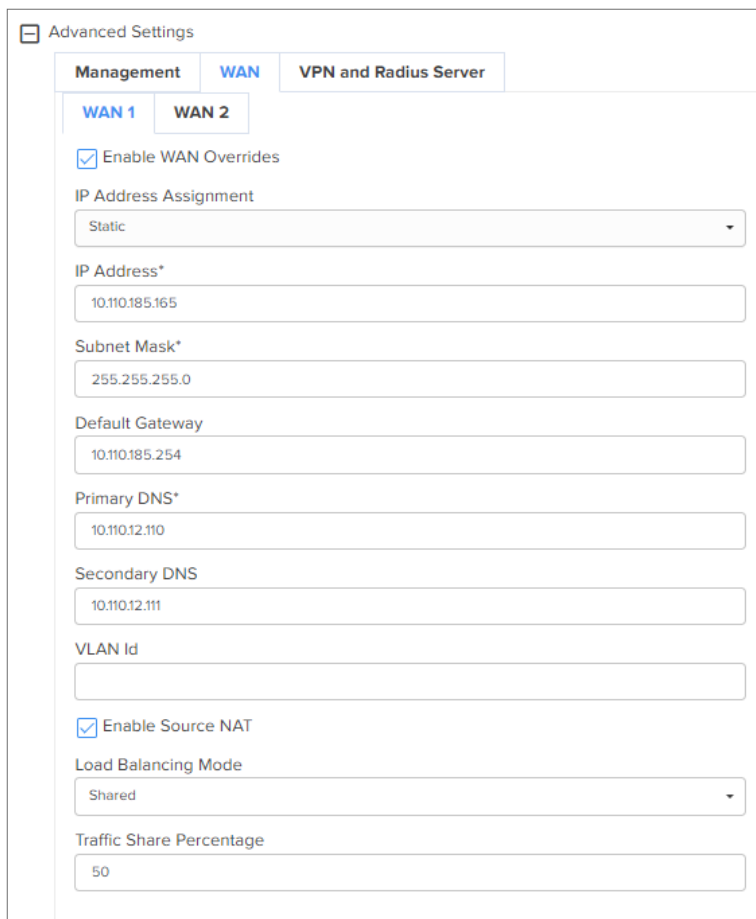

2. Click **Apply Configuration**.

## WAN

In the **WAN**, you can override settings for **WAN 1** and **WAN 2**.

### WAN 1

1. Select **Enable WAN Overrides** option.

The screenshot shows the 'Advanced Settings' page for 'WAN 1'. The 'Enable WAN Overrides' checkbox is checked. The configuration includes:

- IP Address Assignment: Static
- IP Address\*: 10.110.185.165
- Subnet Mask\*: 255.255.255.0
- Default Gateway: 10.110.185.254
- Primary DNS\*: 10.110.12.110
- Secondary DNS: 10.110.12.111
- VLAN Id: [Empty]
- Enable Source NAT: Checked
- Load Balancing Mode: Shared
- Traffic Share Percentage: 50

2. Select the fields to override.
3. Click **Apply Configuration**.

## WAN 2

1. Select **Enable WAN Overrides** option.

Advanced Settings

Management **WAN** VPN and Radius Server

WAN 1 **WAN 2**

No Data Available	

[Add New](#) Showing 0 - 0 Total: 0 10 < Previous Next >

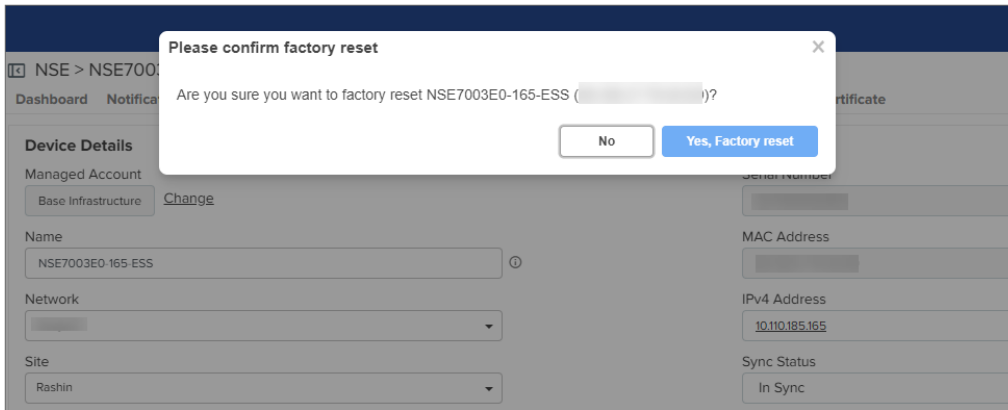

[Apply Configuration](#) [View Configuration Jobs](#)

2. Select **Enable Radius User Overrides** option.
3. Click **Apply Configuration**.

## Factory Reset

To erase all the configuration on the device and bring the device back to the default factory configuration, follow these steps:

1. Navigate to the **NSE > Configuration** page.
2. Click **Factory Reset**.

3. In the pop-up window that appears, Click **Yes, Factory Reset**.

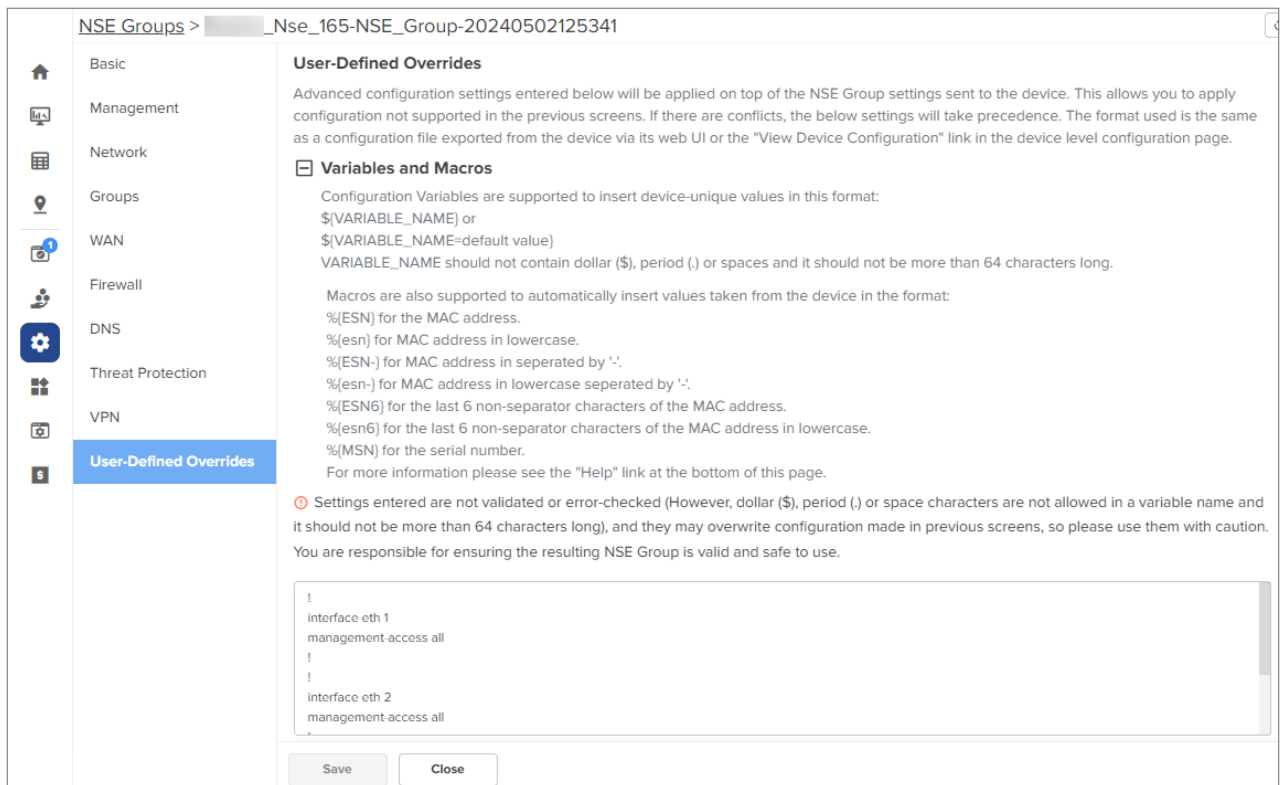

## User-Defined Overrides

User-Defined Overrides are appended to the NSE groups before the configuration is applied to the device. This allows setting configuration parameters which are not supported by GUI.

To configure overrides based on your customized requirements by using variables and macros, follow these steps:.

1. Navigate to the **NSE > configuration** page.
2. Define your overrides in the text box.

**Figure 182** *The User-Defined Overrides page*

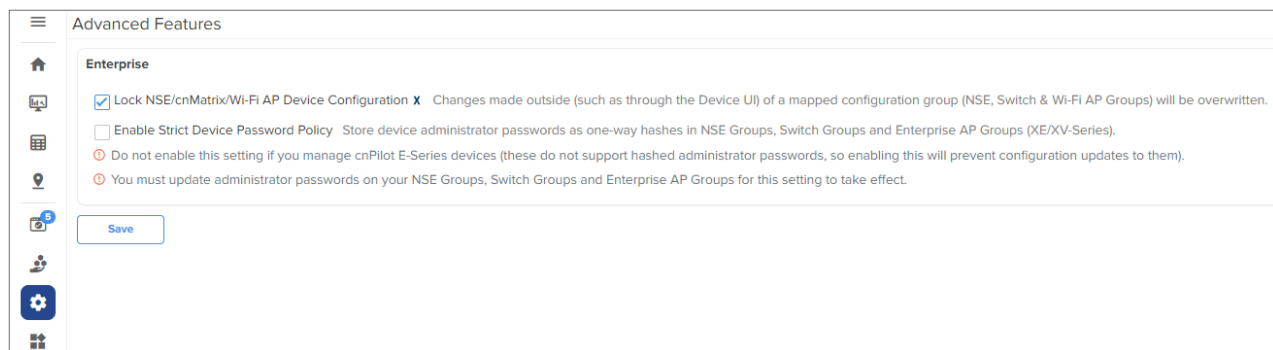

3. Click **Save**.

## Configuration Lock

Configuration Lock forces the configuration on NSE and cnMaestro to be in sync always. If there is any configuration change done directly on the device, then cnMaestro tracks that device and triggers a configuration sync job to bring back the device to same configuration which is applied from the NSE Group.

To enable the configuration lock, follow these steps:

1. Navigate to the **Configuration > Advanced Features**.
2. Select the **Lock NSE/cnMatrix/Wi-Fi AP Device Configuration** check box.

3. Click **Save**.

## Security

The **Security** page allows you to report the vulnerability and threats detected by the device.

### Threats

1. Navigate to **NSE > Security > Threats**.
2. Select **Time Range** from the drop-down.
  - Last 24 hours
  - Last 7 Days
  - Last 30 Days

The threat page displays **Threat by Location**, **Total Threats**, and threat categories based on **Critical**, **Major**, **Minor**, and origin of the threat (country of origin). The bar graph on the left hand side displays the count based upon the threat **by Category**. The pie chart displays the percentage of threats with respect to other threats. The per day bar chart displays the threat count aggregated on per day basis.

Figure 183 The Threats page

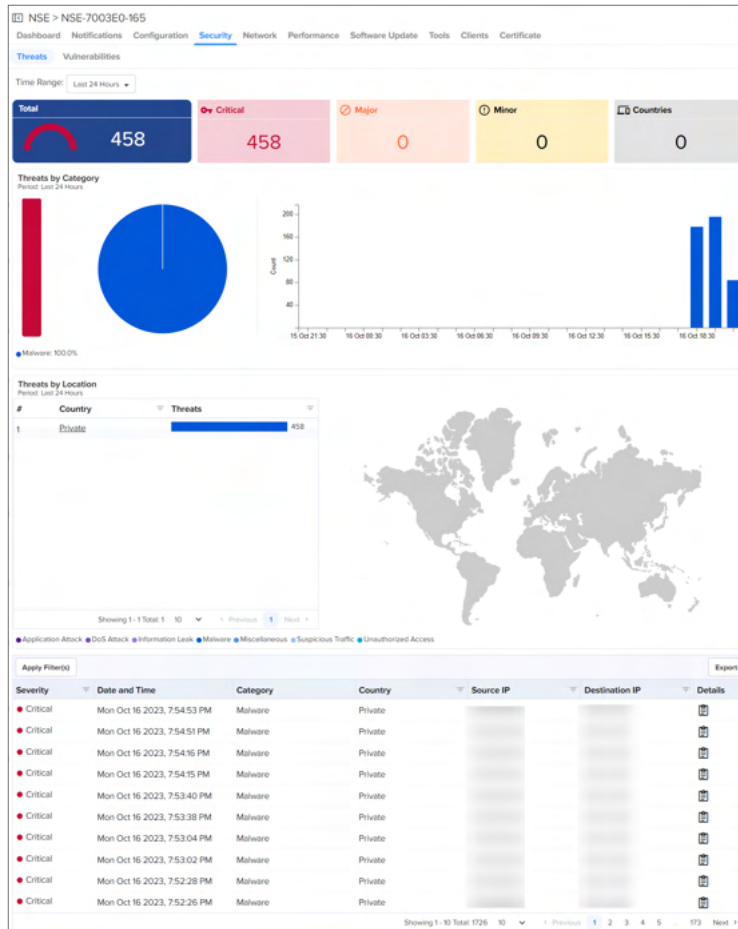

Table 44 Parameters on the Threats page

Parameter	Description
Severity	The severity of threat such as Critical, Major, and Minor.
Date and Time	The date and time of the threat occurrence.
Category	Displays any of the following categories of threat: <ul style="list-style-type: none"> <li>Application Attack</li> <li>DoS Attack</li> <li>Information Leak</li> <li>Malware</li> <li>Miscellaneous</li> <li>Suspicious Traffic</li> <li>Unauthorized Access</li> </ul>
Country	The source country of the threat is displayed for threats that originate from WAN to LAN.
Source IP	Source IP address of the flow which is resulted in the threat.
Destination IP	Destination IP address of the flow which is resulted in the threat.
Details	Displays the above details in a single window in addition to a description of the threat. When you click the  icon, the <b>Threat Details</b> window appears, as shown in <a href="#">Figure 184</a> .

## Vulnerabilities

The Vulnerabilities page displays **Total Vulnerabilities**, **Unique Critical**, **Unique Major**, **Unique Minor**, and **Vulnerable Clients**.

Figure 185 The Vulnerabilities page

The screenshot displays the 'Vulnerabilities' page for NSE7003E0-165-ESS. At the top, there are navigation tabs for Dashboard, Notifications, Configuration, Security (selected), Network, Performance, Software Update, Tools, Clients, and Certificate. Below the navigation, there are five summary cards: Total Vulnerabilities (3), Unique Critical (0), Unique Major (3), Unique Minor (0), and Vulnerable Clients (1). The 'Vulnerable Clients' section shows a table with columns for Hostname, IP Address, MAC Address, Type, OS, Last Scan, Vulnerabilities Count, and Severity. One client, 'Raspberry-Wireless-165', is listed. The 'All Active Vulnerabilities' section shows a table with columns for Severity, Identifier, Known Exploit, Exploitation Probability, Product, Product Version, and Clients Impacted. Three active vulnerabilities are listed, all of Major severity. The 'All Ignored Vulnerabilities' section shows a table with columns for Severity, Identifier, Known Exploit, Exploitation Probability, Product, Product Version, and Clients Ignored. Ten ignored vulnerabilities are listed, with severities ranging from Major to Critical.

Table 45 Parameters on the Vulnerabilities page

Parameter	Description
<b>Vulnerable Clients</b>	
Hostname	Hostname of the client. When you click the hostname, you can view the vulnerabilities discovered by the NSE for the

**Table 45** Parameters on the Vulnerabilities page

Parameter	Description
	client, as shown in <a href="#">Figure 201</a> .
IP Address	Source IPv4 address of the vulnerable client.
MAC Address	MAC address of the client.
Type	Type of client. For example, Computer, or Switch.
OS	Operating system running on the client. For example, Windows, or macOS.
Last Scan	Date and time of the last security scan performed on the client.
Vulnerabilities Count	Number of vulnerabilities found on the client during the security scan.
Severity	Level of severity assigned to each vulnerability, such as Critical, Major, or Minor.
Export	Exports a list of vulnerable clients. The following options are supported: <ul style="list-style-type: none"> <li>• <b>Export page as CSV</b></li> <li>• <b>Export page as PDF</b></li> <li>• <b>Export all as CSV</b></li> </ul>
<b>All Active Vulnerabilities</b>	
Severity	The severity level of the vulnerability: <ul style="list-style-type: none"> <li>• Critical</li> <li>• Major</li> <li>• Minor</li> </ul>
Identifier	CVE ID number for the discovered vulnerability.
Service	Service of the vulnerability.
Port	Port number of the service.
Known Exploit	Indicates whether the vulnerability is exploited in the wild and is present in the Known Exploited Vulnerabilities (KEV) catalog. For information on KEV catalog, see <a href="#">Known Exploited Vulnerabilities Catalog</a> .
Exploitation Probability	The probability (in percentage) that a vulnerability will be exploited in the next 30 days. A higher value indicates a higher probability of the vulnerability being exploited. For information on Exploit Prediction Scoring System (EPSS), see <a href="#">Exploit Prediction Scoring System</a> .
Product	Name of the product.
Product Version	Version of the product.
Clients Impacted	Number of clients impacted by the vulnerability. When you click the number in the <b>Clients Impacted</b> column, a window appears as shown in <a href="#">Figure 186</a> .
Details 	Displays the above details in a single window in addition to a short description of the vulnerability. A short description typically includes essential information, such as details on how an attacker can potentially exploit the vulnerability and which product versions are affected by it.

**Table 45** Parameters on the Vulnerabilities page

VULNERABILITIES

**NOTICE**  
NIST is currently working to establish a consortium to address challenges in the NVD program and develop improved tools and methods. You will temporarily see delays in analysis efforts during this transition. We apologize for the inconvenience and ask for your patience as we work to improve the NVD program.

### CVE-2022-30522 Detail

**MODIFIED**  
This vulnerability has been modified since it was last analyzed by the NVD. It is awaiting reanalysis which may result in further changes to the information provided.

**Description**  
If Apache HTTP Server 2.4.53 is configured to do transformations with mod\_sed in contexts where the input to mod\_sed may be very large, mod\_sed may make excessively large memory allocations and trigger an abort.

**Severity** CVSS Version 3.x CVSS Version 2.0

**CVSS 3.x Severity and Metrics:**  
NIST: NVD Base Score: 7.5 HIGH Vector: CVSS:3.1/AV:N/AC:L/PR:N/UI:N/S:U/C:N/I:N/A:H

*NVD Analysts use publicly available information to associate vector strings and CVSS scores. We also display any CVSS information provided within the CVE List from the CNA.*

*Note: NVD Analysts have published a CVSS score for this CVE based on publicly available information at the time of analysis. The CNA has not provided a score within the CVE List.*

**QUICK INFO**  
**CVE Dictionary Entry:** CVE-2022-30522  
**NVD Published Date:** 06/09/2022  
**NVD Last Modified:** 11/06/2023  
**Source:** Apache Software Foundation

You can refine your search results using **Apply Filter(s)** option as shown in [Figure 189](#).

Figure 189 Apply Filter(s) option

The screenshot shows the NSE interface with the 'Security' tab selected. The 'Vulnerable Clients' section is active, displaying a table with columns: Hostname, IP Address, MAC Address, Type, and OS. One client is listed: 'Raspberry-Wireless-165' with IP '192.168.200.53', Type 'RASPBERRY', and OS 'Android'. Below this, the 'All Active Vulnerabilities' section is visible, showing a table with columns: Severity, Exploitation Probability, and Product. A modal window titled 'Apply Filter(s)' is open, allowing users to filter vulnerabilities by Severity (Major), Identifier (Search), Known Exploit (Yes/No), Product (Search), and Product Version (Search). The modal includes 'Reset' and 'Apply Filter(s)' buttons.

Figure 190 A window with an option to ignore the client(s)

The screenshot shows a window titled 'Clients with CVE-2022-30522'. It features a table with columns: Hostname, IP Address, MAC Address, Type, and OS. One client is listed: 'Raspberry-Wireless-165' with IP '192.168.200.53', Type 'Notebook', and OS 'ChromeOS'. Below the table, there is a 'Reason\*' text area with the word 'Ignore' entered. At the bottom right, there are 'Cancel' and 'Ignore' buttons, with the 'Ignore' button highlighted by a red box.

## Network

Network page displays information about onboard DHCP servers, Route table, and WAN statistics.

## LAN

LAN page displays **Subnet** and **DHCP Leases**. You can **Apply Filters** for the table header to search for a specific parameter in the table.

Figure 193 The LAN page

The screenshot shows the LAN configuration page for device NSE-7003B8. The 'Subnet' table lists five VLANs with their respective IP addresses, DHCP modes (all 'Server'), relay servers (all 'N/A'), and DHCP pools. The 'DHCP Leases' table shows seven active leases with their MAC addresses, IP addresses, host names, expiration times, and assigned VLANs.

VLAN	IP Address	DHCP Mode	Relay Server	Start Address	End Address	Leases Used
1010	192.168.10.1	Server	N/A	192.168.10.10	192.168.10.200	2/191
1020	192.168.20.1	Server	N/A	192.168.20.10	192.168.20.15	5/6
1030	192.168.30.1	Server	N/A	192.168.30.1	192.168.30.100	0/100
1040	192.168.40.254	Server	N/A	192.168.40.10	192.168.40.200	0/191
2000	192.168.200.1	Server	N/A	192.168.200.50	192.168.200.150	0/101

MAC Address	IP Address	Host Name	Expires On	VLAN
	192.168.10.12	-	Sep 20 2022, 22:17	1010
	192.168.10.10	LAPTOP-025DVPT	Sep 20 2022, 22:24	1010
	192.168.20.12	Solutions-Air-	Sep 20 2022, 21:37	1020
	192.168.20.13	solution	Sep 20 2022, 21:38	1020
	192.168.20.15	Galaxy-A21s-5o	Sep 20 2022, 21:41	1020
	192.168.20.10	sitindia	Sep 20 2022, 21:38	1020
	192.168.20.11	IN01-5J550G2	Sep 20 2022, 21:37	1020

Table 46 Parameters displayed in LAN

Parameter	Description
<b>Subnet</b>	
VLAN	VLAN ID.
IP Address	Static IP address of the VLAN interface.
DHCP Mode	Status of the DHCP server mode enabled or disabled.
Relay Server	Status of the relay server mode enabled or disabled.
Start Address	DHCP pool start IP address.
End Address	DHCP pool end IP address.
Lease Used	Active IP address issued by the DHCP server.
<b>DHCP Leases</b>	
MAC Address	MAC address of the client.
IP Address	The leased IP address to the client.
Host Name	The hostname of the client.
Expires On	The duration for the leased IP.
VLAN	The VLAN ID assigned to the client.

## Routes

Routes page displays layer 3 routing table of the device. You can **Apply Filters** for the table header to search for a specific parameter in the table.

**Figure 194** The Routes page

Destination	Mask	Gateway	Flags	Metric	Interface

**Table 47** Parameters on the Routes page

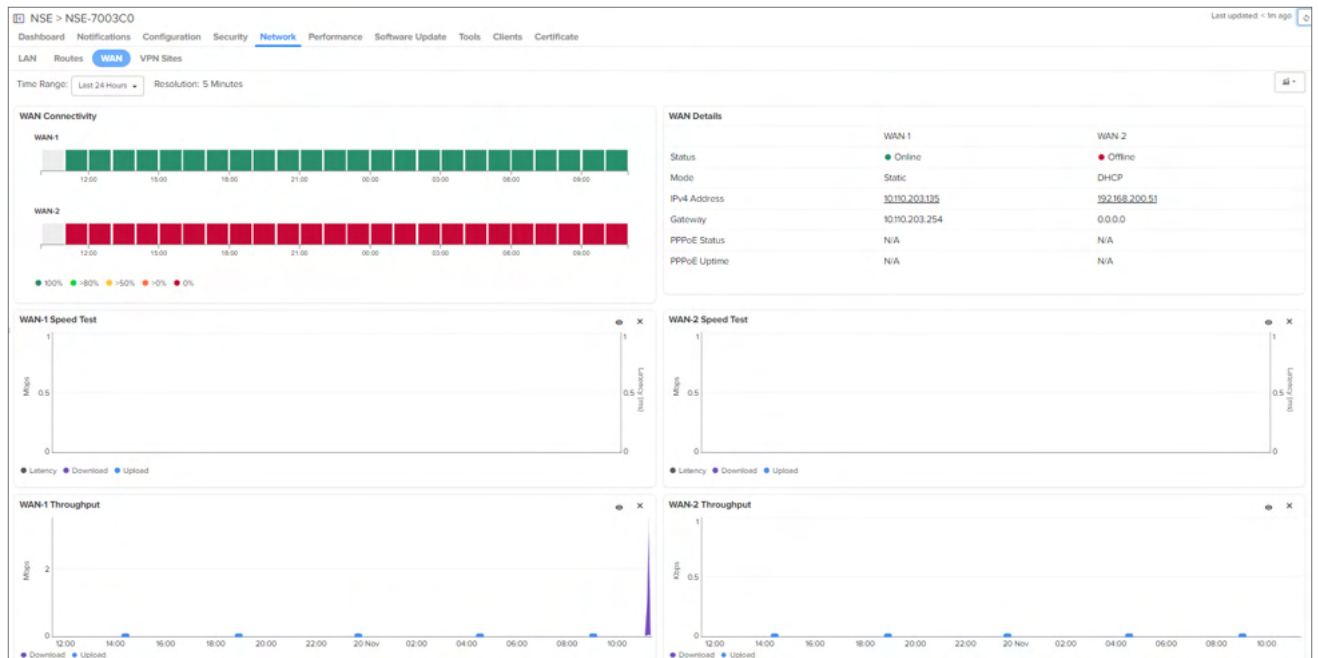

Parameter	Description
<b>Routes</b>	
Destination	Destination address of the routes.
Mask	Subnet mask of the specific route.
Gateway	Default gateway of the routes.
Flags	Flags of the routes.
Metric	Metric of the routes.
Interface	Interface of the routes.

## WAN

WAN page displays **WAN Connectivity**, **WAN Details**, graphical representation of **Speed Test**, **Throughput** in **WAN-1** and **WAN-2** in selected **Time Range** (Last 24 hours or Last 7 Days).

Figure 195 The WAN page

- **WAN connectivity:** Provides the status of the periodic health check of WAN links.
- **WAN speed test:** Provides the status of the MAX uplink and downlink bandwidth of the WAN link.
- **WAN throughput:** Provides the usage of WAN uplink and downlink over a period of time.

## WAN Details

Table 48 Parameters displayed on the WAN Details section

Parameter	Description
<b>WAN Details</b>	
Status	Status (online or offline) based upon the periodic WAN link health check.
Refresh time	Last update of date and time.
IP mode	Mode as DHCP or Static.
IPv4 Address	IPv4 Address of the WAN.
Gateway	Default gateway of the WAN interface.

## VPN Sites

The VPN Sites page displays the network traffic and connection details as shown in [Figure 196](#).

Figure 196 The VPN Sites page

The screenshot shows the VPN Sites configuration page. It includes a table with the following data:

Name	IKE State	IPsec State	Remote Host	Remote Port	Duration	Rx Bytes	Tx Bytes	Remote Subnets
site2	Established	Installed	10.110.32.70	4500	0d 0h 10m	0	0	192.168.80.0/24

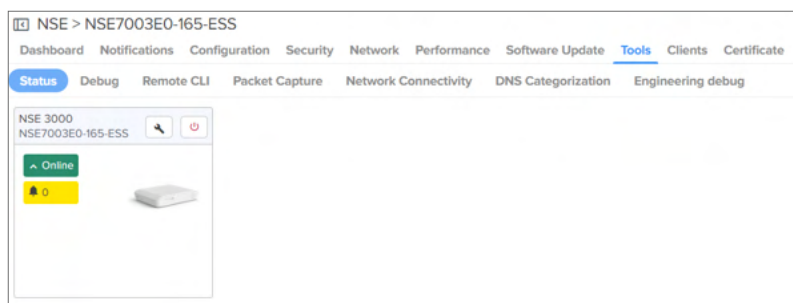

**Table 49** Parameters displayed on the VPN Sites page

Parameter	Description
<b>VPN Sites</b>	
Name	Name of the VPN site.
IKE State	Current state of IKE protocol.
IPSec State	Current state of IPSec protocol.
Remote Host	IP address of the remote VPN endpoint.
Remote Port	Port number of the remote VPN endpoint.
Duration	Duration of the VPN connection.
Rx Bytes	Number of bytes received by the local VPN endpoint from the remote VPN endpoint.
Tx Bytes	Number of bytes transmitted by the local VPN endpoint to the remote VPN endpoint.
Remote Subnets	IP address ranges assigned to the remote VPN endpoint's network.

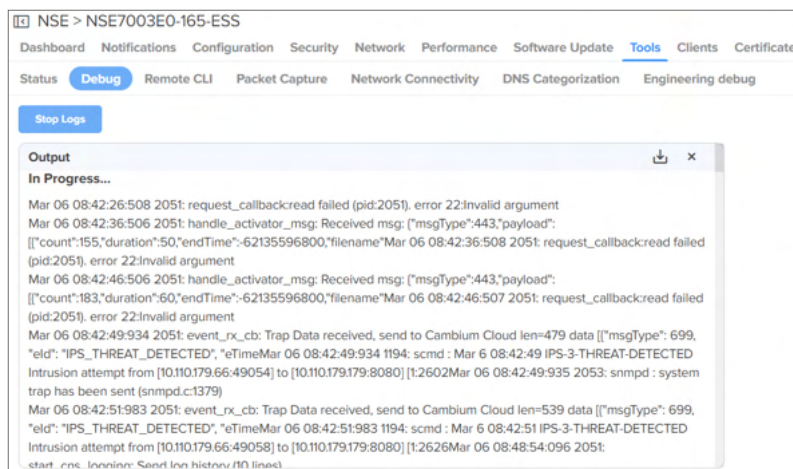

## Debug Tools

You can capture logs, run remote CLI commands to see stats in real time, run traceroute, ping to check the reachability, and run live packet capture on the NSE devices on the selected interface.

To display the NSE device status, navigate to **NSE > Tools > Status** page.

To access the logs, navigate to **NSE > Tools > Debug** tab and click **Start Logs**:

To run CLI commands, navigate to **NSE > Tools > Remote CLI** page, enter the **Command** and then click **Run**:

To access DNS categorization, navigate to **NSE > Tools > DNS Categorization**.

The DNS categorization tool is used to determine the category of the domain under which the queried domain falls. It is employed in scenarios where the administrator knows the specific domain and wants to ascertain which category to select while configuring the DNS filter. Additionally, it indicates whether the queried domain is permitted or denied for the specified group configured on the box.

### Wireless Clients

The **Clients > Wireless Clients** page at the Network- and Site-level displays the following details:

- **General**
  - Device
  - Device MAC
  - Host Name
  - Last Duration
  - Last Seen
  - Manufacturer
  - OS
  - Status
  - User
- **Guest Access**
  - Auth Status
  - Authentication Type

- Client Type
- Download Quota
- Download Quota Balance
- Guest Access Type
- Session Expiry
- Total Quota
- Total Quota Balance
- Upload Quota
- Upload Quota Balance
- **Network**
  - IPv4 Address
  - IPv6 Address
  - MAC
  - VLAN-ID
- **Wireless**
  - Band
  - Capability
  - Download
  - Radio ID
  - Radio Mode
  - RSSI
  - SNR
  - SSID
  - Upload

**Figure 197** Site > Clients > Wireless Clients

## Wired Clients

The **Clients > Wired Clients** page at the Network- and Site-level displays the following details:

- **General**
  - Address Type
  - Device

- Device MAC
- Download
- Expires
- Host Name
- Last Duration
- Manufacturer
- Model
- OS
- OS Version
- Type
- Upload
- **Guest Access**
  - Auth Status
  - Authentication Type
  - Client Type
  - Download Quota
  - Download Quota Balance
  - Guest Access Type
  - Portal Mode
  - Session Expiry
  - Total Quota
  - Total Quota Balance
  - Upload Quota
  - Upload Quota Balance
- **Network**
  - Interface
  - IPv4 Address
  - MAC
  - VLAN-ID

**Figure 198** Site > Clients > Wired Clients

## Unconnected Clients

The **Clients > Unconnected Clients** page at the Network- and Site-level displays the following details:

- Host Name
- Device
- Last Seen
- MAC (address)
- SSID
- Manufacturer

**Figure 199** Site > Clients > Unconnected Clients

Host Name	Device	MAC	Manufacturer	SSID	Last Seen
No Unconnected Clients					

## Client Dashboard

Dashboard provides overview of the wired and wireless clients usage. Click the pie chart to view specific application usage.

Figure 200 Client Dashboard

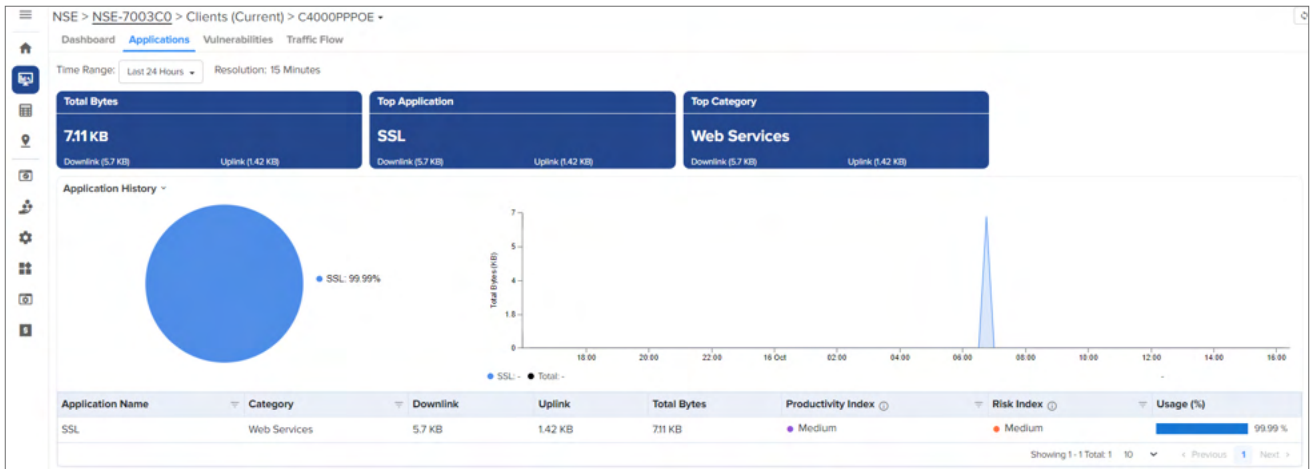

The following parameters are displayed for NSE Clients:

- Total Vulnerabilities
- Critical Vulnerabilities
- Major Vulnerabilities
- Minor Vulnerabilities
- Client Details
- Top Applications
- Top Categories

## Applications

The Applications tab displays **Application History**, **Top Application**, **Top Category**, and **Total Bytes**.

The Application data can be presented most for 24 hours or 7 days.

- **Top Application:** Represent the most used application by the client.
- **Total Bytes:** Represents the sum of Uplink and Downlink traffic across all applications used by the client.
- **Top Category:** Category of the top application used by the client.

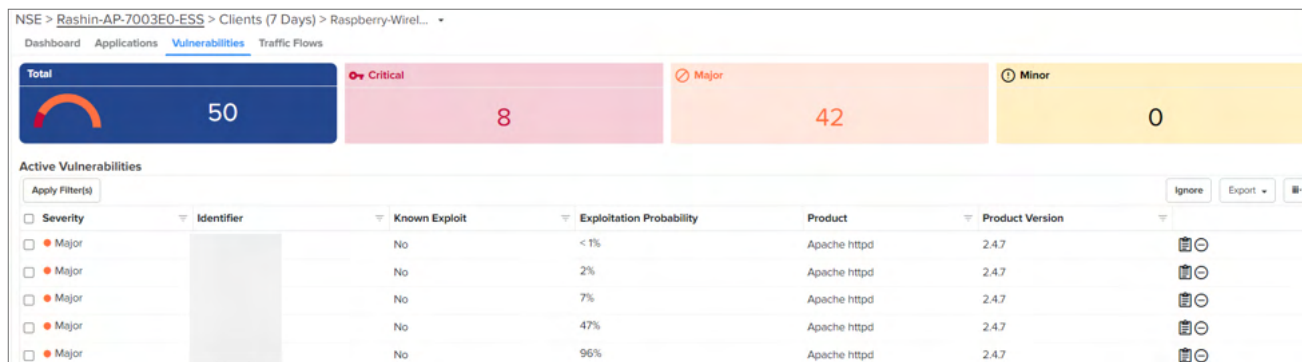

**Table 51** Parameters on the Applications page

Field	Description
Application Name	Name of the application.
Category	Category of the application.
Downlink	Total number of downlink bytes during the period selected.
Uplink	Total number of uplink bytes during the period selected.
Total Bytes	Total amount of application data (uplink plus downlink).
Productivity Index	The estimate of the typical productivity of the application. A higher value means better productivity.
Risk Index	The estimate of the typical security risk of the application. A higher value means greater risk.
Usage	The percentage of usage by this application in comparison to all applications.

## Vulnerabilities

The **Vulnerabilities** page displays the vulnerabilities discovered for the client by the NSE. Vulnerabilities are categorized as Minor, Major, and Critical.

**Figure 201** Vulnerabilities dashboard

## Traffic Flows

Traffic flows can be referred to as a current snapshot of existing flows. The flow direction can be either LAN to WAN or WAN to LAN.

**Note**

The NSE 3000 device supports up to 256000 concurrent connections.

The **Traffic Flows** page displays the active connections or flows of a client, as shown in [Figure 202](#).

**Figure 202** The Traffic Flows page

**Table 52** Parameters on the Traffic Flows page

Parameter	Description
Source IP	Source IP address of the device or endpoint, based on the flow direction. If the flow direction is from LAN to WAN, the source IP address is the source IP address of the

**Table 52** *Parameters on the Traffic Flows page*

Parameter	Description
	device. If the flow direction is from WAN to LAN, the source IP address is the source IP address of the endpoint to which the device has connection to.
Source Port	Source port number.
Destination IP	Destination IP address of the device or endpoint, based on the flow direction. If the flow direction is from LAN to WAN, the destination IP address is the destination IP address of the endpoint. If the flow direction is from WAN to LAN, the destination IP address is the destination IP address of the device.
Destination Port	Destination port number.
Application	Name of the application.
Tx Packets	Transmitted packets.
Tx Bytes	Transmitted bytes.
Rx Packets	Received packets.
Rx Bytes	Received bytes.
TTL	Time to live. Time period during which a session or connection is active.
NAT'ed IP	IP address after the Network Address Translation (NAT) process.
NAT'ed Port	Port number after the NAT process.
Direction	Direction of the communication, indication whether it is incoming or outgoing. Outgoing: LAN to WAN Incoming: WAN to LAN
State	Current state of a connection. The following connection states are valid only if the protocol is TCP. <ul style="list-style-type: none"><li>• SYN_SENT</li><li>• SYN_RECV</li><li>• ESTABLISHED</li><li>• FIN_WAIT</li><li>• CLOSE_WAIT</li><li>• LAST_ACK</li><li>• TIME_WAIT</li><li>• CLOSE</li></ul>
Protocol	Name of the protocol, such as TCP, UDP, ICMP, or any.

## Certificate

To secure the communication between an NSE device and the VPN clients, you can encrypt the communication. To apply the encryption certificate, navigate to **NSE > Certificate**, upload the certificate and the key files, and then click **Apply Certificate**.

**Note:** Only certificates with ".der" and ".pem" file extensions are accepted.

**Figure 203** *The Certificate page*

The screenshot shows the 'Certificate' page for device NSE-700290. The page has a navigation menu at the top with 'Certificate' selected. Below the menu, there is a heading 'Download device certificate and private key on the device to encrypt the communication between device & VPN clients connecting using IPSec.' The 'Status' field is a text box containing 'Not Uploaded'. The 'Certificate' field is a text box with a 'Select File' button to its right. The 'Private Key' field is also a text box with a 'Select File' button to its right. At the bottom left, there is a blue 'Apply Certificate' button.

## Wireless LAN Dashboards

This section describes the following topics:

- [Wi-Fi Monitoring](#)
- [Site Dashboard](#)
- [WLANs Dashboard](#)

## Wi-Fi Monitoring

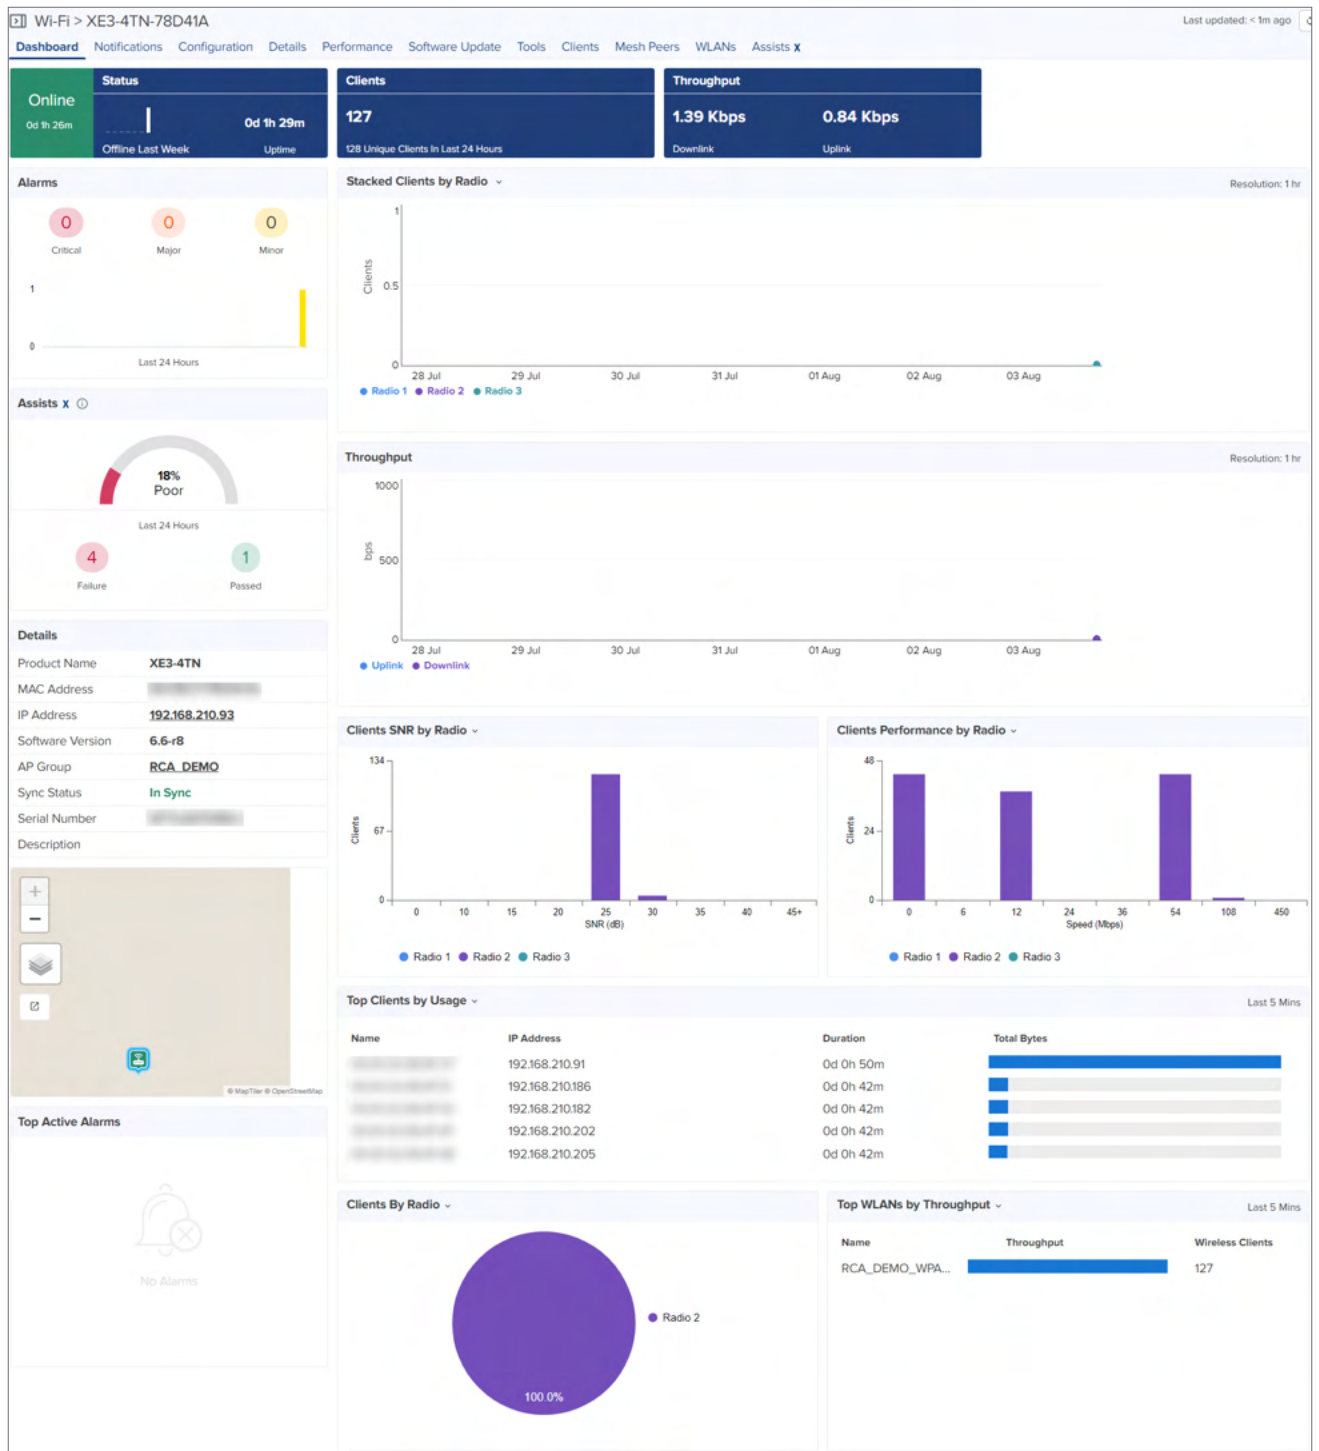

The Wi-Fi Monitoring pages include the following:

- [Dashboard](#)
- [Clients](#)
- [Details](#)
- [Mesh Peers](#)

## Dashboard

The cnPilot Dashboard displays **Stacked Clients by Radio, Stacked Clients by Band, Clients by Radio, Clients by Band, Details, Status, Throughput, Top Active Alarms, Top Clients by Usage, Top Clients by Session, Top WLANs by Clients, and Top WLANs by Throughput.**

Figure 204 Device > Dashboard

## Clients

The Clients tab displays the details of all the Wireless and Wired clients.

The following parameters are displayed for Wireless clients for cnPilot Home (R-Series):

- Actions
  - SSID
- Band

- Download
- Host Name
  - Edit Name
- IP Address
- MAC
- Managed Account
- Manufacturer
- RSSI
- Upload

To view the **Dashboard**, navigate to **Clients > Wireless Clients** and click a value in the **Host Name** column. A detailed **Client Dashboard** page is displayed. For more details, refer to

## Renaming Client Host-names

You can assign friendly host-names for the clients. To edit the host-name of connected wired or wireless client, follow these steps:

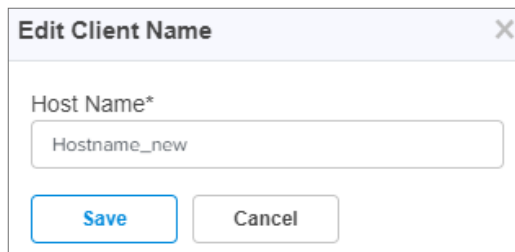

1. Navigate to **Clients > Wireless Clients** or **Wired Clients** tab.

The screenshot shows the 'System' interface with the 'Clients' tab selected. Underneath, the 'Wireless Clients' tab is active. A table lists client details including SNR, Client Type, Upload/Download speeds, Managed Account, Status, Last Duration, Last Seen, and Actions. The Actions column contains a delete icon and an edit icon (highlighted with a yellow box). The table data is as follows:

SNR	Client Type	Upload	Download	Managed Account	Status	Last Duration	Last Seen	Actions
31 dB	Client	6.0 KB	94.5 KB	Base Infrastructure	Connected	0d 0h 57m	28 Mar 2023, 12:03:48 PM	[Delete] [Edit]
42 dB	Client	141.8 MB	8.3 GB	Sekhar_Operator	Connected	0d 19h 3m	28 Mar 2023, 12:03:49 PM	[Delete] [Edit]
41 dB	Client	14.8 MB	0	Sekhar_Operator	Connected	7d 21h 50m	28 Mar 2023, 12:03:49 PM	[Delete] [Edit]
58 dB	Client	404.4 KB	207.5 KB	Base Infrastructure	Connected	0d 1h 11m	28 Mar 2023, 12:03:49 PM	[Delete] [Edit]
45 dB	Client	6.7 MB	353.3 MB	Sekhar_Operator	Connected	0d 19h 4m	28 Mar 2023, 12:03:49 PM	[Delete] [Edit]

2. Scroll to the right most side of the clients list and click on the **Edit** icon under the **Actions** column.
3. In the **Edit Client Name** pop-up window, enter a friendly name for the client.

The 'Edit Client Name' pop-up window has a title bar with a close button. It contains a text input field labeled 'Host Name\*' with the placeholder text 'Hostname\_new'. Below the input field are two buttons: 'Save' and 'Cancel'.

4. Click **Save**.

The new host-name is displayed in all the places such as the Client Dashboards, Audit logs, and Reports.

## Mesh Peers

The Mesh Peers tab displays information related to mesh such as SNR, RSSI, and Band. This provides insight to the performance between the Mesh Client and Mesh Base.

**Figure 216** Device > Mesh Peers

Base AP	MAC	Mesh Base	Mesh Client	SSID	End Hosts	Host Name	Managed Account	IP Address	Band	VLAN	WLAN	Uptime	SNR	RSSI	Auth
XV2-22HE537CE	[Redacted]	[Redacted]	[Redacted]	_Mesh_B...	<a href="#">View End Hosts</a>		Base Infrastructure	0.0.0.0	5 GHz	1	2	0d 0h 28m	42	-53	Yes

## Site Dashboard

The Site Dashboard provides the overview of site-related parameters and devices.

The Site Dashboard displays the following graphics:

- [AP Types](#)
- [Stacked Clients by Band](#)
- [Channel Distribution by Band](#)
- [Clients Performance by Band \(Enterprise Wi-Fi\)](#)
- [Clients SNR by Band \(Enterprise Wi-Fi\)](#)
- [Connected 6E Client Capability](#)
- [Client Capability History](#)
- [Radio Distribution by Band](#)
- [WLAN Distribution by Band](#)
- [RF Quality](#)
- [Wireless LAN Dashboards](#)
- [Wireless LAN Dashboards](#)
- [Floor Plan](#)
- [Wireless LAN Dashboards](#)
- [Wireless LAN Dashboards](#)

## AP Types

## Stacked Clients by Band

## Channel Distribution by Band

Channel distribution displays usage of channels in 2.4 GHz, 5 GHz and 6 GHz. This helps in planning and implementing WLANs within a high-density environment. It displays the usage details for last 5 minutes.

## Clients Performance by Band (Enterprise Wi-Fi)

Clients performance details is displayed for last 5 minutes.

## Clients SNR by Band (Enterprise Wi-Fi)

## Connected 6E Client Capability

The Connected 6E Client Capability widget presents a point-in-time view of Wi-Fi 6E Clients associating to non-6E radios. These Clients may experience better service if SDR radios are upgraded from 5 GHz to 6 GHz. A high percentage of 6E Capable Clients connecting to non-6E radios is a signal to upgrade radios to 6 GHz. The Connected 6E Client Capability widget is represented using different colors and corresponding percentage values as described below:

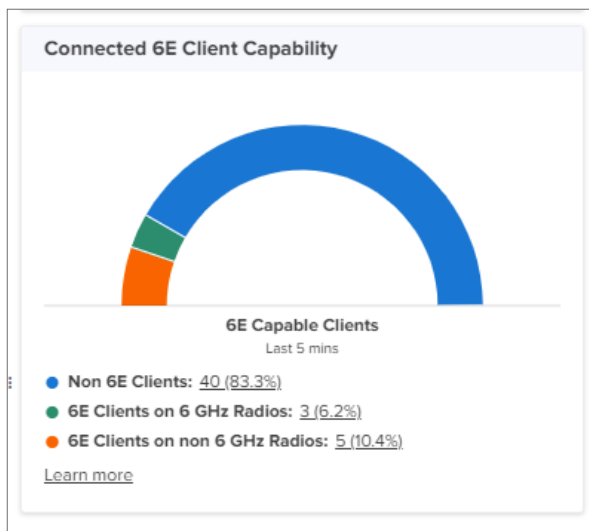

- Non 6E Clients: represents non 6E clients connected across the devices at the Site level.
- 6E Clients on 6 GHz Radios: represents 6E clients connected across the devices at the Site level.
- 6E Clients on non 6 GHz Radios: represents 6E clients connected across the devices on non 6 GHz radios at the Site level.

### Note

For best results, deploy a few radios in 6G mode in high traffic areas.

**Figure 219** Connected 6E Client Capability

Clicking next to clients number navigates to **Wireless Clients** page.

## Client Capability History

The Client Capability History graphic displays the highest detected Wi-Fi protocol for Clients active at a Site on weekly basis. Wi-Fi 6E devices are grouped into a single 6E category. A large number of 6E Capable Clients are a signal to expand infrastructure to include 6 GHz radios. If the period of evaluation extends more than a few weeks, the bar chart converts to a line chart.

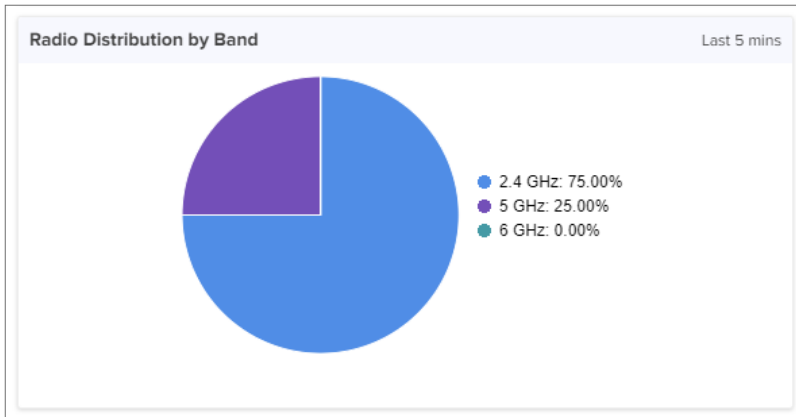

**Figure 220** Clients History in line chart

**Figure 221** Clients History in bar chart

### Radio Distribution by Band

### WLAN Distribution by Band

## RF Quality

Provides an indication of the current RF Quality across the Site.

Radio RF Quality Index is an indication of wireless clients and or MESH clients' RF link as seen by the access point radio (AP). It is the average of all the wireless clients and or mesh clients SNR.

- If aggregated SNR is more than 45: RF Quality Index is marked as Excellent
- If aggregated SNR is more than or equal to 35 and below 45: RF Quality Index is marked as Good
- If aggregated SNR is more than or equal to 25 and below 35: RF Quality Index is marked as Average
- If aggregated SNR is less than 25: RF Quality Index is marked as poor

## Throughput

Displays aggregated throughput for all the clients.

## Throughput Graph

Throughput graph displays client traffic for the last week.

## Top Wi-Fi APs by Throughput

Name	Clients	Throughput
E600-0C1864	3	██████████
MB-XV3-8-4DDB84	1	██████████
E510-C18B5F	2	██████████
E600-027AA6	1	██████████
E410-E1508C	4	██████████

## Wi-Fi Devices Availability (Total and Offline)

Displays total number of Access Points in the Site and the devices that are Offline.

## Top Clients by Session

Displays the top clients by session and the respective details.

Name	IP Address	Duration	Total Bytes
[Redacted]	192.168.210.58	0d 6h 6m	[Bar]
sitindia-Vostro-15-3568	192.168.210.146	0d 6h 6m	[Bar]
sitindia-Latitude-3410	192.168.210.55	0d 6h 6m	[Bar]
[Redacted]	192.168.210.151	0d 6h 6m	[Bar]
sitindia-Latitude-3410	192.168.210.120	0d 6h 6m	[Bar]

## Top Clients by Usage

Displays the top clients by usage and the respective details.

Name	IP Address	Duration	Total Bytes
[Redacted]	192.168.210.131	0d 6h 3m	[Bar]
sitindia-Latitude-3410	192.168.210.54	0d 6h 3m	[Bar]
[Redacted]	192.168.210.117	0d 6h 3m	[Bar]
[Redacted]	192.168.210.95	0d 4h 3m	[Bar]
sitindia-Latitude-3410	192.168.210.120	0d 6h 3m	[Bar]

## Wireless Clients Graph

Wireless clients graph displays clients that are connected in Radio 1 (2.4 GHz), Radio 2 (5 GHz), and Radio 3 (6 GHz).

## Floor Plan

A Floor Plan is used to view APs, device status, connected clients, and transmit power. This is done by creating the floor plan and adding devices. You can upload a floor plan for each floor based on the selected environment type.

To create a floor plan, perform the following steps:

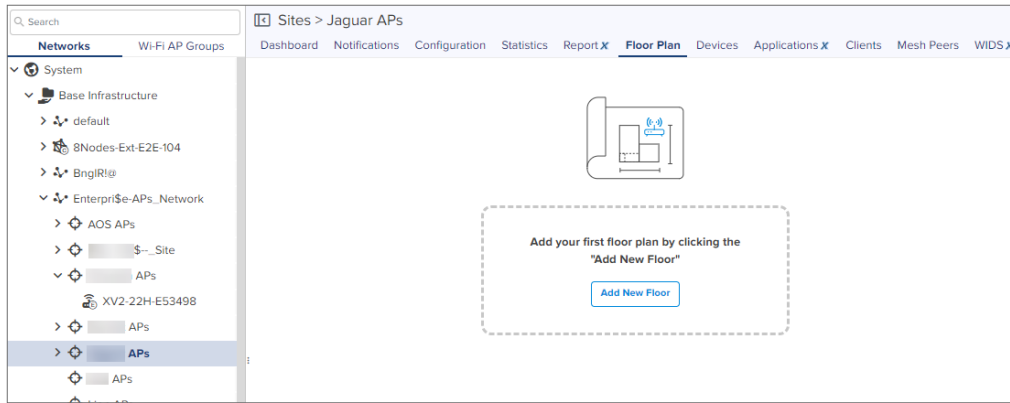

1. Navigate to **System > Network > Enterprise Site > Floor Plan**.

Floor Plan can be uploaded when a **Site** is created.

2. Click **Add New Floor**.

The **Add New Floor** window appears.

3. Enter the parameters for a new floor plan.

**Add New Floor**
✕

Name

Environment Type

AP Height

Floor Plan  Select File

ⓘ Minimum recommended size 1024 px X 800 px. Maximum size of 5MB.

**Table 53** Fields in Floor Plan

Field	Description
Name	Name of the floor.
Level	Level of the floor.
Environment Type	Floor type such as the following: <ul style="list-style-type: none"> <li>• Apartment</li> <li>• Hospital</li> <li>• Hotel</li> <li>• Office (Cubicle)</li> <li>• Office (Walled)</li> <li>• Outdoors</li> </ul>

**Table 53** Fields in Floor Plan

Field	Description
	<ul style="list-style-type: none"> <li>• School</li> <li>• University</li> <li>• Warehouse</li> </ul>
Adjustment	Device adjustment in dB.
Height	Height of the ceiling in meters or feet.
Width	Width of the floor in meters or feet.
Length	Length of the floor in meters or feet.

**Note**

Environment Type, Adjustment, and Height are currently unused by cnMaestro. They will become important when RF Heat Maps are added in a later release.

4. Click **Select File** and browse the required floor plan for uploading.

A preview of the uploaded floor plan is shown below:

Preview of Floor Plan

**Note**

- The minimum size of a floor plan is 1024 X 800 pixels.
- The maximum supported file size is 5 MB.
- The supported file formats are JPEG, JPG, PNG, and GIF.

5. Click **Add**.

A successful message is displayed, as shown below:

The **Zoom** control allows you to zoom in and out of the floor plan.

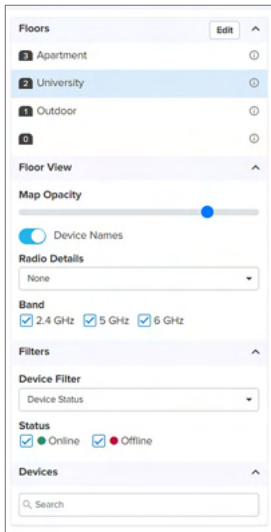

**Note**

- Only cnMaestro X users can upload more than one floor plan.
- You cannot duplicate the floor level for other floor plans.
- If the devices are in a default location and upgraded to 3.1.1, the devices are moved to the **Unmapped Devices** option.

The right pane of the Floor Plan window provides details of uploaded floor plans, such as Floor View, Map Opacity, Radio Details, Filters, and the devices in the floor plan.

**Figure 222** Configure Floor Plan

## WLANs Dashboard

The **WLANs** dashboard displays details of all WLANs that are applied on devices at a given site. It also displays the number of APs on which the WLAN is applied, the SSID that is configured, and the number of clients that are currently connected to those SSIDs. It also displays the uplink and downlink throughput for that WLAN.

WLAN aggregation is performed only at the site-level. If no clients are connected to the APs, no WLAN data is aggregated.

- To view the WLANs dashboard, navigate to **Monitor and Manage** > **<Site-Name>** > **WLANs<sup>X</sup>** tab.

**Figure 223** WLANs Dashboard

WLAN	SSID	AP	Clients	Downlink Usage	Uplink Usage
diva_wpa2_ent_rca	diva_wpa2_ent_rca	2	2	158.9 KB	247.9 KB
diva_open_rca	diva_open_rca	2	1	822 B	24.1 KB
diva_wpa3_rca	diva_wpa3_rca	2	1	754 B	22.8 KB
diva_psk_rca	diva_psk_rca	2	0	0	0
diva_mac_auth_rca	diva_mac_auth_rca	2	0	0	0
diva_sae_owe_rca	diva_sae_owe_rca	2	0	0	0
diva_ga_rca	diva_ga_rca	2	0	0	0

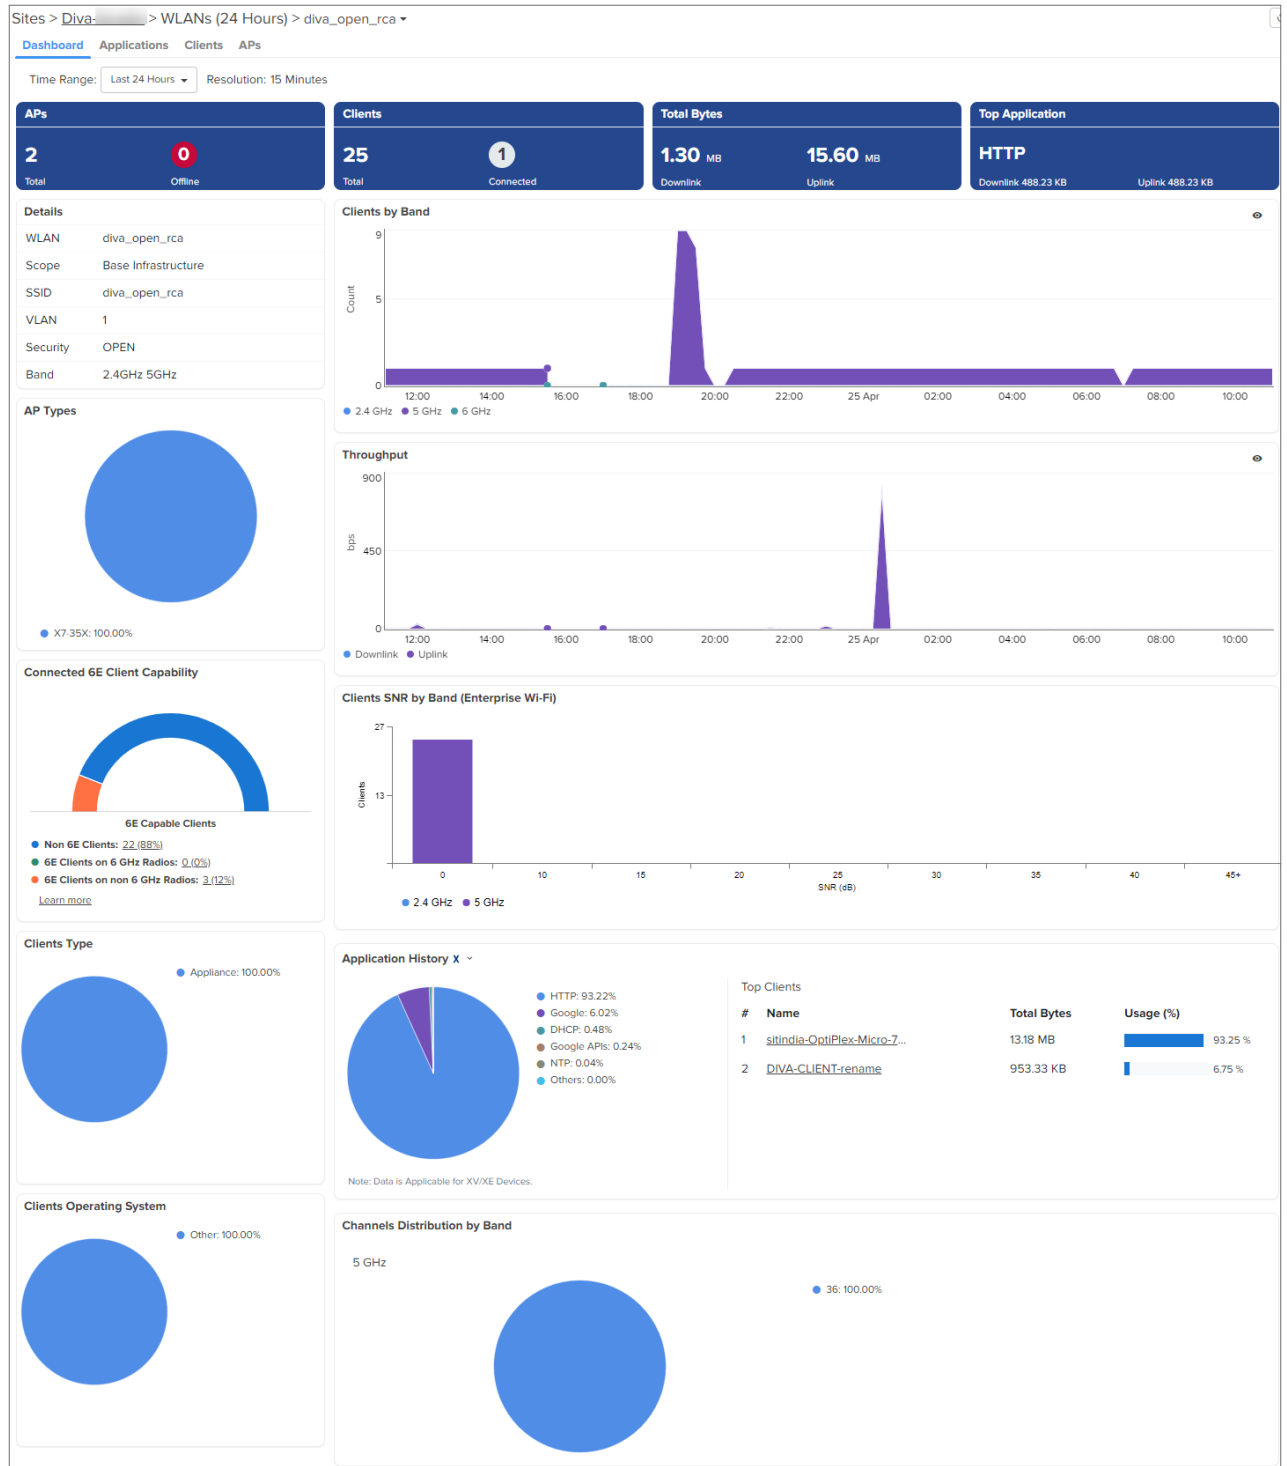

The WLANs data is available for the following durations:

- **Last 5 minutes**—Includes the most recent WLANs data (active clients and data traffic) for the last five minutes.
- **24 hours**—Includes WLAN data aggregated every 15 minutes for the last 24 hours. This may include details of any active clients that are still connected to the APs.
- **7 days**—Includes WLAN data that is aggregated every 1 hour for the last seven days.
- Click a WLAN in the WLANs page to view the WLAN-specific dashboard.

You can view the data for last 24 hours or seven days by selecting the option from the **Time Range** drop-down list.

- The dashboard displays the following data:
  - Details
  - AP Types
  - Connected 6E Client Capability
  - Client Type
  - Client Operating System
  - Clients By Band
  - Throughput
  - Clients SNR By Band (Enterprise (Wi-Fi))
  - Application History<sup>X</sup>
  - Channels Distribution By Band

**Figure 224 WLAN-specific Dashboard**

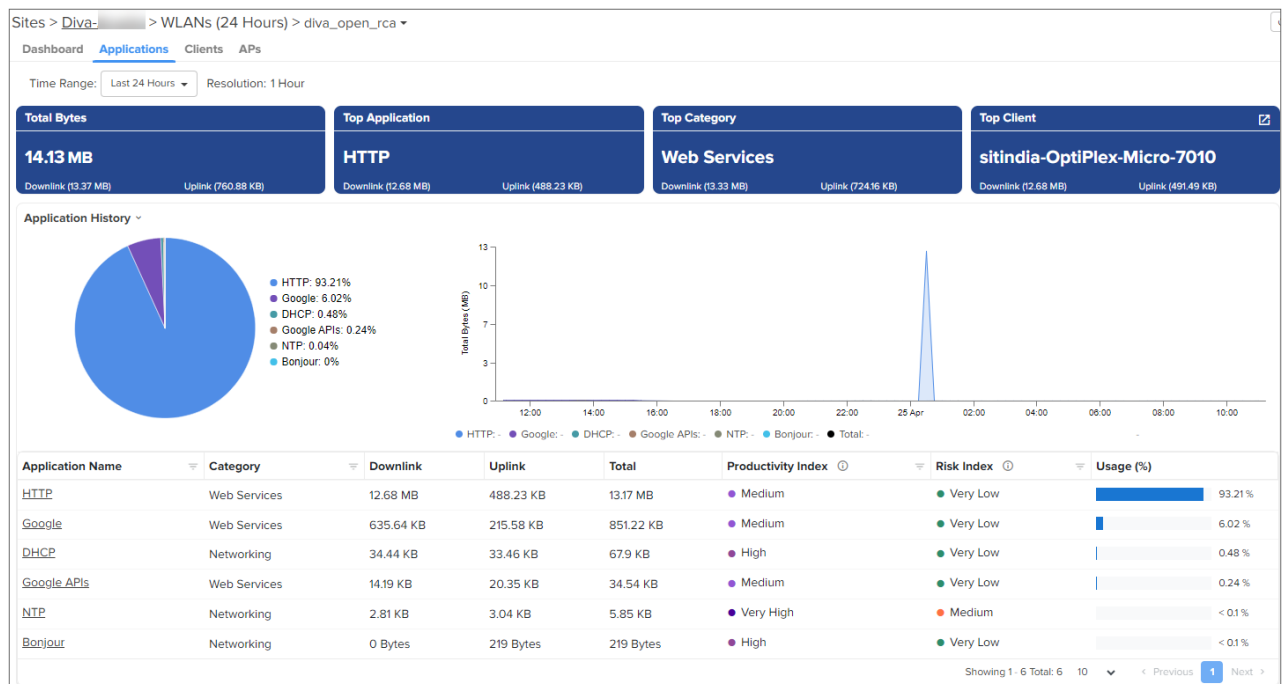

- To view the details of the applications accessed through this WLAN, click the **Monitor and Manage** > **<Site-Name>** > **WLANs<sup>X</sup>** > **<WLAN-Name>** > **Applications** tab.

The **Applications** dashboard displays both a graphical data and details in a table with the following fields:

**Table 55** Application fields

Field	Description
Application Name	Name of the application.
Category	Category of the application.
Downlink	Total number of downlink bytes during the period selected.
Uplink	Total number of uplink bytes during the period selected.
Total	Total amount of application data (uplink plus downlink).
Productivity Index	<p>Estimate of the typical productivity of the application.</p> <p>Following are the supported values:</p> <ul style="list-style-type: none"> <li>• Very Low</li> <li>• Low</li> <li>• Medium</li> <li>• High</li> <li>• Very High</li> </ul>
Risk Index	<p>Estimate of the typical security risk of the application.</p> <p>Following are the supported values:</p> <ul style="list-style-type: none"> <li>• Very Low</li> <li>• Low</li> <li>• Medium</li> <li>• High</li> <li>• Very High</li> </ul>
Usage (%)	Percentage of usage by this application in comparison to all applications.

**Figure 225** WLAN-specific Application Dashboard

- To view information about clients connected to the selected WLAN in the site, click the **Monitor and Manage** > <Site-Name> > **WLANs**<sup>X</sup> > <WLAN-Name> > **Clients** tab.

The **Clients** dashboard displays information, such as the hostname of the client, AP to which client was connected, operating system, and radio capabilities.

**Figure 226** WLAN-specific Clients Dashboard

## Fiber OLT and ONU

The Fiber Optical Line Terminal (OLT) from Cambium Networks is a Passive Optical Network (PON) device that connects to a core switch using either an Ethernet cable or a fiber cable. It supports Gigabit Passive Optical Network (GPON), 10 Gigabit Symmetrical PON (XGS-PON), and combo-PON (GPON co-existing with XGS-PON) Optical Defined Networking (ODN) access. The Fiber OLT is available in 8 and 16 ports, including All-in-One (AIO) PON interfaces, allowing simultaneous support for multiple PON technologies. It is used for network development with GPON and User Network Interface (UNI) ports. The high-performance access design of the Fiber OLT focuses on Software-Defined Networking (SDN) deployments, providing open interfaces to all control management functions for seamless integration with SDN environments.

cnMaestro provides management, configuration, and monitoring services for Fiber OLT. It includes the following pages for Fiber OLT and ONU, providing comprehensive tools for efficient management and optimization:

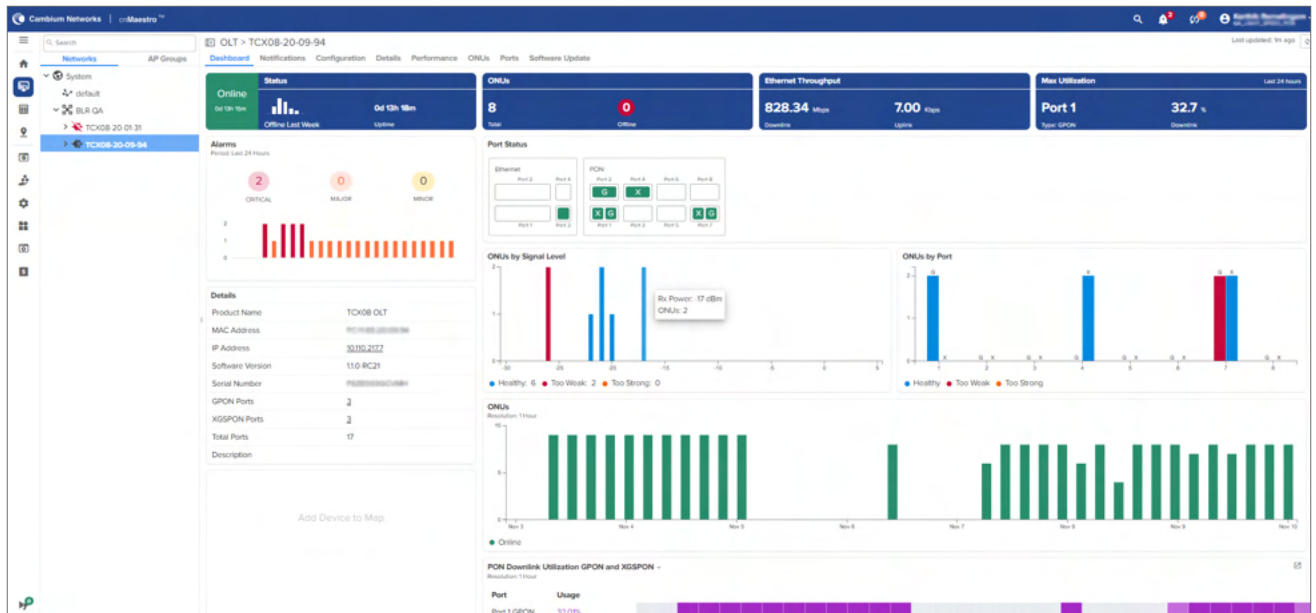

- [Dashboard](#)
- [Notifications](#)

- [Configuration](#)
- [Details](#)
- [Performance](#)
- [ONU](#)
- [Ports](#)
- [Software Update](#)

## Dashboard

Displays the monitoring information of the OLT.

Figure 228 Fiber OLT dashboard

Dashboard has the following elements:

- [Alarms](#)
- [Port Status](#)
- [ONU by Signal Level](#)
- [ONU by Signal Level per Port](#)
- [ONUs](#)
- [PON Downlink Utilization](#)
- [PON Downlink throughput](#)
- [PON Uplink throughput](#)
- [Ethernet Downlink throughput](#)
- [Ethernet Uplink throughput](#)

## Alarms

Displays the critical, major, and minor alarms. [Figure 229](#) shows the status of the alarms.

**Figure 229 Alarms**

To view the detailed information, click on the respective alarm count.

## Port Status

Displays the connection status for Network-to-Network Interface (NNI) or Ethernet (uplink) ports and PON ports (downlink). Small Form-Factor Pluggable (SFP) devices are connected to the Ethernet ports, and ONUs are connected to the PON ports. The uplink NNI has four ports. Port 1 and port 2 support 100 Gbps speed. Port 3 and port 4 support 10 Gbps speed. There are 16 downlink PON ports, with each port supporting both GPON and XGSPON.

**Figure 230 Port status**

## ONU by Signal Level

Displays the signal level received by the ONU.

**Figure 231 ONU by signal level graph**

## ONU by Signal Level per Port

Displays the number of ONU connected and their corresponding power levels.

**Figure 232** ONU by signal level per port

## ONUs

Displays the number of ONUs connected to the OLT.

**Figure 233** ONU

## PON Downlink Utilization

Displays the utilization of GPON and XGS-PON.

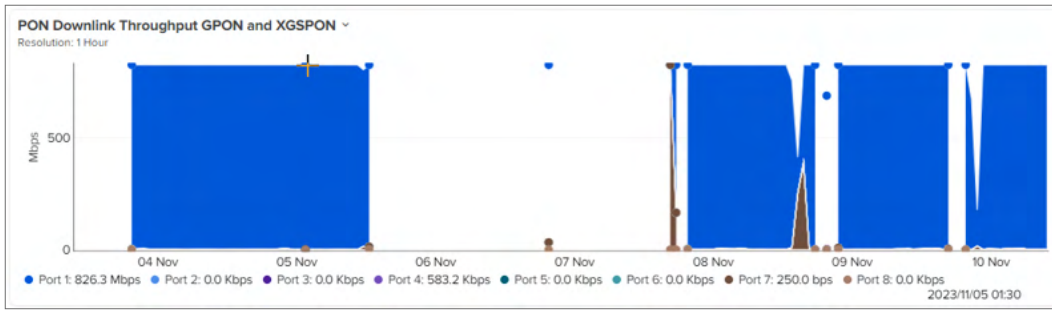

**Figure 234** PON Downlink Utilization

## PON Downlink Throughput

PON Downlink throughput displays the downlink throughput information of GPON and XGS-PON.

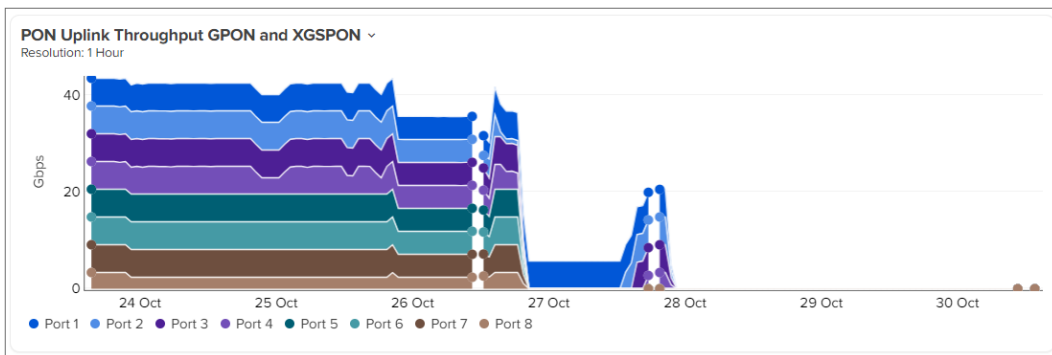

**Figure 235** PON Downlink Throughput

## PON Uplink Throughput

Displays the uplink throughput information of GPON and XGS-PON.

**Figure 236** PON Uplink Throughput

## Ethernet Downlink Throughput

Displays the Ethernet Downlink information of GPON and XGS-PON.

**Figure 237** Ethernet Downlink throughput

## Ethernet Uplink Throughput

Displays the Ethernet Uplink information of GPON and XGS-PON.

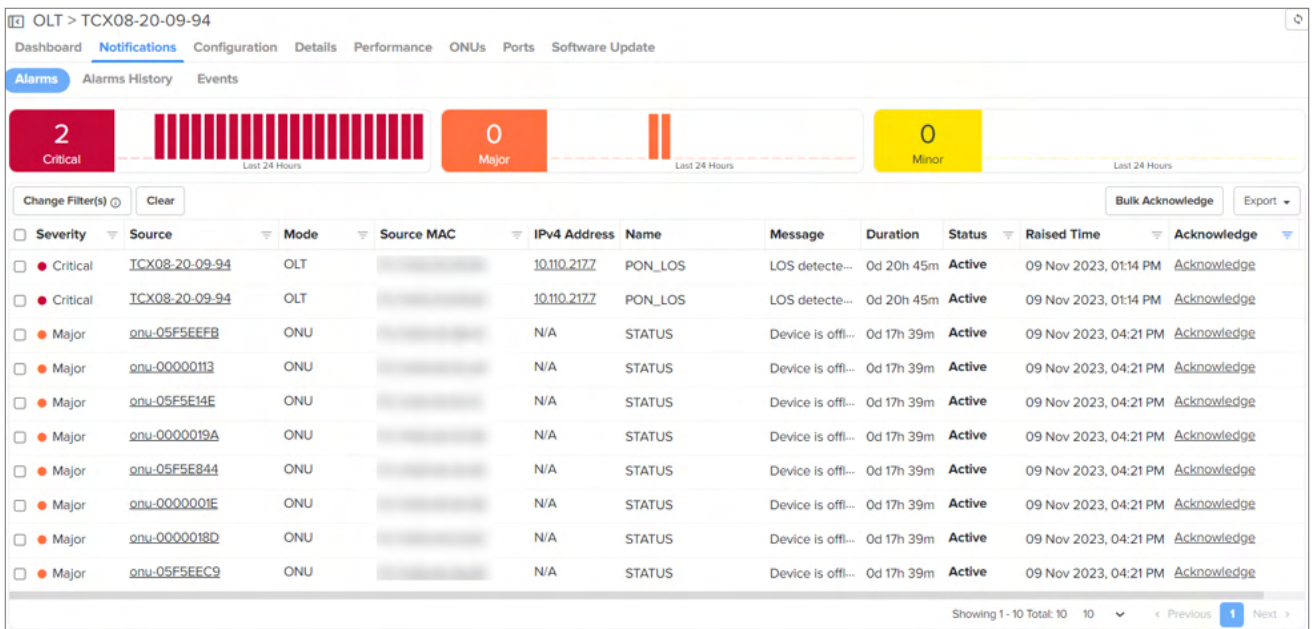

**Figure 238** Ethernet Uplink Throughput

## Notifications

Displays the alarm information of the OLT.

**Figure 239** Notifications

**Table 56** Parameters on the Notifications page

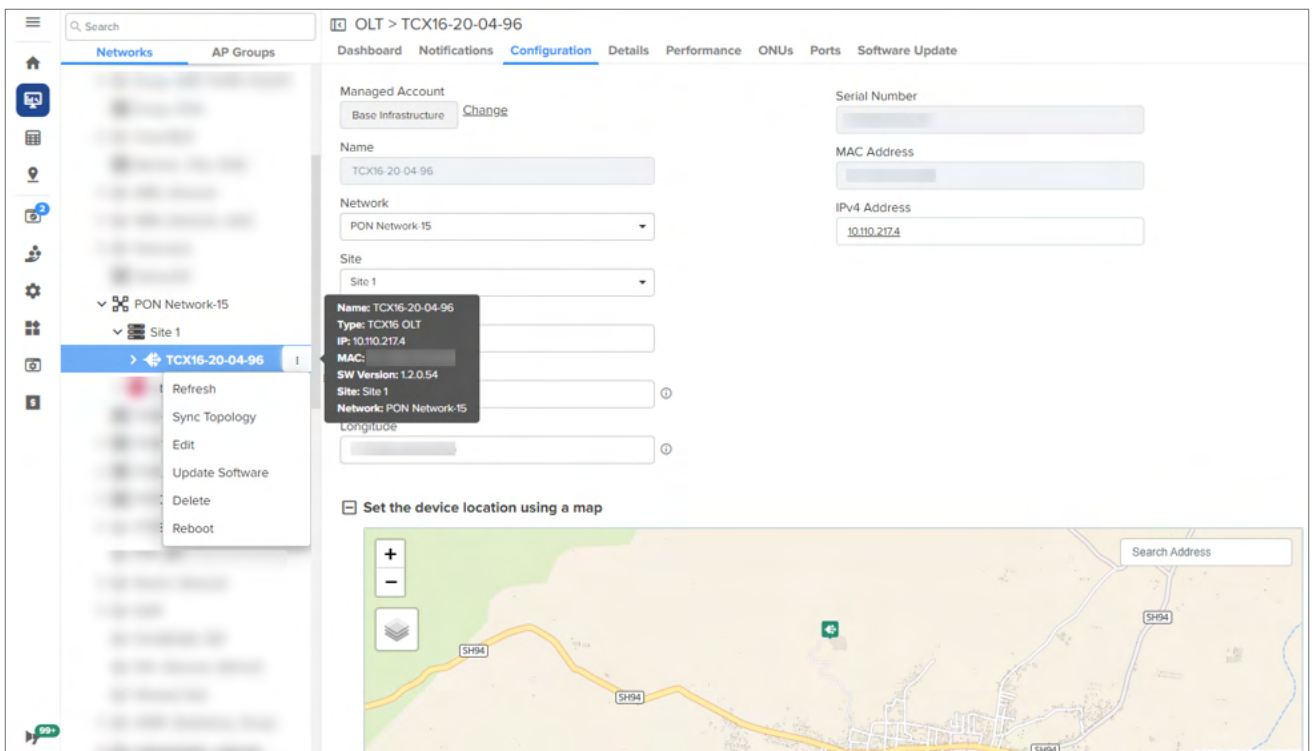

Parameter	Description
Severity	Severity level of the alarm. This parameter supports the following severity levels: <ul style="list-style-type: none"> <li>Critical</li> <li>Major</li> <li>Minor</li> </ul>
Source	Name of the OLT.
Mode	Type of the device. The following device types are supported: <ul style="list-style-type: none"> <li>OLT</li> <li>ONU</li> </ul>
Source MAC	MAC address of the OLT.
IPv4 address	IPv4 address of the OLT.

Parameter	Description
Name	Name of the ONU.
Message	A brief description of the alarm message.
Duration	Duration of the alarm.
Status	Status of the alarm. The following status values are supported: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>
Raised Time	Time when the alarm was raised.

## Configuration

Users can configure the OLT using the Configuration tab. To sync the configuration with the E2E network, from the tree menu, click the **Actions** (⚙️) icon corresponding to the OLT device and select **Sync Topology**

**Figure 240** Configuration

**Table 57** Parameters on the Configuration page

Parameter	Description
Managed Account	Name of the site where OLT is configured.
Name	Name of the OLT.
Network	Name of the network where OLT is configured.
Site	Name of the site.
Description	A brief description of the OLT.
Latitude	Latitude of the OLT.
Longitude	Longitude of the OLT.

Parameter	Description
Serial Number	Serial Number (MSN) of the OLT.
MAC Address	MAC Address of the OLT.
IPv4 Address	IPv4 Address of the OLT.

## Details

The Details page displays general configuration and runtime information of the OLT.

**Figure 241** Details

The screenshot shows the 'Details' page for OLT TCX08-20-09-94. The interface includes a search bar, navigation tabs (Networks, AP Groups), and a breadcrumb trail (OLT > TCX08-20-09-94). The main content area is divided into three sections: System, Software Update, and Network. The System section lists various parameters such as Device Name, Device Type, System Uptime, Session Time, Coordinates, Software Version, DA Version, Onboard Date, and Description. The Software Update section displays Active Software Version, Inactive Software Version, and a History table with columns for Date, Status, and Version. The Network section shows MAC Address, IP Address, Subnet Mask, Gateway, Primary DNS Server, and Secondary DNS Server.

**Table 58** Parameters on the Details page

Parameter	Description
System	
Device Name	Name of the device.
Device Type	Type of the device. This parameter supports the following device types: <ul style="list-style-type: none"> <li>• OLT</li> <li>• ONU</li> </ul>
System Uptime	Date and time configured for the device.
Session Time	Duration of the session.
Coordinates	Latitude and longitude.
Software Version	The current software version used.
DA Version	Version of the device agent (DA).
Onboard Date	Onboard date of the device.
Description	A brief user-defined description of the onboarded device.
Software Update	
Active Software Version	Version of the active software.
Inactive Software Version	Version of the inactive software.

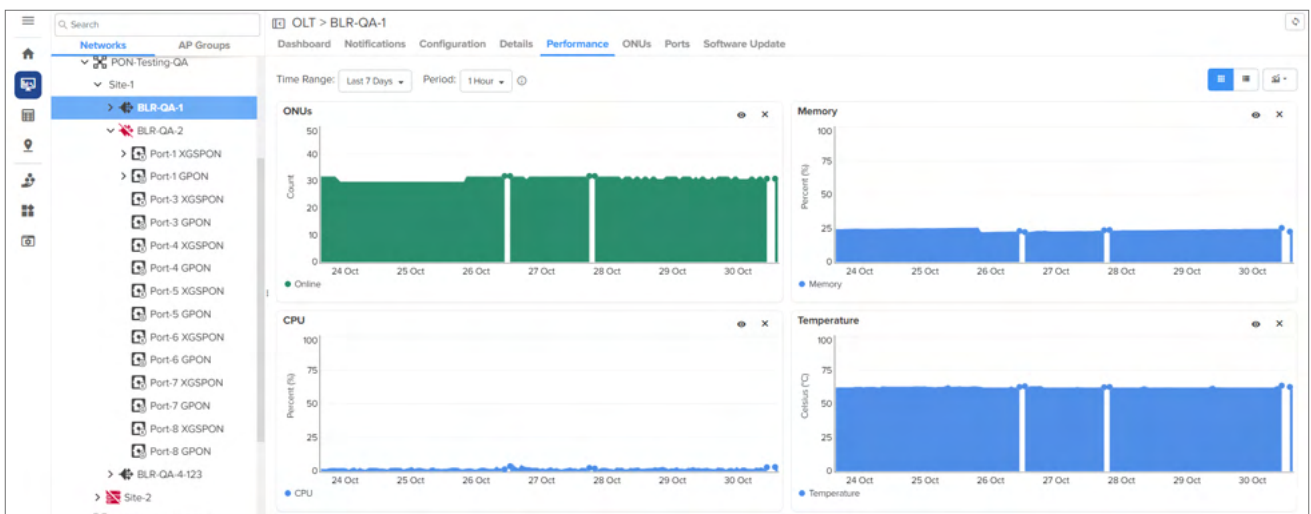

Parameter	Description
History	History of software version updates.
Network	
MAC Address	MAC Address of the device.
IP Address	IP Address of the device.
Subnet Mask	Subnet Mask of the device.
Gateway	Gateway address of the device.
Primary DNS Server	IP address of the primary DNS server.
Secondary DNS Server	IP address of the secondary DNS server.

## Performance

Displays the performance graphs for ONU, CPU, memory, and temperature of the OLT and ONU.

Figure 242 Performance

## ONU

Displays the number of ONUs connected to the OLT and their information.

Figure 243 ONU

Name	MAC Address	Status	Connection Time	ONU ID	OLT Rx Power
onu-05F5E189		Offline	3h 21m	68	0 dBm
onu-05F5E1C6		Offline	3h 20m	79	0 dBm
onu-05F5E1BB		Offline	3h 21m	50	0 dBm
onu-05F5E1E2		Offline	3h 20m	70	0 dBm
onu-05F5E1D8		Offline	3h 21m	56	0 dBm
onu-05F5E1C4		Offline	3h 20m	58	0 dBm
onu-05F5E1BD		Offline	3h 20m	94	0 dBm
onu-05F5E1BA		Offline	3h 22m	16	0 dBm
onu-05F5E194		Offline	3h 21m	38	0 dBm
onu-05F5E1B0		Offline	3h 21m	22	0 dBm

**Table 59** Parameters on the ONU page

Parameter	Description
Name	Name of the OLT.
MAC Address	MAC address of the OLT.
Status	Status of the OLT.
OLT Port	Port number of the OLT to which ONU is connected.
Connection Time	Time during which ONU is connected to OLT.
ONU ID	ID of the ONU.
OLT Rx Power	Receive power of the OLT.

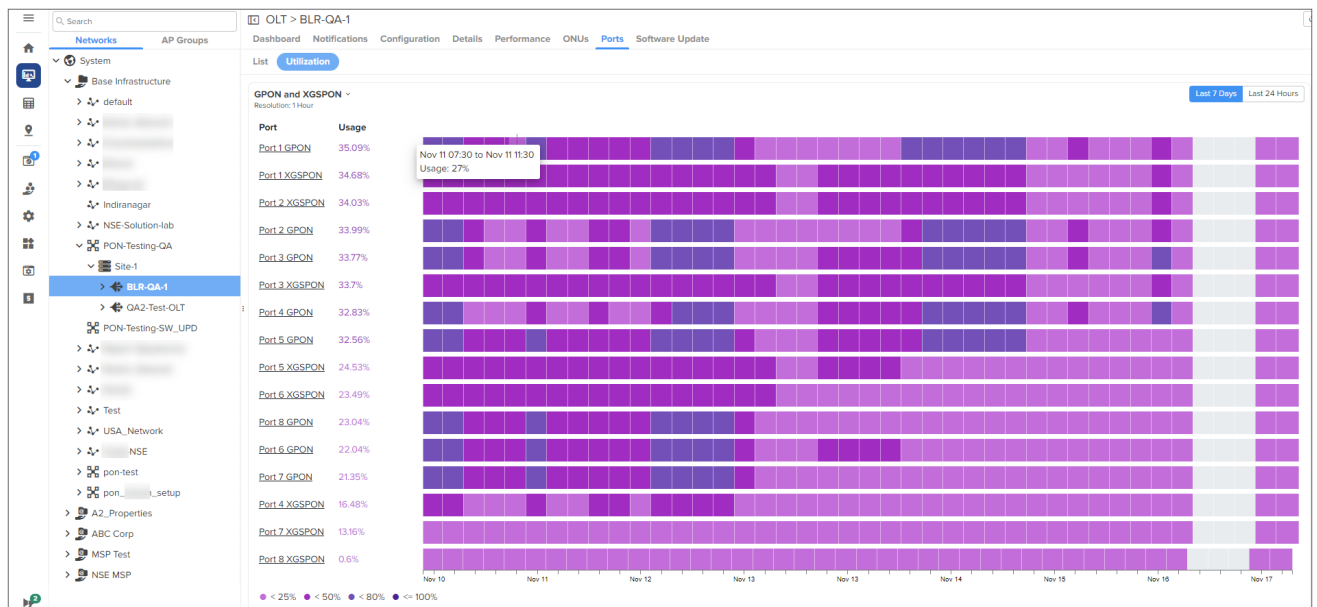

## Ports

Displays the port details. Fiber OLT has 8 ports and 16 ports.

**Figure 244** Ports

Port	Type	Status	Online ONUs	Temperature	Rx Power	PON Downlink Utilization
1	XGSPON	Up	0	46 °C	-30 dBm	-
1	GPON	Up	2	46 °C	-16.9 dBm	33 %
2	GPON	Up	0	35.1 °C	-30 dBm	-
4	XGSPON	Up	2	36.4 °C	-21 dBm	-
7	XGSPON	Up	2	38.2 °C	-20.3 dBm	-
7	GPON	Up	2	38.2 °C	-25.3 dBm	-

**Figure 245** Ports utilization

To filter selected ports, perform the following steps:

1. Click **Apply Filter(s)**, type the port name.
2. Select the type of the OLT.
3. Select the status of the OLT and click **Apply Filter(s)**.

**Table 60** Parameters on the Ports page

Parameter	Description
Port	Port number of the OLT.
Type	Type of the PON.
Status	Status of the ONU.
Online ONU	Number of ONUs online.
Temperature	Temperature of the ONU.
Rx Power	Receive power of the ONU.
PON Downlink Utilization	Utilization percentage of the PON Downlink.

## Software Update

Users can upgrade the OLT firmware using the **Software Update** page. To upgrade the software, perform the following steps:

1. Download the latest firmware from [Cambium Networks Support Site](#).
2. Select **OLT**.
3. Select the software version from the drop-down.
4. Click **Add Software Job** to upload the latest Firmware file.
5. Once the firmware file is uploaded, the software update job is added to the list of update jobs.
6. Click **View Update Jobs** to view the history of the software updates. This provides a record of all previous software update jobs.

# Inventory

The Inventory page displays a list of devices under the selected Node. It presents health and maintenance information in a tabular view that allows for sorting and filtering. When selected for a single device, it presents a detailed customized page of that device.

Navigate to the **Inventory** tab on the left pane.

**Figure 246** Inventory page at the System-level

Device	MAC Address	Managed Account	Type	IPv4 Address	IPv6 Address	Status	Serial Number	Description	Port Speed	Onboard Duration	Active S/W Version

## Note

The **Port Speed** column displays the port speed (in Mbps) for the Enterprise Wi-Fi devices only.

- At the System-level, you can enable the **Port Speed** column by selecting the **Port Speed** checkbox from the Column selector (☰).
- At the Site-level, the **Port Speed** column is displayed by default.

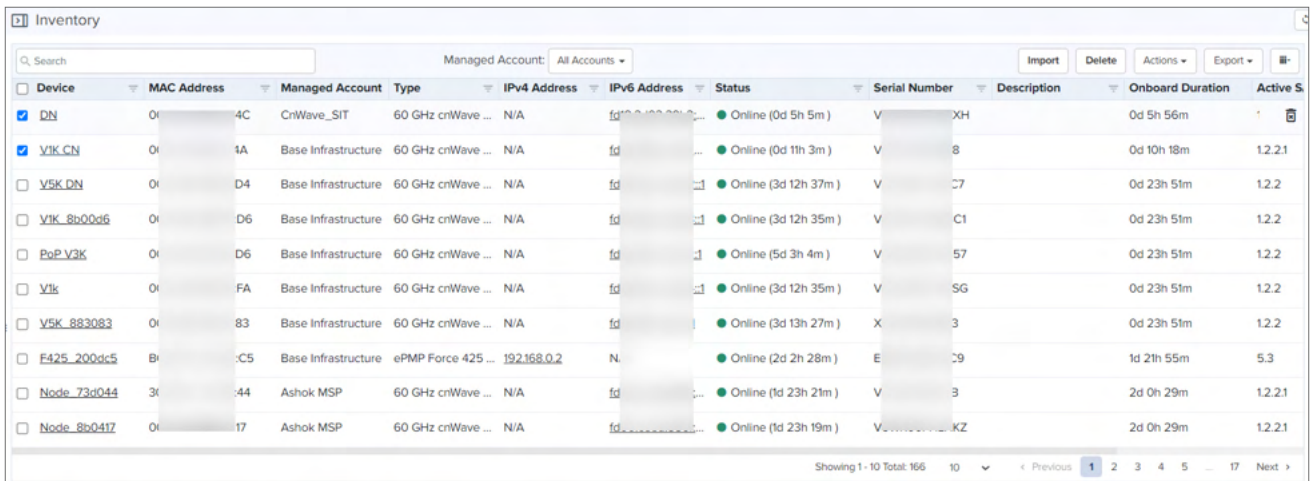

## Inventory Export

The inventory table can be exported in either the CSV or the PDF format. The values exported will match those in the selected table columns. You can customize the health and maintenance views to add or delete columns.

## Bulk Delete

The **Bulk Delete** option is available in the inventory page of System/MSP/Tower/Network/Site.

Figure 248 Bulk Delete

To delete devices using bulk delete, perform the following steps:

1. Navigate to the **Inventory** page of System/MSP/Network/Tower/Site.
2. Select one or multiple devices by selecting the corresponding checkboxes.
3. Click the **Delete** button.

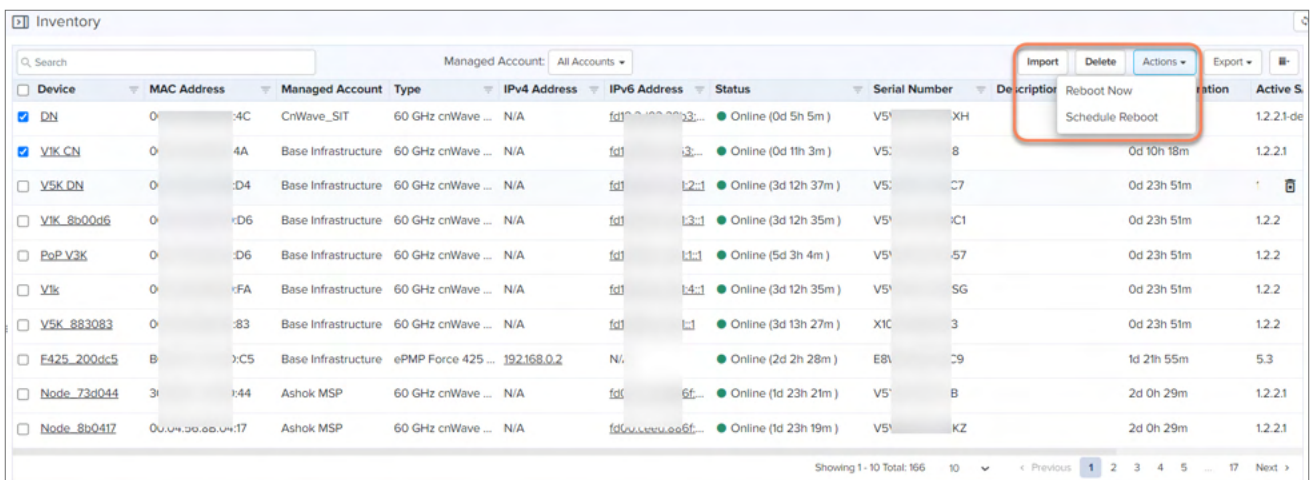

After deleting devices in bulk, you can view the status in the **Administration > Jobs > Actions** page.

For more information about deleting devices in bulk, see [Deleting Devices in Bulk](#).

## Bulk Reboot

The **Bulk Reboot** option is available on the inventory page of Tower/Network/Site. When the devices are rebooted using Bulk Reboot, all the Network/Tower/Site Dashboards, Graphs, Clients, Reports, and Mesh Peers will be updated accordingly.

Figure 249 Bulk Reboot

To reboot devices using bulk reboot, perform the following steps:

1. Navigate to **Inventory** page of Network/Tower/Site.
2. Select one or multiple devices.

3. Click **Actions** and choose **Reboot Now**.

## Schedule Reboot

Schedule a reboot of the device(s) by selecting **Schedule Reboot** from **Actions** drop-down.

To reboot devices using schedule reboot, perform the following steps:

1. Navigate to **Inventory** page of Network/Tower/Site.
2. Select one or multiple devices.
3. Click **Actions** and choose **Schedule Reboot**.
4. Enter **Date** and **Time**.
5. Click **Schedule**.

After creating a scheduled reboot job, you can view the status in the **Administration > Jobs > Actions** page.

ID	Type	Managed Account	Source	Occurrence	Created by	Created on	Completed on	Status

## Import Device Configuration

Import device(s) configuration is available from the inventory page at System/Network/Managed Account/ePMP or PMP AP device levels.

### Note

The Import Device configuration is supported only for the Access and Backhaul account and is applicable only on ePMP/PMP AP and SM devices.

The following parameters are supported for ePMP/PMP AP in the CSV file:

- Azimuth
- Beamwidth
- Elevation
- Height

- Latitude
- Longitude

The following parameters are supported for ePMP/PMP SM is in the CSV file:

- Latitude
- Longitude

**Figure 250** Import Device Configuration

## Sample Configuration File

MAC	LATITUDE	LONGITUDE	AZIMUTH	ELEVATION	BEAM WIDTH	HEIGHT	HEIGHT UNIT
Supports formats with ':', '-', 'no space', upper and lower case.	Signed degrees format (DDD.ddd).	Signed degrees format (DDD.ddd).	Degrees from North (0 to 360)	Degrees from horizon (-90 to 90)	Degrees from 1 to 360	Min=0, Max=5	Meters/Feet
	16	19	17	17	130	1500	Feet
	-90	119.0123	190	64	120	1000	feet
	79.0123	11	111	74	112	110	Meters
	-44	-12.78	124	67	177	190	meters

## Sample Configuration File (60 GHz cnWave)

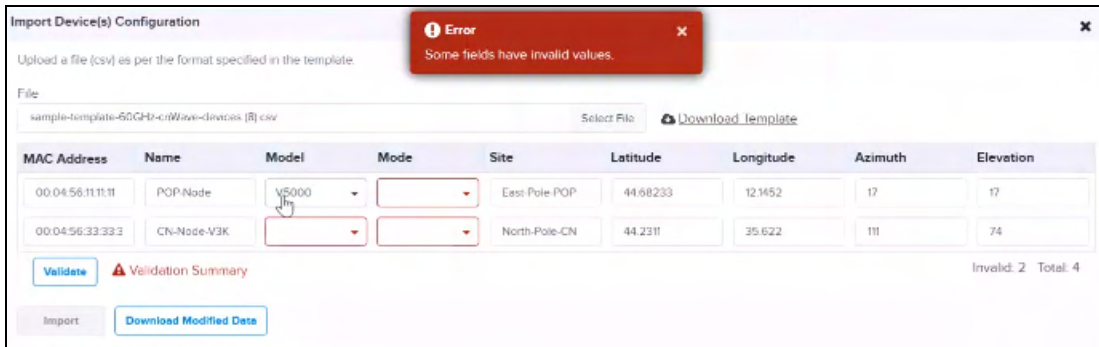

**Figure 251** Sample Configuration file: 60 GHz cnWave

MAC	Serial Number	Device Name	Model	Device Model	PoP	Node	Site	Latitude	Longitude	Azimuth	Elevation	Description
Supports formats with ':', '-', 'no space', upper and lower case.	Serial Number	Name of the POP-Node	V5000/V3000	DN/CN	Yes/No	Name of the Node	Signed degrees from North (0 to 360)	Signed degrees from horizon (-90 to 90)	Degrees from 1 to 360	Degrees from horizon (-90 to 90)		
		POP-Node	V5000	DN	Yes	East-Pole	44.68233	12.1452	17	17		
		DN-Node	V5000	DN	No	West-Pole	-12.5425	119.0123		190	64	
		CN-Node	V3000	CN	No	North-Pole	44.2311	35.622	111	74		
		CN-Node	V1000	CN	No	South-Pole	22.6533	-12.78	124	67		

While importing the file, it automatically validates the data as shown below:

If any invalid fields are found, an error message pops up:

## Uploading a Configuration File

To upload a configuration file (CSV) using the format specified in the sample template, perform the following steps:

1. Click **Download Sample Template** or prepare a sheet in CSV file format with necessary column details.
2. Upload a configuration file (CSV) using the format specified in the sample template.

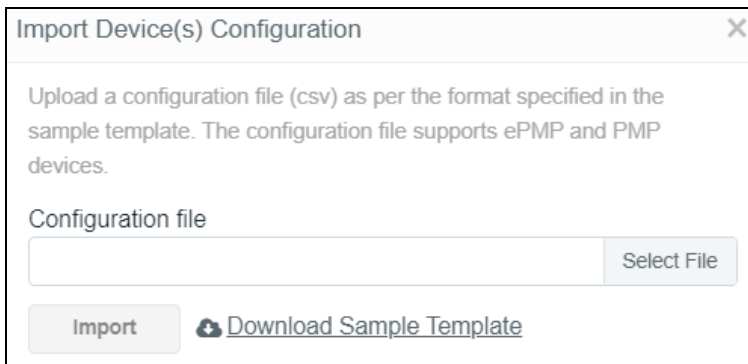

### Note

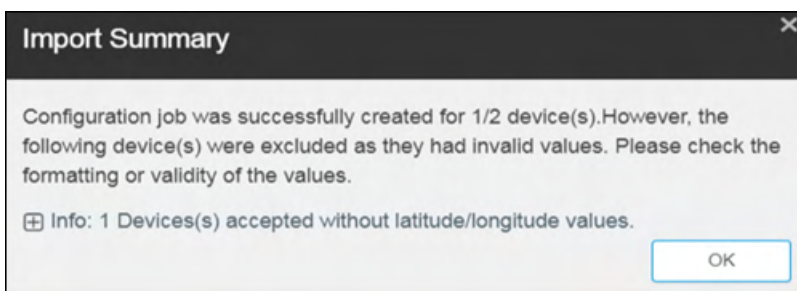

You must know the MAC address of the device to push the configuration.

3. Click **Import**.

**Figure 252** *Uploading Configuration file*

4. A configuration job will be created.

5. You can view the completed status of the configuration import in the configuration update page.

The following table provides details on different errors that might occur while importing a CSV file:

**Table 61** *Importing Error*

Error	Description
{Count of Devices} Device(s) with invalid MAC	<p>This error is displayed if the uploaded CSV file contains an invalid MAC Address.</p>
{Count of Devices} Device(s) skipped due to invalid data	<p>This error is displayed if the uploaded CSV file contains invalid Data or data not relevant for Latitude, Longitude, Azimuth, Height, and Elevation.</p>
Devices were not found for supplied MAC	<p>This error message is displayed if the devices were not found with correct MAC address in the CSV file.</p>

**Table 61** *Importing Error*

Error	Description
Address	
Info: 1 Device(s) accepted without latitude/longitude values	<p>This error is displayed when the latitude and longitude values are tried to push on to ePMP AP or PMP AP which are under a Tower.</p> 

## Reports

There are two types of reports: Data Reports and Graphical Reports. Data Reports generate a CSV file and are meant to be read by Excel, Power BI, or a custom application. Graphical Reports generate a PDF file meant for human consumption.

The **Scheduled** tab displays reports that have not run. This includes reports executed periodically and those meant to run a single time. The **Completed** tab lists all reports that have finished and are available for download.

**Scheduled Reports** include the Scheduled, Terminated, and Timeout status in the Status column. **Completed Reports** include the Completed and Failed status in the Status column. Data reports are displayed only in a tabular format while graphical reports include charts and graphs.

**Note**

You can schedule and view reports (data and graphical) at the following levels in cnMaestro:

- System
- Network—Only data reports are available
- Site
- MSP

To view all scheduled data and graphical reports, navigate to **Monitor and Manage > System/<Network-name>/<Site-name>/<MSP-name> > Reports X > Scheduled**.

System

Dashboard Notifications Configuration Statistics **Reports X** Software Update Applications X Clients Mesh Peers Assists X

### Note

- You can have 50 reports in the **Scheduled** tab and any number in the **Completed** tab. Only 50 reports can be generated in parallel in a cnMaestro account.
- The completed reports are available for download for 30 days in the Cloud and for seven days in On-Premises.
- While generating Alarm History, Events, Performance, Clients, and Guest Access reports, there is a delay of up to 20-30 minutes for the recent entries to be available in the report.

## Data Reports

Data Reports generate a CSV document that can be viewed in Excel, Power BI or other data analysis tools.

This section details how to schedule and generate different types of data reports in cnMaestro.

- [Device Report](#)
- [Performance Report](#)
- [Active Alarms Report](#)
- [Alarm History Report](#)

- [Events Report](#)
- [Clients Report](#)
- [Guest Access Login Events](#)

**Note**

cnMaestro supports 14 months of historical data for devices:

- cnPilot Home (R-Series)
- Enterprise devices (Enterprise Wi-Fi and cnMatrix)
- IIoT devices

cnMaestro supports 26 months of historical data for devices:

- Fixed Wireless

## Device Report

Device Reports are generated as CSV files and include all devices under the selected tree node.

To generate Device Reports, perform the following steps: **X**

1. Navigate to **Reports X > Scheduled** tab within System, MSP, Site, Network, or Tower nodes in the hierarchical tree.
2. Click **Add New Data Report**. The following window is displayed.

[Reports](#) > Add Report

Generate report for device parameters as a comma-separated value (CSV) file. All devices under the tree node selected will be included in the export. Select all parameters that should be included. [Learn More](#)

Name\*

Description

Recipients  Enter valid email and press enter (max 5 recipients)

Type\*

Device Type

Select data to include in report

**Basic**

<input checked="" type="checkbox"/> Country	<input checked="" type="checkbox"/> Description	<input checked="" type="checkbox"/> Device Location	<input checked="" type="checkbox"/> Device Name
<input checked="" type="checkbox"/> Device Type	<input checked="" type="checkbox"/> Hardware	<input checked="" type="checkbox"/> IPv4 Address	<input checked="" type="checkbox"/> IPv6 Address
<input checked="" type="checkbox"/> Last Update Message	<input checked="" type="checkbox"/> Last Update Status	<input checked="" type="checkbox"/> MAC Address	<input checked="" type="checkbox"/> Network
<input checked="" type="checkbox"/> Onboard Date	<input checked="" type="checkbox"/> Onboarding Status	<input checked="" type="checkbox"/> Product Name	<input checked="" type="checkbox"/> Serial Number

**Location**

GPS Coordinates

Schedule  Now  Daily  Weekly  Monthly (30 days)

Report generation may take several minutes, depending upon quantity of data.

3. Enter a **Name** and **Description** for the report.

4. Enter email addresses (maximum of 5) in the **Recipients** field to send reports.
5. Select the **Report Type** as **Devices**.
6. Select the **Device Type** such as cnMatrix, cnPilot Home, and cnRanger.
7. Select the data parameters to include in the report.
8. Select the **Schedule** such as Now, Daily, Weekly, or Monthly.
9. Click **Add**. The report is added to the **Scheduled Reports** page.

If **Device Type** is **All**, then **Basic** data export parameters are available, rather than parameters specific to a device type.

The device data parameters exported for the following devices are listed below:

- [60 GHz cnWave](#)
- [cnMatrix](#)
- [cnPilot Home \(R-Series\)](#)
- [cnRanger](#)
- [cnReach](#)
- [cnReach XIO](#)
- [cnVision](#)
- [cnWave 5G Fixed](#)
- [Enterprise Wi-Fi](#)
- [ePMP](#)
- [PMP](#)
- [PTP 650/670/700](#)
- [PTP 820/850](#)
- [RV22 Home Mesh](#)

If 60 GHz cnWave device is selected as **Device Type**, then the following parameter sections are available:

- Basic
- Ethernet
- GPS
- Mode (CN or DN)
- Radio

**Figure 253** Device Report: 60 GHz cnWave

- System
- Managed Account
- Network
- Tower
- Site
- AP Group

## Performance Report

The Performance Report generates device time-series performance data as a comma-separated value (CSV) file. All devices of selected type under the tree node will be included in the export.

**Note**

- You must select the parameters.
- This feature may generate a large file if many devices are selected.

To generate Performance reports, perform the following steps:

1. Navigate to **Report X > Scheduled** tab.
2. Click **Add New Data Report**.
3. Enter a **Name** and **Description** for the report.
4. Enter email addresses (maximum of 5) in the **Recipients** field to send reports.

5. Select **Type** as **Performance**.

6. Select the **Device Type**.

Reports > Add Report

Generate report for the "device time-based performance data" as a comma-separated value (CSV) file. All devices of selected type under the tree node will be included in the export. Select all parameters that should be included.  
Note: This feature may generate a large file if many devices are selected. [Learn More](#)

# RV22 Home Mesh Performance Report

Figure 285 Performance Report: RV22 Home Mesh

The screenshot shows a configuration form for a Performance Report. At the top, there is a 'Type\*' dropdown menu set to 'Performance'. Below it is a 'Device Type' dropdown menu set to 'RV22 Home Mesh'. A section titled 'Select data to include in report' contains a 'Basic' checkbox which is checked. Underneath, there are 16 individual checkboxes for various data points, all of which are checked: Avg Receive Rate, Avg Send Rate, Avg Usage, Device Mode, Device Name, Device Type, MAC, Max Receive Rate, Max Send Rate, Max Usage, Min Receive Rate, Min Send Rate, Min Usage, Network, No. of Clients, Site, Timestamp, Total Received Bytes, and Total Sent Bytes.

## Active Alarms Report

The Active Alarms Report will export the data for the active alarms at the report generation time. Active alarms for all devices under the tree node will be included in the export.

To generate the Active Alarms reports, perform the following steps:

1. Navigate to **Reports X > Scheduled** tab.
2. Enter a **Name** and **Description** for the report.
3. Enter email addresses (maximum of 5) in the **Recipients** field to send reports.
4. Select the **Report Type** as *Active Alarms*.
5. Select data parameters to include in the report.
6. Select the following options:
  - Schedule type (Now, Daily, Weekly, or Monthly)
7. Click **Add**. The report gets added to the Scheduled Reports page.

The screenshot shows the 'Reports > Add Report' form. At the top, it says 'Generate report for active alarms as a comma-separated value (CSV) file. Active alarms for all devices under the tree node will be included in the export. [Learn More](#)'. The form has several fields: 'Name\*' (empty text box), 'Description' (empty text box), 'Recipients' (text box with 'Type and press Enter' and a note 'Enter valid email and press enter (max 5 recipients)'), and 'Type\*' (dropdown menu set to 'Active Alarms'). Below these is a 'Basic' section with a checked checkbox and 12 individual checkboxes: Acknowledged By, Duration, IP Address, IPv6 Address, MAC, Message, Name, Raised Time, Severity, Source, Source Type, and Status. At the bottom, there is a 'Schedule' section with radio buttons for 'Now' (selected), 'Daily', 'Weekly', and 'Monthly (30 days)'. A note below says 'Report generation may take several minutes, depending upon quantity of data.' At the very bottom are 'Add' and 'Cancel' buttons.

## Alarm History Report

The Alarm History Report will generate data for all alarms that were active at any time within the time period. Alarms for all devices under the tree node selected will be included.

To generate the Alarms History reports, perform the following steps:

1. Navigate to **Reports X > Scheduled** tab.
2. Enter a **Name** and **Description** for the report.
3. Enter email addresses (maximum of 5) in the **Recipients** field to send reports.
4. Select the **Report Type** as Alarms History.
5. Select data parameters to include in the report.
6. Select the following options:
  - Schedule type (Now, Daily, Weekly, or Monthly)
  - Time Range (Last Day, Last Week, Last Month, Custom Time Range)
7. Click **Add** . The report gets added to the **Scheduled Reports** page.
8. Click **View Jobs** to view the reports.

## Events Report

The Events Report is generated for the events raised during the time period. Events for devices under the tree node will be included in the export.

To generate the Events reports, perform the following steps:

1. Navigate to **Reports X > Scheduled** tab.
2. Enter a **Name** and **Description** for the report.
3. Enter email addresses (maximum of 5) in the **Recipients** field to send reports.

4. Select the **Report Type** as Events.
5. Select data parameters to include in the report.
6. Select the following options:
  - Schedule type (Now, Daily, Weekly, or Monthly)
  - Time Range (Last Day, Last Week, Last Month, Custom Time Range)
7. Click **Add**. The report gets added to the **Scheduled Reports** page.

## Clients Report

The clients report generates data for Wi-Fi clients.

### Note

Client Data is available for the last day, last 24 hours, and last week.

To generate the clients reports, perform the following steps:

1. Navigate to **Reports X > Scheduled** tab.
2. Click **Add New Data Report**.  
The Add Report page appears.
3. Enter a **Name** and **Description** for the report.
4. Enter email addresses (maximum of 5) in the **Recipients** field to send reports.
5. Select the **Report Type** as Clients.
6. Select data parameters to include in the report.
7. Select the following options:
  - Schedule type (Now, Daily, or Weekly)
  - Time Range (Last Day, Last Week, or Custom Range)

- Click **Add**. The report is saved and listed in the **Scheduled Reports** page.

## Guest Access Login Events

The Guest Access Login Events represent Wi-Fi Guest Access Logins.

**Note**

Guest access report can be generated only at system level.

To generate the Guest Access Login Events report, perform the following steps:

- Navigate to **Report X > Scheduled** tab.
- Enter a **Name** and **Description** for the report.
- Enter email addresses (maximum of 5) in the **Recipients** field to send reports.
- Select the **Report Type** as Guest Access Login Events.
- Select the **Managed Account**, if applicable.
- Select the **Guest Access Portal**, if applicable.
- Select data parameters to include in the report.
- Select the following options:

- Schedule type (Now, Daily, or Weekly)
- Time Range (Last Day, Last Week).

9. Click **Add**. The report gets added to the **Scheduled Reports** page.

A scheduled report job displays the following **Action** buttons:

- **Edit:** Visible only for **Active Jobs** which have not yet run. You can reschedule a job with this option.
- **Terminate:** Stop the **Active Jobs**.
- **Show History:** Display the detailed status of the generated reports and the file transfer status.
- **Delete:** Delete **Active** and **Completed Jobs**.
- **Instant Download:** Download the latest report without checking the **Show History**.

## Graphical Reports

The data reports contain a lot of data that need to be represented graphically so that you can quickly summarize and get a better visualization. In such cases, you can use the Graphical Reports. Graphical Reports can be created by first building a template of the report you want to view, optionally with your own branding such as your logo and brand name. Then, apply the template at a level in the hierarchical tree in cnMaestro such managed service, system, or site. Each graphical report can consist of multiple pages called widgets. The following widgets are available with applicable type of graphs and charts based on context. Each widget has both a graphical and tabular representation of the data. The output is a PDF file.

[Figure 288](#) lists the Graphical Reports widgets available in cnMaestro and the version they were introduced in.

**Figure 288** List of Graphical Reports widgets available

Name of Widget	Version Introduced
<b>Analytics</b>	
Analytics: Top APs Reporting Client Disconnections—Top APs reporting client disconnections	4.1.0
Analytics: Top Client Connection Failures—Top client connection failure types by number of failures	4.1.0
<b>Applications</b>	
Top Access Points by Traffic Usage—Top APs by traffic usage	5.1.0
<b>Clients</b>	
6E Clients by Radio—Comparison between 6E Clients on 6 GHz radios and other radios	4.1.0
Client Capability Trend—Count of clients based on their Wi-Fi capabilities over time	4.1.0
Client Count by Band—Client count by band	4.1.0
Client Count by Manufacturers—Top manufacturers by number of clients	4.1.0
Client Count over Time—Connected clients by band over time	4.1.0
Client Traffic over Time—Client uplink and downlink speeds over time	4.1.0
Peak and Unique Clients—Total unique clients and peak time number of unique clients	4.1.0
Top Applications by Usage—Top applications by data usage	4.1.0
Top Access Points by Unique Clients—Top APs by unique clients	4.1.0
Top Category by Usage—Top applications category by data usage	4.1.0
Client Count by OS—Top client types by number of clients	5.1.0
Top Application Category by Client Count—Top application category by number of unique clients	5.1.0
Top Applications by Client Count—Top applications by number of clients	5.1.0
Top Client Types by Traffic Usage—Top client types by traffic usage	5.1.0

Name of Widget	Version Introduced
Top Sites by Client Count—Top sites by number of clients	5.1.0
Top Sites by Traffic Usage—Top sites by traffic usage	5.1.0
Top SSIDs by Client Count—Top SSIDs by number of clients	5.1.0
Top SSIDs by Traffic Usage—Top SSIDs by traffic usage	5.1.0
Top Clients by Traffic Usage—Top clients by traffic usage	5.1.0
Top Managed Accounts by Traffic Usage—Top managed accounts by traffic usage	5.1.0

The standard process for graphical report generation includes the following:

1. Create a template using the widgets listed above.
2. Select a level of the hierarchy on which to apply the template.
3. Schedule the report to either execute one-time or periodically.

**Note**

- Graphical reports are only supported for Wi-Fi APs and clients, and they can only be applied at the Managed Service, System, and Site levels.
- If there is no data for the specific period, then a blank page is displayed in the PDF.
- The title page of the PDF displays the date and time zone of the user who scheduled the report.

The **Scheduled** tab presents reports pending execution, and the **Completed** tab provides access to reports that have finished running. The already generated reports are listed as **Completed Reports** (includes Success and Failed status in the status column) and those that are not yet generated but scheduled for a future time are listed as **Scheduled reports** (includes and Future and Terminated status in the status column).

Refer to the following topics to create templates and schedule reports:

- [Create Graphical Report Templates](#)
- [Generate Reports Based on Templates](#)

## Create Graphical Report Templates

To create a graphical report template, complete the following steps:

1. Navigate to **Configuration > Graphical Report Template X** page.

Configuration > Graphical Report Template x

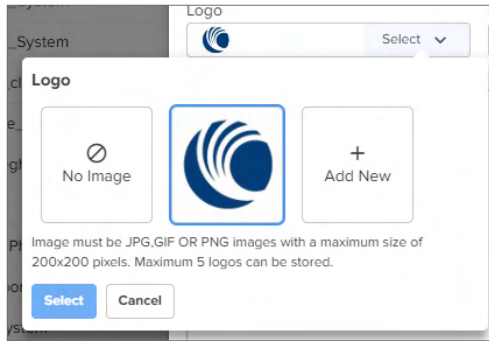

Displays the list of Graphical Report templates. [Learn More](#)

Apply Filter(s) Add New Delete

Name	Title	Description	Scope	Created by	
SITE	SITE		Site		
SYSTEM	SYETEM		System		
█_MSP_SYSTEM	sekhar_MSP		System		

Showing 1 - 3 Total: 3 10 < Previous **1** Next >

2. Click **Add New** and complete the following details:
  - **Name**—Enter a meaningful name for the template.
  - **Scope**—Select the scope of the report such as **System** or **Site** from the drop-down list.
  - **Title**—Enter the title that you want to see in the Title page of the generated PDF document.
  - **Description**—Optionally, describe the report in details.
3. Optionally, brand the report as per your requirement.
  - **Logo**—To select an existing logo, click the down arrow and then click **Select**. You can also add a new logo by clicking **Add New**.

- **Brand Image**—To select an existing brand image, click the down arrow, and then click **Select**. You can also add a new brand image by clicking **Add New**.
- **Themes**—Select a theme for the title page of the report as either **Vertical Lines**, **Brand Box**, or **Plain**.

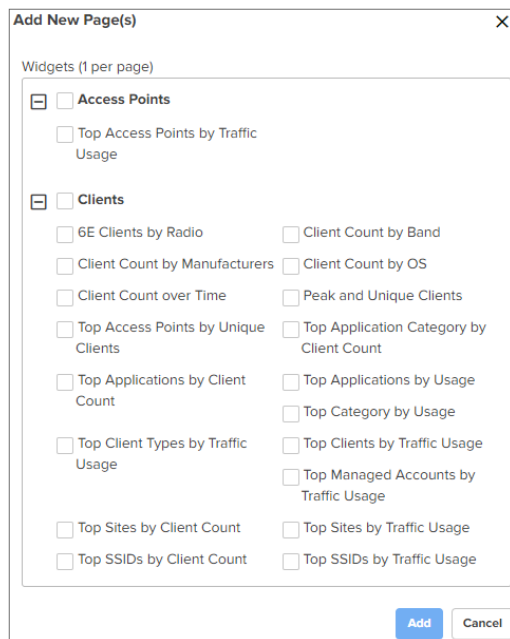

- **Theme Color**—Select the Theme Color by clicking the desired colored square.

4. Click **Add**.

The report template design page is displayed. You can add one or more widgets to the report, one per page.

5. Click **Add New** in the left pane. The following widgets are available:

**Add New Page(s)** X

Widgets (1 per page)

Report generation may take several minutes, depending upon quantity of data.

3. Complete the following details:

- **Name**—Enter a name for the report.
- **Description**—Enter a detailed description for the report.
- **Template**—Select the PDF template from the drop-down list. If there is no template listed, click **Add New** to create a new PDF template.
- **Recipients**—Add email addresses of the recipients or requesters to whom the report is applicable.
- **Schedule**—Select a schedule to generate the report from the following options:
  - **Now**—Generate the report immediately after you click **Add**.
  - **Daily**—Generate the report at the following interval:

- **Start Date**—Select the date.
  - **Start Time**—Select the time.
  - **End**—Stop generating this report:
    - **After**—Enter the number of instances. The maximum is 100 instances.
    - **By**—Select the date when the report generations should be completely stopped.
  - **Weekly**—Generates the report at the following interval.
  - **Monthly**—Generates the report at the following interval.
4. Click **Schedule**. Adds the report to the list of Scheduled Reports.

# Provisioning

The Provisioning chapter includes both Device Software Update and Configuration. It includes the following topics:

- [Software Update](#)
- [Fixed Wireless Configuration](#)
- [Wireless LAN Configuration](#)
- [Switch Groups Configuration](#)
- [60 GHz cnWave Configuration](#)
- [NSE 3000 Configuration](#)
- [Configuring Advanced Features](#)

## Software Update

The **Software Update** tab displays the device update details. This section includes the following:

- [Software Update Overview](#)
- [Create Software Update Job](#)
- [Software Update Jobs and Parameters](#)
- [Viewing Running Jobs in header](#)

## Software Update Overview

The Software Update feature allows users to deploy the latest software images to devices. Software updates can be started at any level in the Device Tree. Updates are created as Jobs and placed into the Jobs Queue. When the update is ready to run, it can be started. The process flow of Software Update is shown below:

**Figure 289** *Software Update Overview*

When a Job completes, it is placed in the completed Jobs table. Jobs are available for one week before they are deleted.

# Create Software Update Job

## Device Selection

Navigate the Device Tree to an appropriate level for the devices to be updated. For example, selecting a Fixed Wireless AP will filter the devices to include the AP and its children.

## Device Type

Software Updates are executed on one type of device at a time.

## Software Update Dashboard

Once the device type is chosen, the UI displays the most recent software release version for that device type. It also displays a breakdown of the different software versions currently installed on the devices.

### Note

Enterprise Wi-Fi shown below contains device types on the **Software Update** page:

- Enterprise Wi-Fi (E-Series)
- Enterprise Wi-Fi (XE/XV/X7-Series)
- Enterprise Wi-Fi (Xirrus-Series)

[View Update Jobs](#)

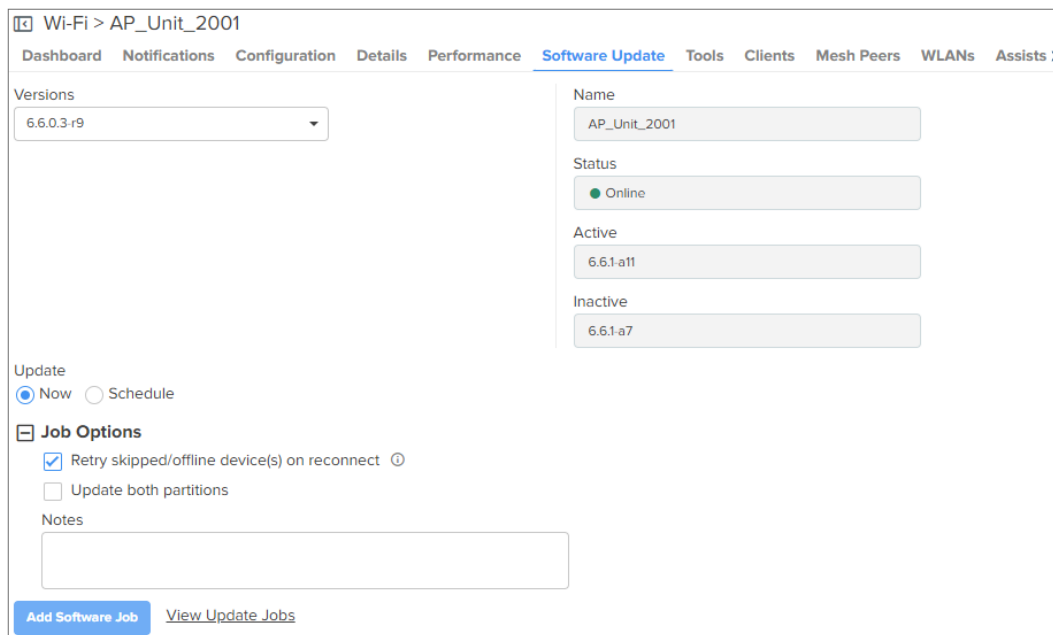

**Note**

- Update both partitions** option is available at System/Network/Site/Device levels. It is only available for the devices that support it.
- Perform sequential updates within a site** option is available at System/Network/Site level except the Device level.

If the **Update both partition** option is enabled/ disabled, the device level of the Software Update will be displayed as follows:

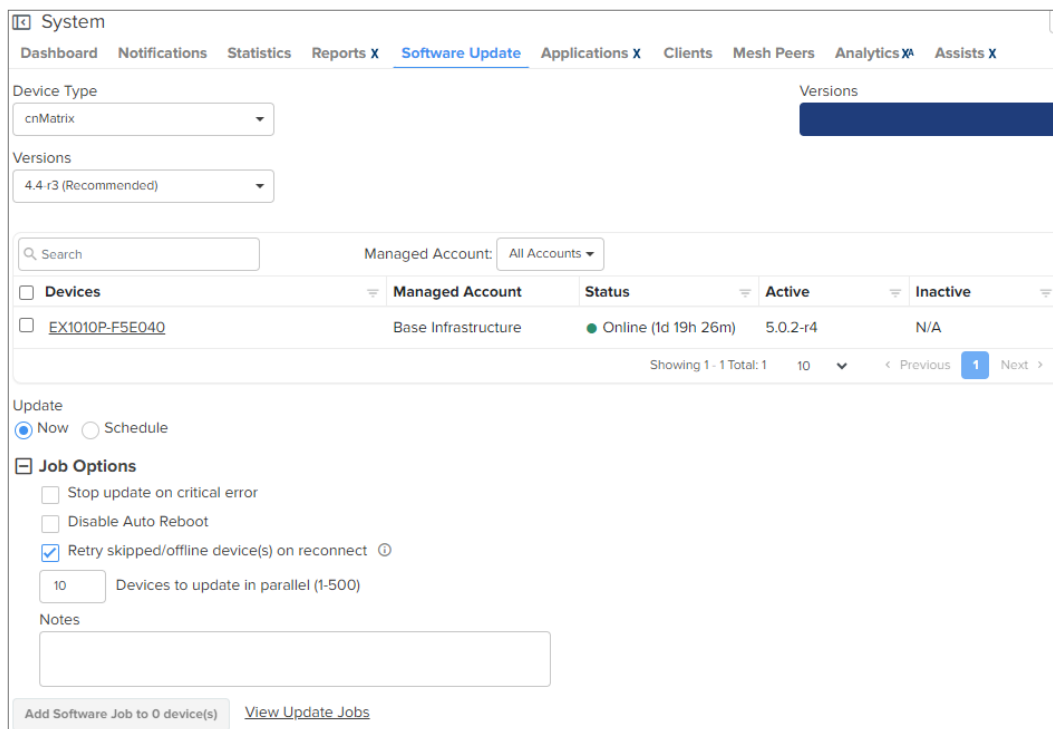

- Enable:** Tp
- selected target image will be upgraded in only active portion of the device.

**Figure 291** Software Update: Device level

If **Perform sequential updates within a site** is enabled, the image upgrade will happen only on one device at a time.

**Figure 292** Software Update: cnMatrix

**Disable Auto Reboot** option disables reboot after applying the new software image. The user must manually reboot the device to complete the software update.

Stop update on critical error

Retry skipped/offline device(s) on reconnect

10 Devices to update in parallel (1-500)

Notes

Add Software Job to 0 device(s) View Update Jobs

### Note

- Ensure that PTP 45700 devices are running the software version 04-02 or later before proceeding with the upgrade.
- Software update is supported on PTP devices from the following cnMaestro versions:
  - from cnMaestro 5.1.0 and later—PTP 78700 and PTP 50670 devices running software version 04-10 and later.
  - from cnMaestro 5.1.1 and later—PTP 48670 devices running software version 04-10 and later.

## Software Update

The software version on the devices can be automatically updated to the preferred version when the device first contacts cnMaestro.

Enable the automatic update of device software as follows:

1. Navigate to **Administration > Jobs > Software Update** page.
2. Select the **Manual** or **Auto** page for updating the device software feature.
3. Choose the software version depending on the device type.
4. Click **Start**.

**Figure 296 Manual update**

**Note**

Auto update can't be manually aborted.

You need to download the new image version released from the Support Site. For more details refer to Managing Device Software Images.

**Device Table**

Select the devices to upgrade in the Devices Table.

**Note**

- You can upgrade a device only when status is Up. If you try to upgrade a device when it is Down, you will receive a message the selected device is down.
- If the device is under the Auto Software Upgrade, the manual software update is not possible.

The following parameters are visible (though some are only available for certain device types).

**Table 62** *Parameters in Device Table*

Parameter	Description
Current Version	The version of the active software image running on the device.
Devices	The names of available devices in a system. The list is pre-filtered based upon the node selected in the Device Tree.
Selected SMs	If the AP is selected, the corresponding SMs will also be selected.
Status	The status of a particular device in a system. Devices that are not connected cannot be updated.

## Retry Software Update

The **Retry Software Update** option is available in every **Software Update** tab; it is enabled by default.

**Figure 298** *Retry Software Update*

The screenshot shows the 'Job Options' dialog box. Under the 'Update' section, the 'Now' radio button is selected. There are three checkboxes: 'Stop update on critical error' (unchecked), 'Disable Auto Reboot' (unchecked), and 'Retry skipped/offline device(s) on reconnect' (checked). Below these is a text input field containing '10' with the label 'Devices to update in parallel (1-500)'. At the bottom, there is a 'Notes' text area and two buttons: 'Add Software Job to 0 device(s)' and 'View Update Jobs'.

When you select **Schedule** to update, the following options are available as shown below:

**Figure 299** *Retry Software Update: Schedule*

The screenshot shows the 'Job Options' dialog box with 'Schedule' selected. It includes 'Start Date' (2019/11/20) and 'Start Time' (05:08 PM) fields. The 'Retry skipped/offline device(s) on reconnect' checkbox is checked. The 'Devices to update in parallel' is set to 10. The 'Notes' field and buttons are also visible.

If the Software Update Job was Skipped for a device because it was offline, an icon (🔄) appears next to the Active Software version of the device. This indicates the software update for the device will be done with the Target device version in the Job, whenever it reconnects to cnMaestro.

If the software update job was skipped while upgrading with the same version as the device active version, the icon will not be displayed, and the device will not update when it reconnects.

**Note**

The device which undergoes **Retry Software Update**, does not create a new Job.

## Options

### Stop Updates on Critical Error

If one of the updates fails, do not start any additional updates and instead pause the update job. All existing, concurrent updates will be allowed to proceed until completion. The administrator will be able to continue the update where it left off if desired.

## Sector Upgrade Order

The recommended update order for devices within a sector will be pre-configured according to the recommendations for the device. It can be changed if desired.

### Note

Device update occurs sector-by-sector. One sector needs to complete before a second sector is started.

## Parallel Upgrades

Specify how many device upgrades to perform in parallel to complete the upgrade faster. However if the job is configured to halt on an error, all concurrent sessions will still be allowed to complete.

## Upgrade Steps

To upgrade an ePMP (Sectors) device, perform the following steps:

1. Navigate to System/Network/Tower/Device level. and select the device.
2. To update the device, navigate to **Manage > Software Update**.
3. Select the following **ePMP (Sectors)** from the **Device Type** drop-down:
  - a. 60 GHz cnWave
  - b. cnMatrix
  - c. cnPilot Enterprise (ePMP Hotspot)
  - d. cnPilot Home (R-Series)
  - e. cnRanger
  - f. cnReach
  - g. cnVision
  - h. cnWave 5G Fixed
  - i. Enterprise Wi-Fi (E-Series)
  - j. Enterprise Wi-Fi (XV-Series)
  - k. ePMP (Sectors)
  - l. NSE
  - m. PMP (Sectors)
  - n. PTP 670/700
  - o. PTP 820/850
4. Select the software image to update from the **Version** drop-down.
5. Select checkbox for the devices to update.
6. Select **Job Options**.
7. Click **Add Software Job**.

## Software Update Jobs and Parameters

The Software Update Jobs table lists all currently running, queued, and completed jobs. The jobs can be triggered immediately, or they can be run later.

( **Administration > Jobs > Software Update** tab.)

The following table displays the list of parameters in the **Software Update Jobs** tab:

**Table 63** *Parameters in Software Update Jobs*

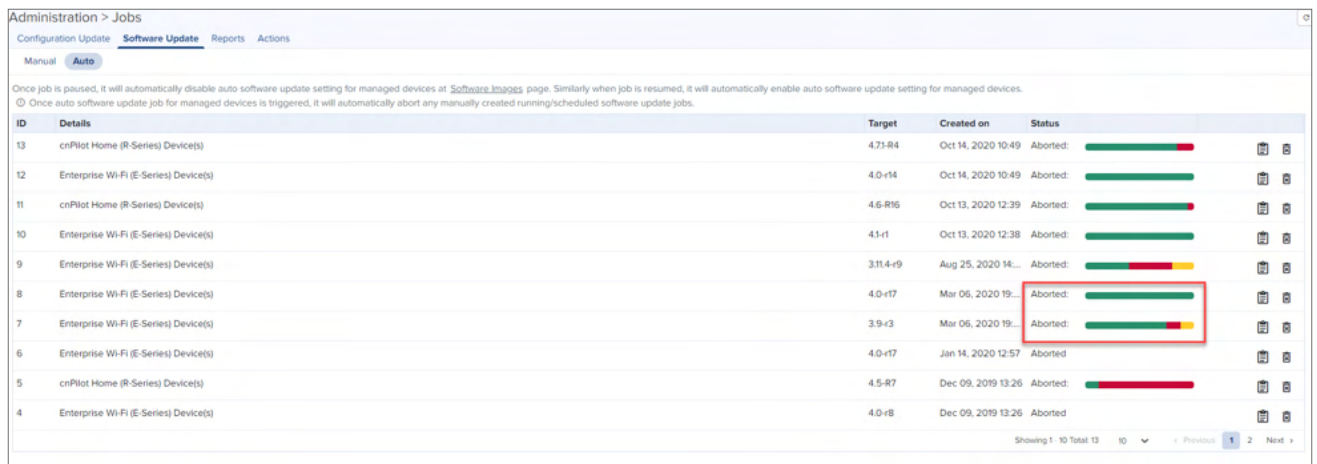

Parameter	Description
Action	Use the <b>Start</b> or <b>Delete</b> button to manage the upgrade process. After the upgrade has started, the <b>Pause</b> button will stop new upgrades from the beginning. If the upgrade process fails or the upgrade has been paused, you can restart the process by clicking the <b>Resume</b> button.
Created By	The user who has created this job.
Created On	Date and time the job is created.
Details	Count of devices and date and time the upgrade process is initiated.
ID	Identification number of the active job.
Image Type	Displays <b>Device</b> for Device Firmware Upgrade.
Occurrence	Displays <b>Now</b> and <b>Scheduled</b> depending upon the job options selected during Software Update Job.
Parallel	Number of devices to start in parallel.
Sector Priority	For cnVision, ePMP/PMP, the priority of AP/SM to start.
Status	Status of update.
Stop on Error	Stop the job on an error in any device update.
Target	Target software version to upgrade.
By selecting the <b>Show More</b> icon, you can view the following parameters:	
Device	Device for which the upgrade is initiated.
Message	The message that is displayed after the update.
Original Version	The current software image version of the device.
Result	The upgrade status of the device.
Status	Status of the device.

The user can filter the jobs based on the running status. The user can also filter the devices in a particular job based on the parameters mentioned in the above table.

## Abort Software Job

Abort operation will skip devices that are waiting for an update to begin. Devices already being updated may continue, but cnMaestro will stop tracking their progress. Aborting a Software Job puts the device into a "Completed" state that cannot be manually restarted by the user. The "pending" devices will not begin their updates.

Figure 300 Abort Software Job

ID	Details	Target	Created on	Status
13	cnPilot Home (R-Series) Device(s)	4.73-R4	Oct 14, 2020 10:49	Aborted: 
12	Enterprise Wi-Fi (E-Series) Device(s)	4.0-r14	Oct 14, 2020 10:49	Aborted: 
11	cnPilot Home (R-Series) Device(s)	4.6-R16	Oct 13, 2020 12:39	Aborted: 
10	Enterprise Wi-Fi (E-Series) Device(s)	4.1-r1	Oct 13, 2020 12:38	Aborted: 
9	Enterprise Wi-Fi (E-Series) Device(s)	3.11.4-r9	Aug 25, 2020 14:...	Aborted: 
8	Enterprise Wi-Fi (E-Series) Device(s)	4.0-r17	Mar 06, 2020 19:...	Aborted: 
7	Enterprise Wi-Fi (E-Series) Device(s)	3.9-r3	Mar 06, 2020 19:...	Aborted: 
6	Enterprise Wi-Fi (E-Series) Device(s)	4.0-r17	Jan 14, 2020 12:57	Aborted: 
5	cnPilot Home (R-Series) Device(s)	4.5-R7	Dec 09, 2019 13:26	Aborted: 
4	Enterprise Wi-Fi (E-Series) Device(s)	4.0-r8	Dec 09, 2019 13:26	Aborted: 

### Note

1. Devices which are already updated display as **Completed** with a message **Update Complete** along with the status as Completed.
2. Devices that are ongoing display as **Aborted** with a message **Manually Aborted** with the status as Aborted.
3. Devices that have not yet started display as **Skipped** with a message **Job was aborted** with the status as **Skipped**.
4. Software update jobs can be scheduled in parallel irrespective of other running jobs in cnMaestro X accounts.
5. Only **Configuration** or **Software Update Job** operation can be performed on the device, as the job locks the device.

## Viewing Running Jobs in header

Click the  icon in the top right corner of the UI. This navigates to the **Software Update** tab > **Jobs** page of the Software Update section. For more information, see [Software Update](#)

## Fixed Wireless Configuration

This chapter provides the following information:

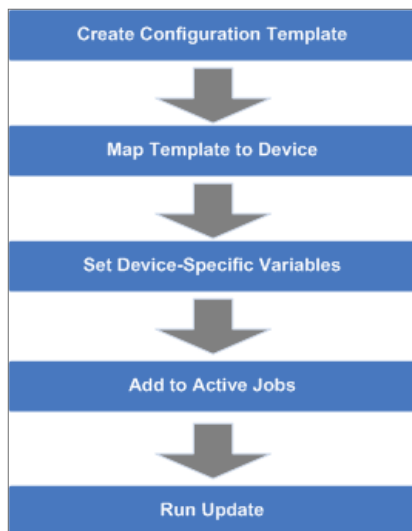

- [Overview](#)
- [Configuration Templates](#)
- [Configuration Variables](#)
- [Configuration Update at Onboarding](#)

### Overview

Template configuration is supported for ePMP, PMP, cnWave 5G Fixed devices. Templates are textual representations of device settings that contain a full or partial configuration. When a template is applied to a device, the only parameters changed are those in the template.

The process flow of the basic template configuration is shown below:

**Figure 301** Basic Template Configuration Flow

## Configuration Templates

Templates can be pushed to a device manually through a configuration job. This is accomplished in the configuration management page. Templates can also be applied prior to onboarding, in which they would be provisioned in the Onboarding Queue.

Some sample templates are listed below. The ellipses (...) represents additional content that has been excised from the example to limit the size of the text. Each device type has its own template syntax, which can be examined by viewing the device configuration.

### Sample ePMP Template

The ePMP template uses the exported ePMP configuration format, which is JSON-encoded.

**Figure 302** Sample ePMP Template

```
{
  "device_props": {
    "acsEnable": "0",
    "acsScanMinDwellTime": "200",
    "acsScanMaxDwellTime": "300",
    "acsControl": "0",
    "bcPriority": "0",
    "camMinSecretConnectionServerID": "",
    "centerFrequency": "5670",
    "dataVLANEnable": "0",
    "dataVLANVID": "",
    ...
    "snmpTrapTable": [
      {
        "snmpTrapEntryIP": "10.120.143.176",
        "snmpTrapEntryPort": "162"
      }
    ],
    ...
  }
}
```

## Configuration Variables

Administrators can embed variables into templates that will be replaced when the template is applied to a device. This allows one to leverage a shared, generic template, but to tailor it to individual devices when it is pushed. Template variables are added to a configuration file by replacing an existing parameter with a customer-defined string of the format `#{VARIABLE}`. An example configuration line with a single variable replacement is shown below:

**"networkLanIPAddr": #{IP ADDRESS}**

The above variable is named `IP_ADDRESS`. When the template is pushed to a device, this variable will be replaced with a value specific to the device. This value needs to be set for the device prior to the template application, else the configuration will not be pushed. Default values can also be specified for variables, as shown below:

**"networkLanIPAddr": #{IP ADDRESS="10.1.1.254"},**

The default value is "10.1.1.254". In this case, if the variable is not set for a device, the default value is used.

## Variable Usage

The Templates and Variables are merged to create the final configuration that is pushed to the device. The figure below explains the usage of variables for configuration:

**Figure 303** Variable Usage

## Macros

**Macros** can be used in templates similar to variables except that they automatically embed values provided by the device itself.

- %[ESN] will be replaced with the MAC address of the device
- %[MSN] will be replaced with the Serial Number of the device

## Variable Caching

Variables set for a particular device will be cached, so they can be reused later. This means the next time a template is applied that leverages a variable with the same name as used previously that value will be pre-populated with the previous value. It is therefore beneficial to define a uniform variable naming and usage scheme for variables across different templates.

## Device Type-Specific Configurations

The format and values of a configuration template are unique to the different device types. Templates that work with device type do not work with others, and all templates need to be mapped to a specific device type upon creation.

### Device Mode restrictions

Some devices, such as ePMP execute in AP and SM modes. The ePMP templates can be configured to only apply to devices that support a selected mode.

## Variable validation

All variables for a selected template must be mapped to a value in order to create a configuration job. If any variables are not mapped, an error will be generated. Variables with default settings do not cause an error if they are unset.

## Sample Templates

A number of sample templates are provided for each device type. These are not meant to be applied directly, but rather serve as an example of the configuration data format accepted by the device. Refer to the device documentation for complete information.

## Template file creation

The typical process for creating your own configuration templates is below:

1. On a test device configure the parameters to the devices. This can be done directly on the device UI .
2. Export the device configuration using cnMaestro.

- Navigate to **Configuration > Templates**, select the device in the left-hand tree and click the **View Device Configuration** link. This can also be done via the device GUI, typically in the Administration or Operations section where there will be an **Export** for configuration.
3. View the configuration file in a text editor like Notepad++ and search for the values entered in step 1. You can also search for the parameter name to find the correct lines.
  4. Copy and paste the relevant lines into a new file.
  5. Optionally replace values with replacement variable text. This will allow you to set the value per device.
  6. Once you have this partial template, it can be copied into the template creation text field and saved.

## Template

To create a configuration template:

1. Navigate to **Configuration > Templates** in the main menu.

Shared Settings > Templates

**Variables and Macros**

Settings entered are not validated or error-checked (However, dollar (\$), period (.) or space characters are not allowed in a variable name and it should not be more than 64 characters long), and they may overwrite configuration made in previous screens, so please use them with caution. You are responsible for ensuring the resulting AP Group is valid and safe to use.

Name

Description

Configuration Text

3. Choose a **Device Type**, **Name**, and **Description** for the template. For ePMP, PMP, cnWave 5G Fixed, cnReach, and cnMatrix templates, you should select a **Device Type** as well.
4. Either upload your template into the UI or paste the template text into the text area.

**Note**  
No default templates available for R-series. User needs to create a new template.

5. After clicking **Save**, the template will be available in the selection menu on the configuration and onboarding pages, as long as the device type and model match the device selected.
6. By selecting the Custom option under the Template type filter All Default templates will be hidden.

**Note**  
When you navigate to the Template page default template type filter will be custom. User needs to select **All** or **Default** to view other templates.

## BTS and CPE Configuration

To configure BTS, navigate to **Monitor and Manage > BTS > Configuration**.

The screenshot shows the configuration page for a Base Transceiver Station (BTS). The breadcrumb navigation is "BTS > BTS-...-lab". The page has tabs for "Dashboard", "Notifications", "Configuration", "Details", "CPEs", "Performance", "Software Update", "Tools", and "Assists X".

## Configuration Template for PTP 820/850

To create a configuration template of PTP 820/850 device, perform the following steps:

1. Navigate to **Configuration > Templates** in the main menu.

Configuration > Templates

Search [ ] Device Type: All Scope: All Accounts Template Type: Custom Add Template

Variables and Macros

Settings entered are not validated or error-checked (however, dollar (\$), period (.), space characters are not allowed in a variable name and it should not be more than 64 characters long), and they may overwrite configuration made in previous screens, so please use them with caution. You are responsible for ensuring the resulting AP Group is valid and safe to use.

Template Name	Mode	Scope	Description	Variable	Last Updated	Created By
MachFu_Template	GW	Shared	N/A		Wed Oct 28 2020 13:33	Seelikumar R

**Basic**

**NTP Configuration**

**Time Services**

**SNMP**

**Security**

Admin Status	Version	Server IP Address
No Data Available		

Create window appears.

2. Select **Admin Status** from drop-down.
3. Select **Version** from drop-down.
4. Enter **Server IP Address**.
5. Click **Save**.

NTP configuration is added to the table. You can perform the following actions for configurations added in the table.

1. Click edit icon to edit the configuration
2. Click delete icon to delete the configuration.

## Time Services

1. Enter the values for the following fields:
  - Offset from GMT
  - Daylight Saving Start Time
  - Daylight Saving End Time

Shared Settings > [Templates](#) > PTP 820/850

<p><b>Basic</b></p> <p><b>NTP Configuration</b> <input checked="" type="checkbox"/></p> <p><b>Time Services</b> <input checked="" type="checkbox"/></p> <p><b>SNMP</b> <input type="checkbox"/></p> <p><b>Security</b> <input type="checkbox"/></p>	<p><b>Offset from GMT</b></p> <p>UTC Offset Hours <input type="text" value="0"/></p> <p>UTC Offset Minutes <input type="text" value="0"/></p> <p><b>Daylight Saving Start Time</b></p> <p>Month <input type="text" value="January"/></p> <p>Day <input type="text" value="1"/></p> <p><b>Daylight Saving End Time</b></p> <p>Month <input type="text" value="January"/></p> <p>Day <input type="text" value="1"/></p> <p>DST offset (Hours) <input type="text" value="0"/></p> <p style="text-align: center;"><b>Save</b></p>
---	---

2. Click **Save**.

## SNMP

1. Enter the details for **V2 Users**, add **V3 Users** and **Trap Managers**, and select **Trap Version**.

The screenshot shows the 'Shared Settings > Templates > PTP 820/850' configuration page. On the left, a sidebar contains tabs for 'Basic', 'NTP Configuration', 'Time Services', 'SNMP', and 'Security'. The 'SNMP' tab is selected and has a blue toggle switch. The main content area is divided into sections: 'V2 Users' with a 'Read Community' text input; 'V3 Users' with an 'Add New' button and a table with columns 'Username', 'Authentication Algorithm', 'Encryption (Privacy) mode', 'Security mode', and 'Access mode'; 'Trap Managers' with an 'Add New' button and a table with columns 'Admin Status', 'IPv4 Address', 'Description', 'Port', 'Heartbeat', 'CLLI', and 'V3 User Name'; and 'Trap Version' with a dropdown menu set to 'v1'. A 'Save' button is at the bottom.

2. Click **Save**.

## Security

1. Select the values for **General Access Control**.
2. Select **Protocol Control**.

The screenshot shows the 'Shared Settings > Templates > PTP 820/850' configuration page with the 'Security' tab selected. The 'Security' toggle switch is turned on. The configuration is split into two sections: 'General Access Control' and 'Protocol Control'. Under 'General Access Control', there are three dropdown menus: 'Failure login attempts to block user (Minutes)' set to '1', 'Blocking Period (Minutes)' set to '10', and 'Unused Account Blocking Period (Days)' set to 'No Blocking'. Under 'Protocol Control', there is a text input for 'Session timeout (Minutes)' set to '10'. A 'Save' button is at the bottom.

3. Click **Save**.

## Configuration Update

### Device Selection

Navigate to the **Configuration Update** tab, and then navigate the Device Tree to the appropriate level for device selection. For example, selecting a Fixed Wireless AP will enable selection of the AP and all its SMs.

### Device Type

Configuration jobs are created for a single device type. The type includes the specific hardware (ePMP, PMP) as well as the mode of the device (cnVision, PMP or PTP mode for ePMP for example).

## Device Table

Select the devices to upgrade in the Devices Table. The following parameters are visible in the table:

**Table 64** *Device Table parameters*

Parameter	Description
Devices	The names of available devices in a system. The list is pre-filtered based upon the node selected in the Device Tree.
Network/Tower	The network and the tower on which the device is located.
Status	The status of a particular device in a system. Devices that are “Down” can not have images pushed to them.

### Note

- You can only push configuration to a device when its status is **Up**.
- The user should validate the configuration before pushing it to the device from cnMaestro.

## Options

### Stop all Configuration on a Critical Error

If one of the configuration updates fails, then do not start any additional updates and instead pause the update job. All existing, concurrent updates will be allowed to proceed until completion. The administrator will be able to continue the update where it left off.

### Parallel Upgrades

Define how many configuration updates to perform in parallel.

### Update Ordering

Allows you to specify update ordering within a Fixed Wireless sector. Options are SMs first and then AP or AP first and then SMs.

### Abort Configuration

Abort operation will skip devices that are waiting for update to begin. Devices already being updated may continue but cnMaestro will stop tracking their progress. Aborting a Configuration Job puts the device into a complete state that cannot be manually restarted by the user. The pending devices will not begin their updates.

**Figure 304** *Abort Configuration*

ID	Details	Managed Account	Occurrence	Target	Created by	Created on	Completed on	Parallel	Stop on Error	Sector Priority	Status

15	1 cnPilot e500 device(s)	Base Infrastructure	Now	DATA_AP_LIS	Sasikumar R	May 19, 2021 19:08	May 19, 2021 19:09	-	false	N/A	Aborted:
14	1 cnPilot e500 device(s)	Base Infrastructure	Now	DATA_AP_LIS	Sasikumar R	May 19, 2021 19:07	May 19, 2021 19:09	-	false	N/A	Aborted:

### Note

1. Devices which are already updated display as **Completed** with a message Update Complete along with the status as **Completed**.
2. Devices which are ongoing display as **Aborted** with a message Manually Aborted with the status as **Aborted**.
3. Devices which have not yet started display as **Skipped** with a message Job was Aborted with the status as **Skipped**.

## Configuration Update Steps

To update the configuration of an ePMP (Sectors) device, perform the following steps:

1. Navigate to **Manage > Configuration > Device Details** in the Main Menu.
2. Navigate to **System > Network** in the Device Tree. From the list of available networks, select a network in which the device belongs.
3. Select ePMP (Sectors) from the **Device Type** drop-down.
4. Select the configuration template to upgrade from the **Template** drop-down.
5. Select the device(s) to upgrade.
6. Click the gear icon to view or edit variables that are required for selected devices.
7. Click **Apply Configuration**.

### Note

- The Configuration Upgrade cannot proceed until all required variables (those without default parameters) are entered. If you attempt to create a configuration job without setting required variables, the gear icon will turn red for any devices not meeting this requirement.
- To save and download the existing Device Configuration as Template, click **View Device Configuration** link.

## Configuration Jobs

Navigate to **Administration > Jobs > Configuration Update** tab.

Jobs are presented with various Status values: Running, Queued, Skipped, and Completed. They can be triggered to execute immediately or run later. The list of parameters in the Jobs tab is shown below:

ID	Details	Managed Account	Occurrence	Target	Created by	Created on	Completed on	Parallel	Stop on Error	Sector Priority	Status	
4357	1 cnMatrix EX2010 device(s)	Base Infrastructure	Now	cnMatrix_Syslog...	Durga Prasad	May 15, 2021 12:47	May 15, 2021 12:47	-	false	N/A	Completed:	
4356	1 device(s)	Base Infrastructure	Now		Auto-Sync	May 15, 2021 12:47	May 15, 2021 12:47	15	false	N/A	Completed:	
4355	1 device(s)	Base Infrastructure	Now		Auto-Sync	May 15, 2021 12:46	May 15, 2021 12:46	15	false	N/A	Completed:	
4354	1 cnMatrix EX2010 device(s)	Base Infrastructure	Now	Default_Switch	Durga Prasad	May 15, 2021 12:46	May 15, 2021 12:46	-	false	N/A	Completed:	
4353	1 device(s)	Base Infrastructure	Now		Auto-Sync	May 14, 2021 16:10	May 14, 2021 16:11	15	false	N/A	Completed:	
4352	1 device(s)	Base Infrastructure	Now		Auto-Sync	May 14, 2021 15:52	May 14, 2021 15:52	15	false	N/A	Completed:	
4351	1 device(s)	Base Infrastructure	Now		Auto-Sync	May 14, 2021 15:51	May 14, 2021 15:51	15	false	N/A	Completed:	
4350	1 device(s)	Base Infrastructure	Now		Auto-Sync	May 14, 2021 15:50	May 14, 2021 15:51	15	false	N/A	Completed:	
4349	1 device(s)	Base Infrastructure	Now		Auto-Sync	May 14, 2021 15:47	May 14, 2021 15:47	15	false	N/A	Completed:	
4348	1 cnPilot e510 device(s)	Base Infrastructure	Now	SessionIssue	Raja Muniyandy	May 13, 2021 13:11	May 13, 2021 13:12	-	false	N/A	Completed:	

**Note**  
cnMaestro X account user can run any number of **Jobs** in parallel.

The following table displays the list of parameters in the **Jobs** tab:

**Table 65** Configuration Update parameters

Parameter	Description
Action	Use the <b>Start</b> or <b>Delete</b> button to manage the upgrade process. After the upgrade has started, the <b>Pause</b> button will stop new upgrades from the beginning. If the upgrade process fails or the upgrade has been paused, you can restart the process by clicking the <b>Resume</b> button.
Created By	The user who has created this job.
Created On	Date and time on which the job is created.
Details	Count of devices and date and time the upgrade process is initiated.
ID	Identification number of the active job.
Parallel	Number of devices to start in parallel.
Sector Priority	For ePMP/PMP, cnRanger, cnVision Hub/Client, the priority of AP/BBU/SM to start.
Status	Status of update.
Stop on Error	Stop the job, if any device in middle finds any error.
Target	Target software version to upgrade.
By selecting the <b>Show More</b> icon, you can view the following parameters:	
Device	Device for which the upgrade is initiated.
Message	The message displayed after the update.
Result	The upgrade status of the device.
Status	Status of the device.
Mode	SM or AP mode selected.
Network	Type of Network.
Tower	Name of the Tower.

## Configuration Update at Onboarding

Administrators can apply the configuration to devices during the onboarding process: Prior to approving the device in the Onboarding Queue, the configuration template and variables can be specified. These will then be pushed to the device during onboarding. For more details on onboarding, see [Device Onboarding](#).

## Wi-Fi Configuration

Wi-Fi configuration is handled through AP Groups or Templates, which Fixed Wireless devices, such as ePMP and PMP, exclusively use Templates. This section will focus exclusively on AP Groups.

This chapter provides details on the following sections:

- [Enterprise Wi-Fi AP](#)
- [Factory Reset](#)
- [Association ACL](#)

- [Access Control Policies](#)
- [Custom Applications](#)

## Enterprise Wi-Fi AP

There are four types of Wi-Fi hardware:

- Enterprise Wi-Fi (E-Series, XE/XV/X7-Series)
- cnPilot Enterprise APs
- cnPilot Home (cnPilot R-series devices)
- Enterprise Wi-Fi (Xirrus-Series)

These four hardware types map to the following AP group types:

- Enterprise Wi-Fi (E-Series, XE/XV/X7-Series)
- Enterprise Wi-Fi (Xirrus-Series)
- cnPilot Home (R-Series)
- RV22 Home Mesh

Multiple AP Group types are needed, because the features available across the groups are different.

### Note

Wi-Fi devices can alternately be configured using a template mechanism, in which a subset of configuration is pushed to the device manually through a user-defined template of parameters. See the section on Templates for more information. Template configuration and AP Group configuration cannot be used simultaneously.

## Configuring Enterprise Wi-Fi APs using Wi-Fi Profiles

Wi-Fi devices are configured by creating an AP Group, mapping it to shared WLANs, and assigning it to devices through the Configuration tab. Once assigned, the configuration is pushed manually or automatically (if **Auto Sync** is enabled).

### Note

Xirrus devices embed WLAN configuration directly into the AP Group Full Configuration tab and do not support separate WLAN profiles.

### Auto Synchronization

AP Groups can automatically synchronize device configuration whenever the AP Group or associated WLANs are updated. This is done by enabling **Auto Sync** in the AP Group **Configuration** page.

### Manual Synchronization

When a device is mapped to an AP Group without **Auto Sync** turned on, the device is placed in an **Unsynchronized** state until it is manually synchronized. Manual synchronization can be done as follows:

- Navigate to device **Configuration** page > **Sync Now** or
- Navigate to **Administration** > **Sync Configuration** > **Sync Configuration**. page.

## Create an AP Group

### Note

- This example demonstrates how to create an Enterprise Wi-Fi (E-Series, XE/XV/X7-Series) AP Group. A similar process can be followed for the cnPilot Home (R-Series) AP Group.
- The Enterprise Wi-Fi (Xirrus-Series) AP Group is different than the others. It embeds a full configuration template of CLI commands that needs to be updated manually. The Xirrus AP Group will support Auto Synchronization when the embedded template is changed, which makes it different than applying the configuration through the standalone Template mechanism.

To create an AP Group, perform the following steps:

1. Navigate to **Configuration > Wi-Fi Profiles > AP Groups** page.
2. Click **Add New** and select **Enterprise Wi-Fi (E-Series, XE/XV/X7-Series)** from the **Type** drop-down list.

### Note

- Certain special characters can be used when creating the AP Group and WLAN passwords, such as a-zA-Z\_-\*&%#@!<>.[ ]^~\$1234567890.
- By default, the password is not configured. User must configure the password for AP Groups.

You can also rename the password after creating one.

## Basic

In the **Basic** page, configure the following details such as:

1. Select **Type** from one of the following:
  - cnPilot Home (R-Series)
  - Enterprise Wi-Fi (E-Series, XE/XV/X7-Series)
  - Enterprise Wi-Fi (Xirrus-Series)
2. Enter the mandatory fields based on device type.
  - Name
  - Country
  - Description
  - WLAN
3. Click **Add WLAN** and select **WLAN** from the list.
4. Click **Save**.

The software defined radio creation and channel listing are populated based on the country-specific restrictions, device type, and release version.

## Software Defined Radios

The Software Defined Radios (SDR) allows you to configure radio parameters for XV3-8, XE3-4, and XE5-8 device models. By default these device models are configured for radio bands as shown in [Figure 310](#). The other radio bands for which the devices can be configured are as shown in [Table 66](#).

**Table 66** Supported Radio bands for Enterprise Wi-Fi Series (E-Series, XV-Series and XE-Series)

Models	Radios	Supported Radio Bands	Channel Specification		
			Channel width	Default Channel width	Supported channel list
XV3-8	Radio 1	2.4 GHz	20/40	20	1 to 13
	Radio 2	5 GHz (8x8 - single radio) or 5 GHz (Split 4x4 dual radio)	20 / 40 / 80	40	<ul style="list-style-type: none"> <li>• 100 to 165 in Split 4x4 dual radio</li> <li>• 36 to 165 in 8x8 - single radio</li> </ul>
	Radio 3		20 / 40 / 80	40	
XE3-4	Radio 1	2.4 GHz	20/40	20	1 to 13
	Radio 2	5 GHz	20 / 40 / 80	40	36 to 64
	Radio 3	5 GHz	20 / 40 / 80 / 160	40	100 to 165
		6 GHz		160	Any 6 GHz channel
XE3-4TN	Radio 1	2.4 GHz	20/40	20	1 to 13
	Radio 2	5 GHz	20 / 40 / 80	40	36 to 64
	Radio 3	5 GHz	20 / 40 / 80 / 160	40	100 to 165
		6 GHz		160	Any 6 GHz channel
XE5-8	Radio 1	2.4 GHz	20/40	20	1 to 13
	Radio 2	5 GHz or 6 GHz	20 / 40 / 80 / 160	20*/80**	Refer to <a href="#">Table 67</a> for Supported Channel list in 5 GHz and 6 GHz
	Radio 3				
	Radio 4	5 GHz (8x8 - single radio) or 5 GHz (Split 4x4 dual radio)	20 / 40 / 80	20	
	Radio 5		20 / 40 / 80		

\* 5 GHz \*\*6 GHz

**Note**

- Split 4x4 is applicable only for 8x8 spatial streams supported devices. (Supported device models are XV3-8 and XE5-8).
- Dual 5 GHz Radio (Supported only on XV3-8 and XE5-8 APs) splits 8x8 5 GHz radio into two 4x4 5 GHz radios.
- In XV3-8, radio 3 is available only in the SBS mode.
- In XE5-8, radio 5 is available only in the SBS mode.

**Table 67** Supported Channel list 5 GHz or 6 GHz in XE5-8

<b>Note:</b> *FCC SKU 6GHz UNII-5 or 6 (1 - 93) EU SKU UNII-5 low (1 - 61)								
**FCC SKU 6GHz UNII-7 or 8 (97 - 233) EU SKU UNII-5 High (65 - 93)								

**Note**

You can use `no channels-distribution` global configuration CLI command for all multi-radio platforms, such as XE3-4, XE3-4TN, and XE5-8 APs. When configured on the device, the predefined default channel list can be overridden.

To configure `no channels-distribution` using the AP groups in cnMaestro UI, complete the following steps:

1. Navigate to **Configuration > Wi-Fi Profiles > AP Groups** page.
2. Select the AP group that you want to update with the `no channels-distribution` CLI.
3. Click **User-Defined Overrides** tab.
4. Enter the following command in the box:

```
!  
no channels-distribution  
!
```

5. Click **Save**.

1. In the **Radio** tab, you can configure **Software Defined Radios** for the required **Model** as shown in [Table 66](#). Enterprise Wi-Fi (E-Series, XE/XV/X7-Series) devices can be configured with radio features for 2.4 GHz, 5 GHz, and 6 GHz radio bands.
2. Expand the **Basic** section, select either **Enable** or **Disable** option to enable or disable the radio.
3. Select **Auto** in the **Channel** drop-down.
4. In the **Candidates Channel** select **All**.
5. Select the parameter values from the drop-down for the following fields:
  - Channel Width
  - Transmit Power
  - Beacon Interval
  - Minimum Unicast Rate
  - Multicast Data Rate
  - Mode

**Figure 311** Radio page - Basic section

The screenshot shows the configuration page for a radio in the 'AP Groups > Add New' section. The left sidebar contains a navigation menu with 'Radio' selected. The main content area is titled 'Basic' and has three tabs: '2.4 GHz Band', '5 GHz Band', and '6 GHz Band'. The 'Basic' section is expanded, showing the following configuration options:

- Status:** Radio is set to **Enabled** (radio button selected).
- Channel:** Set to **Auto**. A note states: "Only 'Auto' value is allowed. Configure static channel under the 'Advanced Settings' section available on the Access Point level configuration page. [Learn more](#)".
- Candidate Channels:** Set to **All**. A note states: "Candidate channels is a list of channels on which AP can operate. List of channels depend on the band and country."
- Channel Width:** Set to **20**. A note states: "Operating width of the channel".
- Transmit Power:** Set to **Auto**. A note states: "Radio transmit power in dBm (4 to 30; subject to regulatory limit) ⓘ".
- Beacon Interval:** Set to **100**. A note states: "Beacon interval in ms (50 to 3500) ⓘ".
- Minimum Unicast Rate:** Set to **1**. A note states: "Configure the minimum unicast management rate (Mbps)".
- Multicast Data Rate:** Set to **Highest Basic**. A note states: "Data-rate to use for transmission of multicast/broadcast packets".
- Mode:** Set to **Default**. A note states: "Allow Clients to connect in 802.11 b/g/n mode".
- Airtime Fairness:**  Enable Airtime Fairness to improve performance of 11n and 11ac clients by throttling legacy clients.
- Short Guard Interval:**  Enable Short Guard interval to increase device throughput.

6. Expand the **Enhanced Roaming** section and select the **Enable** check box to enable enhanced roaming. Configure the threshold value (in dB) in the **Roam SNR Threshold** field.

AP Groups > Add New

Basic

Management

**Radio**

Network

Security

Access Control

Services

**Software Defined Radios**

2.4 GHz Band 5 GHz Band 6 GHz Band

**Basic**

**Enhanced Roaming**

Please enable enhanced roaming only in networks with sufficient signal strength throughout the coverage area, otherwise clients could face connectivity issues

Enable Enable active disconnection of clients with weak signal

Roam SNR Threshold

15 SNR below which clients will be forced to roam (1-100 dB)

**Note**

Enable **Enhanced Roaming** only in networks with sufficient signal strength throughout the coverage area, otherwise clients could face connectivity issues.

7. Expand the **Channel Scan** section and select one of the following options to enable the feature and configure corresponding parameters:

- Off Channel Scan (OCS)

**Channel Scan**

Off Channel Scan  Continuous Background Scan  None

Enable/Disable operation of this radio

OCS periodically goes away from current operating channel (home channel) to other channels and collects data about neighboring clients, AP and RF characteristics.

Dwell time

50 Configure Off Channel Scan dwell time in milliseconds (50-300)

- Continuous Background Scan (CBS)

**Channel Scan**

Off Channel Scan  Continuous Background Scan  None

Enable/Disable operation of this radio

Continuous background scan (CBS) reduces the dwell time, controls the channel switches and also monitors the voice data queues.

Rest Time

6 Rest Time — Interval between scans on different channels (5-15).

Wait Time

2

Configure wait time in minutes to wait after all channels are scanned and before starting a new scan (1-10)

Dwell Split Time

25 Configure dwell split time to spend on foreign channel

Dwell Rest Time

100 Configure time interval between scans on same channel (100-1000)

Channel Switch Announcement Use channel switch announcement as a part of channel change

- None—Select this option if no channel scan is needed.

8. Expand the **Auto-RF** section and configure any of the following modes:

- **Dynamic Channel**

AP Groups > Add New

Basic

Management

Radio

Network

Security

Access Control

Services

User-Defined Overrides

**Enhanced Roaming**

**Channel Scan**

**Auto-RF**

Auto-RF Dynamic Power option adjusts the radio transmit power based on the neighboring Cambium APs transmit power. Auto-RF Dynamic Channel changes the radio channel based on current operating channel RF conditions like channel utilization, interference, packet error rate, etc.

Mode Selection

Dynamic Channel
Dynamic Power

**Enable** Enable Auto-RF to adjust dynamic channel selection based on RF conditions

**Packet Error Rate** Enable channel change using unsuccessful packet transmissions by the AP

**Channel Utilization** Enable channel change using the channel efficiency

**Noise** Enable channel change with higher noise

Samples

Configure the minimum number of samples required to run the channel selection (1-20)

**Enable time range for Auto-RF.**  
Configure time range (24 hour format) at which Auto-RF needs to run everyday.

Channel Hold Time

Channel hold time specifies how much time AP needs to hold the channel <1-44640> mins for build '6.6.0.1' and onwards. Range <1-4320> applies for AP running build below '6.6.0.1'.

**Deprecated (Version 3.11.4 and 4.0)**

Channel Selection Mode

Channel selection done based on interference

Channel Utilization Threshold

Configure channel utilization threshold in %(20-40)

**Note**

The **Channel Hold Time** parameter specifies the time (in minutes) for which the AP will hold the channel.

The supported values vary as per the AP firmware version installed:

- 1-44640 minutes for APs running version 6.6.0.1 and later.
- 1-4320 minutes for APs running versions earlier than 6.6.0.1.

Default value: 1440 minutes

- **Dynamic Power**

AP Groups > Add New

- Basic
- Management
- Radio**
- Network
- Security
- Access Control
- Services
- User-Defined Overrides

**Auto-RF**

Auto-RF Dynamic Power option adjusts the radio transmit power based on the neighboring Cambium APs transmit power. Auto-RF Dynamic Channel changes the radio channel based on current operating channel RF conditions like channel utilization, interference, packet error rate, etc.

Mode Selection

**Dynamic Channel** | **Dynamic Power**

Enable Enable Dynamic Power management

By-Channel  By-Band Set dynamic power mode by-channel / by-band

Minimum Transmit Power

Minimum transmit power that the AP can assign to a radio when adjusting automatic cell sizes. (5-20) dBm

Minimum Neighbour Threshold

The Minimum number of neighbors to consider for power reduction by autotcell logic. (1-10)

Cellsize Overlap Threshold

Cell overlap that will be allowed when the AP is determining automatic cell sizes (0-100) %

9. Click **Save**.

## External Antennas

This feature allows users to customize the antenna models for each of the three radios in the XE3-4TN AP as shown in [Figure 312](#). This customization helps in achieving optimal wireless network performance customized for specific deployment scenarios.

**Figure 312** External Antennas for XE3-4TN APs

External Antennas

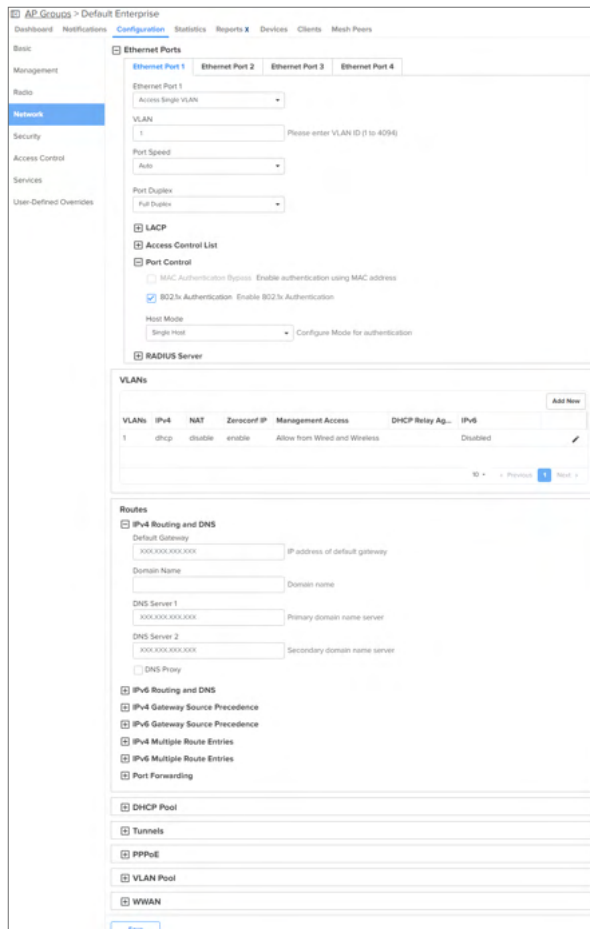

Model	Radio 1	Radio 2	Radio 3
XE3-4TN	Omnidirection...	Omnidirection...	Omnidirection...

Save

## Network

The **Network** page allows to configure **Ethernet Ports**, **VLANs**, **Routes** for IPv4 and IPv6, **DHCP Pool**, **Tunnels**, **PPPoE**, **VLAN Pool**, and **WWAN**.

Figure 313 Network: Enterprise Wi-Fi (E-Series, XE/XV/X7-Series)

## Configuring 802.1X port-based authentication

802.1X authentication on Ethernet ports enhance the network security of the AP.

The AP supports 802.1X port-based authentication with the following authentication modes:

- Single-host authentication—Only one client is allowed to access the network after successful 802.1X port-based authentication. After successful authentication, the port VLAN is assigned based on RADIUS assigned VLAN.
- Multi-host authentication—Authentication is enforced on all clients connecting to the wired port. After the first client authenticates, the port VLAN is assigned based on RADIUS assigned VLAN. Any further client connections to the port will be part of the initial Radius VLAN that was assigned.

### Note

- By default, the 802.1X port-based authentication feature is enabled in the single-host authentication mode.
- 802.1X port-based authentication does not support CoA messages.

802.1X port-based authentication also requires a RADIUS AAA server for authentication and accounting.

To configure 802.1X, complete the following steps:

1. Navigate to **Configuration > Network > Ethernet Ports**.
2. Expand the **Port Control** section and select the **802.1x Authentication** check box.

The **Host Mode** field is enabled.

3. Select from the following authentication modes in the **Host Mode** drop-down list.
  - Single Host
  - Multi Host
4. Expand the **RADIUS Server** section and configure the RADIUS server parameters for 802.1X authentication.

**Table 68** RADIUS Server parameters

Parameters	Description	Range	Default
Authentication Server	<p>Specifies the authentication server details, such as:</p> <ul style="list-style-type: none"> <li>• <b>Host</b>—IPv4 or IPv6 address or hostname of the server</li> <li>• <b>Secret</b>—Text string that is used to encrypt data in RADIUS packets shared between the AP and the sever. Format—Text string</li> <li>• <b>Port</b>—Port number of the authentication server. Default—1812</li> </ul> <p>A maximum of three RADIUS authentication servers can be configured.</p>	-	Disabled
Accounting Server	<p>Specifies the accounting server details, such as:</p> <ul style="list-style-type: none"> <li>• <b>Host</b>—IPv4 or IPv6 address or hostname of the server</li> <li>• <b>Secret</b>—Text string that is used to encrypt data in RADIUS packets shared between the AP and the sever. Format—Text string</li> <li>• <b>Port</b>—Port number of the accounting server. Default—1813</li> </ul> <p>A maximum of three RADIUS accounting servers can be configured.</p>	-	Disabled
Timeout	Time (in seconds) to wait for a response from the RADIUS server.	1–30	3
Attempts	Number of retry attempts for contacting the RADIUS server.	1–3	1
Accounting Mode	<p>Specifies the accounting mode to be used. The following modes are supported:</p> <ul style="list-style-type: none"> <li>• <b>Start-Stop</b>—Accounting packets are transmitted by APs to the AAA server when a wireless client is connected and when the client disconnects.</li> <li>• <b>Start-Interim-Stop</b>—Accounting packets are transmitted by APs to the AAA server when a wireless client connects, then at regular intervals (configured in the <b>Interim Update Interval</b> field) and also when the client disconnects.</li> <li>• <b>None</b>—Disables the accounting mode. This is the default mode.</li> </ul>	-	<b>None</b> (Disabled)
Server Pool Mode	Users can configure multiple Authorization and Accounting servers. Based on a number of wireless stations, the user can choose Failover mode.	-	Failover

Parameters	Description	Range	Default
	<ul style="list-style-type: none"> <li>• <b>Load Balance</b>—AP equally distributes the requests between the configured RADIUS servers,</li> <li>• <b>Failover</b>—AP selects the RADIUS server that is functional based on the order of configuration.</li> </ul>		
Interim update interval	Time (in seconds) to wait for sending RADIUS interim accounting update packets.  <b>Note:</b> This interval is applicable only when you select the <b>Start-Interim-Stop</b> option in the <b>Accounting Mode</b> parameter.	10–65535	1800
Dynamic Authorization	This option is required, where there is CoA request from AAA/RADIUS server.	-	Enabled

## IPv6 Support

IPv6 enables the next generation of large-scale IP networks by supporting addresses that are 128 bits long.

### Note

- In the current release, IPv6 functionality is supported only for cnPilot Enterprise devices.
- IPv6 functionality is supported on cnPilot from System Release 4.0.

## Configuring IPv6

To configure IPv6, perform the following:

1. Navigate to **Configuration Wi-Fi Profiles > AP Groups** tab.
2. Select **Network** tab and click **Edit VLAN**.

The screenshot shows the 'Add VLAN' configuration interface. Key elements include:
 

- VLAN ID:** 1
- IP Address:** DHCP (selected), with fields for Static IP and Netmask.
- NAT:** Unchecked, with a note about hidden IP addresses.
- Zeroconf IP:** Checked, with a note about local IP address support.
- DHCP Relay Agent:** Unchecked, with a field for the relay agent IP.
- DHCP Option 82:** Circuit ID and Remote ID both set to 'None'.
- Request Option All:** Checked, with a note about requesting all options.
- IPv6:** Expanded section with 'Mode' set to 'Auto Configuration' and 'Request Option All' checked.
- General:** Collapsed section with an 'Update' button at the bottom.

3. Click the (+) plus sign next to **IPv6** option.

4. Select **Mode** from drop-down list. By default, the IPv6 Mode is **Disabled**. The different IPv6 modes are **Static**, **Stateless DHCPv6**, **Stateful DHCPv6**, and **Auto Configuration**.

If **Static** is selected, provide the following details:

- **IPv6 Address:** Enter IPv6 address.
- **Prefix Length:** Enter IPv6 prefix. For example: 2001:1111:2222:3333::/64.

5. Enable **Request Option All** to use the IPv6 Gateway, DNS, DHCPv6 options received on this interface. By default the priority of **IPv6 Gateway Source Precedence** is **Static** and then **Auto-config/DHCPv6**.

To create a new static Route,

1. Navigate to **IPv6 Multiple Route Entries** section.
2. Click **Add New**.

3. Enter **Destination IP/Prefix** and **Gateway**.

4. Click **Save**.

To set the preference of IPv4 and IPv6:

1. Navigate to **Routes** tab.
2. Select the **IPv6 Preference** checkbox.

## Security

The **Security** page allows to configure **DoS Protection** and **Rogue AP**.

### Map WLANs to AP Groups

WLANs are added in the AP Group configuration. Ensure the WLANs are ordered correctly if Mesh mode is used. When a WLAN uses Mesh Client mode it must always be the first WLAN in the AP Group, and only one Mesh Client WLAN is allowed per AP Group.

The ordering when using Mesh mode is as follows:

1. Client (maximum of one Mesh Client is selected)
2. Base (maximum of two Mesh Base is selected)
3. Recovery (maximum of one Mesh Recovery is selected)
4. WLANs with Mesh Mode Off (total WLAN limit including Mesh WLANs)

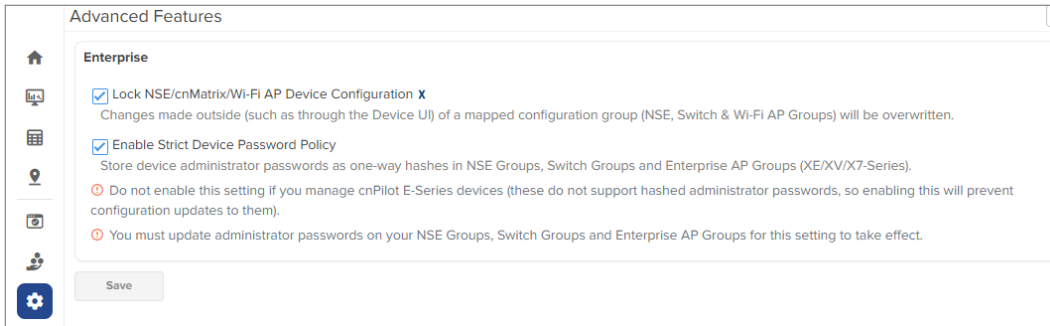

#### Note

Maximum of 16 WLAN policies are supported for E-Series and XV-Series devices. Only one WLAN is available for cnPilot Home devices.

### Lock device Configuration

Locking automatically restores the configuration of devices if it is changed outside of cnMaestro. When this feature is enabled, external configuration changes are automatically reverted by reapplying the AP Group configuration. The configuration is pushed only if the device is in Sync status.

To enable this feature, perform the following steps:

1. Navigate to **Configuration > Advanced Features** page.
2. Select the **Lock cnPilot/cnMatrix device Configuration** checkbox.
3. Click **Save**.

When a configuration change is made on the device using UI or CLI, cnMaestro detects the change and the device is marked **Not In Sync**. In this scenario, an **Auto-Sync** job is triggered to automatically revert the changes.

The **Auto-Sync** job can be viewed in **Administration > Jobs > Configuration Update** page.

ID	Details	Managed Account	Occurrence	Target	Created by	Created on	Completed on	Parallel	Stop on Error	Sector Priority	Status

## Retry Configure

When the user applies an AP Group to the device, and the Job is skipped because the device is Offline, the reason for the skip will be displayed as **Device was offline** in the **Jobs** page. When device comes up and connects to cnMaestro, an **Auto-Sync** job pushes the AP Group to the device. (It will not apply the AP Group if **Auto-Sync** is disabled in the AP Group).

### Note

The Config Update (**Auto-Sync**) will happen only when the **Auto-Sync** option is enabled in the AP Groups page. If the device was Skipped/Failed for any reason other than the **Device was offline**, the device will not be updated.

The default password **admin** of cnPilot R-Series should be changed before upgrading to the build 4.6-RX.

After upgrading to 4.6-RX, the default password **admin** is invalid and needs to be reset through the WAN.

**Note**

Default User Name: **admin** can be used after the upgrade.

## Apply AP Group to Device

A Configuration Job can be created as follows:

1. Navigate to **Monitor and Manage > System > Configuration**.

**Figure 314** System Configuration (Enterprise Wi-Fi E-Series, XE,/XV/X7-Series)

Device	Managed Account	Configuration Group	Status	Sync Status	Network	Tower/Site
cnPilot-test	Base Infrastructure	APG_000_Test	Offline	Not In Sync	default	O1_Enterprise Site
E500-B766E6-V3K-301a	Base Infrastructure	AA_CNM_SIT_Meeting_room	Online	In Sync	default	O1WLAN-Test

XE5-9-E00399	Base Infrastructure	AA_CNM_SIT_Meeting_room	Online	In Sync	default	O1_Mixed_Devices-new-ijjj

2. Select from one of the following options in the **Device Type** drop-down list:

- cnPilot Home (R-Series)
- cnPilot Enterprise (ePMP Hotspot)

- Enterprise Wi-Fi (E-Series, XE/XV/X7-Series)
  - Enterprise Wi-Fi (Xirrus-Series)
  - The list of enterprise Wi-Fi devices are listed.
3. Select the devices to which you want to apply the AP group.
  4. Click **Configure**.

The **System > Configuration** page is displayed.

**Figure 315** Configuration page: Enterprise Wi-Fi (E-Series, XE,/XV/X7-Series)

6. Click **Apply Configuration**.

## AP Group and WLAN Import/Export

The AP groups and WLANs are created for cnPilot Home and Enterprise Wi-Fi devices. The configurations that are created for each WLAN and AP group in a server can be exported and imported to a different server.

### Note

From release 5.1.0, **Built-In** profiles will not be created for MSP accounts and you can create your own profile.

## Export AP Groups and WLANs

To export AP Group or WLANs, perform the following steps:

1. Navigate to **Configuration > Wi-Fi Profiles** page.
2. Select **AP Group** or **WLAN** tab.
3. Click **Export**  icon in the row of the AP Group or WLANs to export.

### Note

- The AP Groups and WLANs should be exported separately as the associated WLANs are not included while exporting an AP Group.
- The AP Groups and WLANs will be exported with proper name and timestamp.

## Import AP Groups and WLANs

To import AP Group and WLANs, perform the following steps:

1. Navigate to **Configuration > Wi-Fi Profiles** page.
2. Select **AP Group** or **WLAN** tab.
3. Click **Import**.

Import AP Group window appears.

1. Enter the **Name**.
2. Select the **Scope** from drop-down.
3. Select the **Configuration file** in JSON format.
4. Click **Import**.

#### Note

- To import an AP Group, ensure all associated WLANs in the AP Group are already imported. If the WLAN associated with the AP Group is unavailable, an error message will be displayed during import.
- If the name is not provided for WLAN or AP Group while importing, it will take the name of the imported file.
- If the name provided for the AP Group/WLAN is already in use, an error message **The specified policy name already exists** will be displayed.

## Creating a WLAN

To create a WLAN, perform the following steps:

1. Navigate to **Configuration > Wi-Fi Profiles > WLAN** tab, or WLAN page in the Wireless LAN View.
2. In **WLAN** tab select **New**.

As with AP Groups, WLANs are separated into cnPilot Home and Enterprise Wi-Fi. You can configure WLAN, RADIUS, Guest Access, Usage Limits, Scheduled Access, and Access parameters with Enterprise Wi-Fi WLANs. With the cnPilot Home WLANs, you can configure SSID, Scheduled Access, and Access parameters.

#### Note

The special characters can be used to create AP Group and WLAN names (Eg: a-zA-Z\_-\*&%#@!<>.) [^~\$1234567890). The user can also rename them if required.

To create a WLAN, perform the following steps:

1. Navigate to **Configuration > Wi-Fi Profiles**.
2. Select **WLANs** tab and then click **Add**.
3. Enter **Type**, **Name**, and WLAN parameters.
4. Ensure **WPA2 PSK** is enabled in **Security** drop-down.

#### Note

To support ePSK with WPA3, you must select either the **WPA2/WPA3 Pre-shared Keys** or **WPA3**

**Pre-shared Keys** option in the **Security** drop-down list, and configure ePSK passphrase.

For information on client (WPA2 and WPA3-compliant) registration with ePSK passphrase, see [ePSK registration for WPA3 clients](#).

The screenshot shows the 'WLAN > Add New' configuration page. The 'Basic Settings' tab is active. The 'Security' dropdown is set to 'WPA2 Pre-Shared Keys'. The 'Passphrase' field is visible with a 'Show' button. The 'Band' section shows '2.4 GHz', '5 GHz', and '6 GHz' options, with '5 GHz' and '6 GHz' checked. The 'Client Isolation' dropdown is set to 'Disable'.

5. Click **Save**.

#### Note

In 6 GHz Band, **Open** option is not supported in **Security**.

### ePSK registration for WPA3 clients

For the ePSK feature, when you configure WPA3-WPA2 (mixed mode)-PSK or WPA3-PSK as the WLAN security, the clients connection in the WPA3 mode must go through an additional registration phase. This is different from the flow when you configure WPA2-PSK as the WLAN security, where users can authenticate by using only a passphrase.

When clients use WPA3-PSK security, Simultaneous Authentication of Equals (SAE) is the authentication mechanism. Here an extra authentication is added, which is more secure than WPA2. For WPA2-PSK clients, the passphrase is matched against a database to identify the user. However, this is not possible for WPA3-PSK clients because of the extra authentication in WPA3-SAE. When WPA2-PSK security is used, the Pairwise Master Key (PMK) is the same for every connection made by the client. This is due to the underlying weaknesses in WPA2-PSK, which make it easier to validate the passphrase. In contrast, when WPA3-PSK security is used, a new PMK is generated each time a client joins the network. Therefore, registration will help us to know the passphrase upfront when a client tries to connect. This mandates the users to register themselves with the ePSK passphrase to bind the client MAC with the passphrase to successfully connect to the Wi-Fi network.

For WPA3 clients to connect to the network using ePSK flow:

1. First connect to the WLAN with the WLAN passphrase.

A simple password is recommended to be configured, for example, `signmeup`, or any other appropriate passphrase.

2. Register themselves with the WPA3-ePSK unique passphrase.

After the MAC binding is complete, users can use the WPA3-ePSK unique passphrase for subsequent WLAN connections.

This section describes the following topics:

- [ePSK with WPA3 feature recommendations](#)
- [Scenarios while registering clients](#)
- [Configuring ePSK registration for WPA3 clients](#)
- [Registration flow screenshots](#)
- [Recommended best practices](#)

## ePSK with WPA3 feature recommendations

The following are the recommendations for this feature:

- This feature is supported only on cnMaestro Cloud 5.1.0 onwards.
- Supported AP firmware version is 6.6.1 or 7.0 and above.
- Security mode must be configured to either **WPA2/WPA3 Pre-shared Keys** or **WPA3 Pre-shared Keys**.
- APs must be managed from cnMaestro Cloud for client registration.
- The WLAN VLAN must be able to provide DHCP to clients and must have internet connectivity.
- This feature is not supported on Enterprise Wi-Fi 5 APs and Xirrus APs.

## Scenarios while registering clients

When a client connects to the WLAN, the following scenarios are possible:

- When a client connects for the first time using WPA2 security and ePSK passphrase (either on 2.4 GHz or 5 GHz radios), the AP performs an ePSK lookup. The following are the outcome:
  - If a match is found, the MAC binding is created with the respective ePSK key.  
AP shares this MAC binding information with the other APs in the network.
  - If a match is not found, the connection fails.
- If the WPA2 client is connected using the WLAN passphrase, client registration steps are performed to bind the passphrase to the client.
- When a client connects for the first time using WPA3 security, the following two possibilities may occur:
  1. If MAC binding is not available for the client on the AP, the following procedure must be completed for successful registration of clients:
    - a. User must authenticate using the configured WLAN passphrase, for example, `signmeup`.  
If the user tries to sign in with some other password other than the configured WLAN password (`signmeup`), the connection fails.
    - b. If the connection with the configured password (`signmeup`) is successful, the AP redirects the client to the registration page.  
This is the only traffic allowed for the client with this WLAN passphrase.
    - c. User must now enter the configured ePSK passphrase and register.  
The AP redirects the client to the registration page with instructions.
    - d. Users must select the checkbox after reading the instructions (provided for different clients, such as Android, Windows, and iOS), and then disconnect from the network.

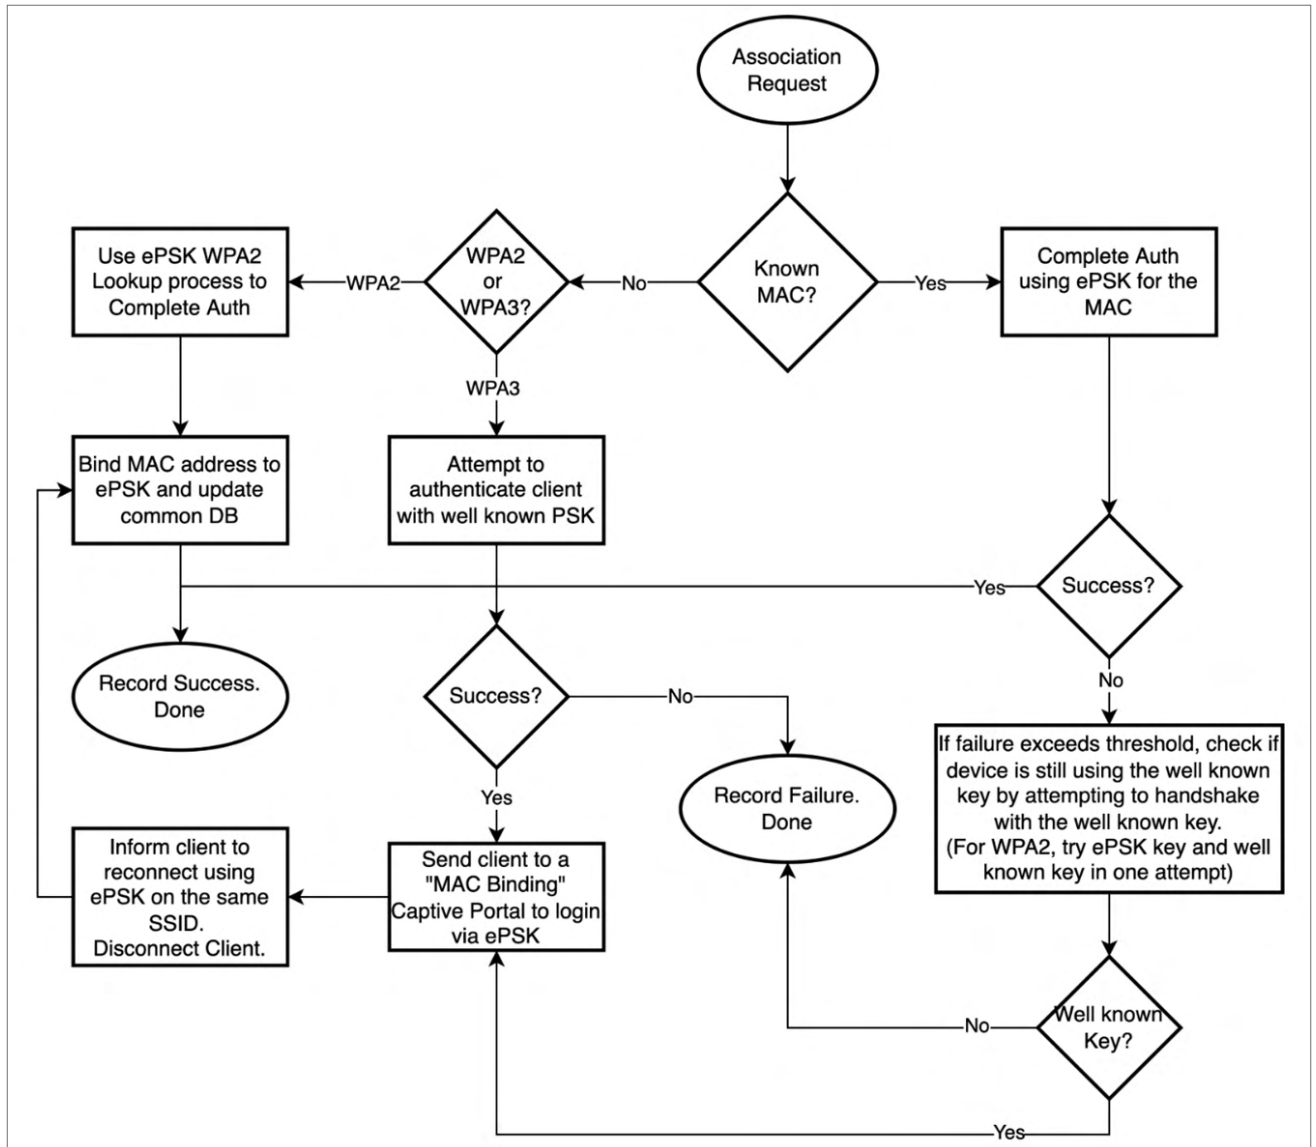

e. User must forget the WLAN/SSID and reconfigure using the ePSK passphrase.

User then reconnects with ePSK passphrase and gets authenticated.

For a more detailed information, see [Registration flow screenshots](#).

2. When MAC binding is available for the client on the AP, users can authenticate the client with the passphrase present in the MAC binding, that is the ePSK passphrase.

**Figure 318** Client registration flow for WPA3 clients

### Configuring ePSK registration for WPA3 clients

To enable WPA3-ePSK registration, you must create a WLAN profile and add ePSK entries in the ePSK grid.

To create WLAN profile and add ePSK entries, complete the following steps:

1. Navigate to **Configuration > Wi-Fi Profiles** page.
2. Select **WLANs** tab and click **Add**.
3. Select **Enterprise Wi-Fi** from the **Type** drop-down list and configure the WLAN parameters.

4. In the **Basic Settings** section, ensure either the **WPA2/WPA3 Pre-shared Keys** or **WPA3 Pre-shared Keys** option is selected in the **Security** drop-down list.
5. Enter the WLAN passphrase.
6. Click **Save**.
  - When ePSK passphrase is not configured in the **WLANs > ePSK** page, the following message is displayed explaining the registration flow.

**Figure 319** Message on the ePSK page when no ePSK entries are added

Passphrase\*  
wlanpassword [Hide](#) **x** WPA3 Pre-shared security passphrase or key (must contain 8 to 63 ASCII or 64 Hexadecimal digits)

Figure 321 When **WPA2/WPA3 Pre-shared Keys** option is selected

The screenshot shows the WLAN configuration interface. The 'Security' dropdown menu is highlighted with a red box and is set to 'WPA2/WPA3 Pre-Shared Keys'. Below it, a note states: 'Registration flow for ePSK is enabled for WPA3 clients. [Learn more](#) on how to enable WPA3 with ePSK.' The 'Passphrase' field contains 'wlanpassword' and is also highlighted with a red box.

7. Click the **ePSK** tab and add the passphrase.

After the ePSK passphrase is added, the following message is displayed explaining the registration flow.

Figure 322 Message on the ePSK page when ePSK entries are added

The screenshot shows the ePSK management page. A message at the top explains the registration flow: 'This WLAN uses WPA3 security. Client registration flow is active. Use the QR code to guide users for registering their clients. Note that the WLAN Passphrase will be used to verify that the client is attempting registration. Ensure that the client will get DHCP IP on the WLAN VLAN and will be able to reach cnMaestro Cloud.' Below the message is a table of ePSK entries.

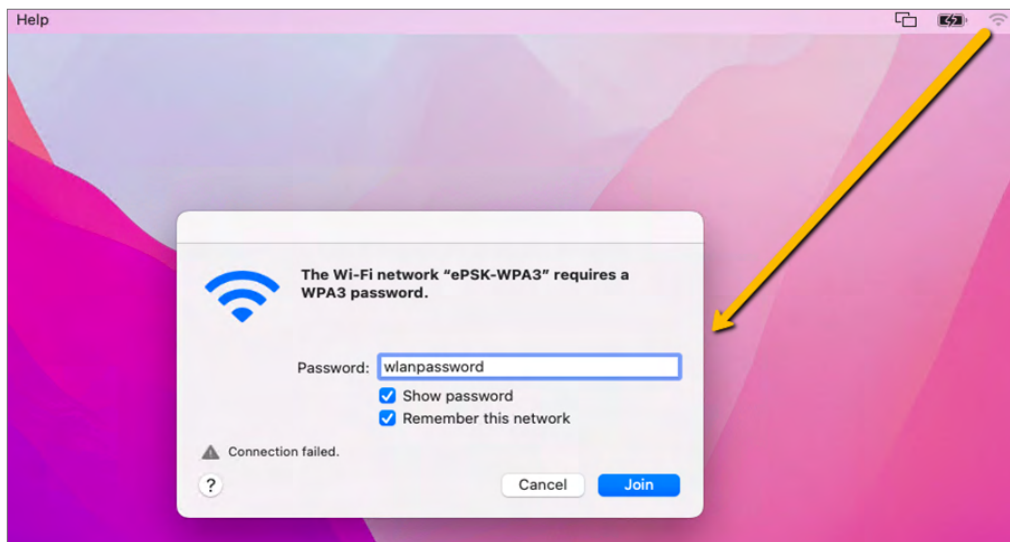

User Name	MAC Address	Passphrase	Creation Date	Expiration Date	Status	VLAN
ePSK	N/A	epskpassword@1234	Thu, Jun 13, 2024	Jun 13 2025 12:47:05	Active	1

## Registration flow screenshots

To register the clients to the network using the ePSK passphrase, users must complete the following steps:

1. Connect the client to the network using the WLAN passphrase.

Figure 323 Using WLAN passphrase for connecting to network

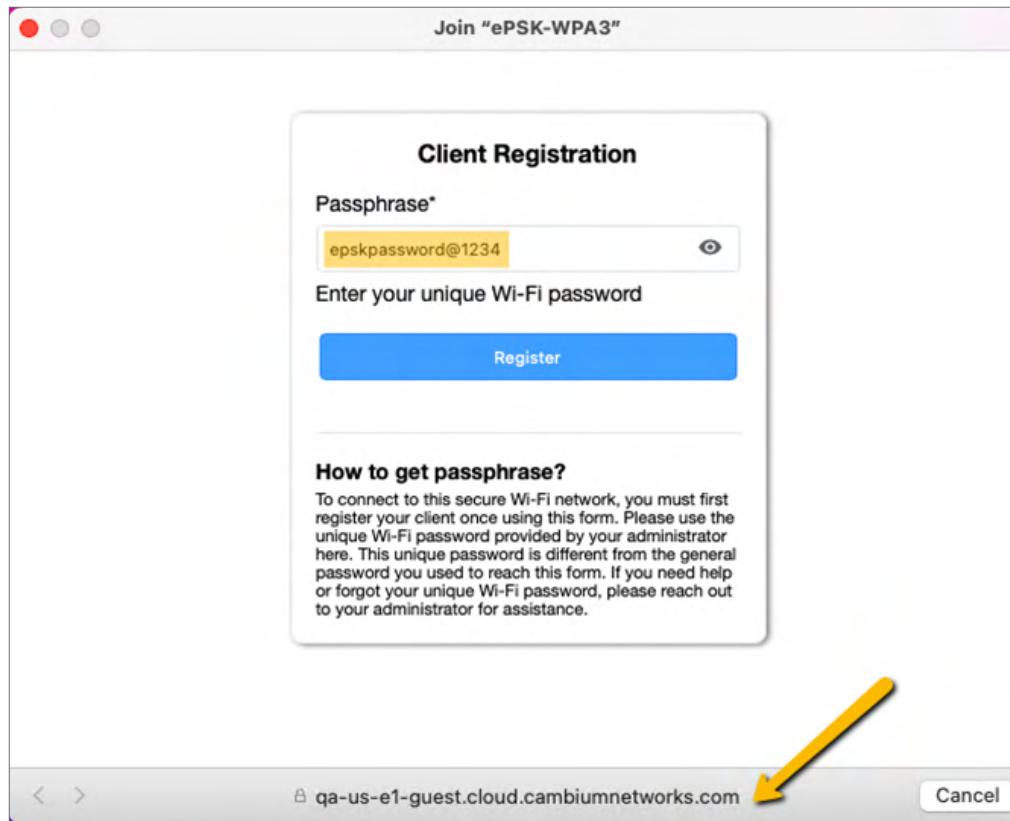

2. Click **Join**.

Clients are redirected to the **Client Registration** page for providing the ePSK passphrase.

3. Enter the ePSK passphrase in the **Passphrase** field and click **Register**.

**Figure 324** Using ePSK passphrase for connecting

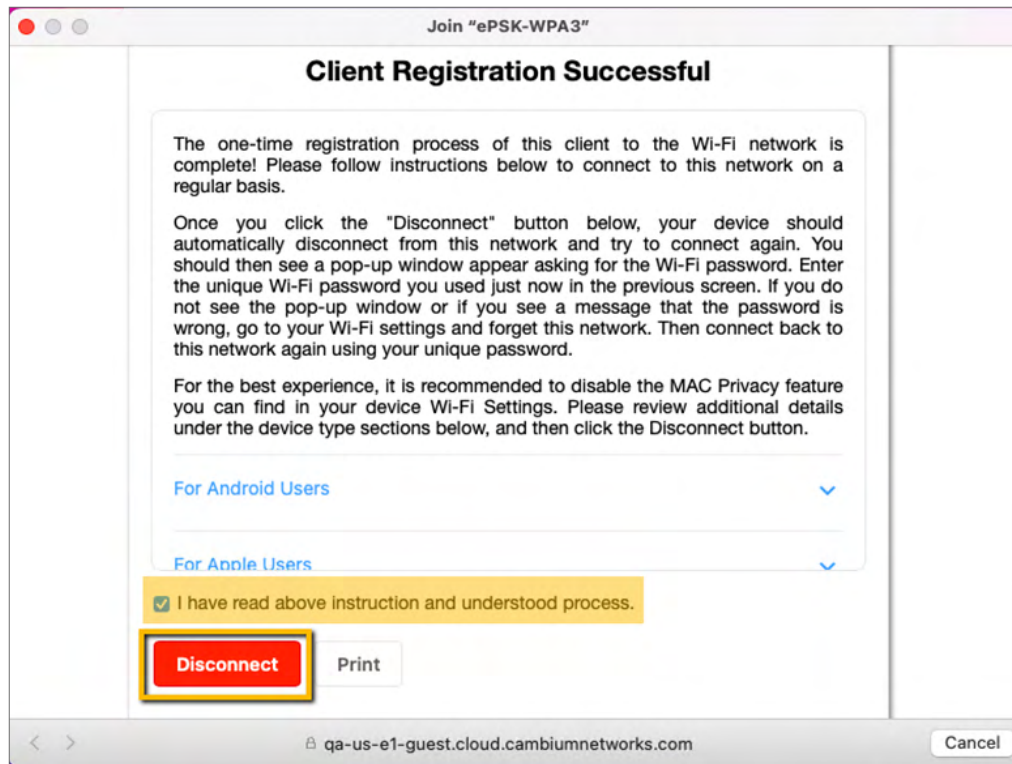

The registration success page is displayed along with a set of instructions.

4. Read the instructions (provided for different devices, such as Android, Windows, and iOS) and select the checkbox for confirmation.

The instructions provide details of the next steps for different devices.

The **Disconnect** button is enabled.

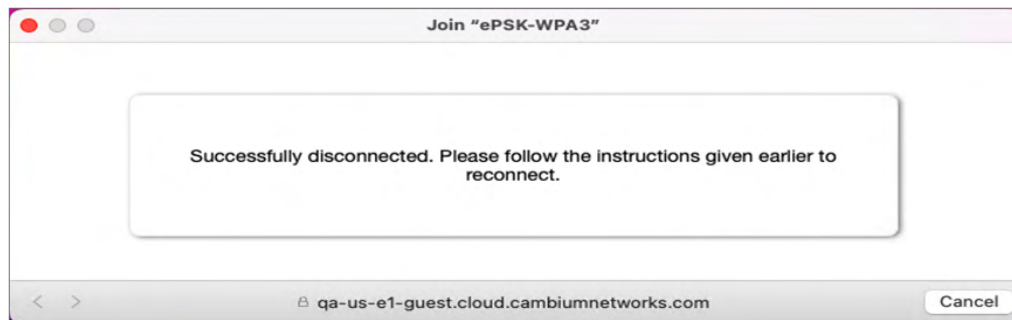

**Figure 325** Registration success page with instructions

5. Click **Disconnect**.

The client is disconnected and a disconnect success message is displayed.

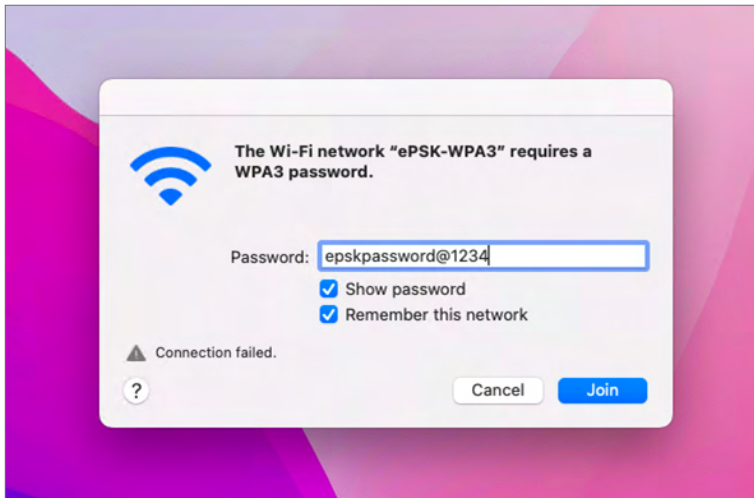

**Figure 326** Disconnect success page

6. Reconnect to the network using the ePSK passphrase that you provided in the **Client Registration** page earlier.

The client connects to the network with the mapped VLAN.

**Figure 327** Using ePSK passphrase for connecting to network

## Recommended best practices

Following are some of the best practices you can follow while configuring ePSK registration for WPA3 clients:

- WPA3 PSK is not recommended for unmanaged (BYOD) clients (For example, multi-dwelling unit (MDU), hospitality, and educational institutions).  
In MDUs, with IoT clients, making WPA3 mandatory with a single SSID may not be a successful deployment.
- WPA2/WPA3 PSK is recommended for unmanaged clients and to transition from the current (WPA2-PSK).
- Most of the WPA3-capable clients favor WPA3 PSK when available. This behavior is different among other clients, where some fallback to WPA2 and some which do not.
- When the SSID is mapped to 2.4 GHz and 5 GHz radios, WPA2 PSK or WPA2/WPA3 PSK security is recommended.
- When the SSID is mapped to 2.4 GHz, 5 GHz, and 6 GHz radios, or only the 6 GHz radio, then WPA3 PSK security is recommended.

## Creating an ePSK WLAN

To create an ePSK WLAN, perform the following steps:

1. Navigate to **Configuration > Wi-Fi Profiles** or WLAN page in the Wireless LAN View.
2. Select **WLANs** tab and click **Add**.

As with AP Groups, WLANs are separated into cnPilot Home and Enterprise Wi-Fi types. You can configure WLAN, RADIUS, Guest Access, Usage Limits, Scheduled Access, and Access parameters with Enterprise Wi-Fi WLANs. With the cnPilot Home WLANs, you can configure SSID, Scheduled Access, and Access parameters.

### Note

- The special characters can be used to create AP Group and WLAN names (Eg: a-zA-Z\_ - \*%#@!<>.) []^~\$1234567890). The user can also rename them if required.
- By default, password will not be configured. User has to configure the password for WLAN.

To create WLAN policy, perform the following steps:

1. Navigate to **Configuration > Wi-Fi Profiles**.
2. Select **WLAN** tab and click **Add**.
3. Select **Enterprise Wi-Fi** from the **Type** drop-down list and enter details in the **Basic Information** section.
4. In the **Basic Settings** section, ensure the **WPA2 Pre-Shared Keys** option is selected in the **Security** drop-down list.

9. To automatically expire ePSK details after a specific duration. The following options are available:

- **None**—ePSK details never expire. Select **None** to never expire the ePSK credentials.
- **Date and Time**— ePSK expires after the specified date and time (in dd/mm/yyyy hh:mm AM/PM format) Supported minimum time is 12 A.M. on the next day and the maximum is five years.
- **Duration**— ePSK expires after the specified (in hours, days, months, or years) in the **Expiry by** drop-down. Supported minimum duration is one hour and the maximum is five years. No decimal values are supported, for example, 1.5 hours.

#### Note

- The configured expiry time appears in the **Expiration Date** column on the **WLANs > <WLAN name>** page.
- The **Status** column on the **WLANs > <WLAN name>** page displays the status of the ePSK details—**Active**, **Expired**, or **None**. **None** is displayed only when older ePSK keys are imported to cnMaestro.
- Expired ePSK details are deleted from the AP only when the next configuration sync functionality is initiated or when there is a configuration change in the AP.

### Creating a Personal Wi-Fi ePSK X

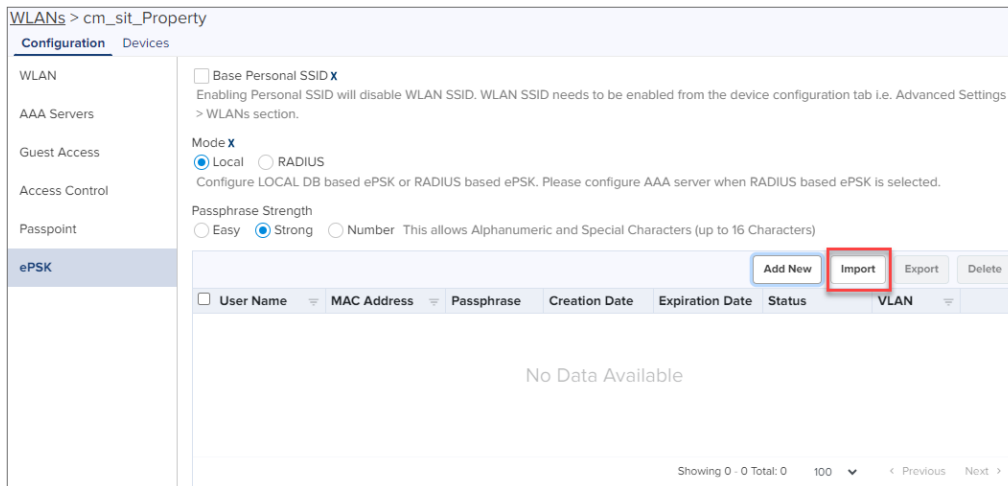

In Multiple Dwelling Units (MDU), personal Wi-Fi allows a user to connect all the personal devices to a unique SSID associated with a VLAN. For example, a user can connect multiple devices to a single personal Wi-Fi.

To configure personal Wi-Fi on the AP, complete the following steps:

1. Add and enable the SSID details (to be used as personal Wi-Fi) in the **WLANs** tab, under **Manage and Operation > Networks > <network name> > Configuration > Device Configuration > Advanced Settings** section.
  - a. Select the **Enable SSID** checkbox.
  - b. In the **Passphrase** field, configure the passphrase.
  - c. Configure the VLAN with which the SSID must be associated.
2. Enable personal Wi-Fi on the ePSK page for the WLAN profile by selecting the **Base Personal SSID** checkbox. By default, this feature is disabled. Once enabled, the **Enable** checkbox (under **WLANs > WLAN > Basic Settings > SSID**) is cleared. Also, the local and RADIUS ePSKs are disabled.

## Import ePSK

1. Click **Import**.

2. Select **Import.csv** file.

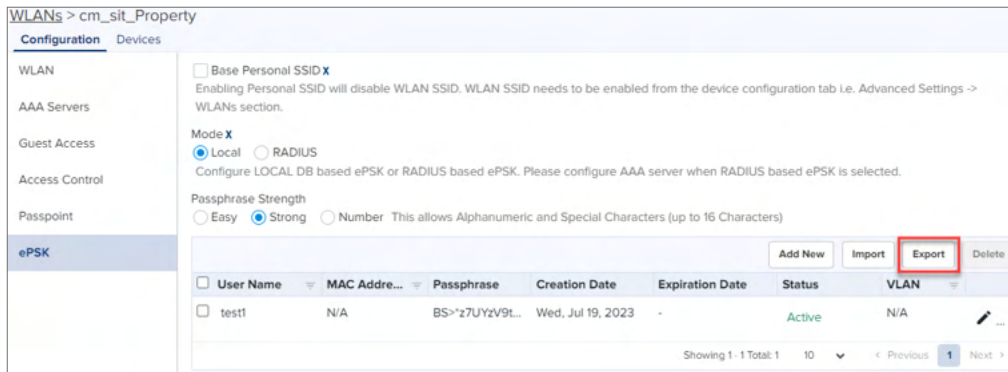

Alternatively, one can import a CSV file containing a list of ePSK entries. A sample file format is available from the Import dialog.

3. Click **Download Sample File**, to view sample ePSK Excel sheet.

	A	B	C	D	E
1	username	mac	passphrase	vlan	expiration_time
2	Unique name of this entry	MAC address of the client, if any (optional)	The Passphrase (Pre Shared Key) to be used in the WPA2 handshake	The VLAN to which the client traffic should be mapped (optional)	Expiration time should be either none or Jun 22 2024 09:07:28 format only
3	Lounge-1	11:11:11:11:11:11	645hj5ab*5L		9 Jun 22 2024 08:34:28
4	Lounge-2	22:22:22:22:22:22	9jdfj;al*38GUS3%		10 Aug 22 2024 05:07:28
5	Lounge-3		*{;nQgUdeMjEeR		1 Jul 27 2024 19:07:28
6	Lounge-4		!Jzam4F1x)Zgg%k		2 May 22 2024 12:07:28

## Export ePSK

1. Click **Export**.
2. Select **export.csv** file.

	A	B	C	D	E	F	G	H	I
1	username	mac	passphrase	vlan					
2	Unique name	MAC address	The Passh	The VLAN to which the client traffic should be mapped (optional)					
3	Room-1		WVghr8SmY_a;Q(e						
4	Room-2		a{N&#amp;Hepk^=-Qt%						
5	Room-3		6q@Qk#WUJzC.Br}						
6	Room-4		eX^g{nlj}tZw{j						
7	Room-5		y5cqs{(YAw5g;p						
8	Room-6		;Ag{EBKk8NR5*c						
9	Room-7		8H(SF)u;m9C4_MQ=						
10	Room-8		_(hgH7;dz)ys^9w						
11	Room-9		7%{C5bqDMgt^(j2}						
12	Room-10		3mq=xY^zg&#amp;f;lmN%						

## Editing ePSK

To edit an ePSK, select the required ePSK and click the edit () icon in the row.

You can edit only the passphrase and the expiry duration information.

## Deleting ePSK

To delete an ePSK, select the required ePSK and click **Delete**. You can also click the delete () icon in the row.

To delete multiple ePSK entries, select the checkboxes corresponding to the ePSK entries and click **Delete**.

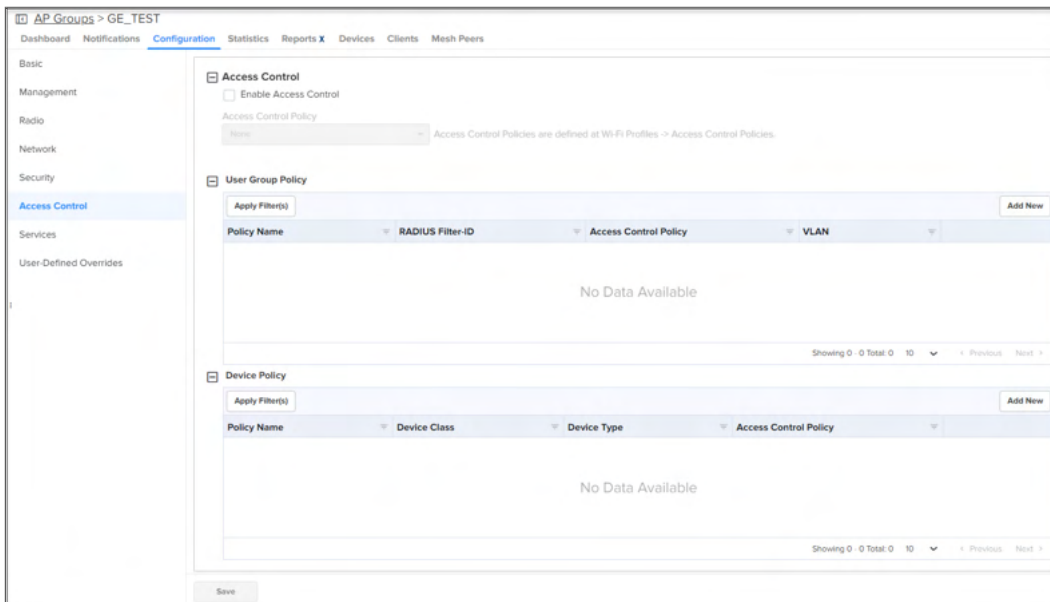

### Note

ePSK feature is supported on cnPilot from Release version 3.11.1.

## Access Control

The Access Control page allows user to enable or assign access control policies and configure **User Group Policy** and **Device Policy**. It offers visibility into the configured rules, ensuring efficient and secure network management.

Figure 328 Access Control page

#### Note

If an Access Control Policy is assigned at the AP group level, it does not appear under User Group or Device Group policies.

### Enable Access Control Policy

Users have the provision to enable or disable access control policies under **Access Control** tab as shown in [Figure 329](#).

Figure 329 Enabling Access Control Policy

#### Note

User can select the available access control policies listed in Wi-Fi profiles in **Access Control Policy** drop-down list. User can review the configured rules associated with these policies by clicking **View Rule** icon as shown in [Figure 329](#). This provides a comprehensive view of the policies and rules within the network.

### User Group Policy

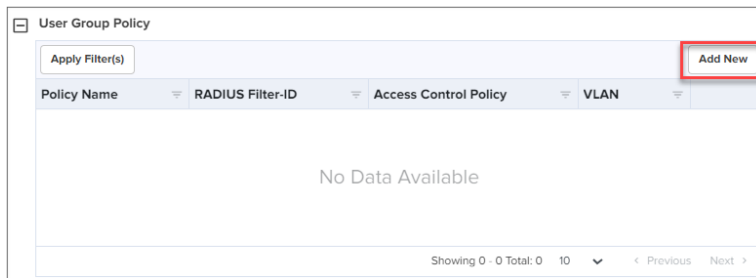

User Group Policy enables users to categorize into specific roles with customized access permissions and restrictions, facilitating fine-tuned control over network access.

#### Adding a new User Group Policy

To add a new User Group Policy, perform the following steps:

1. Navigate to **Configuration > Access Control** page.
2. Click **Add New** in the top right corner of the User Group Policy as shown in [Figure 330](#).

**Figure 330** User Group Policy

3. Complete the details in the **Add User Group** pop-up window as shown in [Figure 331](#).

**Figure 331** Add User Group

**Note**

- The user needs to assign an Access Control Policy or VLAN to create a User Group.
- Users can add a maximum of 64 User Groups and Device Policies each.
- Users can only select Access Control Policies (ACPs) with NON-MAC filters from the **Access Control Policy** drop-down menu.
- Mapping an Access Control Policy (ACP) to a User Group Policy (UGP) enables its use for the AP group, and vice versa. However, the same ACP cannot be shared between UGP and AP group; you can apply it to only either UGP or AP group.

## Device Policy

Device Policy allows users to apply specific rules and access control policies based on the type and characteristics of devices, offering customized control over device behavior within the network.

### Adding a new Device Policy

To add a new Device Policy, perform the following steps:

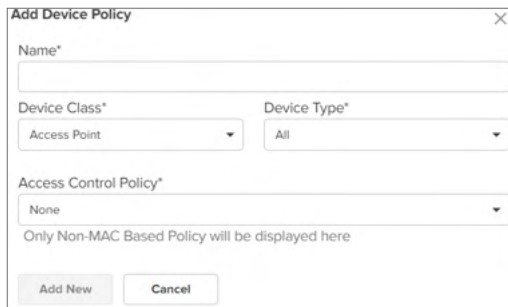

1. Navigate to **Configuration > Access Control** page.
2. Click **Add New** in the top right corner of the Device Policy as shown in [Figure 332](#).

Figure 332 Device Policy

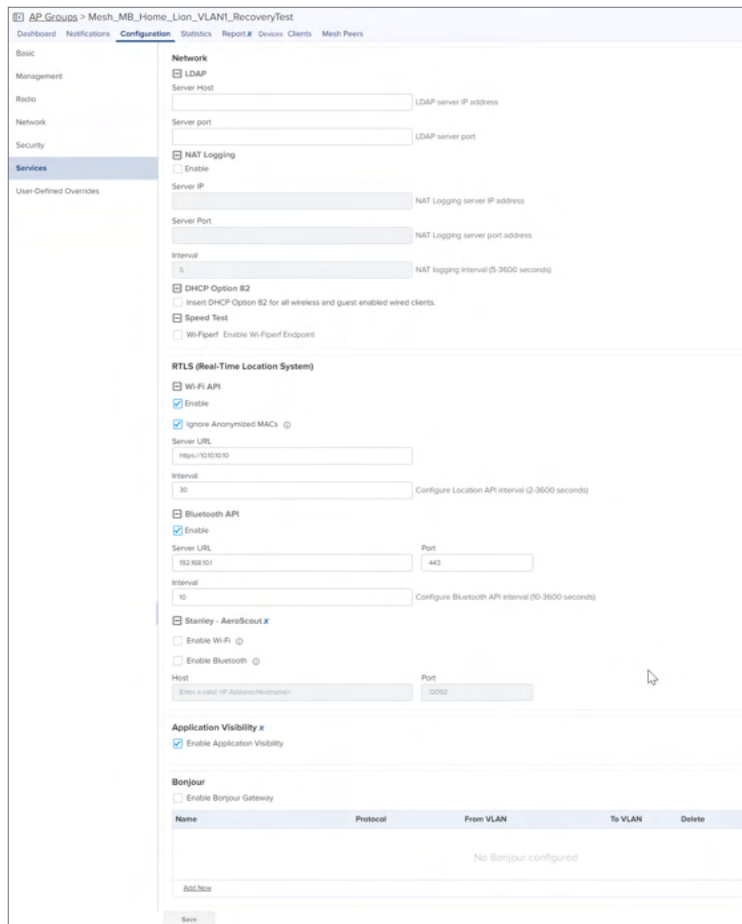

3. Complete the details in the **Add Device Policy** pop-up window as shown in [Figure 333](#).

Figure 333 Add Device Policy

## Services

The **Services** tab allows to configure the **LDAP**, **NAT Logging**, **DHCP Option 82**, **Speed Test**, **RTLS (Real-Time Location System)** such as **Wi-Fi API**, **Bluetooth API**, **Stanley-AeroScout**, and **Bonjour**.

## Note

Stanley-AeroScout is supported only for cnMaestro X features.

## Stanley-AeroScout

Stanley-AeroScout delivers an accurate and reliable location data for assets and customers with the STANLEY Healthcare Wi-Fi tags. It is an integral component of STANLEY Healthcare's Stanley-AeroScout RTLS solutions. The Stanley-AeroScout determines a location using signal strength measurements (RSSI) which are collected by the Cambium Wi-Fi Access Points. These Wi-Fi Access Points can simultaneously serve location sensors and provides network access. Stanley-AeroScout utilizes a location engine to determine the position of Wi-Fi tags.

## Pre-Defined Overrides

Some device configuration is specific to an individual device and not easily shared through an AP Group. This includes IP Address, Radio Channel settings, and WLAN details such as Enabling/Disabling SSID and Passphrase. These items can be configured in the Device Configuration page, which can be selected by choosing **Manage > Configuration** in the menu, and then selecting the device in the tree to update.

You can then choose/change different values from AP Group to be overridden. The icon to the left of a field must be selected first to override that parameter. After specifying override parameters, select **Apply Configuration** on the bottom right to save your changes to the server and create a job to push the new values to the device. This option is also applicable for Onboarding process queue.

## Advanced Settings

By default, Enterprise Wi-Fi devices have **Auto-set from device** enabled. This option reads several network related configuration fields from the device and uses those as override values to prevent overwriting values that would disconnect the device.

Modify the **Advanced Settings** section on the Access Point level configuration page as below:

- Add option to override Dual 5 GHz Radio setting for XV3-8 APs below the Placement field.
- If the Dual 5 GHz Radio feature is **Enabled**, then show the settings to override/configure the 3rd 5 GHz radio.

- If the Dual 5 GHz Radio option is enabled, then allow channel range  $\geq 100$  for Radio 2 and 36 – 64 for Radio 3.

## User-Defined Overrides

User-Defined Overrides can be entered into the end of an AP Group configuration. They will be appended to the AP Groups before the configuration is applied to the device. This allows setting configuration parameters which are not supported by GUI; this is an advanced operation that should rarely be used. The format of the commands is same as with the device CLI.

For example, if a new version of the software had a feature unsupported in cnMaestro, it could can be pushed to the device using CLI commands through the User-Defined Override mechanism.

This can be explained with the following example, in which country-code and hostname are appended to the end of the configuration and will override any settings in the UI.

```
country-code IN
hostname Wi-Fi_Device
```

The screenshot shows the 'AP Groups > Add New' configuration page. The 'User-Defined Overrides' section is active, displaying a text area for entering advanced configuration settings. A warning icon and text state: 'Settings entered are not validated or error-checked (However, dollar (\$), period (.) or space characters are not allowed in a variable name and it should not be more than 64 characters long), and they may overwrite configuration made in previous screens, so please use them with caution. You are responsible for ensuring the resulting AP Group is valid and safe to use.' Below the text area are 'Save' and 'Close' buttons.

## User-Defined Variables

Override configuration also supports a programmatic concept called User-Defined Variables (which are also used with templates). User-Defined Variables can be embedded into the User-Defined Override text area. They require a value to be set for each device mapped to the AP Group before the configuration can be applied. This is either through a default value, or an explicit setting in the device configuration.

The syntax for User-Defined Variables is shown in the following example: the VariableName maps to an identifier set by each Device. If the value is not set, the optional DefaultValue will be used.

```
Parametername ${VariableName=DefaultValue}
```

### Note

You can also configure User-Defined Variables in the Onboarding process queue page. They are mapped individually to each device.

### Other Examples

#### Enterprise Wi-Fi (E-Series and XV-Series) and cnPilot Enterprise (ePMP hotspot)

```
country-code ${countryname=US} // country name with US as default value
hostname ${hostname=ePMP_1000_Hostpot}
```

#### cnPilot Home R-Series

```
Parametername ${variableName=someDefaultValue}
```

### Example

```
CountryCode=${countryName=IE}
RTDEV_CountryCode=${5GHz_CountryName=IE}
wan_ipaddr=${wan_ip=10.110.68.10}
```

Macros can be used in advanced configuration similar to User-Defined Overrides, except that they automatically obtain values provided by the device itself.

The following macros are supported:

- `%{ESN}` will be replaced with the MAC address of device.
- `%{esn}` will be replaced with the MAC address of the device in lowercase.
- `%{ESN-}` will be replaced with the MAC address of the device separated by a hyphen (-).
- `%{esn-}` will be replaced with the MAC address of the device in lowercase separated by a hyphen (-).
- `%{ESN6}` will be replaced with the last six non-separator characters of the device MAC address.
- `%{esn6}` will be replaced with the last six non-separator characters of the device MAC address in lowercase.
- `%{MSN}` will be replaced with the serial number of the device.

## Bulk Overrides

Bulk Overrides allow the user to edit the multiple configurations shared through an AP Group for one or more devices.

### Note

**Bulk Edit** option under **Configuration > Devices Overrides** is supported only for cnMaestro X.

The user can override for the following configurations in cnPilot (R-Series):

- [Management](#)
- [Radios](#)
- [Wi-Fi Configuration](#)

The user can override for the following configurations in Enterprise Wi-Fi (E-Series, XV-Series):

- [Location](#)
- [Management VLAN](#)
- [Radios](#)
- [WLANs](#)
- [User-Defined Variables](#)

**Figure 335 Bulk Override: Enterprise Wi-Fi (E-Series, XE-Series, XV-Series)**

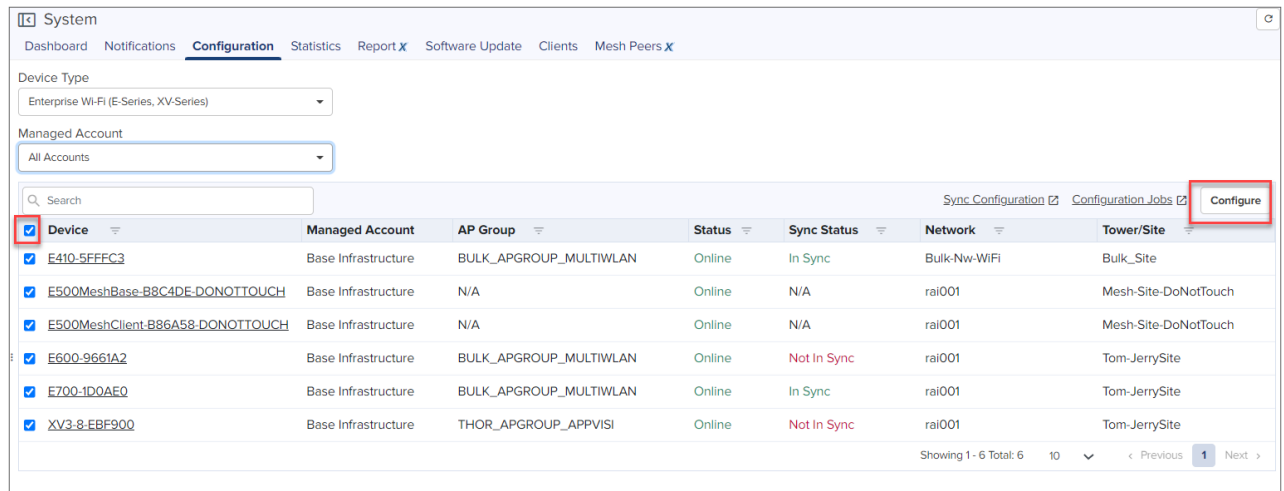

**Note**

**Configuration** tab will be available from other container levels like Network/Site and also from AP group level.

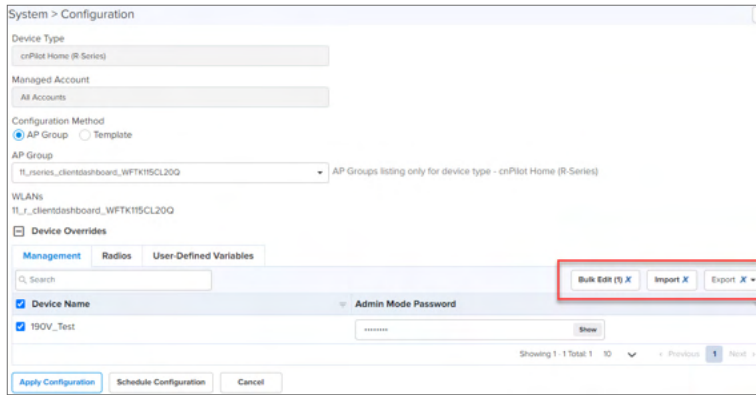

To configure Bulk Overrides for the devices, perform the following steps:

1. Navigate to **Manage > System > Configuration**.
2. Select the **Device Type** from the drop-down.
3. Select **Device** from the list and click **Configure**.

4. Click the plus (+) next to **Device Override(s)**, to override the list of devices.
5. In the Device Override table, reconfigure tabs and perform the following actions:
  - Bulk Edit
  - Export

- Import

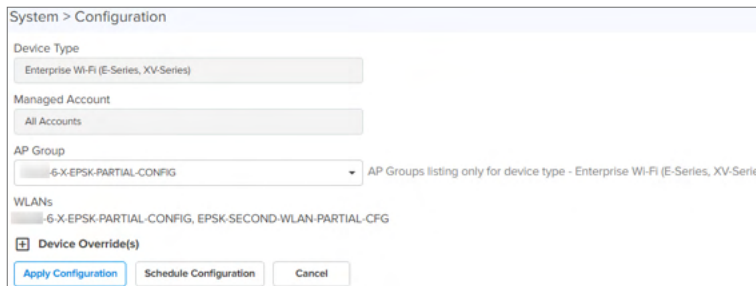

6. Select the device(s) from the Device Override table to configure.
7. Click **Bulk Edit**.
8. Click **Save**.

A pop-up window appears for the fields to reconfigure.

You can export, as described:

- Export page as CSV
- Export all as CSV

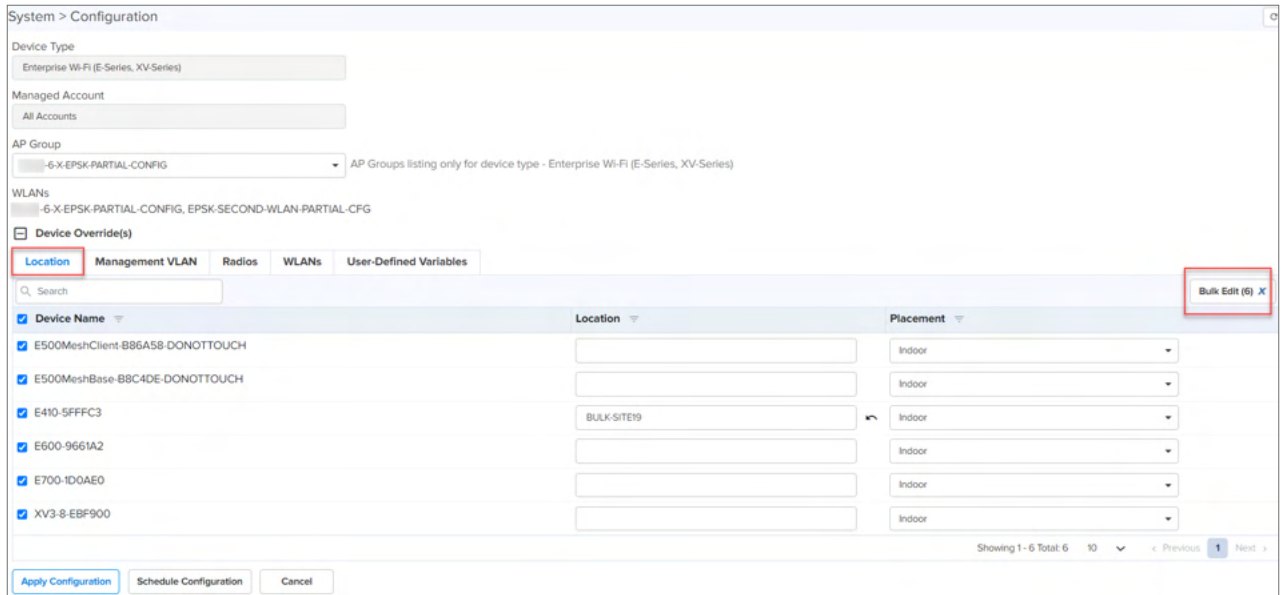

After modifying the field values, the CSV file can be imported.

9. Click **Import**, to import the file.
10. Select the file to import in CSV file format.
11. Click **Apply**.

## Location

1. In the **Location** tab, select the devices from the list.
2. Click **Bulk Edit**.

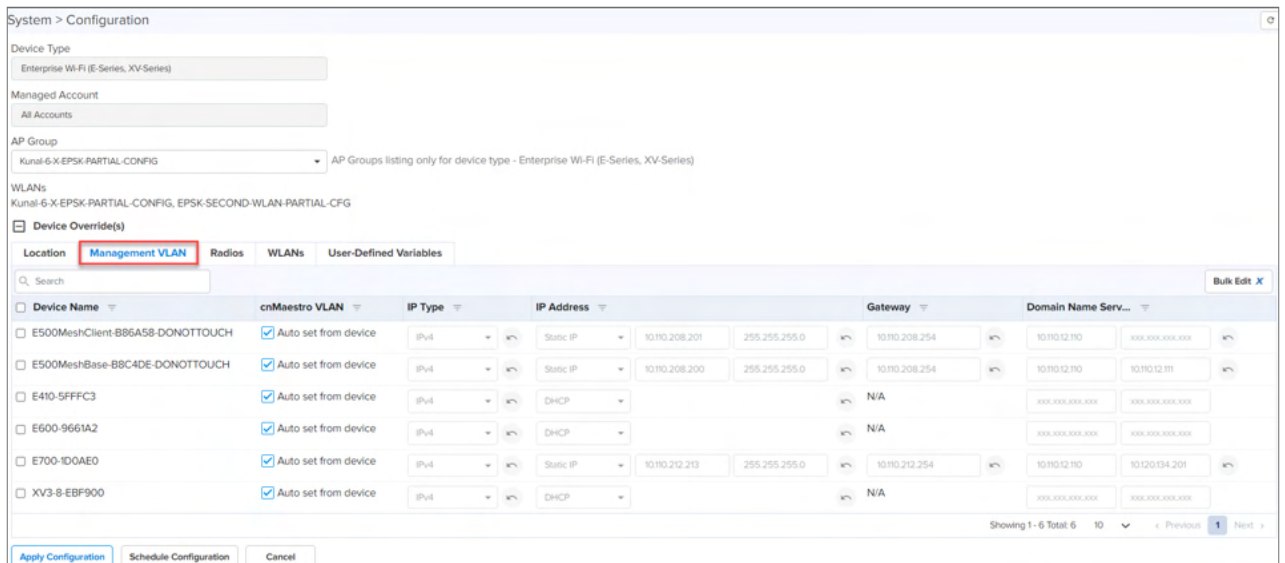

3. **Override Location** window appears, edit the configuration details and click **Save**.

## Management VLAN

4. In the **Management VLAN** tab, select the **VLAN** of the device from the list.

5. Click **Bulk Edit**.

<input checked="" type="checkbox"/> E600-9661A2	2	1111
<input checked="" type="checkbox"/> E700-1DGAEO	2	1111

15. Click **Bulk Edit**.

The **Override User-Defined Variables** window appears.

The dialog box titled 'Edit User Defined Variables' contains two input fields: 'logging\_level' and 'syslog\_host\_ip'. Both fields have checkboxes to the left of their respective labels. At the bottom of the dialog are 'Save' and 'Close' buttons.

16. Edit the configuration details and click **Save**.

### Note

For Bulk overrides to be enabled in **User-Defined Overrides** tab, you must define the overrides in the **User-Defined Overrides** section of AP groups. For more details, see [User-Defined Overrides](#)

17. Click **Apply Configuration** to start immediately, or click **Schedule Configuration** to schedule later.

The user can override for the following configurations in Enterprises Wi-Fi (Xirrus-Series):

- User-Defined Variables

**Figure 336** Bulk Override: Enterprises Wi-Fi (Xirrus-Series)

The screenshot shows the 'System > Configuration' page for an Enterprise Wi-Fi (Xirrus-Series) device. The 'User-Defined Variables' tab is active. A table lists two devices with columns for 'Device Name', 'name', and 'location'. The first device, 'X4096080F0EAA', is selected. A 'Bulk Edit X' button is visible in the top right corner of the table area.

Device Name	name	location
<input checked="" type="checkbox"/> X4096080F0EAA		
<input type="checkbox"/> X4096170F296A		from_cnmaestro

18. In the **User-Defined Variables** tab, select the devices from the list.

19. Click **Bulk Edit**. The **Override User-Defined Variables** window appears , edit the configuration details and click **Save**.

20. Click **Apply Configuration** to start immediately, or click **Schedule Configuration** to schedule later.

## Synchronize (Sync) Configuration

AP Groups can be configured to synchronize automatically or manually when they are updated. The setting is available in the AP Group configuration page.

1. **Enterprise Wi-Fi AP Groups** by default synchronize automatically (so any change of AP Group or WLAN, followed by a **Save**, will immediately push configuration to the devices without manual intervention).
2. **cnPilot Home AP Groups** by default synchronize manually. Updates to them (or the WLANs to which they map) need manual synchronization to push configuration to the devices.

### Manual Synchronization

Manual configuration synchronization allows the user to synchronize any devices with a single action rather than updating each device separately.

Navigate to **Administration > Sync Configuration**.

**Sync Configuration** only displays devices currently **Out-of-Sync** with a mapped AP Group.

Sync Configuration has the following fields:

- AP Group (AP Group to which device is mapped)
- Device (Hostname)
- Device Type
- Network (Network in which device is present)
- Status (Up/Down)
- Site (Site under which device is present)
- Sync Status (Sync status will tell whether job is completed or failed )

### Steps to Sync Configuration:

1. Click the **Sync Configuration** in the top right of the **Configuration > WLAN and AP Groups** or **Manage > Configuration > Device Details** or **Jobs** tab.
2. Select devices to synchronize.

Administration > Sync Configuration

AP Groups can be configured to synchronize automatically or manually when they are updated. [Learn more](#)

**Note**

- Configuration jobs skip offline devices. With manual synchronization, they need to be synchronized by the administrator.
- For more information on Wi-Fi AP configuration, refer to the following URLs:
  - [Unique per-Device values in Profiles Using User-Defined Overrides](#)
  - [AP Groups and Overrides for Wi-Fi Devices.](#)

- [Migrating from Templates to Profiles](#)

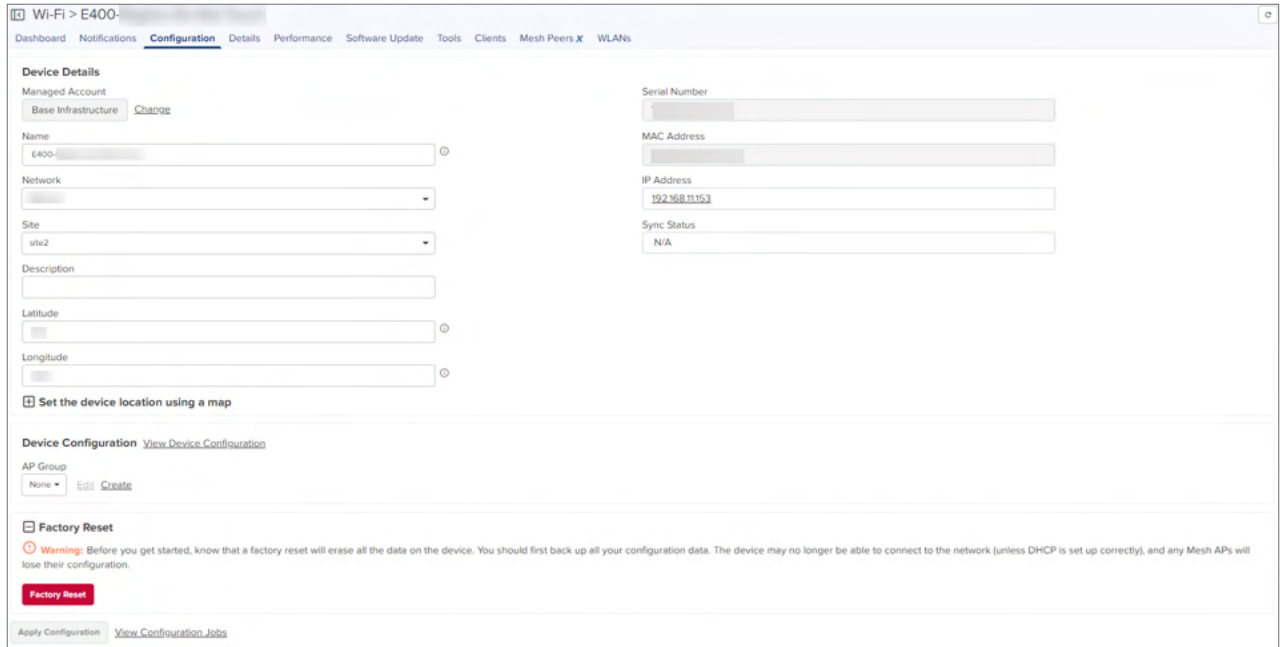

- cnMaestro X can run any number of Jobs in parallel.

## Factory Reset

A factory reset erases all the data on the device. Factory reset is supported for two device models: Enterprise Wi-Fi higher than 3.10-R6 version and cnMatrix higher than 4.0 version.

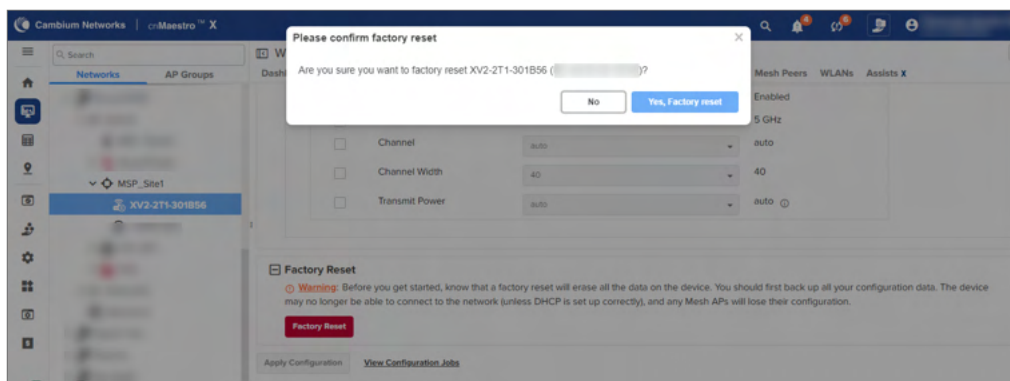

To factory reset the device perform as follows:

1. Navigate to the **Configuration** page of the device.
2. Select **Factory Reset**.

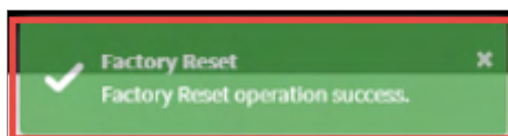

3. Click **Factory Reset**.

It displays **Please confirm factory reset** message as shown below:

4. Click **Yes, Factory reset** option.

If the Factory Reset is successful, the following message is displayed on the **Notifications** tab.

Severity	Device Type	Device	Managed Account	IP Address	Category	Message	Raised Time
<span style="color: orange;">Major</span>	cnPilot e500	IPvt-E500-srdhar	Base Infrastructure		Status	Device is offline <a href="#">View Details</a>	Wed Jul 31 2019 15:19:18 GMT+0530
<span style="color: blue;">Notify</span>	cnPilot e500	IPvt-E500-srdhar	Base Infrastructure		Default System Configuration Applied	System configuration was reset to default <a href="#">View Details</a>	Wed Jul 31 2019 15:19:17 GMT+0530

When Factory Reset is performed, cnMaestro deletes the existing device cookie and displays message to **Approve** in the homepage. When the device connects back you have to re-approve the device as shown below:

This screenshot shows the configuration page for a device named 'Sasi E500-B8B484'. At the top, a notification banner states: "Please verify device details along with source IP and re-approve. Learn more Approve". The device details section includes fields for Name (Sasi E500 B8B484), Network (default), Site (AOS Site), Description, Latitude (12.975987), and Longitude (77.5945427). Below this, the Device Configuration section shows the AP Group set to 'None'. A 'Factory Reset' button is visible at the bottom of the configuration section.

When Factory Reset is applied to an offline device, it displays an error as shown below:

This screenshot shows the configuration page for a device named 'Migration\_04\_XE34\_01'. A red error message overlay at the top reads: "Factory Reset Device is unreachable. This operation cannot be done." The device details section includes fields for Name (Migration\_04\_XE34\_01), Network (default), Site (MSP\_Mixed\_Devices\_Monitor), Description, Latitude, and Longitude. Below this, the Device Configuration section shows the AP Group set to 'APG\_CNM\_SIT\_ESeries\_Migration'. A 'Factory Reset' button is visible at the bottom of the configuration section.

## Association ACL

This section describes how cnMaestro replies to AP's request to allow or disallow client associations. This feature allows you to configure a MAC Association list that is used to allow/deny client associations.

## Overview

When a client tries to connect to an AP, the following occurs:

1. The AP sends MAC authentication request along with the MAC Address of client and the Customer ID (CID) to the Controller. This is optional and occurs only if MAC ACL is configured for the WLAN on the AP and the policy for the MAC ACL is cnMaestro.
2. Controller checks and responds with an action to Allow or Deny the request.
3. AP allows or denies the client's request based on the response of the Controller.

## Configuring Association ACL

To configure the Access Control List (ACL) in cnMaestro:

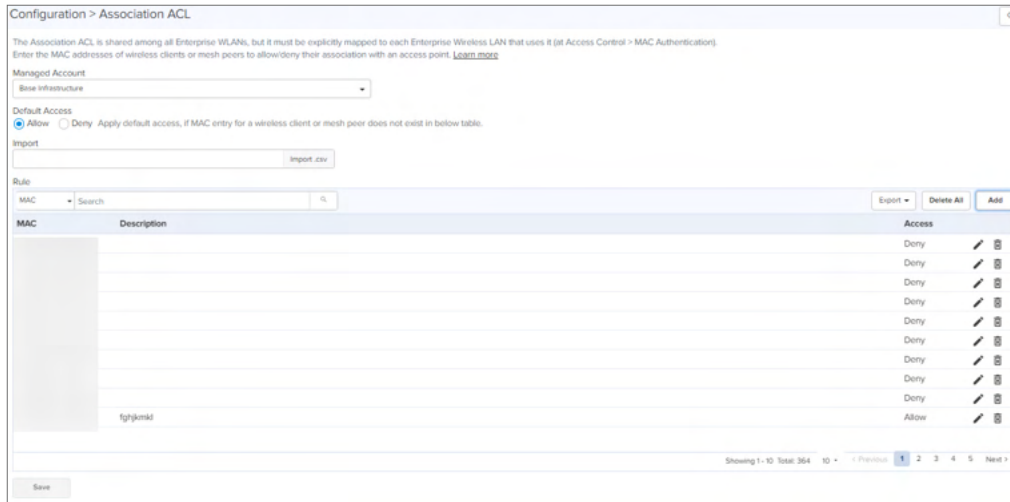

1. Navigate to **Configuration > Wi-Fi Profiles > Association ACL** tab.
2. Click **Add**.

The screenshot shows the 'Configuration > Association ACL' page. At the top, there is a 'Managed Account' dropdown set to 'Base Infrastructure'. Below that, the 'Default Access' is set to 'Allow'. An 'Import' button is visible. The main area is a table with columns for 'MAC', 'Description', and 'Access'. The table contains several rows, all with 'Deny' in the 'Access' column, and one row with 'Allow'. A 'Save' button is at the bottom left. At the bottom right, it says 'Showing 1 - 10 Total 364'.

3. Select **Allow**.
4. Enter the **MAC** and **Description**.
5. Click **Save**.

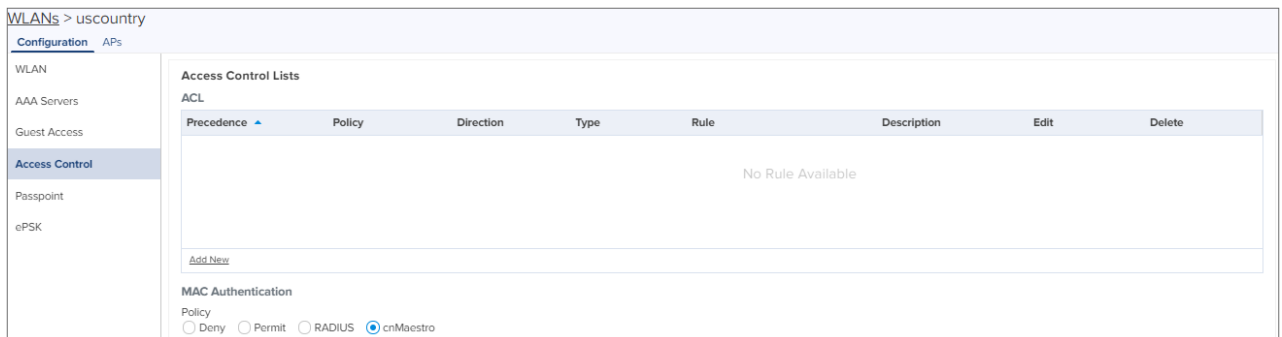

The screenshot shows a dialog box titled 'Add Association ACL'. It has a checked 'Allow' checkbox. Below it are two text input fields: 'MAC' with a placeholder 'XX-XX-XX-XX-XX-XX' and 'Description'. At the bottom are 'Save' and 'Close' buttons.

It displays the **Success** message.

6. To configure MAC authentication as cnMaestro:

The Association ACL is shared among all Enterprise WLANs, but it must be explicitly mapped to each Enterprise Wireless LAN that uses it (at **Access Control > MAC Authentication**).

**Note**

- If MAC is not configured under the policy (to Allow or Deny), the default action will be applied.
- You can perform the following actions by selecting the respective icons in the table:
  - Edit
  - Delete
  - Export
  - Import Association ACL, by selecting **Import.csv** file.

## Access Control Policies

This feature allows you to configure policies that define who can connect to the network, and how or when they are allowed to connect and access a specific device. The policies are a set of conditions, constraints, and settings.

The policies can be configured on both AP Group level and WLAN level, AP Group policies have more priority than WLAN Access Control policies.

On both AP group policy and WLAN policy, we can have L2, L3 and L3 Rules. The configuration rules are processed in following priority: MAC Filters followed by IP and Application Filters.

## Configuring Access Control Policies for AP Groups and WLANs

To configure the Access Control Policies:

1. Navigate to **Configuration > Wi-Fi Profiles > Access Control Policies** tab.

Configuration > Wi-Fi Profiles

AP Groups WLANs Association ACL **Access Control Policies**

ⓘ Policies are sets of conditions, constraints, and settings that allow you to decide who can connect to the network, and how or when they are allowed to connect.

Apply Filter(s) Add WLAN Policy Add AP Group Policy

Apply Filter(s) Delete Add New

<input type="checkbox"/>	Precedence	N...	Status	Action	Type	Application / Category	Protocol	Sour...	Source IP Mask	Destinati...	Destination IP Ma
No Data Available											

3. Enter a **Name** for the policy.
4. Select the **Scope** from the drop-down list.
5. For AP Groups, **Enable Air Cleaner**.
6. Click **Add New** in the top right corner of the **MAC Filtering Rules** list and complete the details in the **Add MAC Filtering Rule** pop-up window.

7. Click **Add New** in the top right corner of the **IP and Applications Filtering Rules** list and complete the details in the **Add IP and Application Filtering Rule** pop-up window.

**Note**  
Application Filtering Rule is an X Feature.

8. After adding all the required rules, Click **Add** in the bottom left corner of the window.
9. Navigate to **WLAN > Access Control** or **AP Group > Access Control** tab and link this policy.

**Note**

- AP Group Access Control Policies are applied at the device level.
- WLAN Access Control policies have less priority than AP Group Access Control policies.

## Custom Applications X

Custom applications allow you to configure applications with a specific IP address or a domain name, and apply filter rules, such as enable or disable traffic from these applications. By default, these applications are applied on the devices along with the AP group configuration.

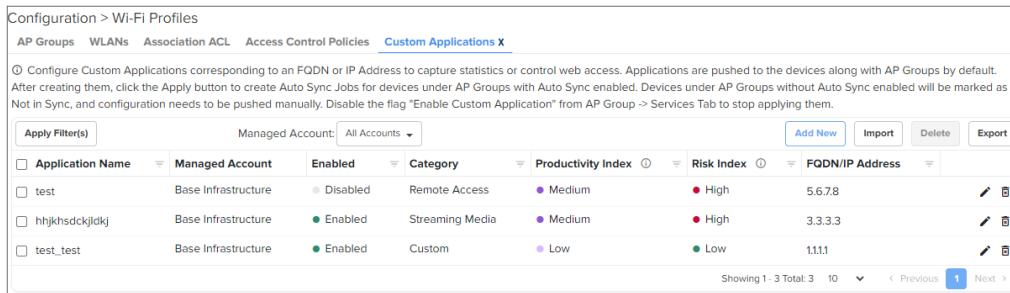

After creating the custom application, when you click **Apply**, cnMaestro creates a job for devices in the AP group that has auto sync enabled. Devices in AP groups that do not have auto sync enabled, are marked as **Not in Sync**, and users must manually apply the configuration on to the devices.

To disable cnMaestro from applying the custom application configuration on the devices, clear the **Enable Custom Application** check box from the **AP Groups > Services tab > Application Visibility X** section.

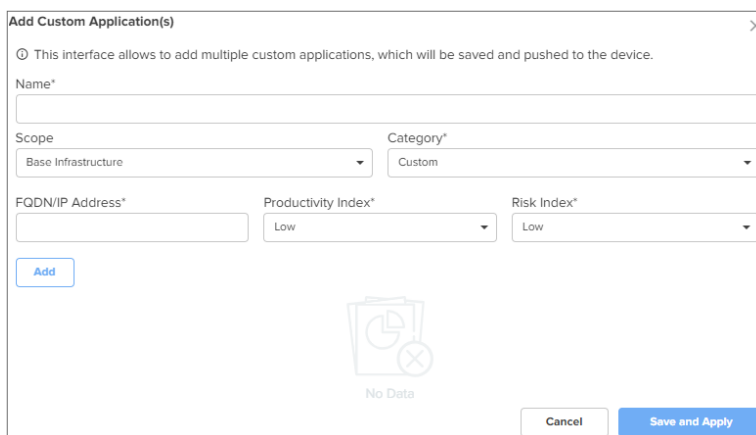

To add a new custom application, complete the following steps:

1. Navigate to **Configuration > Wi-Fi Profiles > Custom Applications X**.

2. Click **Add New** on the **Custom Applications X** page.

The **Add Custom Application(s)** window is displayed.

Configure the following parameters:

**Table 69** Custom Application Parameters

Parameter	Description
Name	Specifies the name for the custom application. Supports a maximum of 20 characters.
Scope	Specifies the availability of the custom application across managed accounts. The following values are supported: <ul style="list-style-type: none"> <li>• Base Infrastructure—Custom application is available only for the global account. It is not shared with other managed accounts.</li> <li>• Shared—Custom application is shared across all managed accounts. It can be mapped to devices in the managed account, but it cannot be modified. To modify the configuration, it must be copied into the managed account and then updated.</li> <li>• Managed Account—Custom application is available only for that specific managed</li> </ul>

**Table 69** Custom Application Parameters

Parameter	Description
	account. <b>Note:</b> Once the scope has been configured on a custom application, it cannot be modified.
Category	Specifies the category to which the application must belong. Select the appropriate category from the drop-down list.
FQDN/IP Address	Specifies the IPv4 address or the domain name of the custom application.
Productivity Index	Indicates how appropriate an application is useful for business purposes. The higher the rating number, the more business-oriented an application is.
Risk Index	Indicates how likely an application is to pose a threat to the security of your network. The higher the rating number, the riskier of an application is.
Enable	Select the check box to enable this custom application.

3. Click **Add**.
4. To apply this configuration on the AP, click **Save and Apply**.

## cnMatrix Switches

cnMatrix switches simplifies the network deployment and operation. cnMaestro provides management, configuration and control, and security services for cnMatrix with deployment options such as Policy-Based Automation (PBA) to simplify core operations and improve network security. Central to cnMaestro's orchestration of cnMatrix devices is the concept of Switch Groups.

This chapter contains the following topics:

- [Switch Group Configuration](#)
- [Synchronize \(Sync\) Configuration](#)
- [Policy Based Automation \(PBA\)](#)
- [Switches](#)
- [Switch Ports](#)
- [Device Details](#)

### Switch Group Configuration

A Switch Group represents a virtual stack of switches, independent of their locations or networks. The Switch Group functionality enables users to manage multiple switches with the same configuration.

Configuration is common to all switches belonging to a Switch Group:

- Configuration changes are synchronized and applied for all the switches in a Switch Group.
- A subset of configuration attributes can be overruled for an individual switch.
- Switch Ports across all physical switches are associated with a Switch Group and can be simultaneously bulk edited.

From the **Switch Groups** tab, the administrator can navigate to the Switches and the Switch Ports tabs for configuration. The Dashboard tab is used to monitor the health condition of the virtual stack.

The process for creating a new switch group configuration is as follows:

1. Navigate to **Configuration > Switch Groups**.
2. Click **New Switch Group**.

Configuration > Switch Groups

Learn more about Switch Groups.

Search  Scope: All Accounts

**New** Import Sync

Name	Offline Switches	Scope	Ports Up	VLANs	Active PoE Ports	Auto Sync	Last Edited

cnPulse Administration Status Enable cnPulse for GPS Sync

cnPulse Power Enable PoE to power cnPulse

Save

**Note**

- Toggle the **Show Advanced** button to view the advanced options of the Switch Groups.
- Click **Save** on individual tab parameters or click once after configuring parameters across all the tabs.

## Basic

The Basic tab provides options to the user to configure the device name as well as other standard values used to identify a switch.

1. Navigate to **Configuration > Switch Groups > Basic**.
2. On the Basic page enter device identification data such as:
  - Name
  - Contact
  - Description
  - Scope
  - WISP Configuration
  - Input DC Voltage
  - Cambium Sync

### Note

- The special characters should be used to create Switch Groups names (Eg: a-zA-Z\_-\*&%#@!<>.) []^~\$1234567890). The user can also rename them if required.
- By default, the password is not configured. User has to configure the password for Switch Group.
- By default, the **Auto Sync** option for automatically applying the configuration is enabled.

## Management

The **Management** page allows you to configure Administrator Access, Time Settings, DNS, and Event Logging.

1. Navigate to **Switch Groups > Management** page.
2. Enable the **Daylight Saving Time** and enter the details.

**Note**  
cnMatrix Switches supports SNMP configuration from release 3.0.4.

The screenshot shows the configuration page for a switch group named 'may2121'. The 'Administrator Access' section is active, showing a table of users: 'admin' with 'Root' privilege and 'guest' with 'Guest' privilege. Below this are sections for 'Time Settings' (SNTP Server Address, Time Zone, Time Zone Name, Daylight Saving Time), 'DNS' (DNS Server 1 and 2), and 'Event Logging' (Minimum Syslog Level, Server Address, Port). A 'Save' button is at the bottom.

3. Click **Add New** to add **Administrator Access**, enter the details and click **Add**.

The form for adding Administrator Access includes the following fields:

- Username\*
- Password\* (with a hover info icon for password rules and a 'Show' button)
- Confirm Password\* (with a 'Show' button)
- Privilege (dropdown menu set to 'Guest')
- An 'Add' button at the bottom.

4. Password should match the special characters as shown below:

The screenshot shows a form titled "Administrator Access" with fields for Username, Password, Confirm Password, and Privilege. A tooltip is displayed over the Password field, listing the following requirements:

- Password length should be in the range of 8 - 20 characters
- Password should contain at least 1 lowercase characters
- Password should contain at least 1 uppercase characters
- Password should contain at least 1 numerical characters
- Password should contain at least 1 special characters
- New Password should contain at least 4 characters different from old password

5. **Time Settings:** Enable the **Daylight Saving Time** and enter the corresponding details.
6. **DNS:** Enter DNS server details.
7. **SNMP:** Enter SNMP details.
8. **Event Logging:** Select **Minimum Syslog Level** from drop-down and enter server details.
9. Click **Save**.

## Network

The Network page allows the user to configure VLANs, PBA, IP Route, and Spanning Tree details.

### Note

From release 3.0.4 cnMatrix Switches supports MSTP Mode and Path Cost Method in Spanning Tree.

1. Navigate to **Switch Groups > Network**, enter the details of **VLANs**, **Policy Based Automation**, **MAC List File Server Settings**, **IP route**, and **Spanning Tree**.

The screenshot shows the "Network" configuration page for a switch group. It includes a table for VLANs and a section for Policy Based Automation settings.

VLAN Name	VLAN ID	IGMP Snooping	DHCP Snooping	ARP Inspection	Voice VLAN	Voice Data VLAN
vlan1	1	Disabled	Disabled	Disabled	Disabled	Disabled

**Policy Based Automation** settings:

- Auto Attach: Controls the Policy Based Automation status on the switch
- Auto VLAN
- Use Site Name for localization **x**
- MAC List File Server Settings **x**

**MAC List File Server Settings** table:

Name	Rule	Action	Precedence	Enabled
No Data Available				

### Note

**Use Site Name for localization**, **MAC List File Server Settings**, and **MAC Lists** are cnMaestro X features.

2. To Add a new VLANs click **Add New**.
3. Enter the **VLAN ID**.
4. Enter the **VLAN Name**.

**Add New VLAN**

VLAN ID\*  
[2-4094]

VLAN Name

Next Hop\*  
xxx.xxx.xxx.xxx

Distance  
1

Add

- c. Enable the **Next Hop**.
- d. Enable the **Distance**.
- e. Click **Add**.

8. Enable **Spanning Tree**.

- a. Select the Mode **RSTP** from the drop-down.
  - Select Path Cost Method **Long** or **Short**.
  - Select **Priority**.

The screenshot shows the 'Spanning Tree' configuration page. The 'Enable' checkbox is checked. The 'Mode' dropdown is set to 'RSTP'. Under 'Path Cost Method', the 'Long' radio button is selected. The 'Priority' dropdown is set to '32768'. A 'Save' button is at the bottom.

- b. Select the Mode **PVRST** from the drop-down.
  - Select Path Cost Method **Long** or **Short**.
  - Select **Priority**.

The screenshot shows the 'Spanning Tree' configuration page for 'PVRST' mode. The 'Enable' checkbox is checked. The 'Mode' dropdown is set to 'PVRST'. Under 'Path Cost Method', the 'Long' radio button is selected. Below this is a table with columns 'VLAN ID' and 'Priority'. The table contains one row with '1' in the 'VLAN ID' column and '32768' in the 'Priority' column. A 'Bulk Edit' button is in the top right of the table area. A 'Save' button is at the bottom.

VLAN ID	Priority
1	32768

- c. Select the Mode **MSTP** from the drop-down.
  - Select Path Cost Method **Long** or **Short**.
  - Enter the **Region Name** and **Revision**.

The screenshot shows the 'Spanning Tree' configuration page for 'MSTP' mode. The 'Enable' checkbox is checked. The 'Mode' dropdown is set to 'MSTP'. Under 'Path Cost Method', the 'Long' radio button is selected. There are text input fields for 'Region Name' and 'Revision' (set to '0'). Below is a table with columns 'Instance ID', 'VLAN List', and 'Priority'. The table contains 8 rows, all with '32768' in the 'Priority' column. Each row has an edit icon (pencil) in the rightmost column. A 'Save' button is at the bottom.

Instance ID	VLAN List	Priority	
0		32768	
1		32768	
2		32768	
3		32768	
4		32768	
5		32768	
6		32768	
7		32768	

- User can edit **Priority** by clicking the edit () icon.

- Select the Priority and click **Update**.

9. Click **Save**.

## Security

In **Security** page user can configure **RADIUS** and **Access Control List (ACL)** details.

To configure Security:

1. Navigate to **Switch Groups > Configuration > Security** tab
2. Enter **Server Address**.
3. Enter **RADIUS Key**.
4. In **AAA Authorization Server** select **None** or **RADIUS** from the drop-down.
5. Enter **RADIUS Dynamic Authorization**.

6. In **IP ACL**, click **Add New**.

- Enter **ACL Name**.
- Select the appropriate **Protocol** from the drop-down.
- Enter **Source IP/Mask**.
- Enter **Destination IP/Mask**.
- Click **Add**.

7. Click **Save**.

## User-Defined Overrides

### Note

The minimum device software version supported for this feature is 4.0.

User-Defined Overrides allows you to apply configuration in cnMatrix switches. If there are conflicts, the below settings will take precedence. The format used is the same as a configuration file exported from the device via its web UI or the "View Device Configuration" link in the device level configuration page.

## Switch Group Operations

Switch Groups can be Exported, Imported, Cloned, and Deleted.

### Export Switch Group

Click on the **Export** () icon in the Switch Group Table to download the configuration as a JSON file.

### Import Switch Group

1. Click **Import Switch Group**. A dialogue box appears.
2. Select the **Scope** from drop-down.
3. Select **import.json** and import the file.

4. Click **Import**.

### Clone Switch Group

Click on the **Clone** (📄) icon in the Switch Group Table to make a copy of the Switch Group.

### Delete Switch Group

To delete Switch Group from the list click **Delete** icon of the specific device row.

Configuration > Switch Groups

Learn more about Switch Groups.

### Retry Configure

When the user tries to apply any Switch Group on the device and if the job was skipped for the device as it was offline, the reason for the skip will be displayed as "Device was offline", in the Jobs page. In this case, when device comes Up and connects to cnMaestro, then cnMaestro will create an Auto-sync job for that device and pushes the Switch Group. (It will not apply to the switch group if the "Auto-Sync" was disabled in the switch group).

#### Note

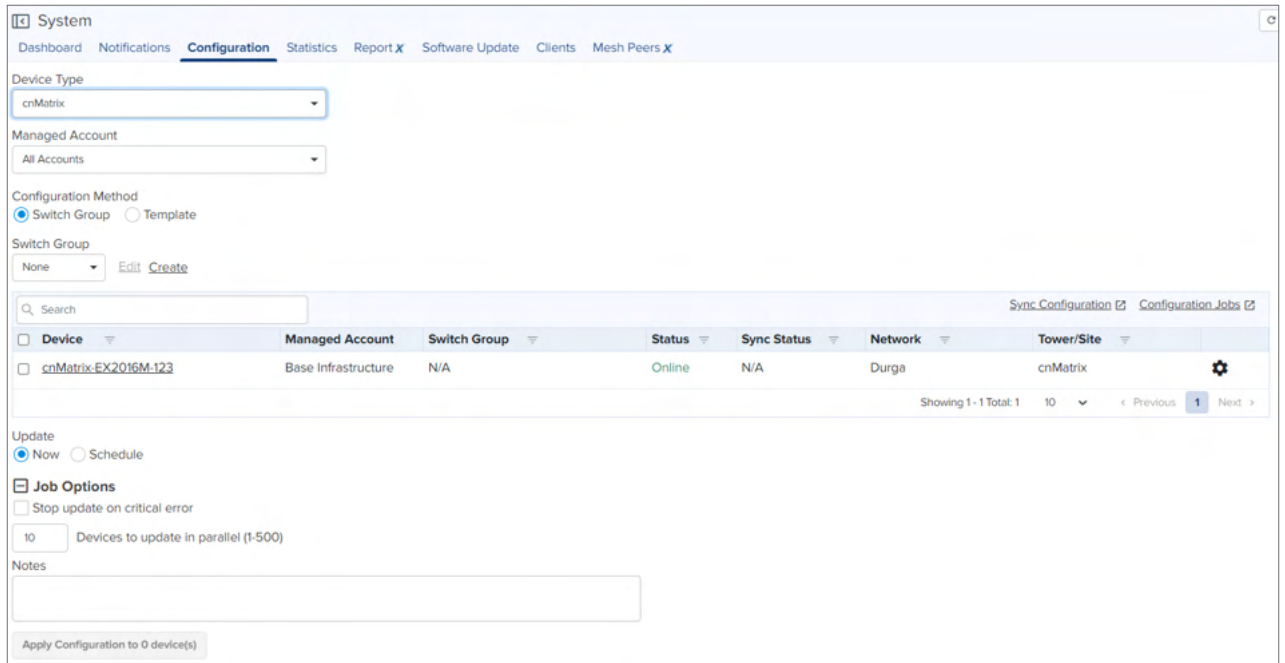

The config update (auto-sync) will happen only when the **Auto-Sync** option was enabled in the Switch Groups page. If the device was skipped/failed because of any other reason other than the "Device was offline", then the device will not be updated.

### Create a Configuration Job

Configuration job can be created from **System/Network/Tower/Site/Device Configuration** page. Select a device type and a set of devices along with switch groups to which they will be mapped. This can be done in three steps:

1. Select the Switch Group that needs to be pushed from drop-down.
2. Select the list of Switch Group **Device**.

### 3. Click **Apply Configuration**

## Synchronize (Sync) Configuration

Switch Groups can be configured to synchronize automatically or manually when they are updated. The setting is found in the Switch Group configuration.

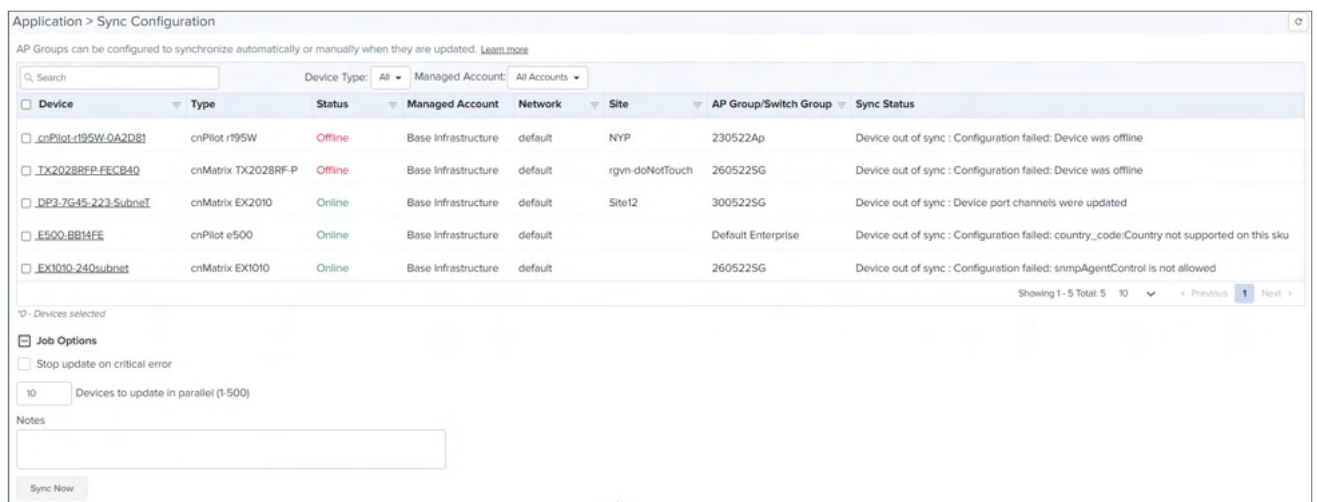

Switches by default synchronize automatically (so any change of switch group, followed by a Save, will immediately push configuration to the devices without manual intervention).

### Manual Synchronization

Manual configuration synchronization allows the user to synchronize any devices with a single action rather than updating each device separately. The page is located at **Administration > Sync Configuration**.

To sync the device manually, navigate to **Administration > Sync Configuration**. This location can also be accessed by clicking the **Sync** button on the **Switch Groups** page.

**Figure 337** Sync Configuration page

**Sync Configuration** has the following fields:

- Device (Hostname)
- Type
- Status (Online/Offline)
- Network (Network in which device is present)
- Site (Site under which device is present)
- Configuration Group (AP Group/Switch Group to which device is mapped)
- Sync Status (Sync status will tell whether job is completed or failed )

**Table 70** Sync Configuration parameters

Parameter	Description
Configuration Group	AP Group or Switch Group to which the device is mapped.
Device	Name of the device or hostname.
Network	Network in which device is present.
Site	Site under which device is present.
Status	Status of device online or offline.
Sync Status	Sync status specifies whether job is completed or failed.
Type	Name of the device platform.

### Steps to Sync Configuration:

Navigate to **Monitor and Manage > Network > Configuration** or the **Jobs** tab.

1. Navigate to **System > Configuration > Sync Configuration**.
2. Select the devices to synchronize and click **Sync Configuration**.

The screenshot shows the 'System' configuration page with the 'Configuration' tab selected. A search bar is present above a table of devices. The table has columns for Device, Managed Account, Configuration Group, Status, Sync Status, Network, and Tower/Site. The 'Sync Configuration' button is highlighted with a red box. Below the table, the third step of the process is described.

Device	Managed Account	Configuration Group	Status	Sync Status	Network	Tower/Site
DND_XE3_4TN_Permanent_Client	Base Infrastructure	N/A	Offline	N/A	default

Notes

Sync Now

User can also synchronize devices from **Application > Sync Configuration**.

**Note**  
Sync configuration can only be used if a Switch Group is already mapped to the device.

## Policy Based Automation (PBA)

Cambium Networks PBA feature fully automates commonly performed operations, improving network security while eliminating potential configuration errors. It allows the user to automatically configure switch port settings based on the device connected to the port. These dynamic PBA settings remain in-use for the duration of the device connection and are automatically cleared when the device disconnects from the switch.

PBA configuration is common to all switches within a Switch Group.

**Note**  
Dynamic PBA updates are indicated by asterisk \* on the Switch Dashboard and on the Switch Ports pages.

Configure the PBA as follows:

1. Navigate to **Configuration > Switch Groups > Network > Policy Based Automation.**
2. Navigate to **Rules** tab.

3. Click **Add New** to set the rules.

**Add New Rule** ✕

A PBA Rule specifies the criteria that is used to identify connected devices for PBA policies. Devices are identified based on generated traffic (LLDP) or MAC address.

**Add New Policy**

Enable

PBA Policies are an ordered list of PBA Rules(filters) and PBA Actions(configuration) that allow automatic configuration of ports based upon traffic. The policies are applied in increasing order of precedence until there is a positive match.

**Name\***

Enter alphanumeric string without spaces (max 32 chars)

**Rule\***

Criteria to detect connecting device by PBA. It is created in Rules tab.

**Action\***

Configuration to be updated when PBA is applied to a port. It is created in Actions tab.

**Precedence**

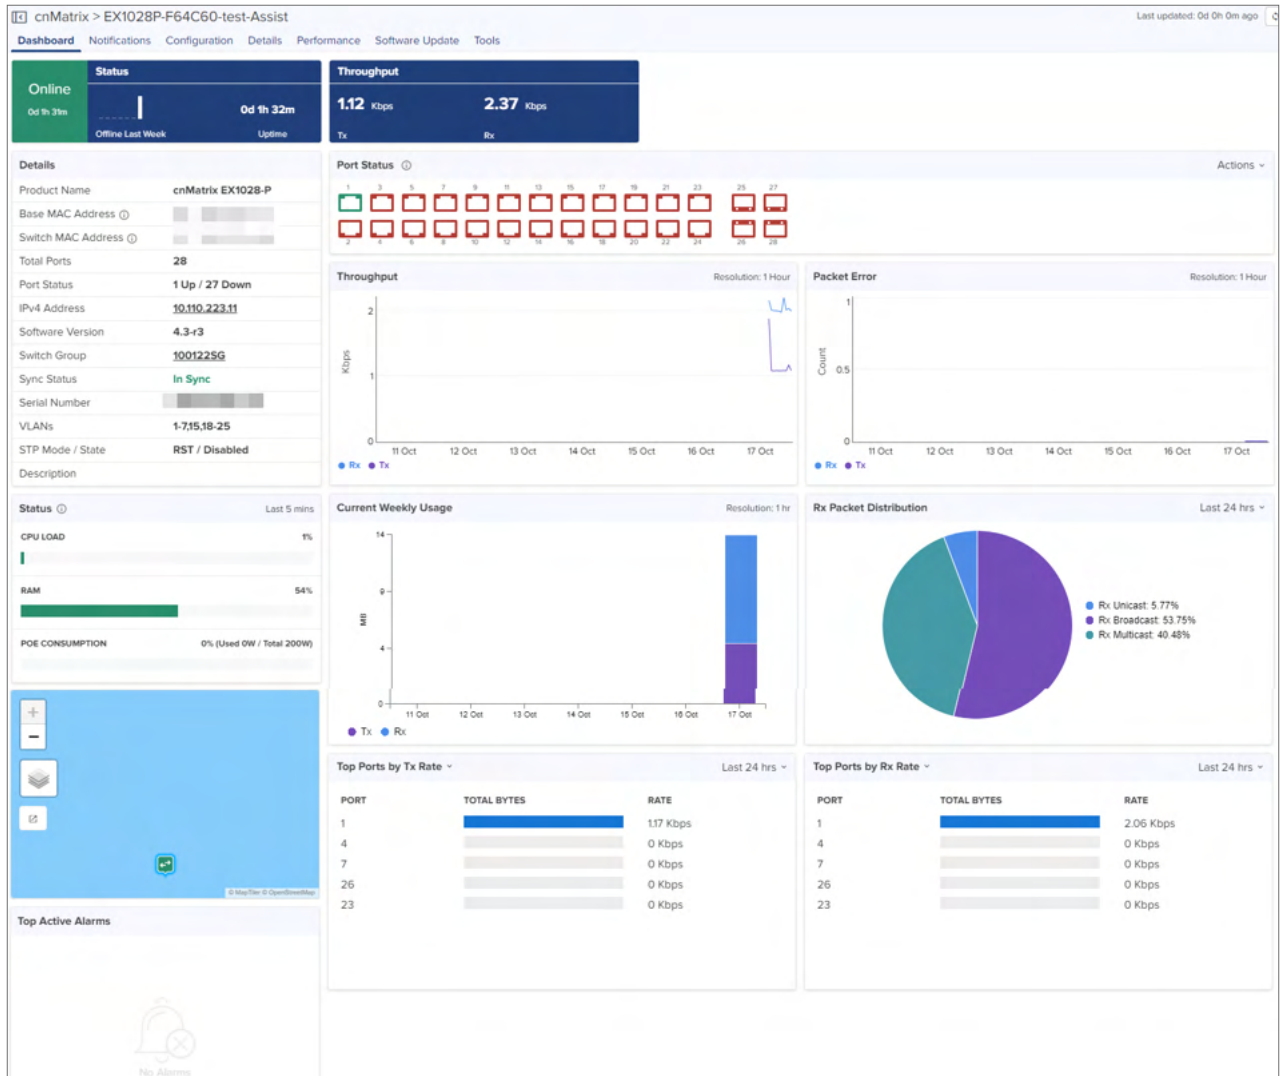

Evaluation order 1 (first) - 100 (last)

**Policy Ports List**

Port interfaces are specified using string format with interfaces and ranges in comma-separated (e.g., 'gi0/3,gi0/8-10,po123').  
Note: This feature requires cnMatrix software version later than '5.0.1'.

[Add](#)

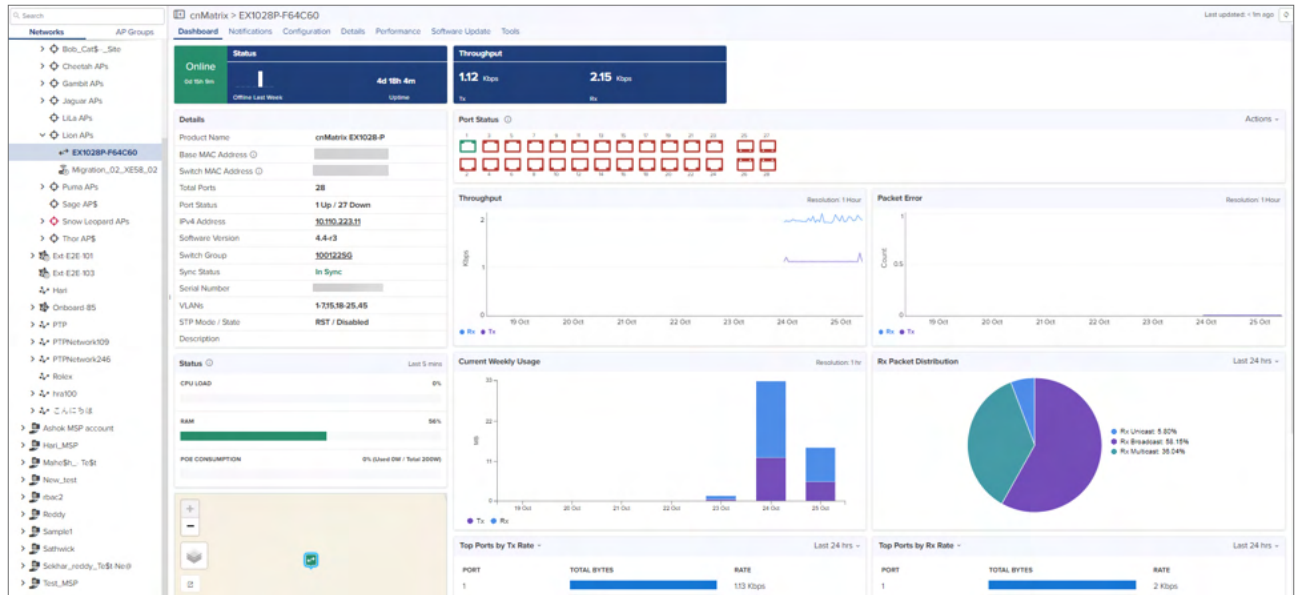

10.

In the cnMatrix dashboard, user can navigate to the following pages using the **Action** drop-down menu in Port Status.

- [Port Configuration](#)
- [Port Statistics](#)
- [Topology](#)
- [Remote CLI](#)
- [Port Operations](#)

## Switches

This section contains the following topics:

- [Export Switches](#)
- [cnMatrix Switches](#)
- [Action](#)
- [Switch Configuration](#)

The Switches page is accessed by selecting the **Switch Groups > Switches** tab lists all of the physical switches assigned to the Switch Group. The Switch Dashboard and switch override configurations settings are accessible through this page.

Switch overrides allows certain attributes for each switch to be configured individually.

### Note

For configuration, a switch must belong to a Switch Group.

Configure the Switch Group as follows:

- Navigate to **Switch Groups >** select the switch from the list and click **Switches** page to view and edit the onboarded switches.

Device	MAC	Configuration Group	Status	Onboarding Status	Serial Number	IPv4 Address	IPv6 Address	S/W Version	Type	Sync Status	Location	Tower/Site
EX30528P-A5EF00		011thJun24	Online (0d 0h 0m)	Waiting for Approval		10.110.156.3	N/A	5.0.1-4	cnMatrix EX3052R-P	N/A		ABD

The Switches details view displays following fields by default:

- Device, Health, Onboarding Status, Serial Number, IP Address, Switch Group, Type, Site, and Action tab.

Action column can be used to edit or delete any device of the Switches.

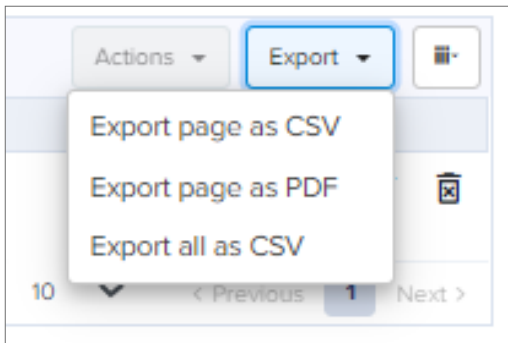

User can click on top bar to include additional fields in Switches Detail view.

<input checked="" type="checkbox"/> <b>General</b>	<input checked="" type="checkbox"/> Device	<input checked="" type="checkbox"/> IP Address

[Factory Reset](#)

[Apply Configuration](#) [View Configuration Jobs](#)

2. Click **Apply Configuration**.

In the Configuration page, you can override the group configuration with device-specific configuration:

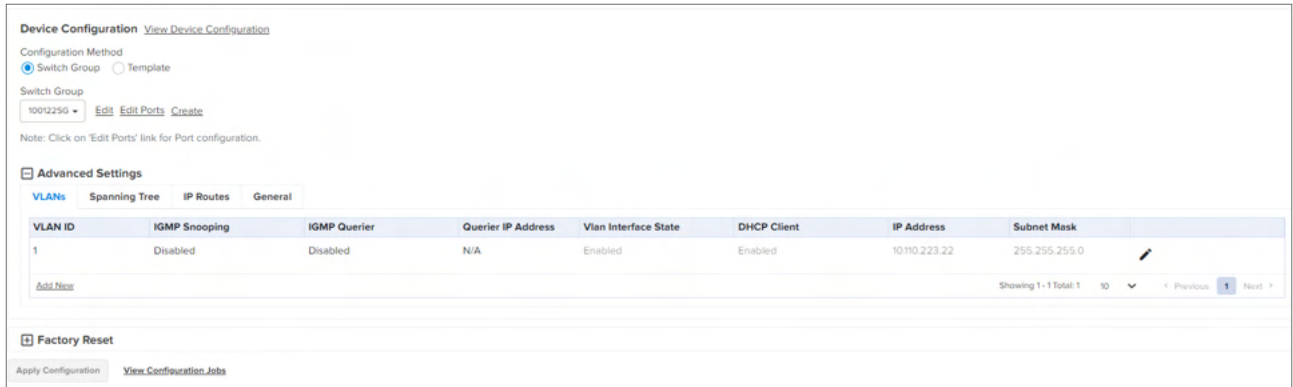

- [Device Configuration](#)
- [Advanced Settings](#)
- [Factory Reset](#)

## Device Configuration

Device Configuration allows you to configure the Configuration Method as Switch Group/Template.

### Switch Group Configuration Method

Enable the Switch Group and select a device from the Switch Group drop-down.

To Edit or Create a Switch Group. Refer to the [Switch Groups Configuration](#).

## Advanced Settings

Navigate to the Advanced Settings and configure the following parameters:

- [VLANs](#)
- [Spanning Tree](#)
- [IP Routes](#)
- [General](#)

### VLANs

VLANs interface allows the user to edit/Add the VLAN details such as **VLAN ID**, **DHCP Client**, **IP Address**, and **Subnet Mask**.

- Click **Advanced Settings** in **Configuration** page and navigate to **VLAN Interface** tab.

- Click the edit (✎) icon or **Add New**.
- Enter the required details and click **Add**

## Spanning Tree

Certain configuration parameters are different for each Switch, and these are highlighted within cnMaestro as Overrides.

Configure the spanning tree to override as follows:

- Click **Advanced Settings** in **Configuration** page and navigate to **General** tab.
- • Click **Enable Spanning Tree Overrides**.
- Select the **Spanning Tree** parameters.

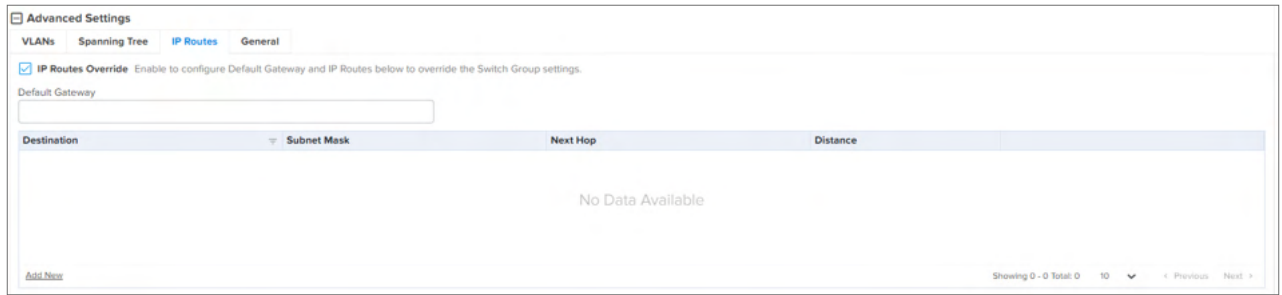

### Note

If Spanning Tree is disabled the overrides feature will be disabled on the Switch configuration.

## IP Routes

IP Routes allows the user to configure the Default Gateway and IP Routes to override the Switch Group.

- Configure the IP Route as follows:
- Enable the **IP Routes Override** and enter the **Default Gateway**.

- Click **Add New**.
- Enter the parameters such as Destination Network, Subnet Mask, Next Hop, and Distance.
- Click **Add**.

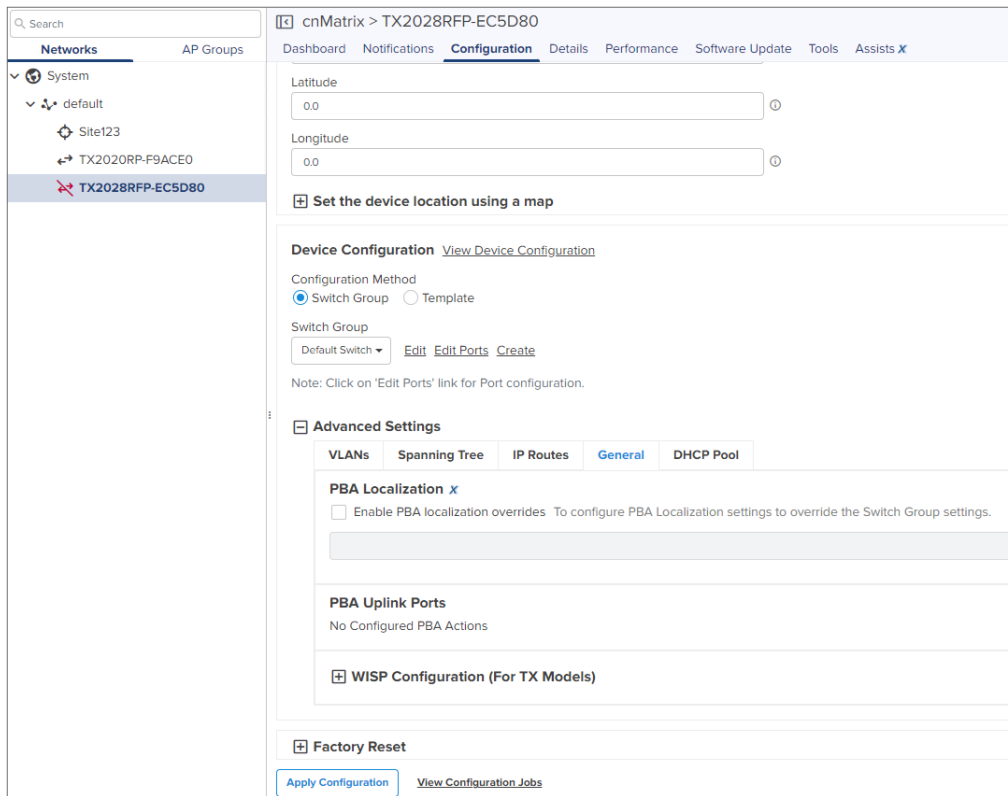

Default gateway IP will override the all IPs of the Switch Groups.

### General

General tabs allows to configure PBA Localization settings to override the Switch Group settings.

To configure the PBA localization, perform as follows:

- Click **Advanced Settings** in **Configuration** page and navigate to **General** tab.

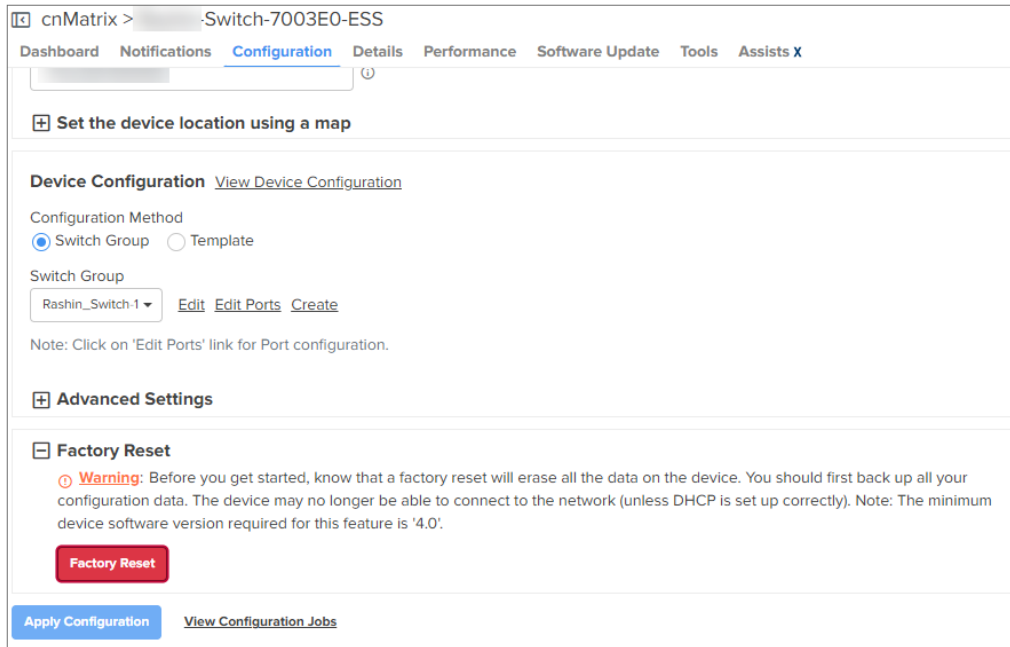

- Enable **PBA localization** overrides.
- Select **Use Site Name** or **Custom**.
- Enter **PBA Uplink Ports**.

## Factory Reset

To erase all the configuration on the device and bring the device back to the default factory configuration, complete the following steps:

1. Navigate to the cnMatrix device **Configuration** page.
2. Expand the **Factory Reset** section. and click **Factory Reset**.

3. In the pop-up window that appears, Click **Yes, Factory reset.**

## Switch Ports

The **Switch Ports** table displays the list of Ports and the Port Channel assigned to the specific switch. The **Switch Ports** table allows administrators to configure the port settings by port ID for all ports within the **Switch Group**. By default, a port ID identifies the switch (by switch name) and port number.

For example: Gi0/1

It supports bulk editing of Switch Port settings across all physical switches.

To view the **Switch Ports**, navigate to **Configuration > Switch Groups > Switch Ports**.

## Ports

The **Ports** table supports creating port channels, editing port configuration and configuring port parameters.

Port	Switch	Tags	Description	Interface	Administrative State	Operational State	PoE Capable
Gi0/1	DP3-7G45-223-Subnet	N/A	DP.DonotUse-EX2010-Management	RJ-45	Enabled	Up	No
Gi0/2	DP3-7G45-223-Subnet	N/A	port-tw0	RJ-45	Enabled	Down	No
Gi0/3	DP3-7G45-223-Subnet	N/A	cnamtrix-3	RJ-45	Enabled	Down	No
Gi0/4	DP3-7G45-223-Subnet	N/A	32	RJ-45	Enabled	Down	No
Gi0/5	DP3-7G45-223-Subnet	N/A	camblum6	RJ-45	Enabled	Down	No
Gi0/6	DP3-7G45-223-Subnet	N/A	stats-6	RJ-45	Enabled	Down	No
Gi0/7	DP3-7G45-223-Subnet	N/A	seven	RJ-45	Enabled	Down	No
Gi0/8	DP3-7G45-223-Subnet	N/A		RJ-45	Enabled	Down	No
Gi0/9	DP3-7G45-223-Subnet	N/A	ap-10	SFP	Enabled	Down	No
Gi0/10	DP3-7G45-223-Subnet	N/A	trunkport	SFP	Enabled	Down	No

Navigate to **Switch Ports > Configuration** tab, configure the following parameters:

- General
- Physical
- Network
- Security

## General Tab

The screenshot shows the 'Switch Ports' configuration page for a switch group named 'Test123\_clone'. The 'Configuration' tab is active, and the 'Ports' section is expanded. A table lists 12 ports with the following columns: Port, Switch, Tags, Description, Interface, Administrative State, Operational State, and PoE Capable. The ports are grouped into Gigabit Ethernet (Gi0/1-8) and SFP+ (Ex0/1-2) categories. Below the table, there are buttons for 'Apply Configuration' and 'View Configuration Jobs'.

Port	Switch	Tags	Description	Interface	Administrative State	Operational State	PoE Capable
Gi0/1	TX2012RP-AD7700	N/A	TX2020RP-B0E280-DND-De...	RJ-45	Enabled	Up	Yes
Gi0/2	TX2012RP-AD7700	N/A		RJ-45	Enabled	Down	Yes
Gi0/3	TX2012RP-AD7700	N/A		RJ-45	Enabled	Down	Yes
Gi0/4	TX2012RP-AD7700	N/A		RJ-45	Enabled	Down	Yes
Gi0/5	TX2012RP-AD7700	N/A		RJ-45	Enabled	Down	Yes
Gi0/6	TX2012RP-AD7700	N/A		RJ-45	Enabled	Down	Yes
Gi0/7	TX2012RP-AD7700	N/A		RJ-45	Enabled	Down	Yes
Gi0/8	TX2012RP-AD7700	N/A		RJ-45	Enabled	Down	Yes
Ex0/1	TX2012RP-AD7700	N/A		SFP+	Enabled	Down	No
Ex0/2	TX2012RP-AD7700	N/A		SFP+	Enabled	Down	No

The **Ports** General details view displays following fields by default:

- Port, Tags, Description, Interface, Administrative State, Operational State, PoE Capable, and Edit.
- Click on **Apply Configuration** whenever you are sure to apply the modified configuration, preferably after all the port details are updated.

User can click on top bar to include additional fields in **Ports** General Detail view.

The screenshot shows a configuration options menu with the following categories and fields:

- General** (checked):
  - Interface
  - Operational State
  - Administrative State

To apply filters, follow the below steps:

1. Click on the **Apply Filter(s)** tab.
2. A new window titled **Filters** appears.

The image shows a 'Filters' dialog box with a close button (X) in the top right corner. It contains four search input fields, each with a magnifying glass icon and the text 'Search'. The fields are labeled 'Port', 'Switch', 'Tags', and 'Description'. At the bottom of the dialog, there are two buttons: a white 'Reset' button and a blue 'Apply Filter(s)' button.

3. Enter information in any field based on your filtering needs.
4. Click on **Apply Filter(s)**.

## 60 GHz cnWave Network Configuration

cnWave 60 GHz operates with Cambium Networks cnMaestro management system. cnMaestro simplifies device management by offering full network visibility and zero-touch provisioning. Using cnMaestro, user can view network status and perform a full suite of wireless network management functions in real time including optimizing system availability, maximizing throughput, and meeting the emerging needs of business and residential customers.

### Managing E2E Network

The Monitor and Manage tab displays the monitoring panel of 60 GHz cnWave for cnMaestro. This section includes the following:

- [Dashboard](#)
- [Notifications](#)
- [Configuration](#)
- [Links](#)
- [Statistics](#)
- [Software Update](#)
- [Report](#)
- [Tools](#)

### Dashboard

Dashboard pages are customized for each device type and aggregation level (such as E2E Network, Node, and Site). The dashboard section displays the **Nodes, Links, Wireless Throughput of PoP(s), Wired Throughput of PoP(s), Alarms, E2E Controller Details, Top Active Alarms, Map, Top Links by MCS, Top Links by RSSI, Top Links by SNR, Top Node(s) Top PoP(s), Top DN(s), and Top CN(s)**.

**Note**

Backup CN links are not shown as Offline links in links widget.

**Auto Manage IPv6 Routes (E2E Controller ↔ Node)**

The **External E2E Network**. dashboard page displays the **Auto Manage IPv6 Routes (E2E Controller ↔ Node)** tab, if you enable **Auto Manage Routes** in the **Tools > Settings** page of **External E2E Network**.

This feature automates IPv6 routes for DNs and CNs based on status of the topology and PoP nodes. It is applicable only if PoP nodes and E2E Controller are in the same Network or containing the same prefix length.

## Dashboard Maps

In the dashboard map, when user hovers on particular **PoP**, **DN** or **CN** it pops-up the device details. When user hovers on particular link it pops up the link details.

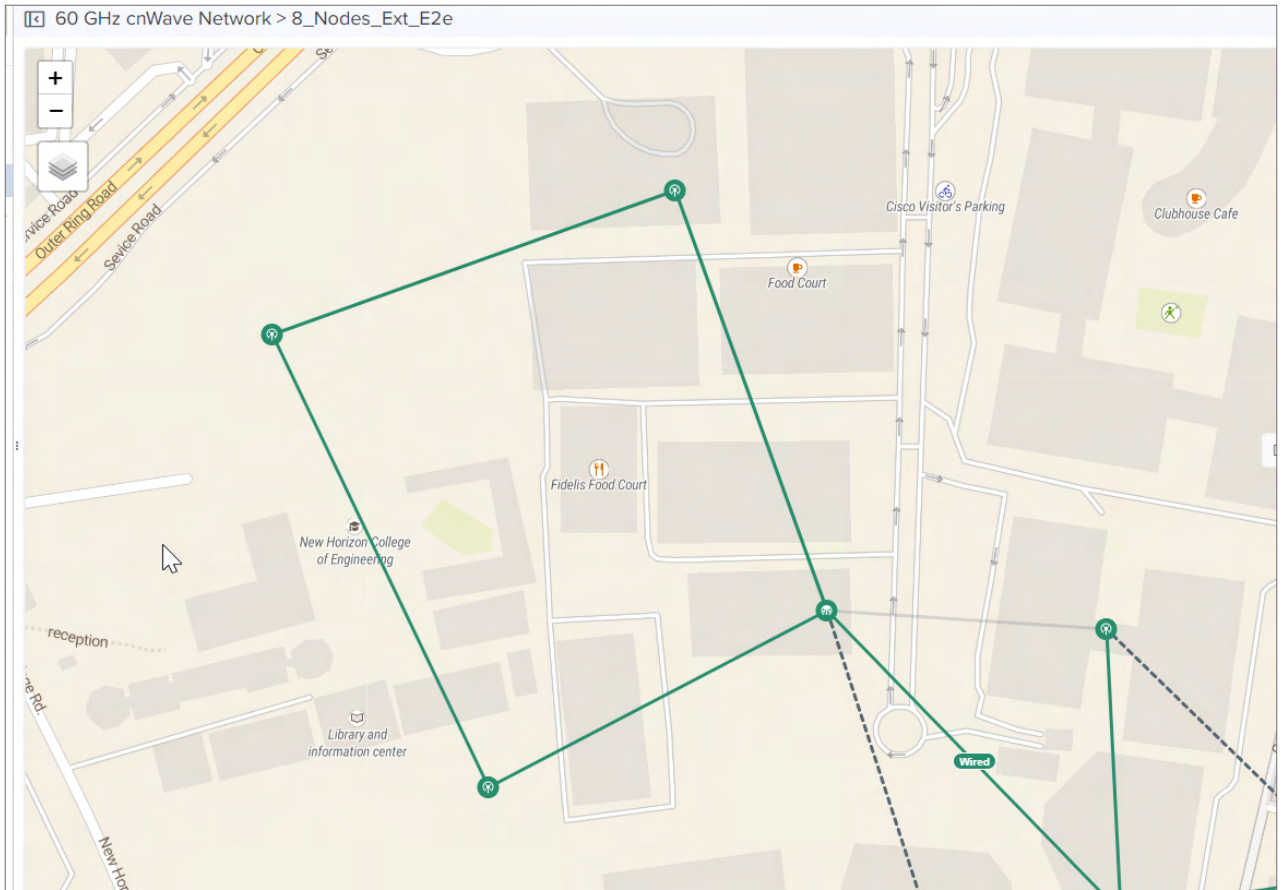

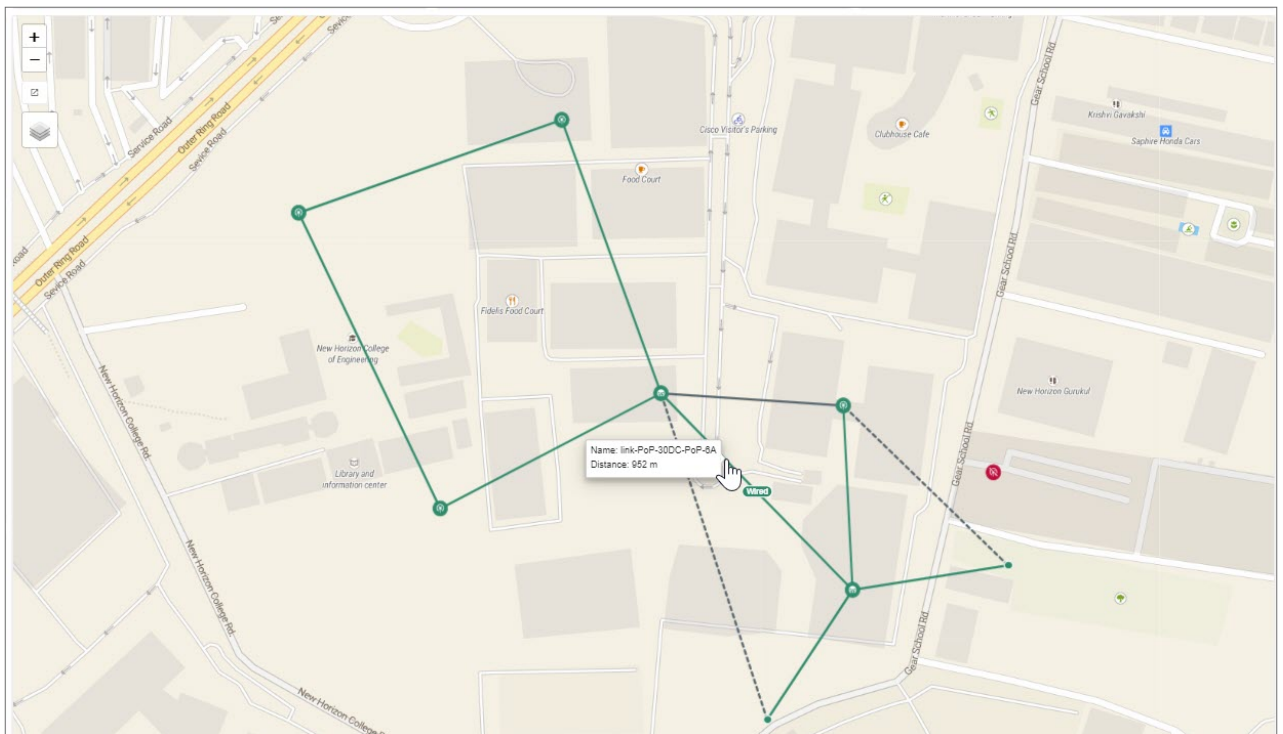

- Dotted line displays the Backup CN link between the DN and CN..

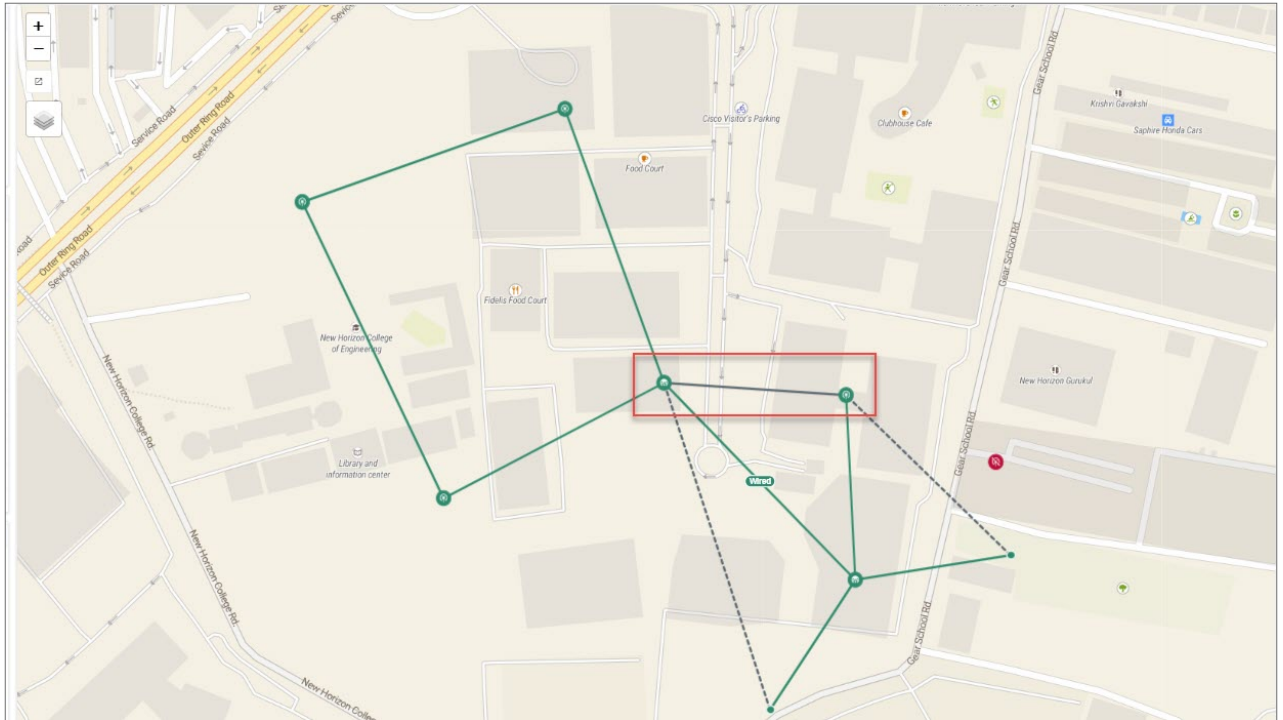

- Continuous line display the wireless link between PoP, DN, or CN..

- Continuous line with **Wired** tag displays the wired link between PoP, DN, or CN.

- Continuous line with gray color displays the **Disabled Ignition** link.

## Notifications

Notifications are same as shown above for other devices, refer to [Notification](#) for more details.

## Configuration

Configure the following after onboarding the External or Onboard E2E Controller:

- [Basic](#)
- [Management](#)
- [Radio](#)
- [Security](#)
- [Advanced](#)
- [E2E Controller](#)
- [High Availability X](#)

### Note

Once user selects the **Auto-assign** IPv6 Addresses while configuring E2E Controller and PoP node. Use the same IPv6 during the prefix allocation.

## Basic Configuration

1. Navigate to **Configuration > Basic** to configure basic settings of E2E Controller.

60 GHz cnWave Network > Ext-E2E-100

Dashboard Notifications **Configuration** Links Statistics Report X Software Update Tools

Basic Management Radio Security Advanced E2E Controller

### Prefix Allocation

Centralized  Deterministic

Seed Prefix\*  
fd12:36cc:c63::48 [Generate](#) IPv6 'seed prefix' in CIDR format from which subnet prefixes are allocated to all DNs and CNs (e.g. fdce:b00c:cafe::/48)

Prefix Length  
64 Length of per-node allocated prefixes

### Layer 2 Bridge

Enable Selecting this option will enable Layer 2 network bridging (via automatically created tunnels) across all nodes connected to a PoP. This will facilitate bridging of IPv4 traffic across the wireless networks.

### IPv6 Layer3 CPE Address

SLAAC  DHCPv6 Relay

### CPE Prefix Zoning

Summarized CPE Prefix Prefix summarizing network wide customized CPE Prefixes/Prefixes allocated by DHCPv6 Relay (that fall outside Seed Prefix range).

Country  
Other

DNS Servers  
DNS server list, comma separated. IPv4 is only supported when Layer 2 bridge is enabled.

NTP Server\*  
fd10:ba5e:100 NTP Server hostnames or IP addresses, comma separated. IPv4 address is only supported when Layer 2 Bridge is enabled. Note: NTP should be enabled from E2E Network -> Tools -> Settings page.

Time Zone  
UTC-05:00

Save Reset

### Note

- **Prefix allocation** automatically gets updated, when E2E Controller is managed by cnMaestro.
- Prefix Length of 48 is supported in Seed Prefix configuration.

6 GHz radio does not work in Italy country. 6 GHz radio does not work in Italy.

2. In the **Prefix Allocation**, select **Centralized** or **Deterministic** to allocate the loopback IPv6 address for the devices.
3. Enter the **Seed Prefix** and **Prefix Length**.
4. Enabling **Layer 2 Bridge** is optional.

Enabling this option will enable Layer 2 network bridging (via automatically created tunnels) connected across all nodes and facilitates bridging of IPv4 traffic across the wireless networks. It also enables the configuration of VLAN Management and Ports on all PoP, DN, and CN Nodes.

In **Layer 2 Bridge**, select the check box to enable Layer2 Network Bridging, choose **Tunnel Concentrator** as **Best PoP** or **Static**. If user selects Tunnel Concentrator as Static, enter an external switch/router IPv6 address.

### Note

**IPv6 Layer3 CPE Address** can be enabled when E2E Controller is running 1.1 version and Layer 2 Bridge is disabled.

1. Select the **IPv6 Layer3 CPE Address** as **SLAAC** or **DHCPv6 Relay**.

If user selects **IPv6 Layer3 CPE Address** as **DHCPv6 Relay**, user can configure the DHCPv6 server address. The CPE device sends a DHCP request. The CN device uses the Address and Prefix from the corresponding DHCP pool and DHCPv6 server assigns address to the CPE device.

#### Note

- By default **Country** is **Other**, user can configure it.
- Enter the **Hostnames** or **IP address** of NTP server.

2. Select the **Country** from the drop-down.
3. Enter the **DNS Server**.
4. Enter **NTP Server**.
5. Select the **Time Zone** from the drop-down.

#### Note

By default **Wireless Scans** will be disabled.

6. Click **Save**.

## Management

Management configuration allows user to configure and manage the credentials of the administrator and it allows enable **SNMP**.

1. Navigate to **Configuration > Management** to set the **Device GUI Passwords** and to enable the **SNMP**.

The screenshot shows the 'Management' configuration page for a 60 GHz cnWave Network. The page is titled '60 GHz cnWave Network > Ext-E2E-100'. The navigation menu includes 'Dashboard', 'Notifications', 'Configuration', 'Links', 'Statistics', 'Report X', 'Software Update', and 'Tools'. The 'Configuration' menu is expanded, showing 'Basic', 'Management', 'Radio', 'Security', 'Advanced', and 'E2E Controller'. The 'Management' section is active, showing 'Device GUI Users' and 'SNMP' settings.

**Device GUI Users**

- Admin User Password: [Text Field]
- Installer User Password: [Text Field]
- Monitor User Password: [Text Field]

**SNMP**

- Enable SNMP
- System Contact: [Text Field] (No Contact)
- System Location: [Text Field] (No Location)
- Community: [Text Field] (SNMP community string)
- IPv4 Source Address: [Text Field] (Allowed IPv4 source address prefix)
- IPv6 Source Address: [Text Field] (Allowed IPv6 source address prefix)
- SNMPv3 User: [Text Field]
- SNMPv3 Security Level:  None  Authentication Only  Authentication & Privacy

2. Click **Save**.

## Radio

The Radio page manages the Radio related settings.

60 GHz cnWave Network > Onboard-Multi-PoP Raja

Basic Management **Radio** Security Advanced E2E Controller

**Wireless Scans**

Scheduled Beam Adjustment  
 Enabled  Disabled

Scan Interval  
 Interval between wireless scans in seconds

**CN Channel Rescan**

Enabled  Disabled

CN Channel Rescan timeout  
 A CN without a wireless link established beyond this timeout will automatically initiate channel scanning.

**Fast Acquisition**

Mode  
 Disabled Always scan all fixed beams and save active beam for future  
 Compatibility Mode Associate on saved beam and perform full scan if unsuccessful  
 Static Mode Associate on saved beam only. CN channel Rescan not supported

**Asymmetric TDD**

Duty Cycle

**Other Settings**

Enable post acquisition beam refinement Disabling this control may reduce link budget by up to 2 dB.

- **Wireless Scans**

- **Enabled/Disabled**—Enable or disable scheduled beam adjustment.
- **Scan Interval**—Specify an interval between wireless scans, in seconds.

- **CN Channel Rescan**

- **Enabled/Disabled**—Enable or disable CN channel rescan.

**Note**

You can enable CN channel rescan only when Fast Acquisition is set to either **Disabled** or **Compatibility Mode**.

- **CN Channel Rescan timeout**—Specify a timeout interval for a CN that does not have a wireless link to reinitiate channel scanning, in seconds.

- **Fast Acquisition**

**Note**

Fast acquisition is supported only on 60 GHz cnWave devices running System Release version 1.3 or later.

- **Mode**

- **Disabled**—On link acquisition, performs IBF scan on 61 fixed beams. This is the default option.
- **Compatibility Mode**—On link acquisition, tries the last known (if present) beam index. If unsuccessful, tries normal IBF scan.

- **Static Mode**—On link acquisition, tries the last known (if present) beam index. If unsuccessful, the association fails.
- **Asymmetric TDD**
  - **Duty Cycle**—Select a duty cycle from the drop-down list. For example:
    - **60% Downlink / 40% Uplink**—Set 60% of physical bandwidth for downloading and 40% of the physical bandwidth for uploading.
- **Other Settings**
  - **Enable post acquisition beam refinement**—Select to enable.

## Security

Security page allows the user to enable the wireless security **PSK** or **802.1x**. The disabled option connects as unsecure devices.

To **Enable PSK**, complete the following steps:

1. Navigate to **Configuration > Security** tab.
2. Select **PSK** in **Wireless Security**.

60 GHz cnWave Network > Ext-E2E-100

Dashboard Notifications **Configuration** Links Statistics Report X Software Update Tools

Basic Management Radio **Security** Advanced E2E Controller

Wireless Security

Disabled  PSK  802.1x Enable wireless security and set the method

Passphrase

.....

WPA2 pre-shared key, in ASCII passphrase format (8-63 characters). If blank, default psk key will be used.

Disable GUI Login

Disable SSH

Save Reset

3. Enter the **Passphrase**.

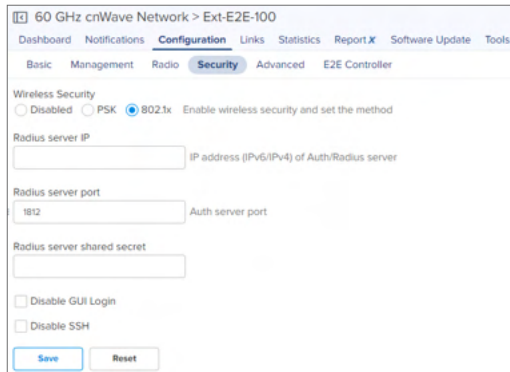

### Note

If **Passphrase** field is blank, default psk key is used.

4. Click **Save**.

To **Enable 802.1x**, complete the following steps:

1. Navigate to **Configuration > Security**.
2. Select **802.1x** in **Wireless Security**.

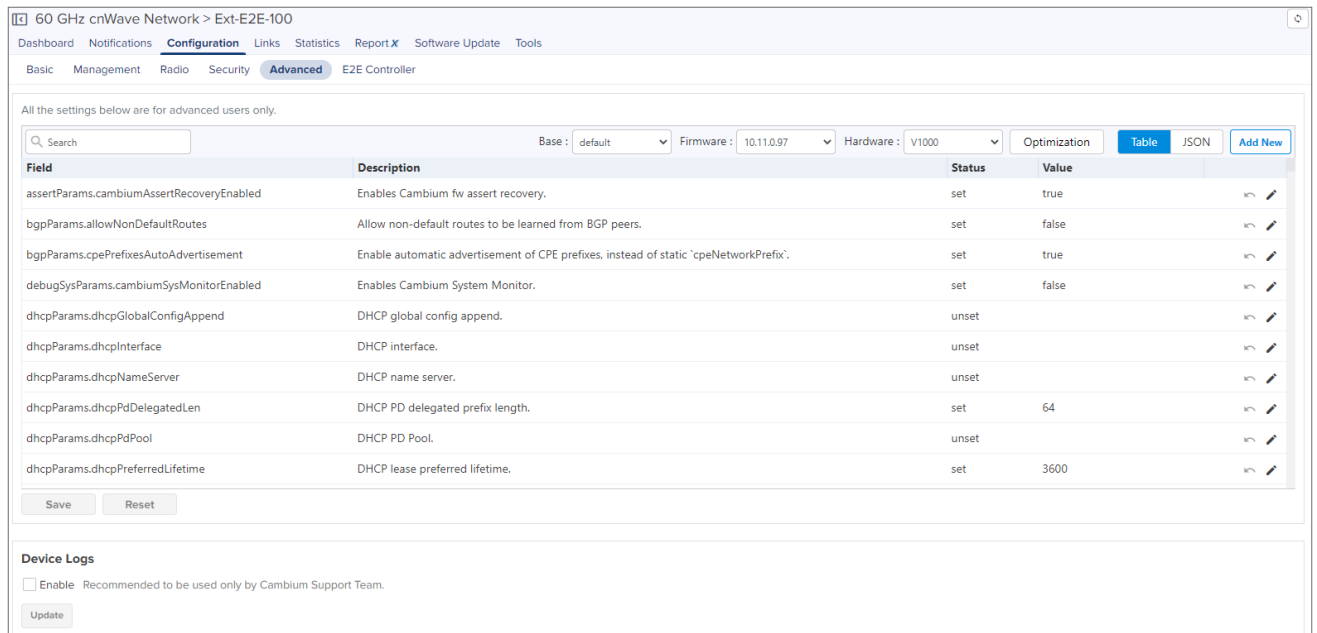

3. Enter the **Radius server IP**.
4. Enter the **Radius Server port**.
5. Enter the **Radius Server Shared Secret**.
6. Click **Save**.

## Advanced

**Advanced** tab allows the advanced user to edit the settings of the [Table](#) and [JSON](#) format of the E2E Controller.

It also allows to optimize the network using the following options:

- Optimize Control Superframe Allocation
- Optimize DPA Zone Allocation
- Clear Node Auto Configuration

## Table

In the **Table** advanced user can view and edit **Field Name** and **Value**. The field names are sorted in alphabetical order.

To add a field:

1. Navigate to **Configuration > Advanced**.
2. Click **Add New**.
3. Enter the **Field Name** and **Value**.

4. Click **Save**.

## JSON

JSON allows Advanced user to download or view and edit in json format.

To view or edit the JSON file:

1. Navigate to **Configuration > Advanced > JSON**.

### Note

Enabling the Device Logs is supported only for External E2E Controller devices and it allows the Support team to view the logs.

2. Enable **Device Logs** and click **Update**.

## E2E Controller

E2E Controller allows the advanced user to set the **Table** and download the **JSON** file.

### Table

In **E2E Controller Table** user can edit or add **Field Name** and **Value**.

To Add Field:

1. Navigate to **Configuration > E2E Controller**.
2. Click **Add New**.

The screenshot shows the configuration page for the E2E Controller. It features a table with columns for Field, Description, Status, and Value. The table lists various configuration parameters such as flags.airtime\_alloc\_update\_interval, flags.airtime\_ul\_dl\_ratio, and flags.app\_router\_port, all currently set to 'unset'. There are 'Save' and 'Reset' buttons at the bottom left, and 'Table', 'JSON', and 'Add New' buttons at the top right.

Field	Description	Status	Value
flags.airtime_alloc_update_interval	The minimum time interval at which the controller will recompute the airtime alloc...	unset	
flags.airtime_ul_dl_ratio	Percentage of uplink traffic to allow as a fraction of downlink traffic.	unset	
flags.app_router_port	The port controller listens on for apps.	unset	
flags.bstar_failover_missed_heartbeats	Number of missed heartbeats before declaring the other controller 'dead'.	unset	
flags.bstar_heartbeat_period_ms	Period for heartbeats between controllers, in milliseconds.	unset	
flags.bstar_peer_host	The hostname or IP address of the peer controller in the high availability configur...	unset	
flags.bstar_peer_ip	[DEPRECATED: use 'bstar_peer_host' instead] The IP address of the peer controller ...	unset	
flags.bstar_peer_pub_port	The publisher port on the peer controller in the high availability configuration.	unset	
flags.bstar_primary	The primary (true) or backup (false) controller in the high availability configuration.	unset	
flags.bstar_primary_recovery_heartbeats	If the backup is 'active' and the primary comes back online, the backup will yield t...	unset	

3. Enter the **Field Name** and **Value**.

The 'Add new field' dialog box contains a 'Field Name' input field with a dropdown menu set to 'String', a 'Value' input field, and 'Save' and 'Cancel' buttons at the bottom.

4. 1. Click **Save**.

## JSON

JSON allows Advanced user to download or view and edit in JSON format. To view or edit the JSON file, navigate to **Configuration > E2E Controller > JSON**.

## High Availability X

Using cnMaestro, you can enable and configure high availability (HA) support in a Multi-PoP Onboard E2E Controller that is running 60 GHz cnWave devices in a mesh network. This HA support configuration allows you to configure a primary (active mode) and a backup or secondary (passive mode) E2E Controller from cnMaestro.

If the active primary E2E Controller, with HA enabled and functioning, goes down, then the backup E2E Controller is active and manages the 60 GHz cnWave devices. All the devices report to the backup E2E Controller until the primary E2E Controller comes back.

This topic covers the following sections:

- [Theory of operation](#)
- [Configuring HA support](#)
- [Caveats of HA configuration](#)

## Theory of operation

E2E Controllers use the high-availability protocol (primary-backup) and support the HA configuration. In such a primary-backup setup, two controllers (peers) run on separate PoP nodes and are designated as either primary or backup. If the primary controller catastrophically fails (for example, power outage, network failure, hardware failure), the backup controller assumes control of the cnWave 60 GHz network.

The HA configuration supports the following operational mechanisms for Onboard E2E Controller:

1. **Role designation:** At setup, one controller is statically designated as primary, and the other as backup. This designation determines their initial operational roles during network management.
2. **Initial state:** The primary controller starts in an active state, overseeing network configuration and collecting network statistics. The backup controller remains in a passive state, prepared to assume control if needed.
3. **Health monitoring:** Both primary and backup controllers monitor each other's status through regular heartbeat messages, sent every five seconds. These messages are crucial for detecting any disruptions or failures in the primary (active) controller.
4. **Data synchronization:** Both primary and backup controllers periodically synchronize topology and configuration data. This synchronization is key to enabling a fast and seamless transition from passive to active state, ensuring the backup controller can immediately manage the network with up-to-date settings and configurations.
5. **Failover process:** If the primary (active) controller fails, detected by a loss of heartbeat messages for 20 seconds, the backup controller automatically transitions from passive to active. This change ensures continuous network management without manual intervention.
6. **Recovery and Reversion:** After the failed primary controller is repaired and comes back online, it starts in a passive state. It remains in this passive state until it has successfully exchanged heartbeat messages for 150 seconds, ensuring stability. Following this period, a role reversal occurs where the primary controller transitions back to active and the backup controller reverts to passive.

## Configuring HA support

### Note

The HA support is applicable only to cnMaestro X accounts. Consider the following key points:

- The Onboard E2E Controller must be managed using cnMaestro.
- The Onboard network must have at least two PoP nodes to enable HA.
- The two PoP nodes are selected to host Primary. The backup controllers should be able to communicate over wire/ethernet.
- For HA, all the DN/CN nodes in network are expected to have a route to report to both the HA peers.
- The HA feature is supported in a network when devices are running 1.4 or above software version.

To enable the HA support for E2E Controller, complete the following steps:

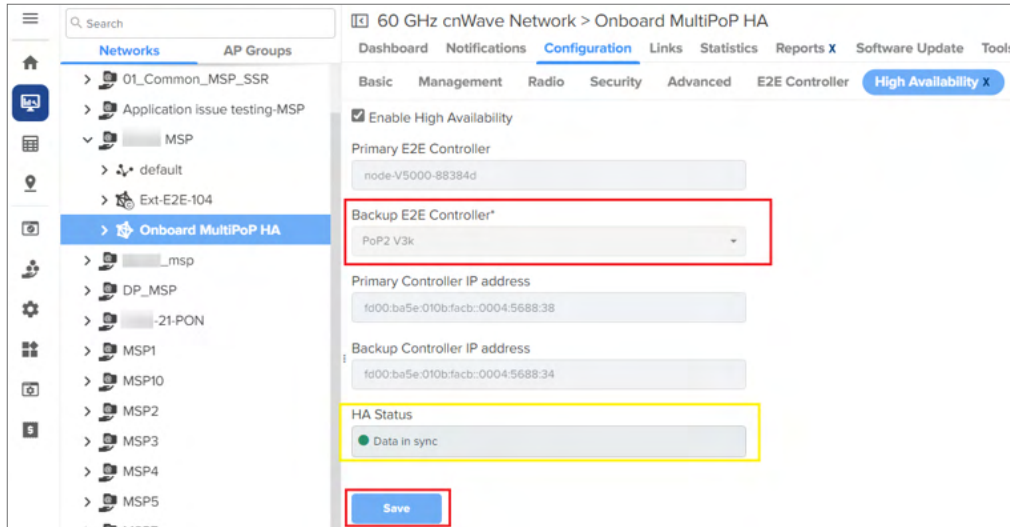

1. From the Home page of cnMaestro, navigate to **Monitor and Manage > E2E Network > Configuration > High Availability X**.

The **Enable High Availability** check box appears.

2. To enable the HA support for E2E Controller, select the **Enable High Availability** check box.

The **High Availability X** page displays options to configure the backup Controller. By default, the current Onboard Controller is selected as the primary controller.

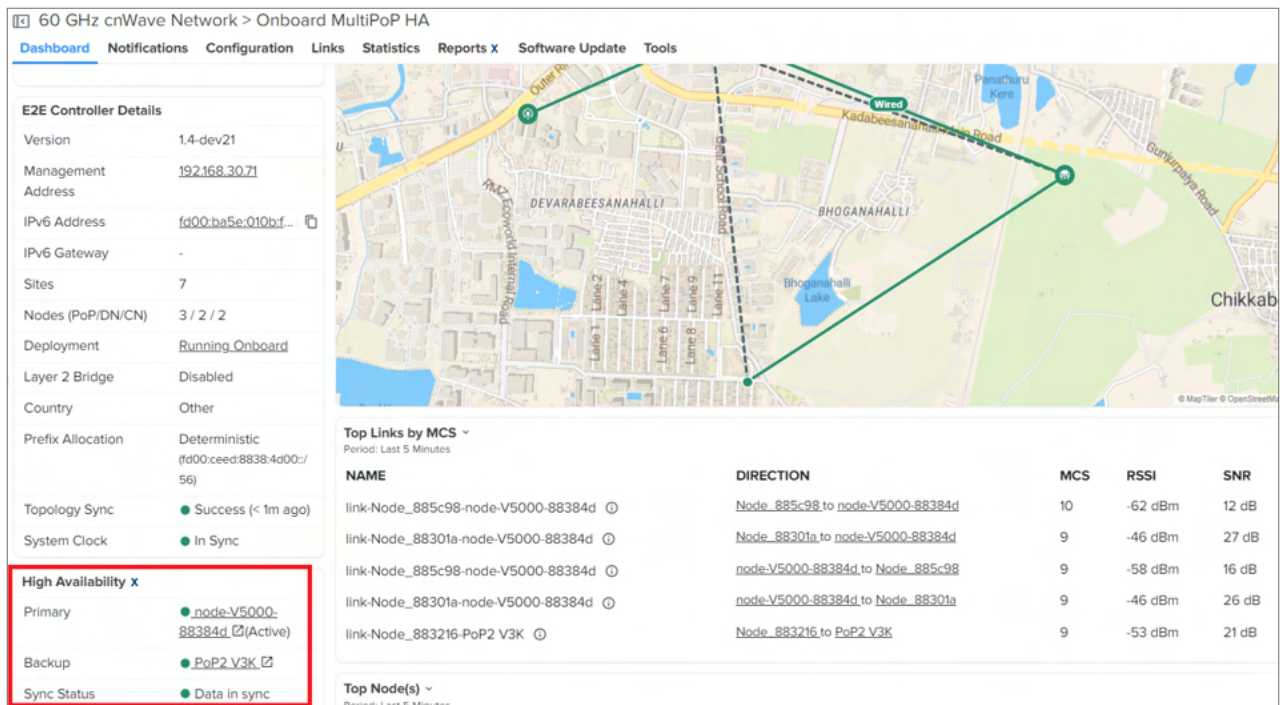

- From the **Backup E2E Controller** drop-down list, select the required node that is connected to the complete network.

You can check the IP addresses (read only) of primary and backup controllers.

- Click **Save** to apply the changes.
- When you configure the HA support, ensure to check the **HA Status** parameter.

The **HA Status** parameter must display the green button, indicating that the HA support is functioning and data is in sync. If **HA Status** displays the red button, then it indicates that the HA support is not functioning.

You can also view the HA status in the **High Availability X** section on the **Dashboard** page.

The **Primary** field displays the primary node name. The **Backup** field displays the backup node name. Green bullets in **Primary** and **Backup** fields show the online/offline status of nodes. The keyword **Active** toggles between

**Primary** and **Backup** fields, indicating that the respective node is currently functioning as the active controller, managing the network and is connected to cnMaestro.

### Caveats of HA configuration

Consider the following caveats of the HA configuration for cnWave 60 GHz devices:

**Table 71** *Caveats of HA configuration*

Configuration	Caveats
Configuration backup and restoration	<ul style="list-style-type: none"> <li>The configuration backups are supported when the HA is enabled.</li> <li>The backup collected from a non-HA network can only be restored in a non-HA network.</li> <li>The backup collected from a HA enabled network is restored only in a HA enabled network.</li> <li>When HA is enabled, the restoration is allowed only when the primary node is active, managing the network and connected to cnMaestro.</li> </ul>
Software update flow	<ul style="list-style-type: none"> <li>When HA is enabled, it is recommended to update the nodes when primary is functioning as the active controller.</li> <li>It is always recommended to run the HA Pairs in same version to avoid HA functionality issues.</li> <li>Avoid downgrading the device version to less than 1.4 when HA is enabled in the network.</li> <li>Avoid updating the device software from a device UI when HA is enabled. You must update the software from cnMaestro.</li> </ul>
Device UI	<ul style="list-style-type: none"> <li>It is always recommended to make changes in the network only from cnMaestro.</li> <li>Making changes through device UIs may have issues in HA functionality.</li> </ul>
cnMaestro X to Essentials downgrade	<ul style="list-style-type: none"> <li>The HA functionality will be disabled leaving the current active controller that is connected to cnMaestro as the only controller in the network.</li> <li>The HA functionality can be enabled back when the subscription is enabled.</li> </ul>
Connecting a HA enabled E2E Controller network to an Essential cnMaestro account	<ul style="list-style-type: none"> <li>The HA functionality will be disabled leaving the current active controller that is connected to cnMaestro as the only controller in the network.</li> <li>The HA functionality can be enabled back when the network is connected to cnMaestro X account.</li> </ul>

### Links

Links provide the details about the link established between the nodes and also provides the option to create a new Wireless, Wired and Backup CN link.

- [List](#)
- [Statistics](#)

- [Events](#)

## List

The **List** page provides details of **General**: Name, A-Node, Z-Node, A-Node MAC, Z-Node MAC, Alive, Link Time, Type, Ignition Attempts, Distance, Azimuth, Backup CN Link, and Ignition Status for each link of all the devices in the E2E Network in a page format.

To add a link, perform the following steps:

1. Navigate to the E2E Network tree menu click (  ) icon and click **Add Link** from the drop-down or navigate to **Network > Links > List > Add New**.

2. **Add Link** window pops-up.
3. Select **Link Type** Wireless or Wired.

Figure 338 Wireless link

## Statistics

**Statistics** pages provides details of **Basic**: Name, Direction, A-Node, Z-Node, Alive, Link Time, Type, Distance, Azimuth, Rx Golay, Tx Golay **Detailed Statistics**: A-Node Sector MAC, Z-Node Sector MAC, RSSI, Rx Airtime%, Rx Beam Azimuth Angle, Rx Beam Elevation Angle, Rx SNR, Rx MCS, Rx PER, Rx Scan Beams, Rx Throughput, Tx Airtime%, Tx Beam Azimuth Angle, Tx Beam Elevation Angle, Tx Power Index, EIRP, Tx MCS, Tx PER, Tx Scan Beams, Rx Errors, Rx Frames, Tx Errors, Tx Frames, Tx Throughput, Rx Time, Tx Time and Link Fade Margin each link of all the devices in the E2E Network in a page format.

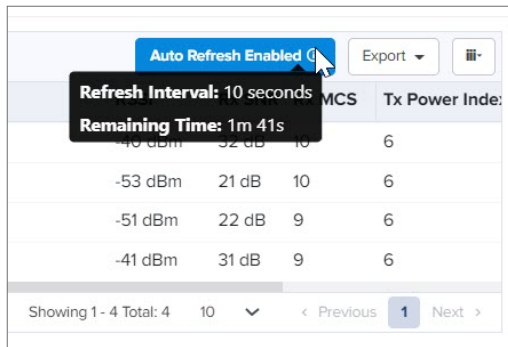

You can **Apply Filter(s)** for Name, A-Node, Z-Node, A-Node Sector MAC, Z-Node Sector MAC, and Alive. The **Auto Refresh** option allows to refresh data automatically as per Refresh Interval, which is configured for five minutes. By default, Refresh Interval is 10 seconds. This option gets disabled after five minutes. Then you must click **Enable Auto Refresh** and specify the refresh intervals to enable this option. To **Enable Auto Refresh**, perform the following steps:

1. Click **Enable Auto Refresh.**
2. Select **Refresh Interval** from the drop-down.
  - 10 seconds
  - 30 seconds
  - 60 seconds
3. Click **Start** to start **Auto Refresh.**

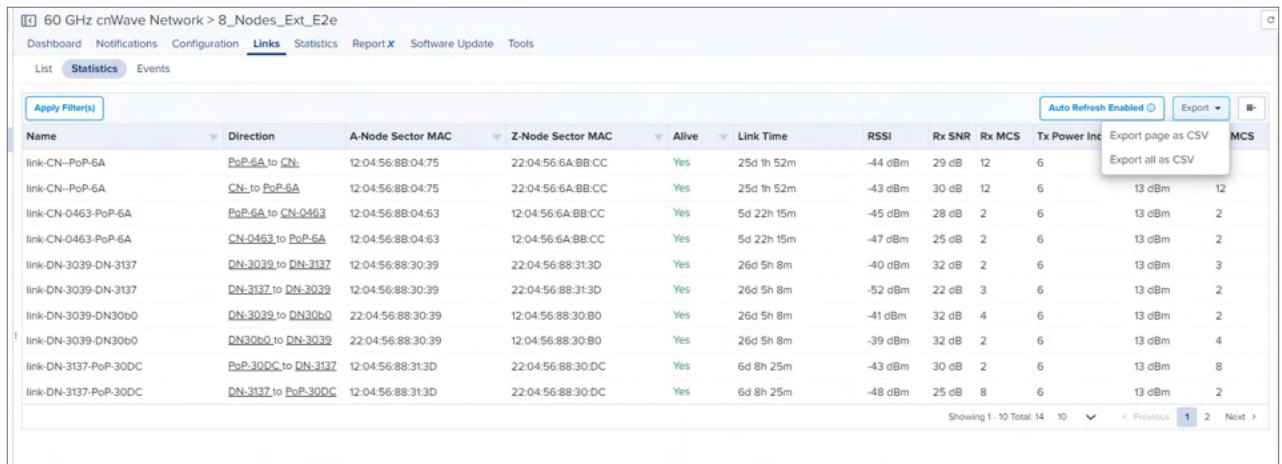

4. Click the info icon to view **Refresh Interval** and **Remaining Time**.

## Export Statistics

To export the Statistics:

1. Navigate to **Links > Statistics > select Export**.

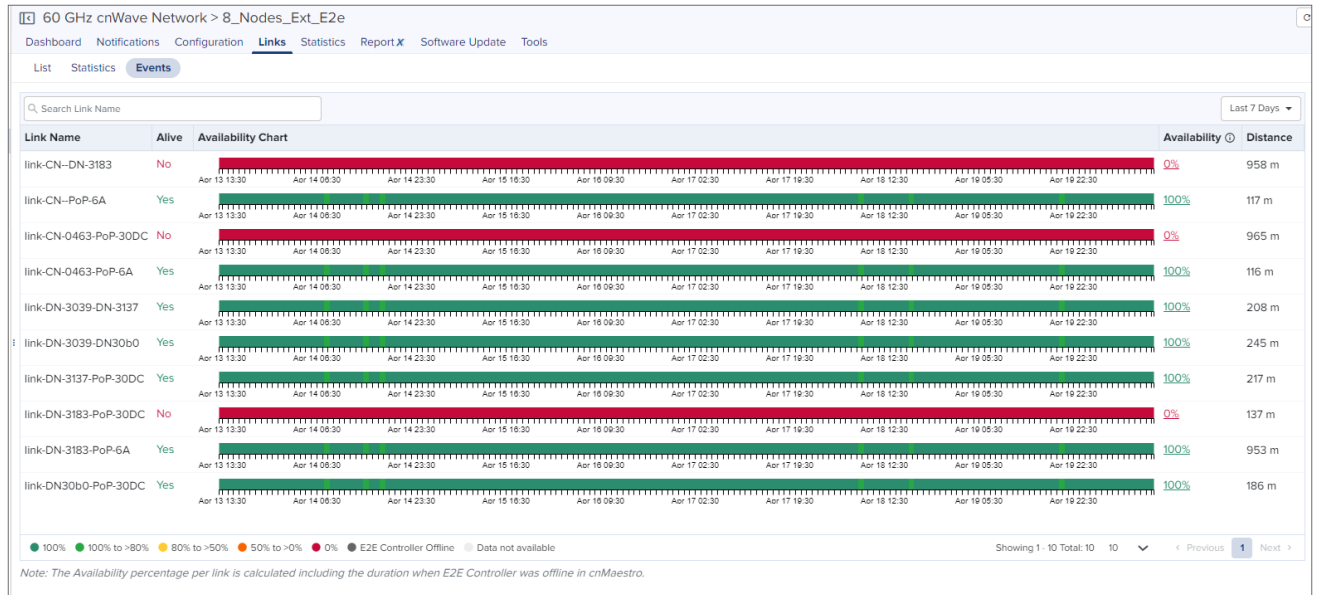

2. It exports .csv file format as shown below.

## Events

Events provide the details of link availability, hourly link availability in percentage, link availability in different time lines, and distance of the link.

**Figure 340** *Links > Events*

**Table 72** *Events fields*

Field	Description
Link Name	Name of the link.
Alive	Status of the link (Yes or No).
Availability Chart	Displays the link availability based on time range selected from the drop-down. When you hover the mouse on the Availability Chart, the link availability is shown as described: <ul style="list-style-type: none"> <li>If you select time range as <b>Last 1 Hour</b>, then link availability for every 5 minutes is displayed.</li> <li>If you select time range other than <b>Last 1 Hour</b>, then link availability for every 1 hour is displayed.</li> </ul> <p>Hover on the link to see the hourly availability as shown in <a href="#">Figure 342</a>.</p> <p>Clicking on percentage link availability displays pop-up window as shown in <a href="#">Figure 343</a></p> <p>Link availability is presented in different colors in the chart as shown in <a href="#">Figure 341</a></p>
Availability Percentage	Availability of link is shown in percentage in the Availability column as shown in <a href="#">Figure 342</a> .
Distance	Distance of the link in meters.

Events details are available for Last 1 hour, Last 6 hours, Last 12 hours, Last 24 Hours, Last 2 days, Last 4 days, and Last 7 days.

**Note**

Event details for **Custom Range** and **Last 30 days** is available only for cnMaestro X users.

## Statistics

The E2E Network provides the following statistics:

- [Nodes](#)
- [BGP](#)

## Statistics

**Nodes** provide a tabular aggregation of data, including General information on the nodes monitored, as well as Wireless, Network, and Traffic metrics. Node Statistics pages provide details of **General**: Device, Serial Number, IPv6 Address, MAC, Mode, Model, Status, Status Time, Site, Zone, PoP Node, Software Version. **GPS**: Sync Mode, Fix Type, Satellites Tracked, Latitude, Longitude, Height. **Network**: Radio Channel, Main Aux SFP, Sector Throughput (Tx), Sector Throughput (Rx), Ethernet Throughput (Tx), and Ethernet Throughput (Rx) each device in E2E Network, generally in a page format.

**Figure 344 Nodes Statistics**

Device	MAC	IPv6 Address	Mode	Model	Status	Status Time	Site	Radios
PoP_V3K	[blurred]	[blurred]	DN	V3000	Online	4d 23h 47m	PoP_site	Wi-Fi

## BGP

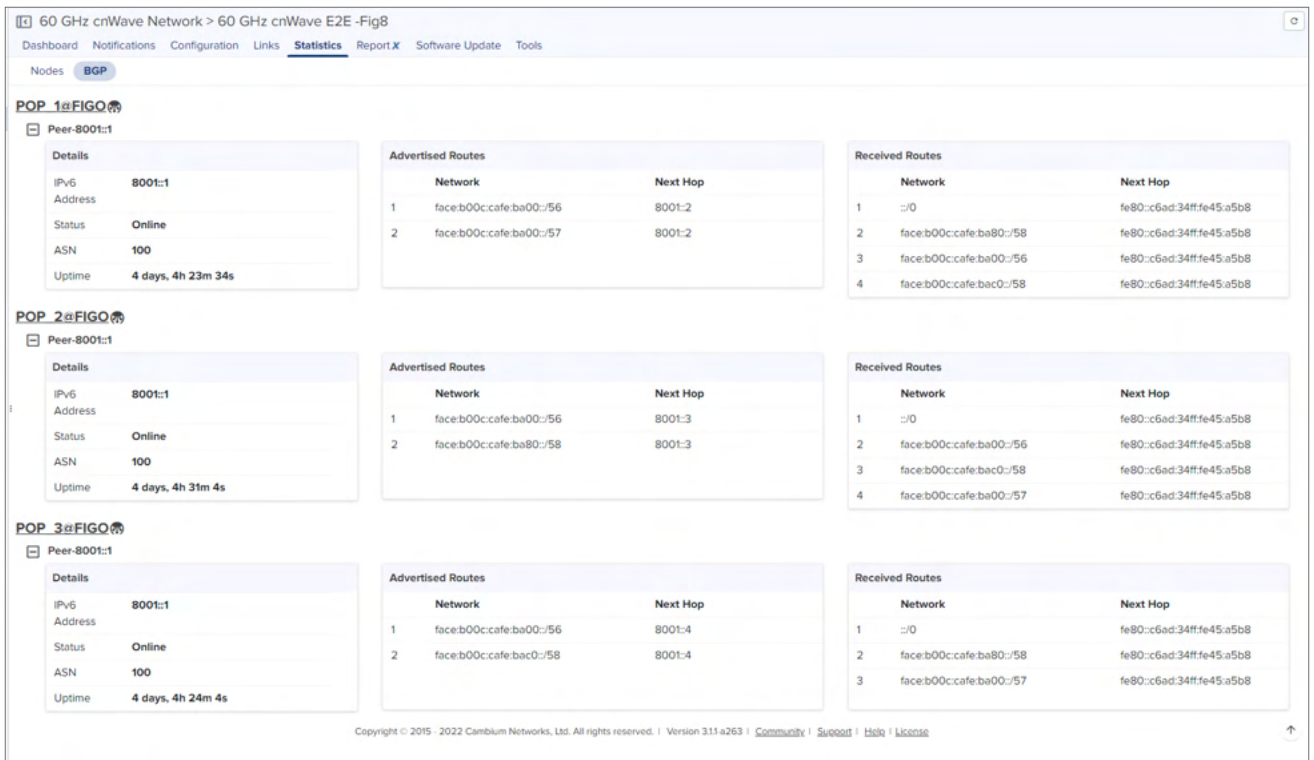

**Note**

BGP statistics displays only if BGP option is enabled in Routing in PoP configuration.

BGP provides the details of **Advertised Routes**, **Received Routes**, and **Peer** details.

Figure 345 BGP Statistics

## Software Update

The **Software Update** tab allows to update with the latest device software.

To update the software:

1. Select the **Network** and navigate to the **Software Update** tab.
2. In **Software Update** tab select the desired Versions from drop-down in **Versions** tab.
3. Select the **Device**.
4. In **Job Options**, do the following:
  - Select **Batch Size**
  - Enter **Upgrade Timeout**.
  - Enter **Download Retry Limit**.
  - Enter **Download Timeout**.
  - Select the Download Protocol as **HTTPS** or **Torrent**.
  - Enable the **Skip Failures** or **Skip PoP Failures**.
5. Click **Add Software Job to device**.

### Note

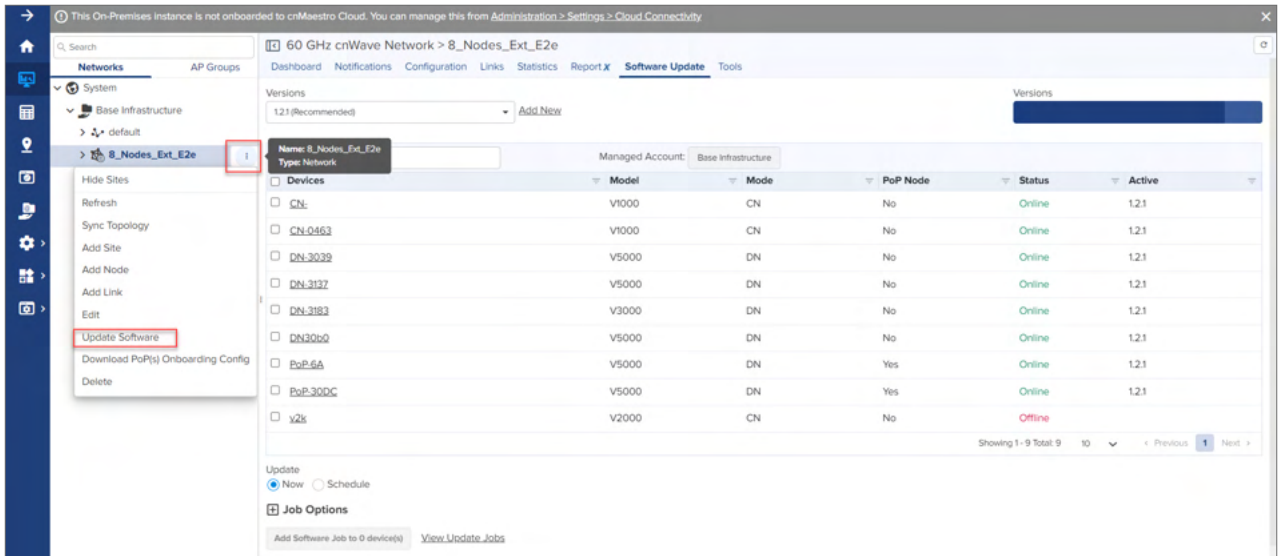

Onboard E2E controller will support only one synced image. If user needs to sync another image, select the image from **Versions** drop down and click **Sync Selected Image**.

The Software Update is performed on the devices managed by External E2E Controller and Onboard E2E Controller as follows:

### External E2E Controller

1. In the **Networks**, select External E2E Controller and check the Software Version.
2. From External E2E Controller menu options, select **Update Software**.

Software Update page appears.

3. In **Versions** drop-down select the version and the devices in the network for software upgrade.

Device software update version check for External E2E Controller is described in [Table 73](#).

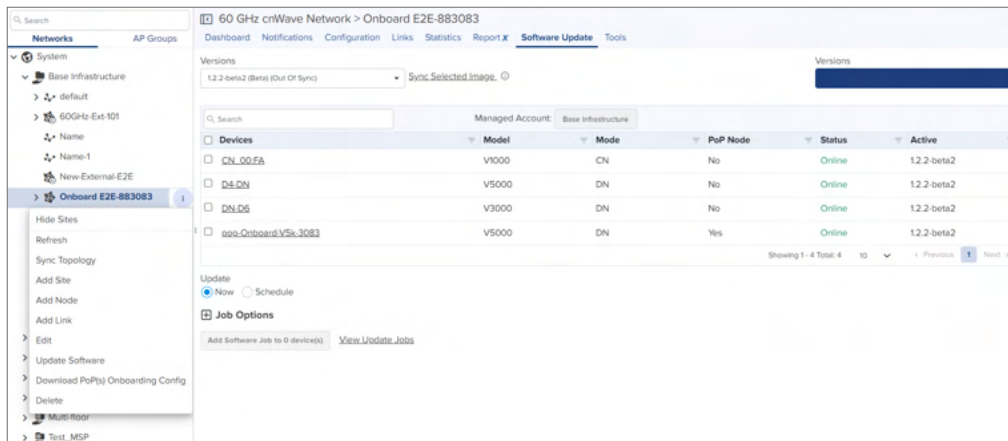

**Table 73** Device Software Update: External E2E Controller

Version	Example
If Software Version of the device is less than the Software Version of the External E2E Controller then Software Upgrade is successful.	External E2E Controller software version: 1.2.1 When Device Software Version is selected as 1.2.1 or lower then Device Software is upgraded successfully.
If Software Version of the Device is selected higher than the External E2E Controller version then Software Upgrade fails.	E2E External Controller Software Version :1.2.1 When Device Software Version is selected as 1.2.2 or higher then Device Software upgrade fails. Error message: <b>Device version should not be higher than External E2E Controller version 1.2.1</b>

### Onboard E2E Controller

1. In the **Networks**, select Onboard E2E Network and check the software version.
2. From Onboard E2E Network menu options, select **Update Software**.

Software Update page appears.

Device software update version check for Onboard E2E Controller is described in [Table 74](#).

**Table 74** Device Software Upgrade: Onboard E2E Controller

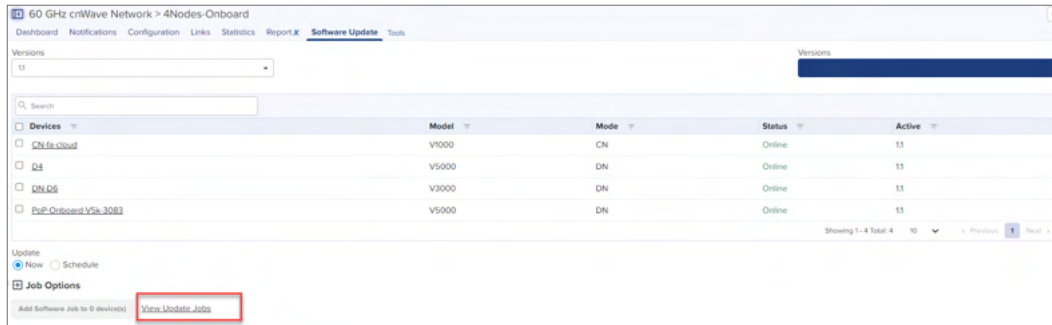

Software Upgrade	Example
If software version of Onboard PoP device is lower and upgraded to higher version then Software Upgrade is successful.	If the Onboard PoP device is running with 1.2, and selected software version is 1.2.1 or higher then Onboard PoP device is upgraded successfully.
If software version of all devices including Onboard PoP are lower and upgraded to higher version then Software Upgrade is successful.	If all the devices including the Onboard PoP are running with 1.2, and selected software version is 1.2.1 or higher then all the devices including PoP device are upgraded successfully.
If software version of all devices are higher and downgraded to lower version except Onboard PoP then Software Upgrade are successful.	If all the devices are running with 1.2.2, and selected software version is 1.2 then all the devices except PoP device are upgraded successfully.
If software version of all devices including PoP are higher and downgraded to lower version then Software Upgrade are successful.	If all the devices including PoP are running with 1.2.2, and selected software version is 1.2 then all the devices are upgraded successfully.
If software version of all devices including Onboard PoP are higher and downgraded to lower version then Software Upgrade should fail if one or more nodes running with higher version in list.	If all the devices including the Onboard PoP are running with 1.2.2, and selected software version is 1.2.1 then Software Upgrade should fail.
If software version of Onboard PoP device is higher and upgraded to lower version then Software Upgrade for PoP fails, only when other devices software version are higher.	If the Onboard PoP device is running with 1.2.2, and selected software version is 1.2.1 or lower then Software Upgrade of Onboard PoP device fails, only when the other devices software version is 1.2.2.
If software version of all devices are lower and upgraded to higher version except Onboard PoP then Software Upgrade should fail.	If all the devices including Onboard PoP are running with 1.2.2, and selected software version is 2.0 excluding PoP node, then Software Upgrade for all the devices should fail except PoP node.
If software version of all devices including PoP is running with same version, and when you select all nodes to upgrade, then PoP fails to upgrade. You need to manually upgrade the PoP node.	If all the devices including PoP are running with software version 1.1 and selected software version is 1.2. If PoP failed to upgrade, then you need to manually upgrade the PoP.

- From the **Versions** drop-down, select the version and the devices in the network for software upgrade.

The Software Upgrade scenario for Onboard E2E Controller is explained in [Table 74](#).

## View Update Jobs

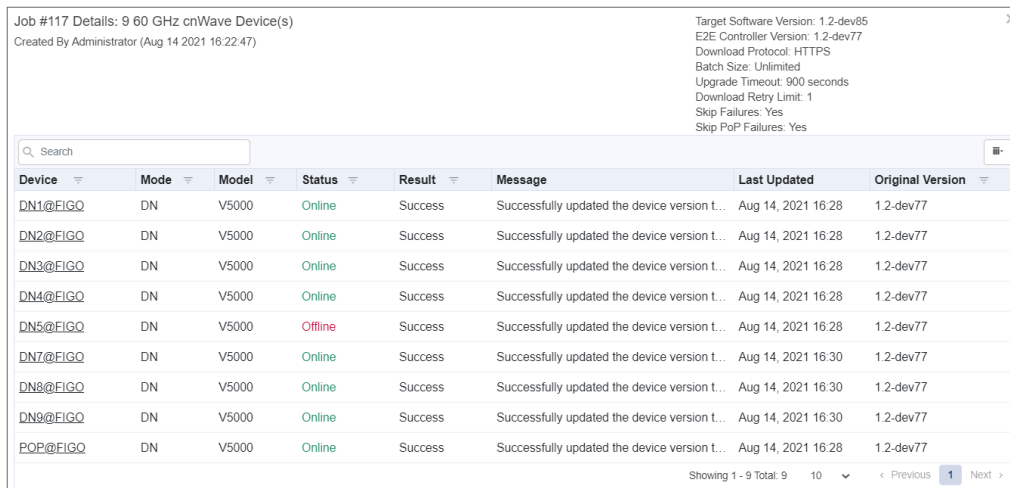

After adding the new Software Images, click **View Update Jobs**.

1. Navigate to the **Administration > Jobs > Software Update**.

2. Click **Show More** to view the Job Details.

## Reports

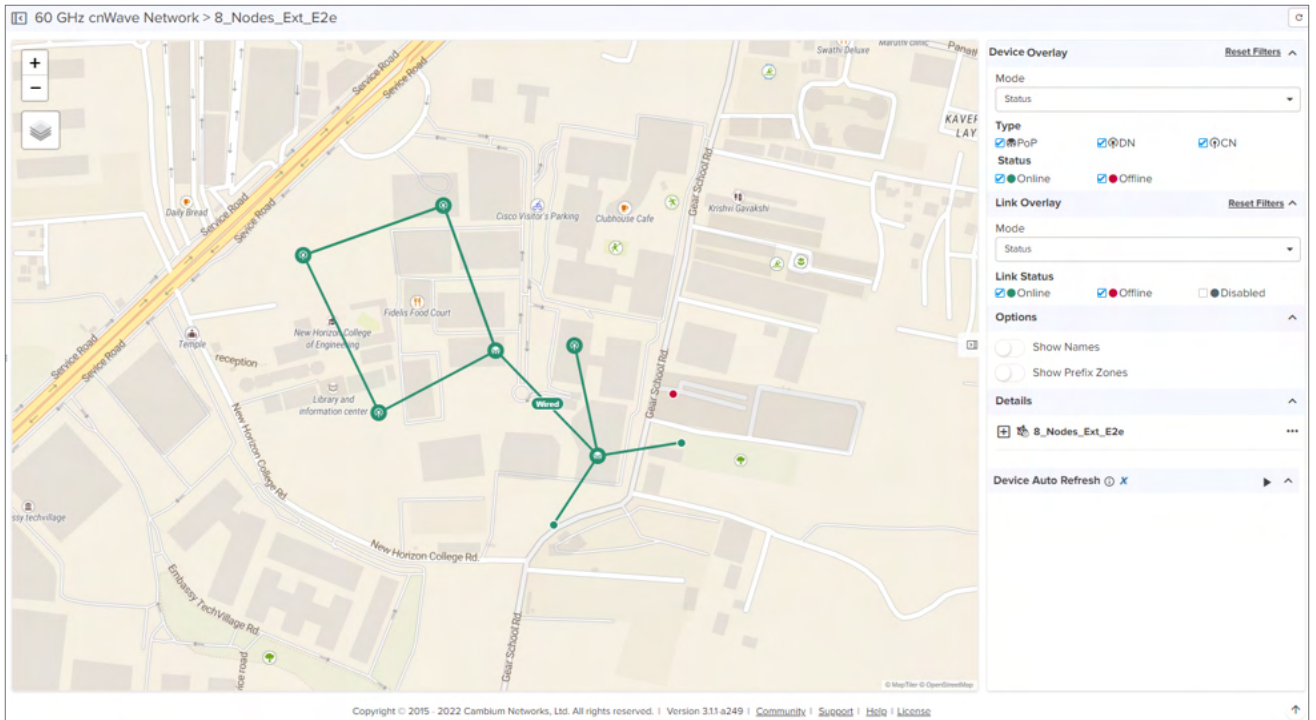

Reports page provides details on how to schedule and generate different types of data reports such as Devices, Active Alarms, Alarm History, and Events. For further details refer to [Reports](#).

## Map

Map shows how devices are connected in a E2E network, the state of the devices, and links in the E2E network. To view the map, perform the following:

- Navigate to **E2E Network** > select **Map** icon in the left pane of the homepage to view E2E Network and 60 GHz cnWave devices and links as shown in [Figure 346](#).

**Figure 346** Viewing E2E Network

**Note**

Gray color lines are un-managed links and gray color nodes are un-managed nodes.

The following fields provides visual representation of the nodes and links:

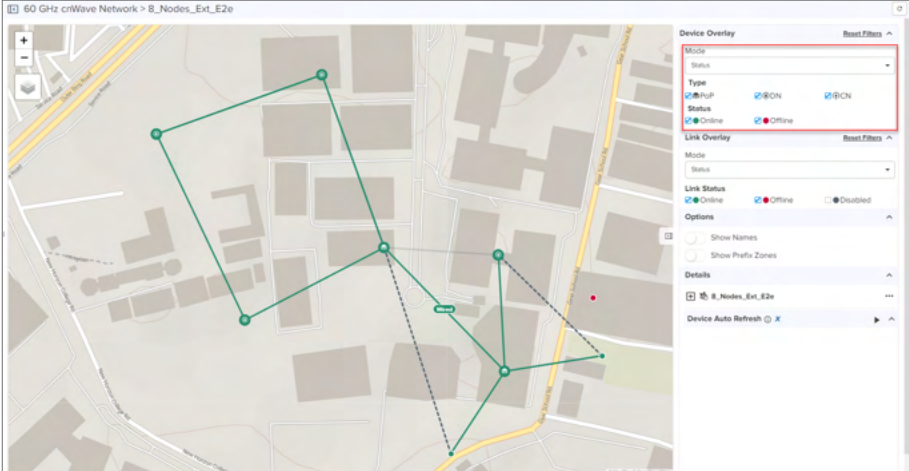

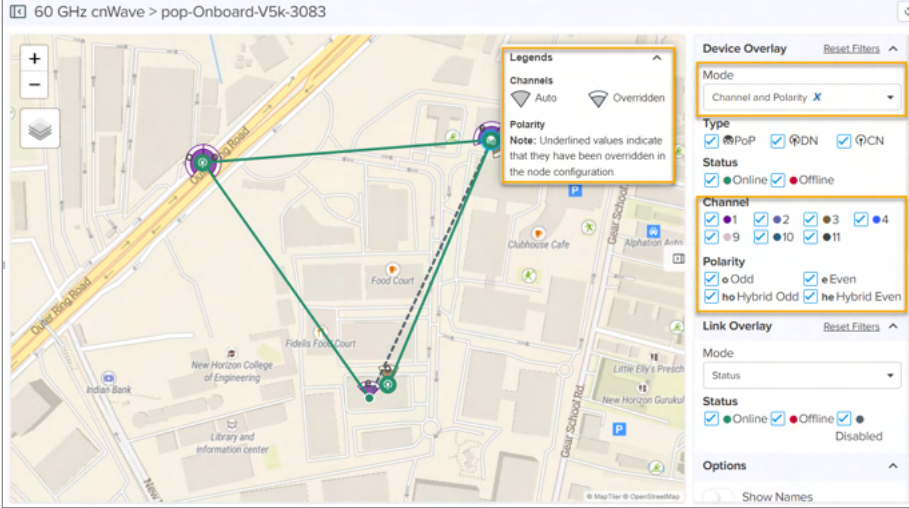

- Device Overlay
- Link Overlay
- Options
- Details
- Device Auto Refresh

**Table 75** Map fields in E2E Network

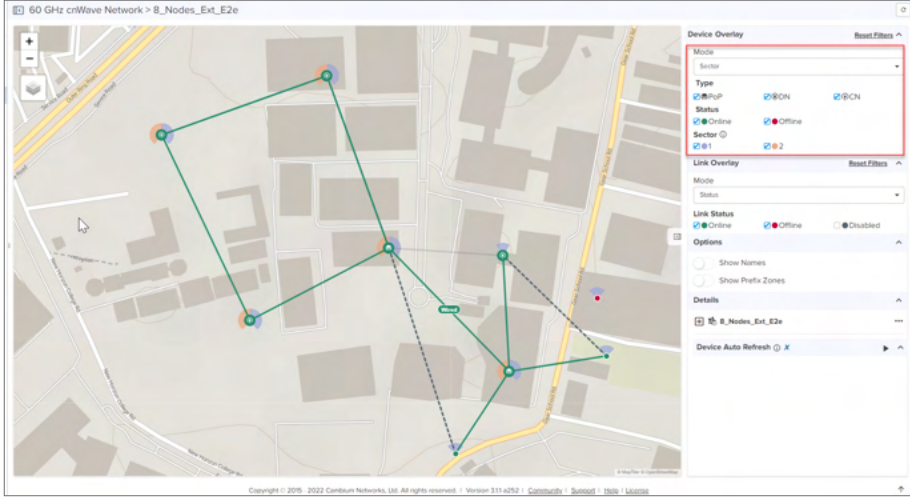

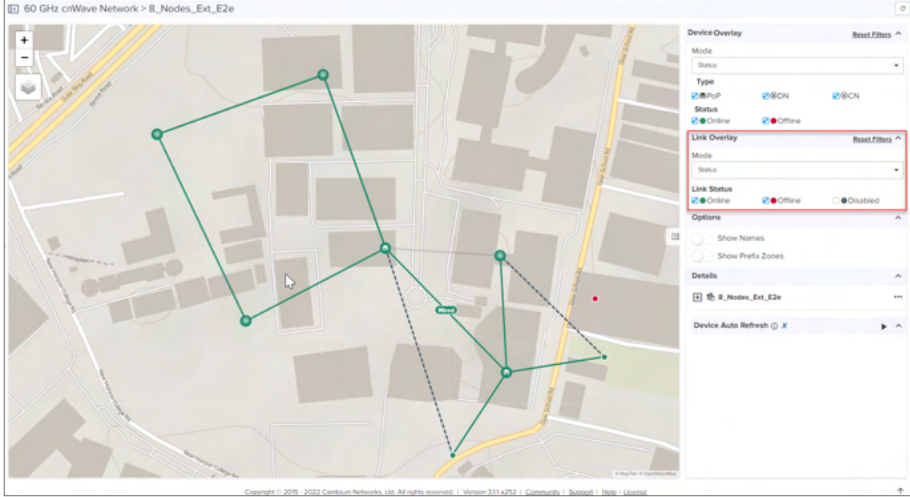

Field	Description

**Note**

- Channel and Polarity mode type are available for cnMaestro X users only.
- Airtime%, Golay, SNR, RSSI, MCS, Link Fade Margin, and Throughput (Mbps) are cnMaestro X features.

A new Link Fade Margin (LFM) statistics has been added to the displayed **Link Statistics** tab in 60 GHz cnWave 1.2.2 software version release. This statistic is shown in units of dB, and it is meant to provide operators with a quick way to assess any additional **system gain** a RF link has available in order to help ride out potential RF link fades due to weather (most typical) or other temporary RF link impairments. The rough calculation for LFM is comprised of the RSSI received from a remote transmitter and assessing how much more TX power is available (from the remote transmitter) and how far away the RSSI value is from an established receiver sensitively floor of -72 dBm. The LFM allows operators quickly assess if/where you may have some marginal RF links that need to be addressed in some way. Typical options would be changing an existing node out for a V3K (to get more margin) or possibly dropping in an intermediate DN node such that their RF paths are shorter, typically resulting in a much larger LFM.

**Figure 347** Link Fade Margin

**Troubleshooting**

- [Topology Scan](#)
- [Node Throughput Test](#)
- [Current Best Routes X](#)
- [Link Throughput Test](#)

## Topology Scan

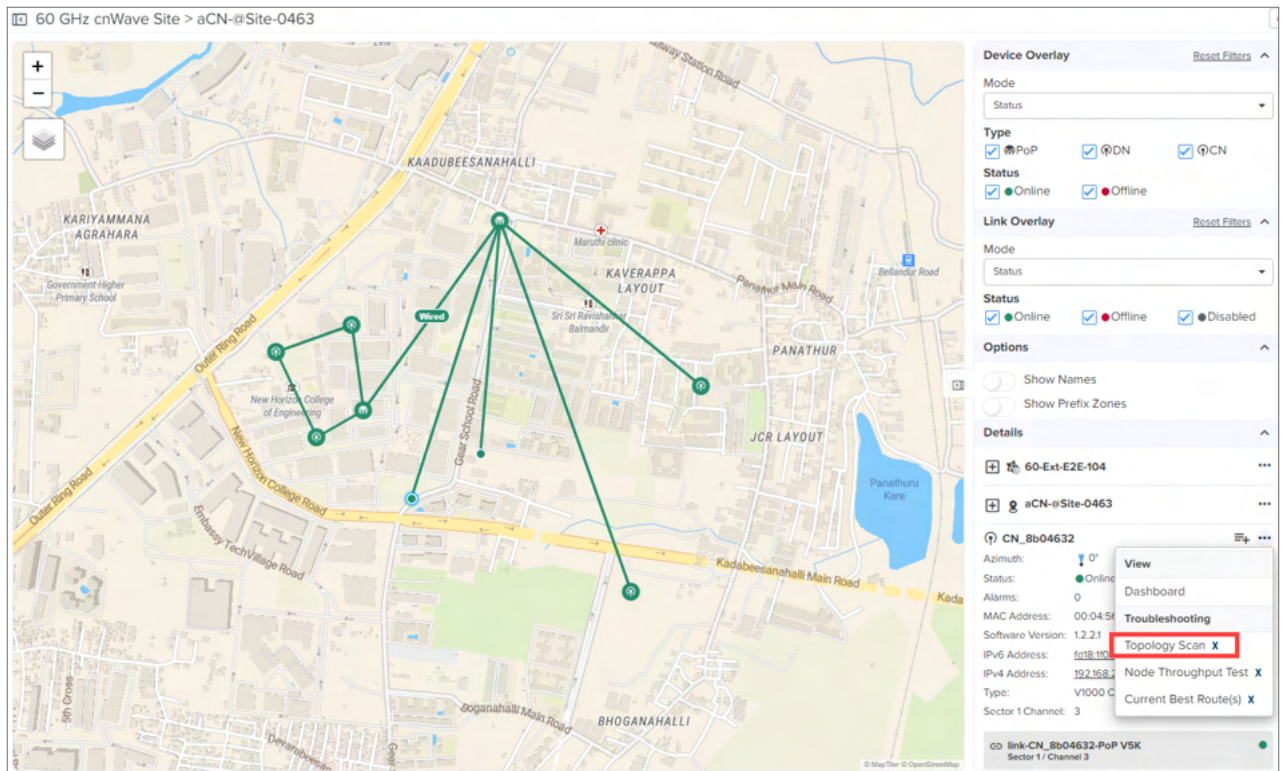

Topology Scan X allows you to discover your entire network and create comprehensive, detailed network topology maps. This tool will only detect nodes operating in responder mode. It will not detect CNs with a wireless link already established. Offline nodes with a configured channel override will not be detected on a different channel.

### Note

Topology Scan will cause a momentary throughput reduction in nearby links.

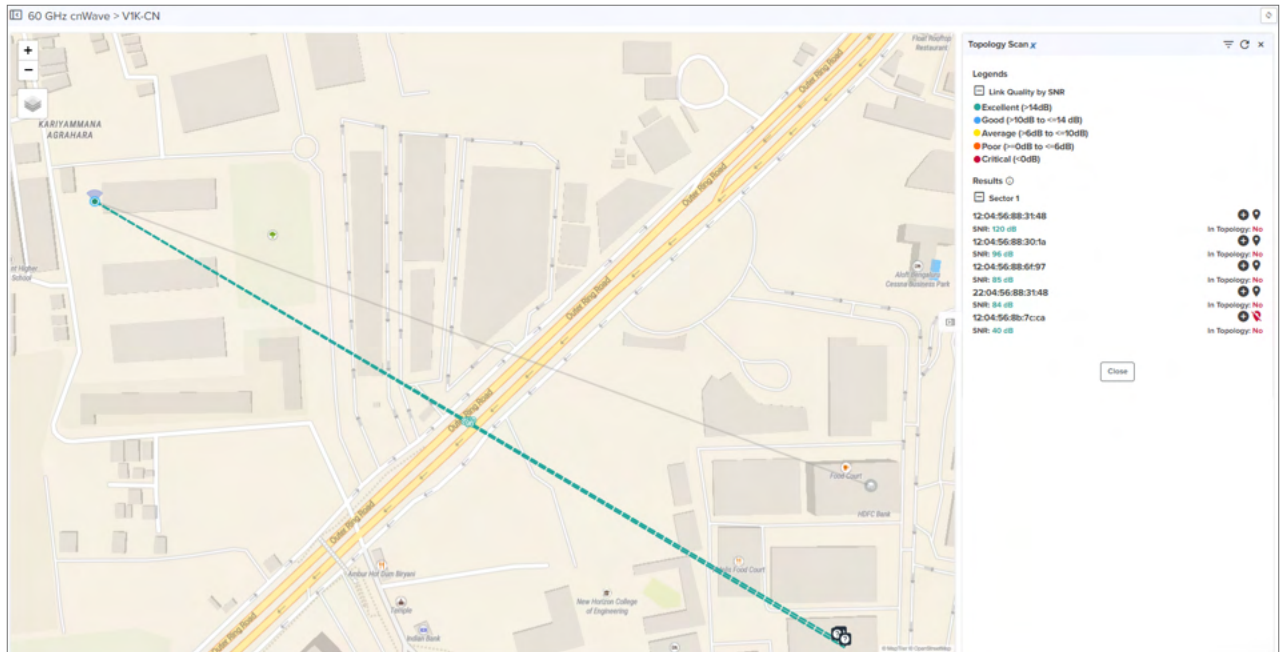

1. Select a node from the Map.
2. Click ellipsis (\*\*\*) icon next to the device to select the **Troubleshooting > Topology Scan**.

Topology Scan preview window is displayed towards the left pane.

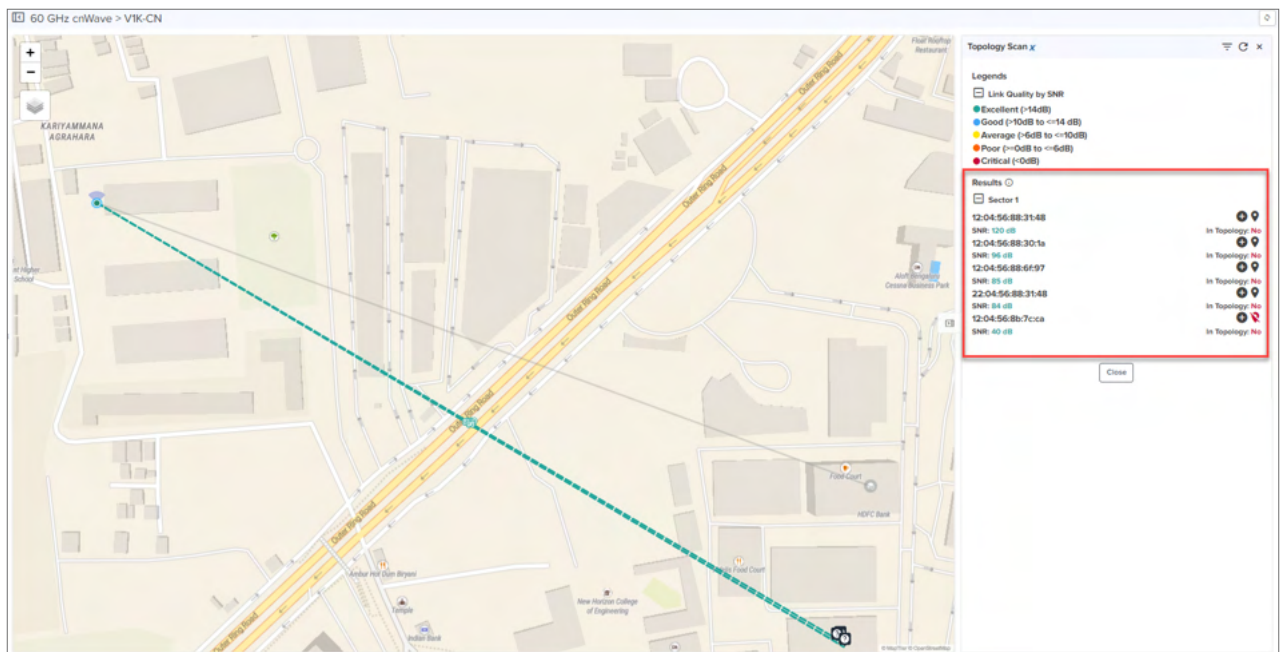

3. Click **Start Topology Scan**. Topology Scan begins as shown in the following figure.

4. Click **Configure SNR Limit** (  ) next to **Topology Scan** header to add new value or reset the existing value. By default SNR value is 5 dB.
5. Click (  ) refresh icon to scan again.

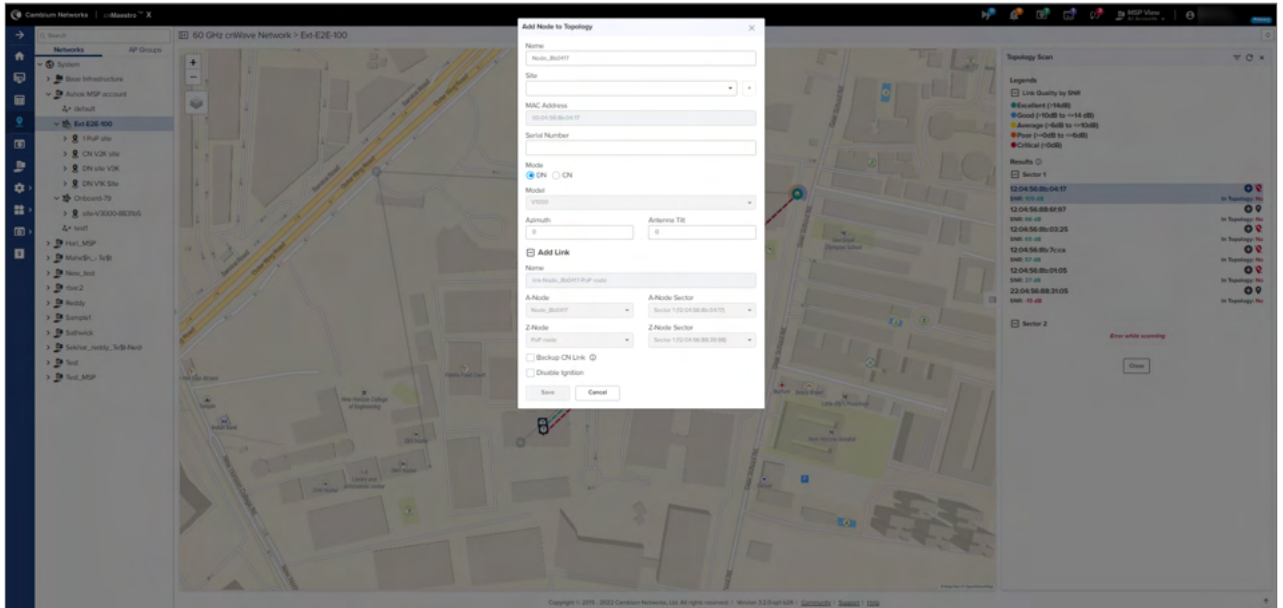

The results are based on **Link Quality by SNR** and the results are shown in the left pane. MAC Address of the links and the Link Quality is displayed.

After topology scan, map displays available nodes and links in the network by Link Quality color codes. Only links available with GPS coordinates are shown in the map. You can add site, node, and link to the topology by clicking the plus sign **In Topology**.

6. **Add Node to Topology** window pops up.

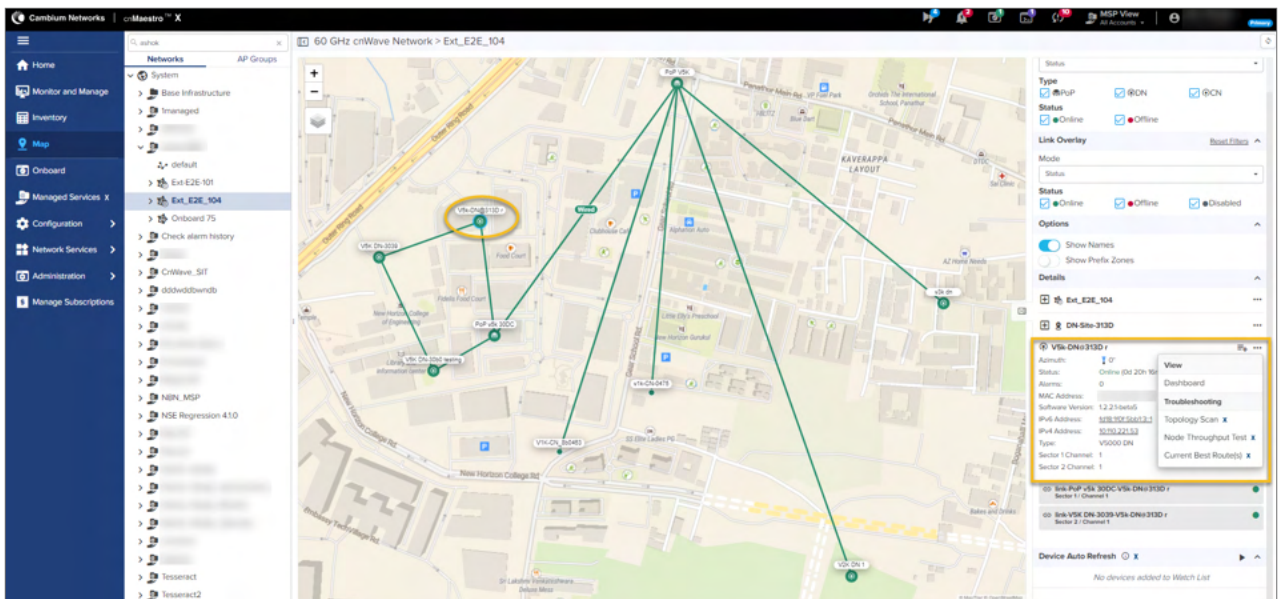

7. Enter the node and link details and click **Save**.

## Node Throughput Test X

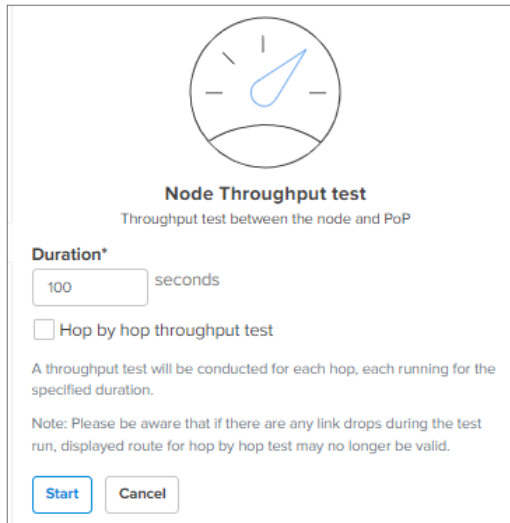

The **Node Throughput Test X** option allows you to test the throughput between a node and PoP. Using this option, you can conduct a throughput test for each hop seamlessly.

To run a node throughput test, complete the following steps:

1. Select a device except the POP Node from the Map.

2. Click ellipsis (\*\*\*) icon next to the device name in the right pane, and select **Troubleshooting > Node Throughput Test X**

### Node Throughput test

Throughput test between the node and PoP

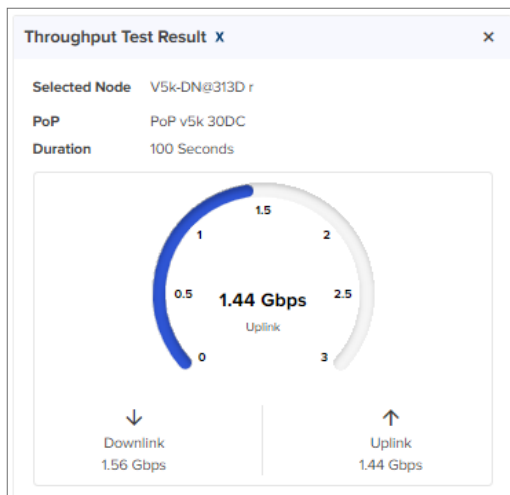

**Duration\***  
 seconds

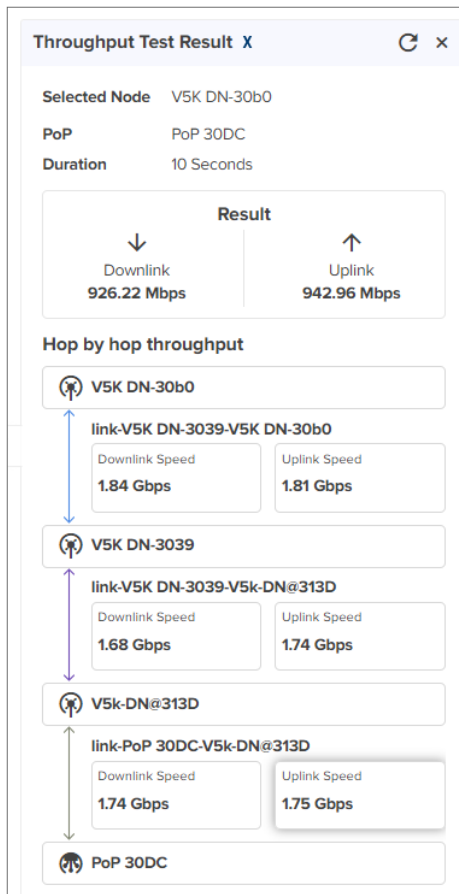

Hop by hop throughput test

A throughput test will be conducted for each hop, each running for the specified duration.

Note: Please be aware that if there are any link drops during the test run, displayed route for hop by hop test may no longer be valid.

3. Enter the **Duration** between 5 to 300 seconds.
4. Select the **Hop by hop throughput test** check box to view the throughput for each hop separately.
5. Click **Start**.

### Current Best Route(s) X

The Current Best Route(s) X feature is used to view the best route from a CN/DN to PoP. The **Current Best Route (s) X** map view displays statistics of the following parameters for uplink and downlink of wireless link of a node:

- Golay
- SNR
- MCS
- RSSI
- Throughput (Mbps)
- Airtime (%)
- Link Fade Margin (LFM)

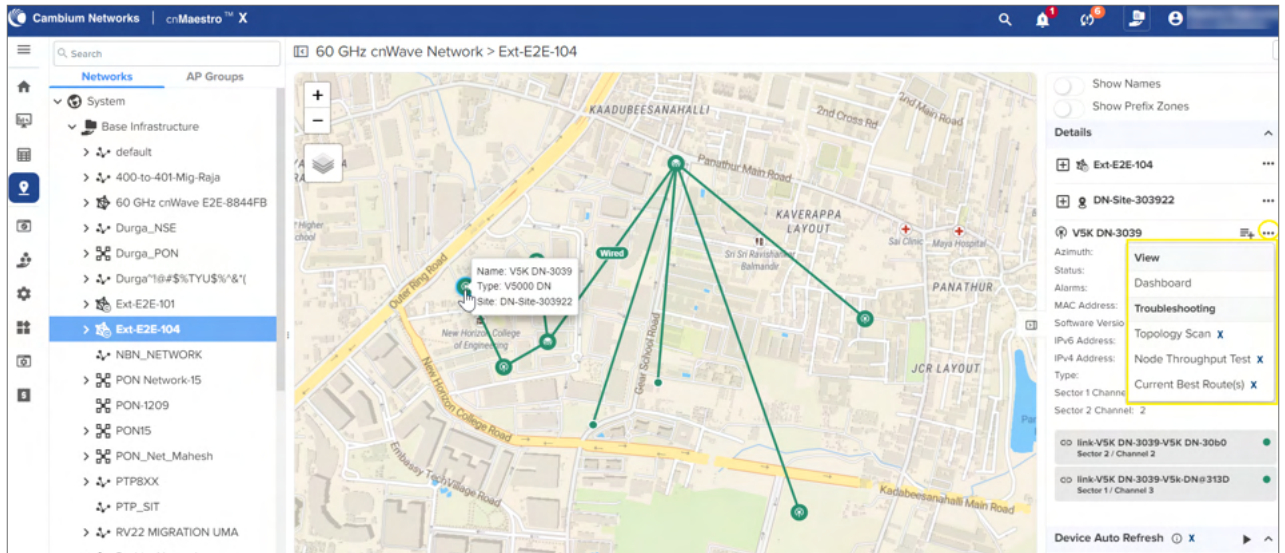

#### Note

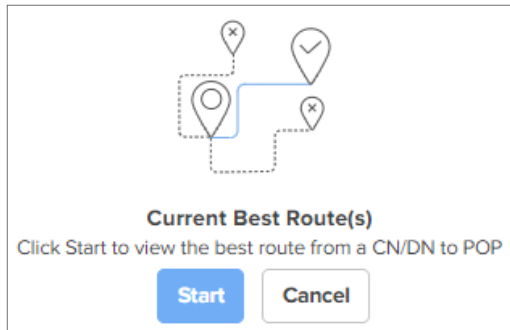

The **Current Best Route(s) X** feature is applicable only to X accounts. In addition, this feature is supported only on the E2E Controller (Onboard or external) running with software version 1.2.2.1 or later.

To view the current best routes, complete the following steps:

1. On the **Map** page, select a device node. The node details are displayed on the right side of the map.

2. Click the **...** icon next to the node name, and select **Troubleshooting > Current Best Route(s) X**. The **Current Best Route(s)** screen appears on the right side of the map.

3. Click **Start**. The **Current Best Routes(s) X** section displays route details for the selected node.

**Current Best Route(s) X**

## Link Throughput Test X

The **Link Throughput Test X** option allows you to test the throughput between the link end points. To run a link throughput test, complete the following steps:

1. Select a Link from the Map.

The screenshot displays the Cambium Networks Maestro X interface. On the left, a navigation menu includes options like Home, Monitor and Manage, Inventory, Map, Onboard, Managed Services, Configuration, Network Services, Administration, and Manage Subscriptions. The main area shows a map titled '60 GHz cnWave Site > DN-Site-313D' with several nodes and links. One link is circled in yellow. On the right, a 'Device Overlay' panel is visible, showing details for the selected link: 'link-VSK-DN-3039-VSK-DN-30b0 testing'. The 'Status' is 'Online (92.22h 28m)', 'Aperture' is '15.5F', and 'Length' is '345 m'. In the 'Details' section, the 'Link Throughput Test X' option is checked.

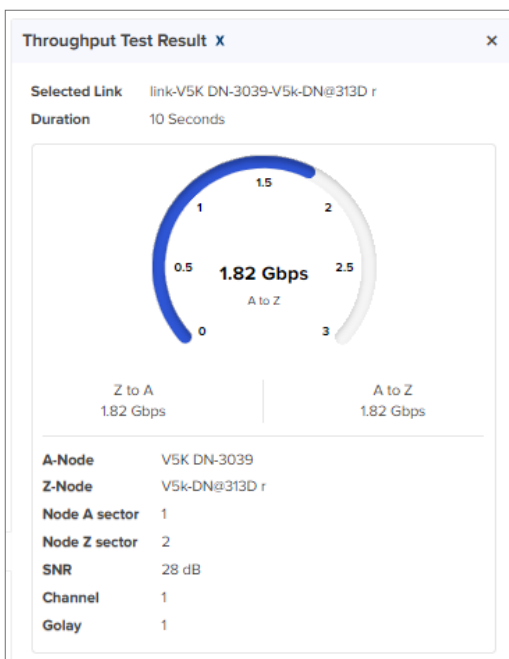

2. Click ellipsis (\*\*\*) icon next to the link, and select the **Troubleshooting >Link Throughput Test X**

  
**Link Throughput Test**  
 Throughput test between the link end points

**Duration\***  
 seconds

3. Enter the **Duration** between 5 to 300 seconds.
4. Click **Start**.

**Note**  
**Show Prefix Zones** is enabled only if **Prefix Allocation** is set to **Deterministic**.

## Tools

The Tools page allows the user to perform the following actions:

- [Operations](#)
- [Diagnostics](#)
- [Debug](#)
- [Remote Command](#)
- [Services](#)
- [Settings](#)

## Operations

### External E2E Controller deployment

If the device is deployed through **External E2E Controller** it displays the operations page as follows:

- **Restart E2E Controller** performs the **Restart**.
- A **System Backup and Restore** the entire state of a E2E Controller server as a file and file can be used to transfer data between two E2E Controller instances. It can be saved in local hard drive through the UI and restored into a new E2E Controller instance to re-create.
- The **Software Upgrade** is to upgrade E2E controller and can be done through E2E controller package.

The screenshot shows a web interface for a 60 GHz cnWave Network. The breadcrumb trail is "60 GHz cnWave Network > 7-Nodes-External-Smartwork". The navigation menu includes Dashboard, Notifications, Configuration, Links, Statistics, Report X, Software Update, and Tools. The "Tools" menu is expanded, showing sub-menus: Operations (selected), Diagnostics, Debug, Remote Command, Services, and Settings.

The "Operations" section contains three main panels:

- Restart E2E Controller**: A panel with the text "Recommended to be used only by Cambium Support Team." and a "Restart" button.
- System Backup and Restore**: A panel with the text "A System Backup stores the entire state of a E2E Controller server as a file. This file can be downloaded to the local hard drive through the UI and restored into a new E2E Controller instance to re-create the application state." It includes a "Backup" section with a "Download" button, and a "Restore" section with a "Select File" button and a "Restore" button.
- Software Update**: A panel with the text "E2E Controller image updates can be performed through software packages." It includes input fields for "OVA Version" (1.0.1-r2), "Package Version" (1.2.0-sp1-a5), and "Package File" (with a "Select File" button), and an "Apply Update" button.

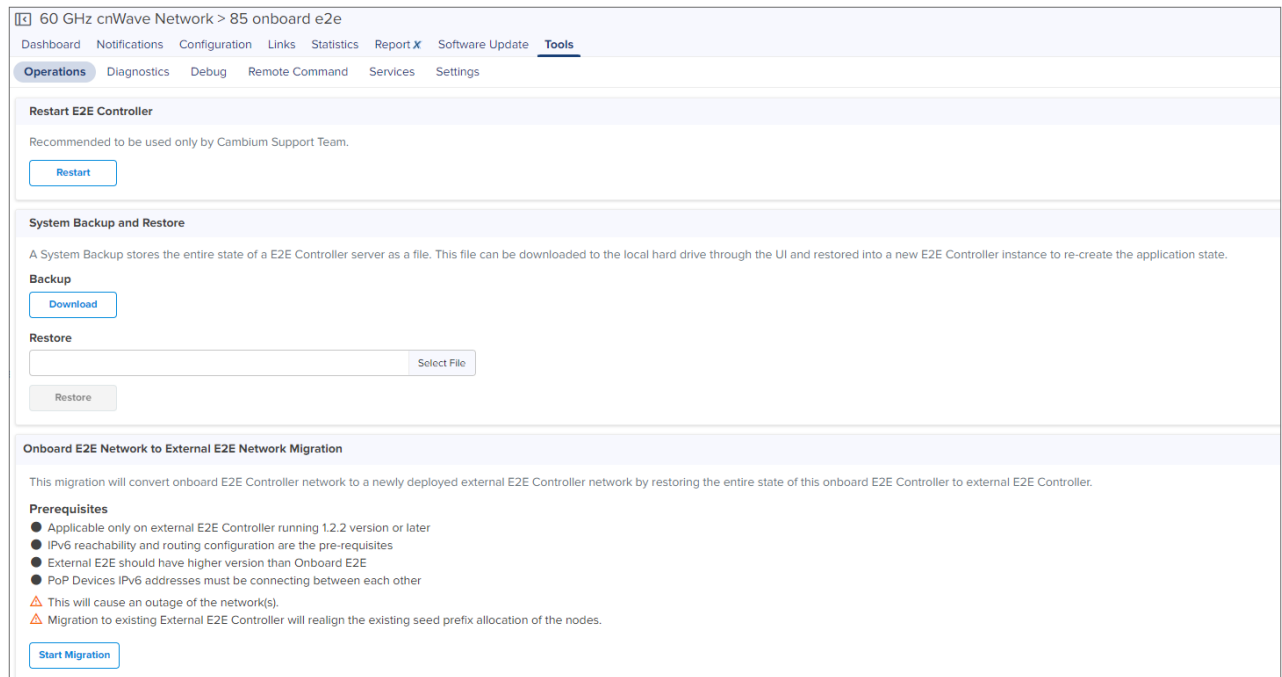

### Onboard E2E Controller deployment

If the device is running **Onboard E2E Controller** it displays the operations page as follows:

- **Operations** page allows the user to **Restart E2E Controller** and perform the **System Backup**. It also stores the entire state of a E2E Controller server as a file and file can be used to transfer data between two E2E Controller instances. It can be saved in local hard drive through the UI and restored into a new E2E Controller

instance to re-create the application state.

## Onboard E2E to External E2E Migration

When you onboard an E2E Controller to External E2E Controller with or without sites, consider the following prerequisites:

- Applicable only on external E2E Controller running with 1.2.2 version or later.
- IPv6 reachability and routing configuration are pre-requisites.
- External E2E Controller should have higher version than Onboard E2E.
- PoP Devices IPv6 addresses must be connecting between each other.

When you onboard an E2E Controller to External E2E Controller with sites, consider the following prerequisites:

- Multiple Multi-PoP Networks must not be connected to same wired switch.
- Selected Onboard Network and External E2E Controller networks for migration should not have same site and device names.

### Post Migration Steps:

- Multi-PoP / Relay Port should be updated with the interface as in PoP interface configuration if not already done, to allow the connection between PoPs.
- If the existing E2E Network is configured with BGP, migrated PoP BGP Configuration must be updated in cnMaestro and then in POP GUI
- If the PoPs are not on the same L2 network:
  - Controller configuration about broadcast should be set to true.
  - If External E2E Controller and PoP devices are not connected/routed through a network router

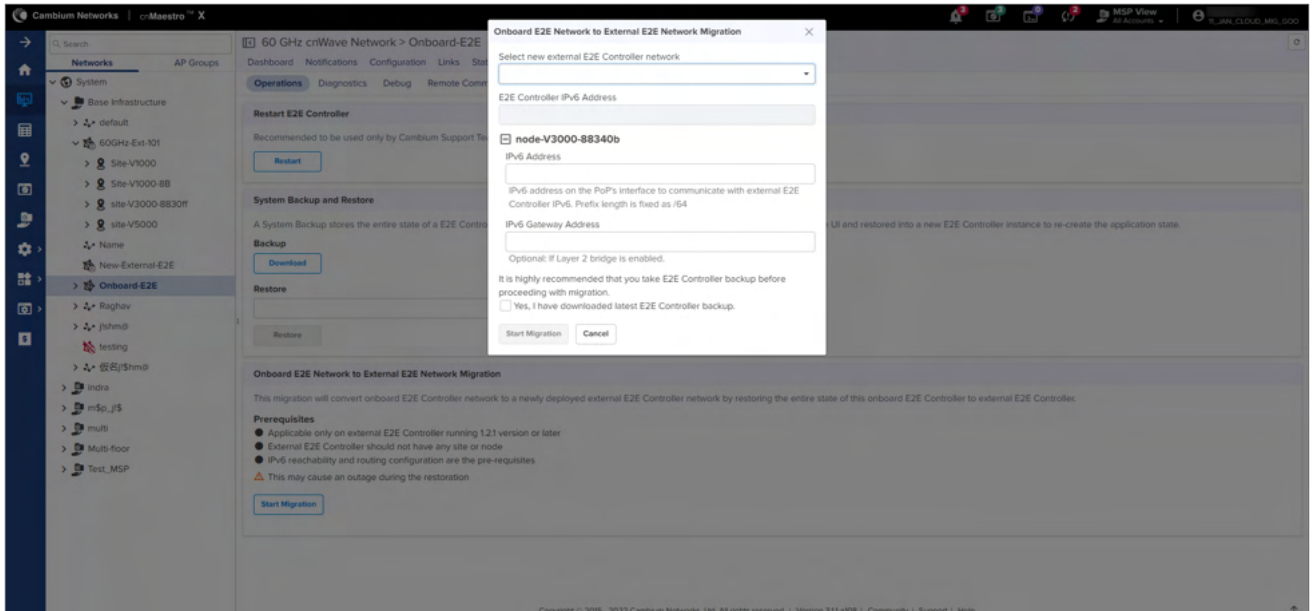

- It is recommended to set Deterministic prefix algorithm
- Routes to each PoP with respective Seed Prefix should be added manually in E2E Controller.

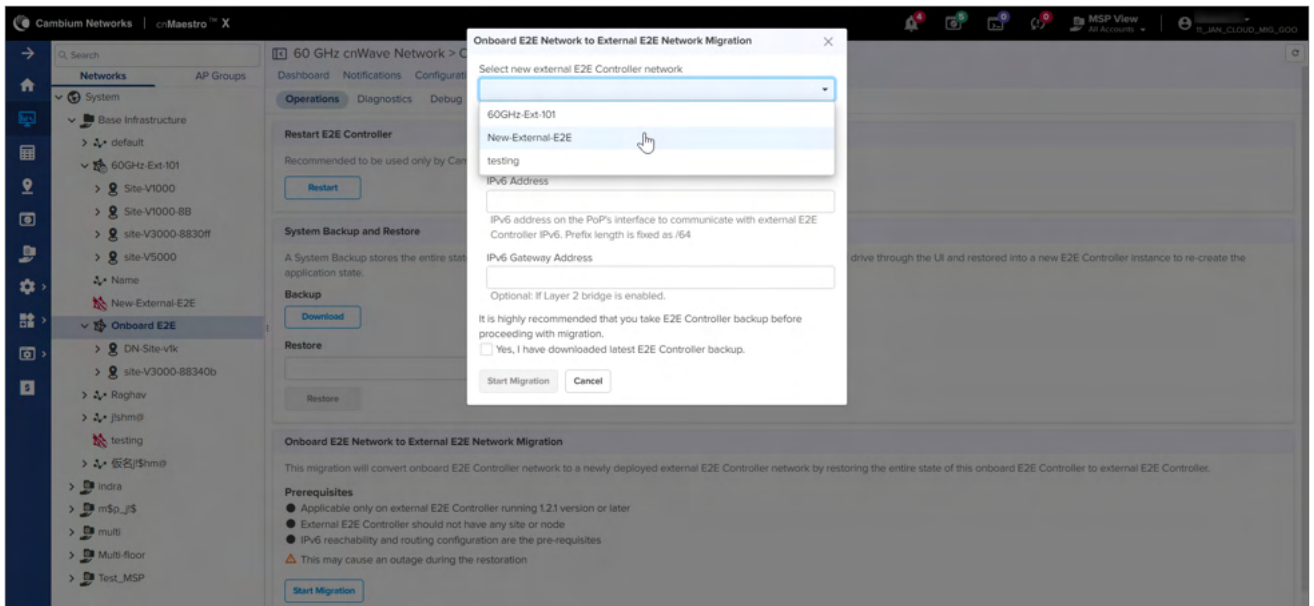

Perform the following steps to migrate Onboard E2E Controller to External E2E Controller:

1. Select Onboard E2E Network > **Tools** > **Operations**.
2. Click **Start Migration**.

The **Onboard E2E Controller to External E2E Migration** window appears.

3. Select a new external E2E Controller network from the drop-down.

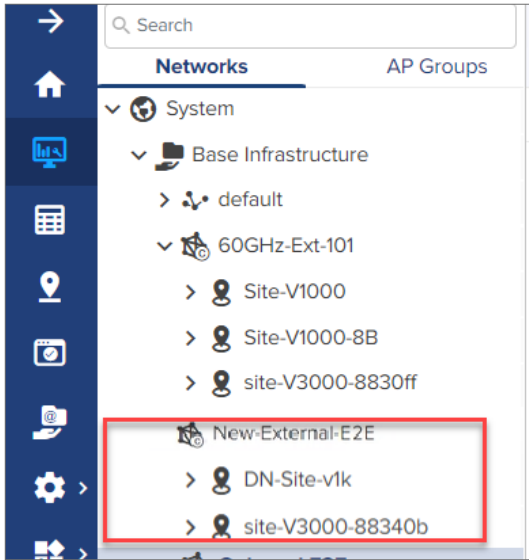

4. Enter **IPv6 Address**.
5. Enter **IPv6 Gateway Address** of PoP node, which is optional.
6. Select the checkbox next to **Yes, I have downloaded latest E2E Controller backup**.
7. Click **Start Migration**.

A successful message on migration process is displayed.

The Onboard E2E Controller network is migrated with all the sites and nodes into External E2E Controller, as shown below:

### Fallback to Onboard E2E Network

The fallback process is applicable only for External E2E networks where Onboard to External E2E Network migrated. Perform the following steps to fallback to Onboard E2E Network after the migration from Onboard to External E2E Network.

1. 1. Change the Controller IPv6 in the PoP from cnMaestro in External E2E Controller.
2. 2. Go to PoP GUI and when the status displays as not connected, Enable Onboard E2E Controller.
3. 3. Disconnect the External E2E controller from cnMaestro.
4. 4. Delete the devices and sites in cnMaestro when the External Controller is offline, as they will conflict with Onboard E2E network devices when connected to cnMaestro.
5. 5. In cnMaestro, approve the Onboard E2E network and restore the backup taken before the Migration.
6. 6. Verify the Network and devices status in PoP device GUI and cnMaestro.

### Scheduling configuration backup of E2E Controller

You can configure FTP or sFTP and schedule to backup the configuration of E2E Controller (onboard or external) using cnMaestro. The backup scheduling option allows you to schedule and save the automated configuration backup in a FTP or sFTP path (which you provided as an input during FTP or sFTP configuration). This scheduling option helps in availing the latest configuration backup and recovering the 60GHz cnWave network to the latest available configuration when E2E Controller crashes or rebuilt.

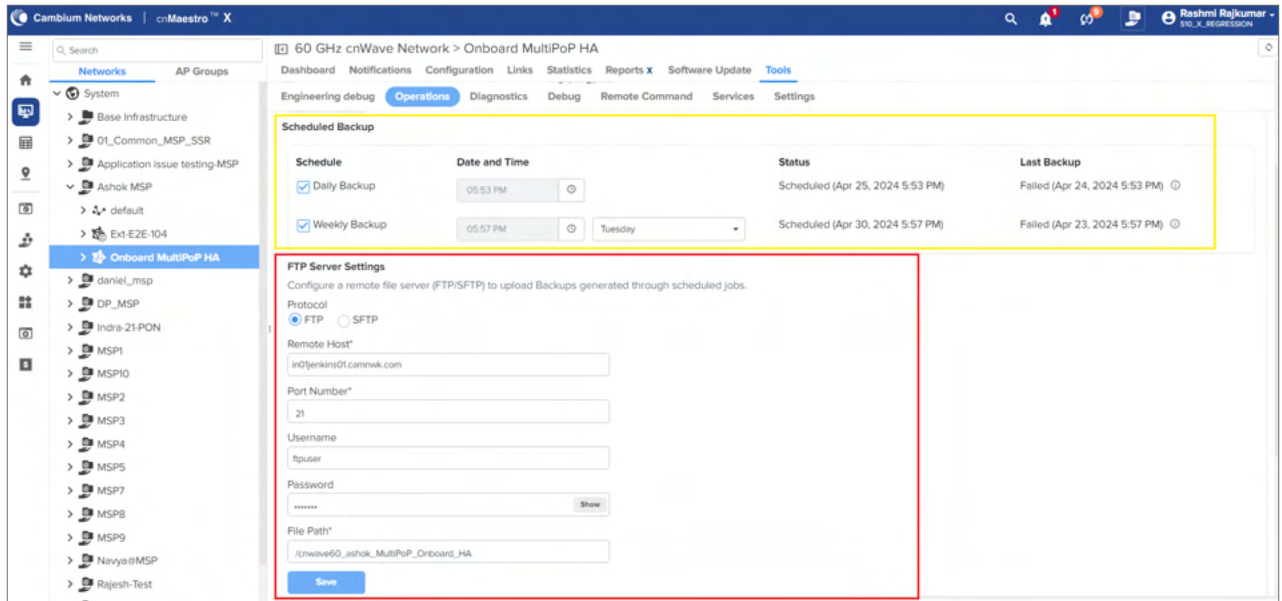

#### Note

- The scheduling option requires the sFTP or FTP configuration as the backups are uploaded to the sFTP or FTP remote path only.

- This backup scheduling option is supported for both Onboard and External E2E Controller deployments.
- FTP or sFTP Ports must be allowed in network firewall from a VM or device running E2E Controller service to the respective FTP or sFTP server.
- The backup scheduling option is supported in 5.1.0 Cloud and On-Premise cnMaestro release and 1.4 E2E Controller release.

To configure the FTP or sFTP settings and schedule the backup, complete the following steps:

1. From the **Home** page of cnMaestro, navigate to Monitor and Manage > E2E Network > Tools > Operations. The **Operations** page displays options to configure settings for E2E Controller.
2. In the **FTP Server Settings** section, configure a remote file server (FTP or sFTP) to upload the backups generated through the scheduled jobs.

[Table 76](#) lists the parameters required for configuring the remote FTP or sFTP server.

**Table 76** Parameters for FTP/sFTP server settings

Parameter	Description
Protocol	File protocol (FTP or sFTP) required for uploading the backup of E2E Controller over the network. Select the required protocol.
Remote Host	The remote host name of the FTP or sFTP file server. Provide IP or DNS resolvable host name in the text box. This is a mandatory parameter.
Port Number	The port number used to allow in network firewall from a VM or device running E2E Controller service to the respective FTP or sFTP server. This is a mandatory parameter.
Username	Username to log in to the remote FTP or sFTP server.

**Table 76** Parameters for FTP/sFTP server settings

Parameter	Description
Password	Password that is required to authenticate the remote FTP or sFTP server.
File Path	The remote file path of FTP or sFTP server where the backups are uploaded automatically on scheduling.

3. Click **Save**.

The remote FTP or sFTP configuration is successfully updated.

4. To schedule the backup job, use the following options (either one or both) in the **Scheduled Backup** section:

- **Daily Backup:** For the daily backup, set the time (in 24-hours format) using the **Date and Time** parameter.
- **Weekly Backup:** For the weekly backup, set the time (in 24-hours format) and day.

The **Status** field in the **Scheduled Backup** section displays date and time of the scheduled job. Similarly, the **Last Backup** field displays date and time of the last failed job.

## Diagnostics

Diagnostics page allows the user to gather Technical Support Dump and can be downloaded and sent to cambium support team.

All the events information of E2E controller can be viewed under E2E Events. In **E2E Events** tab user can view the **Event ID, Time, Device, Level, Source** and **Reason** of the E2E Network.

## Debug

In **Debug** tab, you can view and download the Node logs by executing the following log:

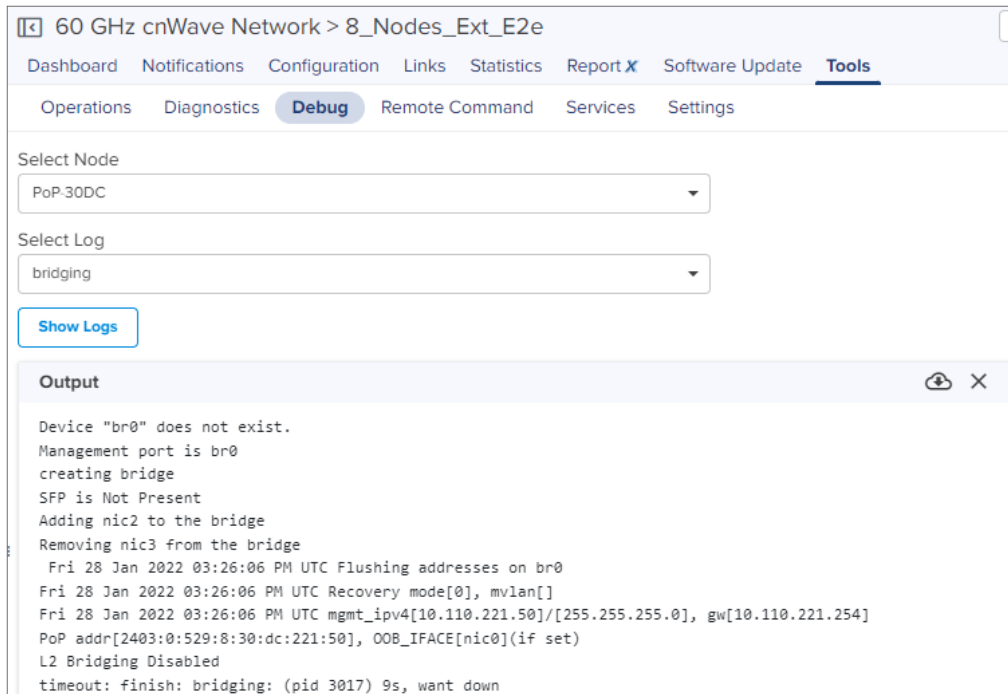

- bridging
- e2e\_minion
- openr
- pop\_config (available for PoP device)

- exabgp (available for PoP device)
- cnAgent (available for Onboard PoP device)
- e2e\_controller (available for Onboard PoP device)

To view the logs:

1. Navigate to **Tools > Debug**.
2. Select a node name from the **Select Node** drop-down.
3. Select the required log name from the **Select Log** drop-down.
4. Click **Show Logs**.

The output for the selected criteria appears as shown:

- Click download (📄) icon to download the generated output.
- Click clear (X) icon to clear the output.

## Remote Command

In **Remote Command** tab, user can view or download command logs by executing the following command:

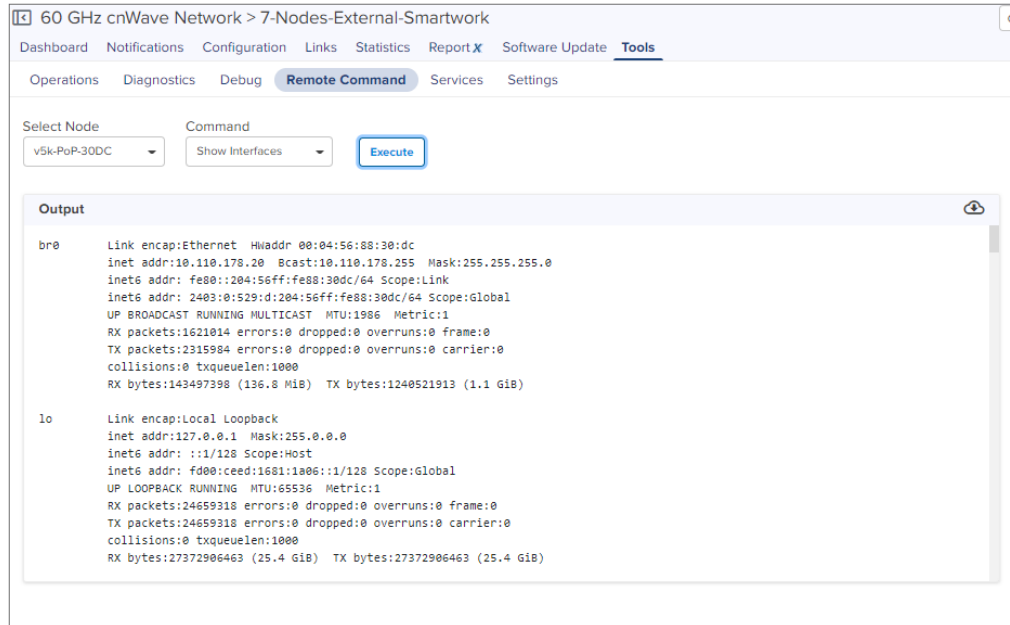

- Show Interfaces
- Show Routes
- Show OpenR Adjacencies
- Show OpenR Prefixes
- Show SFP Power Details (applicable for V5000 and V3000)
- Show IPv4 Neighbors
- Show IPv6 Neighbors
- Show Wired Interface State Changes

- show DHCP client lease
- Ping

To execute the command:

1. Navigate to **Tools > Remote Command**.
2. Select a node name from the **Select Node** drop-down.
3. Select the required command from the **Command** drop-down.
4. Click **Execute**.

The output for the selected criteria appears as shown:

5. Click the download (📄) icon to download the generated output.
6. Click the clear (✕) icon to clear the generated output.

To execute Ping command, perform the following steps:

1. Select the **Ping** command from drop-down.
2. Select **Node** or type of **IP address** (IPv4 or IPv6).
3. Select the following options:
  - Destination Node
  - Number of packets minimum 1 to maximum 10 (-c)
  - Buffer Size minimum 1 to maximum 65507 (-s)
4. Click **Start Ping**.

Output is displayed, as shown in [Figure 349](#).

In **Network Configuration** user can configure the **E2E Controller IPv6 Address** and **IPv6 Routes**.

To change **E2E Controller IPv6 Address**, perform the following:

1. Navigate to **Tools > Settings > Network Configuration** tab.
2. Click **Generate** to automatically generate IPv6 address or manually change the IPv6 Address of E2E Controller.
3. Click **Save**.

To configure **IPv6 Routes**, perform the following:

You can also enable the **Auto Manage Routes**. This automates IPv6 Routes to DNS and CNs based on the topology and PoP nodes status. It is applicable only if PoP nodes and E2E Controller are in same Network/Prefix length.

If IPv6 routes is enabled as **Auto Manage Routes**, **Type** field displays as **Auto**.

To Enable Auto Managed Routes:

1. Navigate to **Tools > Settings > Network Configuration** tab.
2. Enable **Auto Manage Routes**.

3. Click **Save**.

Network Configuration

E2E Controller IPv6 Address (eth0)

IPv6 Routes

Auto Manage Routes Automated IPv6 Routes to DNIs and CNIs based on topology and PoP nodes status. Applicable only if PoP nodes and E2E Controller are in same Network/Prefix length.

Retain Auto-Managed Routes

Destination	Gateway	Type
default	fe80::ce16:7eff:fe6e:5b7f	dynamic
fd00::ceed:1681:a00::56	2403:0:529:d:204:56ff:fe88:30dc	auto

Save

To retain auto-managed routes, even after auto-managed routes is disabled, complete the following steps:

1. Navigate to **Tools > Settings > Network Configuration** tab.

Network Configuration

E2E Controller IPv6 Address (eth0)  
2403:0:529:d:a00:278:1e01212164 Generate Changing IPv6 Address will disconnect all the nodes. E2E Controller Address configured in the PoP nodes should match.

IPv6 Routes

Auto Manage Routes Automated IPv6 Routes to DNIs and CNIs based on topology and PoP nodes status. Applicable only if PoP nodes and E2E Controller are in same Network/Prefix length.

Retain Auto-Managed Routes

Destination	Gateway	Type
default	fe80::ce16:7eff:fe6e:5b7f	dynamic
fd00::ceed:1681:a00::56	2403:0:529:d:204:56ff:fe88:30dc	auto

Save

2. Enable **Retain Auto-Managed Routes**.

3. Click **Save**.

4. Please wait pops-up.

Once the Auto Manage Routes is disabled, IPv6 routes can be managed through static routes and in type it displays as **Static**.

Network Configuration

E2E Controller IPv6 Address (eth0)  
2403:0:529:d:a00:278:1e01212164 Generate Changing IPv6 Address will disconnect all the nodes. E2E Controller Address configured in the PoP nodes should match.

IPv6 Routes

Auto Manage Routes Automated IPv6 Routes to DNIs and CNIs based on topology and PoP nodes status. Applicable only if PoP nodes and E2E Controller are in same Network/Prefix length.

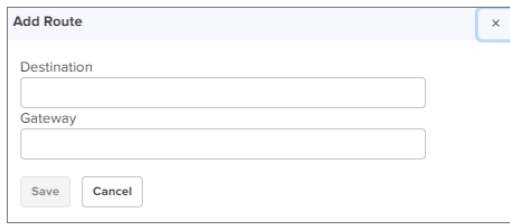

Destination	Gateway	Type
default	fe80::ce16:7eff:fe6e:5b7f	dynamic
fd00::ceed:1681:a00::56	2403:0:529:d:204:56ff:fe88:30dc	static

Save

5. Click **Save**.

To add new static **IPv6 Routes**:

1. Click **Add New**.

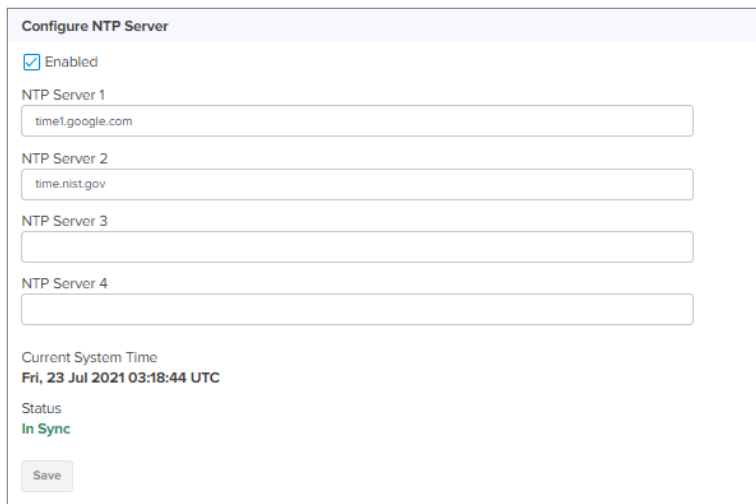

2. Enter **Destination** and **Gateway**.
3. Click **Save**.

The user can configure the **NTP Settings** to configure the time configuration of the server with hostname or IP address.

To configure the NTP server:

1. Navigate to **Tools > Settings > NTP Settings** tab.
2. Enable the **NTP Settings**.
3. Enter **Host Name** or **IP Address**. It displays **Current System Time** and **Status** of the server.

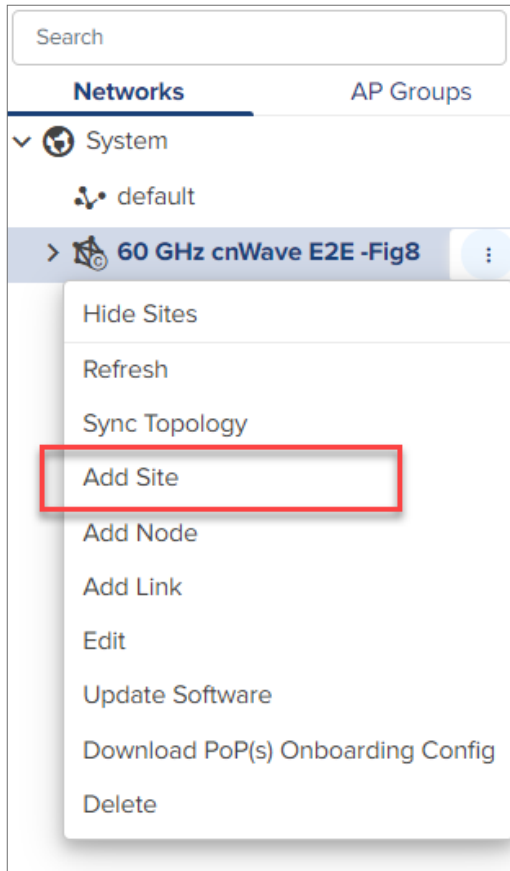

## Site Configuration

Sites are located within the networks and wireless access points attached to it.

### To Add a Site

1. Navigate to **Network** and click **⋮** icon.
2. Select **Add Site** from the drop-down.

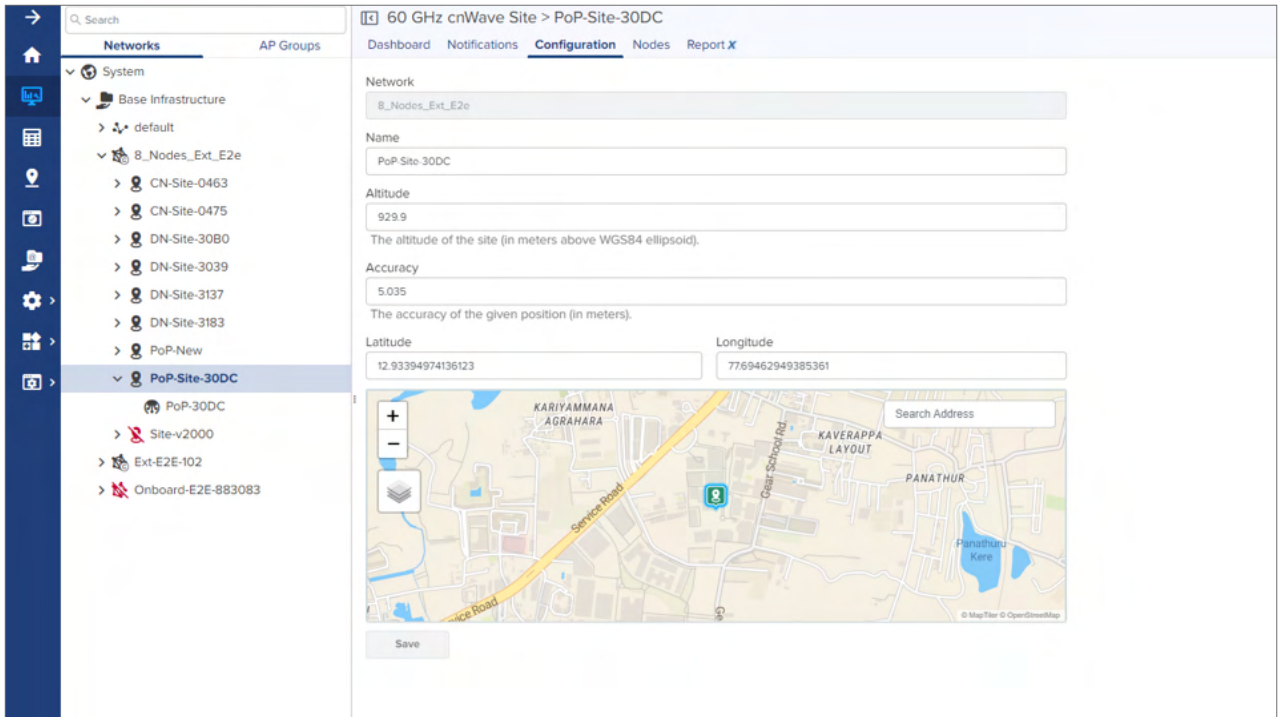

3. Enter the **Name**, **Altitude**, and **Accuracy**.
4. Once the address is entered in the Map, Latitude and Longitude gets fetched automatically. You can also enter the details Manually.

The 'Add Site' dialog box is shown with the following fields and options:

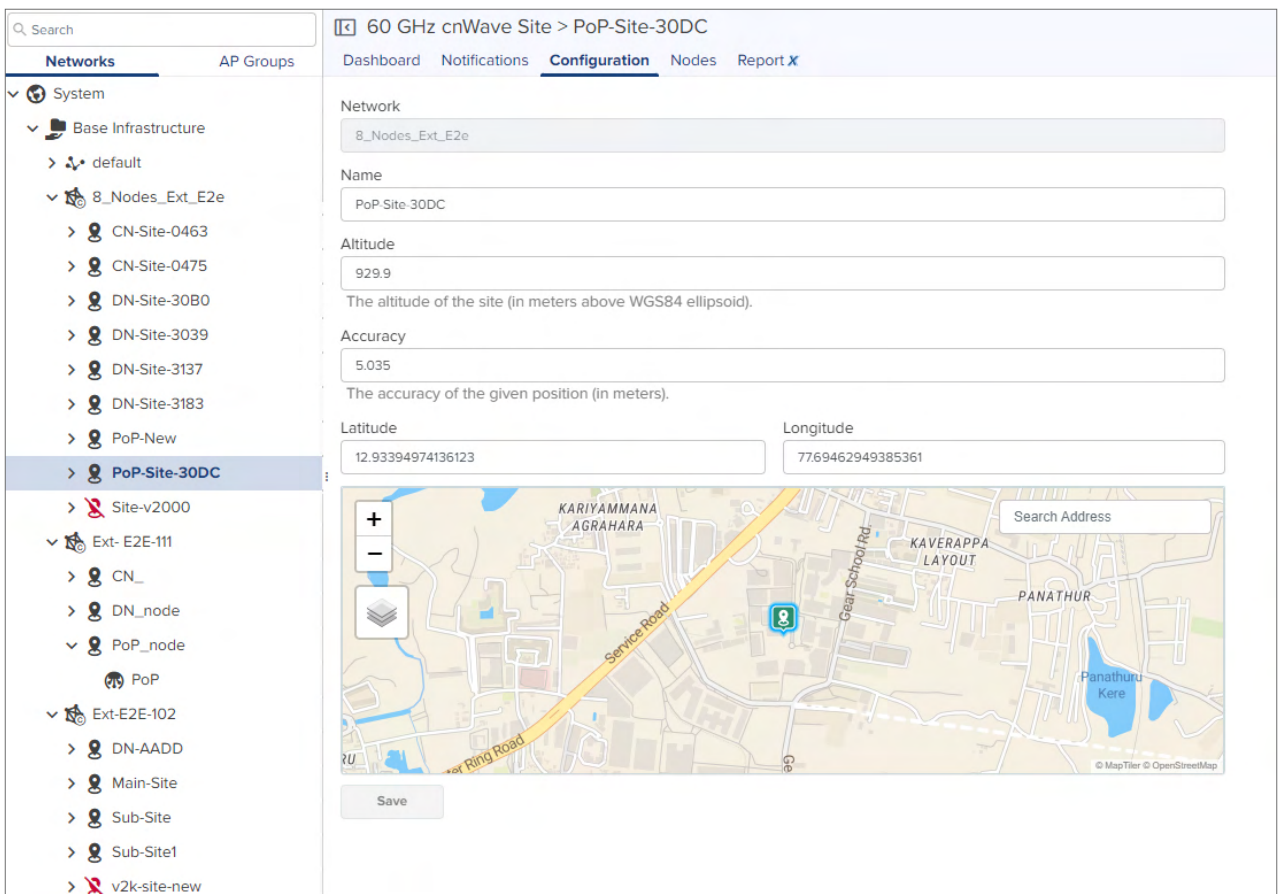

- Network:** 60 GHz cnWave E2E-883083
- Name:** (empty text input field)
- Altitude:** (empty text input field)  
The altitude of the site (in meters above WGS84 ellipsoid).
- Accuracy:** 10000  
The accuracy of the given position (in meters).
- Latitude:** (empty text input field) Min = -90, Max = 90
- Longitude:** (empty text input field) Min = -180, Max = 180
- Map:** A map of India with a search bar labeled 'Search Address'. The map shows Nagpur, Bhilai, Chandrapur, and Mravati.
- Buttons:** 'Save' and 'Cancel' at the bottom.

5. Click **Save**. When the Site is configured it gets added under the E2E Network.

To edit the **Site** perform the following:

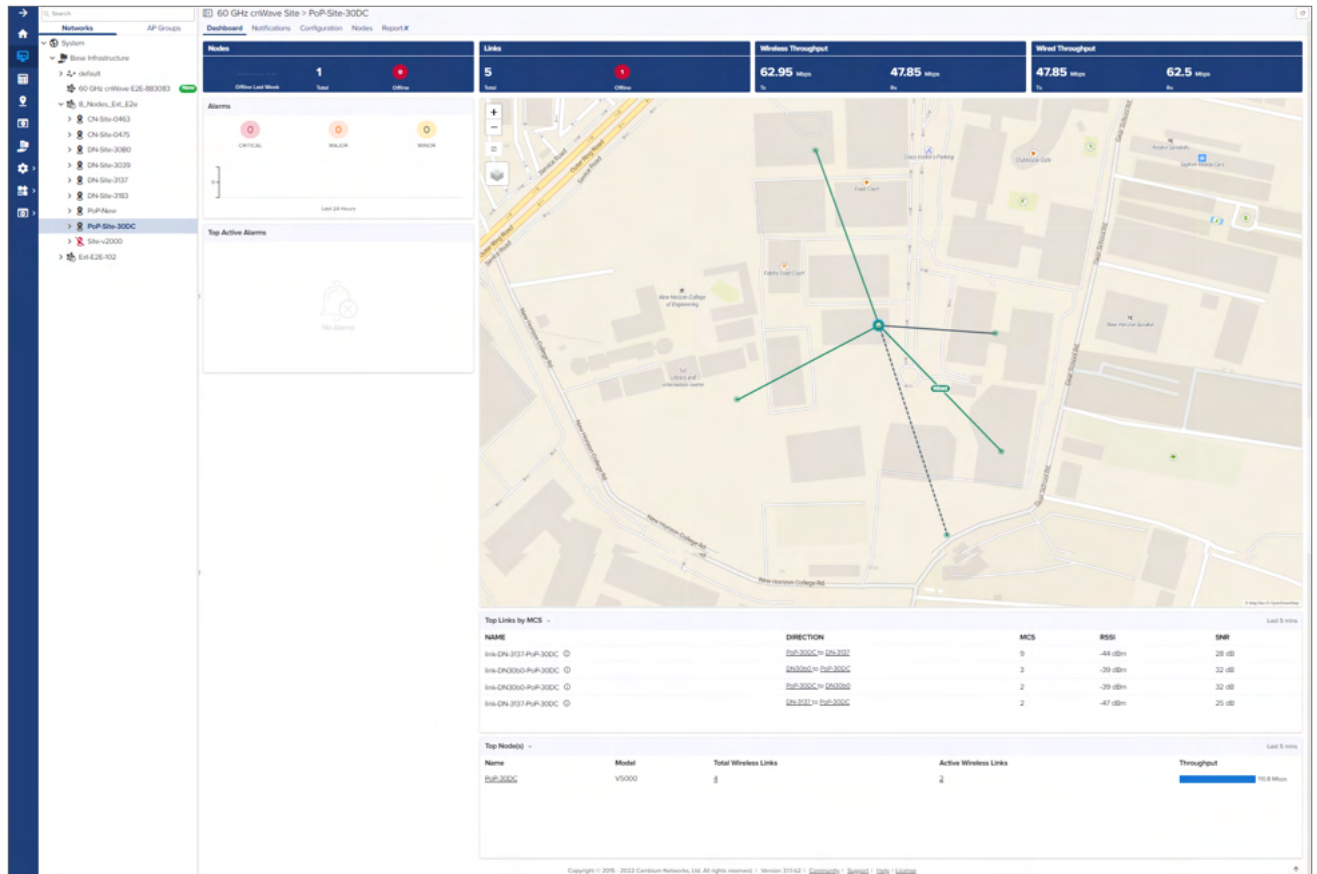

1. Navigate to **Network > Site > Configuration**.
2. Edit the details and click **Save**.

## Site Dashboard

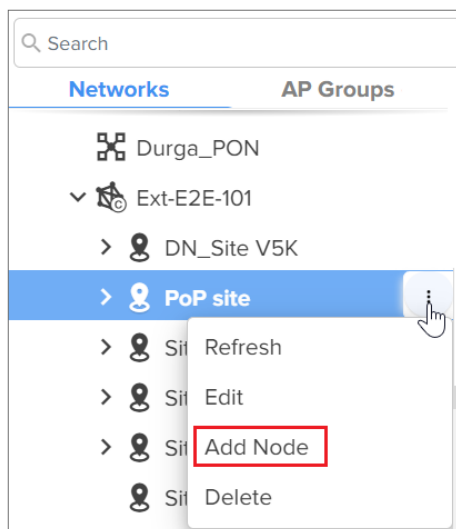

Dashboard pages are customized for each device type and aggregation level. The Site dashboard section displays the **Nodes**, **Links**, **Wireless Throughput**, **Wired Throughput**, **Alarms**, **Top Active Alarms**, **Top Links by MCS**, **Top Links by RSSI**, **Top Links by SNR**, **Top Node(s)**, **Top PoP(s)**, **Top DN(s)**, and **Top CN(s)**.

Figure 351 Site Dashboard

## Node Configuration

Node can be configured through the **Site Menu** option by clicking the  icon in **Network** or **Site** tree menu or through **Network > Site > Nodes** and click **Add Node**.

## Note

From 3.1.1 release V2000 device (beta version) is supported.

To Add a Node:

1. Navigate to the **Network > Site > Nodes**.

Device	IPv6 Address	Mode	Model	Status	Status Time	Radio Channel	Main Aux SFP	PoP Node	Sector Throughput (Tx)	Sector Throughput (Rx)	Ethernet
PoP-30DC	10.10.10.10	DN	V5000	Online	1d 18h 4m	1,2	<input checked="" type="checkbox"/> <input checked="" type="checkbox"/> <input checked="" type="checkbox"/>	Yes	62.94 Mbps	47.85 Mbps	47.85 Mbps

Note: Throughput is calculated every 5 minutes and may not update with each Auto Refresh cycle.

**Add Node** window pops-up.

2. Click **Add new**.

**Add Node**

Name:

Network: Ext E2E-100

Site:

Mode:  DN  CN

PoP Node

Serial Number:

Azimuth:  Antenna Tilt:

IPv4 Management

3. Click  to add site.

Adding the Node allows the user to create the different Nodes as shown below:

- PoP Node
- DN
- CN

## PoP Node configuration

To add a PoP Node:

1. Navigate to the **Network > Site > Nodes**.
2. Click **Add New**.

60 GHz cnWave Site > PoP-Site-30DC

E2E Controller IPv6 Address

**IPv4 Management**

IPv4 Address

Subnet Mask

Gateway Address

Save Cancel

10. Enter the **IPv6** and **Gateway Addresses**.

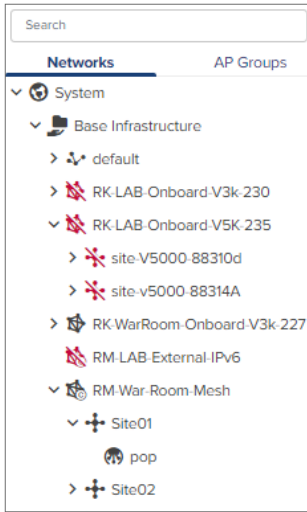

**Note**  
Generate IPv6 provides **Seed Prefix** in CIDR format from which subnet prefixes are allocated to all DNS and CNs (e.g. fdce:b00c:cafe:ba00::/56)

- In IPv4 Management, enter the **IPv4 Address, Subnet Mask** and **Gateway Address**.
- Click **Save**.

**Note**  
Once the PoP Node is configured, **PoP(s) Onboarding Config.json** file gets downloaded automatically, which can be used to import and configure in the PoP Node UI.

Once the **PoP** node is configured it gets listed under the **Site**.

## DN/CN Node configuration

To add DN/CN node:

- Navigate to the **Network > Site > Nodes**.
- Click **Add New**.

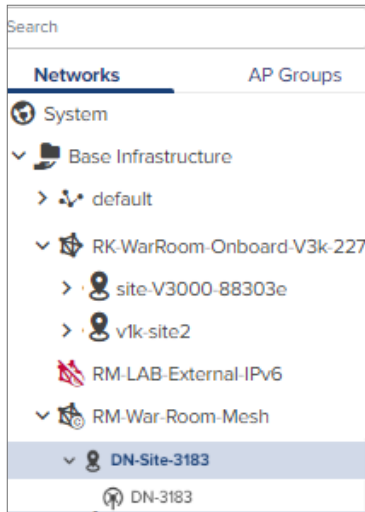

- Add Node** window pops-up.

4. Enter the **Node Name**, select the Mode **DN** or **CN**.
5. Enter the **Serial Number**.
6. Enter the **Azimuth** and **Elevation**.

7. In IPv4 Management enter the **IPv4 Address**, **Subnet Mask** and **Gateway Address**.
8. Click **Save**.
9. Once the **DN/CN** node is configured, it gets listed under the Site.

## Replace Node

Replace Node allows to replace the existing faulty nodes with new nodes along with the configuration and links of existing faulty nodes.

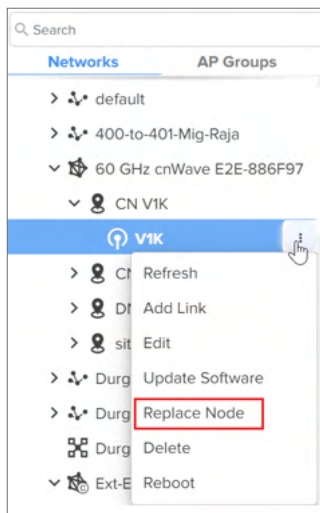

### Note

New node should be replaced with same model as existing node.

To replace Node:

1. Navigate to **Node** tree menu and select the node.

2. Click  icon and Select **Replace Node** from the drop-down.
3. **Replace Node** window pops-up.

**Replace Node** ✕

Current MAC address

New Serial number

Device types should be same

4. Enter the **New Serial number**.
5. Click **Save**.

## PoP Node

Once the PoP node is configured it displays the monitoring panel of the PoP node.

### Dashboard

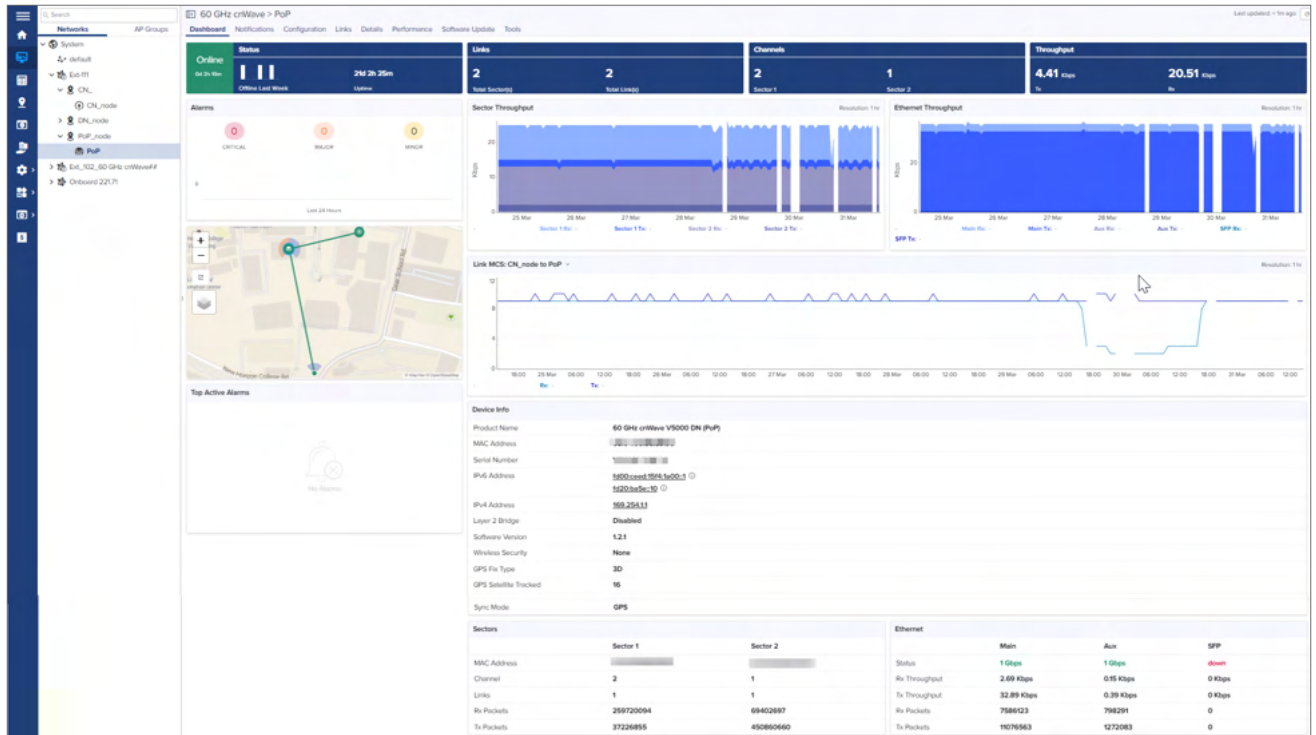

Dashboard pages can be customized for each device type and aggregation level. The PoP node dashboard section displays the **Status, Links, Channels, Throughput, Sector Throughput (Sector 1 and Sector 2), Ethernet Throughput (Main, Aux, SFP), Alarms, Top Active Alarms, Link MCS, Device Info, Sectors, and Ethernet**.

#### Note

- Sector Throughput (sector1) for V3000, V2000 and V1000.
- Sector Throughput (sector1 and sector2) for V5000.
- Ethernet Throughput graph with Main for V1000.
- Ethernet Throughput graph with Main, Aux, SFP for V5000 and V3000.
- Ethernet Throughput graph with Main and Aux for V2000.

Figure 352 PoP Node Dashboard

## Configuration

### Basic

It displays the basic details of PoP node such as **Name, Description, MAC Address, Azimuth, and Elevation**. It also allows to edit the name of the node.

## Network

Network tab allows the user for the **PoP configuration, E2E Controller Configuration, BGP Configuration, IPv6 Layer 3 CPE, IPv4 Management, OOB, Other Settings (Multi-PoP or Relay Port, Enable Aux port power), PTP External Failover, Ethernet Ports, and 1G SFP.**

### Note

When Layer 2 Bridge is enabled in E2E Controller, Layer 2 Bridge option will be available in PoP Network Configuration

Figure 355 Network

Configure the Network as shown below:

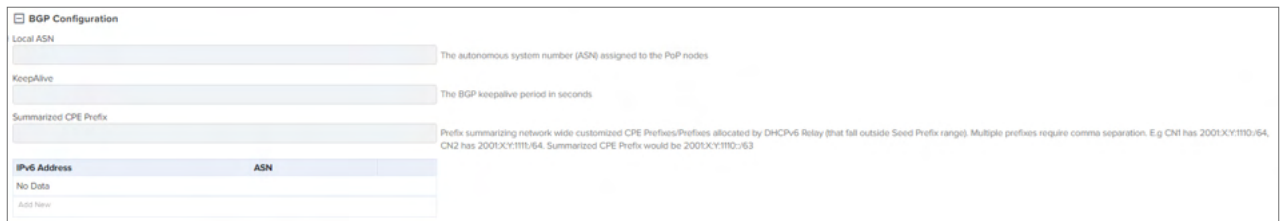

1. Navigate to the **Configuration > Network.**
2. In **PoP Configuration:**
  - Select the appropriate option in **Routing** and **Interface.**
  - Enter the **IPv6 Address.**
  - Enter **IPv6 Gateway Address** its optional.

3. In **E2E Controller Configuration**, enter the **IPv6 Address**.

4. In BGP Configuration add IPv6 Address.

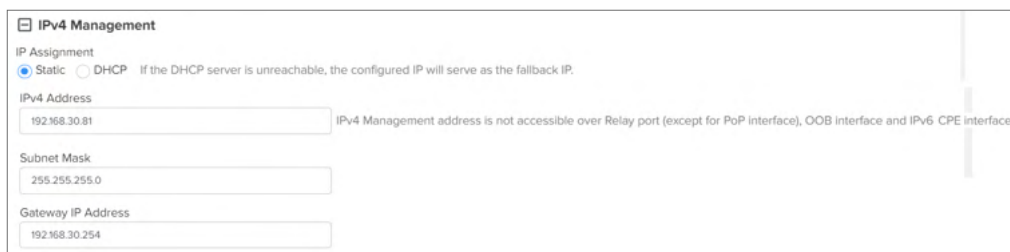

5. In **IPv6 Layer 3 CPE**

- Select **IPv6 CPE interface** as Aux, Main, or SFP.
- Enter **IPv6 CPE Prefix**.

6. In the **IPv4 Management** section, the following options are supported:

- **Static:** If you select Static, enter the IPv4 address, Subnet mask, and Gateway IP address manually.
- **DHCP:** If you select DHCP, there is no need to set the IP address, Subnet mask, and Gateway IP address manually. These properties (IPv4 address, Subnet mask, and Gateway IP address) are automatically obtained from the DHCP server. Note that the DHCP configuration is available only for the PoP nodes. It is not available for CN and DN nodes.

7. In **Ethernet Ports** enable the appropriate option **Main** or **Aux** or **SFP**.

8. In **Layer 2 bridge** enable the appropriate options such as:

- Disable Broadcast Broadcast packets (except DHCP Offer and DHCP Ack) in the downlink direction including client to client packets will be dropped.
- Disable Downlink Multicast Flood - Multicast packets in the downlink direction including client to client packets will be dropped
- Disable Unknown Unicast Flood
- Disable IPv6
- Monitor PoP Interface Layer 2 tunnels will failover to next best PoP when the backhaul interface of this PoP is down.

**Note**

The configuration is applicable only when static routing is used and IPv4 gateway is configured..

- Insert DHCP Option 82

**Layer 2 Bridge**

Disable Broadcast Broadcast packets (except DHCP Offer and DHCP Ack) in the downlink direction including client to client packets will be dropped.

Disable Downlink Multicast Flood Multicast packets in the downlink direction including client to client packets will be dropped.

Disable Unknown Unicast Flood

Disable IPv6

Monitor IPv4 Gateway  
In Layer 2 bridging with multiple POP nodes, enabling this feature will configure this POP to periodically ARP ping the configured IPv4 Gateway. If the ARP pings are to fail, all other nodes within the mesh network will choose one of the other available POP nodes to route to

DHCP Option 82  
 Enabled  Disabled DHCP option 82 will be inserted in the DHCP requests.

9. In **Other Settings** enable **Enable Aux port power** and **Multi-PoP / Relay Port**.

**Other Settings**

Enable Aux port power Enables the power out on the Aux port

Multi-PoP / Relay Port  
 Aux  Main  SFP  Disabled Wired interface on which OpenR is run. Should be used when DNs are connected back to back and on PoPs in a multi PoP network.

10. In **OOB Interface** enable the appropriate option **Main** or **Aux** or **SFP**.

- Enter **IPv4 Address**.
- Enter **Subnet Mask**.

**OOB**

OOB Interface  
 Aux  Main  SFP  Disabled Out of band management interface to access the device. Management VLAN will be bypassed and data traffic will not be routed or bridged on this interface.

IPv4 Address

Subnet Mask

11. Click **Save**.

**Note**

Once the configuration is updated successfully in cnMaestro, the same parameters needs to be entered in the UI of the **PoP Node GUI**.

**VLAN**

**Note**

From Software Update Version 1.1 of all nodes, supports configuration of the VLAN Management and Ports.

Virtual Local Area Networks (VLANs) is a broadcast domain in a Layer 2 network. A broadcast domain is the set of all devices that will receive broadcast frames originating from any device within the set and traffic will be tagged when transporting over wireless.

**Note**

Only PoP node Management VLAN can be configured, if Layer 2 Bridge is not enabled in **E2E Network > Configuration > Basic** page.

Node running version 1.0.1:

- When Layer2 bridge is disabled, Only PoP node Management VLAN ID can be configured.
- When Layer2 bridge is enabled, all nodes Management VLAN ID can be configured.

Node running version 1.1:

- When Layer2 bridge is disabled, Only PoP node Management VLAN ID, Priority with Outer Tag can be configured.
- When Layer2 bridge is enabled, all node management VLAN and ports can be configured.

To add a Management VLAN:

1. Navigate to **Configuration > VLAN**.
2. Click Enabled.

## Links

Links provide the details about the links between nodes, statistics and events of the links in the E2E Network.

## List

List provide the details about the links of the nodes and also provides the option to create a new link. User can delete the links in bulk by selecting the particular links. It also allows to export or import link details.

**Figure 357** List

For more details about adding a link and deleting a link in the network, refer the [List](#) section.

**Note**

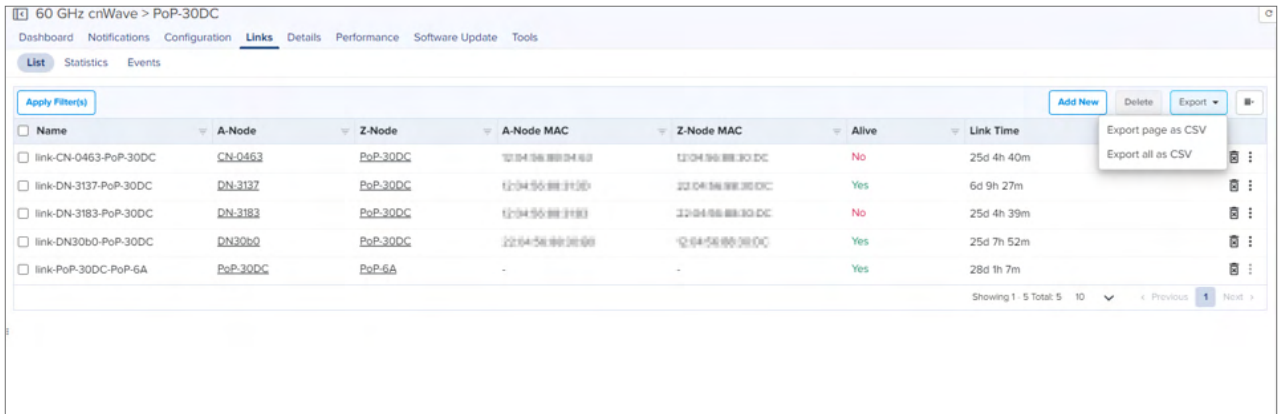

By default A Node is selected as node, when adding new link in the network.

**Export List**

Export list allow the user to export the PoP links list.

To export the links :

1. Navigate to **Links > List > select Export.**

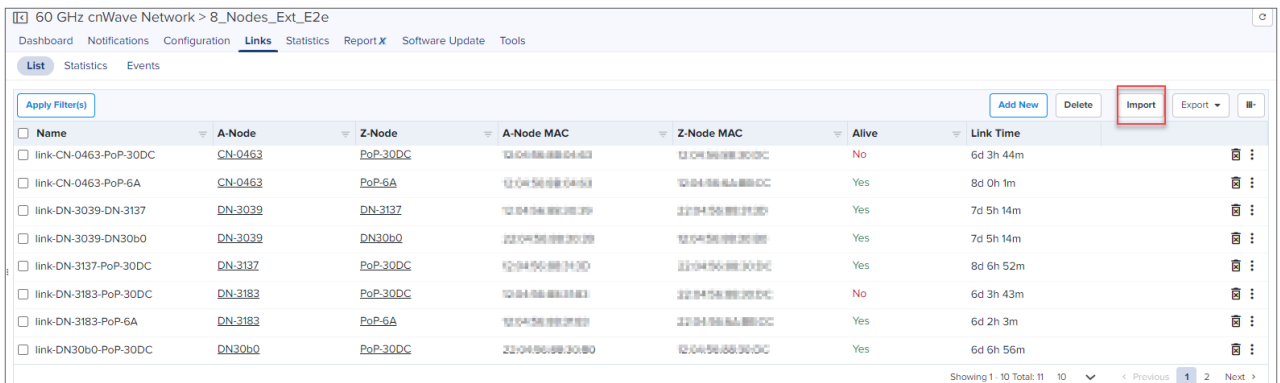

2. It exports .csv file format as shown below.

A	B	C	D	E	F	G	H	I	J	K	L	M	N	O
LINK_NAME	A_NODE	I_A_NODE	I_Z_NODE	I_Z_NODE	I_LINK_TYPE	ALIVE	IGNITION_DISTANCE	AZIMUTH	BACKUP_C	IGNITION_TIMESTAMP				
Link Name	A node	naI	1/2 Z node	naI	Sector 1/2	Wireless o	Yes/No	Ignition At	Distance b	Azimuth (C	Yes/No	Enabled/D	Timestamp	
link-CN-fa-cloud-D4	CN-fa-clou	12:04:56:8	D4	22:04:56:8	Wireless	Yes	16	996	54.9	No	Enabled	2021-07-23T02:49:06.317Z

**Events**

Events provide the details of link availability, hourly link availability in percentage, link availability in different time lines, and distance of the link.

**Figure 358** Link Events

**Table 77** Link > Events fields

Field	Description
Link Name	Name of the link.
Alive	Status of the link (Yes or No).
Availability Chart	Displays the link availability based on time range selected from the drop-down. When you hover the mouse on the Availability Chart, the link availability is shown as described: <ul style="list-style-type: none"> <li>1. If you select time range as <b>Last 1 Hour</b>, then link availability for every 5 minutes is displayed.</li> <li>2. If you select time range other than <b>Last 1 Hour</b>, then link availability for every 1 hour is displayed. <ul style="list-style-type: none"> <li>• Hover on the link to see the hourly availability as shown in <a href="#">Figure 342</a>.</li> <li>• Clicking on percentage link availability displays pop-up window as shown in <a href="#">Figure 343</a></li> <li>• Link availability is presented in different colors in the chart as shown in <a href="#">Figure 341</a></li> </ul> </li> </ul>

**Table 77** Link > Events fields

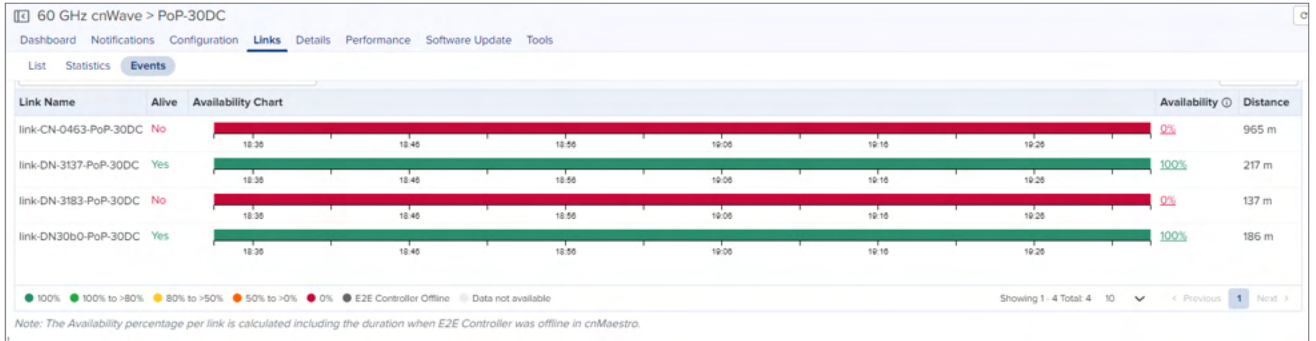

Field	Description
Availability Percentage	Availability of link is shown in percentage in the Availability column, as shown in <a href="#">Figure 342</a> .
Distance	Distance of the link in meters.

**Figure 359** Link Availability in Percentage

Availability percentage per link is calculated, including the duration, when E2E Controller goes Offline in cnMaestro.

**Figure 360** Link Availability

Note: The Availability percentage per link is calculated including the duration when E2E Controller was offline in cnMaestro.

Showing 1 - 10 Total: 21 10 < Previous 1 2 3 Next >

Events details are available for Last 1 hour, Last 6 hours, Last 12 hours, Last 24 Hours, Last 2 days, Last 4 days, and Last 7 days.

**Note**

Event details for **Custom Range** and **Last 30 days** are available only for cnMaestro X users.

## Details

Details page provides the following device information:

- [Overview](#)
- [Network](#)

## Overview

**Overview** page provides the device details and it also details of the last 3 software update history.

Figure 362 Details Overview Page

The screenshot displays the 'Details Overview Page' for a 60 GHz cnWave PoP-300C device. The interface includes a navigation bar with 'Overview' and 'Network' tabs. The main content is divided into several sections:

- System:** A table listing device details such as Name (PoP-300C), Product Name (60 GHz cnWave V5000 DN (PoP)), MAC Address (88:04:98:88:30:8C), Health (Online), IPv6 Address, Software Version (1.21), Firmware Version (10.11.0.87), Serial Number (K1600088900C), Onboard Date (Feb 11, 2022 13:02), and Sync Mode (GPS).
- GPS:** A table showing location data including Latitude (12.933947), Longitude (77.6944181), Height (934 m), Fix Num Sat (15), and Fix Type (3D).
- Links:** A table comparing 'Wireless' and 'Wired' link counts. Total Wireless: 5, Total Wired: 1. Active Wireless: 2, Active Wired: 1.
- Sectors:** A table comparing Sector 1 and Sector 2 across various metrics like MAC Address, Channel, Links, Rx/Tx Packets, Security, and Error Association.
- Software Update:** A table showing the current Software Version (1.21) and a recent update history entry for Feb 11, 2022, with a 'Success' status.

## Network

**Network** page provides the **Ethernet** details of **Main**, **Aux**, and **SFP**.

Figure 363 Details Network Page

The screenshot displays the 'Details Network Page' for a 60 GHz cnWave PoP-Onboard-V5k-3083 device. The 'Network' tab is active, showing an 'Ethernet' section with a table of performance metrics for three ports: Main, Aux, and SFP.

	Main	Aux	SFP
Status	1000 Mbps	down	down
Rx Throughput	4.05 Kbps	0 Kbps	0 Kbps
Tx Throughput	1.37 Kbps	0 Kbps	0 Kbps
Rx Packets	385137	0	0
Tx Packets	140652	0	0
Rx Errors	7401	0	0
Tx Errors	0	0	0
Rx Drops	1872	0	0
Tx Drops	0	0	0
Rx Frames	0	0	0

## Tools

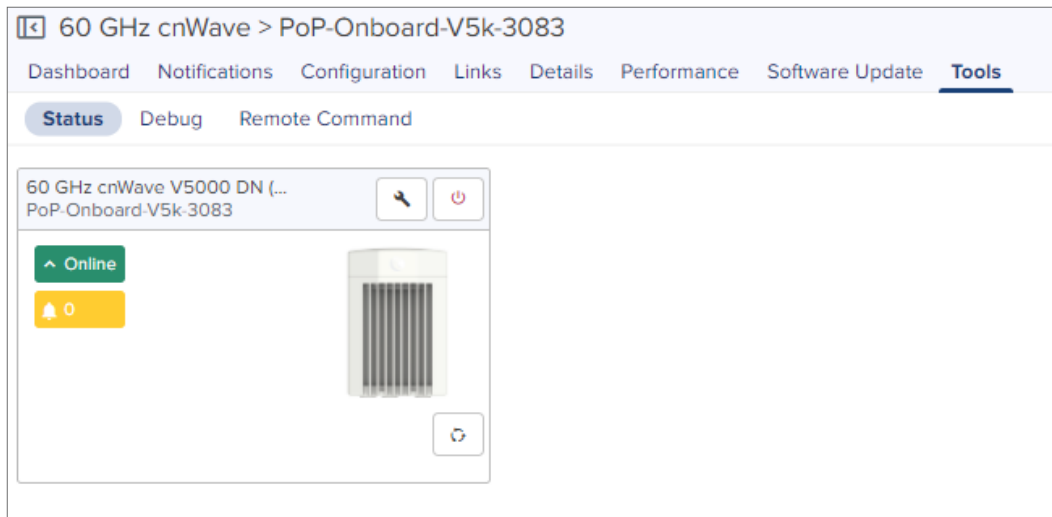

In Tools page, you can view the **Status**, **Debug**, details and **Remote Command** results of the device.

### Status

In **Status** tab you can view the status of the device:

- Critical alarms
- Download Tech Support File

- Online or Offline
- Restart minion
- Reboot the device.

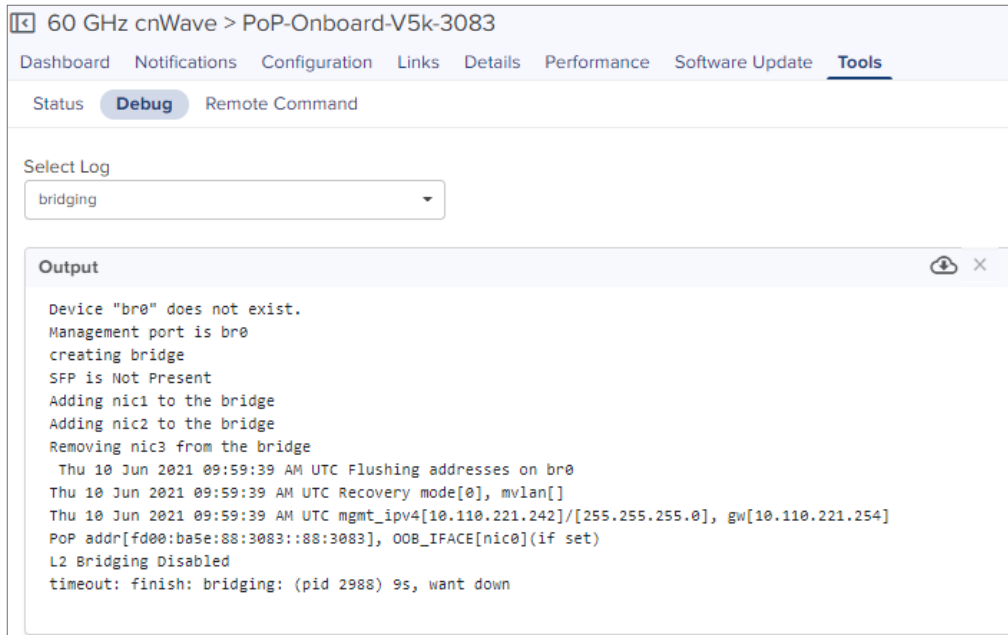

## Debug

In **Debug** tab user view or download the PoP logs by executing the following log commands:

- Bridging
- pop-config
- e2e\_minion
- openr
- exabgp
- cnAgent (available for Onboard PoP device)

To view the logs:

1. Navigate to **Tools > Debug**.
2. Select the required log name from the **Select Log** drop-down list box.

- Click the download  icon to download the generated output.
- Click the clear  icon to clear the generated output.

## Remote Command

In **Remote command** tab user view or download Command logs by executing the following commands:

- Show Interfaces
- Show Routes
- Show OpenR Adjacencies
- Show OpenR Prefixes
- Show SFP Power Details (applicable for V5000 and V3000)
- Show IPv4 neighbors
- Show IPv6 neighbors
- Show Wired Device State Changes
- Ping

To Execute the command:

1. Navigate to **Tools > Remote Command**.
2. Select the required command from the **Command** drop-down list box.
3. Click **Execute**.

The output for the selected criteria appears as shown:

60 GHz cnWave > PoP-Onboard-V5k-3083

## DN/CN Node

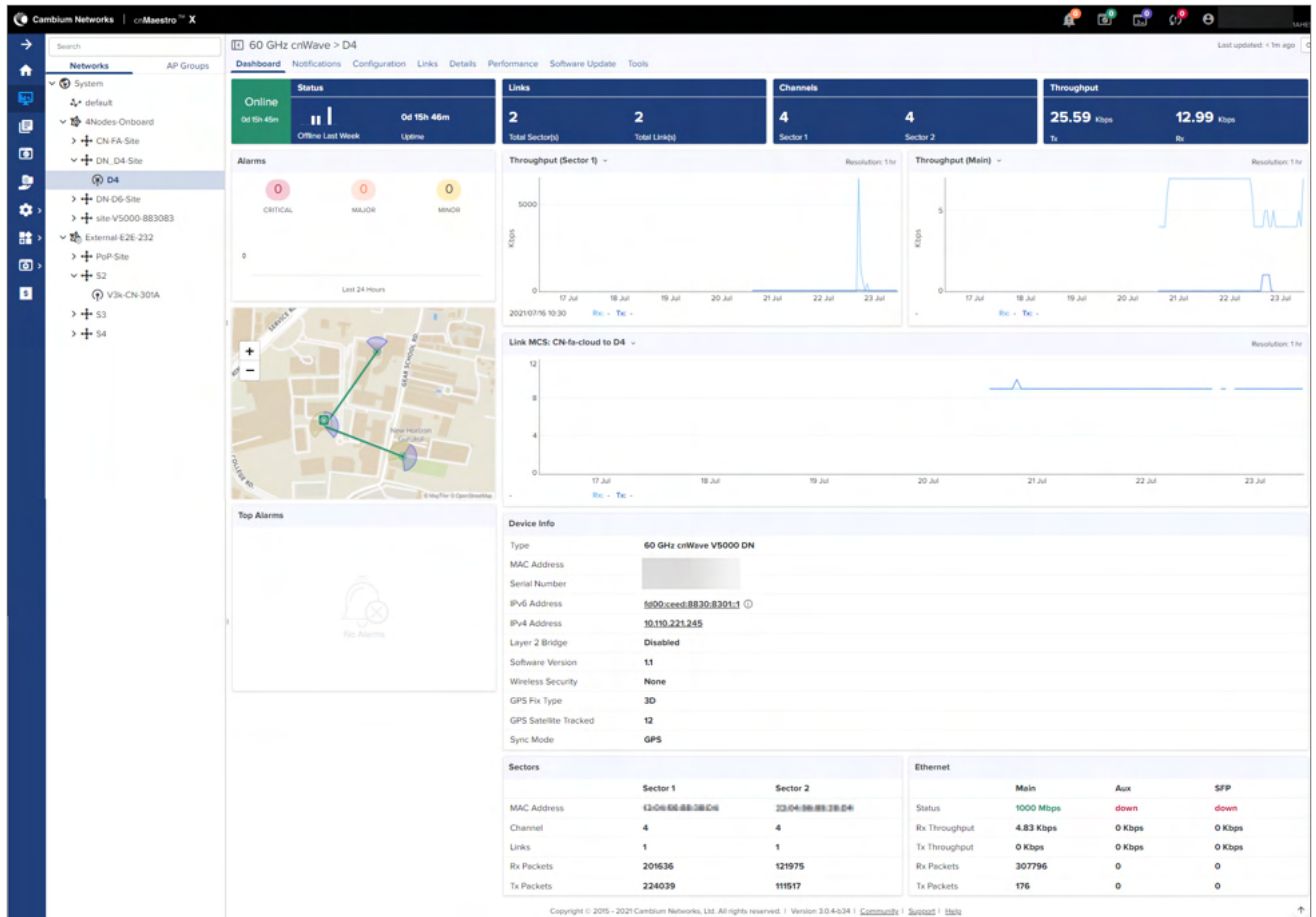

To create a new site, refer to [Site](#).

To create a node, refer to [DN/CN](#).

## Dashboard

Dashboard pages are customized for each device type and aggregation level. The DN/CN node dashboard section displays the **Status, Links, Channels, Throughput, Sector Throughput (Sector 1 and Sector 2), Ethernet Throughput (Main, Aux, SFP), Alarms, Top Active Alarms, Link MCS, Device Info, Sectors, and Ethernet**.

Figure 364 DN/CN Node Dashboard

## Configuration

Configuration page allows the user to configure the following details of CN/DN:

- [Basic](#)
- [Radio](#)
- [Network](#)
- [VLAN](#)
- [Security](#)
- [Advanced](#)

### Basic

It allows to configure and reset the basic details of DN/CN node such as Name, Description, MAC Address, Azimuth, and Elevation. It also allows to edit the name of the node.

Figure 365 Basic

Save Reset

## Network

Network tab allows the user to edit the **Layer 3 CPE, IPv4 Management, Ethernet Ports, PTP External Failover,** and **Other Settings.**

Figure 367 Network

The screenshot shows the Network configuration page for a 60 GHz cnWave device (DN-D6). The page is divided into several sections:

- IPv6 Layer 3 CPE:** Includes options for IPv6 CPE interface (Aux, Main, SFP, Disabled) and an IPv6 CPE Prefix field.
- IPv4 Management:** Includes fields for IPv4 Address (169.254.11), Subnet Mask (255.255.0.0), and Gateway IP Address.
- Ethernet Ports:** Includes checkboxes for Enable Main, Enable Aux, and Enable SFP.
- DHCP Option 82:** Includes a checkbox for Enable DHCP Option 82 (Disabled).
- Other Settings:** Includes a checkbox for Enable Aux port power and a Relay Port Interface section with options for Aux, Main, SFP, and Disabled.

Buttons for Save and Reset are located at the bottom of the page.

## VLAN

VLAN configuration of CN/DN is same as PoP Node VLAN as shown [above](#).

### Note

Enable Layer 2 Bridge in **60 GHz cnWave > Configuration > Basic** page to configure the CN/DN VLAN.

## Security

Security tab allows to reset the identity and password of the Radius user.

Figure 368 Security

The screenshot shows the Security configuration page for a 60 GHz cnWave device (DN-3D). The page includes the following fields:

- Radius user identity (text input)
- Private key password (text input) and Radius Private key password (text input)
- Radius user password (text input) and Radius user password (text input)

Buttons for Save and Reset are located at the bottom of the page.

## Advanced

Advanced tab allows the advanced user to set Field Name and Value.

1. Navigate to **Configuration > Advanced**.
2. Click **Add New**.

60 GHz cnWave > DN-3D

Showing 1 - 25 Total: 25 100  < Previous 1 Next >

Availability percentage per link is calculated including the duration when E2E Controller was Offline in cnMaestro.

**Figure 373 Link Availability**

**Figure 374 Link Status**

Events details are available for Last 1 hour, Last 6 hours, Last 12 hours, Last 24 Hours, Last 2 days, Last 4 days, and Last 7 days.

**Note**

Event details for **Custom Range** and **Last 30 days** is available only for cnMaestro X users.

**Tools**

In Tools page you can view the **Status** and **Debug** details of the device.

**Status**

In **Status** tab you can view the status of the device:

- Critical alarms
- Download Tech Support File
- Online or Offline
- Reboot the device.

- Restart Minion
- Factory reset

## Debug

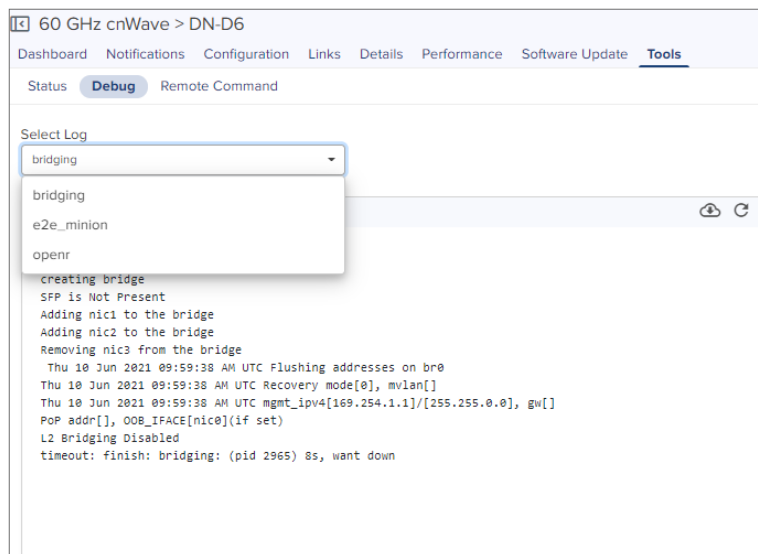

In **Debug** tab, you can view or download the DN or CN logs by executing the following log commands:

- Bridging
- e2e\_minion
- openr

To view the logs:

1. Navigate to **Tools > Debug**.
2. Select the required log name from the **Select Log** drop-down list box.

The output for the selected criteria appears as shown:

- Click the download  icon to download the generated output.
- Click the clear  icon to clear the generated output.

## Remote Command

In **Remote command** tab, you can view and download Command logs by executing the following commands:

- Show Interfaces
- Show Routes
- Show OpenR Adjacencies
- Show OpenR Prefixes
- Show SFP Power Details (applicable for V5000 an V3000)
- Show IPv4 neighbors
- Show IPv6 neighbors
- Show Wired Device State Changes
- Ping

To Execute the command:

1. Navigate to **Tools > Remote Command**.
2. Select the required command from the **Command** drop-down.
3. Click **Execute**.

The output for the selected criteria appears as shown:

The screenshot shows the 'Remote Command' interface in the cnWave management console. The 'Command' dropdown is set to 'Show Interfaces' and the 'Execute' button is visible. The 'Output' section displays the following command output:

```
br0    Link encap:Ethernet  HWaddr 08:04:56:8b:00:fa
       inet addr:10.110.221.239  Bcast:10.110.221.255  Mask:255.255.255.0

- Click the download  icon to download the generated output.
- Click the clear  icon to clear the generated output.

## Managing NSE 3000 using cnMaestro

NSE 3000 is managed using the cloud-hosted cnMaestro (a management solution from Cambium Networks).

This section covers the following topics:

- [Claiming an NSE 3000 device associated with a site](#)
- [High availability support for NSE 3000](#)

- [Configuring NSE 3000](#)
- [Configuring WAN in the device UI](#)

## Claiming an NSE 3000 device associated with a site

A device manufacturer serial number (MSN) is required to claim an NSE 3000 device. You can find the device MSN at the bottom of the device as shown in [Figure 375](#).

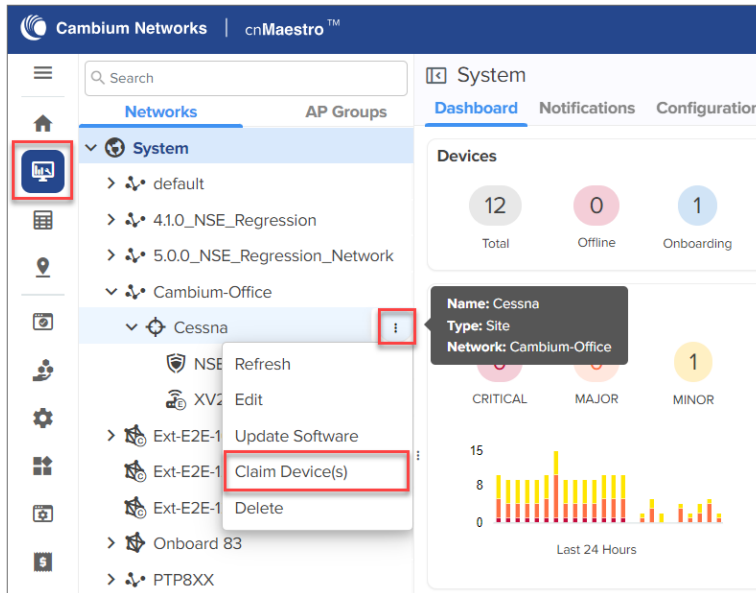

**Figure 375** MSN of the NSE 3000 device

To claim an NSE 3000 device that is associated with a site, complete the following steps:

1. From the home page, navigate to **Monitor and Manage**.  
The **System** page appears, as shown in [Figure 376](#).

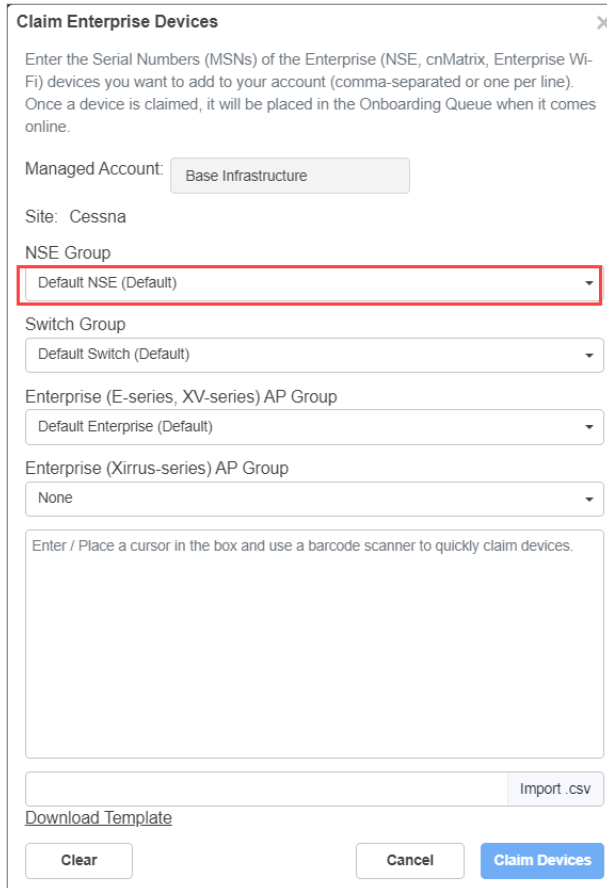

Figure 376 The System page

2. On the left panel, in the **Networks** section, expand the site panel.
3. Click the actions (  ) icon and select **Claim Device(s)**.

The **Claim Enterprise Devices** window appears, as shown in [Figure 377](#).

Figure 377 The Claim Enterprise Devices window

4. From the **NSE Group** drop-down list, select the required group.

**Note**

The selected NSE group is automatically pushed to the device while onboarding.

5. In the **Enter** field, enter the MSN of the NSE 3000 device.
6. Click **Claim Devices**.

The NSE 3000 device that is associated with a site is claimed successfully.

## High availability support for NSE 3000

The high availability (HA) support allows two NSE 3000 devices to share health information when connected through a LAN port (Port-6). When the devices are connected as an HA pair, one is configured as **Primary** and the other as **Spare**. The **Spare** device serves as a backup in case of hardware failures.

If the **Primary** device goes down, the **Spare** device becomes active. When the **Primary** device is restored, it regains its active state and the **Spare** device reverts to a backup state.

**Note**

The HA support is available from NSE release version 1.7 and higher.

## Licensing

An NSE 3000 device requires a Tier-30 license to onboard to cnMaestro.

An HA pair (Primary - Spare) requires only one Tier-30 license. The **Spare** device does not require an additional license as it inherits the license from the **Primary** device.

On the expiry of the license, the device management is deactivated using cnMaestro. However, the devices are not deleted from the device list in cnMaestro.

## Constraints on NSE 3000 devices

The following are the constraints on NSE 3000 devices in cnMaestro:

- A site can have either a single NSE 3000 device or a single NSE 3000 HA pair.
- An HA pair can only be created under a site. NSE group is mandatory for all NSE 3000 devices to onboard to the cnMaestro cloud 5.1.1 version.
- An NSE 3000 device must exist (with an NSE group attached) under the site to form an HA pair.
- If a device is in the **Onboarding** state under a site, you cannot claim another device under the same site.

## Creating an HA pair in cnMaestro

You can create an HA pair using either of the following options:

- **Onboard as HA spare** (from the Onboarding queue)
- **Claim Device(s)** (at the site level)

The HA pair configuration involves the following tasks:

- [Onboarding an NSE 3000 device as an HA spare](#)
- [Claiming an NSE 3000 device as an HA spare](#)
- [Moving the HA pair \(in the tree\)](#)

- [Deleting an NSE 3000 device from the HA pair](#)
- [Deprecation of device overrides](#)
- [Upgrading the firmware](#)
- [Viewing aggregated data of HA pair](#)
- [Creating Wireguard clients for NSE HA pair](#)

## Onboarding an NSE 3000 device as an HA spare

The primary device onboards as a standalone device to cnMaestro. An additional NSE 3000 device can be brought into the onboarding queue (without Tier-30 license) either by bulk claim (on the Onboard page) or using cambium-id and password. An HA pair is formed using the **Onboard as HA spare** option from the **Approve Device** window.

### Note

- The primary device must have the firmware that supports HA functionality.
- The spare device must have the same firmware as the primary device. Otherwise, the system automatically upgrades the firmware of the spare device to match with the primary device.
- The spare device must have the same model as the primary device. NSE 3000 device can be paired only with an NSE 3000 device model. It cannot be paired with an NSE 5000 device model.

When onboarding an NSE 3000 device as a spare, the device automatically inherits the NSE group of the primary device. This holds good even if the devices are claimed at the site level. Additionally, any change in the NSE group of the primary device is automatically reflected in the spare device.

To onboard an NSE 3000 device as a spare device, complete the following steps:

1. From the home page, click the Onboard () icon.

The Onboard page appears.

**Figure 378** *The Onboard page*

2. Click the approve device () icon of the NSE 3000 device.

The **Approve Device** window appears with the **Onboard as HA spare** option and shows all sites that have only one NSE device (as shown in [Figure 379](#)).

**Figure 379** *The Approve Device window*

Approve Device: NSE-700880-UK

Onboard as HA spare

Base Infrastructure

Network  
Network

Site  
Site  
Showing all sites containing one NSE device

NSE Group\*  
NSE-HA

Save and Approve Cancel

**Note**

The spare device has the same NSE group as that of the primary device.

3. Click **Save and Approve** from the **Approve Device** window (as shown in [Figure 379](#)).  
The spare device is onboarded (as shown in [Figure 380](#)) without an additional Tier-30 license.

**Figure 380** *Spare device onboarded*

Onboard

Devices 60 GHz crWave Edge Controller PON Settings

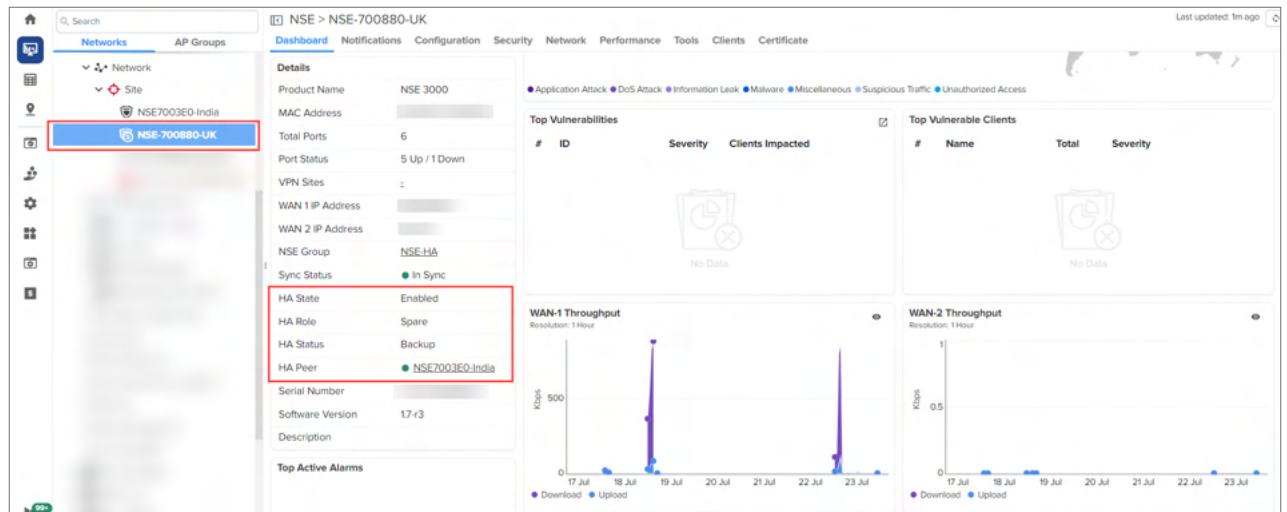

The Onboarding Queue holds devices before they are added to your account. Devices must be approved in order to complete the onboarding process and be managed by cnMaestro. You can pre-provision devices before they are approved by setting location, configuration, or software version. [Learn more](#)

Search Clear Managed Account: All Accounts Claim Device Approve All Delete Export

Type	Serial Number	Name	MAC	Tier	IP Address	Source IP	Managed Account	Onboarding Mode	Status	Onboarding Status	Duration
NSE 3000		NSE-700880-UK		Tier 30			Base Infrastructure	Using Serial Number	Online	Onboarded	2d 21h 55m

4. Click on the spare device name.  
You can see the spare device under a site (as shown in [Figure 381](#)). You can view the HA details in the **Details** section of the dashboard (as shown in [Figure 381](#)).

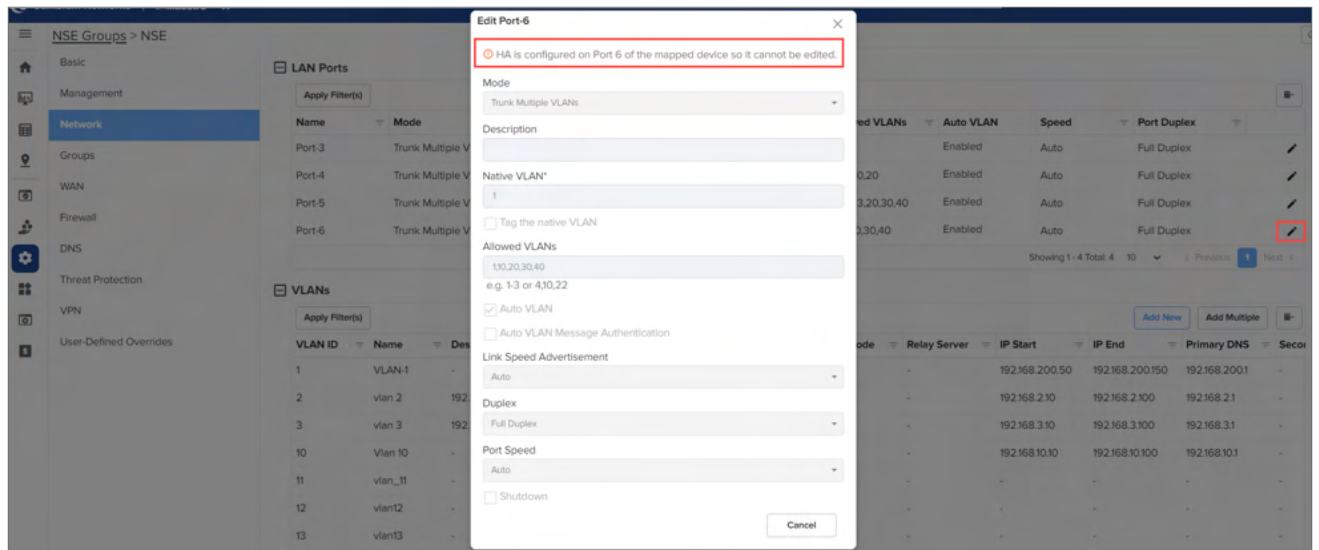

Figure 381 Details about HA for the Spare device

**Note**

When HA is configured on Port-6 of the mapped device, you cannot edit the Port-6 configuration. A message is displayed on the **Edit Port-6** window (as shown in [Figure 382](#)).

Figure 382 The Edit Port-6 window

**Note**

The fields in the **Approve Device** window (as shown in [Figure 379](#)) can also be configured using the Edit Device (✎) icon from the **Onboard** page.

## Claiming an NSE 3000 device as an HA spare

An NSE 3000 HA pair can be additionally formed using the **Claim Device(s)** option at the site level. When a second NSE 3000 device is claimed (assuming the primary already exists under the site), you have the option to claim it as a spare. However, claiming a second NSE 3000 device under the same site as a regular device is restricted.

To claim an NSE 3000 device as an HA spare, complete the following steps:

1. From the home page, click the Monitor and Manage (  ) icon.  
The **System** page appears.
2. On the left panel, in the **Networks** section, expand the site panel.
3. Click the actions (  ) icon and select **Claim Device(s)**.  
The **Claim Enterprise Devices** window appears.
4. In the **Enter** field, enter the MSN of the NSE 3000 device.

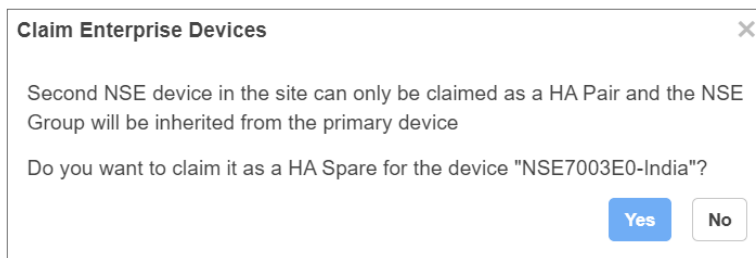

**Note**

You can find the device MSN at the bottom of the NSE 3000 device.

5. Click **Claim Devices**.

The **Claim Enterprise Devices** window appears.

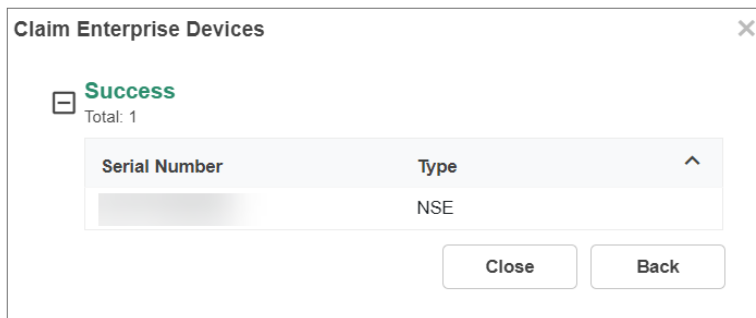

**Figure 383** *The Claim Enterprise Devices window*

6. Click **Yes**.

The **Claim Enterprise Devices** window appears.

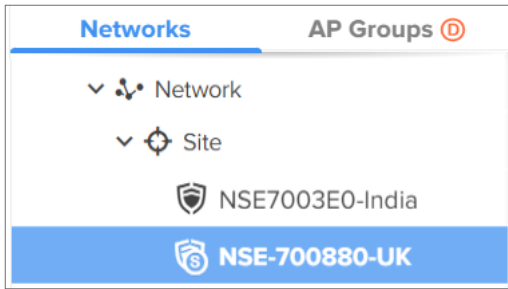

**Figure 384** *The Claim Enterprise Devices window*

7. Click **Close**.

The device is claimed as an HA spare.

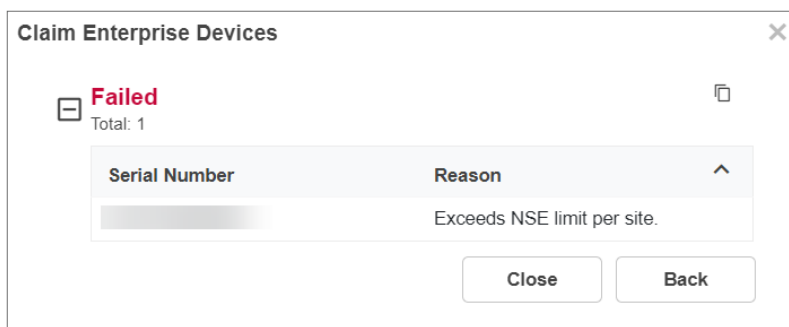

**Figure 385** Device claimed as an HA spare

The (  ) icon indicates the primary NSE 3000 device. The (  ) icon indicates the spare NSE 3000 device.

When you click **No** in the **Claim Enterprise Devices** window (as shown in [Figure 383](#)), the **Claim Enterprise Devices** window appears (as shown in [Figure 386](#)). You cannot claim the device as an HA spare.

**Figure 386** The Claim Enterprise Devices window

## Moving the HA pair (in the tree)

The NSE 3000 HA pair can be moved as a single unit only. This can be done by changing the Network and Site for the primary device. The devices in the pair cannot be moved individually. Moreover, the NSE 3000 device or HA pair can only be moved to a site that has no NSE 3000 devices. Moving to a network is not allowed.

### Note

An HA pair of NSE 3000 devices shares the same NSE group. Consequently, the NSE group selection for the spare device is disabled.

## Deleting an NSE 3000 device from the HA pair

If one of the NSE 3000 devices in a pair is deleted, the other NSE 3000 device becomes standalone.

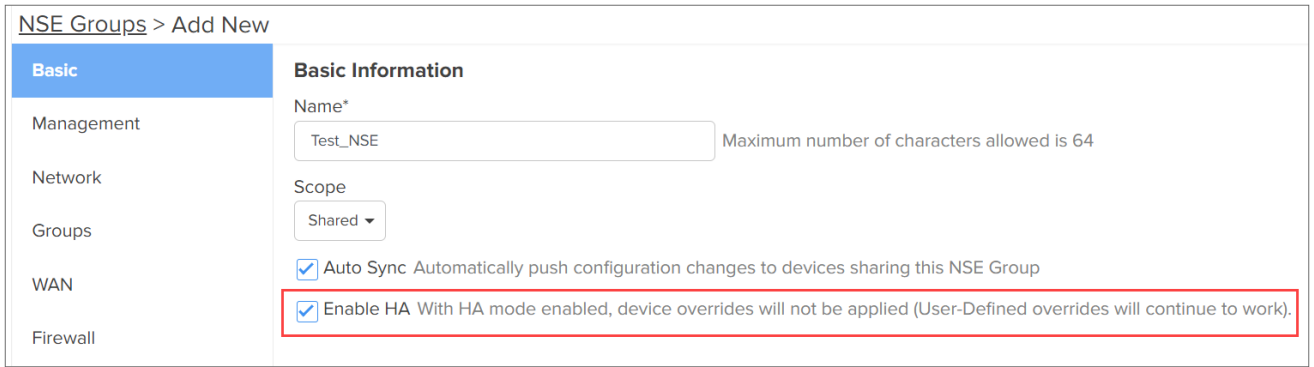

- When the primary device is deleted from the pair, the spare device becomes a standalone device and the pair's Tier-30 license is mapped to the spare device (instead of the primary device). Also, a configuration job for this standalone device with HA mode **Disable** is triggered.
- When the spare device is deleted from the pair, the primary device becomes a standalone device.
- When both primary and spare devices are deleted, a slot is released.

## Deprecation of device overrides

The device overrides are removed from the Onboard page. The bulk overrides cannot be done for NSE 3000 devices.

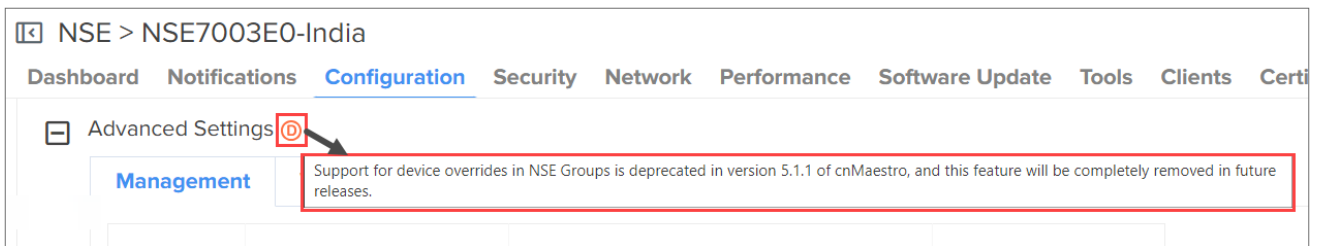

When HA is enabled in the NSE group, the device overrides in the device context are hidden.

**Figure 387** Device overrides are not applied when HA is enabled

When HA is disabled in the NSE group, the deprecated icon (  ) is shown. Device overrides are being deprecated for NSE devices in the 5.1.1 version. When you hover the cursor over the deprecated (  ) icon, a message about the deprecation is displayed (as shown in [Figure 388](#)).

**Figure 388** A deprecation message

## Upgrading the firmware

When you upgrade the firmware on the primary device, the firmware on the spare device is automatically upgraded. This ensures that both primary and spare devices run the same version.

### Note

The **Software Update** tab is available only for the primary device.

## Viewing aggregated data of HA pair

In an HA pair, the active NSE 3000 device shows the aggregated data for the pair. In the spare NSE 3000 device, a banner provides a link to the active device's page (as shown in [Figure 389](#)) to view the aggregated data. The same banner is displayed under the **Security > Threats**, **Security > Vulnerabilities**, and **Clients > Local** tabs.

**Figure 389** Banner

### Note

- If the active device is offline, the aggregated data is not shown.

## Creating Wireguard clients for NSE HA pair

When adding Wireguard clients from the **VPN** page, only the primary device is listed in the **Device** drop-down list (as shown in [Figure 390](#)).

## Configuring NSE 3000

To configure NSE 3000 devices, create configuration profiles called NSE Groups.

To create and configure a new NSE 3000 group, navigate to **Configuration > NSE Groups** and click **Add New**.

**Figure 391** Creating NSE groups

For a new NSE group, you must configure parameters using the following tabs:

- [Basic](#)
- [Management](#)
- [Network](#)
- [Groups](#)
- [WAN](#)
- [Firewall](#)
- [DNS](#)
- [Threat Protection](#)
- [VPN](#)
- [User-Defined Overrides](#)

## Basic

Using the **Basic** tab, you can configure basic group information, such as group name and group scope. You have the option to enable automatic synchronization of the configuration changes for devices associated with the NSE group.

To configure parameters on the **Basic Information** page, complete the following steps:

1. Navigate to **Configuration > NSE Groups** and click **Add**.

The **Basic Information** page appears, as shown in [Figure 392](#).

**Figure 392** The Basic Information page

2. Configure the parameters, as described in [Table 79](#).

**Table 79** Parameters on the Basic Information page

Parameter	Description
Name	Name for the NSE group.

Parameter	Description
	This parameter allows a maximum of 64 characters. This is a mandatory parameter.
Scope	Scope determines the availability of the NSE group across different tenant accounts. By default, the following options are supported: <ul style="list-style-type: none"> <li>• <b>Shared</b> - Configured NSE group will be available to other tenant accounts.</li> <li>• <b>Basic Infrastructure</b> - Configured NSE group will be available only to the Basic Infrastructure user. Other tenant accounts will not have access to the NSE group.</li> </ul>
Auto Sync	Specifies whether the configuration changes made to the NSE group are automatically applied to all devices associated with the group. By default, auto sync is enabled.
Enable HA	Enables or disables the HA. By default, this parameter is disabled. <b>Note:</b> When this parameter is enabled, you must configure the <b>IP Address (HA Spare)</b> parameter by selecting the <b>Static</b> option from the <b>IP Address Assignment</b> drop-down list in the <b>WAN Configurations</b> section of the <b>WAN</b> screen (as shown in <a href="#">Figure 393</a> ).

**Figure 393** The WAN Configurations section

3. Click **Save**.

## Management

Using the **Management** tab, you can configure the profile-related parameters such as time settings and event logging.

To configure parameters on the **Management** page, complete the following steps:

1. On the **NSE Groups > Add New** page, select the **Management** tab.

The **Management** page appears, as shown in [Figure 394](#).

**Figure 394** *The Management page*

The screenshot shows the 'Management' tab selected in the sidebar. The main content area contains the following sections:

- Management**: Admin Password\* (text input, Max 32 characters allowed, with an edit icon).
- Time Settings**: Time Zone\* (dropdown menu), NTP Server 1 (text input, IP address or domain name), NTP Server 2 (text input, IP address or domain name).
- Event Logging**: Syslog Server 1 (text input), Port (text input), Syslog Server 2 (text input), Port (text input), Syslog Severity (dropdown menu).

2. Configure the parameters, as described in [Table 80](#).

**Table 80** *Parameters on the Management page*

Parameter	Description
On the Management page, there are <b>Management</b> , <b>Time Settings</b> , and <b>Event Logging</b> sections.	
<b>Management</b>	
Admin Password	The password used to authenticate the NSE 3000 users who access through SSH or web.  This parameter allows a maximum of 32 characters.  This is a mandatory parameter.  <b>Note:</b> Click the edit  icon to reset the password.
<b>Time Settings</b>	
Time Zone	The time zone based on the installation location of the device.  Select an appropriate time zone from the drop-down list to ensure that the device clock is synchronized with the wall clock time.
NTP Server 1	The IPv4 address or domain name of the primary Network Time Protocol (NTP) server.
NTP Server 2	The IPv4 address or domain name of the secondary or a backup NTP server.
<b>Event Logging</b>	
Syslog Server 1	The IPv4 address or the domain name of the syslog server 1.
Port	The port number of the syslog server 1 to which the syslog messages are sent.  Supported value: 1 to 65535.

Parameter	Description
Syslog Server 2	The IPv4 address or the domain name of the syslog server 2.
Port	The port number of the syslog server 2 to which the syslog messages are sent. Supported value: 1 to 65535.
Syslog Severity	The logs with the selected severity level that must be forwarded to the server. The following options are supported: <ul style="list-style-type: none"> <li>• <b>Emergency (Level 0)</b></li> <li>• <b>Alert (Level 1)</b></li> <li>• <b>Critical (Level 2)</b></li> <li>• <b>Error (Level 3)</b></li> <li>• <b>Warning (Level 4)</b></li> <li>• <b>Notice (Level 5)</b></li> <li>• <b>Info (Level 6)</b></li> <li>• <b>Debug (Level 7)</b></li> </ul>

3. Click **Save**.

## Network

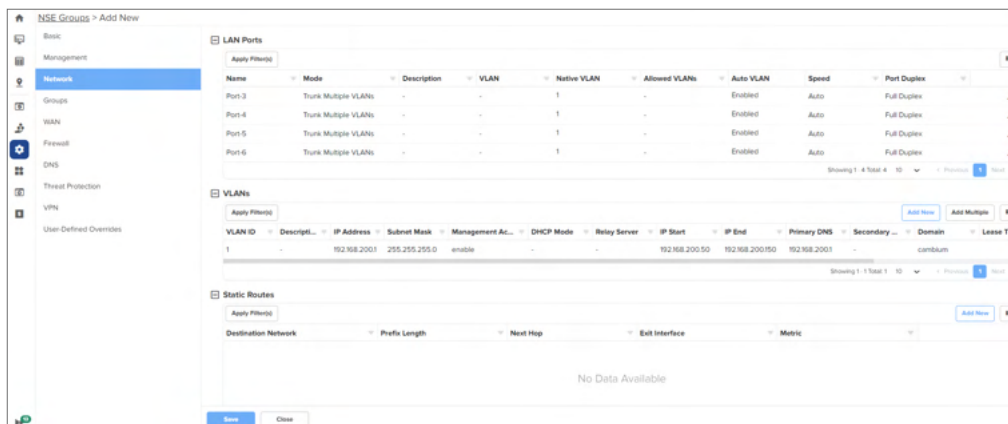

Using the **Network** tab, you can configure LAN ports, VLANs, and static routes.

To configure parameters on the **Network** page, complete the following steps:

1. On the **NSE Groups > Add New** page, select the **Network** tab.

The **Network** page appears, as shown in [Figure 395](#).

**Figure 395** *The Network page*

2. Configure the parameters, as described in [Table 81](#).

**Table 81** *Parameters on the Network page*

Parameter	Description
	On the Network page, there are <b>LAN Ports</b> , <b>VLANs</b> , and <b>Static Routes</b> sections.
<b>LAN Ports</b>	

Parameter	Description
	Click the edit  icon to modify the configuration of the corresponding LAN port as shown in <a href="#">Figure 396</a> , and click <b>Update</b> to apply the changes.
Name	Name of the LAN port. This parameter cannot be modified.
Mode	The VLAN mode of the port. The following options are supported: <ul style="list-style-type: none"> <li>• <b>Access Single VLAN:</b> An access port which places all traffic on its configured VLAN and only passes untagged traffic.</li> <li>• <b>Trunk Multiple VLANs:</b> A trunk port which allows the selected port to accept or pass 802.1Q tagged traffic.</li> </ul>
Description	A brief description of the LAN port.
VLAN	This parameter is applicable only when the <b>Mode</b> parameter is set to <b>Access Single VLAN</b> . By default, VLAN value is 1. VLAN value can be in the range: 1 to 4094 This is a mandatory parameter.
Native VLAN	Indicates that the traffic on the native VLAN is untagged. This parameter is applicable only when the <b>Mode</b> parameter is set to <b>Trunk Multiple VLANs</b> . The Native VLAN value can be in the range: 1 to 4094 This is a mandatory parameter.
Tag the native VLAN	This parameter is applicable only when the <b>Mode</b> parameter is set to <b>Trunk Multiple VLANs</b> . When the <b>Tag the native VLAN</b> parameter is enabled, the native VLAN traffic is tagged with 802.1Q.
Allowed VLANs	This parameter is applicable only when the <b>Mode</b> parameter is set to <b>Trunk Multiple VLANs</b> . This parameter supports a range or comma-separated list of VLANs. Example: 1-3 or 4, 10, 22
Auto VLAN	This parameter is applicable only when the <b>Mode</b> parameter is set to <b>Trunk Multiple VLANs</b> . This parameter facilitates automatic assignment of VLANs in cnMatrix switches and access points (APs). When this parameter is enabled, the cnMatrix switches and APs use the Link Layer Discovery Protocol (LLDP) packets to obtain a list of VLANs for automatic assignment. <b>Note:</b> Auto VLAN works only with cnMatrix switches and access points (APs). It does not work with any third-party switches and APs. Auto VLAN allows cnMatrix switch to dynamically learn VLANs from an AP. The AP advertises the configured VLANs to the cnMatrix switch. The cnMatrix switch then advertises those VLANs to the uplink NSE 3000 device. This process ensures that VLANs are properly bridged. This parameter is enabled by default.
Auto VLAN Message	This parameter is applicable only when the <b>Mode</b> parameter is set to <b>Trunk Multiple</b>

Parameter	Description
Authentication	<p><b>VLANs.</b></p> <p>This parameter enables authentication for the LLDP messages where the VLANs are advertised.</p> <p>This parameter is enabled by default.</p>
Link Speed Advertisement	<p>Indicates the port speed that must be configured for advertisement.</p> <p>Default: Auto</p> <p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• <b>Auto</b></li> <li>• <b>10 Mbps</b></li> <li>• <b>100 Mbps</b></li> <li>• <b>1000 Mbps</b></li> </ul>
Port Duplex	<p>Specifies the mode of port communication. The following options are supported:</p> <ul style="list-style-type: none"> <li>• <b>Full Duplex</b></li> <li>• <b>Half Duplex</b></li> </ul>
Port Speed	<p>Specifies the port speed.</p> <p>Default: Auto</p> <p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• <b>Auto</b></li> <li>• <b>10 Mbps</b></li> <li>• <b>100 Mbps</b></li> <li>• <b>1000 Mbps</b></li> </ul>
Shutdown	<p>Enables or disables the port.</p> <p>By default, this parameter is disabled.</p>
<p><b>VLANs</b></p> <p><b>Note:</b> You can configure up to 128 VLANs.</p> <p>To add a new VLAN, click <b>Add New</b>. The <b>Add New VLAN</b> window appears, as shown in <a href="#">Figure 397</a>.</p> <p>To edit an existing VLAN configuration, click the edit  icon and modify the parameters in the <b>Edit VLAN</b> window. Finally, click <b>Update</b> to apply the changes.</p>	
VLAN ID	<p>Indicates the VLAN ID.</p> <p>The VLAN ID value can be in the range: 1 to 4094</p> <p>This is a mandatory parameter.</p>
Description	<p>Displays the user-configured description for the VLAN.</p>
IP Address	<p>IPv4 address that is assigned to the VLAN.</p> <p>This is a mandatory parameter.</p>
Subnet Mask	<p>Subnet mask that is assigned to the VLAN.</p> <p>This is a mandatory parameter.</p>

Parameter	Description
Management Access	Indicates whether the management access is enabled or disabled. By default, this parameter is enabled.
Enable Rate Limit	Indicates whether the rate limit is enabled or disabled. By default, this parameter is disabled. When you select the <b>Enable Rate Limit</b> check box, the <b>Rate Limit</b> parameter appears.
Rate Limit	Specifies the rate of requests sent or received. This parameter appears only when you enable the <b>Enable Rate Limit</b> parameter. This parameter supports only integer values. This is a mandatory parameter.
DHCP mode	Specifies the DHCP mode. The following options are supported: <ul style="list-style-type: none"> <li>• <b>None</b></li> <li>• <b>DHCP Server</b> - When you select this option, the DHCP server-related parameters appear.</li> <li>• <b>DHCP Relay</b> - When you select this option, the <b>Relay Server IP address</b> parameter appears.</li> </ul>
<b>DHCP Server</b> In addition to the below parameters, you must also configure the parameters in the <b>DHCP Options</b> and <b>MAC Binding List</b> sections, as shown in <a href="#">Figure 398</a> .	
Start IP address	Starting IPv4 address in the range. This is a mandatory parameter.
End IP address	Ending IPv4 address in the range. This is a mandatory parameter.
Primary DNS	The primary DNS server for clients on the network. If the DNS server option is enabled on the NSE, the IPv4 address configured for the VLAN can be provided as the DNS server for the network.
Secondary DNS	The secondary DNS server for clients on the network.
Domain	The DNS search domain for the network.
Lease Time	The DHCP lease expiry time for the DHCP pool (in days, hours, and minutes). This is a mandatory parameter.
<b>DHCP Options</b> NSE allows configuration of standard and custom DHCP options. To add a new DHCP option, click <b>Add New</b> . The <b>Add New DHCP Option</b> window appears, as shown in <a href="#">Figure 399</a> . To edit an existing DHCP option, click the edit  icon and modify the parameters in the <b>Edit DHCP Option</b> window. Finally, click <b>Update</b> to apply the changes.	
Option	The following DHCP options are supported:

Parameter	Description
	<ul style="list-style-type: none"> <li>• <b>Log server(7)</b></li> <li>• <b>Domain name(15)</b></li> <li>• <b>NTP server(42)</b></li> <li>• <b>Vendor specific information(43)</b></li> <li>• <b>Vendor class identifier(60)</b></li> <li>• <b>TFTP server name(66)</b></li> <li>• <b>Boot file name(67)</b></li> <li>• <b>Proxy auto config(252)</b></li> <li>• <b>Custom</b></li> </ul> <p>This is a mandatory parameter.</p>
Code	<p>A value for the code.</p> <p>This parameter allows a maximum value of 254.</p> <p>This is a mandatory parameter.</p>
Type	<p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• <b>Text</b></li> <li>• <b>IP Address</b></li> <li>• <b>Integer</b></li> </ul> <p>This is a mandatory parameter.</p>
Value	<p>A value in ASCII.</p> <p>This is a mandatory parameter.</p>
<p><b>MAC Binding List</b></p> <p>For every DHCP pool configured, the user can bind the client MAC address with an IPv4 address from the network. This enables the client to obtain the same IPv4 address whenever they connect to the NSE 3000 device.</p> <p>Following parameters are required to create the binding list:</p> <ul style="list-style-type: none"> <li>• MAC address of the client</li> <li>• IPv4 address from the configured pool</li> </ul> <p>When you set <b>MAC</b> and <b>IP address</b> fields and click <b>Add</b>, the binding of MAC and IP address is added.</p> <p><b>Note:</b> Upto 200 MAC to IP address bindings are supported per DHCP pool.</p> <p><b>Note:</b> When you bind, the binding IP address should be outside the DHCP pool range.</p> <p>To add a new MAC binding, click <b>Add New</b>. The <b>Add New MAC Binding</b> window appears, as shown in <a href="#">Figure 400</a>.</p> <p>To edit an existing MAC binding, click the edit  icon and modify the parameters in the <b>Edit MAC Binding</b> window. Finally, click <b>Update</b> to apply the changes.</p>	
MAC	<p>The MAC address of the client.</p> <p>This is a mandatory parameter.</p>

Parameter	Description
IP Address	The IPv4 address that must be assigned to the client. This is a mandatory parameter.
Description	Displays the user-configured description.
Import	Imports the MAC bindings. <b>Note:</b> The CSV file that you import must be in the three-column format, for example, MAC, IP address, and Description. To import MAC bindings, click <b>Import</b> . The <b>Import MAC Bindings</b> window appears, as shown in <a href="#">Figure 401</a> .
Replace existing list	Indicates whether the imported bindings will overwrite the existing list or append to the list. <ul style="list-style-type: none"> <li>• If enabled, the imported bindings will overwrite the existing list</li> <li>• If disabled, the imported bindings will append to the existing list.</li> </ul> By default, this parameter is enabled.
Export	Exports the configured bindings list. The following options are supported: <ul style="list-style-type: none"> <li>• <b>Export all as CSV</b></li> <li>• <b>Export page as CSV</b></li> </ul> To export MAC bindings, click <b>Export</b> . The export options appear, as shown in <a href="#">Figure 402</a> .
DHCP Relay	Indicates whether the DHCP relay unicasts the DHCP request to an external DHCP server. This is a mandatory parameter.
Relay Server IP address	IPv4 address of the external DHCP server. This is a mandatory parameter.
<b>Static Routes</b> To add a new route, click <b>Add New</b> . The <b>Add New Route</b> window appears, as shown in <a href="#">Figure 403</a> . To edit an existing route, click the edit  icon and modify the parameters in the <b>Edit Route</b> window. Finally, click <b>Update</b> to apply the changes.	
Destination Network	The IPv4 address of the destination network. This is a mandatory parameter.
Prefix Length	The prefix length for the network address. This parameter supports integer values and a maximum value of 32. This is a mandatory parameter.
Next Hop	The next hop IPv4 address for the route. This is a mandatory parameter.
Exit Interface	The exit interface through which the next hop is reachable. This is a mandatory parameter.

Parameter	Description
Metric	The metric for the route.
<p>To add multiple VLANs, click the <b>Add Multiple</b> button. The <b>Add Multiple VLANs</b> window appears, as shown in <a href="#">Figure 404</a>.</p> <p>To edit an existing VLAN configuration, click the edit  icon and modify the parameters in the <b>Edit VLAN</b> window. Finally, click <b>Update</b> to apply the changes.</p>	
Description	Displays the user-configured description for the VLAN.
First VLAN ID	<p>Indicates the first VLAN ID.</p> <p>The supported VLAN ID value range is between 1 and 4094.</p> <p>This is a mandatory parameter.</p>
Number of VLANs	<p>Indicates the number of VLANs that you want to add.</p> <p><b>Note:</b> You can configure up to 128 VLANs.</p> <p>This is a mandatory parameter.</p>
<p><b>Subnet</b></p> <p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• <b>IP Address and Netmask</b> - When you select this option, the <b>IP address</b> and <b>Netmask</b> options appear.</li> <li>• <b>Hosts per subnet</b> - When you select this option, the <b>First IP Address</b> and <b>Hosts per subnet</b> options appear.</li> </ul>	
IP address	<p>The IPv4 address of the first VLAN.</p> <p>This is a mandatory parameter.</p>
Netmask	<p>The netmask of the subnet.</p> <p>This is a mandatory parameter.</p>
First IP Address	<p>The first IPv4 address of the subnet.</p> <p>This is a mandatory parameter.</p>
Hosts per subnet	<p>The number of hosts that you want for the subnet.</p> <p>This is a mandatory parameter.</p>
DHCP mode	<p>Specifies the DHCP mode.</p> <p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• <b>None</b></li> <li>• <b>DHCP Server</b> - When you select this option, the DHCP server-related parameters appear.</li> <li>• <b>DHCP Relay</b> - When you select this option, the <b>Relay Server IP address</b> parameter appears.</li> </ul>
Lease Time	<p>The DHCP lease expiry time for the DHCP pool (in days, hours, and minutes).</p> <p>This is a mandatory parameter.</p>
<p><b>DHCP Options</b></p> <p>NSE allows configuration of standard and custom DHCP options.</p> <p>To add a new DHCP option, click <b>Add New</b>. The <b>Add New DHCP Option</b> window appears, as shown in</p>	

Parameter	Description
<p><a href="#">Figure 399.</a></p> <p>To edit an existing DHCP option, click the edit  icon and modify the parameters in the <b>Edit DHCP Option</b> window. Finally, click <b>Update</b> to apply the changes.</p>	
Option	<p>The following DHCP options are supported:</p> <ul style="list-style-type: none"> <li>• <b>Log server(7)</b></li> <li>• <b>Domain name(15)</b></li> <li>• <b>NTP server(42)</b></li> <li>• <b>Vendor specific information(43)</b></li> <li>• <b>Vendor class identifier(60)</b></li> <li>• <b>TFTP server name(66)</b></li> <li>• <b>Boot file name(67)</b></li> <li>• <b>Proxy auto config(252)</b></li> <li>• <b>Custom</b></li> </ul> <p>This is a mandatory parameter.</p>
Code	<p>A value for the code.</p> <p>This parameter allows a maximum value of 254.</p> <p>This is a mandatory parameter.</p>
Type	<p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• <b>Text</b></li> <li>• <b>IP Address</b></li> <li>• <b>Integer</b></li> </ul> <p>This is a mandatory parameter.</p>
Value	<p>A value in ASCII.</p> <p>This is a mandatory parameter.</p>
DHCP Relay	<p>Indicates whether the DHCP relay unicasts the DHCP request to an external DHCP server.</p> <p>This is a mandatory parameter.</p>
Relay Server IP address	<p>IPv4 address of the external DHCP server.</p> <p>This is a mandatory parameter.</p>

## Groups

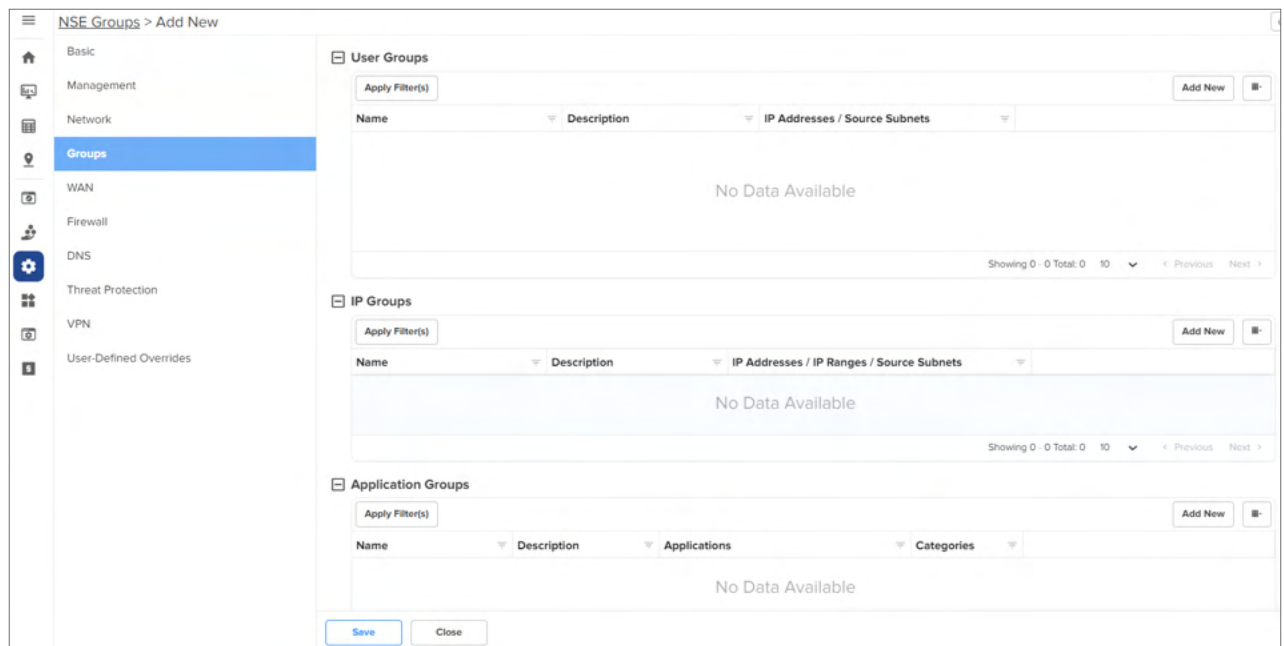

Using the **Groups** tab, you can configure user groups, IP groups, and application groups.

To view the **Groups** page, complete the following steps:

1. On the **NSE Groups > Add New** page, select the **Groups** tab.

The **Groups** page appears, as shown in [Figure 405](#).

**Figure 405** The Groups page

2. Configure the parameters, as described in [Table 82](#).

**Table 82** Parameters on the Groups page

Parameter	Description
On the Groups page, there are <b>User Groups</b> , <b>IP Groups</b> , and <b>ApplicationGroups</b> sections.	
<p><b>User Groups</b></p> <p>User groups are used to group locally configured networks and these groups can be used to associate with policies, especially application rules or DNS rules.</p> <p>To add a new user group, click <b>Add New</b>. The <b>Add User Group</b> window appears, as shown in <a href="#">Figure 406</a>.</p> <p>To edit a user group, click the edit  icon and modify the parameters in the <b>Edit User Group</b> window. Finally, click <b>Update</b> to apply the changes.</p>	
Name	Name for the user group. This is a mandatory parameter.
Description	Description for the user group.
IP Addresses/Source Subnets	IPv4 addresses or source subnets for the user group. This is a mandatory parameter.
<p><b>IP Groups</b></p> <p>IP groups are used to group networks originating from the WAN, and can be used to attach port forwarding rules.</p> <p>To add a new IP group, click <b>Add New</b>. The <b>Add IP Group</b> window appears, as shown in <a href="#">Figure 407</a>.</p> <p>To edit an IP group, click the edit  icon and modify the parameters in the <b>Edit IP Group</b> window. Finally, click <b>Update</b> to apply the changes.</p>	

Parameter	Description
Name	Name for the IP group.
Description	Description for the IP group.
IP Addresses/IP Ranges/Source Subnets	IPv4 addresses, IP ranges, or source subnets for the IP group. This is a mandatory parameter.
<p><b>Application Groups</b></p> <p>Application groups are used to group applications by using application names or categories, which can then be attached to a policy for permitting or denying access.</p> <p>To add a new application group, click <b>Add New</b>. The <b>Add New Application Group</b> window appears, as shown in <a href="#">Figure 408</a>.</p> <p>To edit an application group, click the edit  icon and modify the parameters in the <b>Edit Application Group</b> window. Finally, click <b>Update</b> to apply the changes.</p>	
Name	Name for the application group.
Description	Description for the application group.
<p><b>Applications</b></p> <p>To add applications to the application group, select the required application(s) from the drop-down list and click <b>Add New</b>. The selected applications are added in the <b>Name</b> list.</p>	
Application Name	Applications for the new application group.
<p><b>Categories</b></p> <p>To include categories for the new application group, select the required categories.</p>	
Categories	Categories for the new application group.

## WAN

Using the **WAN** tab, you can configure the settings related to the WAN interface.

To configure parameters on the WAN page, complete the following steps:

1. On the **NSE Groups > Add New** page, select the **WAN** tab.  
The **WAN** page appears.

Figure 409 The WAN page

2. Configure the parameters, as described in [Table 83](#).

Table 83 Parameters on the WAN page

Parameter	Description
On the WAN page, there are <b>WAN Configurations</b> , <b>LoadBalancing</b> , and <b>Flow Preferences</b> sections.	
<p><b>WAN Configurations</b></p> <p>In this section, you can configure the parameters in <b>Connection Health</b>, <b>Dynamic DNS</b>, <b>Link Capacity</b>, <b>Traffic Shaping</b>, <b>Failover Policy</b>, and <b>WAN Speed Test</b> subsections.</p> <p>The same parameters appear in both <b>WAN-1</b> and <b>WAN-2</b> tabs.</p>	
IP Address Assignment	<p>Determines the mode of IP address assignment for the WAN interface.</p> <p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• <b>Dynamic:</b> Dynamically learn the IP address and DNS from the DHCP server.</li> <li>• <b>Static:</b> Manually configure the IP address, gateway, and DNS server IP provided by the service provider.</li> <li>• <b>PPPoE:</b> When you configure PPPoE, you must provide the username and password of the service provider. While the account name and service name are not mandatory configurations, they may be required if the service provider enforces it. By default,</li> </ul>

Parameter	Description
	the MTU is set to 1492 and the TCP MSS clamping is enabled. If required, you can also tag the packet on the WAN link to send.
Enable 802.1q VLAN tagging of frames	When this parameter is enabled, 802.1Q tag is inserted with configured VLAN ID for all the packets going out of the WAN interface. By default, this parameter is disabled.
VLAN ID	This parameter is applicable only when <b>Enable 802.1q VLAN tagging of frames</b> check box is selected.  VLAN ID range: 1 and 4094.  This is a mandatory parameter.  When the 802.1Q header is configured, all transmitted frames are expected to include the 802.1Q header with the same VLAN ID.
Following parameters appear when you select <b>Static</b> from the <b>IP Address Assignment</b> drop-down list.	
IP Address	The IPv4 address of the WAN interface. This is a mandatory parameter.
IP Address (HA Spare)	This parameter appears only when <b>Enable HA</b> check box is selected from the <b>Basic</b> screen. The IPv4 address of the HA spare. This is a mandatory parameter.
Subnet Mask	The subnet mask for the IPv4 address of the WAN interface. This is a mandatory parameter.
Default Gateway	The IPv4 address of the default gateway for the WAN interface.
Primary DNS	The IPv4 address of primary upstream DNS server on this interface. This is a mandatory parameter.
Secondary DNS	The IPv4 address of secondary upstream DNS server on this interface.
Following parameters appear when you select <b>PPPoE</b> from the <b>IP Address Assignment</b> drop-down list.	
Account Controller Name	Name of the account controller. This parameter allows a maximum of 32 characters. This parameter is optional.
Service Name	Indicates the service name of the Account Controller. This parameter allows a maximum of 32 characters. The service name configuration is optional.
User	User name for PPPoE authentication. This is a mandatory parameter.
Password	Password for PPPoE authentication. This parameter is optional.
MTU	MTU for PPPoE interface. MTU ranges from 500 to 1492 bytes.

Parameter	Description
	Default: 1492 bytes.
TCP MSS Clamping	Indicates whether TCP MSS Clamping is enabled or disabled. By default, this parameter is enabled.
Additional IP Addresses	WAN IP addresses that are available for source NAT. <b>Note:</b> The WAN interface supports up to 16 IP addresses.
Enable Source NAT	Indicates whether the source NAT is enabled or disabled. When enabled, NSE 3000 device will replace the source IP address of the traffic routed from LAN to WAN with the WAN interface IP address. By default, this parameter is enabled.
<p><b>Source NAT Rules</b></p> <p>Allows user to configure source NAT rules. User can choose the WAN IP addresses from the Additional IP Address for source NAT. User can configure WAN IP address(es) of their choice for source NAT. By default, all the LAN users' traffic will be source NATed to the configured WAN IP address(es). When LAN pool is configured, the traffic from the specified LAN networks will be source NATed to the configured WAN IP address(es).</p> <p><b>Note:</b> Source NAT Rules supports up to 16 rules per WAN.</p> <p>To add a new source NAT, click <b>Add New</b>. The <b>Add New Source NAT Rule</b> window appears, as shown in <a href="#">Figure 410</a>.</p>	
Precedence	The precedence value for the source NAT rule. The precedence value can be between 1 and 150. This is a mandatory parameter.
LAN Pool	The following options are supported: <ul style="list-style-type: none"> <li>• <b>All</b></li> <li>• <b>IP Group</b></li> <li>• <b>IP Address / Source Subnet</b></li> </ul>
WAN Pool	The following options are supported: <ul style="list-style-type: none"> <li>• <b>Single IP Address</b></li> <li>• <b>Multiple IP Addresses</b></li> </ul>
IP Address	IPv4 address for the WAN pool. Applicable only when <b>Single IP Address</b> option is selected.
Start IP	Starting IP address in the range. This parameter is applicable only when <b>Multiple IP Addresses</b> option is selected. This is a mandatory parameter.
End IP	Ending IP address in the range. This parameter is applicable only when <b>Multiple IP Addresses</b> option is selected. This is a mandatory parameter.
IP Group	Select the IP group for the source NAT. IP groups are the ones that you configure in the <b>Groups &gt; IP Groups</b> section.

Parameter	Description
	This parameter is applicable only when <b>IP Group</b> option is selected. This is a mandatory parameter.
IP Address / Source Subnet	This parameter is applicable only when <b>IP Address / Source Subnet</b> option is selected. This is a mandatory parameter.
<b>Connection Health</b>	
This section is configured to monitor the WAN connection health.	
Click the edit  icon to modify the <b>Monitor Host</b> configuration, as shown in <a href="#">Figure 411</a> . Finally, click <b>Update</b> to apply the changes.	
To add a new monitor host, click <b>Add New</b> . The <b>Add New Monitor Host</b> window appears, as shown in <a href="#">Figure 412</a> .	
Monitor Host	The hosts used to monitor and collect network traffic data. Default: 8.8.8.8 This is a mandatory parameter.
Number of Host Failures	The number of monitor hosts that fail to declare the link down. Default value: 1 The maximum number of monitor hosts that can be configured to fail is 5.
Failure Detect Time	The time period (in seconds) during which the device waits for the response from the monitored host before declaring the link down. Default: 5. Range: 5 to 60
Interval	The time interval (in seconds) used by the device to check and reach the monitor hosts. Default: 2. Range: 2 to 10
Timeout	The time period (in seconds) the device waits for a response from the monitor host after which the connection is timed out. Default: 2. Range: 1 to 10
<b>Dynamic DNS</b>	
Enable Dynamic DNS	Indicates whether the dynamic DNS for the interface is enabled or disabled. By default, this parameter is disabled.
Following parameters appear when <b>Enable Dynamic DNS</b> check box is selected.	
DNS Provider	The following options are supported: <ul style="list-style-type: none"> <li>• <b>Cloudflare:</b> Requires secret/access token and zone configuration. In the Cloudflare account, navigate to <b>Profile &gt; API Tokens</b> to create a token. Following is the recommended setting: <ul style="list-style-type: none"> <li>◦ Permissions: Zone, DNS, Edit</li> <li>◦ ZoneResource: Include, Specific Zone, &lt;zone name&gt;</li> </ul> </li> <li>• <b>Godaddy:</b> Requires API key, secret/access token, and zone configuration. In the Godaddy account, create an API key at <a href="https://developer.godaddy.com/keys">https://developer.godaddy.com/keys</a></li> </ul>

Parameter	Description
	<ul style="list-style-type: none"> <li>• <b>Hetzner:</b> Requires secret/access token and zone configuration. In the Hetzner account, navigate to <b>Profile &gt; API Tokens</b> and create an access token.</li> <li>• <b>Namecheap:</b> Requires password and zone configuration. <ol style="list-style-type: none"> <li>1. In the Namecheap account, navigate to <b>Domains &gt; Free DNS</b> to manage external domains.</li> <li>2. Before you update/create a record, a new record of type <b>A</b> must exist. To create a record, navigate to the dashboard, and then navigate to <b>Products &gt; Advanced DNS</b>. Add a new record of type <b>A</b>. On the same page, enable Dynamic DNS and note the password.</li> </ol> </li> <li>• <b>Noip:</b> Requires server name, username, and password configuration.</li> <li>• <b>Route53:</b> Requires API key, secret/access token, and zone configuration. <ol style="list-style-type: none"> <li>1. In the Route 53 account, navigate to <b>route53 &gt; Hosted Zones &gt; Create Hosted Zone</b> to create a zone. Use type Public hosted zone. Note the name servers in hosted zone details and the hosted zone ID.</li> <li>2. Navigate to <b>IAM &gt; Users &gt; Create user</b>. Select attach policies directly. Create a policy.</li> </ol> <p>The following is an example of a policy:</p> <pre>{   "Version": "2012-10-17",   "Statement": [     {       "Sid": "",       "Effect": "Allow",       "Action": [         "route53:ListResourceRecordSets",         "route53:GetChange",         "route53:ChangeResourceRecordSets"       ],       "Resource": [         "arn:aws:route53:::hostedzone/&lt;ZONE_ID&gt;",         "arn:aws:route53:::change/*"       ]     }   ],   "Sid": "",   "Effect": "Allow",</pre> </li> </ul>

Parameter	Description
	<pre>"Action": [   "route53:ListHostedZonesByName",   "route53:ListHostedZones" ], "Resource": "*" } ] }</pre> <p>3. Replace ZONE_ID in the policy with the previously noted zone id. Select the new policy for the previously created user.</p> <p>4. To create access key, navigate to users, select the user, <b>Security Credentials &gt; Create Access Key</b>.</p> <ul style="list-style-type: none"> <li>• <b>Porkbun:</b> Requires API key, secret/access token, and zone configuration. In the Porkbun account, navigate to <b>Account &gt; API Access</b> to create a token. Additionally, the domain configuration must be changed to enable API access.</li> <li>• <b>Dyn:</b> Oracle Dyn requires server name, username, and password configuration.</li> <li>• <b>DynDNS2 compliant:</b> Requires server name, username, and password configuration.</li> </ul> <p>By default, <b>Noip</b> option is selected.</p>
DNS Hostname	Indicates the DNS host name.
<b>Link Capacity</b>	
Uplink	<p>The WAN uplink capacity in Mbps.</p> <p>Default:1000. Range: 1 to 1000</p> <p>This is a mandatory parameter.</p>
Downlink	<p>The WAN downlink capacity in Mbps.</p> <p>Default:1000. Range: 1 to 1000</p> <p>This is a mandatory parameter.</p>
<b>Traffic Shaping</b>	
<p><b>Note:</b> Traffic Shaping supports up to 16 rules per WAN.</p> <p>To add a new traffic shaping rule, click <b>Add New</b>, the <b>Add New Traffic Shaping Rule</b> window appears, as shown in <a href="#">Figure 413</a>.</p>	
Enable Traffic Shaping	<p>Indicates whether traffic shaping is enabled or disabled.</p> <p>By default, this parameter is disabled.</p>
Precedence	<p>The precedence value for the traffic shaping rule.</p> <p>The precedence value can be between 1 and 150.</p> <p>This is a mandatory parameter.</p>
Description	Displays a user-configured description for the traffic shaping rule.

Parameter	Description
Uplink Bandwidth	Indicates the uplink bandwidth in Mbps. Range: 1 to 1000 This is a mandatory parameter.
Downlink Bandwidth	Indicates the downlink bandwidth in Mbps Range: 1 to 1000 This is a mandatory parameter.
DSCP	Differentiated Services Code Point (DSCP) can range from 0 to 63, with 0 being the lowest priority and 63 being the highest priority.
Type	Indicates the type of filter rule. The following options are supported: <ul style="list-style-type: none"> <li>• <b>IP Based</b> – Allows you to configure <b>Protocol</b> parameter as <b>TCP</b>, <b>UDP</b>, or <b>any</b>.</li> <li>• <b>Application Based</b> – Allows you to configure <b>Deep Packet Inspection (DPI) Type</b> parameter as <b>Application</b> or <b>Category</b>.</li> </ul>
Deep Packet Inspection (DPI) Type	This parameter is applicable only when <b>Type</b> parameter is <b>Application Based</b> . The following options are supported: <ul style="list-style-type: none"> <li>• <b>Application</b> – Specific type of application within a category.</li> <li>• <b>Category</b> – All applications belonging to a category (For example, Social Messaging).</li> </ul> This is a mandatory parameter.
DPI Application	This parameter is applicable only when <b>Deep Packet Inspection (DPI) Type</b> parameter is set to <b>Application</b> . This is a mandatory parameter.
DPI Category	This parameter is applicable only when <b>Deep Packet Inspection (DPI) Type</b> parameter is set to <b>Category</b> . This is a mandatory parameter.
Protocol	This parameter is applicable only when <b>Type</b> parameter is <b>IP Based</b> . The following options are supported: <ul style="list-style-type: none"> <li>• <b>TCP</b> – Match TCP traffic.</li> <li>• <b>UDP</b> – Match UDP traffic.</li> <li>• <b>any</b> – Match any of the above protocol traffic.</li> </ul>
Source IP Address	The source IPv4 address for the shaping rule. This is a mandatory parameter.
Mask	The subnet mask for the shaping rule. This is a mandatory parameter.
Port	Displays the source port from which IPv4 address messaging is sent. This is a mandatory parameter.
Destination IP Address	The destination IPv4 address for the shaping rule. This is a mandatory parameter.

Parameter	Description
Mask	The subnet mask for the shaping rule. This is a mandatory parameter.
Port	Displays the destination port to which IPv4 address messaging is sent. This is a mandatory parameter.
<b>Failover Policy</b> <b>Note:</b> Failover Policy supports up to 32 rules per WAN. To add a new failover policy, click <b>Add New</b> . The <b>Add New Failover Policy</b> window appears, as shown in <a href="#">Figure 414</a> .	
Enable Failover Policy	Indicates whether failover policy is enabled or disabled. By default, this parameter is disabled.
Precedence	The precedence value for the failover policy. The precedence value can be between 1 and 150. This is a mandatory parameter.
Description	A description for the policy.
Action	By default, this parameter is disabled.
Type	The type of failover rule. The following options are supported: <ul style="list-style-type: none"> <li>• <b>IP Based</b> – Allows you to configure the <b>Protocol</b> parameter as <b>TCP</b>, <b>UDP</b>, or <b>any</b>.</li> <li>• <b>Application Based</b> – Allows you to configure <b>Deep Packet Inspection (DPI)Type</b> parameter as <b>Application</b>, <b>Category</b>, or <b>Application Group</b>.</li> </ul>
Protocol	This parameter is applicable only when <b>Type</b> parameter is <b>IP Based</b> . The following options are supported: <ul style="list-style-type: none"> <li>• <b>TCP</b> – Match TCP traffic.</li> <li>• <b>UDP</b> – Match UDP traffic.</li> <li>• <b>any</b> – Match any of the above protocol traffic.</li> </ul>
Source IP Address	The source IPv4 address for the failover rule. This is a mandatory parameter.
Mask	The subnet mask for the failover rule. This is a mandatory parameter.
Port	The source port for the failover rule. This is a mandatory parameter.
Destination IP Address	The destination IPv4 address for the failover rule. This is a mandatory parameter.
Mask	The subnet mask for the failover rule. This is a mandatory parameter.
Port	Displays the destination port for the failover rule.

Parameter	Description
	This is a mandatory parameter.
Deep Packet Inspection (DPI) Type	This parameter is applicable only when <b>Type</b> parameter is <b>Application Based</b> . The following options are supported: <ul style="list-style-type: none"> <li>• <b>Application</b> – Specific type of application within a category.</li> <li>• <b>Category</b> – All applications belonging to a category (For example, Social Messaging).</li> <li>• <b>Application Group</b> - All applications belonging to a group.</li> </ul> This is a mandatory parameter.
Apply to	This parameter is applicable only when <b>Type</b> parameter is <b>Application Based</b> . The following options are supported: <ul style="list-style-type: none"> <li>• <b>All</b></li> <li>• <b>User Group</b></li> <li>• <b>IP Address / Source Subnet</b></li> </ul>
User Group	This parameter is applicable when <b>User Group</b> option is selected. This is a mandatory parameter.
IP Address / Source Subnet	This parameter is applicable when <b>IP Address / Source Subnet</b> option is selected. This is a mandatory parameter.
<b>WAN Speed Test</b>	
Enable WAN Speed Test	Enable or disable the WAN speed test. By default, this parameter is disabled.

3. Expand the **Load Balancing** section and configure the parameters, as described in [Table 84](#).

**Table 84** Parameters on the Load Balancing section

Parameter	Description
<b>Load Balancing</b>	
WAN-1 Mode	<p>Determines the load balancing mode of device.</p> <p>By default, the <b>WAN-1 Mode</b> parameter is set to <b>Shared</b>.</p> <p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• <b>Shared</b> – Enables the WAN link to actively forward a percentage of user traffic. The percentage of user traffic on this link is set via the <b>Traffic Share Percentage</b> parameter.</li> <li>• <b>Backup</b> – The WAN link forwards user traffic only when all of the Shared WAN interfaces are down.</li> <li>• <b>Disabled</b> – Disables the WAN link from participating in WAN link load sharing, and failover procedures.</li> </ul>
Traffic Share Percentage	<p>For the <b>Shared</b> mode, the traffic share percentage must be between 5 and 100.</p> <p>This is a mandatory parameter.</p>
WAN-2 Mode	<p>Determines the load balancing adjust mode of device.</p> <p>By default, the <b>WAN-2 Mode</b> parameter is set to <b>Backup</b>.</p> <p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• <b>Shared</b> – Enables the WAN link to actively forward a percentage of user traffic. The percentage of user traffic on this link is set via the <b>Traffic Share Percentage</b> parameter.</li> <li>• <b>Backup</b> – The WAN link forwards user traffic only when all of the Shared WAN interfaces are down.</li> <li>• <b>Disabled</b> – Disables the WAN link from participating in WAN link load sharing, and failover procedures.</li> </ul>
Traffic Share Percentage	<p>For the <b>Shared</b> mode, the traffic share percentage between 5 and 100.</p> <p>This is a mandatory parameter.</p>

4. Expand the **Flow Preferences** section and configure the parameters, as described in [Table 85](#).

**Table 85** Parameters on the Flow Preferences section

Parameter	Description
<b>Flow Preferences</b>	
<p>Flow preferences support up to 30 rules for both WANs combined.</p> <p>To add a new flow preference, click <b>Add New</b>. The <b>Add New Flow Preference</b> window appears, as shown in <a href="#">Figure 415</a>.</p>	
WAN Interface	<p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• <b>WAN-1</b></li> <li>• <b>WAN-2</b></li> </ul>
Description	Provide a description for the flow preference.

Parameter	Description
Policy	<p>The flow preference policy.</p> <p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• <b>Flexible</b> – Allow traffic to failover if the preferred WAN link goes down.</li> <li>• <b>Strict</b> – Traffic is dropped in strict mode, if the preferred WAN link goes down.</li> </ul>
Type	<p>The flow preference type.</p> <p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• <b>IP Based</b> – Allows you to configure <b>Protocol</b> parameter as <b>TCP</b>, <b>UDP</b>, or <b>any</b>.</li> <li>• <b>Application Based</b> – Allows you to configure <b>Deep Packet Inspection (DPI) Type</b> parameter as <b>Application</b> or <b>Category</b>.</li> </ul>
Protocol	<p>This parameter is applicable only when <b>Type</b> parameter is <b>IP Based</b>.</p> <p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• <b>TCP</b> – Match TCP preference.</li> <li>• <b>UDP</b> – Match UDP preference.</li> <li>• <b>Any</b> – Match any of the above preferences.</li> </ul>
Source IP Address	<p>The source IPv4 address for the flow preference.</p> <p>This is a mandatory parameter.</p>
Mask	<p>The subnet mask for the flow preference.</p> <p>This is a mandatory parameter.</p>
Port	<p>The source port for the flow preference.</p> <p>This is a mandatory parameter.</p>
Destination IP Address	<p>The destination IPv4 address for the flow preference.</p> <p>This is a mandatory parameter.</p>
Mask	<p>The subnet mask for the flow preference.</p> <p>This is a mandatory parameter.</p>
Port	<p>The destination port for the flow preference.</p> <p>This is a mandatory parameter.</p>
Deep Packet Inspection (DPI) Type	<p>This parameter is applicable only when <b>Type</b> parameter is <b>Application Based</b>.</p> <p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• <b>Application</b> – Specific type of application within a category.</li> <li>• <b>Category</b> – All applications belonging to a category (For example, Social Messaging).</li> </ul> <p>This is a mandatory parameter.</p>
DPI Application	<p>This parameter is applicable only when <b>Deep Packet Inspection (DPI) Type</b> parameter is set to <b>Application</b>.</p> <p>This is a mandatory parameter.</p>
DPI Category	<p>This parameter is applicable only when <b>Deep Packet Inspection (DPI) Type</b> parameter is set to <b>Category</b>.</p>

Parameter	Description
	This is a mandatory parameter.

**Figure 415** The Add New Flow Preference window

5. Click **Save**.

## Firewall

NSE 3000 firewall allows the user to configure the IP-based and application-based outbound rules, GEO IP filters, port forward rules, one-to-one NAT mappings, and one-to-many NAT mappings. All inbound connections are denied by default. You can configure port forwarding or NAT rules to allow inbound traffic. Outbound traffic is allowed by default. Using application-based outbound rules, users can create rules to block websites without specifying IP addresses or port ranges. Application-based rules allow the user to block a specific type of application within a category or all applications belonging to a category (For example, social messaging).

### Note

Up to 150 outbound firewall rules are supported for an NSE Group including combinations of IP-based and application-based rules.

To configure parameters on the **Firewall** page, complete the following steps:

1. On the **NSE Groups > Add New** page, select the **Firewall** tab.

The **Firewall** page appears, as shown in [Figure 416](#).

**Figure 416** *The Firewall page*

**NSE Groups > Add New**

2. Configure the parameters, as described in [Table 86](#).

**Table 86** Parameters on the Firewall page

Parameter	Description
<p>On the Firewall page, there are <b>Inbound Filter Rules</b>, <b>Outbound Filter Rules</b>, <b>Denial of Service (DoS) Protection</b>, <b>GEO IP WAN to LAN Filters</b>, <b>GEO IP LAN to WAN Filters</b>, <b>Port Forward Rules</b>, <b>NAT One-to-One</b>, <b>NAT One-to-Many</b>, and <b>Device Access</b> sections.</p>	
<p><b>Inbound Filter Rules</b></p> <p>By default, NSE firewall routers are configured to function as stateful firewalls by dropping packets that are not related to an established connection.</p>	
Allow traffic from WAN to LAN	<p>An option to enable or disable the stateful firewall behavior.</p> <p>By default, this parameter is disabled.</p> <p>In special deployment cases, when NSE is positioned behind an MPLS uplink router, you can enable this behavior. To enable this behavior, select the <b>Allow traffic from WAN to LAN</b> checkbox. Additionally, you must disable source NAT on the WAN UI page to allow routing of traffic without NAT, originated on the LAN directed towards the WAN.</p>
<p><b>Outbound Filter Rules</b></p> <p>To add a new outbound filter rule, click <b>Add New</b>. The <b>Add New Filter Rule</b> window appears, as shown in <a href="#">Figure 417</a>.</p>	
Precedence	<p>The precedence value for the filter rule.</p> <p>The precedence value can be between 1 and 150.</p> <p>This is a mandatory parameter.</p>
Description	Displays a user-configured description for the filter rule.
Action	<p>Determines the action of filter.</p> <p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• <b>Permit</b> - Allow traffic matching this filter rule.</li> <li>• <b>Deny</b> - Drop traffic matching this filter rule.</li> </ul>
Type	<p>The type of filter rule.</p> <p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• <b>IP Based</b> – Configure <b>Protocol</b> parameter as <b>TCP</b>, <b>UDP</b>, <b>ICMP</b> or <b>any</b>.</li> <li>• <b>Application Based</b> – Configure <b>Deep Packet Inspection (DPI) Type</b> parameter as Application, Category, or Application Group</li> </ul>
Protocol	<p>This parameter is applicable only when <b>Type</b> parameter is <b>IP Based</b>.</p> <p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• <b>TCP</b>: Match TCP traffic.</li> <li>• <b>UDP</b>: Match UDP traffic.</li> <li>• <b>ICMP</b>: Match ICMP traffic.</li> <li>• <b>any</b>: Match any of the above protocol traffic.</li> </ul>
Source IP Address	The source IPv4 address for the filter rule.

Parameter	Description
	This is a mandatory parameter.
Mask	The source subnet mask for the filter rule. This is a mandatory parameter.
Port	This parameter is applicable only when <b>Protocol</b> parameter is <b>TCP</b> or <b>UDP</b> . Supported values: 1 to 65535 or any This is a mandatory parameter.
Destination IP Address	The destination IPv4 address for the filter rule. This is a mandatory parameter.
Mask	The destination subnet mask for the filter rule. This is a mandatory parameter.
Port	This parameter is applicable only when <b>Protocol</b> parameter is <b>TCP</b> or <b>UDP</b> . Supported values: 1 to 65535 or any This is a mandatory parameter.
Deep Packet Inspection (DPI) Type	This parameter is applicable only when <b>Type</b> parameter is <b>Application Based</b> . The following options are supported: <ul style="list-style-type: none"> <li>• <b>Application</b> – Specific type of application within a category.</li> <li>• <b>Category</b> – All applications belonging to a category (For example, Social Messaging).</li> </ul> This is a mandatory parameter.
DPI Application	This parameter is applicable only when <b>DPI Type</b> parameter is set to <b>Application</b> . This is a mandatory parameter.
DPI Category	This parameter is applicable only when <b>DPI Type</b> parameter is set to <b>Category</b> . This is a mandatory parameter.
Apply to	This parameter is applicable only when <b>Type</b> parameter is <b>Application Based</b> . The following options are supported: <ul style="list-style-type: none"> <li>• <b>All</b></li> <li>• <b>User Group</b></li> <li>• <b>IP Address / Source Subnet</b></li> </ul>
User Group	This parameter is applicable when <b>User Group</b> option is selected. This is a mandatory parameter.
IP Address / Source Subnet	This parameter is applicable when <b>IP Address / Source Subnet</b> option is selected. This is a mandatory parameter.

Parameter	Description
<b>Denial of Service (DoS) Protection</b>	
IP Spoof	Enable or disable the IP spoof attack protection. By default, this parameter is disabled.
Smurf Attack	Enable or disable the smurf attack protection. By default, this parameter is disabled.
IP Spoof Log	Enable or disable IP spoof log messages. By default, this parameter is disabled.
ICMP Fragment	Enable or disable the fragmented ping attack. By default, this parameter is disabled.
<b>GEO IP WAN to LAN Filters</b>	
GEO IP WAN to LAN filters allows users to configure rules to permit/deny traffic based on the source country of inbound traffic.	
Mode	Specifies the mode for GEO IP WAN to LAN filters. The following options are supported: <ul style="list-style-type: none"> <li>• <b>Allow Only (Deny by default)</b> – Allow traffic coming from the countries that are configured. The traffic coming from the countries which are not part of the configured countries will be dropped.</li> <li>• <b>Deny Only (Allow by default)</b> – Block traffic coming from the countries that are configured. The traffic coming from countries that are not part of the configured countries will be allowed.</li> <li>• <b>None</b> – Disables the feature. Traffic is allowed from all the countries.</li> </ul>
Countries	The source countries from which the traffic originates.
<b>Exceptions</b>	
Exceptions allow users to configure source IP address ranges that are allowed in the inbound traffic. To add a new exception, click <b>Add New</b> . The <b>Add New Exception</b> window appears, as shown in <a href="#">Figure 418</a> .	
Start IP	Starting IPv4 address in the range. This is a mandatory parameter.
End IP	Ending IPv4 address in the range. This is a mandatory parameter.
<b>GEO IP LAN to WAN Filters</b>	
GEO IP LAN to WAN Filters allows users to configure rules to permit/deny traffic based on the destination country of outbound traffic.	
Mode	Specifies the mode for GEO IP LAN to WAN filters. The following options are supported: <ul style="list-style-type: none"> <li>• <b>Allow Only (Deny by default):</b> Allow traffic destined to the countries matching the configured countries. The traffic destined for the countries which are not part of the configured countries will be dropped.</li> <li>• <b>Deny Only (Allow by default):</b> Block traffic destined to the countries</li> </ul>

Parameter	Description
	<p>matching the configured countries. The traffic destined for the countries which are not part of the configured countries will be allowed</p> <ul style="list-style-type: none"> <li>• <b>None:</b> Disables the feature. Traffic is allowed in all countries.</li> </ul>
Countries	The destination countries to which the traffic is destined.
<p><b>Exceptions</b></p> <p>Exceptions allow users to configure destination IPv4 address ranges that are allowed in the outbound traffic. To add a new exception, click <b>Add New</b>. The <b>Add New Exception</b> window appears, as shown in <a href="#">Figure 418</a>.</p>	
Start IP	<p>Starting IPv4 address in the range.</p> <p>This is a mandatory parameter.</p>
End IP	<p>Ending IPv4 address in the range.</p> <p>This is a mandatory parameter.</p>
<p><b>Port Forward Rules</b></p> <p>Port Forward Rules allow users to forward traffic destined to the WAN Interface IP address of NSE 3000 on a specific TCP or UDP port to any of the LAN IP address. Port Forward Rules provides remote access to internal resources.</p> <p>To add a new port forward rule, click <b>Add New</b>. The <b>Add New Port Forward Rule</b> window appears, as shown in <a href="#">Figure 419</a>.</p>	
WAN	<p>The interface to forward inbound traffic to the internal host.</p> <p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• <b>WAN-1</b></li> <li>• <b>WAN-2</b></li> </ul>
Description	Displays the user-configured description for the port forward rule.
LAN IP Address	<p>The IPv4 address to which traffic will be forwarded.</p> <p>This is a mandatory parameter.</p>
LAN Port	<p>The LAN port to which the traffic will be forwarded.</p> <p>Supported values: 1 to 65535.</p> <p>This is a mandatory parameter.</p>
Protocol	<p>The protocol of forwarded traffic.</p> <p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• <b>TCP</b></li> <li>• <b>UDP</b></li> </ul>
Port	<p>The destination port of the incoming traffic on the WAN interface.</p> <p>Supported values: 1 to 65535.</p> <p>This is a mandatory parameter.</p>
Apply To	<p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• <b>All</b></li> <li>• <b>IP Group</b></li> </ul>

Parameter	Description
	<ul style="list-style-type: none"> <li>• <b>IP Address / Source Subnet</b></li> </ul>
IP Group	This parameter is applicable only when <b>IP Group</b> option is selected.
IP Address / Source Subnet	<p>This parameter is applicable only when <b>IP Address / Source Subnet</b> option is selected.</p> <p>This is a mandatory parameter.</p>
<p><b>NAT One-to-One</b></p> <p>NAT One-to-One allows users to map an IP address on the WAN side to a LAN IP address. The IP address on the WAN side should be different from any of the WAN interface (WAN-1/WAN-2) IP addresses. NAT One-to-One rules provide remote access to any of the LAN resources.</p> <p>To add a new NAT one-to-one, click <b>Add New</b>. The <b>Add New NAT One-to-One</b> window appears, as shown in <a href="#">Figure 420</a>.</p>	
WAN	<p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• <b>WAN-1</b></li> <li>• <b>WAN-2</b></li> </ul>
Public IP Address	<p>The public IPv4 address on the WAN side that is used to access the LAN resource.</p> <p>The public IPv4 address is different from the IPv4 address of the WAN (WAN-1/WAN-2) interfaces.</p> <p>This is a mandatory parameter.</p>
LAN IP Address	<p>The LAN IPv4 address of the server which is hosting the resource.</p> <p>This is a mandatory parameter.</p>
Protocol	<p>The protocol of the incoming traffic.</p> <p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• <b>TCP</b></li> <li>• <b>UDP</b></li> </ul>
<p><b>NAT One-to-Many</b></p> <p>NAT One-to-Many provides remote access to internal resources. It maps a public IP address to multiple LAN IPs and ports.</p> <p>To add a new NAT one-to-many, click <b>Add New</b>, the <b>Add New NAT One-to-Many</b> window appears, as shown in <a href="#">Figure 421</a>.</p>	
WAN	<p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• <b>WAN-1</b></li> <li>• <b>WAN-2</b></li> </ul>
Public IP Address	<p>The public IPv4 address on the WAN side that is used to access the LAN resource.</p> <p>The public IPv4 address is different from the IPv4 address of the WAN (WAN-1/WAN-2) interfaces.</p> <p>This is a mandatory parameter.</p>

Parameter	Description
LAN IP Address	The LAN IPv4 address of the server which is hosting the resource. This is a mandatory parameter.
LAN Port	The LAN Port which is hosting the resource. This is a mandatory parameter.
Protocol	The protocol of the incoming traffic. The following options are supported: <ul style="list-style-type: none"> <li>• TCP</li> <li>• UDP</li> </ul>
Port	The destination port of the incoming traffic on the WAN interface. This is a mandatory parameter.
<b>Device Access</b>	
Respond to ICMP pings from WAN	This parameter is disabled by default. When enabled, this service is enabled for all the sources, unless specific IP addresses or IP groups are configured in the <b>IP Group</b> and <b>IP Address / Source Subnet</b> parameters.
IP Group	Specifies the IP group for this service.
IP Address / Source Subnet	Specifies the IPv4 address or source subnet for this service.

## DNS

NSE 3000 supports DNS-based filters. DNS-based filters allow users to block certain category of websites. From the blocked list, users can still allow certain websites by adding them to the exception list. For example, if user blocks social-media category then all the social websites will be blocked including linkedin.com since linkedin.com belongs to social-media category. Adding linkedin.com to the Exception to filters list will allow access to linkedin.com while blocking other social-media websites.

To configure parameters on the **DNS** page, complete the following steps:

1. On the **NSE Groups > Add New** page, select the **DNS** tab.

The **DNS** page appears, as shown in [Figure 422](#).

2. Configure the parameters, as described in [Table 87](#).

**Table 87** Parameters on the DNS page

Parameter	Description
On the DNS page, there are <b>DNS</b> , <b>Policies</b> , and <b>Hosts</b> sections.	
<b>DNS</b>	
Enable Built-in DNS Server	Indicates whether the on-board DNS server is enabled or disabled.  By default, this parameter is enabled.
Block external DNS servers	Blocks the client to reach to any external DNS servers.  By default, this parameter is enabled.
Block external DNS exceptions	Allows the clients added in the exceptions list to reach to any external DNS servers.
Log to Syslog	Specifies whether the DNS queries received from the client is logged to an external syslog server.
Learn DNS servers from DHCP	Dynamically learns the DNS server IP on WAN.  By default, this parameter is enabled.  When you disable this parameter, the <b>Primary DNS</b> and <b>Secondary DNS</b> parameters are displayed.
Primary DNS	The IPv4 address of the primary upstream DNS server.
Secondary DNS	The IPv4 address of the secondary upstream DNS server.
<b>Local DNS Entries</b>	
To add a new local host, click <b>Add New</b> . The <b>Add New Local Host</b> window appears, as shown in <a href="#">Figure 423</a> .	
Domain	A domain name for the local host.  This is a mandatory parameter.
IP address	The IPv4 address of the local host.  This is a mandatory parameter.
<b>Conditional Forwarding Rules</b>	
To add a new forwarding rule, click <b>Add New</b> . The <b>Add New Forwarding Rule</b> window appears, as shown in <a href="#">Figure 424</a> .	
Domain	A domain name for the forwarding rule.  This is a mandatory parameter.
IP address	The IPv4 address of the server to which the DNS query is forwarded.
DNS Filter Mode	Specifies the mode for DNS filtering. The following options are supported: <ul style="list-style-type: none"> <li>• <b>Disabled</b>: Disables DNS filter. By default, this option is selected.</li> <li>• <b>Learning</b>: Builds local cache for domain categories but does not filter requests.</li> <li>• <b>Filtering</b>: Filters requests based on configuration.</li> </ul>

Parameter	Description
<p><b>Policies</b></p> <p>To add a new policy, click <b>Add New</b>. The <b>Add New Policy</b> window appears, as shown in <a href="#">Figure 425</a>.</p>	
Name	<p>Name for the policy.</p> <p>This is a mandatory parameter.</p>
Description	Description about the policy.
Deny categories	<p>Categories to deny in the following sections:</p> <ul style="list-style-type: none"> <li>• <b>Productivity</b></li> <li>• <b>Privacy</b></li> <li>• <b>Sensitive</b></li> <li>• <b>Misc</b></li> <li>• <b>IT Resources</b></li> <li>• <b>Security</b></li> </ul> <p>Expand the sections and select individual categories. To select all categories in a section, select the check box provided for the section.</p>
Safe Search Mode	<p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• <b>Disabled:</b> Disables safe search mode. By default, this option is enabled.</li> <li>• <b>Moderate:</b> Enable moderate safe search mode.</li> <li>• <b>Restricted:</b> Enable restricted safe search mode.</li> </ul>
Allow Exceptions (List of Domain Names)	Enter the exempted domain names separated by a comma (,).
Apply to	<p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• <b>All:</b> Apply to all user groups. By default, this option is selected.</li> <li>• <b>User Group:</b> Apply to selected user groups.</li> </ul>
User Group	<p>This parameter is applicable only when <b>User Group</b> option is selected for <b>Apply to</b> parameter.</p> <p>This is a mandatory parameter.</p>
<p><b>Hosts</b></p> <p>Hosts section contains two tabs - <b>Safe Search Moderate Hosts</b> and <b>Safe Search Restricted Hosts</b></p> <p>The following parameters appear in both the tabs and can be configured as required.</p> <p>A list of hosts are already added by default. You can modify these hosts by clicking the edit  icon or you can add new hosts by clicking <b>Add New</b> in the respective tabs as shown in <a href="#">Figure 426</a> and <a href="#">Figure 427</a>.</p>	
Domain Name	<p>The domain name for the safe search host</p> <p>This is a mandatory parameter.</p>
IP address	<p>The IPv4 address of the safe search host.</p> <p>This is a mandatory parameter.</p>

**Figure 423** The Add New Local Host window

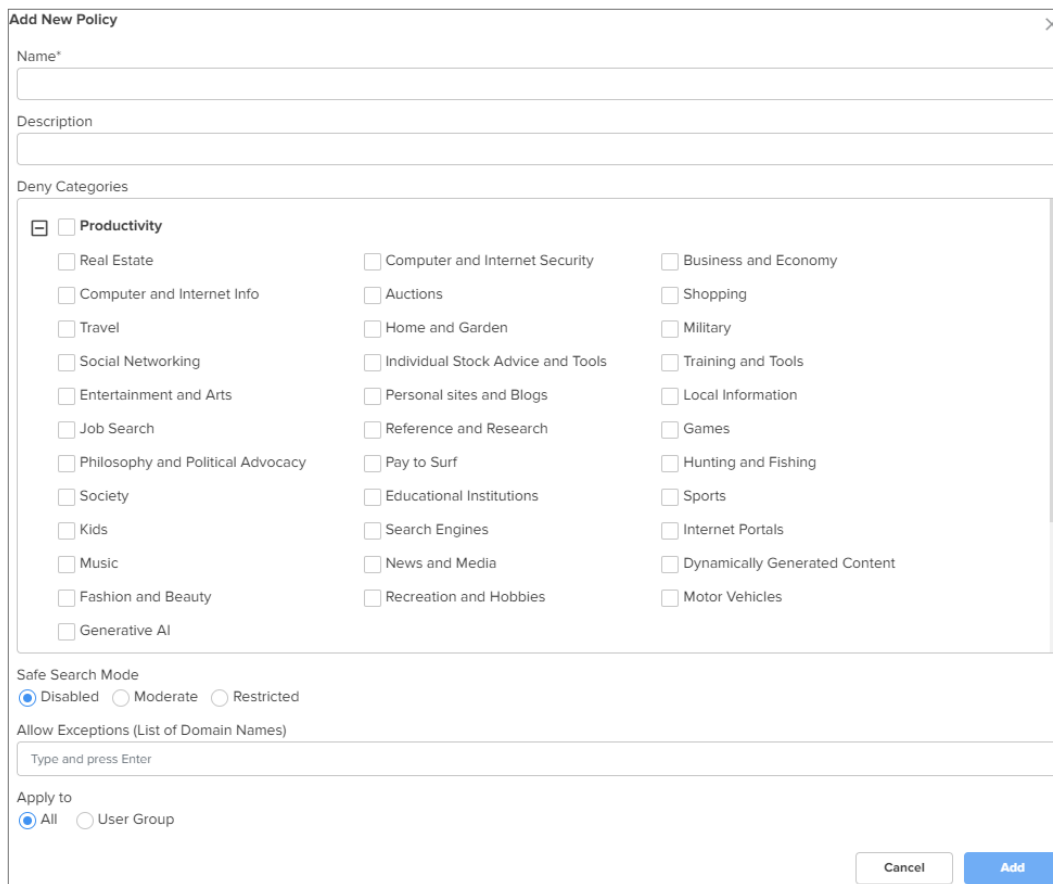

The 'Add New Local Host' window contains two text input fields: 'Domain Name\*' and 'IP Address\*'. At the bottom right, there are two buttons: 'Close' and 'Add'.

**Figure 424** The Add New Forwarding Rule window

The 'Add New Forwarding Rule' window contains two text input fields: 'Domain\*' and 'IP Address'. The 'IP Address' field has a placeholder text 'Type and press Enter'. At the bottom right, there are two buttons: 'Close' and 'Add'.

**Figure 425** The Add New Policy window

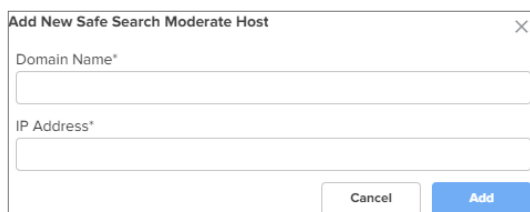

The 'Add New Policy' window is a complex form with the following sections:

- Name\***: A text input field.
- Description**: A text input field.
- Deny Categories**: A list of categories with checkboxes, including:
  - Productivity
  - Real Estate
  - Computer and Internet Info
  - Travel
  - Social Networking
  - Entertainment and Arts
  - Job Search
  - Philosophy and Political Advocacy
  - Society
  - Kids
  - Music
  - Fashion and Beauty
  - Generative AI
  - Computer and Internet Security
  - Auctions
  - Home and Garden
  - Individual Stock Advice and Tools
  - Personal sites and Blogs
  - Reference and Research
  - Pay to Surf
  - Educational Institutions
  - Search Engines
  - News and Media
  - Recreation and Hobbies
  - Business and Economy
  - Shopping
  - Military
  - Training and Tools
  - Local Information
  - Games
  - Hunting and Fishing
  - Sports
  - Internet Portals
  - Dynamically Generated Content
  - Motor Vehicles
- Safe Search Mode**: Radio buttons for 'Disabled' (selected), 'Moderate', and 'Restricted'.
- Allow Exceptions (List of Domain Names)**: A text input field with placeholder 'Type and press Enter'.
- Apply to**: Radio buttons for 'All' (selected) and 'User Group'.

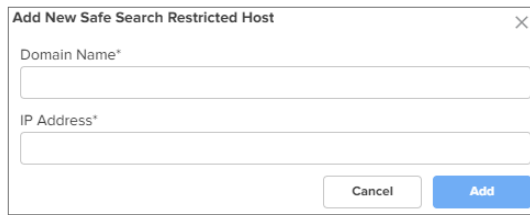

At the bottom right, there are two buttons: 'Cancel' and 'Add'.

**Figure 426** The Add New Safe Search Moderate Host

The 'Add New Safe Search Moderate Host' window contains two text input fields: 'Domain Name\*' and 'IP Address\*'. At the bottom right, there are two buttons: 'Cancel' and 'Add'.

**Figure 427** The Add New Safe Search Restricted Host

A dialog box titled "Add New Safe Search Restricted Host" with a close button (X) in the top right corner. It contains two input fields: "Domain Name\*" and "IP Address\*", both with empty text boxes. At the bottom, there are two buttons: "Cancel" and "Add".

3. Click **Save**.

## Threat Protection

Using the **Threat Protection** tab, you can configure the Intrusion Detection and Prevention system (IDS/IPS) parameters.

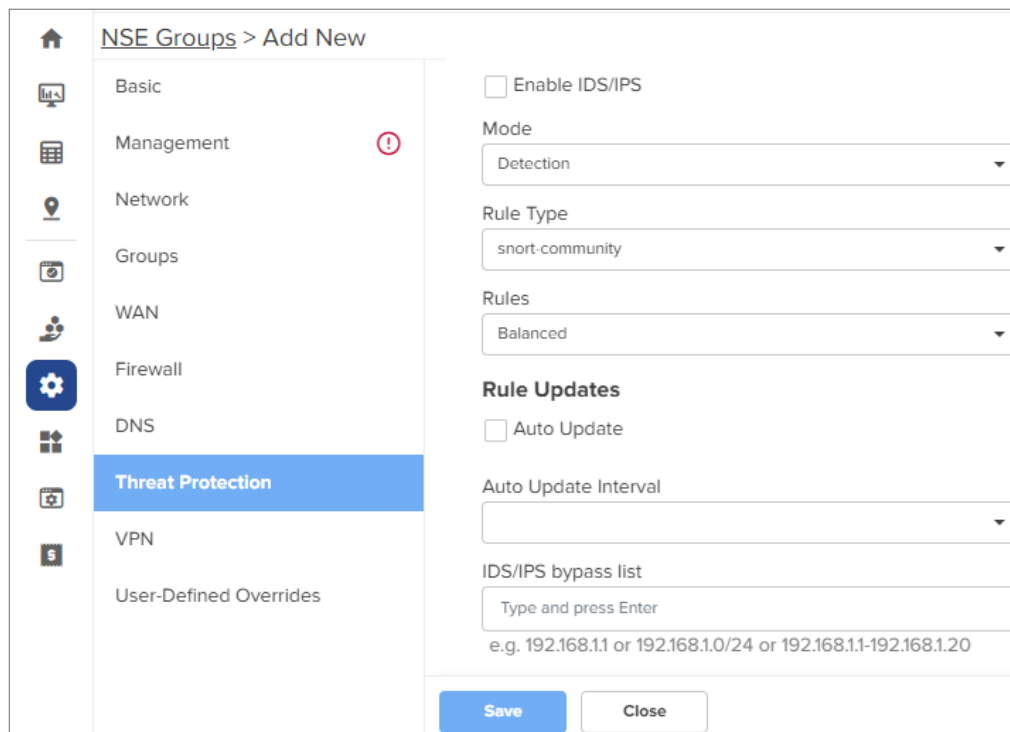

NSE 3000 supports IDS/IPS engine. IPS engine uses a series of rules that help define a malicious network activity. IPS engine supports rules from snort and emerging threats. The solution supports both community and licensed rules. The IPS engine uses these rules to find packets that match against them and generates alerts for users.

To configure parameters on the **Threat Protection** page, complete the following steps:

1. On the **NSE Groups > Add New** page, select the **Threat Protection** tab.

The **Threat Protection** page appears, as shown in [Figure 428](#).

**Figure 428** The Threat Protection page

The "Threat Protection" configuration page is shown within the "NSE Groups > Add New" interface. The left sidebar lists various configuration tabs: Basic, Management (with a red warning icon), Network, Groups, WAN, Firewall, DNS, **Threat Protection** (highlighted in blue), VPN, and User-Defined Overrides. The main content area contains the following settings:

- Enable IDS/IPS
- Mode: Detection (dropdown menu)
- Rule Type: snort-community (dropdown menu)
- Rules: Balanced (dropdown menu)
- Rule Updates:  Auto Update
- Auto Update Interval: (dropdown menu)
- IDS/IPS bypass list: Type and press Enter (text input field)  
e.g. 192.168.11 or 192.168.1.0/24 or 192.168.11-192.168.1.20

At the bottom of the configuration area, there are two buttons: "Save" and "Close".

2. Configure the parameters, as described in [Table 88](#).

Table 88 Parameters on the Threat Protection page

Parameter	Description
<b>IDS/IPS</b>	
Enable IDS/IPS	Indicates whether IDS/IPS is enabled or disabled. By default, this parameter is disabled.
Mode	Specifies the IDS/IPS mode. The following options are supported: <ul style="list-style-type: none"> <li>• <b>Detection</b> – Detects malicious activity and generates alerts for users.</li> <li>• <b>Prevention</b> – Detects malicious activity, generates alerts for users, and takes action to prevent attacks.</li> </ul>
Rule Type	Specifies the IDS/IPS rule type. The following options are supported: <ul style="list-style-type: none"> <li>• <b>snort-community</b> – The community rule set is a GPLv2 Talos certified rule set that is distributed free of charge and without any license restrictions. The rules are updated every Tuesday and Thursday.</li> <li>• <b>snort-vrt</b> – The Snort Subscriber rule set is developed by Talos research team and is governed by license agreement. The rule set is updated on Tuesday and Thursday. The snort-vrt rule set requires an oinkcode to download and activate rules.</li> <li>• <b>emerging-threats open</b> – Consists of signatures contributed from the community. The emerging-threats open rule sets are distributed free of charge.</li> <li>• <b>emerging-threats pro</b> – Consists of signatures created as a result of Proofpoint research. The rule sets are governed by license agreement. The emerging-threats pro rule set requires an oinkcode to download and activate the rules.</li> </ul>
Rules	Specifies the IDS/IPS rule policy. This parameter is applicable when <b>Rule Type</b> is <b>snort-vrt</b> or <b>snort-community</b> . The following options are supported: <ul style="list-style-type: none"> <li>• <b>Connectivity</b> – Policy designed to favor device performance over the security controls in the policy.</li> <li>• <b>Balanced</b> – This policy is the default policy that is recommended for initial deployments. The policy attempts to balance security needs and performance characteristics.</li> <li>• <b>Security</b> – This policy is designed for customer base that is extremely concerned about organizational security. This policy is deployed in networks that have higher security requirements.</li> </ul>
Oink Code	This parameter is applicable when <b>Rule Type</b> is <b>snort-vrt</b> or <b>emergency- threats pro</b> .
Category	Categories to select from the <b>Category</b> section. This parameter is applicable when <b>Rule Type</b> is <b>snort-vrt</b> or <b>emergency- threats pro</b> .
<b>Rule Updates</b>	
Auto Update	Indicates whether the IDS/IPS rules must be automatically updated or not. By default, this parameter is disabled. When <b>Auto Update</b> is enabled, NSE 3000 will periodically download and activate the IDS/IPS

Parameter	Description
	rules.
Auto Update Interval	<p>Time interval for the periodic updates of IDS/IPS rules.</p> <p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• <b>12 Hrs</b> – Auto updates the rules every 12 hours.</li> <li>• <b>24 Hrs</b> – Auto updates the rules every 24 hours.</li> </ul>
IDS/IPS bypass list	<p>List of allowed IPv4 addresses or range of allowed IPv4 addresses.</p> <p>IDS/IPS operating in prevention mode blocks traffic from a host on detecting malicious traffic from the host.</p> <p>When an IPv4 address is part of allowed IP addresses, IDS/IPS will not block traffic from the host even when malicious traffic is detected.</p>

3. Click **Save**.

## VPN

NSE 3000 provides an on-board VPN server that allows remote users to establish a connection using the native VPN client supported in most of the operating systems. The VPN server uses the L2TP/IPsec protocol with the IPsec encryption and hashing algorithms. The VPN server maintains a pool of IP addresses and leases the IP addresses from this pool for remote users.

NSE 3000 also provides an on-board RADIUS server that allows authentication and accounting of enterprise and remote users. The RADIUS server maintains user profiles in a central database.

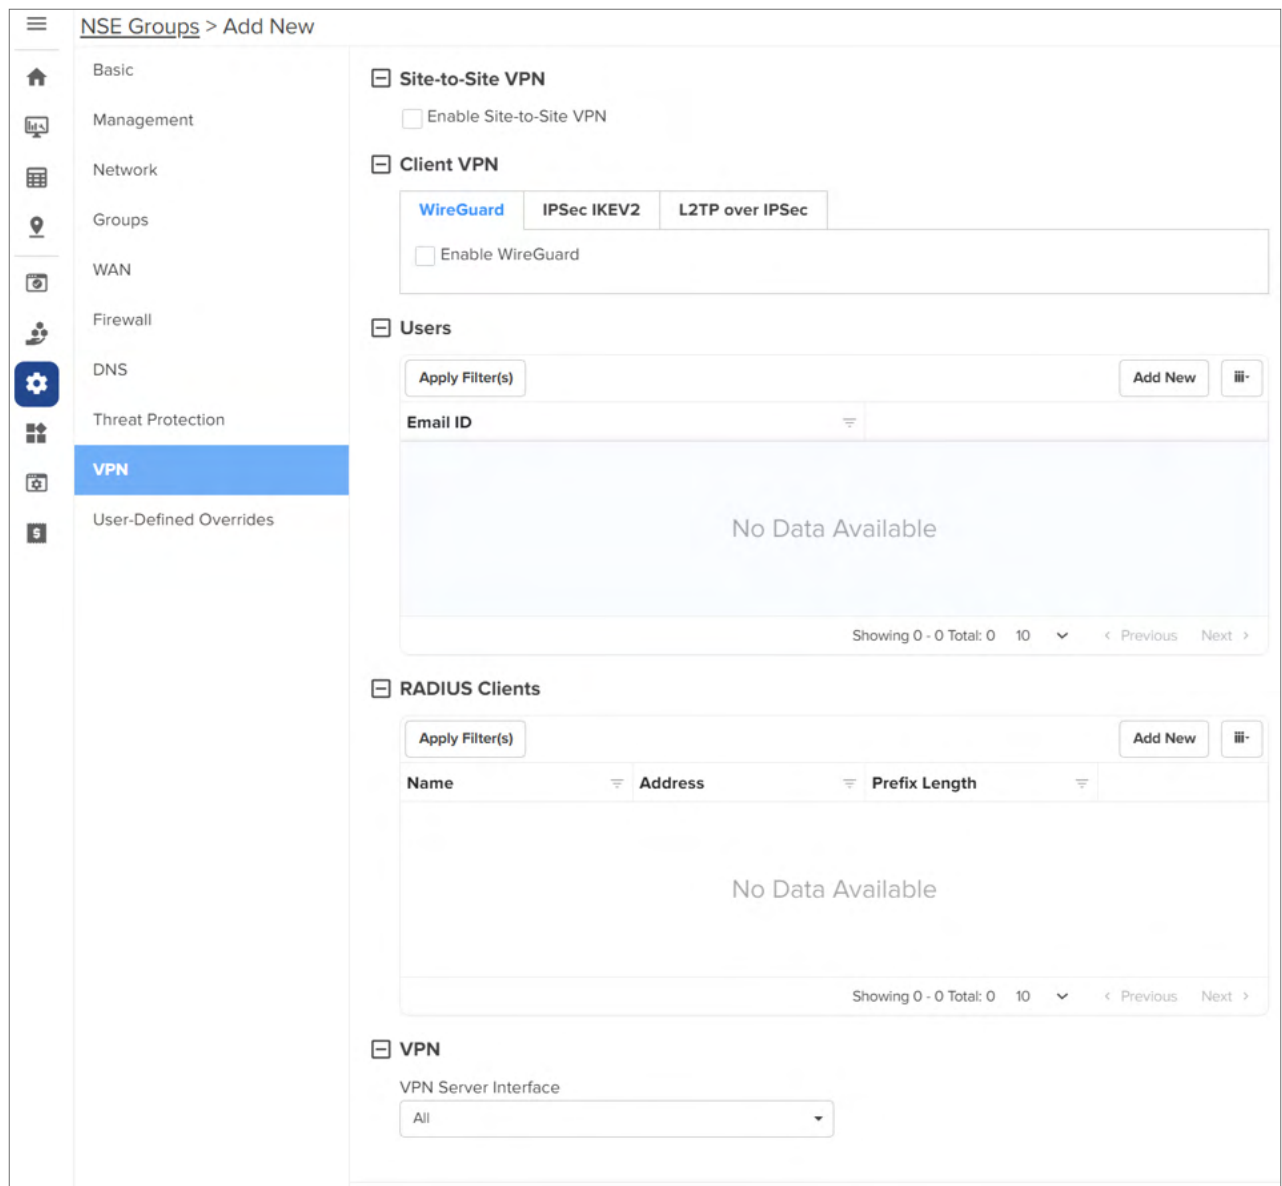

Using the **VPN** tab, you can configure DNS server, VPN server, and RADIUS server parameters.

To configure parameters on the **VPN** page, complete the following steps:

1. On the **NSE Groups > Add New** page, select the **VPN** tab.

The **VPN** page appears, as shown in [Figure 429](#).

**Figure 429** The VPN page

2. Configure the parameters, as described in [Table 89](#).

**Table 89** Parameters on the VPN page

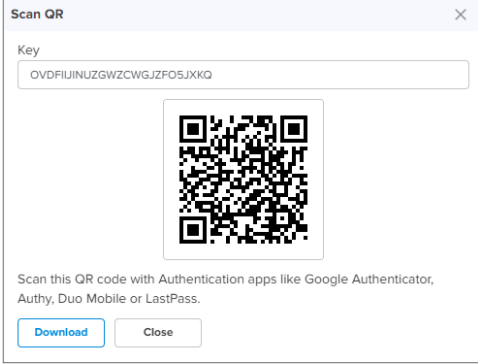

Parameter	Description
	On the VPN page, there are <b>Site-to-Site VPN</b> , <b>Client VPN</b> , <b>Users</b> , <b>RADIUS Clients</b> , and <b>VPN</b> sections.
<b>Site-to-Site VPN</b>	<p>IPsec tunnel is a VPN technology that provides a secure, encrypted connection between two devices or networks over the internet or another public network. It uses IPsec protocols to encrypt the traffic between two endpoints, making it difficult for anyone to intercept the communication.</p> <p>IPsec site-to-site tunnel is used to connect two remote sites for secure communications. NSE allows setting up tunnels both in responder mode and initiator mode. Both, IKEv1 and IKEv2 are supported in the configuration. The default version is IKEv2.</p>

Parameter	Description
<p><b>Note:</b> You can configure up to 100 IPsec tunnels.</p> <p>Pre-shared key is the authentication method supported by the device. Each site can have its own pre-shared key. The site is identified by an identifier (string or the IP address of the site). Each site has to be configured with a local and remote site for the tunnel to establish.</p> <p>To view the IPsec tunnel stats, navigate to the <b>NSE Group &gt; Network &gt; VPN Sites</b> tab, as shown in <a href="#">Figure 431</a>.</p> <p>To add a new site-to-site VPN, click <b>Add New</b>. The <b>Add New Site-to-Site VPN</b> window appears, as shown in <a href="#">Figure 430</a>.</p>	
Enable Site-to-Site VPN	<p>Indicates whether site-to-site VPN is enabled or disabled.</p> <p>By default, this parameter is disabled.</p>
<p>Following parameters appear when you select <b>Enable Site-to-Site VPN</b> check box.</p>	
Name	<p>A name for the new site-to-site VPN.</p> <p>This is a mandatory parameter.</p>
IKE version	<p>The Internet Key Exchange (IKE) version for the site-to-site VPN. The following options are supported:</p> <ul style="list-style-type: none"> <li>• <b>IKE v1</b></li> <li>• <b>IKE v2</b></li> </ul>
Role	<p>Specifies the role for the tunnels. The following options are supported:</p> <ul style="list-style-type: none"> <li>• <b>Initiator</b></li> <li>• <b>Responder</b></li> </ul> <p>Default role: Responder</p>
Dead peer detection interval	<p>The interval (in seconds) for detecting dead peers.</p> <p>Range: 30 - 600 seconds. Default: 120 seconds</p> <p>This is a mandatory parameter.</p>
Remote ID	<p>The remote ID.</p> <p>The value of 192.168.50.10 is pre-configured and is not modifiable.</p> <p>This is a mandatory parameter.</p>
Local ID	<p>The local ID.</p> <p>This is a mandatory parameter.</p>
Local Subnets	<p>The comma-separated list of local subnets.</p> <p>This is a mandatory parameter.</p>
Remote Subnets	<p>The comma-separated list of remote subnets.</p> <p>This is a mandatory parameter.</p>
Remote PSK	<p>The remote PSK.</p> <p>This is a mandatory parameter.</p>
Local PSK	<p>The local PSK.</p>

Parameter	Description
	This is a mandatory parameter.
The following parameters are common for both <b>IKE Phase 1</b> and <b>IKE Phase 2</b> .	
Encryption	The following options are supported: <ul style="list-style-type: none"> <li>• <b>aes128</b></li> <li>• <b>aes192</b></li> <li>• <b>aes256</b></li> <li>• <b>aes128-gcm16</b></li> <li>• <b>aes192-gcm16</b></li> <li>• <b>aes256-gcm16</b></li> <li>• <b>3des</b></li> </ul>
Integrity	The following options are supported: <ul style="list-style-type: none"> <li>• <b>md5</b></li> <li>• <b>sha1</b></li> <li>• <b>sha256</b></li> </ul>
DH Group	The following options are supported: <ul style="list-style-type: none"> <li>• <b>1</b></li> <li>• <b>2</b></li> <li>• <b>5</b></li> <li>• <b>14</b></li> <li>• <b>15</b></li> </ul>
Key Lifetime	The duration (in hours) for the pre-shared key. Range: 1 to 24
<b>Client VPN:</b> This section contains the following tabs: <ul style="list-style-type: none"> <li>• <a href="#">WireGuard: A VPN protocol that is highly secure.It is simpler and more efficient than traditional IPsec.</a></li> <li>• <a href="#">IPsec IKEV2</a></li> <li>• <a href="#">L2TP over IPsec</a></li> </ul>	
<b>WireGuard:</b> A VPN protocol that is highly secure.It is simpler and more efficient than traditional IPsec.	
Enable WireGuard	Indicates whether WireGuard is enabled or disabled. By default, this parameter is disabled.
Following parameters appear when you select <b>Enable WireGuard</b> check box.	
Port	Indicates the WireGuard listen port number. Default: 51820 This is a mandatory parameter.
Client Pool	Indicates the WireGuard interface IP for the device and the client IPs to be assigned for the WireGuard clients.

Parameter	Description
	This is a mandatory parameter.
Keep Alive	Periodic keep alive packets sent for the configured duration. Default: 5 seconds This is a mandatory parameter.
Enable Split Tunnel	Indicates whether the split tunnel is enabled or disabled. By default, this parameter is disabled. <b>Note:</b> When you enable split tunnel, only the traffic destined to tunnelled subnets is allowed. You can override the <b>Enable Split Tunnel</b> parameter at the user level.
Tunnelled Subnets	Specifies the list of local subnets in NSE that should be allowed access from the WireGuard clients. <b>Note:</b> The same <b>Tunnelled Subnets</b> field is auto-populated in the <b>Add New User</b> window. You can edit this field at the user level.
<b>IPSec IKEV2</b>	
Enable IPSec IKEV2	Indicates whether IPSec IKEV2 is enabled or disabled. By default, this parameter is disabled.
Following parameters appear when you select <b>Enable IPSec IKEV2</b> check box.	
Client IP Pool Range Start	Starting IPv4 address in the range. This is a mandatory parameter.
Client IP Pool Range End	Ending IPv4 address in the range. This is a mandatory parameter.
<b>L2TP over IPSec</b>	
Enable L2TP over IPSec	Indicates whether L2TP over IPSec is enabled or disabled. By default, this parameter is disabled.
Following parameters appear when you select <b>Enable L2TP over IPSec</b> check box.	
Client IP Pool Range Start	Starting IPv4 address in the range. This is a mandatory parameter.
Client IP Pool Range End	Ending IPv4 address in the range. This is a mandatory parameter.
IPsec Shared Secret	Enter a pre-shared key string for the IPsec protocol. The shared secret is used between the VPN Client and Server for device authentication. This is a mandatory parameter.
Enable 2FA	Indicates whether two-factor authentication (2FA) is enabled or disabled. By default, this parameter is disabled.
<b>VPN Two-Factor Authentication</b>	
1. When you enable two-factor authentication (2FA), scan the QR code to add a 16-digit key to a particular	

Parameter	Description
<p>user's Google Authenticator app.</p>  <ol style="list-style-type: none"> <li>2. An email is also sent to the configured email address with the QR code and the 16-digit key.</li> <li>3. The two-factor authentication gets enabled for the user when the user tries to connect to the NSE 3000 device using the remote VPN client from the WAN side. Users on the LAN side do not require two-factor authentication.</li> </ol>	
<p><b>Users:</b> This section is common for all the three protocols - WireGuard, IPSec IKEV2, and L2TP over IPSec. To add a new user, click <b>Add New</b>. The <b>Add New User</b> window appears, as shown in <a href="#">Figure 432</a>.</p>	
Email ID	<p>Email ID of the user. User is either an enterprise user or a remote user. This is a mandatory parameter.</p>
Password	<p>Password for the user. This is a mandatory parameter.</p>
Enable WireGuard	<p>Indicates whether WireGuard is enabled or disabled. By default, this parameter is disabled.</p>
<p>Following parameters appear when <b>Enable WireGuard</b> check box is selected in the <b>Add New User</b> window.</p>	
Enable Split Tunnel	<p>Indicates whether split tunnel is enabled or disabled. By default, this parameter is enabled.</p>
Tunnelled Subnets	<p>Specifies the list of local subnets in NSE that should be allowed access from the WireGuard clients.</p>
Device	<p>Indicates the NSE 3000 device. When you select an NSE 3000 device, the device's public key is populated in the [Peer] section of the WireGuard client configuration file. This is a mandatory parameter.</p>
WAN Interface	<p>WAN Interface of the NSE 3000 device. When you select a WAN interface, the NSE 3000 device's WAN IP is populated as the endpoint IP in the [Peer] section of the WireGuard client configuration file. The following WAN Interface options are supported:</p> <ul style="list-style-type: none"> <li>• WAN-1</li> </ul>

Parameter	Description
	<ul style="list-style-type: none"> <li>• WAN-2</li> </ul>
<p><b>Clients:</b> In this section, you have an option to add a new WireGuard client.</p> <p>To add a new WireGuard client, click <b>Add New</b>. The <b>Add New WireGuard Client</b> window appears, as shown in <a href="#">Figure 433</a>.</p>	
Name	<p>Name for the new WireGuard client.</p> <p>This is a mandatory parameter.</p>
Auto generate key pair	<p>Generates a public and private key pair for the client. By default, this parameter is enabled.</p> <p>When this option is enabled, the <b>Client Public Key</b> field is auto-populated with the public key generated for that client.</p> <p>When this option is disabled, you need to provide the WireGuard client public key generated on the WireGuard client device.</p>
Client Public Key	<p>Public key of the client.</p> <p>This is a mandatory parameter.</p>
IP Address	Auto-generated IP address of the WireGuard client.
<p><b>Note:</b> You have options to download QR code and configuration file in the <b>Add New WireGuard Client</b> window, as shown in <a href="#">Figure 433</a>.</p>	
<p><b>RADIUS Clients</b></p> <p>To add a new RADIUS client, click <b>Add New</b>. The <b>Add New RADIUS Client</b> window appears, as shown in <a href="#">Figure 434</a>.</p>	
Name	<p>Name of the RADIUS client.</p> <p>This is a mandatory parameter.</p>
Secret	<p>The shared secret of the RADIUS client. This is the shared secret (password) that the NAS needs to communicate with the RADIUS server.</p> <p>This is a mandatory parameter.</p>
Address	<p>The IPv4 address or network address of the RADIUS client.</p> <p>This is a mandatory parameter.</p>
Prefix Length	<p>The client network prefix length.</p> <p>This is a mandatory parameter.</p>
<p><b>VPN</b></p>	
VPN Server Interface	<p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• <b>WAN-1</b> - The first WAN interface on your server.</li> <li>• <b>WAN-2</b> - The second WAN interface on your server.</li> <li>• <b>All</b> - Applies to all WAN interfaces.</li> </ul>

## User-Defined Overrides

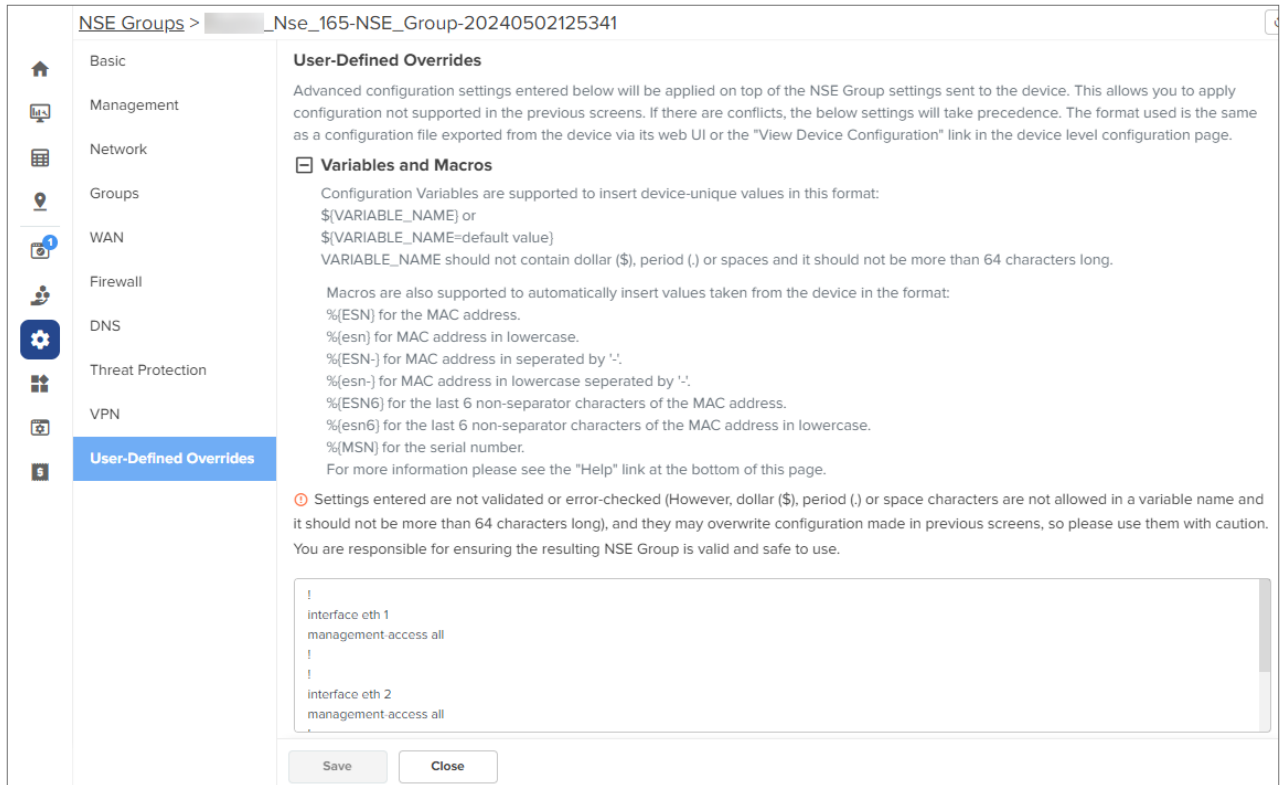

Using the **User-Defined Overrides** tab, you can configure the user-defined overrides.

To configure parameters on the **User-Defined Overrides** page, complete the following steps:

1. On the **NSE Groups > Add New** page, select the **User-Defined Overrides** tab.

The **User-Defined Overrides** page appears, as shown in [Figure 435](#).

Figure 435 The User-Defined Overrides page

2. In the text box, enter the configuration that you want to apply to the device.
3. Click **Save**.

## Configuring WAN in the device UI

In the **WAN** page, you can configure the device's IPv4 address based on the IP mode.

### Note

If **PPPoE** is used as the WAN connection mode as shown in [Figure 436](#), make sure to configure the PPPoE username and password. Once you have configured the PPPoE user name and password, you can proceed to configure the NSE group by providing the same username and password and then attaching the default NSE group to the device.

Figure 436 PPPoE as WAN connection mode

The screenshot shows the Cambium Networks management interface. On the left is a navigation menu with 'WAN' selected. The main content area is titled 'WAN' and has two tabs: 'WAN-1' (active) and 'WAN-2'. The 'IP Mode' dropdown menu is highlighted with a red box and is set to 'PPPoE'. Below it are input fields for 'Account Name', 'Service Name', 'User Name', and 'Password', each with a note: 'Configure Account name (max 32 characters)', 'Configure Service name (max 32 characters)', and 'Configure MTU for PPPoE (500-1492 bytes)'. The 'MTU' field is set to '1492'. There is a checkbox for 'TCP MSS Clamping' which is unchecked. At the bottom is a 'VLAN ID' field and a 'Save' button.

To view and configure the WAN settings, complete the following steps in the device UI:

1. From the main NSE 3000 dashboard page, click **WAN** tab from the left panel.

The **WAN** page appears, as shown in [Figure 437](#).

**Note**  
By default, WAN-1 page appears. You can configure WAN on WAN-1 or WAN-2.

Figure 437 The WAN page

The screenshot shows the Cambium Networks management interface. On the left is a navigation menu with 'WAN' selected. The main content area is titled 'WAN' and has two tabs: 'WAN-1' (active) and 'WAN-2'. The 'IP Mode' dropdown menu is set to 'Dynamic'. Below it is a 'VLAN ID' field with a note: 'Minimum 1, Maximum 4094'. At the bottom is a 'Save' button. In the top right corner of the interface, there are 'Reboot' and 'Logout' buttons.

2. Configure the parameters, as described in [Table 90](#).

**Table 90** Parameters on the WAN page

Parameter	Description
IP Mode	<p>Determines the network that must be configured to use IPv4 addresses.</p> <p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• <b>Dynamic</b></li> <li>• <b>Static</b></li> <li>• <b>PPPoE</b></li> </ul> <p>By default, the <b>Dynamic</b> mode is selected.</p>
VLAN ID	<p>The VLAN ID can range from 1 to 4094.</p> <p>The VLAN configuration is optional.</p> <p>When the 802.1Q header is configured, all transmitted frames are expected to include the 802.1Q header with the same VLAN ID.</p>
<p>Following parameters appear only when you select the mode as <b>Static</b> from the <b>IP Mode</b> drop-down list, as shown in <a href="#">Figure 438</a>.</p>	
IP Address	The 32-bit binary number that identifies a network element by both network and host.
Subnet Mask	The subnet mask for the destination IP/network for the route.
Gateway	The gateway for the destination IP/network for the route.
<b>DNS</b>	
Primary DNS	The IPv4 address of primary upstream DNS server.
Secondary DNS	The IPv4 address of secondary upstream DNS server.
<p>Following parameters appear only when you select the mode parameter as <b>PPPoE</b> from the <b>IP Mode</b> drop-down list, as shown in <a href="#">Figure 439</a>.</p>	
Account Name	<p>The name of Access Controller.</p> <p>This parameter allows a maximum of 32 characters.</p> <p>This parameter is optional.</p>
Service Name	<p>Service name of Access Controller.</p> <p>This parameter allows a maximum of 32 characters.</p> <p>This parameter is optional.</p>
User Name	<p>A user name for PPPoE authentication.</p> <p>This parameter is mandatory.</p>
Password	<p>A password for PPPoE authentication.</p> <p>This parameter is optional.</p>
MTU	<p>MTU for PPPoE interface in bytes.</p> <p>Default: 1492. Range: 500 to 1492</p>
TCP MSS Clamping	<p>Indicates whether TCP MSS Clamping is enabled or disabled.</p> <p>By default, this parameter is disabled.</p>

Figure 438 Static mode

The screenshot shows the Cambium Networks management interface. On the left is a navigation sidebar with 'WAN' selected. The main content area is titled 'WAN' and has tabs for 'WAN-1' and 'WAN-2'. The 'Static' IP mode is selected in a dropdown menu. Below this are input fields for 'IP Address', 'Subnet Mask', and 'Gateway'. A 'DNS' icon is present, followed by a 'VLAN ID' field with a note 'Minimum 1, Maximum 4094'. A 'Save' button is at the bottom.

Figure 439 PPPoE mode

The screenshot shows the same Cambium Networks management interface, but with 'PPPoE' selected in the 'IP Mode' dropdown. The 'Account Name' field has a note 'Configure Account name (max 32 characters)'. The 'Service Name' field has a note 'Configure Service name (max 32 characters)'. The 'User Name' and 'Password' fields are present. The 'MTU' field is set to '1492' with a note 'Configure MTU for PPPoE (500-1492 bytes)'. There is a checkbox for 'TCP MSS Clamping' with the text 'Enable/Disable TCP MSS Clamping'. The 'VLAN ID' field has a note 'Minimum 1, Maximum 4094'. A 'Save' button is at the bottom.

3. Click **Save**.

# Configuring Advanced Features

To configure advanced features, navigate to **Configuration > Advanced Features** page.

Advanced Features

**Enterprise**

- Lock NSE/cnMatrix/Wi-Fi AP Device Configuration** X Changes made outside (such as through the Device UI) of a mapped configuration group (NSE, Switch & Wi-Fi AP Groups) will be overwritten.
- Enable Strict Device Password Policy** Store device administrator passwords as one-way hashes in NSE Groups, Switch Groups and Enterprise AP Groups (XE/XV/X7-Series).

ⓘ Do not enable this setting if you manage cnPilot E-Series devices (these do not support hashed administrator passwords, so enabling this will prevent configuration updates to them).

ⓘ You must update administrator passwords on your NSE Groups, Switch Groups and Enterprise AP Groups for this setting to take effect.

Save

## Lock Device Configuration

To lock NSE, cnMatrix, and Wi-Fi device configuration, select the check box. Once you enable this check box, you cannot update the device-level configuration using the device UI or any other method. Only the configuration pushed from cnMaestro for NSE, switch, and Wi-Fi AP groups will be retained on the device.

## Strict Device Password Policy

To enable strict password policy for Switch Groups or Enterprise AP Groups, select the **Enable Strict Device Password Policy** check box.

If you enable this option:

- The device administrator passwords are stored as one-way hashes for all NSE Groups, Switch Groups, and Enterprise AP Groups (XE/XV/X7-series).
- The administrator password has to be updated for all NSE Groups, Switch Groups, and Enterprise AP Groups under **Configuration > NSE Group > Management** page, **Configuration > Switch Group > Management** page, and **Configuration > Wi-Fi Profiles > AP Group > Management** page respectively for this setting to take effect.
- The configuration cannot be pushed to cnPilot E-series device.
- Device software versions must be at or above 1.3 for NSE, 4.6.1 for cnMatrix, and 6.5.3 for Enterprise Wi-Fi XE/XV/X7-Series to support the strict password policy. cnMaestro will not push any configuration to devices not meeting these requirements, including all cnPilot E-Series devices when the strict policy is enabled.

If you disable this option:

- The password must be updated for all NSE Groups, Switch Groups, and Enterprise AP Groups under the respective **Management** pages for this setting to take effect.

# Auto-Provisioning

cnMaestro supports Auto-Provisioning for cnVision, Wireless LAN devices (Enterprise Wi-Fi, cnPilot R-Series, and Xirrus) and fixed devices (PMP and ePMP). It is enabled at **Configuration > Auto-Provisioning**, and it allows one to automatically configure and approve devices based upon IP address.

## Creating Auto-Provisioning Rule

To create a rule for Auto-Provisioning, perform the following steps:

1. Navigate to **Shared Settings > Auto-Provisioning** page.

2. Click **Add** and following window appears.

**Figure 440** Auto-Provisioning - cnPilot Home (R-Series) devices

Approve

**Figure 441** Auto-Provisioning - All Other Devices

The screenshot shows a dialog box titled "Add Auto-Provisioning Rules". It contains the following fields and controls:

- Subnet (CIDR):** A text input field with a placeholder "xxx.xxx.xxx.xxx/xx".
- Device Type:** A dropdown menu with "ePMP" selected.
- Managed Account:** A dropdown menu with "Base Infrastructure" selected.
- Network:** A dropdown menu with "default" selected.
- Tower:** A dropdown menu with "None" selected.
- Template:** A dropdown menu with "None" selected.
- Description:** A text input field.
- Approve:** A checkbox.
- Buttons:** "Cancel" and "Add" buttons at the bottom right.

3. Enter the following details:

- **Subnet:** The subnet with CIDR of the devices to which the rule has to be applied.
- **Device Type:** Select the rule to be created for Enterprise Wi-Fi, Enterprise Wi-Fi (Xirrus-Series), cnVision, cnPilot Home (R-Series), ePMP, and PMP devices.
- **Managed Account:** Select the Managed Account from the list.
- **Network:** To which network the device should be onboarded, once device contacts the server.
- **Site:** Site under which the device must be onboarded, once device contacts the server. Applicable for Enterprise (E) or Home (R).
- **Tower:** Site under which the device must be onboarded, once device contacts the server. Applicable for ePMP AP, PMP AP, and cnVision.
- **Template:** Template to be applied on the device when onboarding, once device contacts the server. Applicable for ePMP AP, PMP AP, cnVision, and cnPilot Home (R-Series).
- **AP Group:** AP Group to be applied on the device when onboarding, once device contacts the server. Applicable for Enterprise (E-, XE-, XV-, and X7-Series), Xirrus, and cnPilot Home (R-Series).
- **Description:** Brief information about the device.
- **Approve:** Indicates whether the device is auto-approved or must be manual approved when onboarding.

4. Click **ADD**.

## Managing Home Mesh Router

The Home Mesh Router is engineered to provide superior Wi-Fi performance and mesh networking capabilities. It incorporates the advanced 802.11ax technology, ensuring it is fully compatible with a wide range of consumer devices while offering low latency and high throughput. These routers are specifically designed for comprehensive home coverage, supporting simultaneous operation on both 2.4 GHz and 5 GHz bands. This enables extended range, enhanced efficiency, and reduced interference compared to previous generations of Wi-Fi technology.

Additionally, the routers are configured to work in tandem, creating a seamless mesh network that covers the entire home, effectively eliminating areas with weak or no Wi-Fi signal.

The Home Mesh Routers can be configured using cnMaestro Cloud and the cnMaestro Subscriber application.

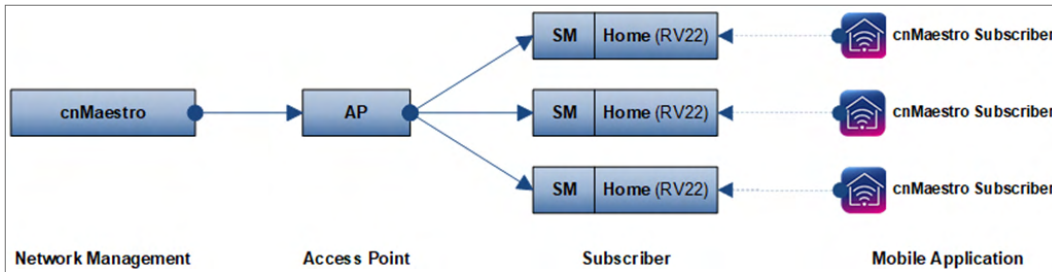

For information on supported platforms and hardware overview, see *Home Mesh Router User Guide*.

**Warning**

The WAN port of the Home Mesh Router may be damaged if a 48 VDC passive power (passive POE) is connected to the WAN port.

The basic architecture of the Home Mesh Router is as shown below.

The cnMaestro Subscriber application allows home customers to manage RV22 devices using their mobile phones. In the graphic above, the Subscriber is demarcated by the SM CPE. Alternatively, it could be mapped to a PON ONU, or to no explicit backhaul at all. In the latter case, the Subscriber would be attached to a new cnMaestro Home Site.

The workflow for creating and onboarding Subscribers, so customers can use the mobile application, has a cnMaestro (blue) and a customer (purple) component, as shown below.

A Subscriber is configured in cnMaestro Cloud, and an invite is sent to the customer’s email address, which will enable home Wi-Fi management using the mobile application. The customer must download the cnMaestro Subscriber application from the Apple App store or Google Play Store. The “Site” in the application, which maps to the Subscriber, can be customized and branded.

Feature	Details
Onboarding	Supported using Cambium ID or Serial Number (MSN).
Dashboard	Dashboards tailored for Home Site and RV22 Home Mesh.
Configuration	Available through RV22 Home Mesh AP Groups.
Details	Overview and network information display.
Notifications	Alarms, AP Events, and Wi-Fi Events aggregated at System, Managed Account, Network, Site, and Device levels.
Performance	WAN Throughput, Wireless Throughput (downlink/uplink), Clients by Band, Noise Floor, Interference, and Airtime (2.4/5 GHz) performance graphs.
Statistics	System, Managed Service, and Network statistics available.
Software Update	Software update provided at System, Managed Account, Network, Site, and Device levels.

Feature	Details
Maps	Location of Home Sites and Devices.
Clients	Both Wired and Wireless Clients supported at Site and Device levels.
Tools	Status, Debug, Network Connectivity, Wi-Fi Analyzer, Speed Test, and Packet Capture tools available.
Reports	Data Reports downloaded from the System, Managed Service, Network, and Site levels.

This topic contains the following sections:

- [Configuring Home Mesh Router](#)
- [Viewing router system information and network traffic status](#)
- [Viewing, editing, and blocking connected clients](#)
- [Monitoring and troubleshooting the Home Mesh Router](#)

## Configuring Home Mesh Router

Before shipping the Home Mesh Routers to the subscribers, they must be configured with AP groups, Wi-Fi profiles, and associated with the corresponding subscriber.

Configuring the routers involves the following steps:

1. [Configuring WLAN profiles \(SSIDs\)](#)
2. [Configuring AP Groups](#)
3. [Onboarding the Home Mesh Router to cnMaestro](#)
  - a. [cnMaestro Subscriber application branding](#)
  - b. [Adding a Subscriber Service Profile](#)
  - c. [Adding a subscriber](#)
  - d. [Claiming the Home Mesh Router](#)

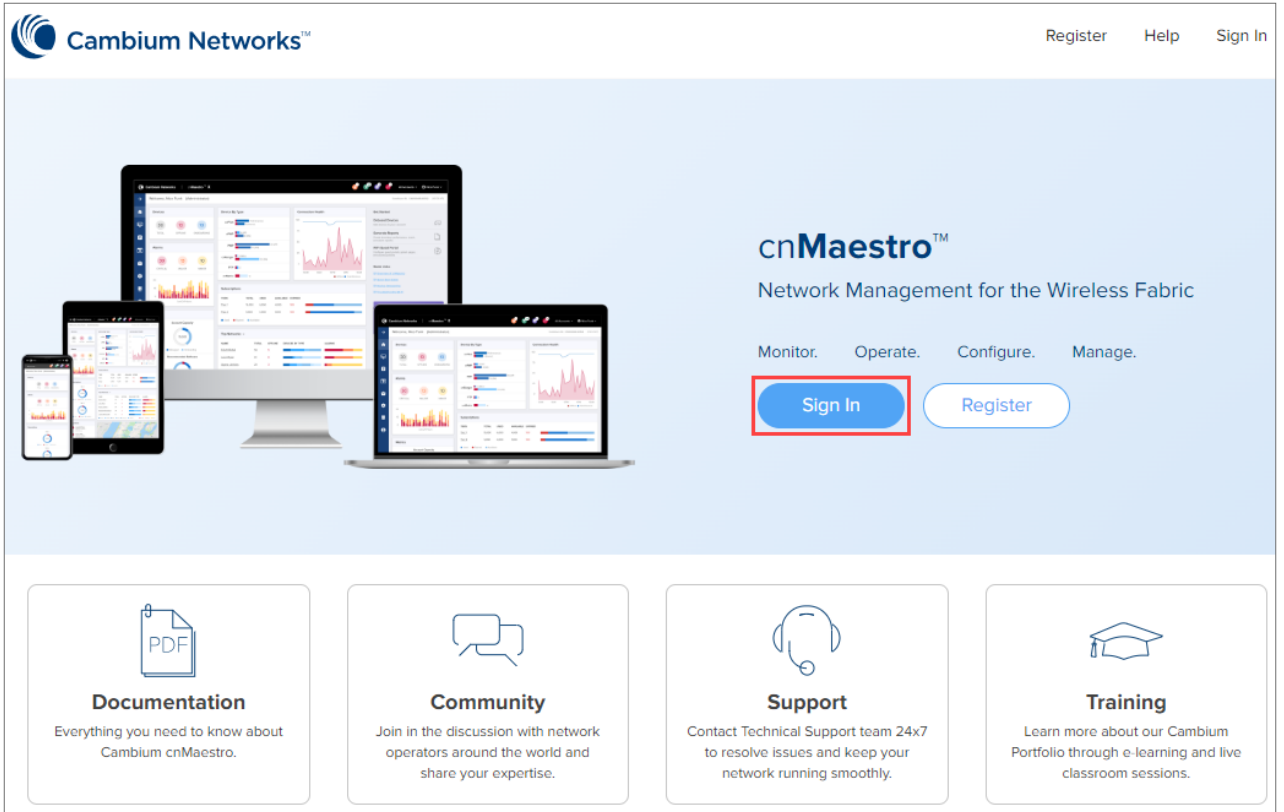

## Configuring WLAN Profiles (SSIDs)

WLANs allow you to configure home and guest access SSIDs for the Home Mesh Router. This WLAN profile is associated with an AP group that contains configuration applied on the Home Mesh Routers. These SSIDs act as default SSIDs on all routers associated with the AP group.

To configure a WLAN profile, complete the following steps:

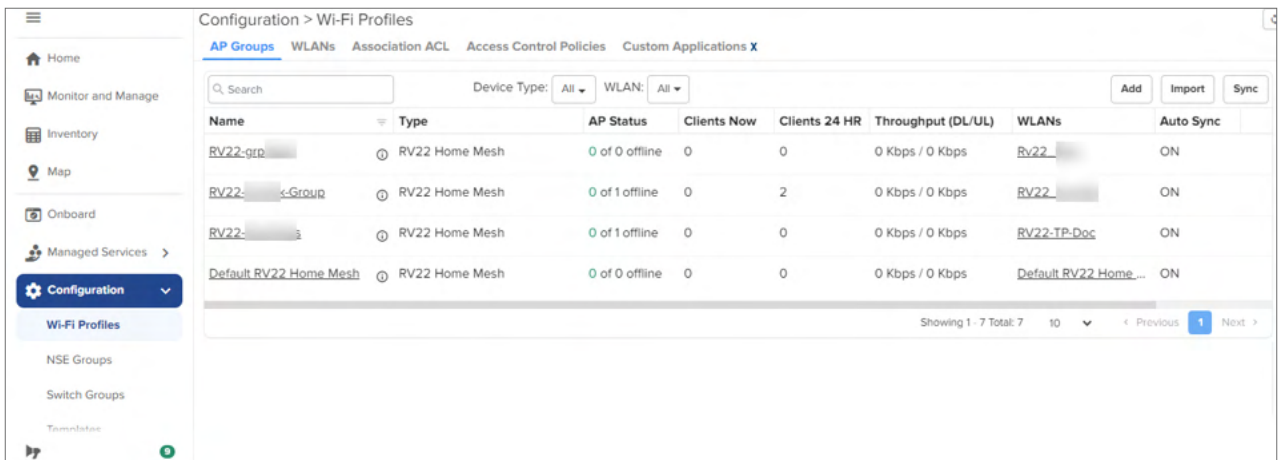

1. Sign in to cnMaestro.  
The home page appears.

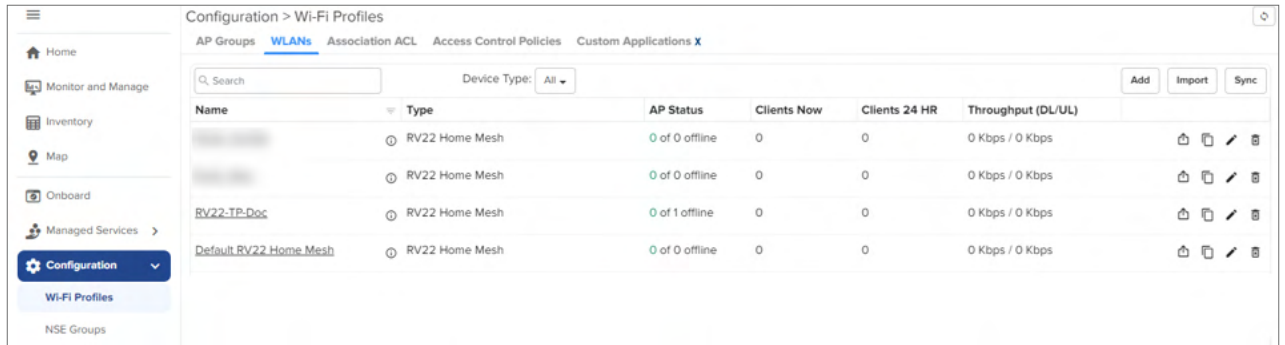

2. Navigate to **Configuration > Wi-Fi Profiles**.

The **AP Groups** page under **Wi-Fi Profiles** appears, by default.

3. Click the **WLANs** tab.

The **WLANs** page appears.

4. Click **Add**.

The **WLANs > Add New** window appears.

In the **WLANs > Add New** window, configure the WLAN parameters as described in [Table 91](#).

The screenshot shows the 'WLANs > Add New' configuration window. The left sidebar has a 'WLAN' tab selected. The main content area is divided into sections: 'Basic Information', 'SSIDs', and 'Band Steering'. The 'Basic Information' section has a 'Type\*' dropdown set to 'RV22 Home Mesh', an empty 'Name\*' text box, and an empty 'Description' text box. The 'SSIDs' section has two sub-sections: 'Home Access' and 'Guest Access'. 'Home Access' includes an empty 'SSID\*' text box (with a note 'The SSID of this WLAN (up to 32 characters)'), a 'Security\*' dropdown set to 'WPA2 Pre-Shared Key (AES, CCM)', and an empty 'Password\*' text box with a 'Show' button (with a note 'WPA2 Pre-shared security passphrase or key'). 'Guest Access' includes an unchecked 'Enable Guest Access' checkbox, an empty 'SSID' text box (with a note 'The SSID of this WLAN (up to 32 characters)'), and an empty 'Passphrase' text box with a 'Show' button. At the bottom, there is an unchecked 'Band Steering' checkbox (with a note 'Steering clients connectivity to 5 GHz band') and 'Save' and 'Close' buttons.

Table 91 WLAN parameters

Parameter	Description
<b>Basic Information</b>	
Type	Type of device for which the WLAN profile is configured. Select <b>RV22 Home Mesh</b> from the drop-down list.
Name	Name of the WLAN profile.
Description	Brief description for the WLAN profile.
<b>SSIDs—Home Access</b>	
Configure the default SSID for connecting devices wirelessly. Only one home SSID can be configured.	
SSID	Unique name of the SSID for this WLAN. Supports a maximum of 32 characters. You must either configure the default SSID or enter a customized SSID. The default SSID: RV22_<last 6 digits of device MAC>. For example, RV22_123456.
Security	Security method used for encryption. The following security methods are supported: <ul style="list-style-type: none"> <li>• <b>Open</b></li> <li>• <b>WPA Pre-Shared Key (AES, CCM)</b></li> <li>• <b>WPA2 Pre-Shared Keys (AES, CCM)</b></li> <li>• <b>WPA2 Pre-Shared Keys (TKIP, AES)</b></li> <li>• <b>WPA Pre-Shared Key (TKIP, AES)</b></li> </ul>
Password	Security passphrase or key used to connect to this SSID. You must either configure the default password or enter a customized password. Default password: <code>password</code>
<b>SSIDs—Guest Access</b>	
Configure the guest SSID to allow any guest devices to access the wireless network.	
Enable Guest Access	Determines whether the guest access is enabled. Select the check box to enable guesst access.
SSID	Unique name of the guest SSID for this WLAN. Supports a maximum of 32 characters.
Password	Security passphrase or key used to connect to this guest SSID.
Band Steering	Determines whether the band steering is enabled for the wireless clients. When enabled, APs steer wireless clients to connect to the 5 GHz band.

5. Click **Save**.

## Configuring AP Groups

AP groups apply the same configuration to multiple Home Mesh Routers. AP groups contain configuration, such as administrator password, event logging, radio settings, WAN mappings, and DNS mode.

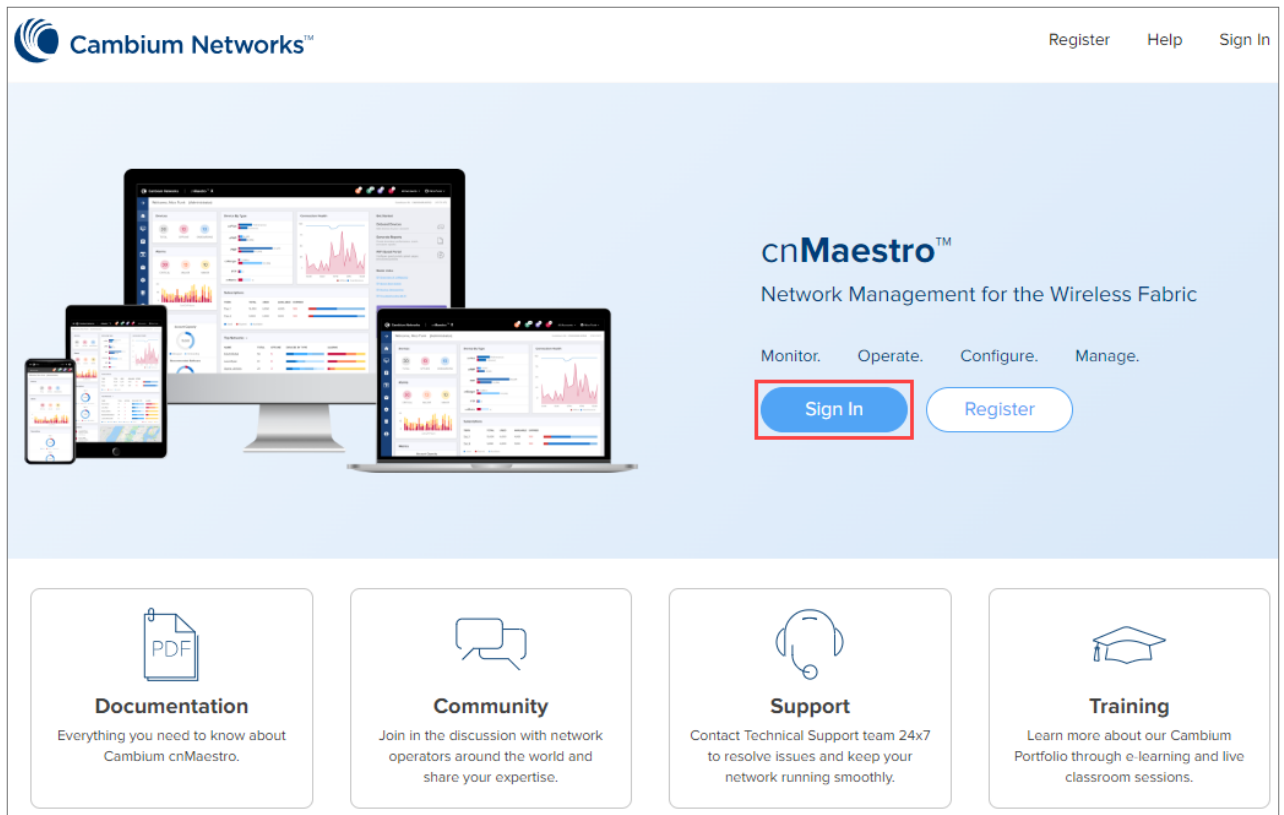

The following are part of the AP group:

- **Basic**
- **Management**
  - Administrator Access
  - Time Settings
  - Event Logging
  - SNMP
- **Radio**
- **Network**
  - WAN Configuration
  - LAN Configuration
- **Security**
  - DoS Protection
  - Access Control List (ACL)

To configure an AP group, complete the following steps:

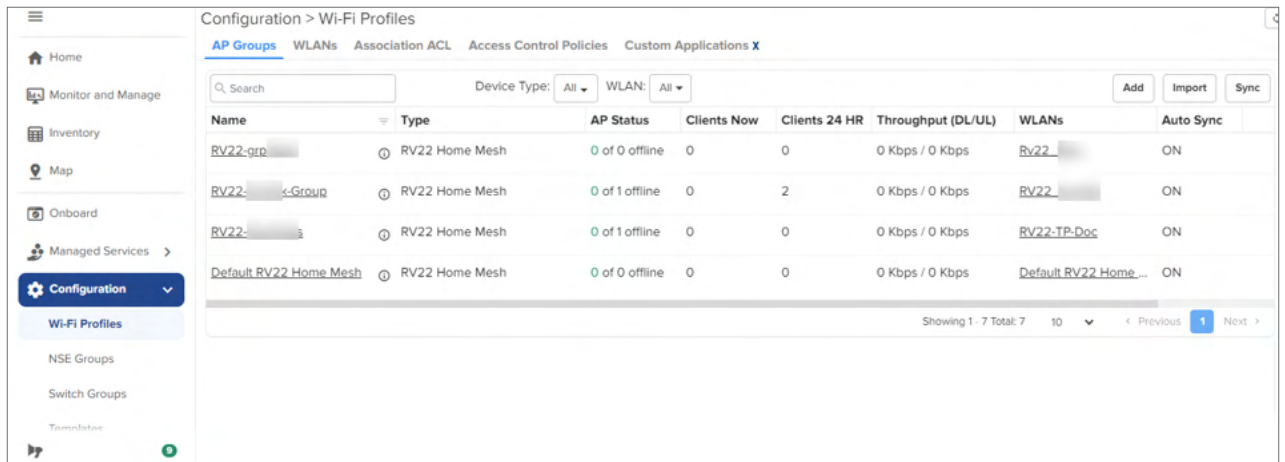

1. Sign in to cnMaestro.

The home page appears.

2. Navigate to **Configuration > Wi-Fi Profiles**.

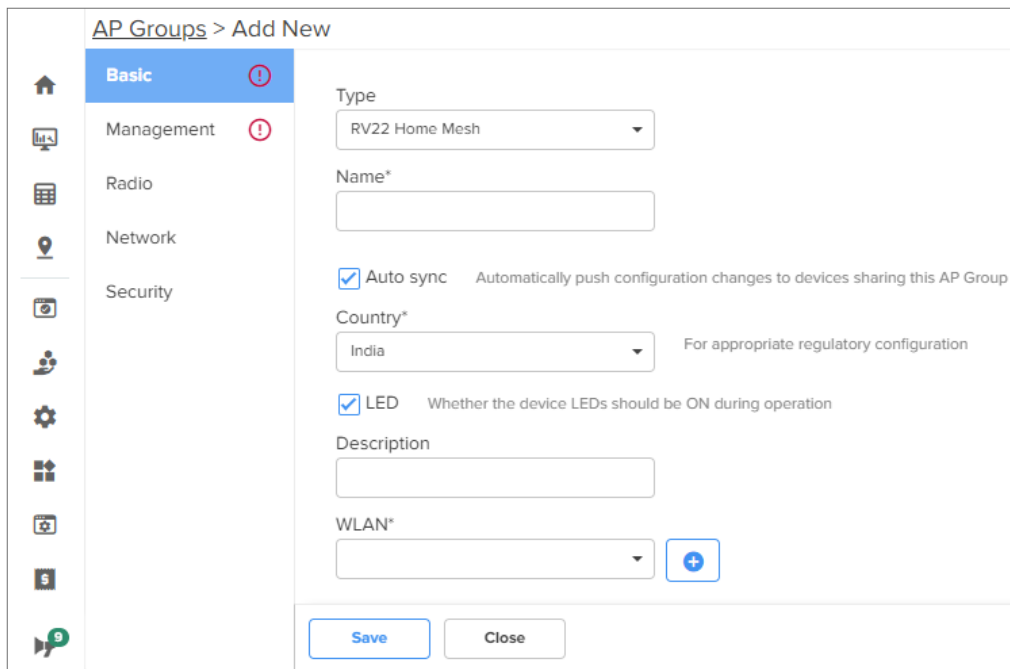

The **AP Groups** page under **Wi-Fi Profiles** appears, by default.

3. Click **Add**.

The **Add New** window appears with multiple tabs. By default, the **Basic** tab is selected.

4. In the **Add New** window > **Basic** tab, select **RV22 Home Mesh** in the **Type** drop-down list and configure the parameters described in [Table 92](#).

**Table 92** Basic parameters

Parameter	Description
Type	Type of device for which the AP group is configured. Select <b>RV22 Home Mesh</b> from the drop-down list.
Name	Hostname of the device. Supports a maximum of 64 characters.
Auto sync	Specifies whether configuration is applied to the router automatically after saving. Select the check box to enable auto sync of configuration.

Parameter	Description
Country	Country from where the device is operated.  To be set by the administrator only.  The allowed operating channels and the respective transmit power levels depend on the country of operation. The list of countries supported depends on the SKU of the device (FCC and ROW).  <b>Note:</b> Radios remain disabled unless this parameter is configured.
LED	When enabled, turns on the device LEDs during operation.
Description	Brief description for the AP group.
WLAN	WLAN profile to be associated with this AP group.  WLAN profile contains SSID details of the wireless network.  Select the WLAN from the drop-down list. If no WLAN is configured, create one by clicking the add (  ) icon. For more information, See <a href="#">Configuring WLAN profiles (SSIDs)</a> .

- Click the **Management** tab on the left pane and configure the parameters described in [Table 93](#).

The screenshot shows the 'AP Groups > Add New' configuration page with the 'Management' tab selected. The left sidebar contains tabs for Basic, Management (active), Radio, Network, and Security. The main content area is titled 'Administrator Access' and includes the following settings:

- Admin Password\***: A text input field with a password strength indicator. Description: Configure password for authentication of GUI and CLI sessions (max 32 characters).
- Remote Management Access**: Enable remote access through WAN Interface.
- SSH**: Enable SSH access to the device CLI.
- HTTP**: Enable HTTP access to the device GUI.
- HTTP Port**: A text input field with the value '80'. Description: Port for HTTP access to the device GUI (1-65535).
- HTTPS**: Enable HTTPS access to the device GUI.
- HTTPS Port**: A text input field with the value '443'. Description: Port for HTTPS access to the device GUI (1-65535).
- Disable Hardware Reset Button**: When enabled the physical hardware reset button will not let the user to do factory-reset the device.

Below the Administrator Access section are three expandable sections: **Time Settings**, **Event Logging**, and **SNMP**. At the bottom of the page are 'Save' and 'Close' buttons.

**Table 93** Management parameters

Parameter	Description
<b>Administrator Access</b>	
Admin Password	Password required for authentication of the router.
Disable Hardware	Determines whether the reset button on the router is required to prevent a factory

Parameter	Description
Reset Button	reset operation of the router. Select the check box to prevent the user from performing the factory reset operation.
<b>Time Settings</b>	
Time Zone	Time zone of the location where the router is installed. Select an appropriate time zone from the drop-down list.
NTP Server 1	Hostname or IPv4 address of the Network Time Protocol (NTP) server.
NTP Server 2	Hostname or IPv4 address of a second NTP server.
<b>Event Logging</b>	
Syslog Server	Hostname, IPv4, or IPv6 address of the Syslog server and the respective port number. Default port number: 514
Syslog Severity	The severity level of event that must be forwarded to the server. The supported severity levels (0-7) are based on RFC standards.
<b>SNMP</b>	
Enable	Determines whether SNMPv2c or SNMPv3 support on the router is enabled. Select the check box to enable SNMP support.
Trap Receiver IP	IPv4 address of the SNMP server to receive the SNMP traps. This parameter is applicable to both SNMP v2c and v3 versions.
Version	Specifies the SNMP version configured for the router. The following options are available: <ul style="list-style-type: none"> <li>v2c</li> <li>v3</li> </ul>
<b>SNMPv2c</b>	
SNMPv2c RO community	The SNMP v2c read-only community string used as a password when obtaining information from the router.
SNMPv2c RW community	The SNMP v2c read-write community string as a password when writing information to the router.
<b>SNMPv3</b>	
SNMPv3 Username	Username for the SNMPv3 server. Supports a maximum of 32 characters.
Enable Authentication	Indicates whether authentication is enabled for SNMP communication. Select the check box to enable authentication.
Authentication Protocol	Specifies the authentication protocol. The following options are available: <ul style="list-style-type: none"> <li>MD5</li> <li>SHA</li> </ul> Cambium uses SHA-1 authentication protocol. By default, the <b>SHA</b> option is selected.

Parameter	Description
Authentication Password	Password used for authentication. Supports 8 to 32 characters.
Enable Encryption	Indicates whether encryption is enabled for SNMP communication. Select the check box to enable encryption.
Encryption Type	Specifies the encryption type. The following options are available: <ul style="list-style-type: none"> <li>• AES</li> <li>• DES</li> </ul> By default, the <b>AES</b> option is selected.
Encryption Password	Password used for encryption. Supports 8 to 32 characters.

6. Click the **Radio** tab on the left pane and configure the preferred radios (2.4 GHz or 5 GHz or both).  
By default, both the radios are enabled. You can disable only the 2.4 GHz radio.  
Configure the parameters (described in [Table 94](#)), which are similar across 2.4 and 5 GHz radios.

**Table 94** Radio parameters

Parameter	Description
Enable	Enables the operation of radio.
Channel	This parameter cannot be modified. Default: Auto
Auto Channel Frequency Coordination	Enable to prevent router from self-interference with upline wireless network infrastructure.

Parameter	Description
Channel Width	<p>Select the following channel widths for the operation:</p> <ul style="list-style-type: none"> <li>For 2.4 GHz—20 MHz and 40 MHz channel widths are supported. Default: 20 MHz</li> <li>For 5 GHz—20 MHz, 40 MHz, 80 MHz, and 160 MHz channel widths are supported. Default: 80 MHz</li> </ul>
Transmit Power	<p>Transmit power of the router in percentage (%).</p> <p>The following options are available:</p> <ul style="list-style-type: none"> <li>Auto</li> <li>20</li> <li>40</li> <li>60</li> <li>80</li> <li>100</li> </ul>

7. Click the **Network** tab on the left pane and configure the WAN mode and IP address assignment parameters.

- a. The **AP Mode** is pre-configured as **Router** and cannot be modified.
- b. In the **WAN Configuration** section, select the required WAN mode and configure the corresponding parameters.

This mode selects the mode of IP address assignment for the WAN interface. The following WAN modes are supported:

- **DHCP**—This mode is selected by default.  
No additional parameter configuration is required.
- **PPPoE**—Configure the PPPoE parameters as described in [Table 95](#).

The screenshot shows the configuration interface for a new AP group. On the left, a navigation menu includes Basic, Management, Radio, Network (highlighted), and Security. The main content area is titled 'AP Groups > Add New' and contains the following settings:

- AP Mode:** Router (selected), Bridge
- WAN Configuration:**
  - WAN Mode:** DHCP, PPPoE (selected), Static
  - Service Name:** Home-RV22-PPPoE (with a note: 'Configure PPPoE service name parameters (max 32 characters)')
  - Username\*:** home-rv22-test
  - Password\*:** [masked] (with a 'Show' button)
  - Passthrough:** [unchecked]
  - PPP Connection Trigger:** Auto Connect (selected), On Demand
  - Idle Timeout:** 300 (with a unit of 'Seconds')
  - MTU:** 1492

**Table 95** WAN Mode: PPPoE parameters

Parameter	Description
<b>PPPoE-related parameters</b>	
Service Name	Name of the PPPoE service name. Supports a maximum of 32 characters.
Username	Username of the PPPoE service required for authentication.
Password	Password of the PPPoE service required for authentication.
Passthrough	Indicates whether the clients must directly establish connection with the service provider. Select the check box to enable passthrough.
PPP Connection Trigger	Indicates the connection method for the router for keeping the connection intact. The following options are supported: <ul style="list-style-type: none"> <li>• Auto Connect</li> </ul>

**Table 95** WAN Mode: PPPoE parameters

Parameter	Description
	<ul style="list-style-type: none"> <li>On Demand</li> </ul>
Idle Timeout	<p>This parameter is mandatory when you select <b>On Demand</b> type of <b>PPP Connection Trigger</b>.</p> <p>Specifies the duration (in seconds) after which PPPoE keep-alive packets must be sent to keep the connection intact.</p> <p>Default: 300</p>
MTU	<p>Maximum size (in bytes) of each packet sent in a single transmission between connected devices.</p> <p>Default: 1492</p>

- **Static**—Configure the Static parameters as described in [Table 96](#).

The screenshot shows the 'Add New' configuration page for an AP Group. The 'Network' tab is selected. Under 'AP Mode', 'Router' is selected. The 'WAN Configuration' section shows 'WAN Mode' set to 'Static'. The 'IPv4' section includes the following fields:

- IP Address\*: 192.168.10.10
- Subnet Mask\*: 255.255.255.0
- Gateway\*: 192.168.10.254
- Primary DNS\*: 8.8.8.8
- Secondary DNS\*: 11.11.11.11
- MTU: 1492

**Table 96** WAN Mode: Static parameters

Parameter	Description
<b>Static-related parameters</b>	
IP Address	IPv4 address assigned to the router.
Subnet Mask	Subnet mask assigned to the router's IPv4 address.
Gateway	IPv4 address of the gateway used for communication.
Primary DNS	IPv4 address of the primary DNS server.
Secondary DNS	IPv4 address of the secondary DNS server.
MTU	<p>Maximum size (in bytes) of each packet sent in a single transmission between connected devices.</p> <p>Default: 1492</p>

### Note

If you select **PPPoE** or **Static** mode, you must preconfigure the settings in the router before shipping the routers to customers. Complete the following steps before shipping the Home Mesh Router to the customers:

1. Onboard the Home Mesh Router using the standard WAN mode as **DHCP**.
2. After the Home Mesh Router is onboarded, set the WAN mode to **PPPoE** or **Static**.
3. Configure the username and password credentials.

The configuration and the credentials are applied on the Home Mesh Router.

4. Disconnect the Home Mesh Router and ship it to the customer.

When the customer connects the router to the PPPoE authenticated network, the Home Mesh Router uses the PPPoE credentials to authenticate.

- c. In the **LAN Configuration** section, configure the mode of IP address assignment for connecting devices to **Auto** or **Manual**.

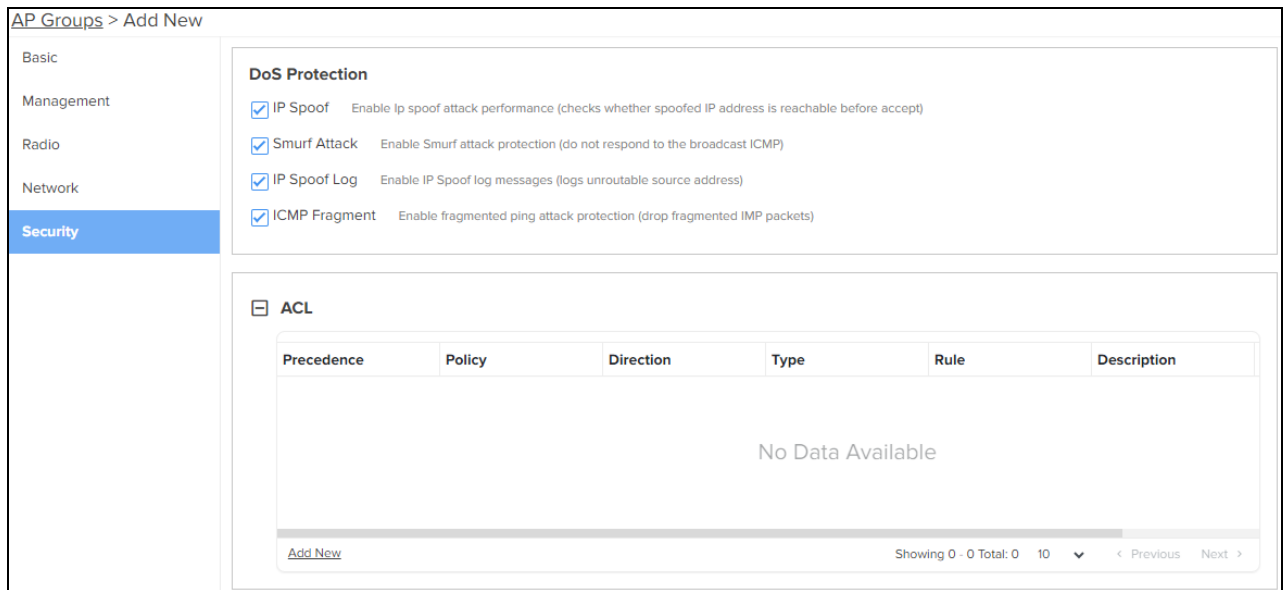

If you select Manual mode of assignment, configure the following parameters:

**Table 97** LAN Configuration parameters for Manual mode

Parameter	Description
<b>IPv4-related parameters</b>	
Local IP Address	Local IPv4 address assigned to the router.
Local Subnet	Subnet mask assigned to the router's IPv4 address.
Address Range Start	Starting IPv4 address in the address pool.
Address Range End	Ending IPv4 address in the address pool.
Domain Name	The domain name.
DNS Mode	DNS mode used for IP address resolution. Following are the supported options: <ul style="list-style-type: none"><li>• Auto</li><li>• Manual</li><li>• Proxy</li></ul>

8. Click the **Security** tab on the left pane and configure protection against different types of attacks, such as Smurf attack and ICMP fragment.

Select the check box corresponding to the DoS protection options.

**Table 98** Security parameters: DoS Protection

Parameter	Description
IP Spoof	Enable protection against IP spoof attacks. When enabled, the router checks whether the spoofed IP address is reachable before accepting.
Smurf Attack	Enable protection against Smurf attacks. When enabled, the router does not respond to the broadcast ICMP.
IP Spoof Log	Enable logging of IP spoof addresses. When enabled, the router logs the unroutable source IP address.
ICMP Fragment	Enable protection against ICMP fragmented ping attack. When enabled, the router drops the fragmented ICMP packets.

- Click **Add New** in the **ACL** section and configure the parameters as described in [Table 98](#).

**ACL** ✕

Precedence

Policy

Source IP/Mask\*

Destination IP/Mask\*

Description

**Table 99** Security parameters: Access Control List (ACL)

Parameter	Description
Precedence	Specifies the priority of the rule configured. Select the precedence from the drop-down list.
Policy	Indicates the action to be taken for the policy. The following are the supported actions: <ul style="list-style-type: none"> <li>• Accept</li> <li>• Drop</li> <li>• Reject</li> </ul>
Direction	Direction to which the policy must be applied. The following are the supported options: <ul style="list-style-type: none"> <li>• WAN to LAN</li> <li>• LAN to WAN</li> <li>• WAN to Router</li> <li>• Router to WAN</li> </ul>
Type	Type of traffic to which the policy must be applied. The following are the supported options: <ul style="list-style-type: none"> <li>• IP</li> <li>• IPv6</li> <li>• MAC</li> <li>• Protocol</li> <li>• Protocolv6</li> </ul> Additional parameters are enabled when you select the type.
Source IP/Mask Destination IP/Mask	This field is applicable when you select the <b>Type</b> as <b>IP</b> , <b>IPv6</b> , <b>Protocol</b> , or <b>Protocolv6</b> . Specifies the source IPv4 or IPv6 address and the destination IPv4 or IPv6 address for the policy. You can configure <b>Any</b> if there is no specific IP address to apply the policy to any source IP address.
Source MAC/Mask Destination MAC/Mask	This field is applicable when you select the <b>Type</b> as <b>MAC</b> . Specifies the source MAC address and the destination MAC address for the policy. You can configure <b>Any</b> if there is no specific MAC address to apply the policy to any source IP address.
Protocol	Type of protocol for which the policy must be applied. The following are the supported options: <ul style="list-style-type: none"> <li>• TCP</li> <li>• UDP</li> <li>• ICMP</li> </ul>

**Table 99** Security parameters: Access Control List (ACL)

Parameter	Description
	<ul style="list-style-type: none"><li>Any</li></ul> Additional parameters are enabled when you select the protocol.
Source Port	This field is applicable when you select the <b>Protocol</b> as <b>TCP</b> , <b>UDP</b> , or <b>Any</b> . Specifies the source port number for the policy.
Destination Port	This field is applicable when you select the <b>Protocol</b> as <b>TCP</b> , <b>UDP</b> , or <b>Any</b> . Specifies the source port number for the policy.
Description	Description for the rule.

10. Click **Save**.

The AP group is successfully created with the configured parameters.

## Onboarding the Home Mesh Router to cnMaestro

After creating a WLAN profile and an AP group, you must now create a subscriber profile and associate it with the subscriber. Finally, you must onboard the router(s) to the corresponding subscriber.

Adding a subscriber and onboarding the router involves the following steps:

1. [cnMaestro Subscriber application branding](#)
2. [Adding a Home Site](#)
3. [Adding a Subscriber Service Profile](#)
4. [Adding a subscriber](#)
5. [Claiming the Home Mesh Router](#)

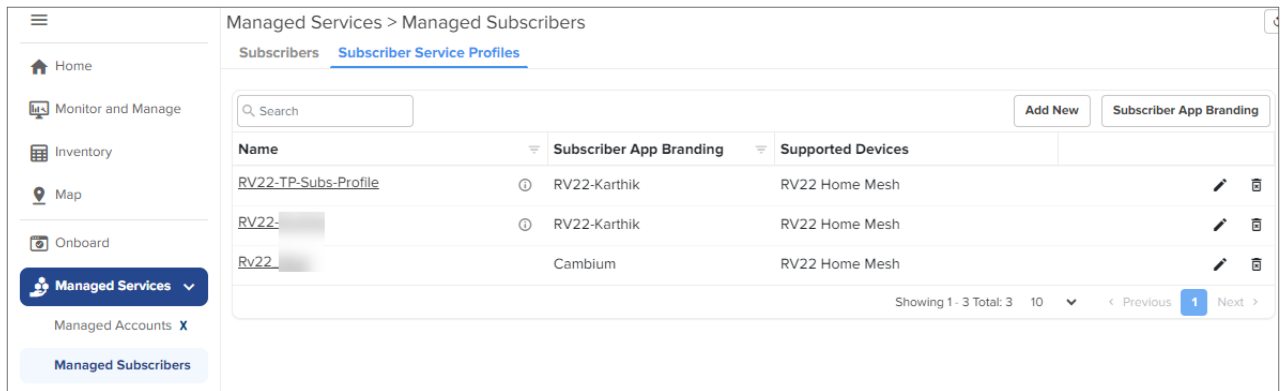

## cnMaestro Subscriber application branding

Customize the cnMaestro Subscriber mobile application with your company name, brand logo, and other details, such as support contact information and hours. This branding can be associated with individual subscriber service profiles.

To add brand details to the cnMaestro Subscriber application, complete the following steps:

1. Navigate to the **Manage Service Providers > Managed Subscribers > Subscriber Service Profiles** tab.

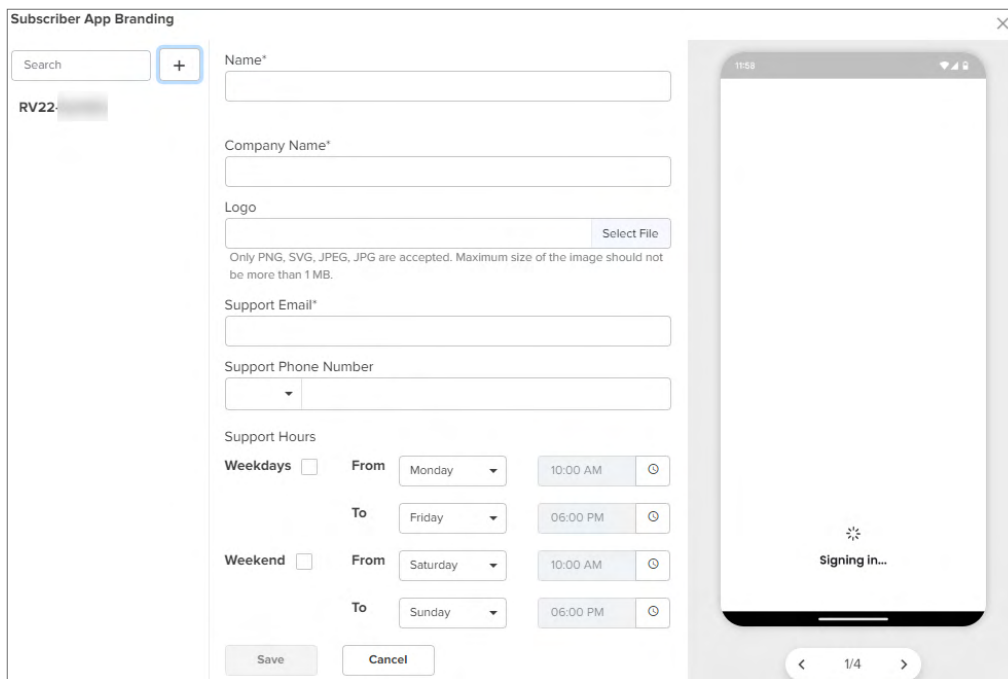

The **Subscriber Service Profiles** page appears.

2. Click **Subscriber App Branding**.

3. Click the add (  ) icon.

The **Subscriber App Branding** window appears. Configure the following parameters as described in [Table 100](#).

**Table 100** Subscriber App Branding parameters

Parameter	Description
Name	Name of the application branding.
Logo	Brand logo displayed in the cnMaestro Subscriber application. Maximum size of the image supported is 1 MB. Only JPEG, JPG, PNG, and SVG file formats are supported.
Support Email	Email address for customer support team displayed in the application.
Support Phone	Phone number for customer support team displayed in the application.

Parameter	Description
Number	
Support Hours	<p>Contact hours for the customer support team.</p> <ul style="list-style-type: none"> <li>• Select the <b>Weekdays</b> check box and configure the week days on when the customer support team is available. You can also configure the time using the time picker tool.</li> <li>• Select the <b>Weekends</b> check box and configure the weekend days on when the customer support team is available. You can also configure the time using the time picker tool.</li> </ul>

You can preview your branding updates by scrolling through the images in the preview window on the right.

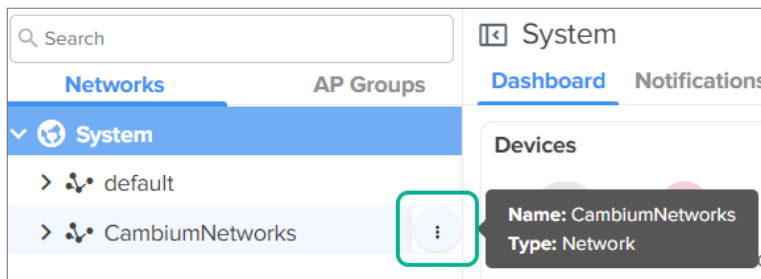

4. Click **Save**.

## Adding a Home Site

A home site is required to associate the subscriber's device with the device configuration.

To create a home site, complete the following steps:

1. Click **Monitor and Manage** ()
2. In the **Networks** tab, search for the network and hover over the network name.

3. Click the actions () icon and select **Add Site**.

The **Sites > Add New** page appears.

Sites > Add New

Network\*  
CambiumNetworks

Name\*

Type\*  
 Enterprise  Home

ID

ⓘ Unique ID for site. Valid characters include alphanumeric and underscore (.). It can be up to 64 characters long.

Address

Latitude\*

ⓘ Please use signed degrees format (DDD.dddd). For example, 41.25 and -31.96. Min = -90, Max = 90

Longitude\*

ⓘ Please use signed degrees format (DDD.dddd). For example, -31.96 and 115.84. Min = -180, Max = 180

Location\*  

4. Select the **Home** option in the **Type** field.
5. Enter the location details in the **Longitude** and **Latitude** fields.  
You can also search for the location in the map to fill in the details.
6. Click **Add**.

## Managing subscribers (end-customer)

To enable a subscriber to manage the router using the Android or iOS application, you must add a subscriber profile in cnMaestro and send an invitation to the subscriber.

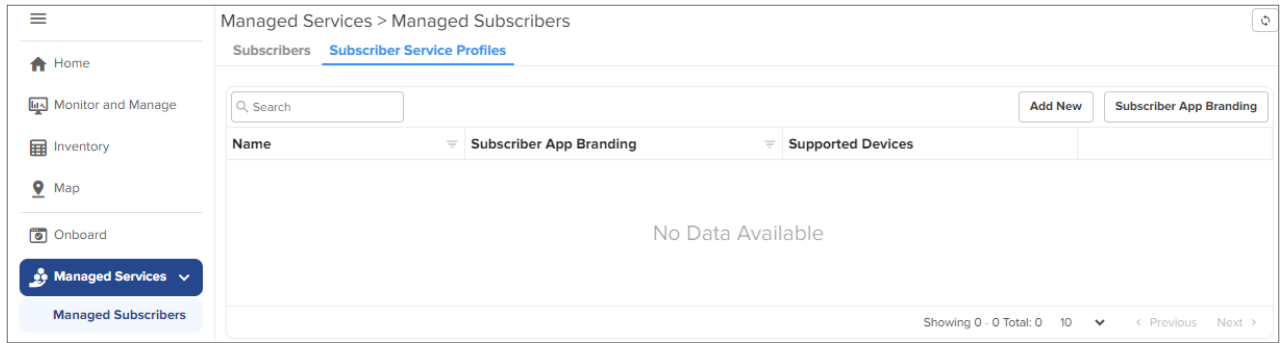

This process involves the following actions:

1. [Adding a Subscriber Service Profile](#)
2. [Adding a subscriber](#)
  - a. [Modifying the owner details for the Subscriber App](#)
3. [Claiming the Home Mesh Router](#)

## Adding a Subscriber Service Profile

To add a subscriber service profile, complete the following steps:

1. Navigate to the **Manage Services > Managed Subscribers > Subscriber Service Profiles** tab.  
The **Subscriber Service Profiles** page appears.

2. Click **Add New**.

The **Add Subscriber Service Profile** window appears.

3. Select the Home Mesh Router configuration to which you want to associate with the subscriber service profile and configure the parameters as described in [Table 101](#).

**Table 101** *Subscriber Service Profile parameters*

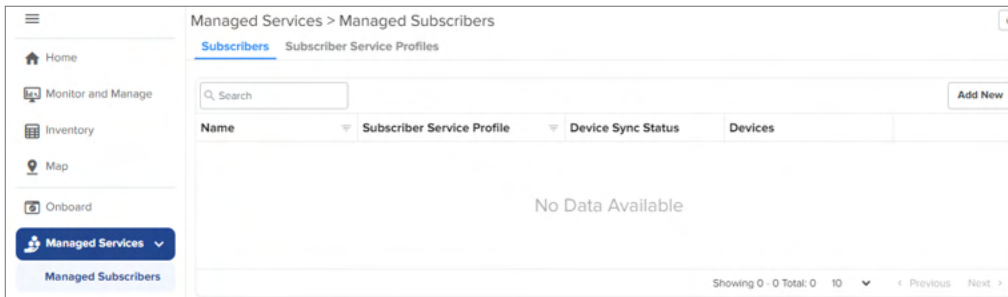

Parameter	Description
Name	Name of the subscriber service profile.
Description	Brief description for the subscriber service profile.
Download (Mbps)	Download speed (in Mbps) configured for the profile.
Upload (Mbps)	Upload speed (in Mbps) configured for the profile.
Type	Displays the device type as <b>RV22 Home Mesh</b> . This field cannot be modified.
Device Configuration	Specifies the Wi-Fi AP group (created for the Home Mesh Router device type) that must be associated with the service profile. Select the group from the drop-down list.
Subscriber App Branding	Specifies the cnMaestro Subscriber application branding that must be used in this profile.

Parameter	Description
	<p>All routers sent to subscribers in this service profile contain the selected branding logo and information.</p> <p>Select the required branding from the drop-down list.</p> <p>If no branding is present, create one by clicking the add (  ) icon. See <a href="#">cnMaestro Subscriber application branding</a> for more information.</p>

4. Click **Save**.

## Adding a subscriber

5. Click the **Subscribers** tab on the **Managed Subscribers** page.

6. Click **Add New**.

The **Add Subscriber** window appears.

7. In the **Add Subscriber** window, configure the details of the subscriber in the **Basic Information** section, as described in [Table 102](#).

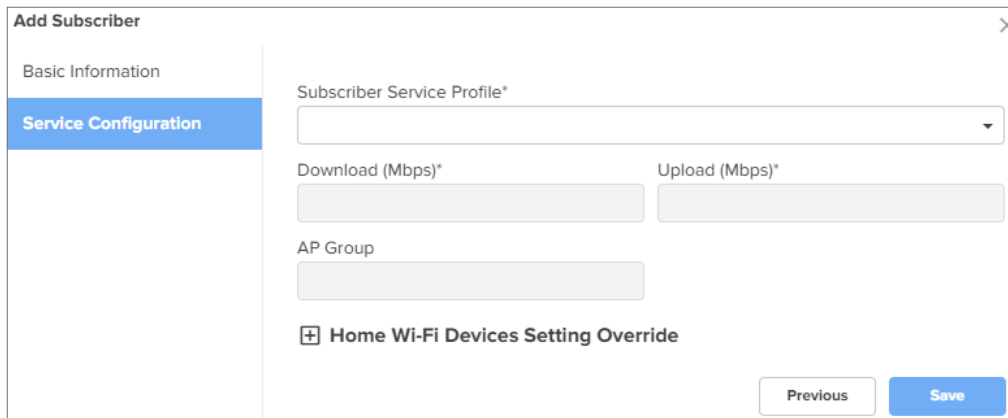

**Table 102** *Subscriber > Basic tab parameters*

Parameter	Description
Full Name	Name of the subscriber.
Email ID	Email address of the subscriber.

Parameter	Description
	<p>This email address receives the invitation to join the Home Mesh Router (RV22) site. Through this email address the user will be able to access and manage the router as a primary user and invite other users (secondary users), through the mobile application, to manage the routers.</p> <div style="display: flex; align-items: flex-start;">  <div style="border: 1px solid #ccc; background-color: #e6f2ff; padding: 5px;"> <p><b>Note</b></p> <p>You can edit this email address at anytime. However, editing this email address will remove all existing users, both primary and secondary. For information about how to modify the email ID, refer to <a href="#">Modifying the owner details for the Subscriber App</a>.</p> </div> </div>
Phone Number	Phone number of the subscriber.
Customer ID	Unique ID for the subscriber.
Address	Address of the subscriber where the routers will be installed.

- Click **Next**.

The **Service Configuration** tab is displayed.

- Select the subscriber service profile to be associated with this subscriber from the **Service Profile** drop-down list.
- Click **Save**.  
A new tab, **Devices** appears, where you can link (or claim) the Home Mesh Router to the subscriber. See [Claiming the Home Mesh Router](#).  
The cnMaestro Subscriber application invitation email is sent to the subscriber with the link to join the account.
- Click **Devices**.

12. Select one of the following options in the **Deployment Type** field to filter the available deployment types:
  - **Fiber**—Select the Optical Network Unit (ONU) device that you want to associate with the subscriber's router by searching in the **ONU** search box.
  - **Fixed Wireless**—Select the Subscriber Module (SM) device that you want to associate with the subscriber's router by searching in the **SM** search box.
  - **Home Site**—Select the home site you want to associate with the subscriber's router by searching in the **Home Site** search box. To add a home site, see [Adding a Home Site](#).
13. Before linking the Home Mesh Router to the subscriber, click **Save**.

### Modifying the owner details for the Subscriber App

You can modify the owner details for the Subscriber App by modifying the email ID.

**Warning**  
 Modifying the email address will remove all existing users, both primary and secondary.

To modify the email address, complete the following steps:

1. Navigate to the **Manage Services > Managed Subscribers > Subscribers** tab.
2. In the list of subscribers, click the subscriber name for which you want to modify the email ID.  
 The corresponding subscriber details are displayed.

Subscribers > Edit new-sub

Close Update

- Enter the new email ID for the subscriber.
- Click **Update**.

## Claiming the Home Mesh Router

After adding a subscriber profile and a subscriber, you must now associate the Home Mesh Router to the subscriber by claiming the router in cnMaestro.

To claim the router, complete the following steps:

- Navigate to the **Manage Services > Managed Subscribers > Subscribers** tab.
- In the list of subscribers, select the subscriber name for which you want to associate the Home Mesh Router.
- Click the **Devices** tab.
- In the **Add Devices to Subscriber** section, click **Add New**.

The **Link Subscriber** window appears.

5. In the **Link Subscriber** window, link the Home Mesh Router to the subscriber by using any of the following methods:

- To claim a new router that is not onboarded to cnMaestro, select the **Claim new and assign** option and enter the serial number of the device to be claimed.

You can claim multiple routers by adding multiple serial numbers separated by commas.

- To claim a router that is already onboarded to cnMaestro, select the **Search for inventory and assign** option.

Enter the details of the router you want to claim.

**Add New Device(s)** ✕

Claim new device and assign  Search from inventory and assign

🔍 Enter Device name, MAC Address or Serial Number of RV22 Home Mesh

Cancel

6. Click **Assign**.

The assigned router appears in the **Add Devices to Subscriber** section.

Add Devices to Subscriber						Add New
Name	Serial Number	MAC Address	Mesh Type	Status		
RV22			Base	● Onboarded	🔗	

#### Note

Click the unlink (🔗) icon to unlink the router from the subscriber.

## Setting up the Home Mesh Router

Home Mesh Routers can be deployed in one of the following modes:

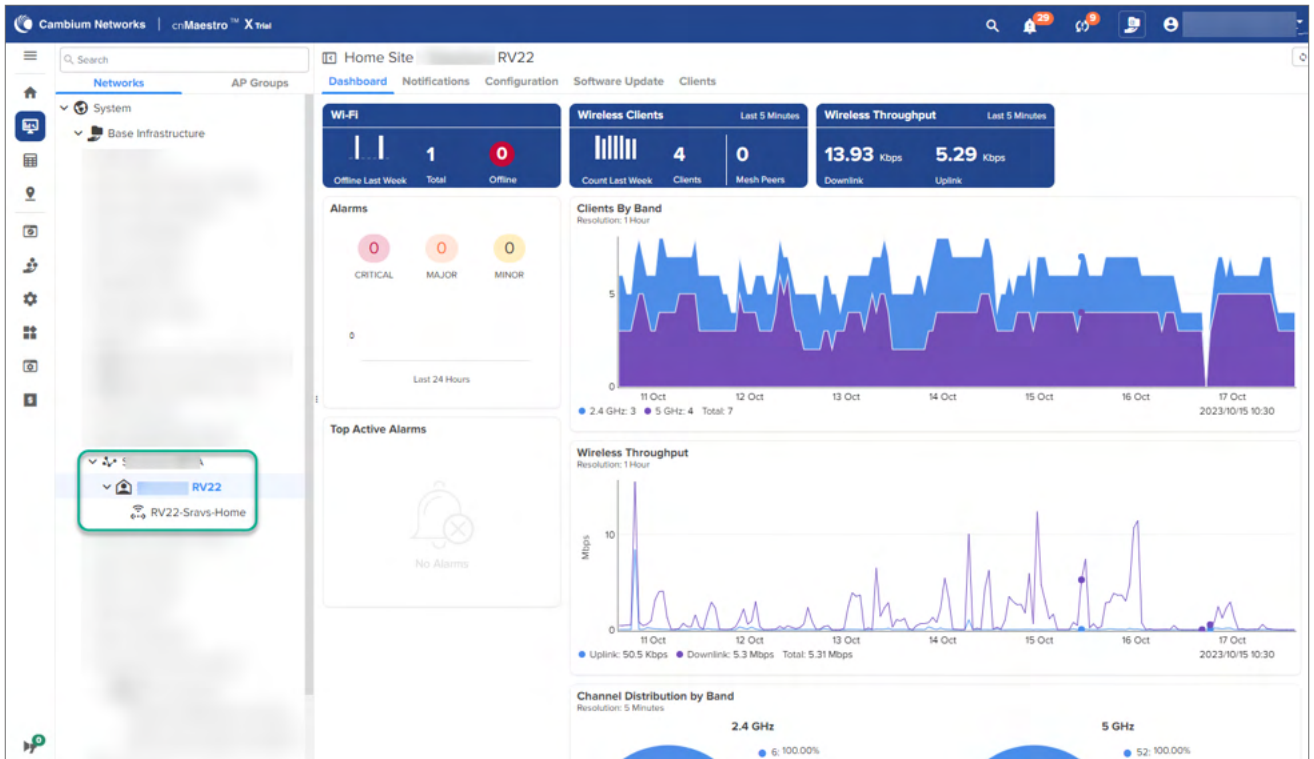

- [Setting up the Home Mesh Router—Standalone mode](#)
- [Setting up the Home Mesh Router—Wireless Mesh Mode](#)
- [Setting up the Home Mesh Router—Wired Mesh Mode](#)

## Setting up the Home Mesh Router—Standalone mode

In standalone mode of deployment, there is only one Home Mesh Router deployed. A sample scenario is shown in the following figure:

A sample cnMaestro dashboard for the standalone mode of deployment is shown in the following figure:

## Setting up the Home Mesh Router—Wireless Mesh Mode

To configure a wireless mesh, onboard the routers to a site—Claim all the routers, which you want to be part of the mesh, on cnMaestro in the subscriber workflow. See [Claiming the Home Mesh Router](#). Connect the mesh base router to the internet and wirelessly connect the node routers. The AP group mapped to the subscriber is applied to all the routers to sync the configuration.

Following are some of the wireless mesh configuration scenarios and the corresponding dashboards and hierarchy in cnMaestro:

- [Wireless mesh: 1-1 deployment](#)
- [Wireless mesh: 1-1-1 deployment](#)
- [Wireless mesh: 1-2 deployment](#)
- [Wireless and wired mixed mesh 1-2 deployment](#)

### Wireless mesh: 1-1 deployment

In this deployment, the base router is connected to one node router, thereby creating a wireless 1-1 mesh deployment.

**Figure 442** *Wireless mesh: 1-1 deployment*

[Figure 443](#) displays a sample cnMaestro dashboard for the wireless mesh 1-1 deployment.

Figure 443 Sample dashboard for wireless mesh: 1-1 deployment

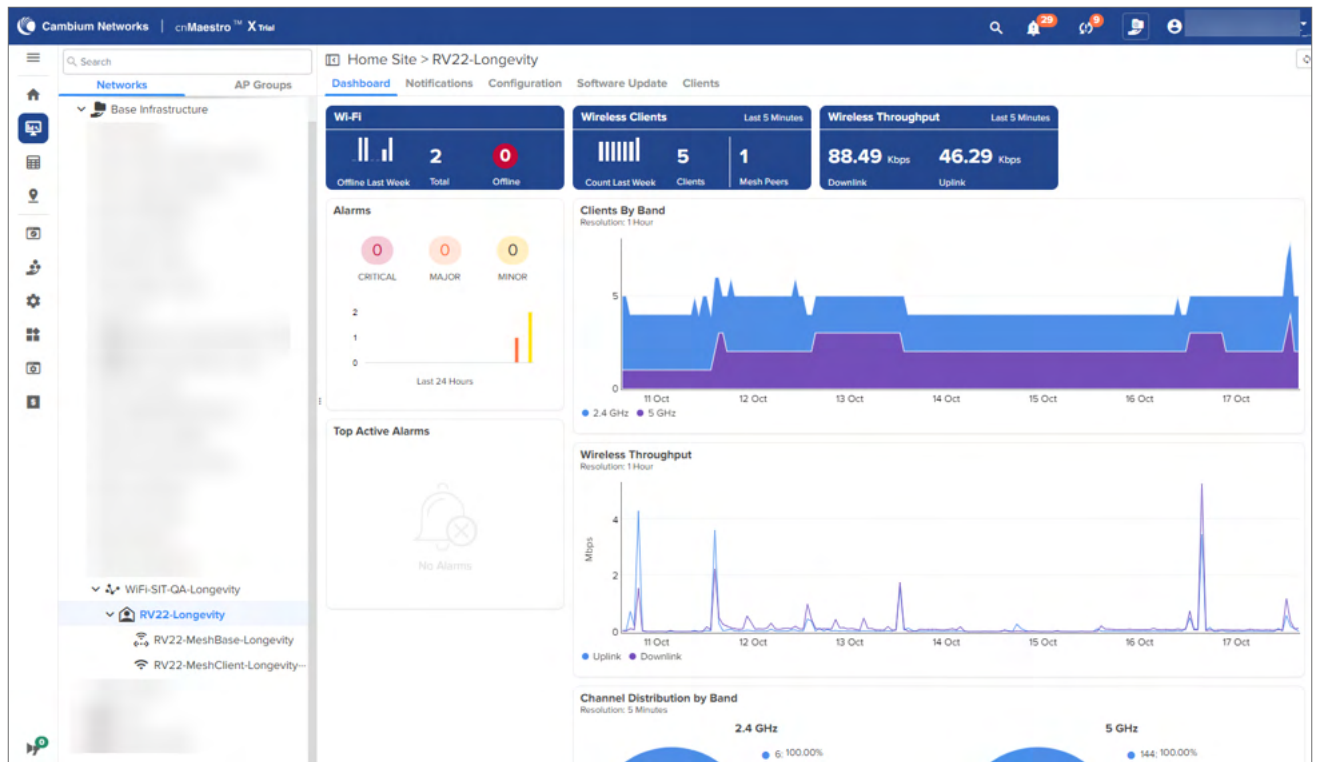

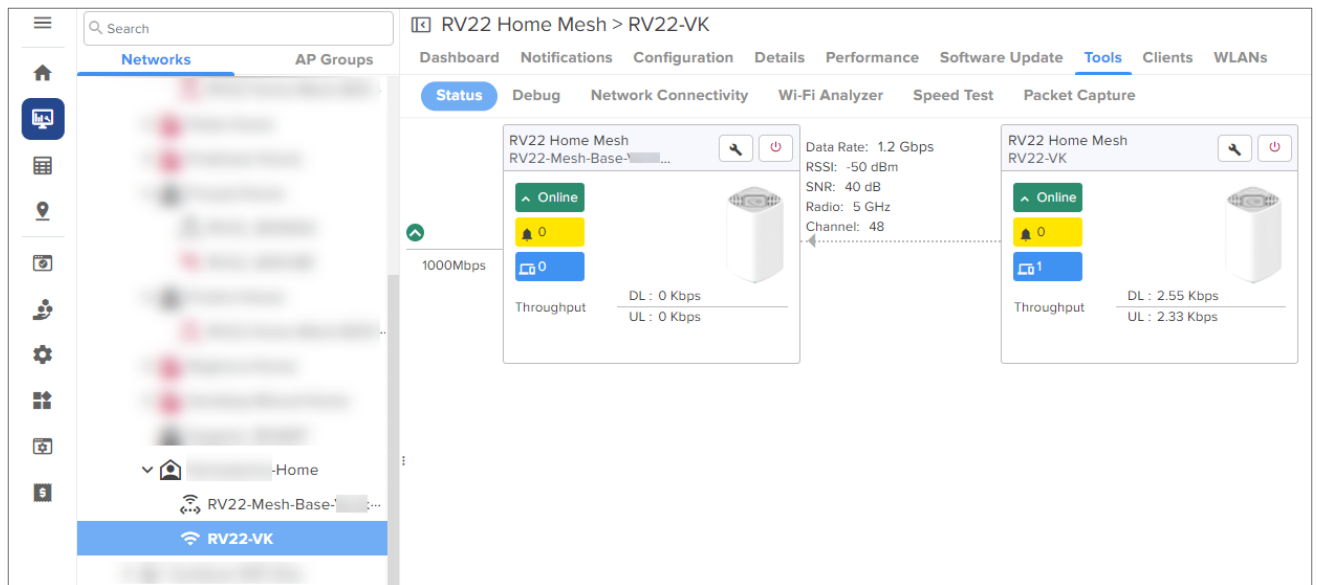

Figure 444 displays a sample cnMaestro status page for the wireless mesh 1-1 deployment.

Figure 444 Sample status page for wireless mesh: 1-1 deployment

### Wireless mesh: 1-1-1 deployment

In this deployment, the base router is connected wirelessly to only one of the node routers, which is in turn connected to another node router, thereby creating a wireless 1-1-1 mesh deployment.

Figure 445 Wireless mesh: 1-1-1 deployment

Figure 446 displays a sample cnMaestro dashboard for the wireless mesh 1-1-1 deployment.

Figure 446 Sample dashboard for wireless mesh: 1-1-1 deployment

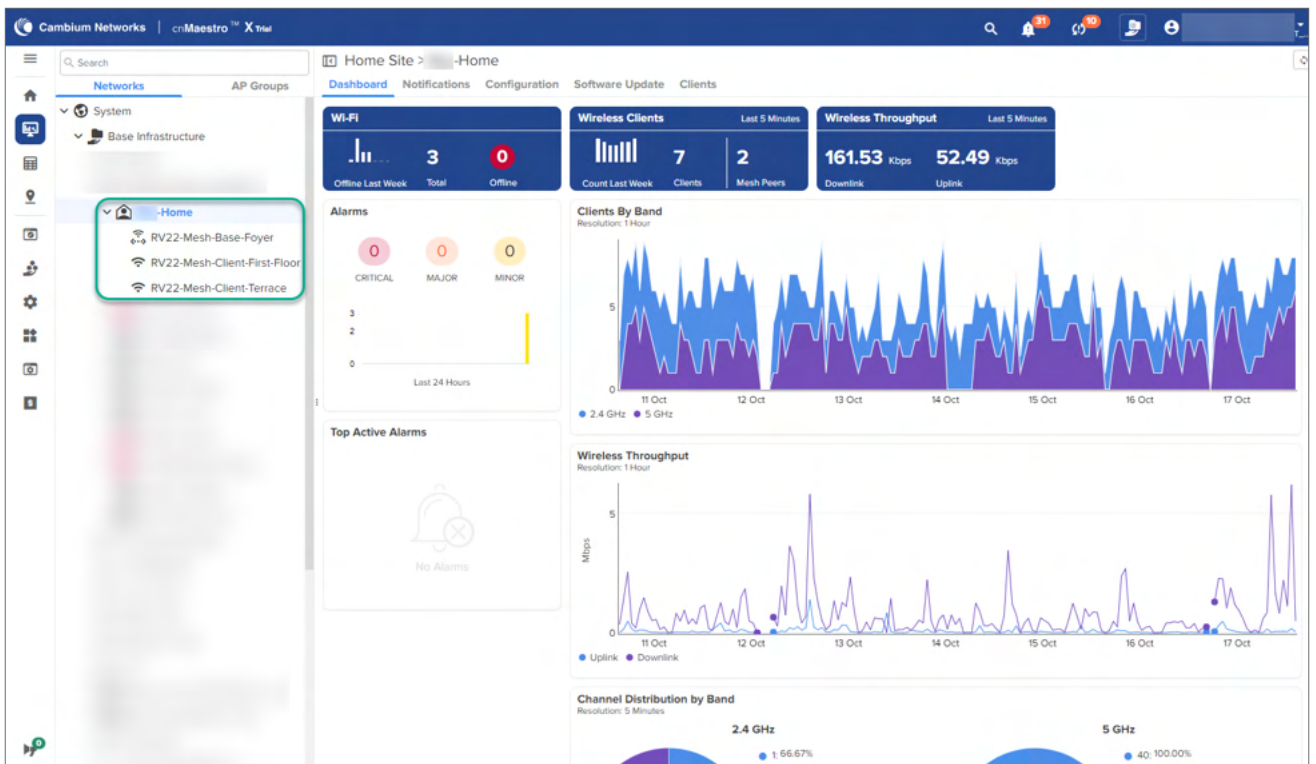

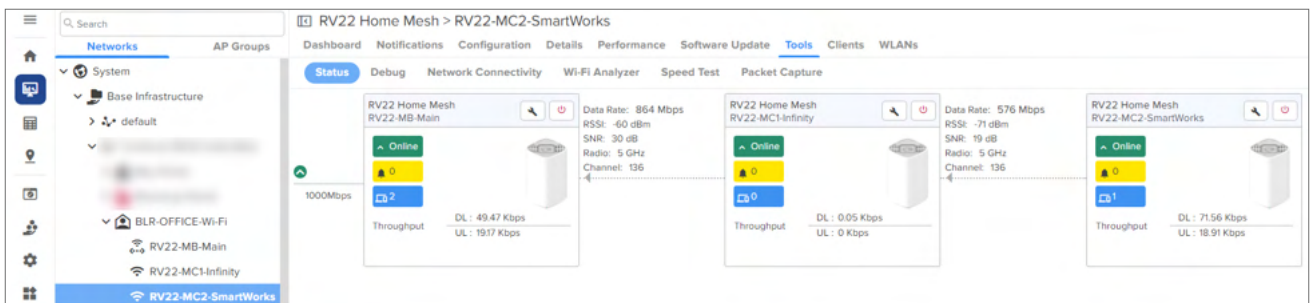

Figure 447 displays a sample cnMaestro status page for the wireless mesh 1-1-1 deployment.

Figure 447 Sample status page for wireless mesh: 1-1-1 deployment

## Wireless mesh: 1-2 deployment

In this deployment, the base router is connected to two node routers simultaneously, thereby creating a wireless 1-2 mesh deployment.

Figure 448 *Wireless mesh: 1-2 deployment*

Figure 449 displays a sample cnMaestro dashboard for the wireless mesh 1-2 deployment.

Figure 449 *Sample dashboard for wireless mesh: 1-2 deployment*

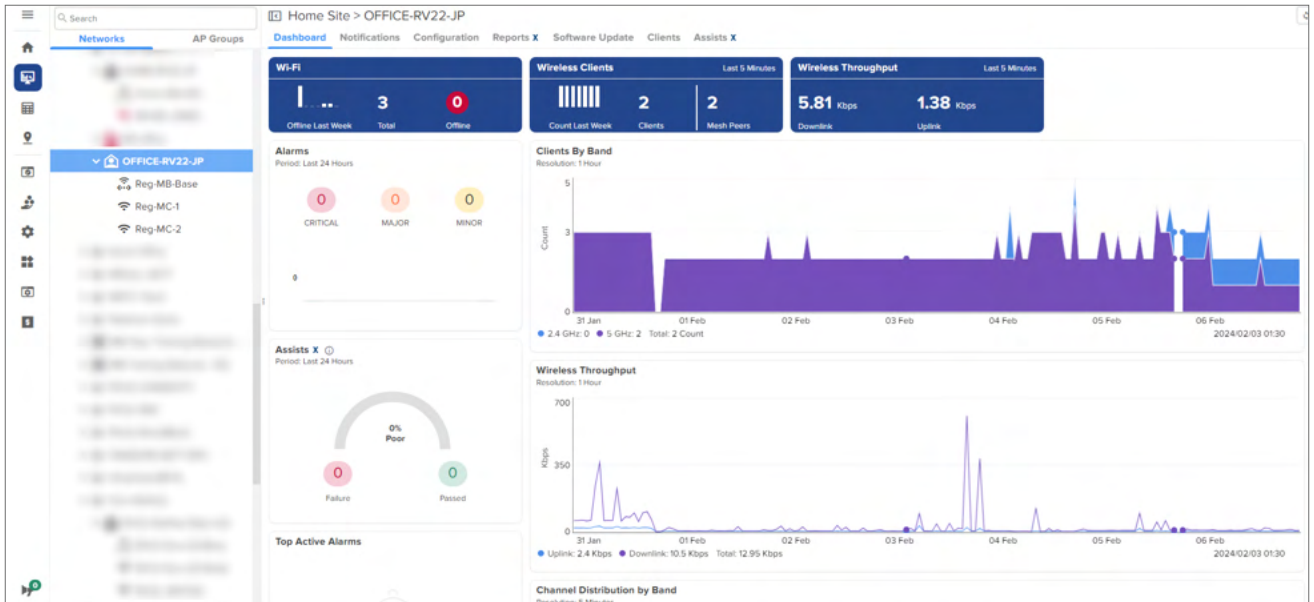

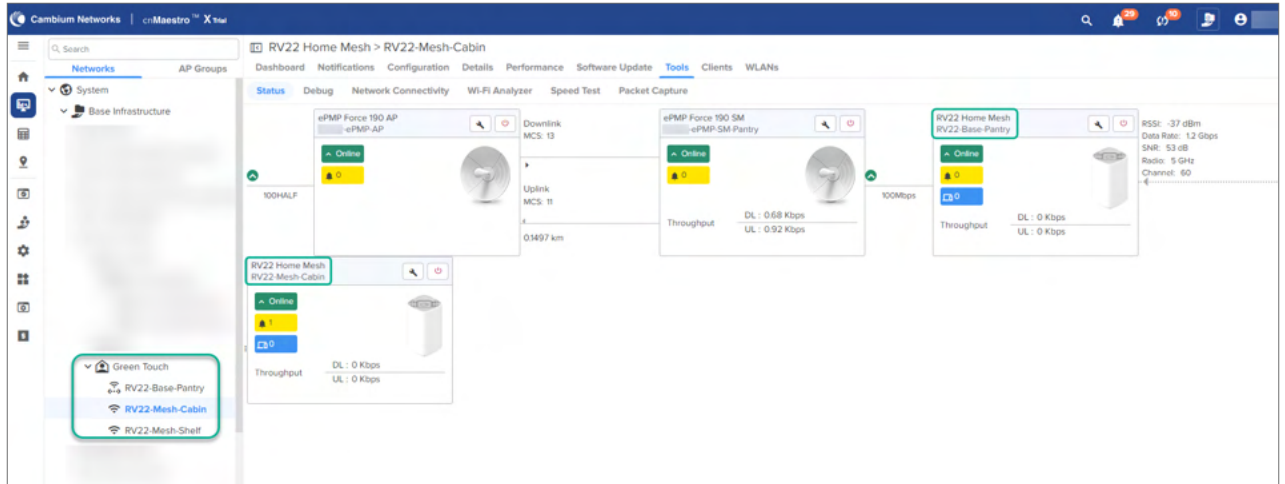

Figure 450 and Figure 451 display sample status pages for the node routers in a wireless mesh 1-2 deployment.

In the following status samples, the **RV22-Base-Pantry** router is connected to both **RV22-Mesh-Shelf** and **RV22-Mesh-Cabin** routers, forming a 1-2 multi-mesh topology.

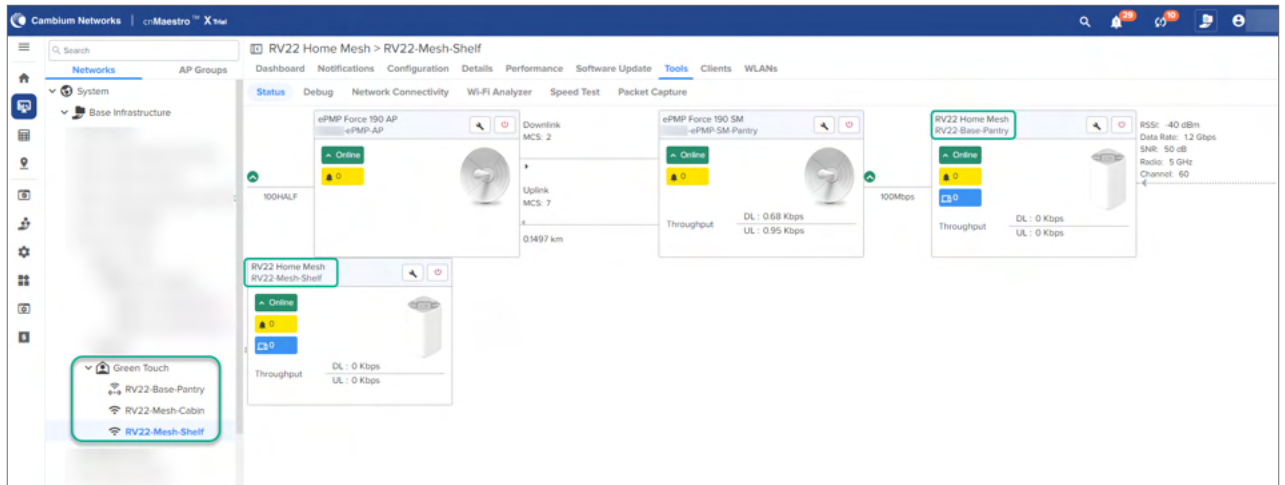

- Network topology for the **RV22-Mesh-Cabin** router

**Figure 450** Sample status page for RV22-Mesh-Cabin node router in a wireless mesh: 1-2 deployment

- Network topology for the **RV22-Mesh-Shelf** router

**Figure 451** Sample status page for RV22-Mesh-Shelf node router in a wireless mesh: 1-2 deployment

## Wireless and wired mixed mesh 1-2 deployment

In this deployment, the base router is connected to one node router wirelessly and simultaneously to another by a wired connection, thereby creating a mixed 1-2 mesh deployment.

**Figure 452** *Wireless and wired mixed mesh: 1-2 deployment*

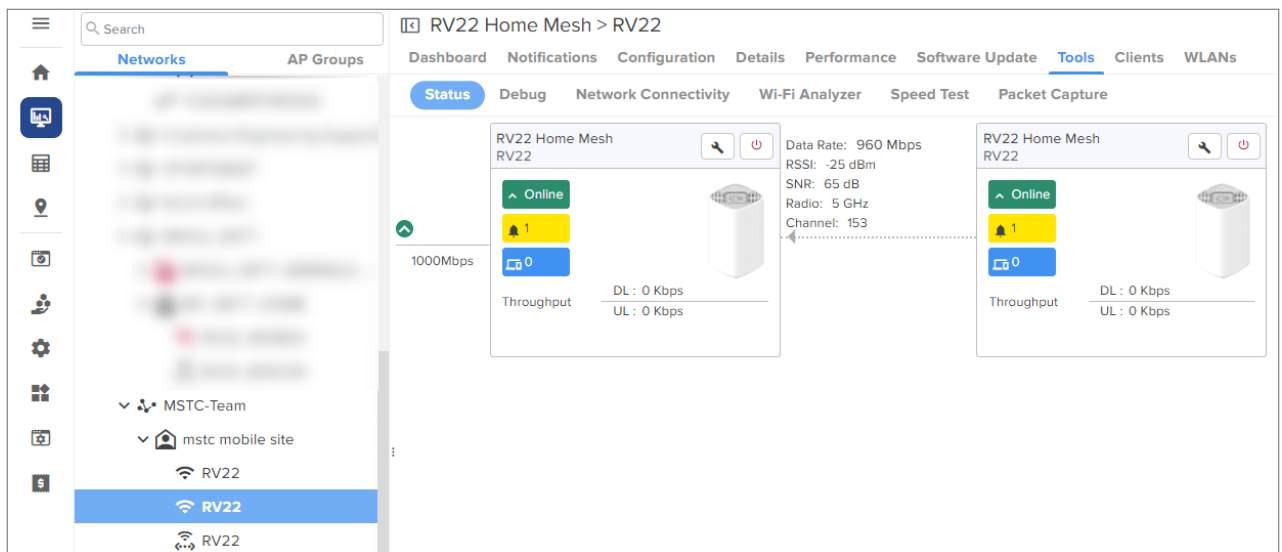

[Figure 450](#) and [Figure 451](#) display sample status pages for the node routers in a mixed mesh 1-2 deployment.

In the following status samples, one RV22 base router is connected to one RV22 node router wirelessly and simultaneously to another RV22 node router by a wired connection.

- Network topology for the wireless RV22 node router

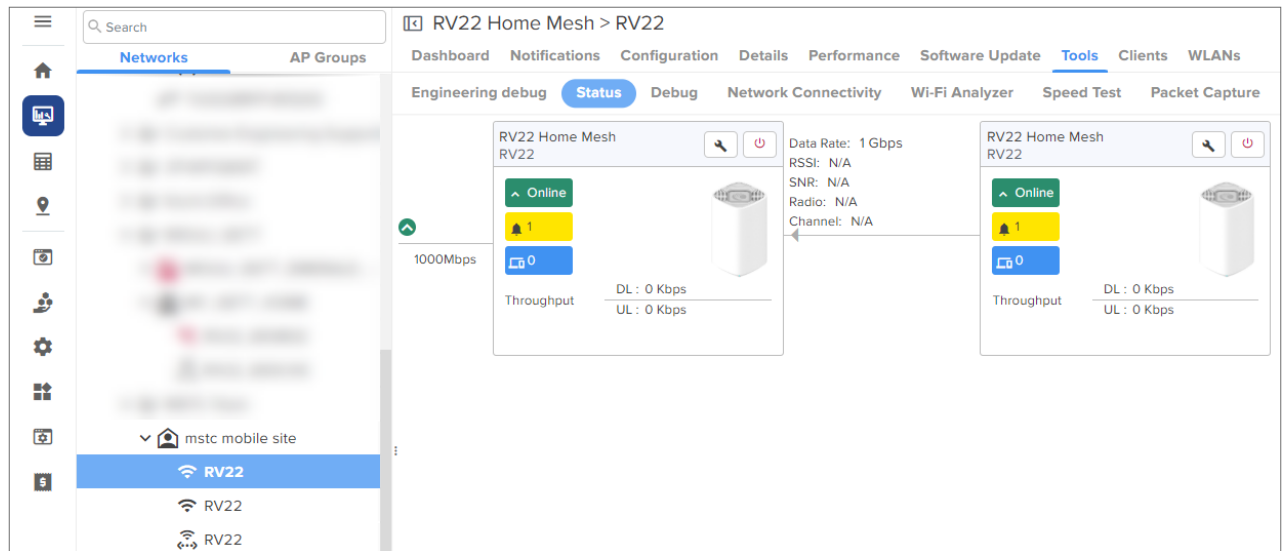

**Figure 453** *Sample status page for the wireless RV22 node router in a mixed mesh: 1-2 deployment*

- Network topology for the wired RV22 node router

**Figure 454** Sample status page for the wired RV22 node router in a mixed mesh: 1-2 deployment

## Setting up the Home Mesh Router—Wired Mesh Mode

To configure a wired mesh, onboard the routers to a site—Claim the routers, which you want to be part of the mesh, on cnMaestro in the subscriber workflow. See [Claiming the Home Mesh Router](#). Connect the mesh base router to the internet and connect the node routers to the base router using Ethernet cables. The AP group mapped to the subscriber is applied to all the routers to sync the configuration.

No configuration changes are required for RV22 routers to work in both wired and wireless mesh modes. Use any LAN port on the mesh base and any LAN port on the mesh node routers to establish a wired mesh connection. When a mesh node router detects an RV22 neighbor on its LAN port, it automatically establishes a wired mesh link using the LAN ports.

### Note

You must not use the WAN port on the mesh node router to establish a wired mesh.

Following are some of the wired mesh configurations supported:

- [Wired mesh: 1-1 deployment](#)
- [Wired mesh: 1-1-1 deployment](#)
- [Wired mesh: 1-2 deployment](#)

### Wired mesh: 1-1 deployment

In this deployment, the base router is connected to one node router using an Ethernet cable (between any LAN ports on both routers), thereby creating a wired 1-1 mesh deployment.

**Figure 455** Wired mesh: 1-1 deployment

### Wired mesh: 1-1-1 deployment

In this deployment, the base router is connected to only one of the node routers, which is in turn connected to another node router, by a wired connection (between any LAN ports on the routers), thereby creating a wired 1-1-1 mesh deployment.

Figure 456 *Wired mesh: 1-1-1 deployment*

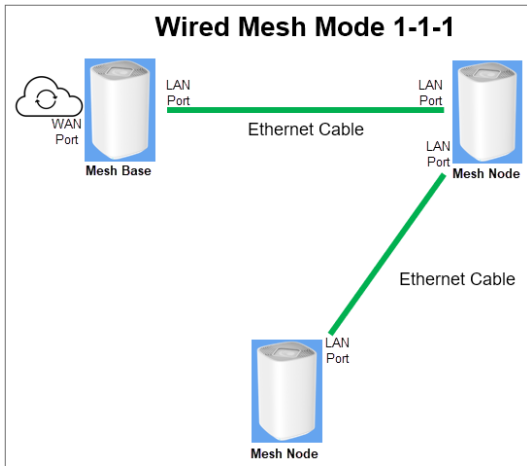

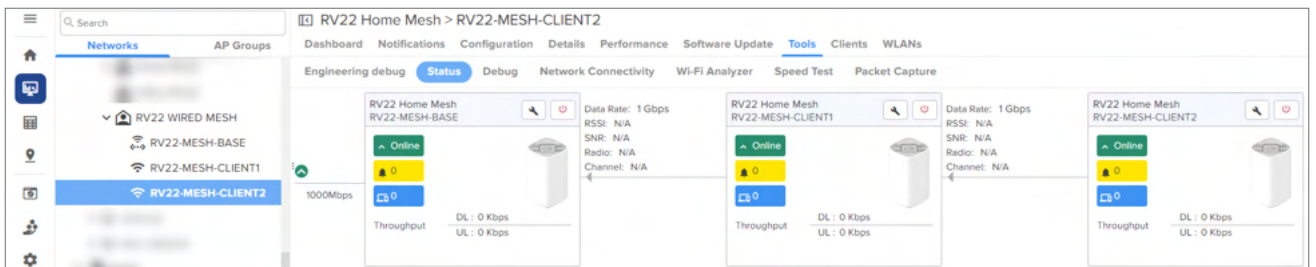

Figure 457 displays a sample cnMaestro status page for the wired mesh 1-1-1 deployment.

Figure 457 *Sample status page for wired mesh: 1-1-1 deployment*

### Wired mesh: 1-2 deployment

In this deployment, the base router is connected to two node routers simultaneously by a wired connection, thereby creating a wired 1-2 mesh deployment.

Figure 458 *Wired mesh: 1-2 deployment*

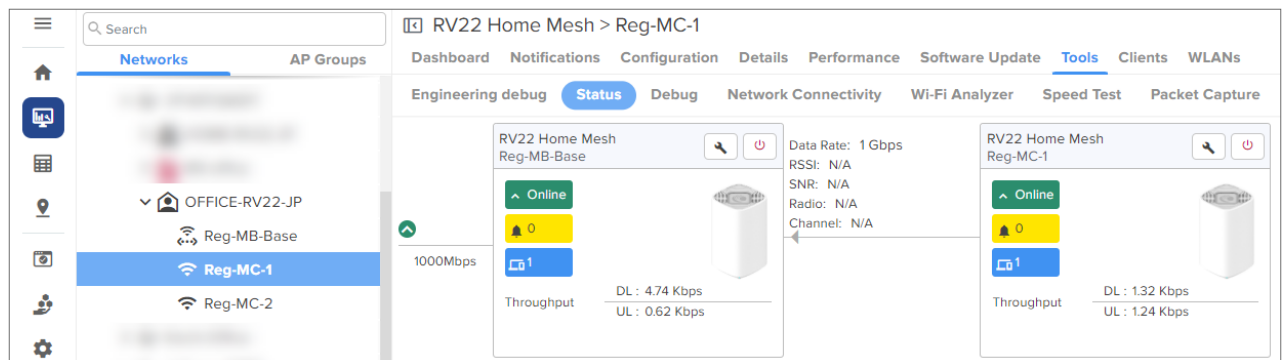

Figure 459 and Figure 460 display sample status pages for the node routers in a wired mesh 1-2 deployment.

In the following status samples, the **Reg-MB-Base** router is connected to both **Reg-MC-1** and **Reg-MC-2** routers using Ethernet cables, forming a wired 1-2 multi-mesh topology.

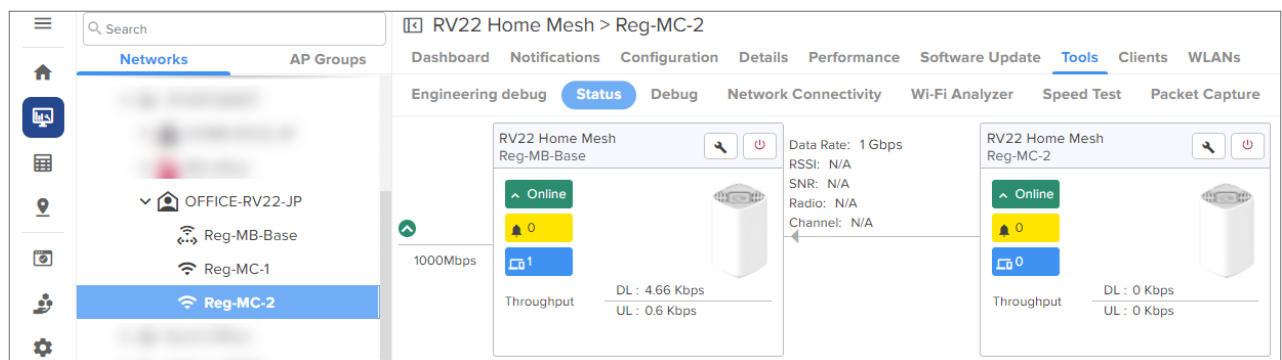

- Network topology for the **Reg-MC-1** router

**Figure 459** Sample status page for Reg-MC-1 node router in a wired mesh: 1-2 deployment

- Network topology for the **Reg-MC-2** router

## Viewing router system information and network traffic status

When the customer configures the Home Mesh Router and connects to the internet, you can check the connection of the router in cnMaestro. You can also check the details of the clients that are connected.

To view router system information and the connection status, navigate to **Monitor and Manage** > *<Home-Mesh-Router-name>* > **Details** tab.

The **Details** page displays information in the following tabs:

- **Overview**

This page displays information in the following sections:

- **System**—Displays information, such as router name, MAC address, health of the router (online, offline), software version, and location.
- **Radio**—Displays radio details, such as the running bands, RF quality, count of clients connected to each radio, and the average throughput.
- **Configuration Update**—Displays the history of configuration updates to the router.
- **Software Update**—Displays the currently running software version and a history of software updates that were performed and the status.

## Viewing, editing, and blocking connected clients

cnMaestro allows you to view details of clients (both wired and wireless) connected to the router and edit the name of clients. You can also block certain clients that you do not want to be connected to your wireless networks.

This topic contains the following sections:

- [Viewing connected clients](#)
- [Editing client host name](#)
- [Blocking clients](#)

### Viewing connected clients

To view the list of connected clients, both wired and wireless, navigate to **Monitor and Manage** > *<Home-Mesh-Router-name>* > **Clients** tab.

The **Details** page displays information in the following tabs:

- **Wireless Clients**

This page displays information about the wireless clients connected to the router, such as the host name, MAC address, IPv4 address assigned, the router it is connected to, and the status of connection with the router (online, offline).

Host Name	Managed Account	AP	IPv4 Address	MAC	Manufacturer	Capability	SSID	Bar
's iPhone	Base Infrastructure	RV22-Mesh-Base-Foyer			unknown	axa	RV22	Home 5 C
IN01-51Y70J3	Base Infrastructure	RV22-Mesh-Base-Foyer			Intel Corporate	axa	RV22	Home 5 C
Samsung Refrigerator	Base Infrastructure	RV22-Mesh-Base-Foyer			S.J.I Industry Company	gn	RV22	Home 2.4
iPhone	Base Infrastructure	RV22-Mesh-Base-Foyer			unknown	axa	RV22	Home 5 C
's Air	Base Infrastructure	RV22-Mesh-Client-First-Floor			Apple, Inc.	ac	RV22	Home 5 C

unKnown	Base Infrastructure	RV22-Mesh-Client-First-Floor			unknown	an	RV22	Home 5 C

## • Wired Clients

This page displays information about the wired clients connected to the router, such as the host name, MAC address, IPv4 address assigned, port number to which it is connected, the manufacturer of device connected, last connected duration, and the download and upload data size (in MB).

Host Name	Managed Account	IPv4 Address	MAC	Port	Manufacturer	Last Duration	Download	Upload
Cambium-cnMatrix-FX2K	Base Infrastructure			Ethernet LAN 2	Cambium Networks Limited	0d 2h 42m	393.2 MB	54.5 MB
XV2-2-540556	Base Infrastructure			Ethernet LAN 2	Cambium Networks Limited	0d 2h 42m	393.2 MB	54.5 MB
XV2-21X-E5386F	Base Infrastructure			Ethernet LAN 2	Cambium Networks Limited	0d 2h 42m	393.2 MB	54.5 MB

## Editing a client's host name

To edit the host name of a connected client, click the edit client name (✎) icon corresponding to the client.

Enter the name in the **Host Name** field and click **Save**.

## Blocking clients

To block a connected client, click the block (🚫) icon corresponding to the client.

## Monitoring and troubleshooting the Home Mesh Router

You can monitor and perform troubleshooting tasks on the Home Mesh Router using cnMaestro. This topic covers the following sections

- [Monitoring the Home Mesh Router](#)
- [Troubleshooting the Home Mesh Router](#)
- [Upgrading the Home Mesh Router firmware](#)

# Monitoring the Home Mesh Router

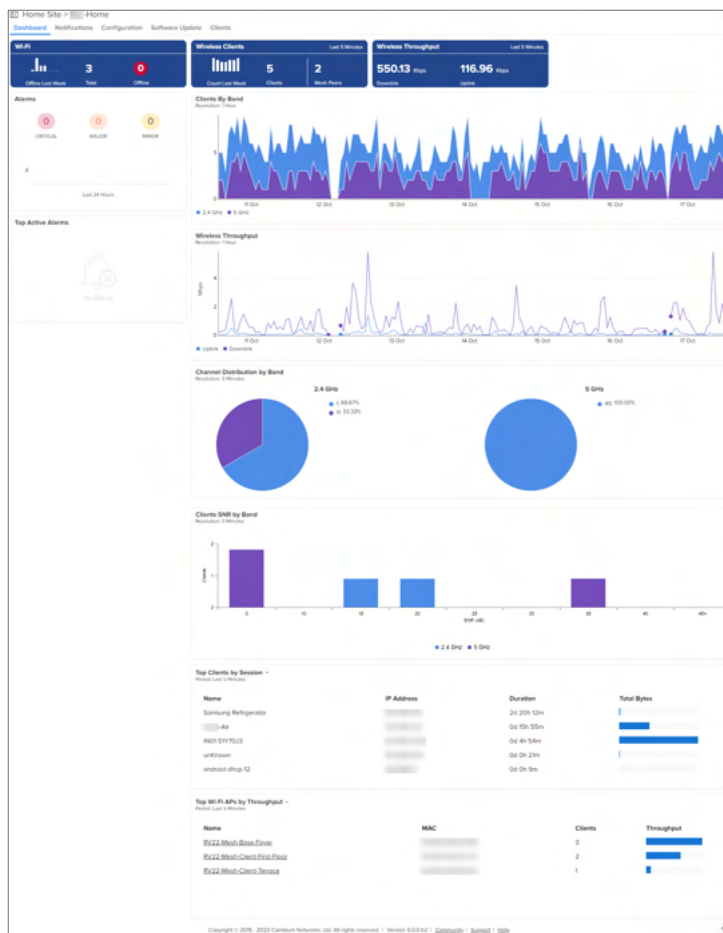

When the device is onboarded to cnMaestro, based on the deployment type, the router is displayed under the site that it is configured.

Using the following pages in cnMaestro, monitor and view details of the router and the deployment.

- [Home Site Dashboard](#)
- [Notifications](#)
- [Software Update](#)
- [Performance](#)

## Home Site Dashboard

To view the site dashboard, access the **Dashboard** page under **Monitor and Manage** > <Home-site-name> > **Dashboard**.

## Notifications

The Notifications page displays current alarms, previous alarms, Wi-Fi-related events, and other device-related events.

cnMaestro displays the following types of notifications:

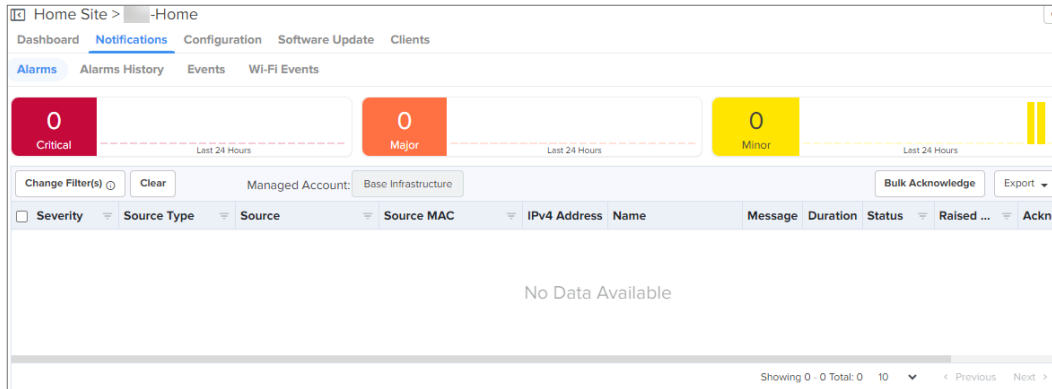

- [Alarms](#)
- [Alarms History](#)

- [Events](#)
- [Wi-Fi Events](#)

## Alarms

The Alarms page displays the number of critical, major, and minor events observed for the Home Mesh Router. You can also view the details of the events, such as severity level, name of the event, time and action taken.

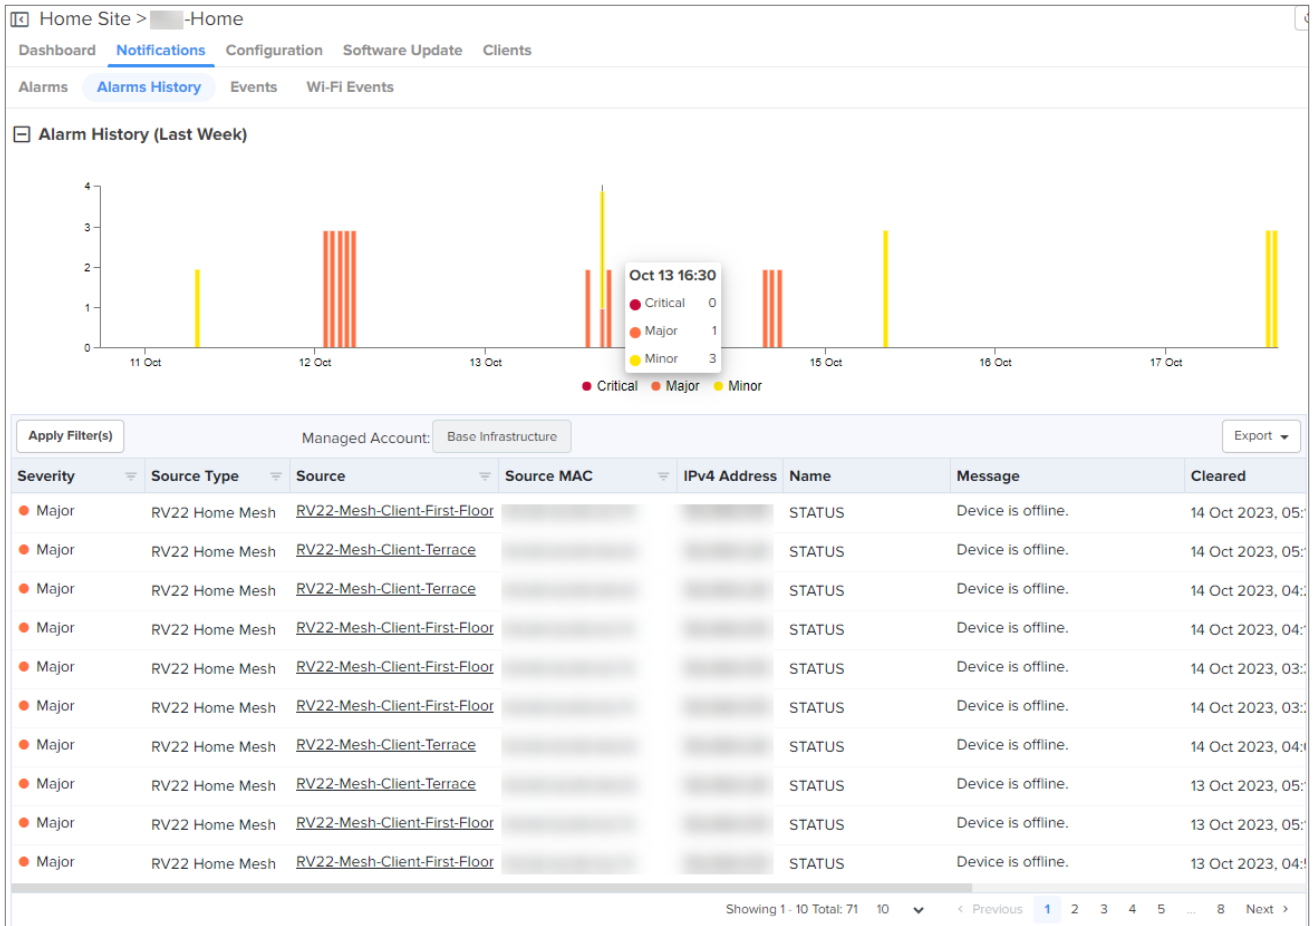

To view the alarms raised, access the **Alarms** page under **Monitor and Manage** > <Home-site-name> > **Notifications** > **Alarms**.

## Alarms History

The Alarms History page displays the number of critical, major, and minor events observed in the previous week.

To view the alarms history displayed as a graphical representation, access the **Alarms History** page under **Monitor and Manage** > <Home-site-name> > **Notifications** > **Alarms History**.

## Events

The Events page displays Home Mesh Router-related events, such as its status, if there were any changes in bandwidth, and when the DHCP server IP was assigned to the connected clients.

To view the events, access the **Events** page under **Monitor and Manage** > <Home-site-name> > **Notifications** > **Events**.

RV22 Home Mesh > RV22\_8001D2

## Wi-Fi Events

The Wi-Fi Events page displays client-related events, such as when the client connected to the network, when it was disconnected, and authentication events.

To view the Wi-Fi events, access the **Wi-Fi Events** page under **Monitor and Manage** > <Home-site-name> > **Notifications** > **Wi-Fi Events**.

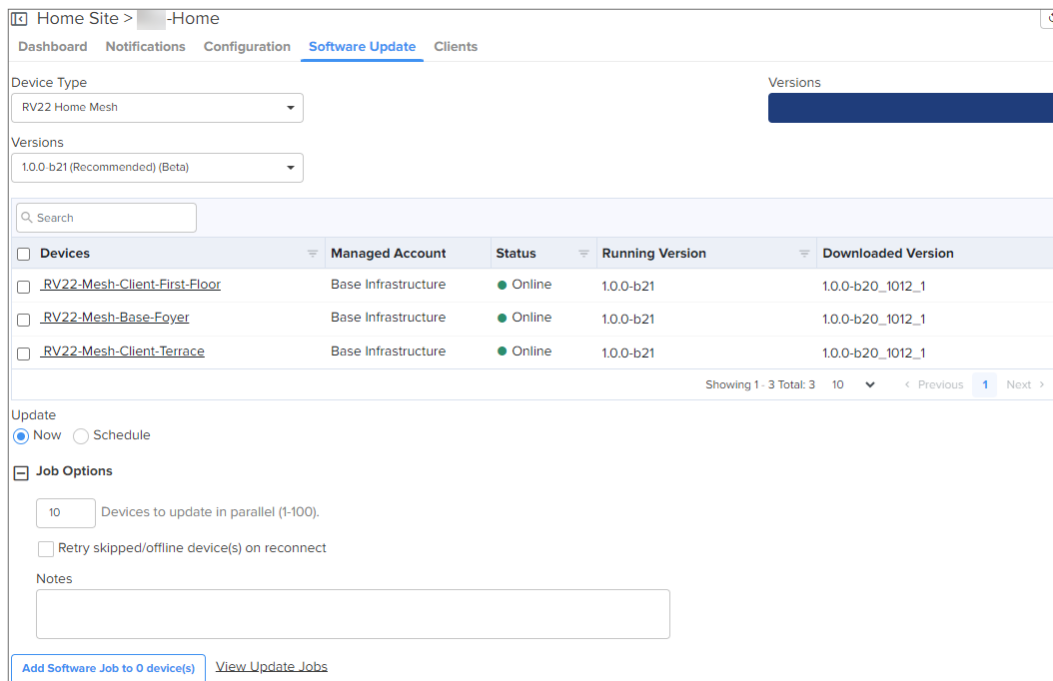

The screenshot shows the 'Wi-Fi Events' page for a Home Site. The page has a navigation bar with 'Dashboard', 'Notifications', 'Configuration', 'Software Update', and 'Clients'. Below the navigation bar, there are tabs for 'Alarms', 'Alarms History', 'Events', and 'Wi-Fi Events'. The main content area shows a table of events with columns for Source, Managed Account, Source MAC, Source Type, Client Name, Client MAC, Name, and Raised Time. The table contains 12 rows of events, including connections, disconnections, and authentication events for various mesh clients.

Source	Managed Account	Source MAC	Source Type	Client Name	Client MAC	Name	Raised Time
RV22-Mesh-Client-First-Floor	Base Infrastructure		RV22 Home Mesh	iPhone		WIFI_CLIENT_CONNECTED	17 Oct 2023, 04:27:03 PM

RV22-Mesh-Base-Foyer	Base Infrastructure		RV22 Home Mesh	iPhone		WIFI_CLIENT_AUTH_SUCCESS	17 Oct 2023, 04:20:57 PM

## Software Update

To upgrade the router firmware, go to the **Software Update** page. See [Upgrading the Home Mesh Router firmware](#) for more information.

The screenshot shows the 'Software Update' page for a Home Site. The page has a navigation bar with 'Dashboard', 'Notifications', 'Configuration', 'Software Update', and 'Clients'. Below the navigation bar, there are tabs for 'Alarms', 'Alarms History', 'Events', and 'Wi-Fi Events'. The main content area shows a table of devices with columns for Devices, Managed Account, Status, Running Version, and Downloaded Version. The table contains 3 rows of devices, all of which are online and running version 1.0.0-b21. Below the table, there are options to update the devices, including a 'Now' button and a 'Schedule' button. There are also options to specify the number of devices to update in parallel and to retry skipped/offline devices on reconnect. A 'Notes' field is also present.

Devices	Managed Account	Status	Running Version	Downloaded Version
RV22-Mesh-Client-First-Floor	Base Infrastructure	Online	1.0.0-b21	1.0.0-b20_1012_1
RV22-Mesh-Base-Foyer	Base Infrastructure	Online	1.0.0-b21	1.0.0-b20_1012_1
RV22-Mesh-Client-Terrace	Base Infrastructure	Online	1.0.0-b21	1.0.0-b20_1012_1

## Performance

To view the performance of the router, access the **Wi-Fi Events** page under **Monitor and Manage** > <Home-Mesh-Router-name> > **Performance**.

The page displays the following graphical information:

**Table 103** Performance page graphs—Base and Node routers

Parameter	Description	Router (Base / Node / Both)
Stacked WAN Throughput	Hourly throughput for both downlink and uplink in the WAN interface for each band of the mesh base router.	Base only
Stacked Throughput by Band (Downlink)	Downlink speed in each band.	Both
Stacked Throughput by Band (Uplink)	Uplink speed in each band.	Both
Stacked Clients by Band	Count of number of clients connected in each band.	Both
Noise Floor	Amount of background noise (in dBm) or interference created by devices in the same frequency.	Both
Interference	Interference (in dBm) caused by other wireless signals and devices interrupting the router's Wi-Fi signal.	Both
Airtime 2.4 GHz	Capacity utilization (in %) of the 2.4 GHz band for effective transmission.	Both
Airtime 5 GHz	Capacity utilization (in %) of the 5 GHz band for effective transmission.	Both
Available Memory	Amount of router memory (in %) available for use.	Both
CPU	Router CPU utilization in percentage (%).	Both
SNR	Minimum, average, and maximum SNR values (in dB) for the mesh node router.	Node only
RSSI	Received Signal Strength Indicator (RSSI) value (in dBm) for the mesh node router.	Node only
Data Rate	Minimum, average, and maximum data rates (in Mbps or Gbps) provided by the mesh node router to the client devices.	Node only

Following are sample performance graphs for base and node routers:

- Performance of the base router in a mesh deployment

- Performance of the node router in a mesh deployment

## Troubleshooting the Home Mesh Router

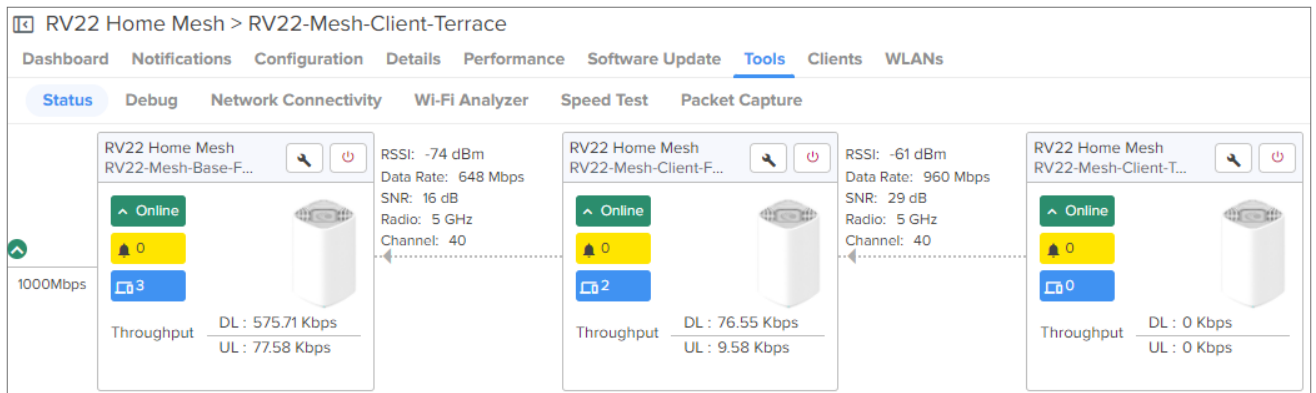

cnMaestro provides the following troubleshooting options for the router:

- [Status](#)
  - [Downloading tech support file](#)
- [Debug](#)
- [Network Connectivity](#)
- [Wi-Fi Analyzer](#)
- [Speed Test](#)
- [Packet Capture](#)

### Status

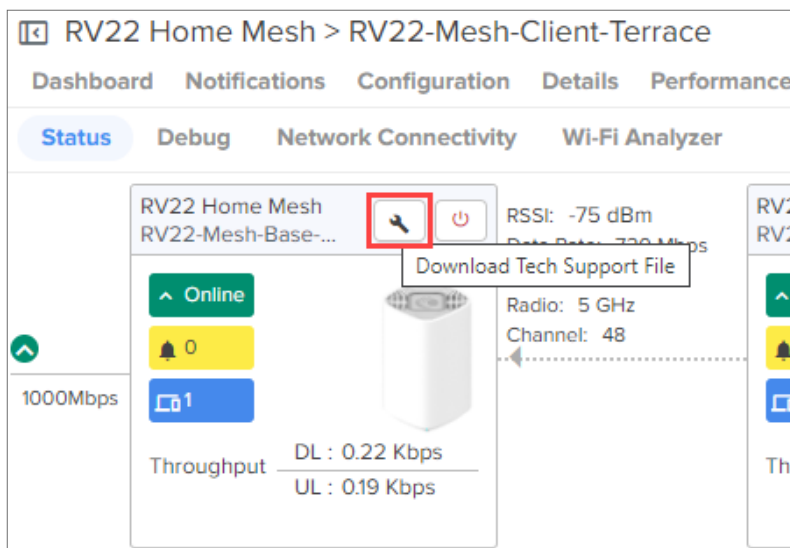

The Status page displays the status of link between the Home Mesh Router base and client devices.

To view the status of the link between the Home Mesh base and client devices, access the **Status** page under **Monitor and Manage** > <Home-Mesh-Router-name> > **Tools**.

## Downloading tech support file

To download the tech support file, click the Download Tech Support File () icon on the **Status** page.

## Debug

The Debug page displays log information of the Home Mesh Router. To view the debug information, complete the following steps:

1. Navigate to the **Monitor and Manage** > <Home-Mesh-Router-name> > **Tools** > **Debug** tab.
2. Click **Start Logs**.

The log information is displayed in the **Output** window.

## Network Connectivity

The Network Connectivity page provides network connectivity information of the Home Mesh Routers.

cnMaestro supports the following tests to provide connectivity information for the Home Mesh Routers:

- Ping
- DNS Lookup
- Traceroute

To test network connectivity of the router, complete the following steps:

1. Navigate to the **Monitor and Manage** > <Home-Mesh-Router-name> > **Tools** > **Network Connectivity** tab.
2. Select the required test type from the **Test Type** drop-down list and configure the corresponding parameters required for the test.
3. Click **Start Test**.

cnMaestro initiates the test and displays the result in the <**Test Type**> **Result** window.

The screenshot shows the 'Network Connectivity' configuration page in the cnMaestro interface. The page title is 'RV22 Home Mesh > RV22-Mesh-Client-Terrace'. The navigation menu includes 'Dashboard', 'Notifications', 'Configuration', 'Details', 'Performance', 'Software Update', 'Tools', 'Clients', and 'WLANs'. The 'Tools' menu is expanded, showing 'Status', 'Debug', 'Network Connectivity', 'Wi-Fi Analyzer', 'Speed Test', and 'Packet Capture'. The 'Network Connectivity' section has a 'Test Type' dropdown set to 'Ping' with the description 'Network ping to a hostname or IP address.'. Below this are input fields for 'IP Address or Hostname\*' (www.cambiumnetworks.com), 'Number of Packets (-c)' (3, with a range of Min = 1, Max = 10), and 'Buffer Size (-s)' (56, with a range of Min = 1, Max = 65507). A 'Start Ping' button is visible. Below the configuration is a 'Ping Result' window titled 'Complete' for the hostname 'www.cambiumnetworks.com'. The results show three successful ping attempts with response times of 26.367 ms, 24.968 ms, and 25.795 ms. The statistics indicate 3 packets transmitted, 3 packets received, and 0% packet loss, with a round-trip time of 24.968/25.710/26.367 ms.

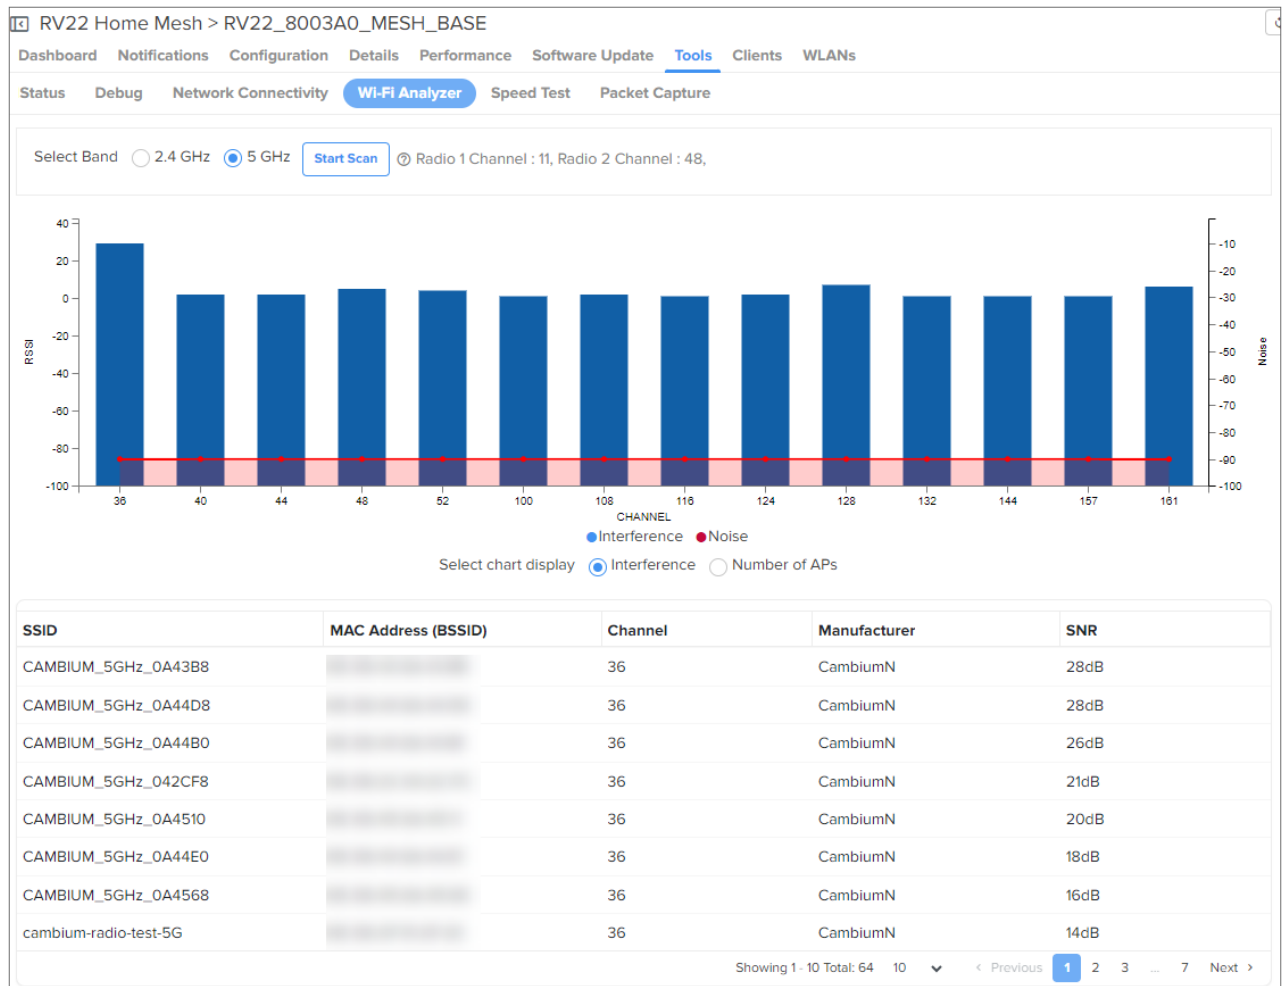

## Wi-Fi Analyzer

The Wi-Fi Analyzer page displays radio traffic and signal information for the selected band. It displays the interference and noise measured for the selected band.

To view the Wi-Fi Analyzer details, complete the following steps:

1. Navigate to the **Monitor and Manage** > <Home-Mesh-Router-name> > **Tools** > **Wi-Fi Analyzer** tab.
2. Select the required band (2.4 or 5 GHz).
3. Click **Start Scan**.

cnMaestro analyzes the band and displays the result in a table.

## Speed Test

The Speed Test page displays the internet speed provided by the Home Mesh Router.

To know the speed of the router, complete the following steps:

1. Navigate to the **Monitor and Manage** > <Home-Mesh-Router-name> > **Tools** > **Speed Test** tab.
2. Configure the required values for testing the speed.
3. Click **Start Speed Test**.

cnMaestro checks the speed and displays both download and upload speeds in megabits per second (Mbps).

The screenshot shows the 'Speed Test' configuration page in the cnMaestro interface. The page title is 'RV22 Home Mesh > RV22-Mesh-Client-Terrace'. The navigation menu includes 'Dashboard', 'Notifications', 'Configuration', 'Details', 'Performance', 'Software Update', 'Tools', 'Clients', and 'WLANs'. The 'Tools' menu is expanded, showing 'Status', 'Debug', 'Network Connectivity', 'Wi-Fi Analyzer', 'Speed Test', and 'Packet Capture'. The 'Speed Test' section contains four input fields: 'Duration (Seconds)' with a value of 15 and a range of Min = 1, Max = 60; 'Parallel Streams' with a value of 3 and a range of Min = 1, Max = 10; 'Download Size (MB)' with a value of 20 and a range of Min = 1, Max = 1000; and 'Upload Size (MB)' with a value of 20 and a range of Min = 1, Max = 1000. A 'Start Speed Test' button is located at the bottom left of the form.

The speed test option is also available on the **Subscriber** page in the **Home Wi-Fi Devices Setting Override** section.

To avail this speed test option, complete the following steps:

1. Navigate to the **Manage Service Providers > Managed Subscribers > Subscribers** tab.
2. From the list of subscribers, click the subscriber name for which you want to configure the speed test.  
The **Edit <Subscriber-name>** window is displayed.
3. Click the **Service Configuration** tab.
4. In the **Home Wi-Fi Devices Setting Override** section, click the **Speed Test** tab.

## Packet Capture

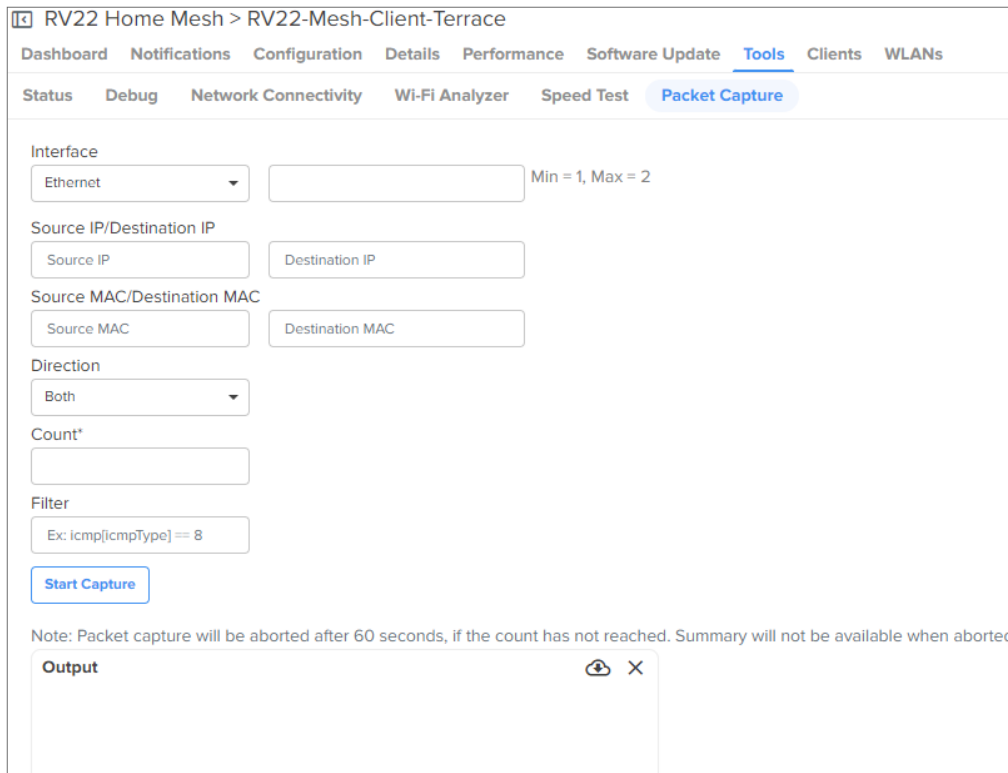

The Packet Capture page allows the user to capture all packets on a specified interface.

To capture packet data, complete the following steps:

- Navigate to the **Monitor and Manage** > <Home-Mesh-Router-name> > **Tools** > **Packet Capture** tab.
- Select the required interface, and provide the source and destination IP address or MAC address.
- Provide the number of packets that must be captured.
- Click **Start Capture**.

cnMaestro displays the information in the **Output** window.

- To download the PCAP file, click the download () icon.

The screenshot shows the 'Packet Capture' configuration page for an RV22 Home Mesh router. The page has a breadcrumb trail: 'RV22 Home Mesh > RV22-Mesh-Client-Terrace'. The navigation menu includes 'Dashboard', 'Notifications', 'Configuration', 'Details', 'Performance', 'Software Update', 'Tools' (selected), 'Clients', and 'WLANS'. Under the 'Tools' menu, there are sub-menus: 'Status', 'Debug', 'Network Connectivity', 'Wi-Fi Analyzer', 'Speed Test', and 'Packet Capture' (selected). The configuration area includes: 'Interface' (dropdown set to 'Ethernet', with a text input field and 'Min = 1, Max = 2'); 'Source IP/Destination IP' (two text input fields for 'Source IP' and 'Destination IP'); 'Source MAC/Destination MAC' (two text input fields for 'Source MAC' and 'Destination MAC'); 'Direction' (dropdown set to 'Both'); 'Count\*' (text input field); 'Filter' (text input field with example 'Ex: icmp[icmpType] == 8'); and a 'Start Capture' button. A note states: 'Note: Packet capture will be aborted after 60 seconds, if the count has not reached. Summary will not be available when aborted.' Below the note is an 'Output' section with a download icon and a close button.

## Upgrading the Home Mesh Router firmware

To upgrade the firmware of Home Mesh routers present in a home site, complete the following steps:

- Navigate to **Monitor and Manage** > <Home-site-name> > **Software Update**.  
The Software Update page appears.
- Select **RV22 Home Mesh** from the **Device Type** drop-down list.
- Select the software version from the **Versions** drop-down list.
- In the list of devices table, select the check boxes corresponding to the devices for which you want to upgrade the firmware.

You can also select one router to upgrade the firmware of only that router.

- Select the **Now** option in the **Update** field to upgrade the firmware immediately.  
To schedule the upgrade job, select the **Schedule** option and configure the required date and time.
- Click **Add Software Job to** <number of devices> **device(s)**.  
The upgrade is scheduled to run at the specified date and time.

To view the status of the update jobs, click **View Update Jobs**.

The screenshot shows the 'Software Update' page in a web interface. At the top, there are navigation tabs: Dashboard, Notifications, Configuration, Software Update (active), and Clients. Below the tabs, there are two dropdown menus: 'Device Type' set to 'RV22 Home Mesh' and 'Versions' set to '1.0.0-b21 (Recommended) (Beta)'. A search bar is present above a table of devices. The table has columns for 'Devices', 'Managed Account', 'Status', 'Running Version', and 'Downloaded Version'. Three devices are listed, all with a status of 'Online'. Below the table, there are 'Update' options (Now selected, Schedule) and 'Job Options' including a parallel update count of 10 and a checkbox for retrying skipped devices. A 'Notes' text area is also present. At the bottom, there is a button 'Add Software Job to 0 device(s)' and a link 'View Update Jobs'.

- [Client Analytics](#)

## Analyzing Connection Failures of Wi-Fi Clients and Poor Performance of Wi-Fi Networks

The Wi-Fi Analytics feature provides deep visibility into the health of Wi-Fi client connections, including root cause analysis of failures and possible remediations. It also provides analytics on aggregated data that can help to improve client connectivity in the Wi-Fi network.

### Note

This feature is currently available as a free trial to all cnMaestro X customers, but will require a separate paid subscription in the future.

This section covers the following topics:

- [Overview](#)
- [Use cases](#)
  - [Resolve connectivity issues](#)
  - [Address poor performance of applications](#)
  - [Identify OS, SSID, and AP-specific issues](#)
- [Accessing the Analytics XA page](#)
- [Accessing Site-level consolidated details at the System- and MSP-levels](#)
- [Setting filters to view the connection data](#)
- [Viewing the connection events](#)
  - [Dashboard page](#)
  - [Analytics XA page](#)
    - [Connection tab](#)
    - [Disconnection tab](#)
    - [Viewing a client or host-specific connection or disconnection event](#)
    - [Viewing an event-based connection or disconnection event](#)
    - [Viewing an AP-specific information](#)

## Overview

The Analytics X<sup>A</sup> feature analyzes the Wi-Fi client connection events and helps to troubleshoot common network connectivity and performance issues such as the following:

- **Connectivity**—Association, authentication, and network connectivity failures.
- **Poor Performance**—Low RSSI, low data rate, high retry rate, and high latency in AAA, DHCP, DNS, and applications.

You can use this feature to detect and analyze common network problems that occur in your wireless networks.

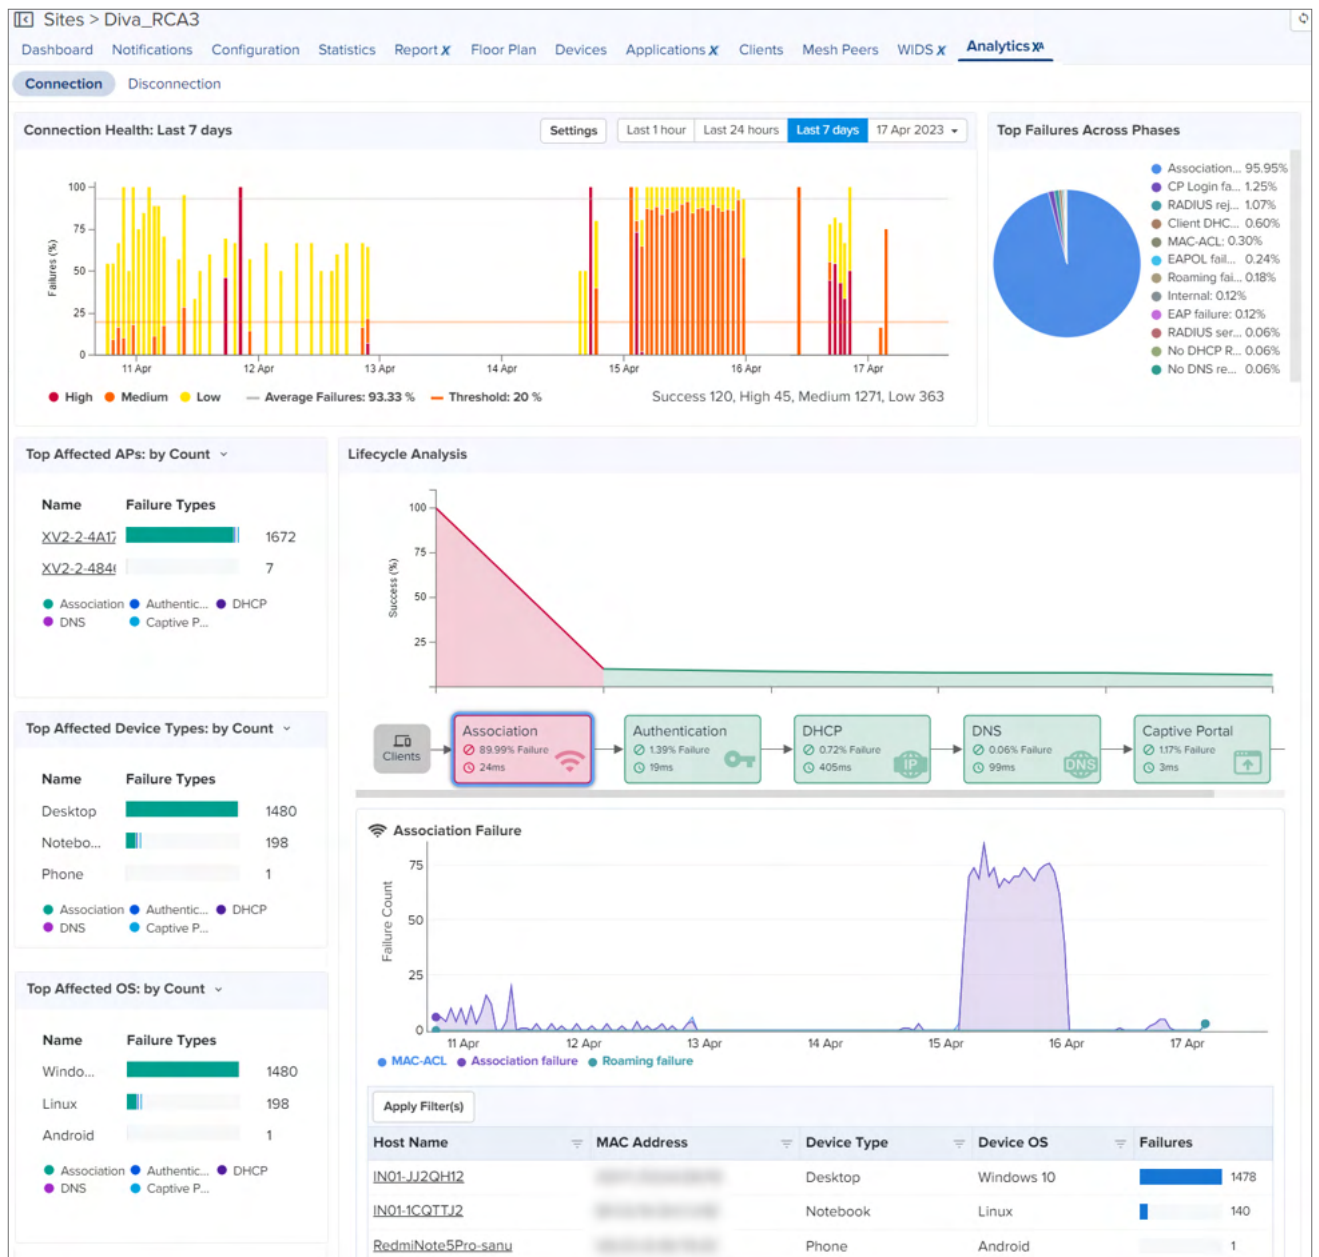

**Note**

**Analytics X<sup>A</sup>** is supported only for XV and XE devices.

The **Analytics X<sup>A</sup>** page reports the following data for the Wi-Fi clients:

- Statistics of successful connections per connection type such as new, reconnection, and roaming.
- Statistics of failed connections and disconnections, such as reason codes for association, EAP/EAPOL handshake, DHCP, DNS, and Captive Portal failures.

**Figure 461** The Analytics X<sup>A</sup> page

## Use cases

Following are some of the **use cases**, to identify the connectivity issue and analyze the root cause:

### Resolve connectivity issues

The **Analytics X<sup>A</sup>** page provides visual analytics of client connection failures in each phase such as baseline performance and key metrics in the form of graphs and tables with multiple data filters. You can easily identify the root cause based upon the phase of the Wi-Fi connection lifecycle.

- **Association**—Accessing the AP may fail if the client has low RSSI; if the request for capabilities is not supported by the AP; or if the AP is already handling the maximum number of clients.
- In such cases, you can use the **Lifecycle Analysis** widget on the **Analytics X<sup>A</sup>** page. This widget displays the statistics of 802.11 authentication/association failures in percentage. In addition, you can use the **Events** page to analyze the reason, cause, impact, and the recommended action.
- **Authentication**—Authentication may fail when 802.1X/EAP key is incorrect; the RADIUS server cannot be reached; or the WPA2-PSK or WPA3-SAE key derivation is invalid.
- In such cases, the **Lifecycle Analysis** widget displays the RADIUS authentication failure count in percentage.
- **Network connection**—When a client is successfully authenticated, it must be assigned an IP address by the DHCP server and provided networking information such as for DNS and Gateway. When the DHCP server fails, connectivity to the network cannot be established.
- In such cases, the **Lifecycle Analysis** widget can help identify that the DHCP server failure, and the **Events** page can analyze the reason and cause.
- **Aggressive roaming**—Time sensitive applications such as voice and video require uninterrupted connectivity. To ensure this, Wi-Fi clients monitor the RSSI from local APs and probe better APs when the connection degrades. The RSSI threshold at which a client moves from the current AP to another AP may be different for each client and is vendor specific. Some clients may have aggressive roaming where they move frequently across APs. This can result in increased contention in the network and longer delay for other clients connecting or transmitting data. The client drill down presents the association, authentication, and network connectivity events generated due to aggressive roaming.
- You can use the **Lifecycle** page to analyze the RSSI ranges, roam quality, and lifecycle events.
- **DHCP, AAA, or DNS latency**—Each of the association, authentication, and network connectivity stages might add latency to the total connection time.
- The **Lifecycle Analysis** widget and the **Events** page display statistics for the DHCP, AAA, and DNS latencies.

### Address poor performance of applications

Wi-Fi clients may use a wide range of advanced video coding (AVC) applications such as Google Meet, Microsoft Teams, Zoom, Skype, YouTube, and multiple e-commerce applications such as Flipkart and Amazon. In such scenarios, clients may experience poor network performance or network disconnection due to low RSSI or bad roam quality.

You can view the **Session Timeline** section in the **Lifecycle** page to analyze the RSSI ranges, and events such as success, failed, connected, disconnected, and roam quality. This analysis helps you to understand the cause and take recommended actions.

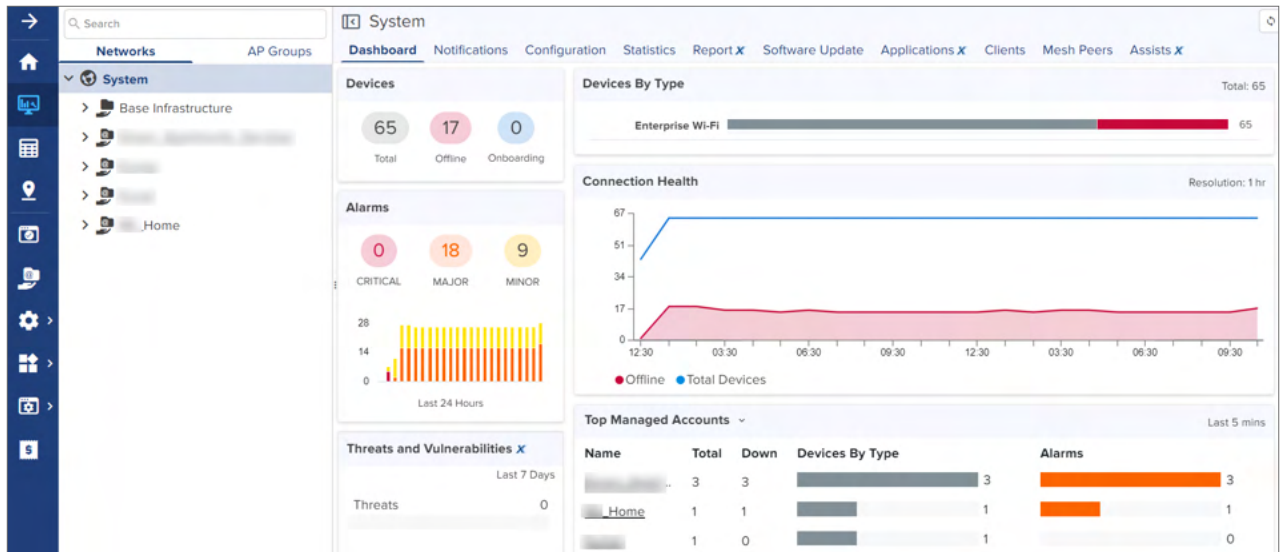

### Identify OS, SSID, and AP-specific issues

Apart from run-time metrics, the **Connection Health** widget provides filters to identify performance issues with a specific vendor, operating system, and associated AP and SSID.

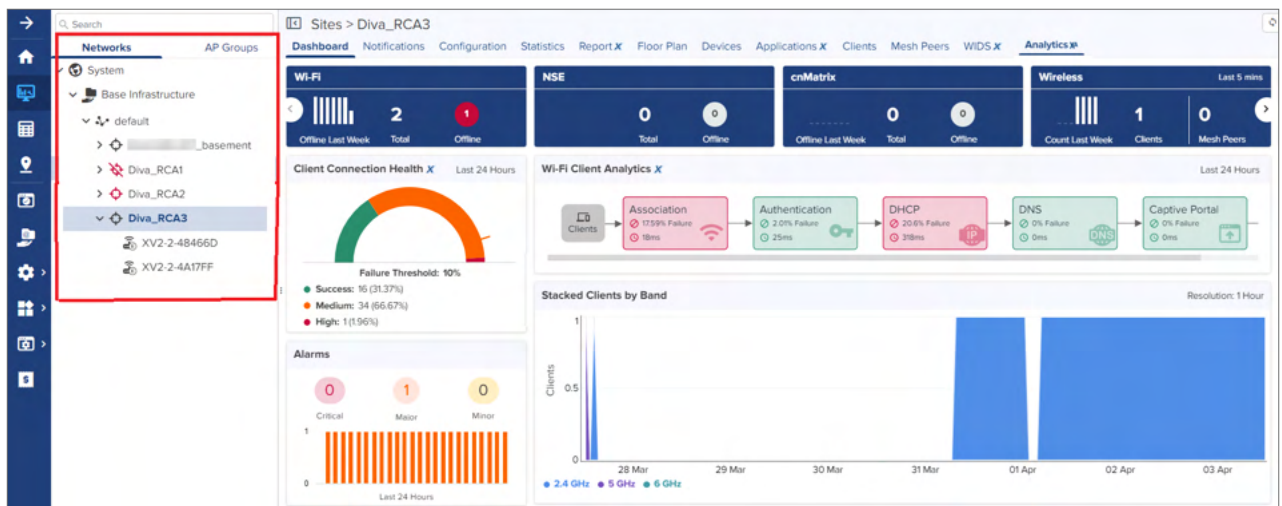

# Accessing the Analytics XA page

To access the Analytics X<sup>A</sup> page:

1. On the left navigation pane, select the **Monitor and Manage** (📊) icon.

2. Select either a **System**, **MSP**, or **Network**, and then a **Site** node in the tree.

## Note

The **Analytics X<sup>A</sup>** page is available only at site and client levels.

The **Dashboard** tab displays the default Wi-Fi connection statistics.

3. Select the **Analytics X<sup>A</sup>** tab.

# Accessing Site-level consolidated details at the System- and MSP-levels

cnMaestro allows you to access consolidated information from all sites located in an account- or at the MSP-level. The information is displayed in a tabular format including details, such as the Managed Account name, the network

to which the site belongs, failure threshold and what percentage of events have crossed this threshold, and the high, medium, and low impact events.

**Note**

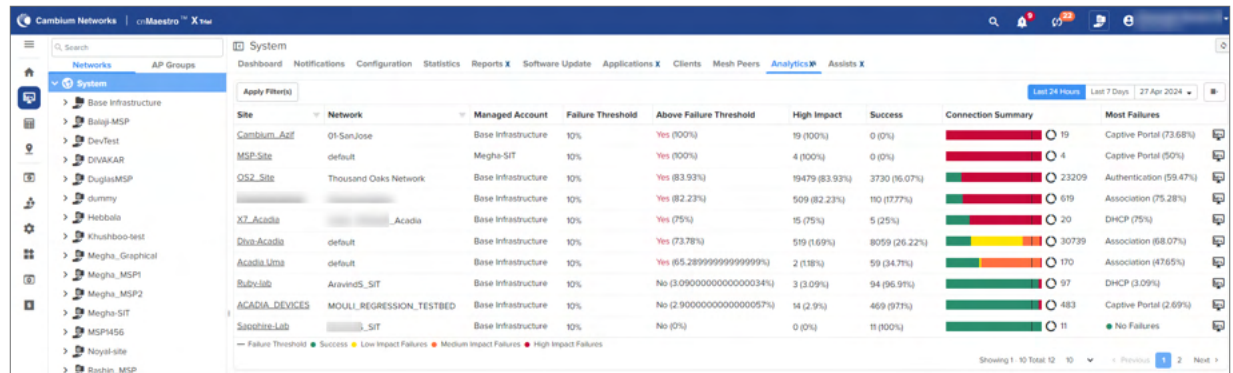

Site-level consolidated details at the System- and MSP-levels are available only for those sites where devices are onboarded and clients are connected.

To view consolidated site-level information, complete the following steps:

1. Navigate to **Monitor and Manage**.
2. In the **Networks** tab, select one of the following options:
  - To view account-level information, click **System > Analytics X<sup>A</sup>**.

The **Analytics X<sup>A</sup>** page is displayed with consolidated information from all the sites in that account. At the system-level, data is aggregated from all sites including under any MSP accounts. However, at the MSP-level, data is aggregated from only those sites under the MSP account.

**Figure 462** Site-level information for the complete System

- To view MSP-level information, click **<MSP-Name> > Analytics X<sup>A</sup>**.

The **Analytics X<sup>A</sup>** page is displayed with consolidated information about from all the sites in that account.

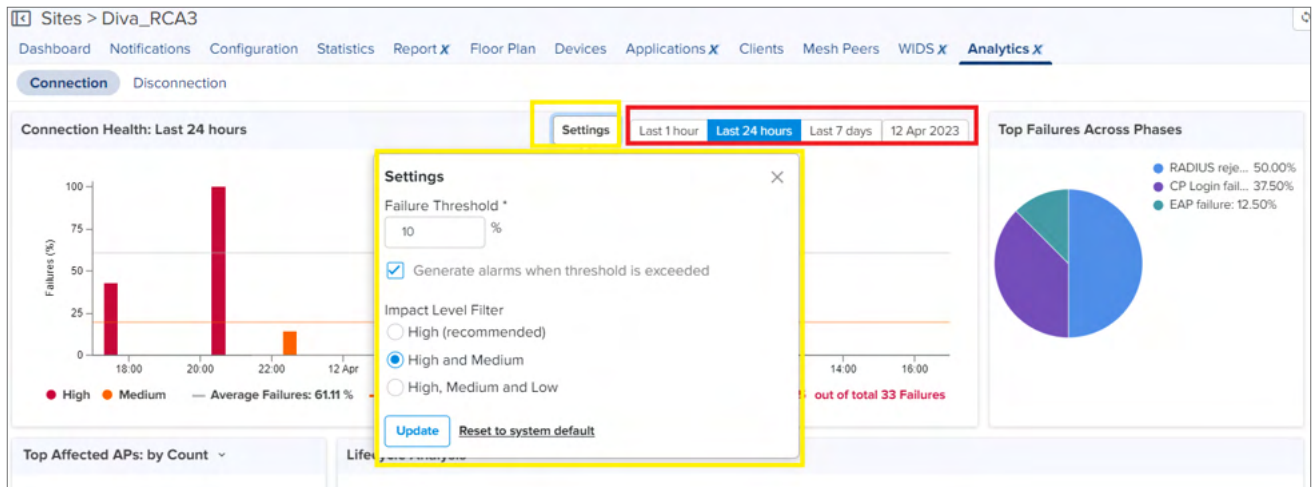

**Figure 463** Site-level information for an MSP

## Setting filters to view the connection data

After accessing the **Analytics X<sup>A</sup>** page, you may change the default threshold for failed connections and set the period to view the connection events such as 1 hour or 24 hours, or 7 days.

To set failure threshold and period:

1. Navigate to the **Connection** tab
2. Click **Settings** located inside the **Connection Health** widget.
3. Enter the **Failure Threshold**.  
The default value is 10% and higher. To reset the threshold, click **Reset to system default**.
4. Select the **Generate alarms when threshold is exceeded** check box to generate a System Alarm whenever the threshold is surpassed.
5. Select the **Impact Level Filter** as:
  - High (recommended) or
  - High and Medium or
  - High, Medium, and Low
6. To apply the configuration changes, click **Update**.
7. To view the connection or disconnection events for a specific period, select the **Settings** filter as
  - Last 1 Hour or
  - Last 24 hours (Resolution 1 hour) or
  - Last 7 days (Resolution 1 hour) or
  - **Date**: To view the connection or disconnection data for a specific date. The **Date** filter supports today's date and dates of the last seven days.

Based on the failure threshold, failure Impact filter, and the period, the **Dashboard** and **Analytics X<sup>A</sup>** pages display the Wi-Fi client's connection data. Whenever the failure percentage exceeds the configured failure threshold, the Analytics X<sup>A</sup> page automatically generates alerts.

#### Note

Consider the following key points specific to impact level failures:

- **High impact failure**—Occurs when a client is unable to establish a connection with an access point or transmit data over a connection. These failures are typically permanent until the underlying problem is resolved. High impact failures include incorrect pre-shared key (PSK); the VLAN not being configured or present on the switch; and AP software issues.
- **Medium impact failure**—Occurs when a client is intermittently unable to connect to a network, and the time to connect is relatively short (sub-seconds). These failures may not be

noticed by end users. They are caused by transient issues such as the moving client or when an access point locks the necessary information during the initial connection attempt. Medium impact failure events include fast transition (FT); authentication failure; missed packets during the four-way handshake; DHCP request process; or momentary interference from other wireless devices.

- **Low impact failure**—Occurs when a client is unable to connect to a network, without causing any noticeable impact for end users. These failures may arise due to specific wireless LAN features or configurations, such as band steering. These failures are expected, based upon the Wireless LAN protocols, and do not impact the user experience. In some cases, adjusting WLAN configuration can resolve such failure issues.

## Viewing the connection events

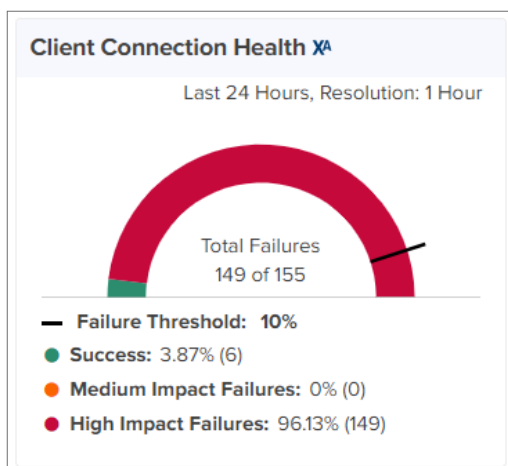

You can view and analyze the Wi-Fi connection events using the following UI pages:

- [Dashboard page](#)
- [Analytics X<sup>A</sup> page](#)

### Dashboard page

The site **Dashboard** page displays the following widgets:

- **Client Connection Health**—Displays overall statistics for connection events through a gauge/dial chart. Based on the impact level filter set on the **Analytics X<sup>A</sup> > Settings** page, this widget displays the statistics for failed connections.

The default Impact filter for a Site is High. The resolution of this chart is 1 hour, which means every 1 hour this chart is updated. This chart displays the data based on the threshold and the impact level filter you set.

- Number and percentage of successful connections.
- Number and percentage of impact level failures for failed connections.

#### Note

The **Client Connection Health** widget score is calculated, as follows.

$$\text{Score} = (\text{Failures} * 100) / (\text{Failures} + \text{Success}) \%$$

Depending on the selection of the impact level filter on the **Analytics X<sup>A</sup> > Settings** page, the failure count is calculated as follows:

- **High Impact**—Includes high impact failures only.
- **High and Medium Impact**—Includes medium and high impact failures.
- **High, Medium, and Low Impact**—Includes all failures: high, medium, and low impact.

- **Wi-Fi Client Analytics**—Indicates the percentage of failed connections at each step in the client lifecycle.

The phase-wise chart displays the current status by highlighting the phase in:

- **Red**—If the failure percentage exceeds the configured failure threshold configured in **Analytics X<sup>A</sup>> Settings** page,
- **Orange**—If the failure percentage falls within the range of 80-100% of the configured failure threshold,
- **Green**—If the failure percentage is below 80% of the configured failure threshold.

The **Wi-Fi Client Analytics** widget displays the connection state of clients to the Internet in the following phases:

- Duration in each phase indicates the average time taken by the clients in the respective phase.
- **Association**—Indicates the percentage of failed connections during the association phase.
- **Authentication**—Indicates the percentage of failed client authentications such as EAP, RADIUS, and authentication key derivation (EAPOL) failures.
- **DHCP**—Indicates the percentage of failed DHCP request/responses from/to the client.
- **DNS**—Indicates the percentage of failed DNS request/responses from/to the client.
- **Captive Portal**—Indicates the percentage of failed captive portal accesses.

#### Note

A captive portal is a web page launched in a browser that enables access to a public network. For example, business centers, airports, hotel lobbies, coffee shops, and other public venues use captive portals to offer free Wi-Fi hotspots for internet users.

## Analytics XA page

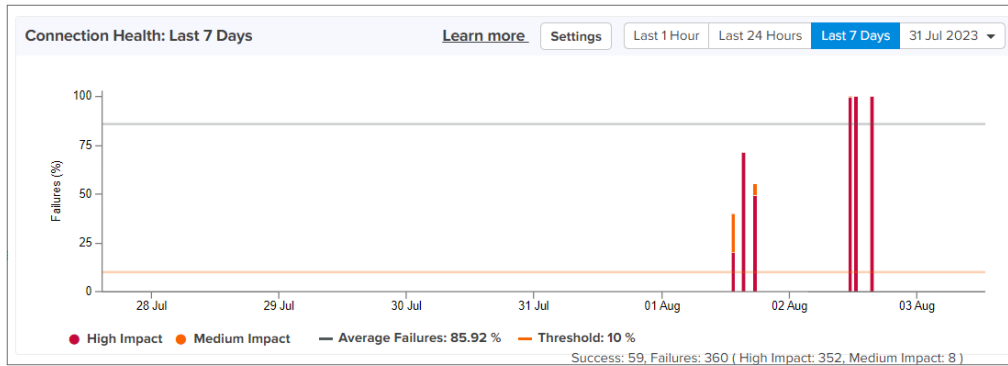

After accessing the **Analytics X** page and setting the failure threshold percentage, failure impact filter, and duration, you can analyze the connection events using the following tabs:

- [Connection](#)—Provides statistics for the connection events.
- [Disconnection](#)—Provides statistics for the disconnection events.

### Connection tab

Following widgets on the **Connection** tab show connection failure events for the configured duration:

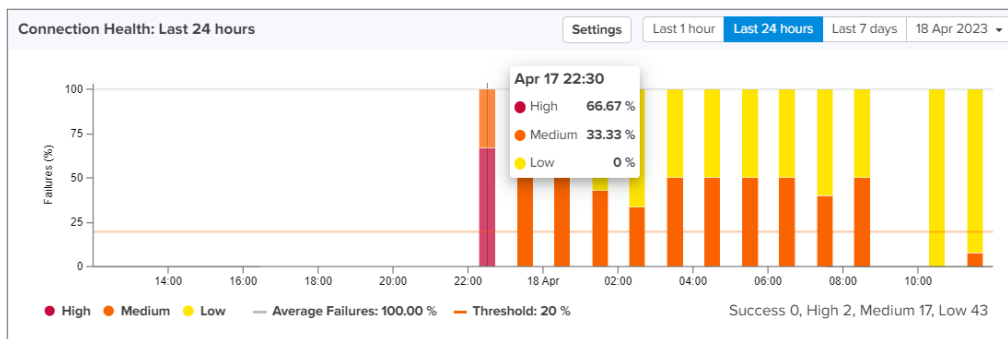

- **Connection Health**—Displays statistics of the failed connections in a bar chart, based on the threshold you set and the impact level failures in percentage.

The **Connection Health** bar chart represents the following data:

- Percentage of failed connections in a specific period for each Failure impact.
- Percentage of average failures highlighted by a grey line.
- Percentage of high, medium, and low impacted connections in different colors.
- Orange line indicates the Failure threshold percentage configured.

When you click on a bar in the chart, the chart displays the connection statistics for the selected date and time.

When you select a bar on the **Connection Health** chart, the following widgets display data for the selected failed connection event for the selected duration:

- Top Failures Across Phases
- Lifecycle Analysis
- Top Affected APs
- Top Affected Devices
- Top Affected OSes

**Note**

Click the  icon, located on the top right corner of the **Analytics X<sup>A</sup>** page, to refresh the page.

- **Top Failures Across Phases**—Displays statistics of top failed connections in a pie chart, indicating failure reasons across phases in percentage.

When you select any top failure slice on the pie chart, the following widgets display data for the selected top failure:

- Lifecycle Analysis
- Top Affected APs
- Top Affected Devices
- Top Affected OSes
- **Lifecycle Analysis**—Displays statistics for failed connections that help you analyze the life cycle of an event. By default, the phase with highest failure percentage is selected and highlighted.

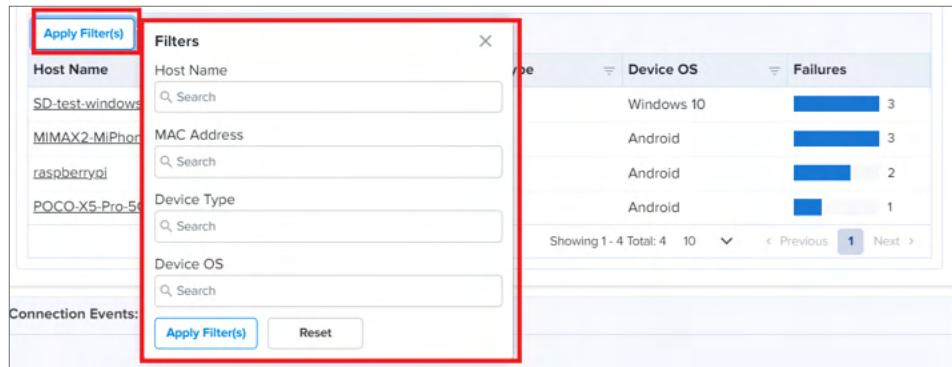

This **Lifecycle Analysis** widget displays data through the following formats:

- **Phase-wise chart**—Displays the phase-wise chart that indicates the percentage of failed Wi-Fi client connections. When you click on a phase, the line graph below the phase-wise chart displays the corresponding data.
- **Line graph**—Displays the count of failed connections based on the date and time.
- **Filters to view the required failed connection in detail**—Displays a detailed table to view failed connection events.

To use filters and view the details of a failed connection, perform the following steps:

1. Inside the **Lifecycle Analysis** widget, click **Apply Filter(s)** located below the line graph section.

2. To search for and view data of the required client's connection event, enter one or more of the following values:

Filter name	Description
Host Name	The name of the host for which you want to view the failed connection details.
MAC Address	The MAC address of the device for which you want to view the failed connection details.
Device Type	Type of device used for the connection.
Device OS	The operating system (OS) running on the device.

3. Click **Apply Filter(s)** to apply the changes.

A table below the line graph displays the count of failures for the searched criteria, as shown in the following figure:

Host Name	MAC Address	Device Type	Device OS	Failures
LGwebOSTV		Notebook	Linux	2
realme-X2		Phone	Android	2
OnePlus-9R		Phone	Android	1

#### Note

You can also click the  icon in the table to quickly search for Mac address, device type, device OS, and failure count.

When you click on a host name, the site-specific **Clients** page appears, displaying the connection data for the selected host.

- **Top Affected APs**—Displays the name of top affected APs and the statistics for the failed connection. To view the statistics of top affected APs in percentage or count, click the  icon next to the **Top Affected APs** widget title.

Placing the cursor on any colored bar, displays the failure type and count specific to the failed connection. If you click on any AP name, the site-specific **Wi-Fi** dashboard appears with the AP or device information.

- **Top Affected Device Types**—Displays the name of top affected device types and the statistics for the failed connection in count or percentage.
- **Top Affected OS**: Displays the name of top affected OS and the statistics for the failed connection in count or percentage.
- **Connection Events : Last 1 Hour**—A table with filters displays the details of successful or failed connection events that occurred in the last one hour.

**Note**

Failure events per AP, Device type, and OS are displayed only when an hourly bar is selected.

To use filters and view the connection details for the last one hour, perform the following steps:

1. Inside the **Connection Events : Last 1 Hour** widget, click **Apply Filters**.
2. To search and view data for the last one hour, enter one or more of the following details:

Filter name	Description
MAC Address	The MAC address of the device with connection events.
Success	Select whether you want to view successful or failed connection events. <ul style="list-style-type: none"> <li>• Success</li> <li>• Failed</li> </ul>
Reason	Select the required reason type from the drop-down list such as MAC-ACL, MAC-AUTH, QoS failure, Passpoint failure, Capability mismatch, L2 Auth failure, Association failure, Roaming failure, SAE failure, Cipher failure, or TDLS failure.

Filter name	Description
Impact	Select the required impact type from the list: <ul style="list-style-type: none"> <li>• Low</li> <li>• Medium</li> <li>• High</li> </ul>
Host Name	The name of the host for which you want to view the connection state.
Device Type	The type of device used for the connection.
Device OS	The operating system (OS) running on the device.

3. Click **Apply Filter(s)** to apply the changes.

The table displays the connection event details with date, time, and AP names for the searched criteria.

Connection Events: Last 1 Hour									
<a href="#">Apply Filter(s)</a>									
Date and Time	MAC Address	Status	Reason	Impact	AP Name	Host N...	Device ...	Devic...	
11 Apr 2023_09:50:44 AM		Failed	Association failure	Medium	Puma	realme-X2	Phone	Android	
11 Apr 2023_09:01:46 AM		Failed	Association failure	Low	Puma	realme-X2	Phone	Android	
11 Apr 2023_09:01:41 AM		Failed	Association failure	Medium	Puma	realme-X2	Phone	Android	

#### Note

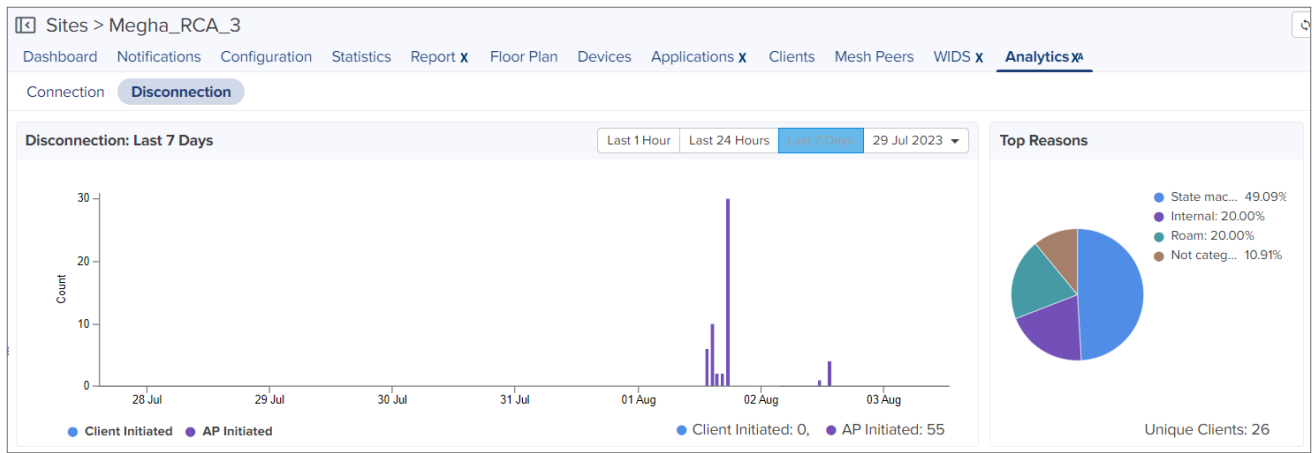

You can also click the  icon in the table to quickly search for status, reason, impact level, AP name, host name, device type, and device OS.

- When you click on any date and time, the **Events** page displays connection state data for the selected date and time.
- When you click on any AP name, the site-specific **Wi-Fi** dashboard displays the AP or device information.
- When you click on a host name, the site-specific **Clients** page displays the connection data for the selected host.

## Disconnection tab

On accessing the **Analytics X<sup>A</sup>** page, click on the **Disconnection** tab and set the time filter by choosing the required time period as last 1 hour, last 24 hours, last 7 days, or a custom date. The **Disconnection** tab displays the data for the selected time period.

The following widgets on the **Disconnection** page support root cause analysis:

- **Disconnection**—Displays the count of clients and APs initiated during the time period.

When you click on a bar in the chart, the chart displays the count of Clients and APs initiated at the specific date and time.

When you select any bar on the **Disconnection** chart, the following widgets display data for the selected disconnection event:

- Top Reasons
- Top Reporting APs
- Analytics
- Top Reporting Device Models
- Top Reporting Device Types
- Top Reporting OSes

**Note**

Click the  icon, located on the top right corner of the **Analytics X<sup>A</sup>** page, to refresh the page.

- **Top Reasons**—Displays statistics of top failure reasons such as state machine issues, roam, QoS failures, and timeout failures.

When you select any top failure slice on the pie chart, the following widgets display data for the selected top failure:

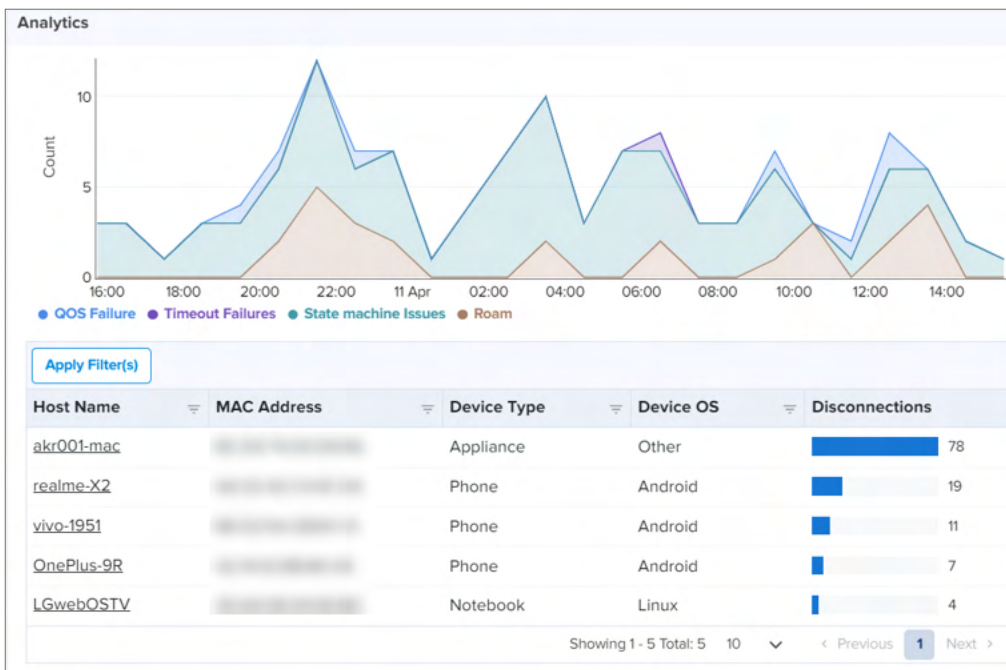

- Top Reporting APs
- Analytics
- Top Reporting Device Models
- Top Reporting Device Types
- Top Reporting OSes

#### Note

Click the icon, located on the top right corner of the **Analytics X<sup>A</sup>** page, to refresh the page.

- **Analytics**—Displays statistics for disconnections to help analyze failure events in detail.

This **Lifecycle Analysis** widget displays data in the following formats:

- **Line graph:** Displays the count of disconnections, including the date, time, and failure reasons in different colors.
- **Filters to view the required disconnection in detail:** A table with filters displays detailed information of a disconnection event.

To use filters and view the details of a disconnection event, perform the following steps:

1. Inside the **Analysis** widget, click **Apply Filters** located below the line graph section.
2. To search for and view data of the required client's disconnection state, enter one or more of the following:

Filter name	Description
Host Name	The name of the host for which you want to view the disconnection details.
MAC Address	The MAC address of the device for which you want to view the disconnection details.
Device Type	Type of device used for the connection.
Device OS	The operating system (OS) running on the device.

3. Click **Apply Filter(s)** to apply the changes.

A table below the line graph section displays the count of disconnections for the searched criteria, as shown in the following figure:

Host Name	MAC Address	Device Type	Device OS	Disconnections
akr001-mac		Appliance	Other	78

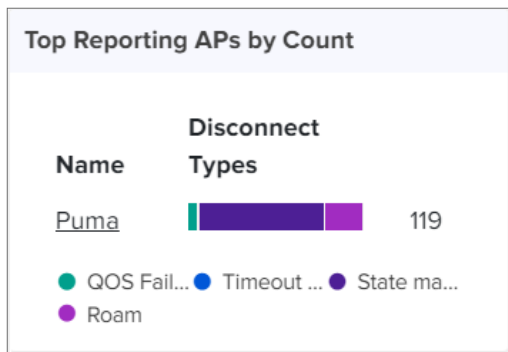

**Note**

You can also click the  icon in the table to quickly search for MAC address, device type, device OS, and disconnection count.

When you click on a host name, the site-specific **Clients** page displays the disconnection state data for the selected host.

- **Top Reporting APs**—Displays the names of top APs and the count of disconnections in different colors based on the disconnection types.

When you place your cursor on any color, you can view the reason type and count specific to the disconnection type.

- **Top Reporting Device Types**—Displays the names of the top devices and the count of disconnections in different colors based on the disconnection reasons. When you place your cursor on any color, you can view

the reason type and count specific to the disconnection events.

- **Top Reporting OS**—Displays the names of top OS and the count of disconnections. Different colors are used to highlight the disconnection reasons. When you place your cursor on any color, you can view the reason type and count specific to disconnection.
- **Disconnect Events: Last 1 Hour**—A table with filters displays the data of disconnection events that occurred in the last one hour.

To use filters and view the disconnection state details for the last one hour, perform the following steps:

1. Inside the **Disconnect Events : Last 1 Hour** widget, click **Apply Filters**.
2. To search for and view data of the disconnection events, enter one or more of the following:

Filter name	Description
MAC Address	The MAC address of the device for which you want to view the disconnection events.
Reason	Select the type of reason from drop-down list such as Unknown-disc-O, QoS failure, Radius failures, TDLS failures, timeout failures, state machine issues, AP Resource failures, AP assisted roaming, and roam.
Host Name	The name of the host for which you want to view the disconnection state.
Device Type	Type of device used for the connection.
Device OS	The operating system (OS) running on the device

3. Click **Apply Filter(s)** to apply the changes.

The table displays the disconnection state with date, time, and AP names for the searched criteria.

Date and Time	MAC Address	Reason	AP Name	Host Na...	Device T...	Device ...
11 Apr 2023, 03:36:10 PM	[blurred]	Roam	Puma	realme-X2	Phone	Android

**Note**

You can also click the  icon in the table to quickly search for MAC address, reason, AP name device type, device OS, and disconnection count.

- When you click on any date and time, the **Events** page displays the disconnection state data for the selected date and time.
- When you click on any AP name, the site-specific **Wi-Fi** dashboard displays the AP or device information.
- When you click on a host name, the site-specific **Clients** page displays the disconnection state data for the selected host.

### Viewing a client or host-specific connection or disconnection event

You can analyze client or host-specific connection or disconnection events in detail and take appropriate actions.

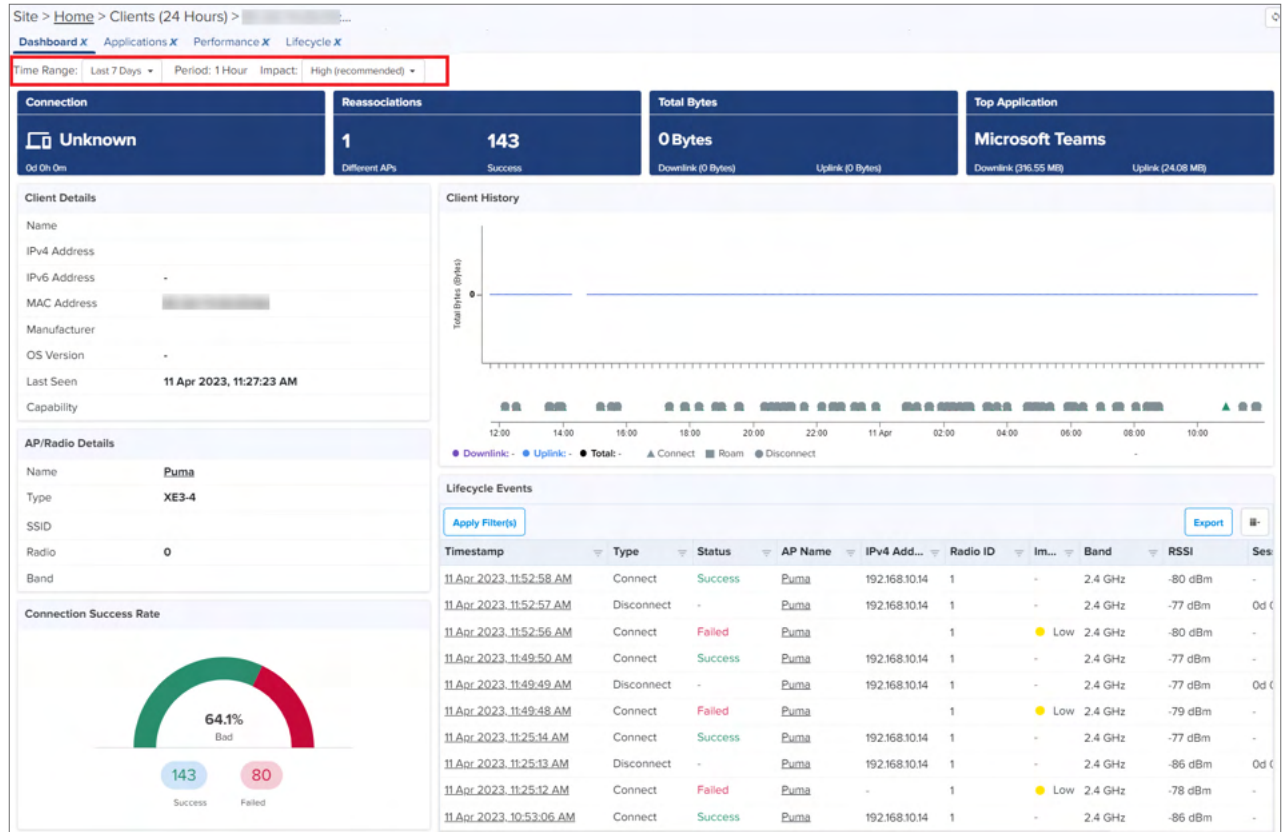

To view client or host-specific information, perform the following steps:

1. Click on a host name to view the connection or disconnection state in detail.

You can locate the host names in the following widgets:

- **Lifecycle Analytics** on the Connection page—host names are available in a table below the line graph section.
- **Connection Events: Last 1 Hour** on the Connection page.
- **Analytics** on the Disconnection page.
- **Disconnect Events: Last 1 Hour** on the Disconnection page.

When you click the required host name, the site-specific **Clients** page displays detailed information for the selected host. The following figure is an example of the site-specific **Clients** page:

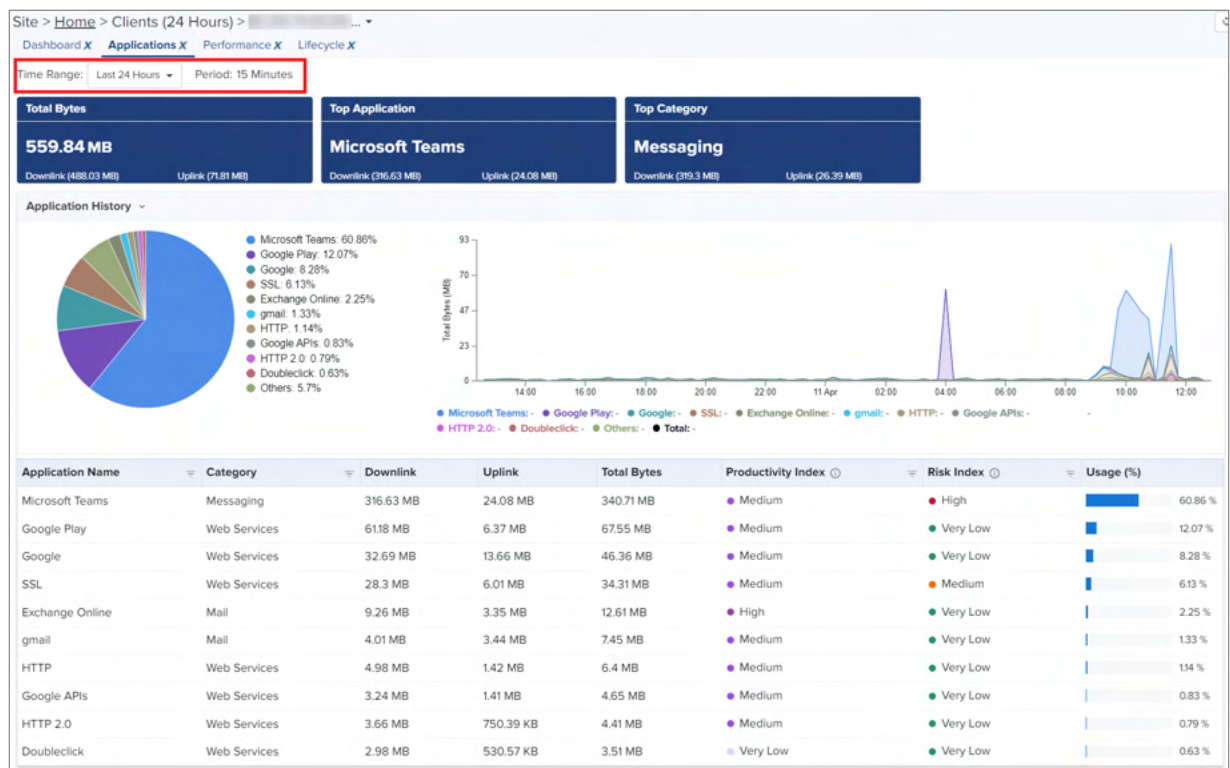

This site-specific **Clients** page contains the following tabs:

- **Dashboard**—Provides a summary of the client connection or disconnection events such as Client history or lifecycle events.

By default, the **Dashboard** tab is visible when the site-specific **Clients** page appears. Based on the period options such as Last 24 Hours or Last 7 Days from the **Time Range** filter on the **Dashboard** page, the site-specific **Dashboard** page displays the Wi-Fi client information in the following widgets:

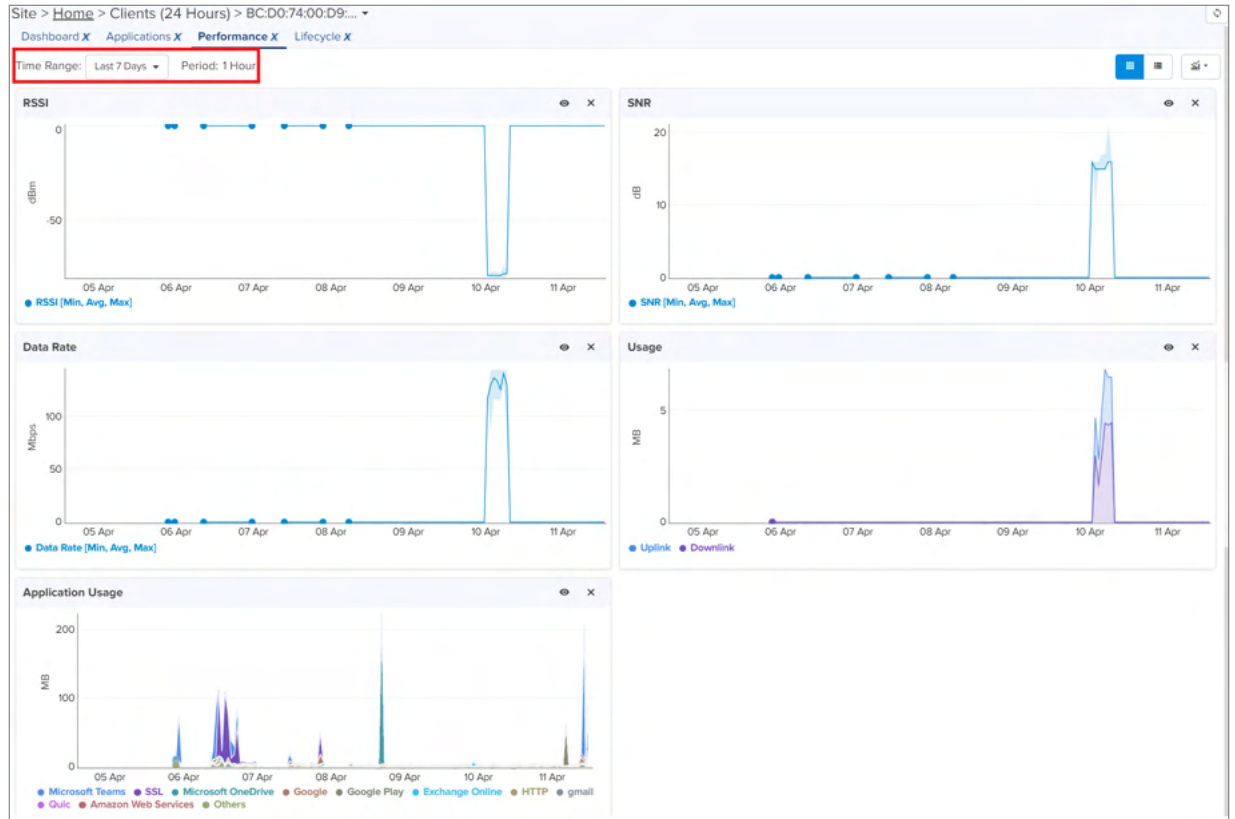

- Connection
- Reassociations
- Total Bytes
- Top Application
- Client Details

- Client History
- AP/Radio Details
- Lifecycle Events
- Connection Success Rate
- Top Failures Across Phases
- RSSI
- SNR
- Top Applications
- Data Rate
- Top Categories
- **Applications**—Provides detailed information of top applications used for the connection.

Based on the time period you select from the **Time Range** filter on the **Applications** page, the **Applications** page displays the application information for the Wi-Fi client in the following widgets:

- Total Bytes
  - Top Application
  - Top Category
  - Application / Category History
- Click the  icon (for example, next to **Application History**) to view the history of category details.
- **Performance**—Provides detailed information of RSSI, SNR, data rate, usage in uplink and downlink, and the application usage.

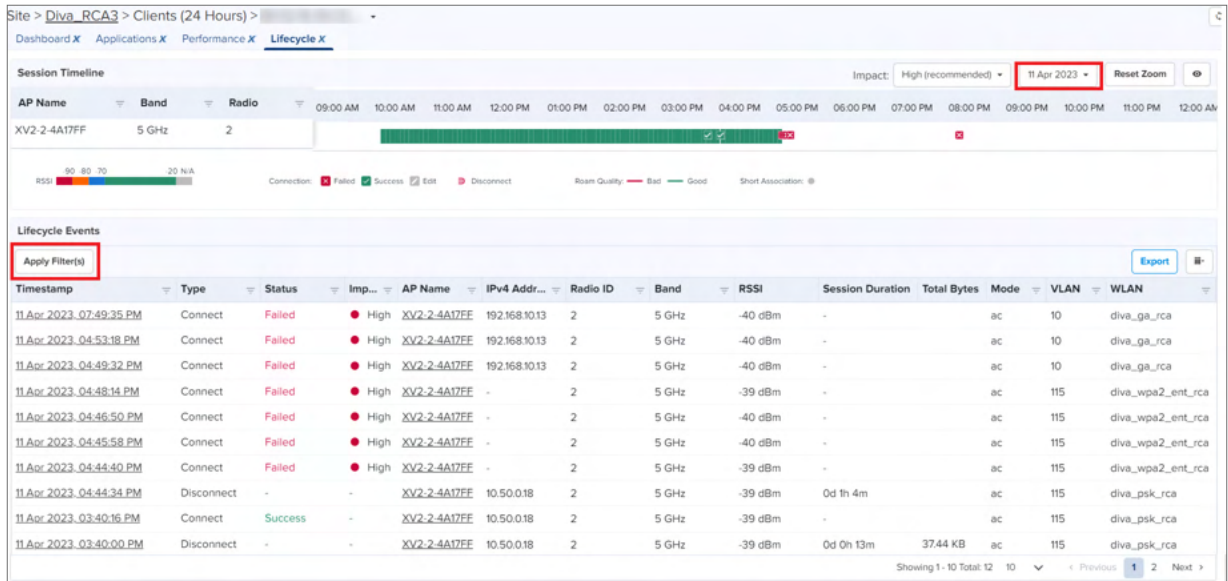

Based on the time period you select from the **Time Range** filter on the **Performance** page, the **Performance** page displays the network performance for the Wi-Fi client in the following widgets:

- RSSI
- SNR
- Data Rate
- Usage
- Application Usage

You can click the  icon (Data point selector) to filter and view the required options specific to performance in the widgets.

- **Lifecycle**—Provides detailed information of the client's connection or disconnection events.

Based on the date and impact levels you select from the date and **Impact** filters, the **Lifecycle** page displays the session timeline and the lifecycle events of the Wi-Fi client for the selected date.

In the **Session Timeline** section, you can find the AP names, band used, and the radio index. In addition, different indicators mark RSSI, the connection event as failed or success, the disconnection event, roam quality as bad or good, and short association.

For example, in the following UI page, the RSSI ranges and bad and good roam quality are highlighted using different colors.

- Placing the cursor on the icon, displays date and time of the succeeded event.
- Placing the cursor on the icon, displays reason and cause for the failed event.
- Clicking or icon in the **Session Timeline** section, displays the **Events** page with detailed information for the selected event.
- Clicking the disconnect ( ) icon, displays details about the event and disconnection reason.
- The short association ( ) icon denotes that the client connected and disconnected within a minute.
- The edit ( ) icon denotes that the client connection failed in DHCP, DNS or Captive portal phase in the first connection attempt but succeeded later.

#### Note

A client connection is considered failed in DHCP, DNS, or CP, if the client fails to complete the phase within 45-60 secs.

The **Lifecycle Events** section provides detailed information of the client's connection and disconnection events such as timestamp, connection type, connection status, AP name, IPv4 address, radio ID, impact of

the event, band used, RSSI, session duration, total bytes, wireless mode used, VLAN used, and WLAN details.

You can also use the filters to view and analyze the required event information. To view the required lifecycle event using filters, perform the following steps:

- a. In the **Lifecycle Events** section, click **Apply Filter(s)**.
- b. Enter one or more of the following details:

Filter name	Description
Timestamp	Time period for which you want to view the data: <ul style="list-style-type: none"> <li>• Between</li> <li>• After</li> <li>• Before</li> </ul>
Type	Type of event for which you want to view the data: <ul style="list-style-type: none"> <li>• Roam</li> <li>• Connect</li> <li>• Disconnect</li> </ul>
Status	State of the event: <ul style="list-style-type: none"> <li>• Success</li> <li>• Failed</li> </ul>
AP Name	Name of the AP that is used in the event.
IPv4 Address	The IPv4 address used for the connection.
Radio ID	ID of the radio used in the event.
Impact	Impact level of the event. <ul style="list-style-type: none"> <li>• Low</li> <li>• Medium</li> <li>• High</li> </ul>
Band	The bandwidth used for the connection.
Mode	The standard wireless mode used for the connection. For example: 802.1ac
VLAN	The VLAN ID used for the connection.
WLAN	The WLAN ID used for the connection.

**Note**

You can also click the  icon in the **Lifecycle Events** table to quickly search for type, status, AP name, IPv4 address, radio ID, impact, band, RSSI, VLAN, and WLAN.

- c. Click **Apply Filter(s)**.

The table in the **Lifecycle Events** section is updated with the required information for the client or host.

You can also drill-down an event to view what went wrong during the connection or the reason for the disconnection event.

2. Analyze the data for the required client or host and take actions.

## Viewing an event-based connection or disconnection event

After viewing the lifecycle events for a specific client or host, you can drill-down an event to analyze what caused a failed connection or a disconnection.

To view an event-based connection or disconnection state, perform the following steps:

1. Click **Date and Time** or **Timestamp** to view the connection or disconnection event in detail.

You can locate a date or timestamp in the following widgets:

- **Timestamp** in the **Lifecycle Events** widget available on both the **Connection** page and the **Disconnection** page)
- **Date and Time** in the Connection Events: Last 1 hour widget on the **Connection** page
- **Date and Time** in the Disconnect Events: Last 1 hour widget on the **Disconnection** page

When you click on **Timestamp** or **Date and Time**, the **Events** screen displays the detailed event information.

The screenshot shows the 'Events (IN01-1CQTTJ2)' screen in the Cambium Networks Maestro MSP View. The interface is divided into several sections:

- Event Details:** A table on the left provides metadata for the event:

Type	Connect
Status	Failed
Device OS	Linux
Device Type	Notebook
MAC Address	[Redacted]
Hostname	IN01-1CQTTJ2
Username	unknown
IPv4 Address	192.168.10.13
VLAN	10
AP Name	XV2-2-4A17FF
BSSID	[Redacted]
Mode	ac
Capability	ax
Band	5 GHz
Radio ID	2
WLAN	diva_ga_rca
RSSI	-40 dBm
Timestamp	11 Apr 2023, 07:49:35 PM
- Event Flow Diagram:** A sequence of steps showing the connection process: Association (Open-Auth, 12ms), Authentication (N/A, +12ms), DHCP (N/A, IP), DNS (24ms, DNS), and Captive Portal (N/A, +10s). The Captive Portal step is highlighted with a red box, indicating a failure.
- Captive Portal Details:** A sub-diagram shows 'Portal Redirect' leading to 'login\_req'.
- Reason:** Client didn't initiated Captive Portal Login (Code: 1076, Type: 27)
- Impact (High):** The impact is high because the user is unable to access the internet without logging in through the captive portal.
- Cause:** Client just connected but never initiated captive portal login resulting in this failure.
- Resolution:** Check with end user.

The **Events** page provides phase-wise information with complete event details such as reason, impact, cause, and resolution. These event-based details help with troubleshooting.

2. To view an event for a specific date, you can select the required date from the date drop-down list.

Similarly, you can use < or > to view time-based events for a client. You can also select the time-based events from the drop-down list.

3. Click the ✕ icon to close the **Events** page.

## Viewing an AP-specific information

You can view an AP-specific information for the required client or event and analyze the connection or disconnection data. This analysis helps identify device details used for the connection.

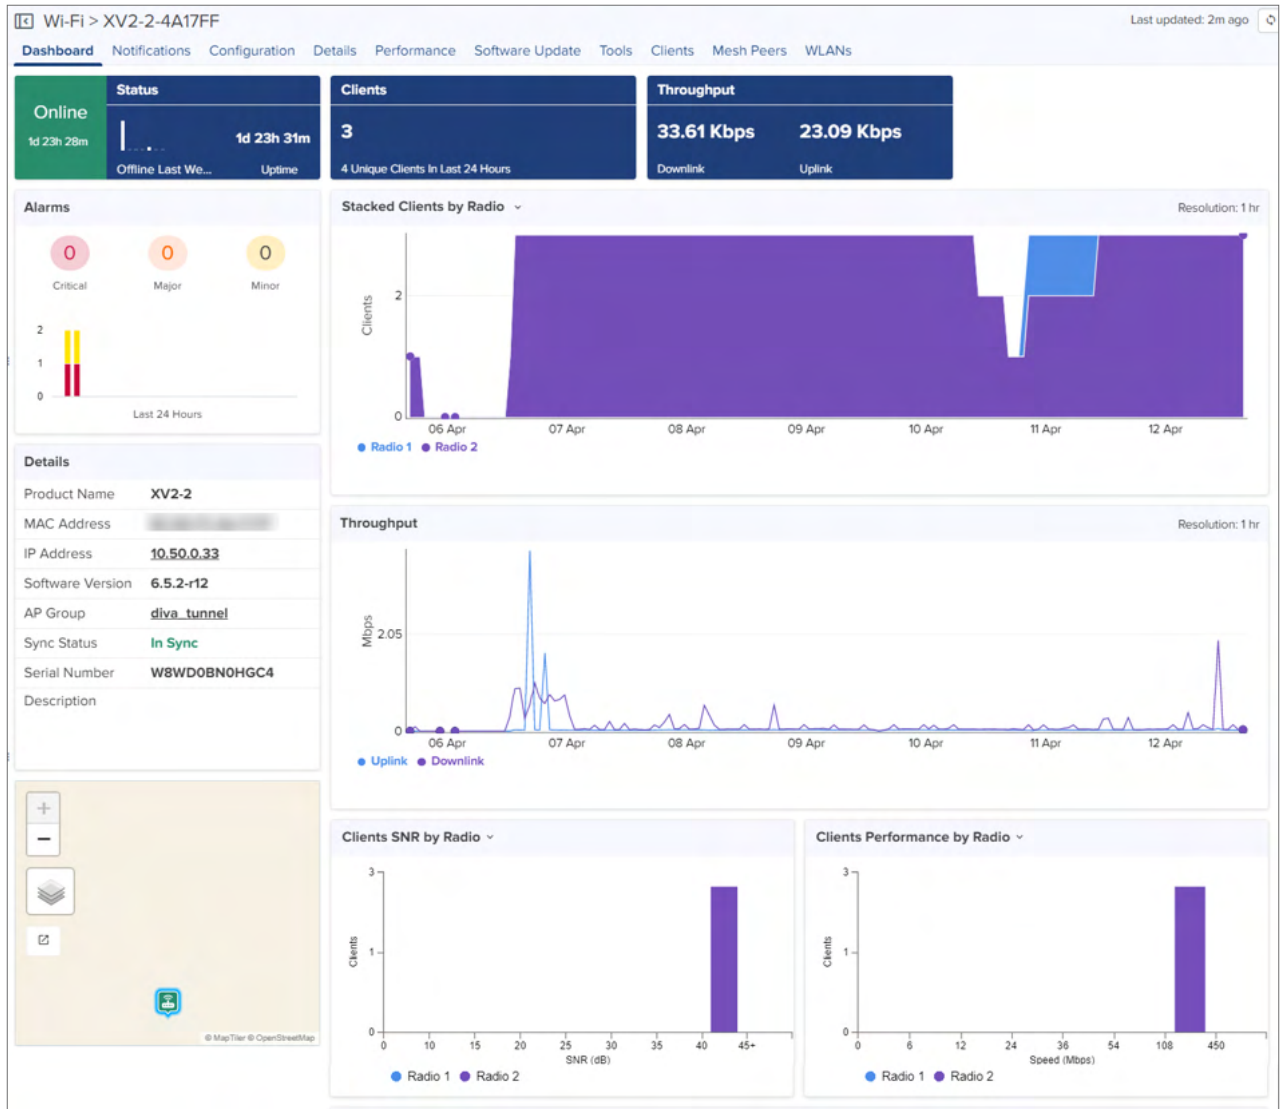

To view AP-specific information, perform the following steps:

1. Click the **AP Name** to view the data.

You can locate an AP name in the following widgets:

- Top Affected APs on the **Connection** page
- Connection Events—Last 1 Hour on the **Connection** page
- Top Reporting APs on the **Disconnection** page
- Disconnect Events—Last 1 Hour on the **Disconnection** page
- Lifecycle Events on both the **Connection** and **Disconnection** pages

When you click on the required AP name, the site-specific **Wi-Fi** dashboard displays the AP or device information.

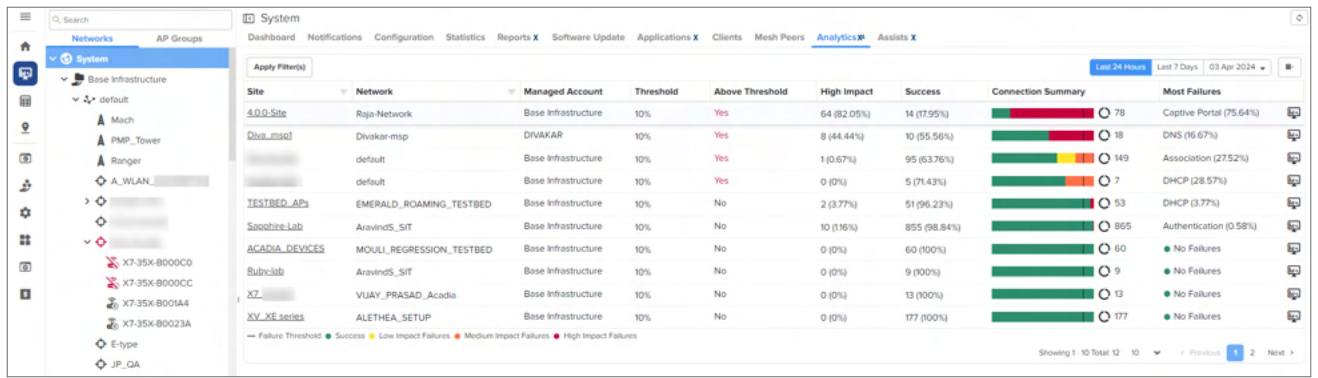

For more information on the AP (or device) specific dashboard, refer to the Wireless LAN Dashboards section of cnMaestro Cloud User Guide.

2. Analyze the AP data and take appropriate actions.

## System Analytics

The System Analytics page provides the consolidated data of all the Site Analytics. For more information, refer to the [Analytics X<sup>A</sup> page](#) section.

Figure 464 System Analytics

# Managed Services

This section includes the following topics:

- [Managed Accounts](#)
- [Managing subscribers \(end-customer\)](#)

## Managed Accounts

This section includes the following topics:

- [Overview](#)
  - [Managed Accounts](#)
  - [Accounts](#)
  - [Managed Account Service](#)
  - [Account Service Users \(Administrators\)](#)
- [Configuring Managed Account Services](#)
  - [Enable Managed Accounts](#)
  - [Creating Managed Account Services](#)
  - [Creating Account](#)
  - [Validating Account Users](#)
- [Managed Account Administration](#)
  - [Overview](#)
  - [System Dashboard](#)
  - [Account Administration](#)
  - [Device Management](#)
  - [Swap 60 GHz cnWave Accounts](#)
  - [Disabling the Managed Accounts feature](#)

## Overview

Managed Accounts allow the cnMaestro owner to partition their installation into independent accounts with their own administrators and configuration. This feature is for MSPs who want to provision a full cnMaestro account for their customers, while still maintaining control over the global deployment.

## Managed Accounts

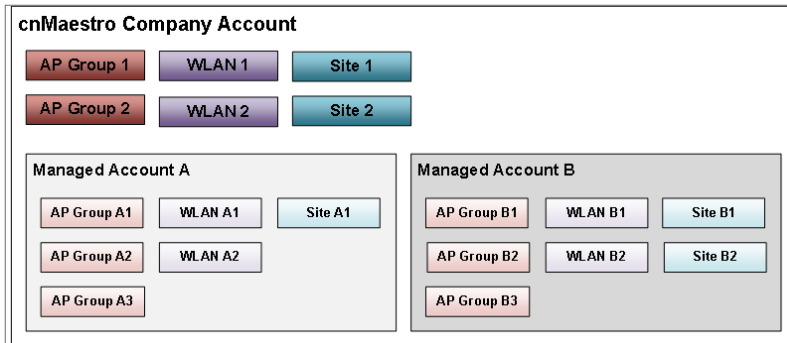

The Managed Accounts feature combines Accounts with Account Services.

## Accounts

Managed Accounts group cnMaestro devices and configuration objects (such as AP Groups, WLANs, and Sites) into administration domains within a single cnMaestro deployment . Accounts are independent, and the devices added to them are configured using the objects in the Account.

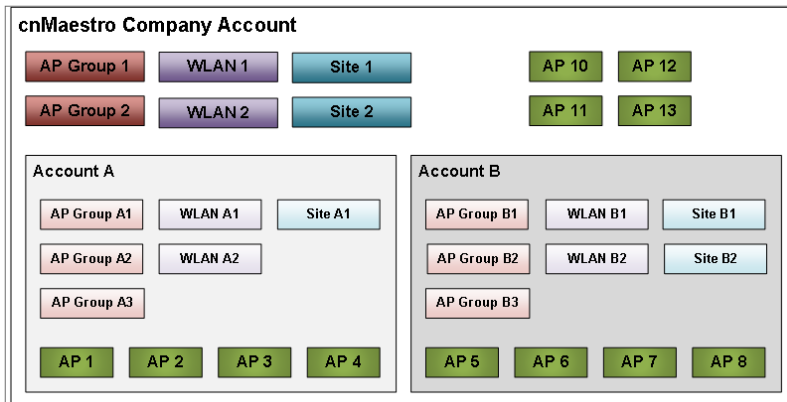

Figure 465 Accounts

## Access Points

Access Points exist in the global Company Account, or they can be added to a single Managed Account. Access Points in a Managed Account are configured using the Wi-Fi Profiles in that Managed Account.

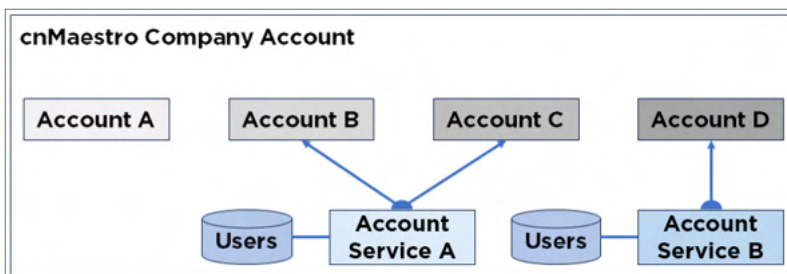

Figure 466 Access Points

## Managed Account Service

A Managed Account Service creates a branded version of the cnMaestro UI. Each Account Service can be mapped to multiple Accounts.

Figure 467 Account Service

Each Managed Account Service adds the following support to an Account:

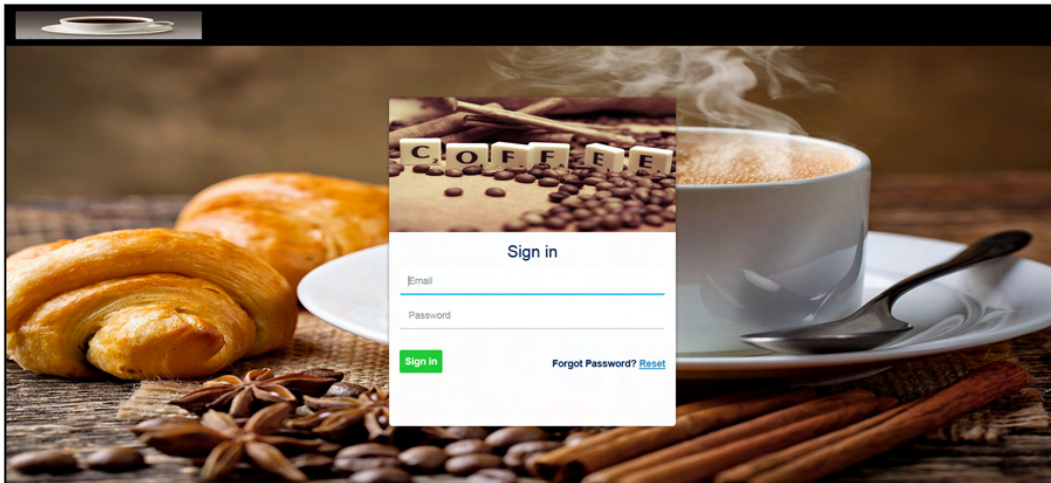

Support	Details
Administrator Database	Each Account Service has its own independent database of users who can be shared across multiple Accounts.
Custom Login URL	The path of the login URL used by the Account Service Administration can be tailored to the Account Service. The path must be unique across all cnMaestro.
Branded UI	The Account UI is customized for the Account Service through graphics, colors, and text.
Account Service Users	List of all the users mapped to the Managed Account Service. They may be mapped to zero or more associated Accounts.

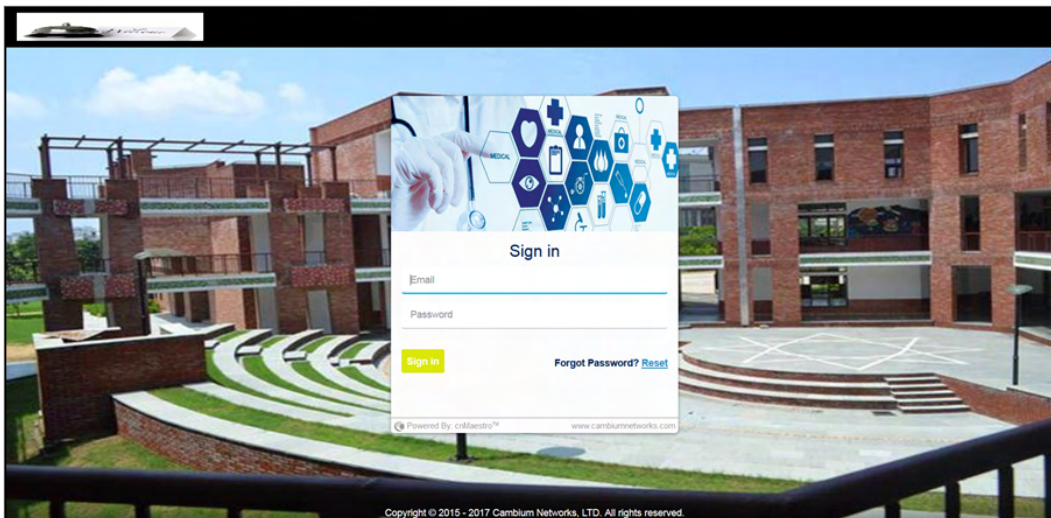

## Account UI

The Account UI can be customized to represent the service brand. A sample Account UI is shown below:

**Figure 468** Account UI - Sample 1

**Figure 469** Account UI - Sample 2

## Account Service Users (Administrators)

Account Service Users are assigned to Accounts. They access similar features as the Global cnMaestro Administrators, except they are only allowed to manage the subset of devices and objects (AP Groups, WLAN, Sites, etc.).

## Account Service Users (Administrators) Roles

Account Service Users can be assigned one of three roles as shown below for each account:

- Administrator
- Monitor
- Operator

The authorizations for each Role are listed in the table below:

**Table 104** *Tenant Administrator Roles*

Feature	Description	Administrator	Operator	Monitor
AAA Services (Global cnMaestro administrator only)	Add AAA services	None	None	None
Administration Settings (Global cnMaestro administrator only)	Change global application configuration, Onboarding settings like password change	None	None	None
API Management (Global cnMaestro administrator only)	Create API clients	None	None	None
Application Operations 1	Create Networks, Towers, and Sites	All	View	View
Application Operations 2	Tech Dump, import/export server data, change Account Type (Enterprise or Access and Backhaul)	None	None	None
Association ACL	Configure MAC list on the controller	All	View	None
Auto- provisioning (Global cnMaestro administrator only)	Support for global auto-provisioning rules	None	None	None
Audit logs	Logs user action of different features	All	All	All
Device Operations	Reboot device, link test, connectivity test	All	All	None
Device Override	Per-device configuration changes	All	All	View
Global Configuration	Apply Configuration through Templates and AP Group	All	View	View
Guest Access	Guest Access	All	View	View

**Table 104** *Tenant Administrator Roles*

Feature	Description	Administrator	Operator	Monitor
Portal				(Sessions)
Monitoring	Access Device Statistics Data	All	All	View
Notifications	View Alarms and Events	All	All	View
Onboarding	Approve Device Onboards	All	All	View
Reporting	Generate reports	All	All	All
Software Images (Global cnMaestro administrator only)	Download device software images	All	None	None
Software Upgrade	Upgrade device	All	All	View
System Operations	Reboot VM, change log level, system upgrade, system monitoring	None (Except System Monitoring)	None (Except System Monitoring)	None (Except System Monitoring)
User Management	Manage users, roles, and sessions	All	None	None

## Configuring Managed Account Services

This section provides the following details on configuration of Account Services in cnMaestro:

- [Enable Managed Accounts](#)
- [Creating Managed Account Services](#)
- [Creating Account](#)
- [Validating Account Users](#)

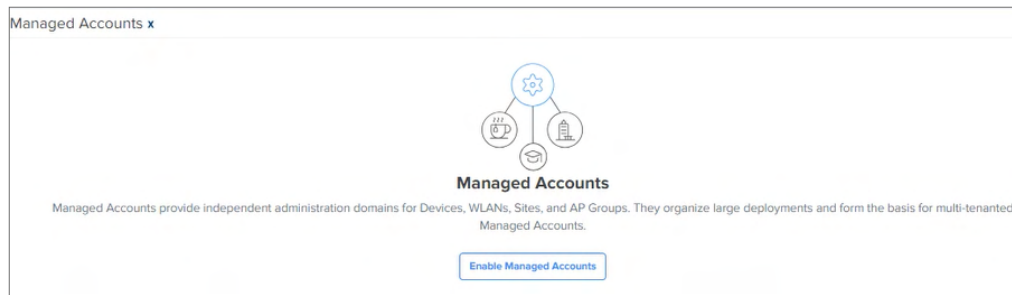

### Enable Managed Accounts

By default, Account Services is disabled in the cnMaestro UI.

To enable Account Services:

1. Navigate to **Managed Services > Managed Accounts**.
2. Click the **Enable Managed Accounts**.

**Figure 470** *Enabling Managed Accounts*

**Note**

Account Services provide independent administration domains for Devices, WLANs, Sites, and AP Groups. They organize large deployments and form the basis for multi-tenanted Account Services.

**Additions in the cnMaestro UI when Managed Accounts is Enabled**

- Once Managed Accounts is enabled, **Accounts** and **Account Services** tabs appear in the cnMaestro UI.

**Figure 471** *Accounts and Account Services tabs*

Managed Services > Managed Accounts x

[Accounts](#) [Account Services](#)

Accounts group cnMaestro devices and configuration objects (such as AP Groups, WLANs, and Sites) into independent administration domains within a single cnMaestro.

**Figure 473** Dashboard > Top Managed Accounts

- Global tabs in the UI are updated with a Managed Account column.

**Figure 474** Managed Account Column

## Creating Managed Account Services

The user can create an Account Service and map it to an Account. The Account Service supports an independent user database and a customized user interface. There is a default Account Service, so creating a new one is optional.

To create an Account Service:

1. Navigate to **Managed Services > Managed Accounts > Account Services** tab.

Account Services Tab

Managed Services > Managed Accounts x

Accounts [Account Services](#)

Account Services optionally map Managed Accounts to external Tenant Administrators. The Account Service supports a unique Tenant database and Login URL. System administrators maintain full control of the accounts and can assign role-based access to Managed Account users.

[New Account Service](#)

[Redacted] OLT	[Redacted]	<input type="checkbox"/> [Redacted]	Enabled	0	1	0 of 0 offline	0 0	[Icons]

2. Click **New Account**.

The **Add Account** window is displayed.

**Figure 476** Add Account window

The screenshot shows a dialog box titled "Add Account" with a close button (X) in the top right corner. The form contains the following elements from top to bottom: a text input field for "Name\*" (with an asterisk indicating it is required), a text input field for "Friendly Name", a "Status" section with two radio buttons: "Enabled" (which is selected) and "Disabled", a dropdown menu for "Account Service" currently showing "aye", a small information icon (i) and text "The Account Service supports unique UI branding and Login URL.", a text input field for "Email", another dropdown menu for "Role" currently showing "Administrator", a second small information icon (i) and text "Access all functionality, including adding/deleting local users.", and finally two buttons at the bottom: "Add" (highlighted in blue) and "Cancel".

3. Enter the following details:

**Table 106** Parameters in the Add Account Window

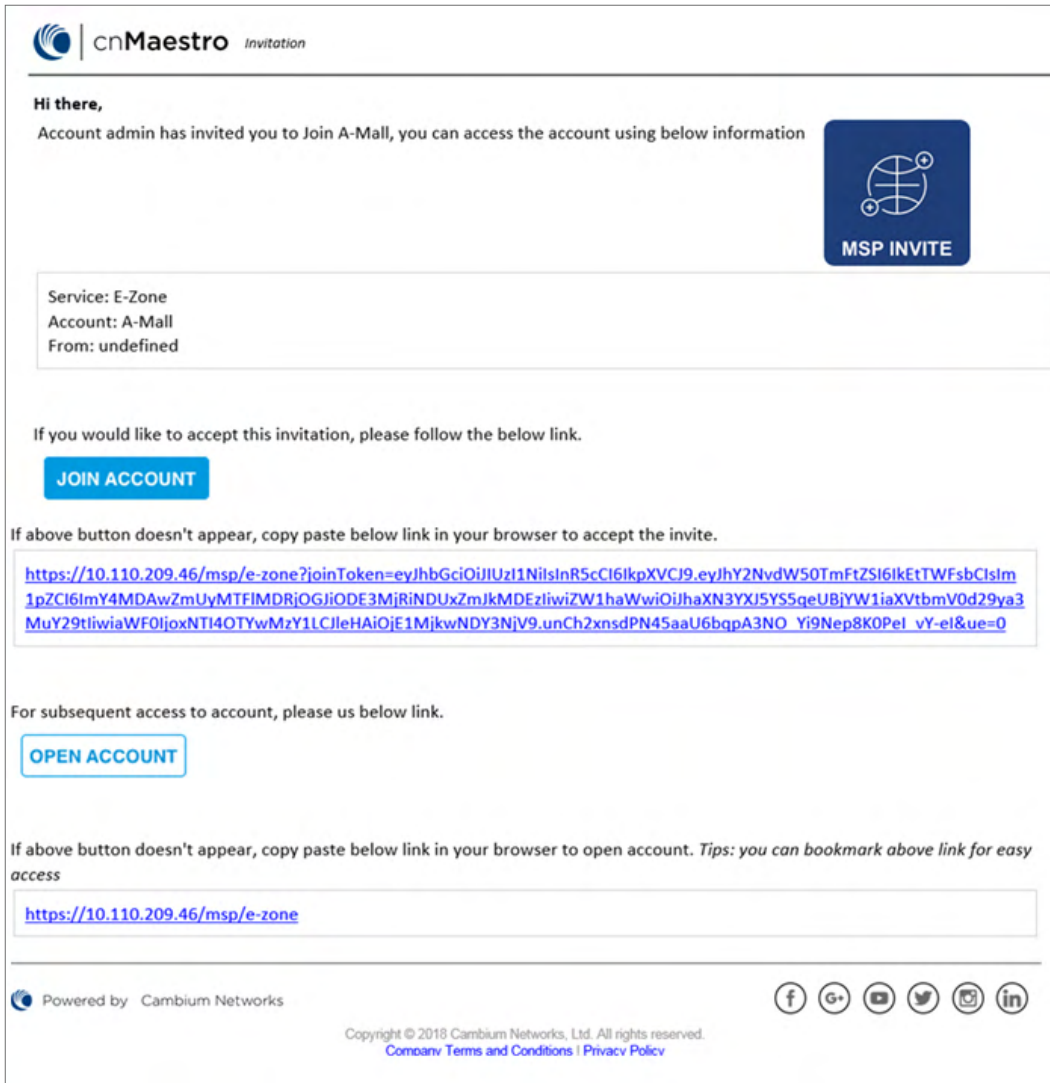

Parameter	Description
Name	Name of the Account. This is sent in the invitation email when users are invited to the account.
Friendly Name	The Friendly Name will be sent in the invitation email.
Status	Determines whether the account is enabled or disabled. When an account is disabled, all Account Users (users) are logged out.
Account Service	The Account Service used for branding and authentication.
Email	The email address of the first Account User. You can add more users after the account has been created.

4. Click **Add**.

## Validating Account Users

Once an Account is created, the Account User is sent an email invitation. The email provides directions on how to access the Account UI and set their password.

Figure 477 Sample Email Invitation

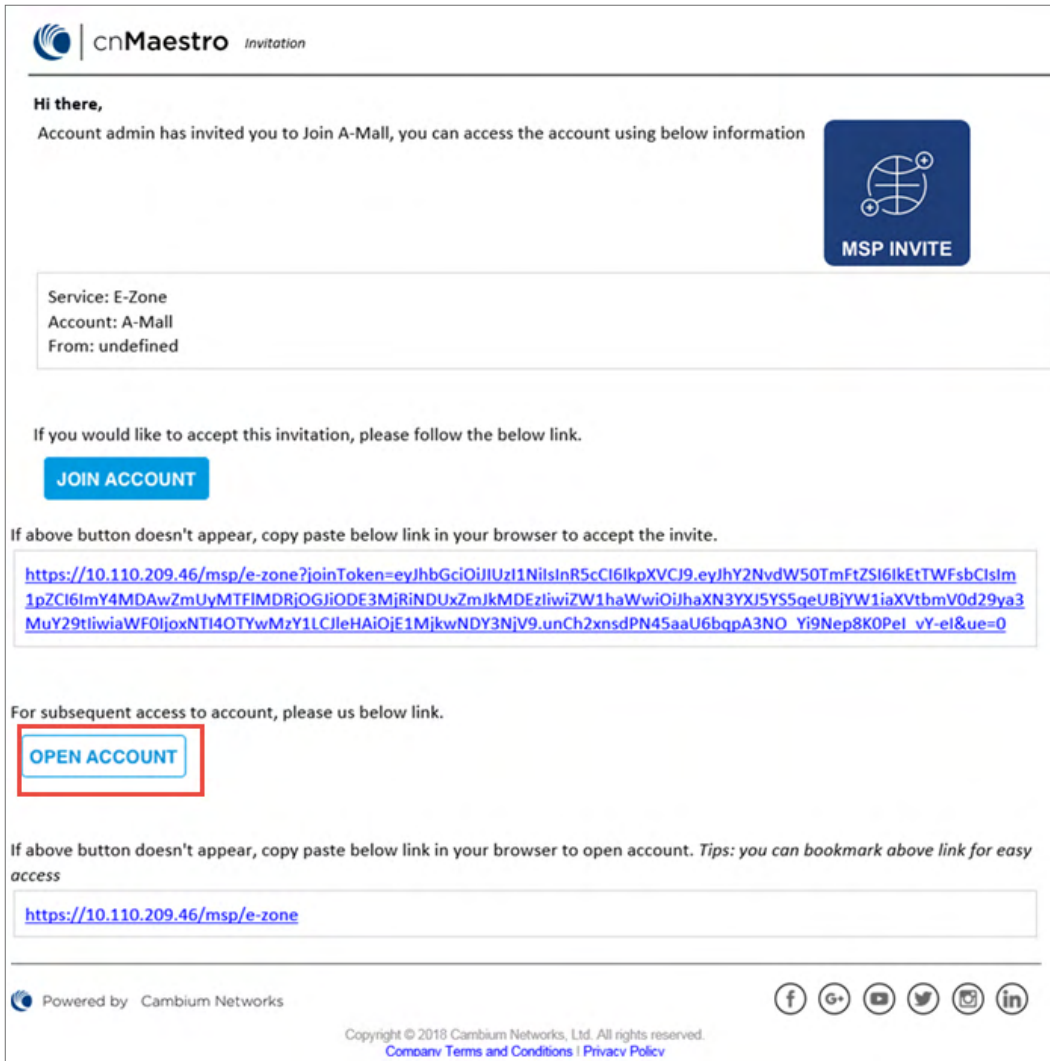

## Check Email for Invite

An email is sent inviting the Account User to view their new Managed Account. It has a link that must be clicked to enable access.

Figure 478 Checking Account Administrator User Email

## Create Account in Account Service

Clicking the link prompts the user to create a new Account or use an existing Account.

### Note

If a user already has an Account in the Account Service, they can use their existing email login to accept the invite for the new Account. In the global cnMaestro UI, switching between accounts is accomplished using the choice box in the UI header (upper right).

## Login to the Accounts UI

Once the Account Administrator (User) is created, use the URL listed in the **Login Path** column to login.

**Figure 479** A Sample Login URL

Managed Services > Managed Accounts x

Accounts [Account Services](#)

Account Services optionally map Managed Accounts to external Tenant Administrators. The Account Service supports a unique Tenant database and Login URL. System administrators maintain full control of the accounts and can assign role-based access to Managed Account users.

## Managed Account Administration

### Overview

Once Managed Accounts are enabled, there are three ways to administrator the Accounts.

- [System View](#)
- [Account View](#)
- [Account Administrator \(User\) View](#)

### Important Points to Remember

Please note the following points for Account Services administration:

#### Note

- When a device is moved from one Account to other, it goes offline for one minute before appearing online. Only active alarms are moved to the new account and other data is retained in the old account.
- The Managed Accounts feature can be disabled only if all devices in Accounts are deleted or moved to Base Infrastructure account.
- Administrators of Accounts do not have access to the settings page of the server to change the account type.
- When Global Super Administrators trigger Configure/Software/Reports Jobs, the Account users cannot view them.
- When Account Users trigger Configure/Software/Reports Jobs, they are reflected under the Global Super Administrator view along with respective Job IDs enrolled in the respective Accounts.
- The devices that have not started Software/Configure Jobs cannot be moved across Accounts.
- The Global Super Administrator and the Account Administrator cannot trigger a Software or

Configure Job simultaneously on the same device.

- The Lock AP configuration can be enabled only by the Global Super Administrator. But whenever a device configuration is changed outside of cnMaestro by either a Global Super Administrator or an Accounts Administrator, the Auto Synchronization Job starts automatically with the configuration job ID as in Accounts and reflects in both the Global Super Administrator and Accounts Administrator accounts.

## System View

At the System level, one can view APs, AP Groups, or Sites across all Managed Accounts in a single, unified table. This allows one to review the status of all accounts in context to each another. The following figure displays the AP table, and specifies which APs are mapped to Accounts.

**Figure 480** System View

Device	MAC	Managed Account	Status	Onboarding Status	Serial Number	IPv4 Address	IPv6 Address	Type	Configuration Group	Tower/Site	Client Count
AY-cnPilot200P		Base Infrastructure	Online (12d 2h 6m)	Onboarded (41d 21h 6m)			N/A	cnPilot r200P	AY - APGrpSTATIC2	cnPilot_R	0

## Account View

The **Managed Accounts > Accounts** page allows you to select individual Accounts, which launches the Account View. This provides full status and configuration for all components of the Account, including Dashboard, Notifications, Configuration, Software Update, Reports, Clients, etc.

**Figure 481** Account View

**Managed Accounts > BULK move**

Dashboard Notifications **Configuration** Statistics Reports X Software Update Clients Mesh Peers Assists X

 [Edit](#) [Create](#)

Login Path  
<https://.../dqihd>

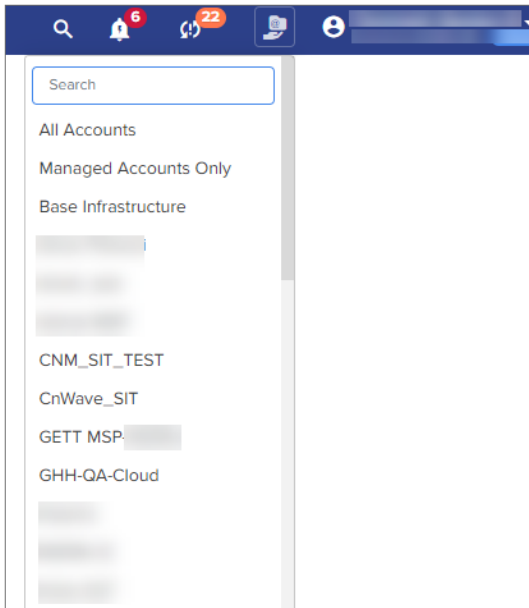

Status  
 Enabled  Disabled

[Save](#)

## Account Administrator (User) View

The Account Administrator View presents the branded Account UI, without having to explicitly log into it. It is accessed through the Account drop-down in the UI header. Selecting a specific Account (rather than **All**) updates the UI to the Account Administrator's view. From here, the Global Administrator can update the configuration and monitor issues.

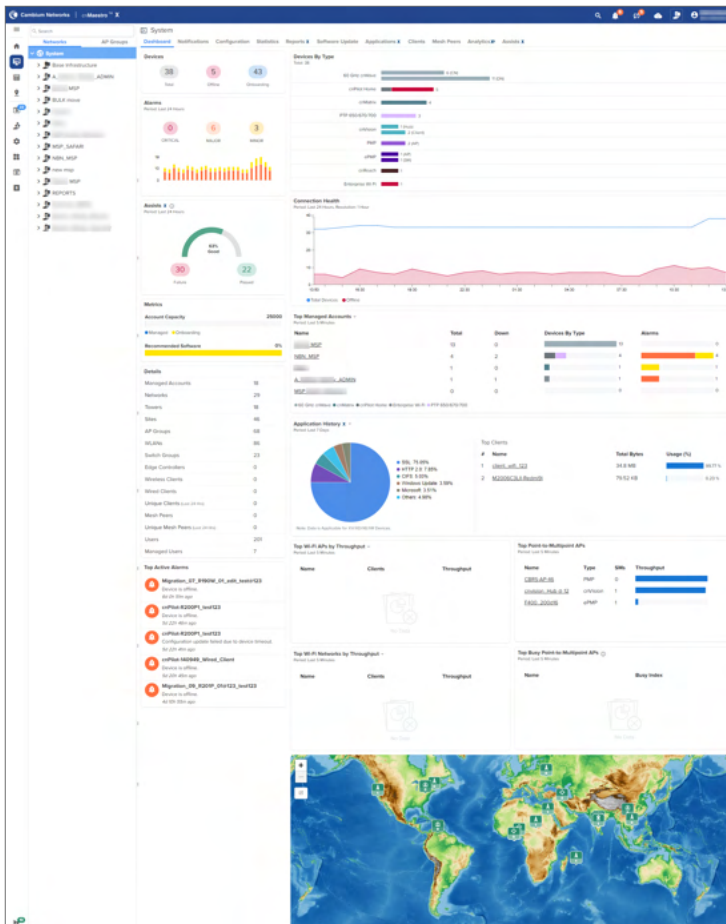

Figure 482 Managed Account Administrator (User) View

## System Dashboard

The System Dashboard integrates Accounts into the global health component. It ranks the top Accounts based upon device count.

Figure 483 System Dashboard

## Account Administration

AP Groups, WLANs, and Switch Groups have three types of accessibility scope as shown below:

**Table 107** *Types of Scope*

State	Description
Base Infrastructure	The object is only available for the global account.
Managed Account	The object belongs to a Managed Account.
Shared	The object is shared among all Managed Accounts. It can be mapped to devices in the Account, but it cannot be modified. To change the configuration, it needs to be copied into the Account and then updated.

### Note

Once the scope has been configured on an object, it cannot be changed.

## Device Management

Devices are added at the global System level or within Managed Accounts. Devices added at the System level can be moved into Accounts at a later time.

### System Onboarding

Onboarding at the global System level supports both MSN and Cambium ID. In the example below, a Management Account can be selected for all devices onboarded in the MSN batch.

**Figure 484** *System Onboarding*

Claim Devices with Serial Number

Enter the Serial Numbers (MSNs) of the devices you want to add to your account (comma-separated or one per line). Once a device is claimed, it is placed in the Onboarding Queue when it comes online.

**Note:** All devices with 12 digit strong Serial Numbers can be claimed here. Other devices can be claimed using [Cambium ID](#)

Managed Account

Base Infrastructure

Search

Base Infrastructure  
1-MSP-25NoV  
ma\_test\_nbi\_api\_d579d

Claim Devices Clear

### Device Onboarding

Onboarding devices through the Managed Account UI automatically places the devices in the Account.

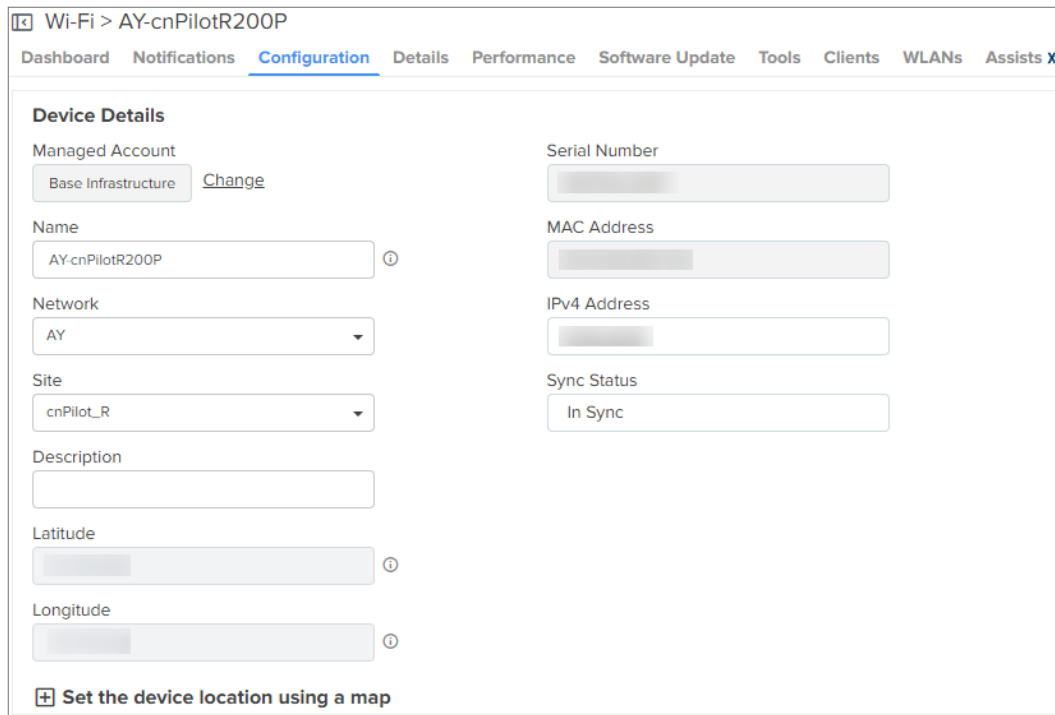

### Note

cnMaestro supports onboarding through either MSN or Cambium ID. Within Accounts, only MSN onboarding is supported.

### Moving a Device Between Accounts

You can move a device from one Managed Account to another by using the **Change** option in the device configuration page.

**Figure 485** Moving a Device Between Accounts

In Enterprise view, the device can be moved between Accounts using the **Managed Account** () icon in the **AP Groups > <AP-group-name> > Devices > List** tab.

**Figure 486** Moving a device between Accounts in Enterprise View

## Account Deletion

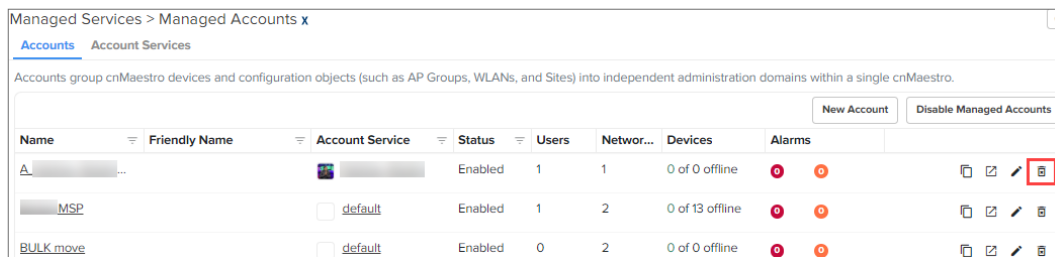

### Note

All devices must be removed from the Account before deleting the account.

To delete a Managed Account, navigate to the **Account Services** page and click the delete icon.

**Figure 487** Account Deletion

## Disabling the Managed Accounts feature

The Managed Accounts feature can be disabled within the system only after all the devices are deleted or moved to the Global context. By disabling Account Services, the Account field will be disabled across all the tables, such as Clients, Notifications, Inventory.

## Managing subscribers (end-customer)

To enable a subscriber to manage the router using the Android or iOS application, you must add a subscriber profile in cnMaestro and send an invitation to the subscriber.

This process involves the following actions:

1. [Adding a Subscriber Service Profile](#)
2. [Adding a subscriber](#)
  - a. [Modifying the owner details for the Subscriber App](#)
3. [Claiming the Home Mesh Router](#)

## Adding a Subscriber Service Profile

To add a subscriber service profile, complete the following steps:

1. Navigate to the **Manage Services > Managed Subscribers > Subscriber Service Profiles** tab.

The **Subscriber Service Profiles** page appears.

2. Click **Add New**.

The **Add Subscriber Service Profile** window appears.

3. Select the Home Mesh Router configuration to which you want to associate with the subscriber service profile and configure the parameters as described in [Table 108](#).

**Table 108** *Subscriber Service Profile parameters*

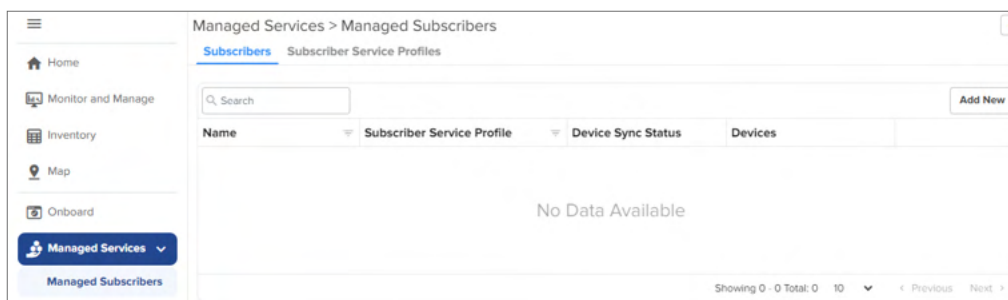

Parameter	Description
Name	Name of the subscriber service profile.
Description	Brief description for the subscriber service profile.
Download (Mbps)	Download speed (in Mbps) configured for the profile.
Upload (Mbps)	Upload speed (in Mbps) configured for the profile.
Type	Displays the device type as <b>RV22 Home Mesh</b> . This field cannot be modified.
Device Configuration	Specifies the Wi-Fi AP group (created for the Home Mesh Router device type) that must be associated with the service profile. Select the group from the drop-down list.
Subscriber App Branding	Specifies the cnMaestro Subscriber application branding that must be used in this profile. All routers sent to subscribers in this service profile contain the selected branding logo and information. Select the required branding from the drop-down list.  If no branding is present, create one by clicking the add (  ) icon. See <a href="#">cnMaestro Subscriber application branding</a> for more information.

4. Click **Save**.

## Adding a subscriber

- Click the **Subscribers** tab on the **Managed Subscribers** page.

- Click **Add New**.

The **Add Subscriber** window appears.

- In the **Add Subscriber** window, configure the details of the subscriber in the **Basic Information** section, as described in [Table 109](#).

**Table 109** *Subscriber > Basic tab parameters*

Parameter	Description
Full Name	Name of the subscriber.
Email ID	<p>Email address of the subscriber.</p> <p>This email address receives the invitation to join the Home Mesh Router (RV22) site. Through this email address the user will be able to access and manage the router as a primary user and invite other users (secondary users), through the mobile application, to manage the routers.</p> <div style="border: 1px solid #ccc; background-color: #e6f2ff; padding: 5px;"> <p><b>Note</b></p> <p>You can edit this email address at anytime. However, editing this email address will remove all existing users, both primary and secondary. For information about how to modify the email ID, refer to <a href="#">Modifying the owner details for the Subscriber App</a>.</p> </div>

Parameter	Description
Phone Number	Phone number of the subscriber.
Customer ID	Unique ID for the subscriber.
Address	Address of the subscriber where the routers will be installed.

- Click **Next**.

The **Service Configuration** tab is displayed.

The screenshot shows the 'Add Subscriber' form with the 'Service Configuration' tab selected. The form contains the following elements:

- Subscriber Service Profile\***: A dropdown menu.
- Download (Mbps)\***: A text input field.
- Upload (Mbps)\***: A text input field.
- AP Group**: A text input field.
- Home Wi-Fi Devices Setting Override**: A checkbox with a plus icon.
- Buttons**: 'Previous' and 'Save' buttons at the bottom right.

- Select the subscriber service profile to be associated with this subscriber from the **Service Profile** drop-down list.
- Click **Save**.

A new tab, **Devices** appears, where you can link (or claim) the Home Mesh Router to the subscriber. See [Claiming the Home Mesh Router](#).

The cnMaestro Subscriber application invitation email is sent to the subscriber with the link to join the account.

- Click **Devices**.

The screenshot shows the 'Add Subscriber' form with the 'Devices' tab selected. The form contains the following elements:

- Deployment Type**: Radio buttons for Fiber, Fixed Wireless, and Home Site (selected).
- Home Site\***: A search input field with a magnifying glass icon and a plus sign.
- Add Devices to Subscriber**: A section with an 'Add New' button and a table.
- Table**: A table with columns: Name, Serial Number, MAC Address, Mesh Type, Status. The table is currently empty, showing 'No Data Available'.
- Buttons**: 'Previous' and 'Save' buttons at the bottom right.

- Select one of the following options in the **Deployment Type** field to filter the available deployment types:

- **Fiber**—Select the Optical Network Unit (ONU) device that you want to associate with the subscriber's router by searching in the **ONU** search box.
- **Fixed Wireless**—Select the Subscriber Module (SM) device that you want to associate with the subscriber's router by searching in the **SM** search box.
- **Home Site**—Select the home site you want to associate with the subscriber's router by searching in the **Home Site** search box. To add a home site, see [Adding a Home Site](#).

13. Before linking the Home Mesh Router to the subscriber, click **Save**.

## Modifying the owner details for the Subscriber App

You can modify the owner details for the Subscriber App by modifying the email ID.

### Warning

Modifying the email address will remove all existing users, both primary and secondary.

To modify the email address, complete the following steps:

1. Navigate to the **Manage Services > Managed Subscribers > Subscribers** tab.
2. In the list of subscribers, click the subscriber name for which you want to modify the email ID.

The corresponding subscriber details are displayed.

3. Under the **Email** parameter, click **Change Owner**.

The Change Owner window is displayed.

4. Enter the new email ID for the subscriber.
5. Click **Update**.

## Claiming the Home Mesh Router

After adding a subscriber profile and a subscriber, you must now associate the Home Mesh Router to the subscriber by claiming the router in cnMaestro.

To claim the router, complete the following steps:

1. Navigate to the **Manage Services > Managed Subscribers > Subscribers** tab.
2. In the list of subscribers, select the subscriber name for which you want to associate the Home Mesh Router.
3. Click the **Devices** tab.
4. In the **Add Devices to Subscriber** section, click **Add New**.

The screenshot shows the 'Add Subscriber' window with the 'Devices' tab selected. The 'Deployment Type' is set to 'Home Site'. A search box for 'Home Site' is visible. Below is a table titled 'Add Devices to Subscriber' with columns: Name, Serial Number, MAC Address, Mesh Type, Status. The table is currently empty, displaying 'No Data Available'. There are 'Previous' and 'Save' buttons at the bottom.

The **Link Subscriber** window appears.

5. In the **Link Subscriber** window, link the Home Mesh Router to the subscriber by using any of the following methods:
  - To claim a new router that is not onboarded to cnMaestro, select the **Claim new and assign** option and enter the serial number of the device to be claimed.

You can claim multiple routers by adding multiple serial numbers separated by commas.

The screenshot shows the 'Add New Device(s)' window. The 'Claim new device and assign' option is selected. The 'Device Type' is set to 'RV22 Home Mesh'. A large text input box is provided for entering serial numbers. A 'Cancel' button is at the bottom right.

- To claim a router that is already onboarded to cnMaestro, select the **Search for inventory and assign** option.

Enter the details of the router you want to claim.

**Add New Device(s)** ✕

Claim new device and assign  Search from inventory and assign

6. Click **Assign**.

The assigned router appears in the **Add Devices to Subscriber** section.

Add Devices to Subscriber						<input type="button" value="Add New"/>
Name	Serial Number	MAC Address	Mesh Type	Status		
RV22			Base	<span style="color: green;">●</span> Onboarded		

**Note**

Click the unlink () icon to unlink the router from the subscriber.

# Network Services

This section includes the following topics:

- [API Client](#)
- [RESTful API](#)
- [Guest Access](#)
- [EasyPass](#)
- [RADIUS Proxy](#)

# API Client

## Overview

The cnMaestro RESTful API allows customers to manage their deployment programmatically using their own client applications. The API is supported over HTTPS, and messages are exchanged in JSON format. Modern programming languages have rich support for RESTful interfaces.

### Note

cnMaestro currently provides monitoring data over the API (such as inventory, statistics, events, and alarms).

## API Clients

API Clients are external applications that access the RESTful API over HTTPS using OAuth 2.0 Authentication. They require a Client ID and Client Secret for access, both of which are detailed later in this chapter. For more information, refer to [RESTful API Specification](#).

Application Name	Application Description	Client Id	Actions
TestAPI	test	5foug3ALHFKEYEe	[Edit] [Delete] [Refresh]
Cloud_API	%, Test APIs	NI0GgRQ0qLHBLK	[Edit] [Delete] [Refresh]

Showing 1-2 Total: 2 10 < Previous 1 Next >

To add **API Client**:

1. Navigate to **Network Services > API Clients**.

Application Name	Application Description	Client Id	Actions
Test API Now	Test NBI/API		[Edit] [Delete] [Refresh]
Test API	Test NBI/API		[Edit] [Delete] [Refresh]

Showing 1-2 Total: 2 10 < Previous 1 Next >

2. Click **Add API Client**.

**API Clients > Add API Client x**

**Basic Information**

Name\*

Description\*

Expiration Time  
 OAuth 2.0 Access Token expiration seconds

Token Renewal Time  
 OAuth 2.0 Access Token renewal seconds

3. Enter **Name**.
4. Enter **Description**.
5. Enter **Expiration Time**.
6. Enter **Token Renewal Time**.
7. Click **Save**.

Once the API Clients is added you can able to view or download credentials shown in the **OAuth 2.0 Access Credentials**.

API Clients > Edit API Client x

**Basic Information**

Name\*

Description\*

Expiration Time  
 OAuth 2.0 Access Token expiration seconds

Token Renewal Time  
 OAuth 2.0 Access Token renewal seconds

**OAuth 2.0 Access Credentials**

These credentials are required to create an Access Token and invoke the API.

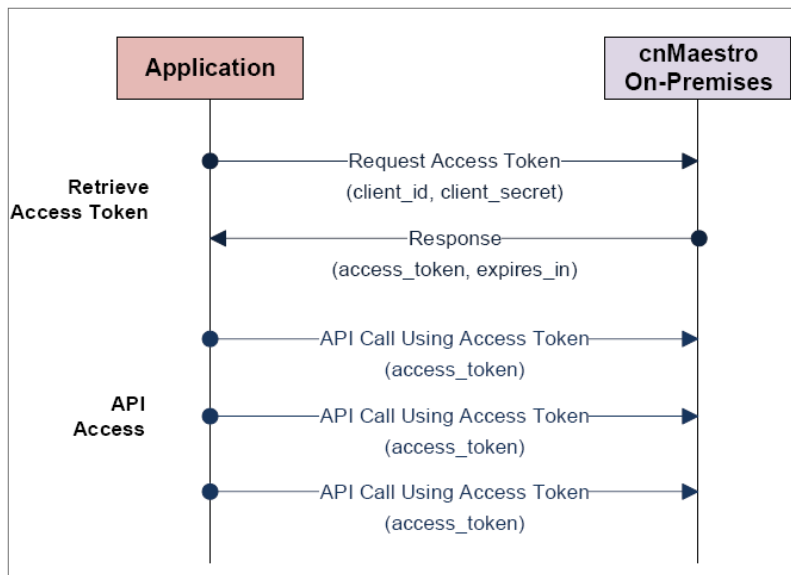

Client Id

Client Secret

## RESTful API Specification

### Authentication

API Authentication uses OAuth2. The client retrieves an Access Token to start the session. It then sends API requests until the Access Token times out, at which point the token can be regenerated.

### Establish a Session

A session is created by sending the Client ID and Client Secret to the cnMaestro server. These are generated in the cnMaestro UI and stored within the application. The Client ID defines the cnMaestro account and application, and the Client Secret is a private string mapped to the specific application. The Client Secret should be stored securely.

If the session is established successfully, an Access Token is returned along with an expiration string. The Access Token is used to authenticate the session. The expiration is the interval, in seconds, in which the Access Token remains valid. If the Access Token expires, a new session needs to be created.

## API Access

The application sends the Access Token, in every API call. The token is sent in an Authentication header. Details are provided later in this document.

## Session Expiration

If a token expires, an expiration error message is returned to the client. The client can then generate a new token using the Client ID and Client Secret. The token expires immediately if the Client API account is deleted. The default expiration time for a token is 3600 seconds (1 hour). The session expiration is configurable in the UI.

## Rate Limiter

The Rate Limiter API request helps in improving the availability of API based services by avoiding resource starvation.

This API calculates the rate limit per customer based on various factors such as system configuration, number of devices onboarded, Network, Towers, Sites, etc.

The API limits the number of NBI API calls to a single cnMaestro account per minute. Once the limit is reached, the API receives a standard HTTP Response Status code such as 429 or 503.

HTTP Response Status Code	Response Headers	Explanation	Action to be taken
429	RateLimit-Limit: 10	Number of API calls allowed for the cnMaestro account per minute	If the <b>RateLimit-Remaining</b> value is 0, then the client application waits for the number of seconds to <b>Reset-RateLimit</b> before sending the next subsequent API requests
	RateLimit-Remaining: 0	Number of remaining API calls for the current minute is zero	
	RateLimit-Reset: 35	Number of seconds remaining to reset the rate limit	
503	Retry-After	Number of seconds during which users wait before retrying	If the value of <b>Retry-After</b> is greater than 0, then the client application waits for the number of seconds to <b>Retry-After</b> before sending the next subsequent API requests

The following table below displays the approximate limit calculated by the system on a 4 vCPU, 8 GB RAM Cloud instance.

Devices	GET	POST/Others
101	10	3
501	24	3
1001	47	5
2001	92	10
4001	163	17

Example of a Python client:

```
import sys
import requests
import json
import base64
import time

HOST = # host here
CLIENT_ID = # client id here
CLIENT_SECRET = # client secret here
TOKEN_URL = # token url here

# Retrieve access parameters (url, access_token, and expires_in).
def get_access_parameters(token_url, client_id, client_secret):
    """
    Authenticates to API.
    Parameters:
        `token_url` - Endpoint to authenticate to\n
        `client_id` - Auth client id\n
        `client_secret` - Auth client secret\n
    Returns:
        `(access_token, expiry)`
    """
    data = "%s:%s" % (client_id, client_secret)
    encoded_credentials = base64.b64encode(data.encode('ascii')).decode('ascii')
    headers = {
        "Authorization": "Basic %s" % encoded_credentials,
        "Content-Type": "application/x-www-form-urlencoded"
    }
    body = "grant_type=client_credentials"
    r = requests.post(token_url, body, headers=headers, verify=False)
    print ("Status Code: %s" % r.status_code)
    return r.json()['access_token'], r.json()['expires_in']

def call_api(method, host, path, access_token):
    """
```

Makes HTTP call to an API with given method.

Parameters:

``method`` -  
method for the new Request object: GET, OPTIONS, HEAD, POST, PUT, PATCH, or DELETE\n

``host`` - host for the url\n

``path`` - path for the url\n

``access_token`` - a valid access token for header

Returns:

```
`(response_status_code, headers, body)`  
""  
api_url = "https://%s%s" % (host, path)  
headers = {  
    "Authorization": "Bearer %s" % access_token,  
}  
response = requests.request(method=method, url=api_  
url, headers=headers, verify=False)  
headers = response.headers  
body = response.json()  
response_status_code = int(response.status_code)  
return response_status_code, headers, body  
  
def main():  
  
    try:  
        # Getting the access token using client id and client secret  
        access_token, expires_in = get_access_parameters(TOKEN_URL, CLIENT_  
ID, CLIENT_SECRET)  
  
        # For the purpose of the example, let's send 100 requests back to back  
        for i in range(100):  
            # Calling the endpoint with GET method  
            status_code, header, body = call_api  
( 'GET', HOST, '/api/v2/devices/statistics', access_token)  
            # identifying any client or server side error codes  
            client_errors = (status_code - status_code%100) == 400  
            server_errors = (status_code - status_code%100) == 500
```

```

        # handling error status code
        if client_errors or server_
errors: # check for all 400 and 500 responses
            print("Failure: [%s]-[%s]" %(status_code, (json.dumps
(body, indent=2))))

            # For 429, wait until `RateLimit-Reset` seconds
            if (status_code == 429):
                sleep_time = 10 # default wait time
                # try block prevents any dict value exception
                try:
                    # Reading the header
                    sleep_time = int(header["RateLimit-Reset"])
                except: pass
                # if sleep_
time is not greater than 0, defaulting to 10 seconds
                sleep_time = sleep_time if sleep_time > 0 else 10
                print("Sleeping for %d seconds" % sleep_time)
                # sleeping the main thread
                time.sleep(sleep_time)

            if (status_code == 503):
                sleep_time = 10 # default wait time
                # try block prevents any dict value exception
                try:
                    # Reading the header
                    sleep_time = int(header["Retry-After"])
                except: pass
                # if sleep_
time is not greater than 0, defaulting to 10 seconds
                sleep_time = sleep_time if sleep_time > 0 else 10
                print("Sleeping for %d seconds" % sleep_time)
                # sleeping the main thread
                time.sleep(sleep_time)

            else:
                # process response
                print("Success: [%s]" %(json.dumps(body, indent=2)))

except Exception as E:

```

```

print("Failure: [%s]"%E)

sys.exit()

if __name__ == "__main__":
    main()

```

## Swagger API

### Introduction

The RESTful API documentation is supported through Swagger, which allows visualization and interaction with the API resources.

To access Swagger, perform the following steps:

1. Navigate to **Services > API Client** grid.
2. Click **Swagger API documentation**.

Application Name	Application Description	Client ID	Swagger	Actions
Test API	Test API	0x0E7B3JnJ3ChAL	Try it out	[Edit] [Delete]

### Sample Swagger UI

**cnMaestro On-Premises API** 2.4.0 OAS3

cnMaestro supports RESTful API as part of its On-Premises deployment. This API allows customers to read data and perform operations programmatically using their own client applications. The API is supported over HTTPS, and messages are exchanged in JSON format. Modern programming languages have rich support for RESTful interfaces.

cnMaestro API leverages OAuth 2.0 Client Credentials Grant. The Client Credentials grant type is used by clients to obtain an access token [Read More](#)

Announcements: [New APIs](#) / [Deprecation notice](#)

Servers: /api/v1 [Authorize]

**Alarms** Alarms related APIs

- GET /alarms Returns list of active alarms.
- GET /alarms/history Returns list of alarms.

**AP Groups** cnPilot Enterprise AP Group related APIs

- GET /wifi\_enterprise/ap\_groups Returns list of AP Groups
- POST /wifi\_enterprise/ap\_groups Create an AP Group
- GET /wifi\_enterprise/ap\_groups/{ap\_group\_name} Returns single AP Group information
- PUT /wifi\_enterprise/ap\_groups/{ap\_group\_name} Update an AP Group
- DELETE /wifi\_enterprise/ap\_groups/{ap\_group\_name} Delete an AP Group

## Generating Client ID and Client Secret

### cnMaestro User Interface

To create the Client ID and Client Secret in the cnMaestro UI, perform the following steps:

1. Navigate to **Services > API Client**.  
Each client application should be added as an API Client.

Application Name	Application Description	Client ID	Swagger	Actions
Test API	Test API	CNCE80sJmJCH4RL	Includ	[Edit] [Delete] [Refresh]

2. Click **Add APIClient** to add a client.  
Add API Client window pops up.

3. Enter **Name** and **Description**.
4. Click **Save**.

## Download the Client ID and Client Secret

You can download and store the Client ID and Client Secret by clicking **Download Credentials**. The Client Id is required to create an API session.

# API Session

## Introduction

The cnMaestro API leverages the Client Credentials section of the [OAuth 2.0 Authorization Framework \(RFC 6749\)](#). An API session can be created using any modern programming language. The examples below highlight how messages are encoded and responses returned.

## Retrieve Access Token

### Access Token Request (RFC 6749, section 4.4.2)

To generate a session, the client should retrieve an Access Token from cnMaestro. This is done by base64 encoding the **Client\_ID** and **Client\_Secret** downloaded from the cnMaestro UI and sending them to the cnMaestro server. The **Authorization** header is created by base64 encoding these fields as defined below.

#### Note

The fields are separated by a colon (:).

```
Authorization: Basic BASE64(<client_id>:<client_password>)
```

In the body of the **POST** the parameter **grant\_type** must be set to **client\_credentials**.

```
POST /api/v2/access/token HTTP/1.1
Host: server.example.com
Authorization: Basic czZCaGRSa3F0MzpnWDFmQmF0M2JW
Content-Type: application/x-www-form-urlencoded

grant_type=client_credentials
```

Alternatively, the credentials can be passed within the body of the **POST** without using the **Authorization** header.

```
POST /api/v2/access/token HTTP/1.1
Host: server.example.com
Content-Type: application/x-www-form-urlencoded

grant_type=client_credentials&client_id=s6BhdRkqt3&client_secret=7Fjfp0ZBr1KtDRbnfVdmIw
```

### Access Token Response (RFC 6749, section 4.4.3)

The response returned from cnMaestro includes the **Access\_Token** that should be used in subsequent requests. The **expires\_in** field defines how many seconds the token is valid.

```
HTTP/1.1 200 OK
Content-Type: application/json;charset=UTF-8
Cache-Control: no-store
Pragma: no-cache
{
  "access_token": "2YotnFZFEjrlzCsicMWpAA",
  "token_type": "bearer",
  "expires_in": 3600
}
```

Sample 200 response body.

```
HTTP/1.1 200 OK
Content-Type: application/json;charset=UTF-8
Cache-Control: no-store
Pragma: no-cache
{
  "access_token": "290eeaba71d3f4885405eac2fd18a4f3c300448d",
  "expires_in": 3600,
  "token_type": "bearer",
  "redirect_uri": "https://10.110.241.252"
}
```

#### Note

The returned **redirect\_uri** should be used to generate the session.

### Error Response (RFC 6749, section 5.2)

If there is an error, an HTTP 400 (Bad Request) error code is returned along with one of the following error messages as shown below:

**Table 110** *Error Response*

Message	Details
invalid_request	Required parameter is missing from the request.
invalid_client	Client authentication failed.
unauthorized_client	The client is not authorized to use the grant type sent.
unsupported_grant_type	The grant type is not supported.

An example error response is below:

```
HTTP/1.1 400 Bad Request
Content-Type: application/json;charset=UTF-8
Cache-Control: no-store
Pragma: no-cache
{
  "error": "invalid_request"
}
```

## Access Resources

When the **Access-Token** is retrieved, API requests are sent to cnMaestro server using the format below. The **Access-Token** is sent within the HTTP **Authorization** header.

```
GET /api/v2/devices
Accept: application/json
Authorization: Bearer ACCESS_TOKEN
```

## API Details

### HTTP Protocol

#### HTTP Response codes

[Table 111](#) lists the response codes that are supported in cnMaestro and may be returned through the HTTP protocol.

**Table 111** *HTTP Response codes returned*

Code	Description	Use in cnMaestro
200	OK	Standard response for successful HTTP requests.
400	Bad Request	Status field in request validation related errors.
401	Unauthorized	User tried to access a resource without authentication.
403	Forbidden	An authenticated user tries to access a non-permitted resource.

Code	Description	Use in cnMaestro
404	Not Found	Server could not locate the requested resource.
405	Method Not Allowed	A method (GET, PUT, POST) is not supported for the resource.
413	Payload Too Large	The request is larger than the server is willing to handle
422	Unprocessable Entity	The server understands the request but cannot process it.
429	Too Many Requests	The client has sent too many requests in a given interval.
431	Request Header Fields Too Large	The header fields are too large to be processed.
500	Internal Server Error	A server-side error happened during processing the request.
501	Not Implemented	The request method is not recognized.
502	Bad Gateway	Internal server error that may require a reboot.
503	Service Unavailable	Internal server error that may require a reboot.

## HTTP Response codes

[Table 112](#) lists the HTTP request codes supported in cnMaestro.

**Table 112** Request Headers

Header	Details
Accept	Set to application/json
Authorization	Used in every API request to send the Access Token. Example: Authorization: Bearer <Access-Token>
Content-Type	Set to application/json

## REST Protocol

### Resource URLs

The format for cnMaestro path and parameters are the following:

Access a collection of resources:

```
/api/{version}/{resource}?{parameter}={value}&{parameter}={value}
```

Access a single resource:

```
/api/{version}/{resource}/{resource_id}?{parameter}={value}&{parameter}={value}
```

Access a sub-resource on a collection (this is also possible on single resources):

```
/api/{version}/{resource}/{sub-resource}?{parameter}={value}&{parameter}={value}
```

For example – read the statistics for MAC, Type, and IP on all devices:

```
/api/v2/devices/statistics?fields=mac,type,ip_wan
```

### Version

The version is equal to v2 in this release.

### Resource

Resources are the basic objects in the system. Examples include:

**Table 113** Resource

Context	Details
alarms	Current active alarms.
alarms/history	Historical alarms, including active alarms.
devices	Devices, including ePMP, PMP, and WiFi.
events	Historical events.
misp	MSP managed services.
networks	Configured networks.
sites	Configured WiFi sites.
towers	Configured Fixed Wireless towers.

### Sub-Resources

Sub-Resources apply to top-level resources. They provide a different view of the resource data, or a filtered collection based upon the resource. Examples include:

**Table 114** Sub-Resources

Context	Details
alarms	Alarms mapped to the top-level resource.
alarms/history	Historical alarms mapped to the top-level resource.
clients	Wireless LAN clients mapped to the top-level resource.
devices	Devices mapped to the top-level resource.
events	Events mapped to the top-level resource.
mesh/peers	Wireless LAN mesh peers mapped to the top-level resource.
operations	Operations available to the top-level resource
performance	Performance data for the top-level resource.
statistics	Statistics for the top-level resource.

## Responses

### Successful Response

In a successful HTTP 200 response, data is returned using the following structure. The payload is presented in JSON format.

The request URL is:

```
/api/v2/devices?fields=mac,type&limit=5
```

Response:

```
{
  "paging": {
    "offset": 0,
    "limit": 5,
    "total": 540
  },
  "data": [
    {
      "mac": "C1:00:0C:00:00:21",
      "type": "wifi-home"
    }
  ]
}
```

```

    },
    {
      "mac": "C1:00:0C:00:00:18",
      "type": "wifi-home"
    },
    {
      "mac": "C1:00:0C:00:00:12",
      "type": "wifi-home"
    },
    {
      "mac": "C1:00:0C:00:00:15",
      "type": "wifi-home"
    },
    {
      "mac": "C1:00:0C:00:00:06",
      "type": "wifi-home"
    }
  ]
}

```

## Error Response

Error Responses return a message and an error cause.

```

{
  "error": {
    "message": "Missing required property: stop_time \n Missing required property:
start_time",
    "cause": "InvalidInputError"
  }
}

```

## Parameters

Most APIs can filter the data and limit the number of entries returned. The parameter options are listed below. The specific fields and the appropriate values vary for each API.

### Field selection

Field selection is supported through the optional **Fields** parameter, which can specify the data to return from the server. If this parameter is missing, all available fields will be returned.

**Table 115** *Fields*

Parameter	Details
fields	Define exactly what fields should be returned in a request. The names are provided as a comma-separated list.

Fields can limit which JSON parameters are returned as shown below:

Example: To retrieve name, type and location information for all devices.

Request:

```
/api/v2/devices?fields=mac,type
```

Response:

```
{
```

```

    "paging": {
      "total": 3,
      "limit": 100,
      "offset": 0
    },
    "data": [
      {
        "mac": "00:44:E6:34:89:48",
        "type": "wifi-enterprise"
      },
      {
        "mac": "00:44:16:E5:33:E4",
        "type": "wifi-enterprise"
      },
      {
        "mac": "00:44:26:46:32:22",
        "type": "wifi-enterprise"
      }
    ]
  }
}

```

## Filtering

A subset of fields support filtering. These are defined as query parameters for a particular resource, and they are listed along with the API specification.

[Table 116](#) describes the standard filtering parameters as shown below:

**Table 116** *Filtering*

Field	Details
network	(Devices) Configured Network name.
severity	(Alarms, Events) Alarm or Event severity (critical, major, minor, notice).
site	(Devices) Configured Site name.
state	(Alarms) Alarm state (active, cleared).
status	(Devices) Device status (online, offline, onboarding).
tower	(Devices) Configured Tower name.
type	(Devices) Device type (60ghz-cnwave, cnreach, cnmatrix, epmp, pmp, wifi-enterprise, wifi-home, wifi, ptp) (wifi includes wifi-home and wifi-enterprise).

Filters can be used simultaneously for **Resources** and **Sub-Resources**.

Example: Retrieve all WiFi devices that are online.

Request:

```
/api/v2/devices?type=wifi&status=online
```

Response:

```

{
  "paging": {
    "total": 1,
    "limit": 100,
    "offset": 0
  },
  "data": [

```

```

{
  "ip": "233.187.212.38",
  "location": {
    "type": "Point",
    "coordinates": [
      77.55310127974755,
      12.952351523837196
    ]
  },
  "mac": "C1:00:0C:00:00:24",
  "msn": "SN-C1:00:0C:00:00:24",
  "name": "Hattie",
  "network": "Bangalore",
  "product": "cnPilot R201",
  "registration_date": "2017-05-23T21:28:37+05:30",
  "status": "online",
  "site": "Bangalore_Industrial",
  "type": "wifi-home",
  "hardware_version": "v1.1",
  "software_version": "2.4.4",
  "status_time": 1495560086
}
]
}

```

## Time Filtering

Events, Alarms, and Performance data can be filtered by date and time using ISO 8601 format.

Example: January 12, 2015 UTC would be encoded as **2015-01-12**.

Example: January 12, 2015 1:00 PM UTC would be encoded as **2015-01-12T13:00:00Z**.

If the parameters that are described in the [Table 117](#) are not specified, then the start or stop times will be open-ended.

**Table 117** Time Filtering

Parameter	Details
start_time	Inclusive start time of interval.
stop_time	Inclusive stop time of interval.

## Sorting

Sorting is supported on a subset of fields within certain requests. Sort is used to specify sorting columns. The sort order is ascending unless the path name is prefixed with a '-', in which case it would be descending.

**Table 118** Sort

Parameter	Details
sort	Used to get the records in the order of the given attribute.

Example: To retrieve devices in sorted (ascending) order by name.

Request:

```
/api/v2/devices?sort=name
```

Example: To retrieve devices in sorted (descending) order by mac.

Request:

/api/v2/devices?sort=-mac

## Pagination

The limit and offset query parameters are used to paginate responses.

**Table 119** *Pagination*

Parameter	Details
limit	Maximum number of records to be returned from the server.
offset	Starting index to retrieve the data.

Example: To retrieve the first 10 ePMP devices

Request:

/api/v2/devices?offset=3&limit=1

Response:

```
{
  "paging": {
    "total": 6,
    "limit": 1,
    "offset": 3
  },
  "data": [
    {
      "status": "online",
      "product": "cnPilot E400",
      "network": "Mumbai",
      "software_version": "3.3-b14",
      "registration_date": "2017-04-28T08:57:33+00:00",
      "site": "Central",
      "hardware_version": "Force 200",
      "status_time": "3498",
      "msn": "Z834275ABCDH",
      "mac": "00:04:36:46:34:AA",
      "location": {
        "type": "Point",
        "coordinates": [
          0,
          0
        ]
      },
      "type": "wifi-enterprise",
      "name": "E400-4634AA"
    }
  ]
}
```

## Internal Response limits

When clients try to access a resource type without pagination, the server will return the first 100 entries that match the filter criteria. The response will always carry metadata to convey total count and current offset and limit.

Maximum number of results at any point is 100 even when the provided is more than 100.

Example: To retrieve all devices.

Request:

/api/v2/devices

Response:

```
{
  data: {devices: [ {name: 'ePMP_5566', type:'ePMP', location:'blr'} , {...}... ] },
  paging:{
    "limit":25,
    "offset":50,
    "total":100
  }
}
```

The response returns the following values in the paging section:

**Table 120** Internal Response limits

Parameter	Details
limit	Current setting for the limit.
offset	Starting index for the records returned in the response (begins at 0).
total	Total number of records that can be retrieved.

## Access API

### Token (basic request)

POST

/api/v2/access/token

The access API generates token using the **Client ID** and **Client Password** created in the cnMaestro UI. The token can be leveraged by API calls through the expiration time. Only one token is supported for each Client ID at any given time.

### Request

[Table 121](#) describes about the header and its values as shown below:

**Table 121** Headers

Header	Value
Accept (optional)	application/json.
Authorization	Basic czZCaGRSa3FOMzpnWDFmQmFOM2JW.
Content-Type	application/x-www-form-urlencoded.

The **client\_id** and **client\_secret** are encoded and sent in the Authorization header. The encoding is:

```
BASE64(client_id:client_secret)
```

### Body

The body needs to have the **grant\_type**.

```
grant_type=client_credentials
```

### Response

The response returns credentials for API access.

### Body

Name	Details
access_token	Access token to return with each API request.
expires_in	Time in seconds that the API session will remain active.
token_type	This will always be bearer.
<pre>{   "access_token": "2YotnFZFEjr1zCsicMWpAA",   "token_type": "bearer",   "expires_in": 3600 }</pre>	

## Example

Request
<pre>curl https://10.110.134.12/api/v2/access/token \ -X POST -k \ -u 8YKCxq72qpjnYmXQ:pcX5BmdJ2f4QLM5RfgsS4jOtxAdTRF \ -d grant_type=client_credentials</pre>
Response
<pre>{"access_token": "d587538f445d30eb2d48e1b7f7a6c9657d32068e", "token_type": "bearer", "expires_in": 86400}</pre>

## Token (alternate request)

POST
/api/v2/access/token

An alternative form is supported in which the **client\_ID** and **client\_secret** are sent in the body, rather than the Authorization header.

## Request

### Headers

Header	Value
Accept (optional)	application/json
Content-Type	application/x-www-form-urlencoded

### Body

grant_type=client_credentials&client_id=s6BhdRkqt3&client_secret=7Fjfp0ZBr1KtDRbnfVdmIw
---

## Response

The response to both forms is the same.

### Body

Name	Details
access_token	Access token to return with each API request.
expires_in	Time in seconds that the API session will remain active.
token_type	This will always be bearer.

Name	Details
	<pre>{   "access_token": "2YotnFZFEjrlzCsicMwPAA",   "token_type": "bearer",   "expires_in": 3600 }</pre>

## Example

Request
<pre>curl https://10.110.134.12/api/v2/access/token \ -X POST -k \ -d grant_type=client_credentials \ -d client_id=8YKCxq72qpjnYmXQ \ -d client_secret=pcX5BmdJ2f4QLM5RfgsS4jOtxAdTRF</pre>
Response
<pre>{"access_token": "ee4e077cf457196eb4d27cf6f02686dc07763059", "token_type": "bearer", "expires_in": 86400}</pre>

## Validate Token

GET
/api/v2/access/validate_token

Verify if an Access Token is valid and return the time remaining before it expires.

## Request

### HTTP Headers

Header	Value
Accept (optional)	application/json
Authorization	Bearer <ACCESS_TOKEN>

## Response

Body

Name	Details
expires_in	Time in seconds that the API session will remain active.
	<pre>{   'expires_in': 86399 }</pre>

## Example

Request
<pre>curl https://10.110.134.12/api/v2/access/validate_token \ -X GET -k \ -H "Authorization: Bearer ee4e077cf457196eb4d27cf6f02686dc07763059"</pre>
Response
<pre>{"expires_in": 85643}</pre>

# Selected APIs

## Overview

cnMaestro APIs are defined within the Swagger specification, accessed here <https://docs.cloud.cambiumnetworks.com/api/5.1.1/index.html>. This section only presents additional details for the Device, Statistics and Performance APIs, which have unique responses based upon Device Type, and are difficult to present within Swagger.

## cnMaestro v2 API

Beginning with cnMaestro 3.0.0, the API version changes from **v1** to **v2**. The **v1** version will be supported through 3.1.0, but Cambium recommends updating existing API code to use **v2**. For most commands, swapping v1 in the URL with v2 should be sufficient. However, the following APIs may need to be rewritten while moving to the **v2** version.

- AP Groups
- Devices
- Statistics
- Performance
- Mesh Peers
- Operations

There are unique API responses such as:

- [Devices API Response \(v2 Format\)](#)
- [Statistics API Response \(v2 Format\)](#)
- [Performance API Response \(v2 Format\)](#)

## Devices API Response (v2 Format)

## Devices onboarding error codes

Error Codes	Details
ERR_UNSUPPORTED_DEVICE	Claiming {{type}} devices is not currently supported.
ERR_NON_ENTERPRISE_WIFI_TYPE	Only cnPilot Enterprise (ePMP Hotspot), Enterprise Wi-Fi (E-Series and XE/XV-Series) and cnMatrix devices are allowed into Enterprise account.
ERR_NON_WIFI_TYPE	Cannot claim non Wi-Fi device under a Site.
ERR_UNSUPPORTED_	Unsupported device type in current account view - {{view}}.

Error Codes	Details
TYPE	
ERR_UNKNOWN_DEVICE	Unknown Device.
ALREADY_CLAIMED	Device already claimed.
LTE_CLAIMED	cnRanger devices are not supported in production accounts.
ERR_INVALID_MSN	Invalid Serial Number.
ERR_OWNER_DIFFERENT	Device is claimed into another account.
ERR_INTERNAL	System encountered an internal error; please try again later. If the problem persists, contact support.
ERR_INVALID_MAC	Invalid MAC.
ERR_DUPLICATE_KEY	The device is already claimed.
UNPROCESSABLE	Device state does not allow to cloud sync.
CBRS_ERROR_DEVICES	MAC is already claimed. It cannot be claimed on CBRS.
SUBSCRIPTION_FAIL	Device could not acquire slot.
SUBSCRIPTION_FAIL_FEATURE_MISMATCH	Device is mapped to another onprem instance.
SUBSCRIPTION_FAIL_TOO_MANY ASSOCS	Device is mapped to another onprem instance.

## Statistics API Response (v2 Format)

Statistics API Response v2 format are shown for the following devices:

- [60 GHz cnWave](#)
- [cnMatrix](#)
- [cnReach](#)
- [Fixed Wireless](#)
- [PTP](#)
- [PTP 820/850](#)
- [Wi-Fi](#)
- [cnWave 5G Fixed](#)

### 60 GHz cnWave

#### General

Name	Details	Mode
cpu	CPU utilization	All
last_sync	Last synchronization (UTC Unix time milliseconds)	All
mac	MAC address	All
IP	IP address	All
managed_account	Managed account name	All
memory	Available memory	All
mode	Device mode	All

Name	Details	Mode
name	Device name	All
network	Network	All
site	Site name	All
site_id	Site ID	All
status	Status [online, offline, claimed, waiting, onboarding]	All
status_time	Uptime/downtime interval (seconds)	All
sync_mode	Radio Sync mode [RF, GPS, None]	All
type	Device type	All

## Networks

Name	Details	Mode
ipv6	IPv6 address	All

## Radios (Array format)

Name	Details	Mode
radios[].channel	Channel	All
radios[].id	Radio Id	All
radios[].mac	Radio MAC	All
radios[].rx_bps	Receive bits per second	All
radios[].sync_mode	Radio Sync mode [RF, GPS, None]	All
radios[].tx_bps	Transmit bits per second	All

## Ethernet Ports (Array format)

Name	Details	Mode
ethports[].port	Port name	All
ethports[].rx_pkts	Received packets	All
ethports[].rx_errors	Received packets errors	All
ethports[].rx_pkts_drop	Dropped received packets	All
ethports[].speed	Port speed and duplex	All
ethports[].tx_pkts	Transmitted packets	All
ethports[].tx_errors	Transmitted packets errors	All
ethports[].tx_pkts_drop	Dropped transmitted packets	All

## cnMatrix

### General

Name	Details
cpu	CPU utilization
config_version	Configuration version
last_sync	Last synchronization (UTC Unix time milliseconds)

Name	Details
mac	MAC address
managed_account	Managed account name
memory	Available memory
mode	Device mode
name	Device name
network	Network
site	Site name
site_id	Site unique identifier
status	Status [online, offline, claimed, waiting, onboarding]
status_time	Uptime/downtime interval (seconds)
tower	Tower name
type	Device type

## Networks

Name	Details
ip	IP address

## cnReach

### General

Name	Details	Mode
config_version	Configuration version	All
connected_sms	Connected SM count	All
last_sync	Last synchronization (UTC Unix time milliseconds)	All
mac	MAC address	All
managed_account	Managed account name	All
mode	Device mode	All
name	Device name	All
network	Network	All
status	Status [online, offline, claimed, waiting, onboarding]	All
status_time	Uptime/downtime interval (seconds)	All
tower	Tower name	All
type	Device type	All

### Networks

Name	Details	Mode
ip	IP address	All

## Radios (Array format)

Name	Details	Mode
radios[].device_id	Device ID	Radios
radios[].id	Radio Id	Radios
radios[].linked_with	Linked with	Radios
radios[].mac	Radio MAC	Radios
radios[].margin	Margin	Radios
radios[].mode	Radio mode [ap, ep, rep]	Radios
radios[].neighbors	Radio neighbors	Radios
radios[].network_address	Network address	Radios
radios[].noise	Average noise (dB)	Radios
radios[].power	Transmit power	Radios
radios[].rssi	RSSI value (dB)	Radios
radios[].rx_bytes	Receive bytes	Radios
radios[].software_version	Current software version.	Radios
radios[].temperature	Radio temperature	Radios
radios[].type	Radio type [ptp, ptmp]	Radios
radios[].tx_bytes	Transmit bytes	Radios

## Fixed Wireless (cnVision, ePMP and PMP)

### General

Name	Details	cnVision	ePMP	PMP
ap_mac	AP MAC	SM	SM	SM

## PTP 650/670/700

### General

Name	Details	Mode
config_version	Configuration version	All
connected_sms	Connected SM count	Master
gain	Antenna gain (dBi)	All
last_sync	Last synchronization (UTC Unix time milliseconds)	All
mac	MAC address	All
managed_account	Managed account name	All
mode	Device mode	All
name	Device name	All
network	Network	All
status	Status [online, offline, claimed, waiting, onboarding]	All
status_time	Uptime/downtime interval (seconds)	All
temperature	Temperature	All
tower	Tower name	All
type	Device type	All
vlan	VLAN	All

### Networks

Name	Details	Mode
default_gateway	Default gateway	All
ip	IP address	All
ip_dns	DNS	All
ip_dns_secondary	Secondary DNS	All
lan_status	LAN status [down, up]	All
netmask	Network mask	All

### Ethernet Ports (Array format)

Name	Details	Mode
ethports[].port	Port name	All
ethports[].rx_frames	Ports receive frames oversize	All
ethports[].rx_util	Ports receive bandwidth utilization	All
ethports[].speed	Ports speed and duplex	All
ethports[].tx_util	Ports transmit bandwidth utilization	All

## Radios

Name	Details	Mode
radio.byte_error_ratio	Byte Error Ratio	All
radio.channel_width	Channel width ePMP: [5 MHz, 10 MHz, 20 MHz, 40 MHz] PMP: [...]	All
radio.color_code	Color code	All
radio.rx_frequency	Receive frequency	All
radio.tx_frequency	Transmit frequency	All
radio.tx_power	Radio transmit power	All

## PTP 820/850

### General

Name	Details	Mode
ip	IP address	All
last_sync	Last synchronized	All
mac	MAC address	All
managed_account	Managed account name	All
mode	Device mode	All
name	Device name	All
network	Network	All
status	Status [online, offline, claimed, waiting, onboarding]	All
status_time	Uptime/downtime interval (seconds)	All
temperature	Temperature	All
tower	Uptime/downtime interval (seconds)	All
type	Device type	All

### Radio

Name	Details	Mode
radios[].defective_blocks	Radio defective blocks	All
radios[].id	Radio Id	All
radios[].radio_location	Radio location	All
radios[].rx_bps	Receive bits/second	All
radios[].rx_level	Receive level	All
radios[].rx_frequency	Receive frequency	All
radios[].tx_bps	Transmit bits/second	All
radios[].tx_level	Transmit level	All
radios[].tx_frequency	Transmit frequency	All
radios[].tx_mute_status	Transmit mute status	All
radios[].modem_mse	Modem Mean Square Error (MSE) in dB	All
radios[].modem_xpi	Modem Cross-Polar Isolation (XPI) in dB	All

## Interfaces

Name	Details	Mode
interfaces[].admin_state	Admin state	All
interfaces[].auto_negotiation	Auto Negotiation	All
interfaces[].interface_location	Interface location	All
interfaces[].mac	MAC address	All
interfaces[].media_type	Media type	All
interfaces[].operational_status	Operational Status	All
interfaces[].port_duplex	Interface duplex type	All
interfaces[].speed	Interface speed	All

## Wi-Fi

### Note

Mode is Enterprise, Home, or All.

## General

Name	Details	Mode
config_version	Configuration version	All
cpu	CPU utilization	All
mac	MAC address	All
managed_account	Managed account name	All
memory	Available memory	All
mode	Device mode	All
name	Device name	All
network	Network	All
parent_mac	Parent MAC	All
site	Site name	All
site_id	Site unique identifier	All
status	Status [online, offline, claimed, waiting, onboarding]	All
status_time	Uptime/downtime interval (seconds)	All
type	Device type	All

## Networks

Name	Details	Mode
ip	IP address	All
ipv6	IPv6 address	All
ip_dns	DNS	All
ip_dns_secondary	Secondary DNS	All
ip_wan	WAN IP	All
lan_mode_status	LAN mode status [no-data, half, full]	Enterprise
lan_speed_status	LAN speed status	All

Name	Details	Mode
lan_status	LAN status [down, up]	Home
netmask	Network mask	All

### Radios (Array format)

Name	Details	Mode
radios[].airtime	Airtime	All
radios[].band	Radio band	All
radios[].bssid	Radio mac	Enterprise
radios[].channel	Channel	All
radios[].id	Radio Id	All
radios[].multicast_rate	Multicast rate	Enterprise
radios[].noise_floor	Noise floor	Enterprise
radios[].num_clients	Number of clients	All
radios[].num_wlans	Number of WLANs	Enterprise
radios[].power	Transmit power	All
radios[].quality	RF Quality description	Enterprise
radios[].radio_state	Radio state	Enterprise
radios[].rx_bps	Receive bits/second	All
radios[].rx_bytes	Receive bytes	All
radios[].tx_bps	Transmit bits/second	All
radios[].tx_bytes	Transmit bytes	All
radios[].unicast_rates	Unicast rates	Enterprise
radios[].utilization	Radio utilization	Enterprise

## cnWave 5G Fixed

### General

Name	Details	Mode
cpu	CPU utilization	All
last_sync	Last synchronization (UTC Unix time milliseconds)	All
mac	MAC address	All
managed_account	Managed account name	All
ip	IP Address	All
mode	Device mode	All
name	Device name	All
network	Network	All
tower	Tower name	All
status	Status [online, offline, claimed, waiting, onboarding]	All
status_time	Uptime/downtime interval (seconds)	All
config_version	Current config version	All
type	Device type	All

Name	Details	Mode
connected_cpe	Number of CPEs connected to the BTS	BTS
registered_cpe	Number of CPEs registered with the BTS	BTS
cpe_registration_state	CPEs Registration State	CPE
cpe_registration_count	CPEs Registration Count	CPE
cpe_imsi	CPE Device Identity	CPE

## Boot

Name	Details	Mode
startup_count	Startup Count for the device	BTS
startup_reason	Startup Reason for the device	BTS

## Shutdown (Array format)

Name	Details	Mode
shutdown[].date	Shutdown Date	BTS
shutdown[].detail	Shutdown Detail	BTS
shutdown[].index	Shutdown Index	BTS
shutdown[].reason	Shutdown Reason	BTS

## Interface Config

Name	Details	Mode
sfp1_speed	SFP1 Speed	BTS
sfp2_speed	SFP2 Speed	BTS

## Interfaces (Array format)

Name	Details	Mode
interfaces[].port_name	Port name	BTS
interfaces[].in_octets	Received octets	BTS
interfaces[].out_octets	Transmitted octets	BTS
interfaces[].in_ucast_pkts	Received unicast packets	BTS
interfaces[].out_ucast_pkts	Transmitted unicast packets	BTS
interfaces[].in_mcast_pkts	Received multicast packets	BTS
interfaces[].out_mcast_pkts	Transmitted multicast packets	BTS
interfaces[].in_bcast_pkts	Received broadcast packets	BTS
interfaces[].out_bcast_pkts	Transmitted broadcast packets	BTS
interfaces[].in_discards	Received discarded packets	BTS
interfaces[].out_discards	Transmitted discarded packets	BTS
interfaces[].in_errors	Received errored packets	BTS
interfaces[].out_errors	Transmitted errored packets	BTS

## Radio

Name	Details	Mode

### 60 GHz cnWave

#### General

Name	Details	Mode
mac	MAC address	All
managed_account	Managed account name	All
mode	Device mode	All
name	Device name	All
network	Network	All
online_duration	Duration of device connection with server (seconds)	All
site	Site	All
timestamp	Timestamp	All
type	Device type	All
uptime	Device online time (seconds)	All

#### Radios (Array format)

Name	Details	Mode
radios[].id	Radio ID	All
radios[].rx_bps	Receive bits per second	All
radios[].tx_bps	Transmit bits per second	All

## Ethernet Ports (Array format)

Name	Details	Mode
ethports[].max_rx	Ports maximum receive bytes	All
ethports[].max_tx	Ports maximum transmit bytes	All
ethports[].min_rx	Ports minimum receive bytes	All
ethports[].min_tx	Ports minimum transmit bytes	All
ethports[].port	Port name	All
ethports[].rx	Ports receive bytes	All
ethports[].tx	Ports transmit bytes	All
ethports[].rx_bps	Ports receive bits per second	All
ethports[].tx_bps	Ports receive bits per second	All
ethports[].min_rx_bps	Ports minimum receive bits per second	All
ethports[].min_tx_bps	Ports minimum transmit bits per second	All
ethports[].max_rx_bps	Ports maximum receive bits per second	All
ethports[].max_tx_bps	Ports maximum transmit bits per second	All

## cnMatrix

### General

Name	Details
mac	MAC address
managed_account	Managed account name
mode	Device mode
name	Device name
network	Network
site	Site
timestamp	Timestamp
tower	Tower
type	Device type

### Switch

Name	Details
switch.rx.broadcast_pkts	Receive broadcast packets
switch.dl_kbits	Downlink usage (in kbits on hour or minute basis)
switch.dl_throughput	Downlink throughput (Kbps)
switch.ul_kbits	Uplink (in Kbits on hour or minute basis)
switch.rx.multicast_pkts	Receive multicast packets
switch.ul_throughput	Uplink throughput (Kbps)
switch.rx.pkts_err	Receive Packet error
switch.rx.unicast_pkts	Receive unicast packets
switch.tx.broadcast_pkts	Transmit broadcast packets

Name	Details
switch.tx.multicast_pkts	Transmit multicast packets
switch.tx.pkts_err	Transmit packet error
switch.tx.unicast_pkts	Transmit unicast packets

## cnReach

### General

Name	Details	Mode
mac	MAC address	All
managed_account	Managed account name	All
mode	Device mode	All
name	Device name	All
network	Network	All
online_duration	Duration of device connection with server (seconds)	All
sm_count	Connected SM count	All
timestamp	Timestamp	All
tower	Tower	All
type	Device type	All
uptime	Device online time (seconds)	All

### Radios (Array format)

Name	Details	Mode
radios[].id	Radio ID	Radios
radios[].neighbors	Radio neighbors	Radios
radios[].noise	Average noise	Radios
radios[].power	Transmit power	Radios
radios[].rssi	RSSI value	Radios
radios[].rx_bytes	Receive bytes	Radios
radios[].throughput	Total throughput	Radios
radios[].tx_bytes	Transmit bytes	Radios

## Fixed Wireless (cnVision, ePMP and PMP)

### General

Name	Details	cnVision	ePMP	PMP

type	Device type	AP/SM	AP/SM	AP/SM
uptime	Device online time ( seconds)	AP/SM	AP/SM	AP/SM

## Radios

Name	Details	cnVision	ePMP	PMP
radio.dl_frame_utilization	Downlink frame utilization			AP
radio.dl_kbits	Downlink usage (in Kbits on hour or minute basis)	AP/SM	AP/SM	
radio.dl_mcs	Downlink MCS	SM	SM	
radio.dl_modulation	Downlink modulation			SM
radio.dl_pkts	Downlink packet count	AP/SM	AP/SM	
radio.dl_pkts_loss	Downlink packet loss			AP/SM
radio.dl_retransmits_pct	Downlink retransmission percentage	AP/SM	AP/SM	
radio.dl_rssi	Downlink RSSI	SM	SM	SM
radio.dl_rssi_imbalance	Downlink RSSI imbalance			SM
radio.dl_snr	Downlink SNR	SM	SM	
radio.dl_snr_h	Downlink SNR (dB) horizontal			SM
radio.dl_snr_v	Downlink SNR (dB) vertical			SM
radio.dl_throughput	Downlink Throughput (Kbps)	AP/SM	AP/SM	AP/SM
radio.ul_frame_utilization	Uplink frame utilization			AP
radio.ul.kbits	Uplink usage (in Kbits on hour or minute basis)	AP/SM	AP/SM	
radio.ul_mcs	Uplink MCS	SM	SM	
radio.ul_modulation	Uplink modulation			SM

Name	Details	cnVision	ePMP	PMP
radio.ul_pkts	Uplink packet count	AP/SM	AP/SM	
radio.ul_pkts_loss	Uplink packet loss			AP/SM
radio.ul_retransmits_pct	Uplink Retransmission percentage	AP/SM	AP/SM	
radio.ul_rssi	Uplink RSSI	SM	SM	SM
radio.ul_snr	Uplink SNR	SM	SM	
radio.ul_snr_h	Uplink SNR (dB) horizontal			SM
radio.ul_snr_v	Uplink SNR (dB) vertical			SM
radio.ul_throughput	Uplink Throughput (Kbps)	AP/SM	AP/SM	AP/SM

## PTP 650/670/700

### General

Name	Details	Mode
mac	MAC address	All
managed_account	Managed account name	All
mode	Device mode	All
name	Device name	All
network	Network	All
sm_count	Connected SM count	Master
timestamp	Timestamp	All
tower	Tower	All
type	Device type	All

### Ethernet Ports (Array format)

Name	Details	Mode
ethports[].max_rx	Ports maximum receive bytes	All
ethports[].max_tx	Ports maximum transmit bytes	All
ethports[].min_rx	Ports minimum receive bytes	All
ethports[].min_tx	Ports minimum transmit bytes	All
ethports[].pkt_error	Ports packet error	All
ethports[].port	Port name	All
ethports[].rx	Ports receive bytes	All
ethports[].tx	Ports transmit bytes	All
ethports[].rx_bps	Ports receive bits per second	All
ethports[].tx_bps	Ports receive bits per second	All
ethports[].min_rx_bps	Ports minimum receive bits per second	All
ethports[].min_tx_bps	Ports minimum transmit bits per second	All

Name	Details	Mode
ethports[].max_rx_bps	Ports maximum receive bits per second	All
ethports[].max_tx_bps	Ports maximum transmit bits per second	All

## Ethernet

Name	Details	Mode
ethernet.link_loss	Link loss	All
ethernet.pcb_temperature	PCB temperature	All
ethernet.rx_channel_util	Receive channel utilization	All
ethernet.rx_capacity	Receive capacity	All
ethernet.ssr	Signal strength ratio	All
ethernet.rx_power	Receive power	All
ethernet.sfp_interface.tx	SFP transmit bytes	All
ethernet.rx_throughput	Receive throughput	All
ethernet.tx_channel_util	Transmit channel utilization	All
ethernet.tx_capacity	Transmit capacity	All
ethernet.tx_power	Transmit power	All
ethernet.tx_throughput	Transmit throughput	All
ethernet.vector_error	Vector error	All

## PTP 820/850

### General

Name	Details	Mode
mac	MAC address	All
managed_account	Managed account name	All
mode	Device Mode	All
name	Device name	All
network	Network	All
online_duration	Duration online	All
timestamp	Timestamp	All
tower	Tower	All
type	Device type	All
uptime	Device online time ( seconds)	All

### Radio

Name	Details	Mode
radios[].id	Radio ID	All
radios[].max_rsl	Radio Maximum Receiver Signal Level	All
radios[].max_tsl	Radio Maximum Transmission Signal Level	All
radios[].min_rsl	Radio Minimum Receiver Signal Level	All

Name	Details	Mode
radios[].min_tsl	Radio Minimum Transmission Signal Level	All
radios[].peak_throughput	Radio Peak Throughput	All
radios[].radio_location	Radio Location	All
radios[].throughput	Radio Throughput	All
radios[].modem_max_mse	Modem maximum MSE in dB	All
radios[].modem_min_mse	Modem minimum MSE in dB	All
radios[].modem_max_xpi	Modem maximum XPI in dB	All
radios[].modem_min_xpi	Modem minimum XPI in dB	All
radios[].modem_max_mrmc_profile	Modem maximum MMRC	All
radios[].modem_min_mrmc_profile	Modem minimum MMRC	All

## Radio Groups

Name	Details	Mode
radios_groups[].id	Radio Group ID	All
radios_groups[].peak_throughput	Radio Group peak throughput	All
radios_groups[].radio_location	Radio Group location	All
radios_groups[].throughput	Radio Group throughput	All

## Wi-Fi

### General

Name	Details	Mode
mac	MAC address	All
managed_account	Managed account name	All
mode	Device mode	All
name	Device name	All
network	Network	All
online_duration	Duration of device connection with server ( seconds)	All
site	Site	All
timestamp	Timestamp	All
type	Device type	All
uptime	Device online time ( seconds)	All

### Radios (Array format)

Name	Details	Mode
radios[].clients	Number of clients	All
radios[].id	Radio ID	All
radios[].rx_bps	Receive bits/second	All
radios[].throughput	Total throughput	All
radios[].tx_bps	Transmit bits/second	All
radios[].band	Radio band (2.4 GHz/5 GHz)	All

**General**

Name	Details	Mode
mac	MAC address	All
managed_account	Managed account name	All
mode	Device mode	All
name	Device name	All
network	Network	All
online_duration	Duration of device connection with server (seconds)	All
timestamp	Timestamp	All
type	Device type	All
uptime	Device online time (seconds)	All
cpe_registered	Registered CPEs count	BTS
cpe_connected	Connected CPEs count	BTS
cpe_registrationCnt	Number of times the CPE registered with the BTS	CPE

**Radio**

Name	Details	Mode
ul_throughput	Uplink Throughput	BTS
dl_throughput	Downlink Throughput	BTS
cpe_ul_throughput	Uplink Throughput	CPE
cpe_dl_throughput	Downlink Throughput	CPE
cpe_ul_evm	Uplink EVM	CPE
cpe_dl_evm	Downlink EVM	CPE
cpe_ul_mcs	Uplink MCS	CPE
cpe_dl_mcs	Downlink MCS	CPE
cpe_ul_rxPower	Uplink Rx Power	CPE
cpe_dl_rxPower	Downlink Rx Power	CPE

**Client API Response (v2 Format)**

Client details API Response v2 format are shown below:

Name	Details	Wi-Fi
ap_mac	AP MAC	
client_type	Client type(Client   Guest Client)	
download_quota	Download quota (Note: only applicable for Guest Client)	
download_quota_balance	Download quota balance (Note: only applicable for Guest Client)	
ip	IP address of client	
mac	Client MAC	

Name	Details	Wi-Fi
managed_account	Managed account name	
manufacturer	Manufacturer name	
name	Client name	
radio.band	Band(2.4 GHz/5 GHz)	
radio.rssi	RSSI	
radio.rx_bytes	Received bytes	
radio.snr	SNR	
radio.ssid	SSID	

## External Guest Access Login API

Integrates an external captive portal with the Cambium Networks AP while posting directly to cnMaestro. This API provides the support for the external captive portal to make login requests.

POST /api/v2/ext-portals/login

### Request:

curl -X

```
/api/v2/ext-portals/login" -H "accept: */*" -H "Authorization: Bearer
e88916f5b663c1ea966af835c8a0a19c20d17686" -H "Content-Type: application/json"-d
```

### Body

```
"{"ga_ap_mac": "11-22-33-44-55-66", "ga_cmac": "11-22-33-44-55-65", "ga_
Qv": "eUROBR86HBgAGDEEVgQAGw4UWRUCACYVMgFPMV5ZWVFfUVdGX1ZFJXxZR1dLBhMUMmw", "ga_
user": "test-user", "ga_pass": "test-pass"}"
```

### Response:

```
{
  "data": {
    "mType": 3,
    "msgId": 28,
    "status": <integer values>,
    "prefixQs": <true/false>,
    "expiry": <integer values>,
    "action": <integer values>,
    "cmac": <client mac>,
    "msg": <Radius Returned Message>,
    "extURL": <external url string>
  }
}
```

The status value description is provided in the table below.

Status	Description
0	Login is successful.
1	Invalid login request, the client is not currently associated to the AP which is being requested for login here.
2	RADIUS reject due to invalid username/password.
3	RADIUS timeout, AP didn't received the RADIUS response.
4	Missing RADIUS server config on the WLAN config of the AP.

Status	Description
5	If LDAP configured on the AP for authentication then LDAP server responded back with reject.
6	LDAP timeout happened on the AP for the request.
7	Missing LDAP configuration on the WLAN configuration of the AP.
8	Logout is successful.
9	Logout failed due to missing session on the AP. Most likely client session is already deleted from this AP.

The response parameter name and details is shown below.

Name	Details
action	0: On success action redirects the user to AP onboard logout page. 1: On success redirects user to an external URL. 2: On success redirects user to its original URL.
cmac	MAC address of the client.
expiry	Displays the session time for the given guest session.
msg	Message is based on RADIUS attribute reply message (18) in the RADIUS Access Accept or Reject message.
prefixQs	True: Add query strings to landing URL on success. False: Remove query strings from landing URL on success.  prefixQs and action values are driven based on WLAN configuration.

## 60 GHz cnWave RESTful API

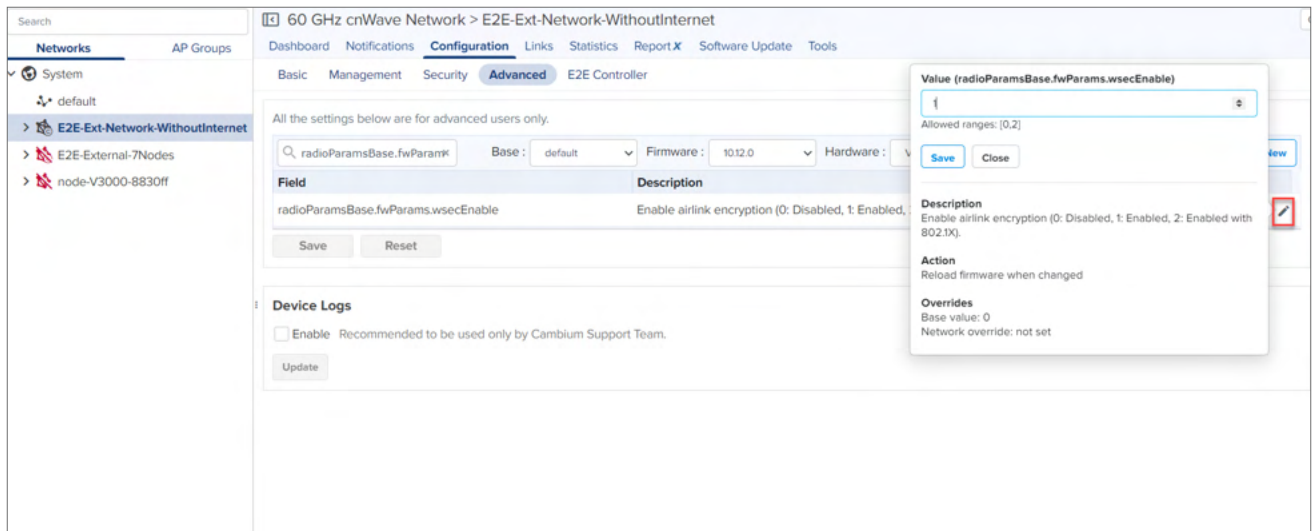

cnMaestro supports configuration overrides for 60 GHz cnWave E2E Network, E2E Controller, and Node(s) using the RESTful API.

### E2E Network

To determine the configuration parameters available in an E2E Network, navigate to **E2E Network > Configuration > Advanced**. Search for the desired **Field**, and review its **Description**, allowed **Values**, and **Override status**. Use the RESTful API to override single or multiple fields.

```
GET /api/v2/cnwave60/networks/{network_id}/configuration
```

```
PUT /api/v2/cnwave60/networks/{network_id}/configuration
```

Field names are separated by dots. Each substring between the dots will be converted to objects and the last substring will be the key and value.

### Example

In case of field name `radioParamsBase.fwParams.wsecEnable`, payload will be:

```
{
  "radioParamsBase": {
    "fwParams": {
      "wsecEnable": 1
    }
  }
}
```

**Warning**  
 Partial update is not allowed. Always send full configuration that needs to be pushed to E2E Network.

### Optimization

To determine the optimization parameters available in an E2E Network, navigate to **E2E Network > Configuration > Advanced**.

GET `/api/v2/cnwave60/networks/{network_id}/optimization/{optimization_type}`

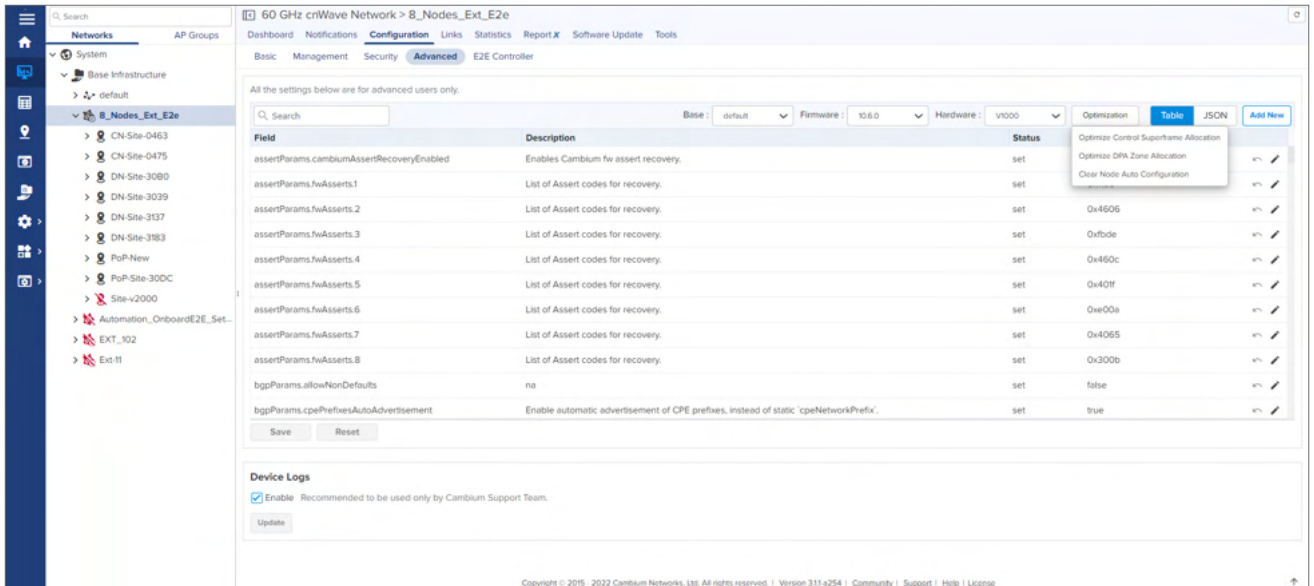

PUT `/api/v2/cnwave60/networks/{network_id}/optimization/{optimization_type}`

Available values :

`controlSuperframeAllocation,`

`dpaZoneAllocation`

`clearNodeAutoConfig`

## Example

```
{
  "clearUserConfig": true,
  "nodes": [
    "string"
  ],
  "configPaths": "string"
}
```

## Device (Node) Configuration

To update Device configuration, navigate to **Node > Configuration > Advanced**. Search for the **Field**, and review its **Description**, allowed **Values**, and **Overrides status**. Use the RESTful API to override those fields.

GET /api/v2/cnwave60/networks/{mac}/configuration

PUT /api/v2/cnwave60/networks/{mac}/configuration

Field names are separated by dots. Each substring between the dots will be converted to objects and the last substring will be the key and value.

## Example

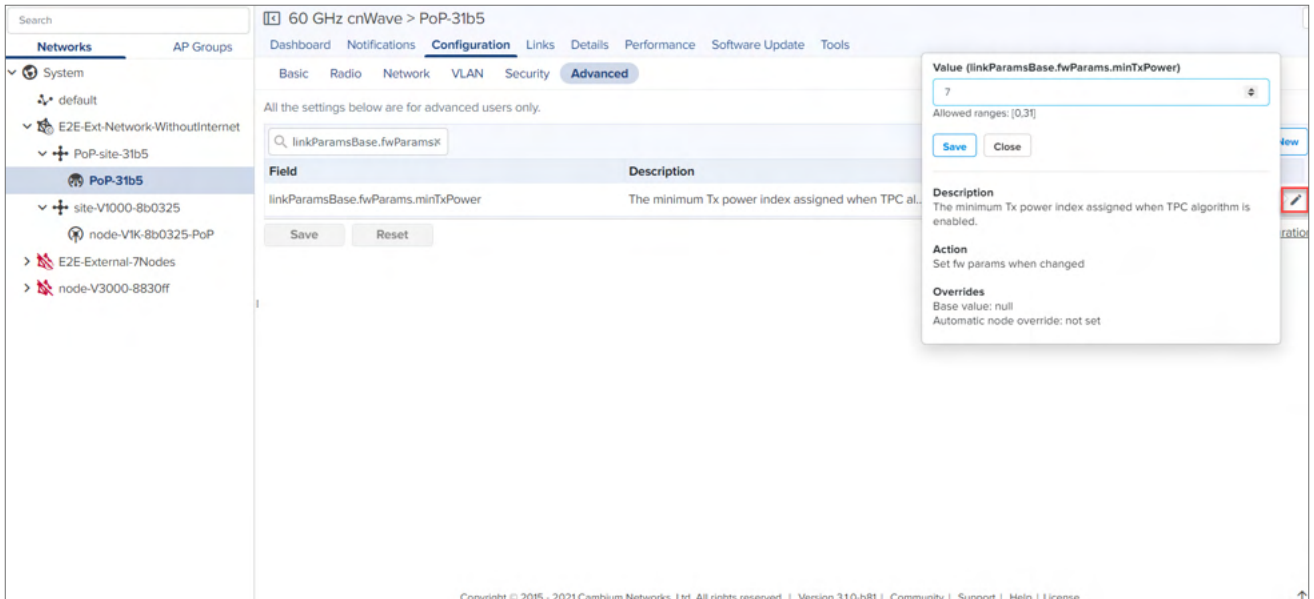

In case of field name `linkParamsBase.fwParams.minTxPower`, object to send in the API payload will be:

```
{
  "linkParamsBase": {
    "fwParams": {
      "minTxPower": 6
      "maxTxPower": 8
    }
  }
}
```

The below two APIs are introduced in Release 3.1.0 to update multiple device configurations overrides.

GET /api/v2/cnwave60/networks/{network\_id}/devices/overrides

PUT /api/v2/cnwave60/networks/{network\_id}/devices/overrides

### Warning

Partial update is not allowed. Always send full configuration that needs to be pushed to 60 GHz cnWave Devices.

The example payload for PUT request is seen from cnMaestro UI.

### Example

```
{
  "device1_name": {
    "radioParamsBase": {
      "fwParams": {
        "txPower": 6
      }
    }
  },
  "device2_name": {
    "popParams": {
      "POP_IFACE": "nic2"
    }
  }
}
```

### Note

You can download the full config of the node by clicking on the **Show Full Configuration** as well and then get the JSON key and pass in RESTful API.

## E2E Controller

To update E2E Controller configuration, navigate to **E2E Network > Configuration > E2E Controller**. Search for the desired **Field**, and review its **Description**, allowed **Values**, and **Override status**. Use the RESTful API to override those fields.

GET /api/v2/cnwave60/networks/{network\_id}/controller/configuration

PUT /api/v2/cnwave60/networks/{network\_id}/controller/configuration

Field names are separated by dots. Each substring between the dots will be converted to objects and the last substring will be the key and value.

## Example

In case of field name `prefixAllocParams.seedPrefix`, payload will be:

```
{
  "prefixAllocParams": {
    "seedPrefix": "fd00:ceed:1992:1400::/56"
  }
}
```

60 GHz cnWave Network > E2E-Ext-Network-WithoutInternet

Configuration Links Statistics Report X Software Update Tools

Basic Management Security Advanced **E2E Controller**

All the settings below are for advanced users only.

prefixAllocParams.seedPr

Field	Description	Status
prefixAllocParams.seedPrefix	Network seed prefix used for centralized and determ...	modified

Save Reset

Value (prefixAllocParams.seedPrefix)  
fd00:ceed:8b03:2400::/56  
Regular expression: [(0-9a-fA-F:)](0-9)+

Save Close

Description  
Network seed prefix used for centralized and deterministic prefix allocation.

Action  
Update prefix alloc params when changed

Overrides  
Base value: undefined  
Override: fd00:ceed:8b03:2500::/56

### Warning

Partial update is not allowed. Always send full configuration that needs to be pushed to the E2E Controller.

## Guest Access

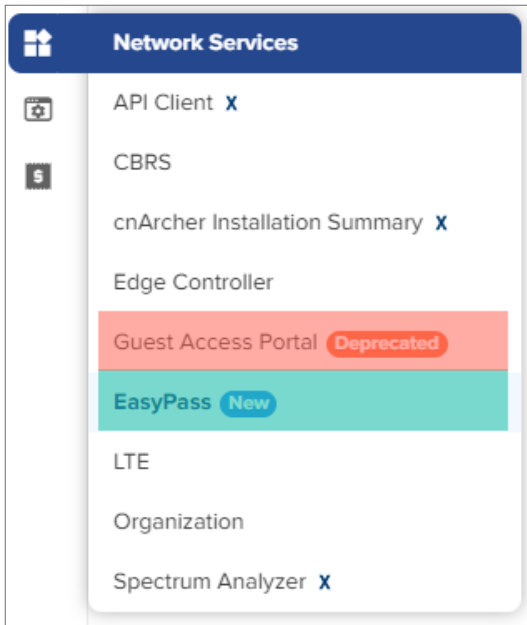

This section describes how to configure Guest Access using cnMaestro. This feature allows the clients to connect to the internet through Free Tier, Vouchers, or Paid Access types.

### Note

From cnMaestro 5.1.0 release onwards, the **Guest Access Portal** configuration wizard is deprecated, and a new wizard called **EasyPass** is introduced, as shown in [Figure 488](#).

Figure 488 Network Services

**Note**

For information on EasyPass, see [EasyPass](#).

The Guest Access feature creates a separate network for guests by providing Internet access to guest wireless devices such as mobiles, tabs, and laptops.

**Note**

The Guest Access feature is supported only on Enterprise Wi-Fi devices.

## Configuration

- Create the Guest Access Portal in cnMaestro
- Map the device to cnMaestro

## Creating the Guest Access Portal in cnMaestro

1. [Basic Details](#)
2. [Access Portal](#)
3. [Design Page](#)
4. [Sessions](#)
5. [Guests](#)

## Procedure for Creating Guest Access

1. Navigate to **Network Services > Guest Access Portal**.

Services > Guest Access Portal

You must update your AP software to version 3.5-r1 or higher in order to use Guest Access Portal in Managed Accounts.

Managed Account: All Accounts Delete Add Portal

<input type="checkbox"/>	Guest Portal Name	Description	Managed Account	Event Logging	Free Access	Paid Access	Voucher Access	
<input type="checkbox"/>	<a href="#">GAP_Test_NOV25</a>		Base Infrastructure	Yes	Yes	No	Yes	
<input type="checkbox"/>	<a href="#">nbi_base_portal</a>		Base Infrastructure	No	Yes	No	Yes	
<input type="checkbox"/>	<a href="#">nbi_ma_portal</a>		ma_test_nbi_api_d579d	No	Yes	No	Yes	
<input type="checkbox"/>	<a href="#">1_GAP_Test</a>		Base Infrastructure	Yes	No	No	No	
<input type="checkbox"/>	<a href="#">2_GAP_Test_1</a>		Base Infrastructure	Yes	No	No	No	
<input type="checkbox"/>	<a href="#">3_GAP_Test</a>		Base Infrastructure	Yes	No	No	No	
<input type="checkbox"/>	<a href="#">4_GAP_Test</a>	45rtfg	Base Infrastructure	Yes	No	No	No	
<input type="checkbox"/>	<a href="#">5_GAP_Test</a>		Base Infrastructure	Yes	No	No	No	
<input type="checkbox"/>	<a href="#">GAP_Test_6</a>		Base Infrastructure	Yes	No	No	No	
<input type="checkbox"/>	<a href="#">GAP_Test_msp_1</a>		1-MSP-25NoV	Yes	No	No	No	

Showing 1 - 10 Total: 10 10 < Previous 1 Next >

2. Click **Add Portal**. A maximum of four portals can be created per account.
3. Enter a name and brief description for the portal.

### Add Guest Portal

Managed Account  
Base Infrastructure

Name\*

**Note**

A name once created for the Portal cannot be changed.

## Access Portal

The Access Portal tab has four different access types:

- [Free](#)
- **Enterprise X** [access through one of the following options:](#)
  - Microsoft Azure
  - Sponsored Guest
  - Self Registration
  - Google
- [Paid X](#)
- [Vouchers](#)

The parameters under each access method can be configured only after the corresponding access method is enabled.

**Note**

Microsoft Azure and Google-based access are not supported on devices running release version 4.x.

## Free Access Type Configuration

[Guest Access Portal](#) > Raja-GA-Test

Hour(s) Valid range is 1-43800 hour(s)

Session Duration

Hour(s) Valid range is 1-43800 hour(s)

**Client Rate Limit**

**Client Quota Limit**

**Social Login**

**SMS Authentication**

**Add Whitelist**

**Free Access** type contains configurable parameters such as:

- Session validity
- Renewable frequency
- Client rate limits
- Social login

You can select authentication using Google, Facebook, Twitter and Office 365, or all. You will need to enter the App ID of your social login App. If you enable Facebook login you will also need to enter your Facebook App secret.

**Table 122** *Free Access Type Parameters*

Parameter	Description
Add Whitelist	Options for configuring the IP address or the domain name.
Client Rate Limit	Options for configuring downlink and uplink parameters in kbps to limit the data transfer rate to or from the client. If a client rate limit parameter is blank, no limits are applied.

**Table 122** Free Access Type Parameters

Parameter	Description
Client Quota Limit	<p>The data quota limit feature has been added for RADIUS-based as well as controller-based guest portals. For controller-based, it is either directional or total data quota limit. Once the client logs in as a guest, the data quota limit is enforced and the values are sent to the AP to which the client is connected. The access point keeps track of the data limits and sends client statistics to the controller every 30 minutes. In case of multiple devices allowed for a given policy, the data quota limits enforcement has some limitations and works with the latency of 30 minutes during which the cumulative data quota limits of the devices can be exceeded beyond the configured data quota limits.</p> <p>The similar behavior is supported through RADIUS attributes for RADIUS-based onboard guest access clients.</p> <p>RADIUS_VENDOR_ID_CAMBIUM 9 (17713)</p> <p>RADIUS_VENDOR_ATTR_CAMBIUM_WIFI_QUOTA_UP (151)</p> <p>RADIUS_VENDOR_ATTR_CAMBIUM_WIFI_QUOTA_DOWN (152)</p> <p>RADIUS_VENDOR_ATTR_CAMBIUM_WIFI_QUOTA_UP_GIGWORDS (153)</p> <p>RADIUS_VENDOR_ATTR_CAMBIUM_WIFI_QUOTA_DOWN_GIGWORDS (154)</p> <p>RADIUS_VENDOR_ATTR_CAMBIUM_WIFI_QUOTA_TOTAL (155)</p> <p>RADIUS_VENDOR_ATTR_CAMBIUM_WIFI_QUOTA_TOTAL_GIGWORDS (156)</p> <p>The <code>gigwords</code> attributes are used for supporting data quota limits above 4 GB when required.</p>
Renewable Frequency	Once the session duration for the client expires, the client needs to wait for the period specified by renewal frequency before logging in again.
Session Duration	The duration for which the client is provided access.
SMS Authentication	SMS OTP supports Twilio, SMS Country, and SMS Gupshup SMS gateway providers. Any one of the gateway providers can be used to support the SMS OTP to be delivered to the cell phone of the end user. Once OTP is received the client can enter the OTP to get Internet access.
Social Login	<p>Consists of the following options:</p> <ul style="list-style-type: none"> <li>• Domain URL: The redirected URL used by the client when trying to access the Internet.</li> <li>• Google: Consists of ID and Secret options to configure, which admin can create from <a href="https://console.cloud.google.com/">https://console.cloud.google.com/</a>.</li> <li>• Facebook: Consists of ID and Secret options to configure, which admin can create from <a href="https://developers.facebook.com/apps/">https://developers.facebook.com/apps/</a>.</li> <li>• Twitter: Consists of consumer key, consumer secret key, and callback URL.</li> <li>• Office 365: Consists of ID and Replyback URL.</li> </ul>

**Note**

- Renewal frequency should be greater than session expiration.
- Client will get Social login options only when enabled in Access Control page in Portal.
- If Social login is enabled, it is mandatory in free access method for client to login through Google/Facebook/Twitter/Office 365.

# Enterprise Wi-Fi Access X using Microsoft Azure Login, Sponsored Guest, Self Registration, or Google

## Note

- Microsoft Azure and Google-based access are supported only on Enterprise Wi-Fi 6 APs running firmware version 6.5.1 and later.
- Microsoft Azure is supported on cnMaestro 4.1.0 and later versions.
- Google-based access is supported on cnMaestro 5.0.0 and later versions.

## Microsoft Azure

Enterprise Microsoft Azure access page enables Microsoft Azure users to log in to access the Enterprise Wi-Fi. To set up users to authenticate from Microsoft Azure, navigate to **Network Services > Guest Access Portal > Access > Enterprise X > Microsoft Azure**, complete the following parameters and click **Save**:

### Self Registration

Self registration enables guests to register themselves when connecting to the Wi-Fi network for the first time. The Wi-Fi administrator can configure the self registration process to require a sponsor approval or not. The sponsor approval can also be configured to be manual or automatic confirmation.

To configure self registration, navigate to **Network Services > Guest Access Portal > Access > Enterprise X > Self Registration** and configure the following parameters.

**Table 123** *Self Registration Parameters*

Parameter	Description
<b>Enable Self Registration</b>	Select the check box to enable self registration feature and configure the following parameters.
<b>Sponsor Guest Settings</b>	The guests must enter a sponsor email address when registering to connect to the wireless network. The administrator can choose to configure whether the sponsor must manually approve each request or the approval is automatic.
<b>Require Sponsor</b>	Select the check box if you want the self registration to be approved by a sponsor.  The guests must enter the sponsor email address when registering for access to the SSID.
<b>Sponsor Type</b>	Specifies whether the sponsor approval for guest internet access must be automatic or manual. The following options are available: <ul style="list-style-type: none"> <li>• <b>Manual Confirmation</b>—The sponsor receives an email for approving the guest's access request. After approval, the guest receives an email confirmation along with the password to connect to the wireless network.</li> <li>• <b>Automatic Confirmation</b>—If the guest provides a configured sponsor's email address, the password to access the network is automatically emailed to the guest and the sponsor is also notified via email.</li> </ul>
<b>Sponsor Email List</b>	Configure the list of sponsor email addresses for approving access requests.

**Table 123** Self Registration Parameters

Parameter	Description
<b>Receive password via text</b>	
By default, the guests receive the password to their email address. However, if you want the guests to receive the password to their mobile devices as well, configure the following parameters.	
<b>Enable</b>	Select the check box to send the password to the guest's mobile device.
<b>SMS Gateway Provider</b>	<p>Select the SMS gateway to be used to send the OTP to the guest's mobile device.</p> <p>The following gateways are supported (each of the gateways have their own respective parameters that must be configured):</p> <ul style="list-style-type: none"> <li>• Fast SMS</li> <li>• Generic SMS API</li> <li>• SMS Country</li> <li>• SMS Gupshup</li> <li>• SMSAPI</li> <li>• Twilio</li> <li>• Victory Link SMS</li> </ul> <p>Each of the above gateways must be configured with their respective parameters.</p>
<b>Client-related parameters</b>	
Client Session— <b>Session Duration</b>	<p>Specifies the maximum duration (in minutes) that the guest can browse the internet in a single session.</p> <p>Supported range: 1-2628000 minutes</p>
<b>Client Rate Limit</b>	<p>Specifies the download and upload speed limit (in Kbps) for the guests.</p> <p>Configure the speed limit in the <b>Downlink</b> and <b>Uplink</b> fields.</p>
<b>Client Quota Limit</b>	
<b>Quota Type</b>	<p>Specifies the type of quota for configuring the data usage limit.</p> <p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• None—No limit is configured for data usage. Guests can access unlimited data in the configured session duration.</li> <li>• Directional—Configure limits separately for downlink and uplink directions. The <b>Downlink</b> and <b>Uplink</b> fields are enabled.</li> <li>• Total—Configure the limit for both directions totally. The <b>Total</b> field is enabled.</li> </ul>
<b>Downlink</b>	<p>Specifies the downlink data usage limit (in either MB or GB, selected from the drop-down list).</p> <p>This field is available only when you select <b>Directional</b> in the <b>Quota Type</b> field.</p>
<b>Uplink</b>	Specifies the uplink data usage limit (in either MB or GB, selected from

**Table 123** Self Registration Parameters

Parameter	Description
	the drop-down list). This field is available only when you select <b>Directional</b> in the <b>Quota Type</b> field.
<b>Total</b>	Specifies total data usage limit for both the directions (in either MB or GB, selected from the drop-down list). This field is available only when you select <b>Total</b> in the <b>Quota Type</b> field.
<b>Device Limit</b>	Specifies the number of devices that the guest can connect to the wireless network. Default: 5.

### Google-based access

Google-based access enables users with a Google account to connect to the wireless network by synchronizing the active directory. When enabled, if a guest who is part of the supported group tries to connect to the Wi-Fi network, the AP provides access to the guest.

#### Note

To configure Google-based access, you must have a Google Workspace account.

To configure Google-based access, navigate to **Network Services > Guest Access Portal > Access > Enterprise X > Google** and configure the following parameters.

The screenshot shows the 'Guest Access Portal' configuration interface. The 'Access' tab is selected, and the 'Enterprise X' profile is active. Under the 'Google' section, the following parameters are visible:

- Microsoft Azure:**  Enable Google Login
- Sponsored Guest:**  Enable Directory Synchronization
- Self Registration:** Allowed Domains\* (Type and press Enter)
- Device Limit:** 5
- Client Session:** Session Duration\* (Min(s) dropdown, Valid range is 1-2628000 min(s))
- Client Rate Limit:** Downlink (Kbps), Uplink (Kbps)
- Client Quota Limit:** Quota Type (None)

**Table 124** Google Parameters

Parameter	Description
<b>Enable Google Login</b>	Select the check box to enable Google-based Wi-Fi access and configure the following parameters.
<b>Device Limit</b>	Specifies the number of devices that the guest can connect to the wireless network.

Table 124 Google Parameters

Parameter	Description
	Default: 5.
<b>Google Login</b>	
<b>Enable Directory Synchronization</b>	Select the check box to enable synchronization of Google Apps Domain Directory. This functions requires authorization. Click <b>Follow these steps</b> for information on configuring your Google Apps Domain Directory.
<b>Allowed Domains</b>	List of domains to be allowed for Google-based access. Enter the domain name in the text box.
<b>Client-related parameters</b>	
<b>Client Session— Session Duration</b>	Specifies the maximum duration (in minutes) that the guest can access internet in a single session. Supported range: 1-2628000 minutes
<b>Client Rate Limit</b>	Specifies the download and upload speed limit (in Kbps) for the guests. Configure the speed limit in the <b>Downlink</b> and <b>Uplink</b> fields.
<b>Client Quota Limit</b>	
<b>Quota Type</b>	Specifies the type of quota for configuring the data usage limit. The following options are supported: <ul style="list-style-type: none"> <li>• None—No limit is configured for data usage. Guests can access unlimited data in the configured session duration.</li> <li>• Directional—Configure limits separately for downlink and uplink directions. The <b>Downlink</b> and <b>Uplink</b> fields are enabled.</li> <li>• Total—Configure the limit for both directions totally. The <b>Total</b> field is enabled.</li> </ul>
<b>Downlink</b>	Specifies the downlink data usage limit (in either MB or GB, selected from the drop-down list). This field is available only when you select <b>Directional</b> in the <b>Quota Type</b> field.
<b>Uplink</b>	Specifies the uplink data usage limit (in either MB or GB, selected from the drop-down list). This field is available only when you select <b>Directional</b> in the <b>Quota Type</b> field.
<b>Total</b>	Specifies total data usage limit for both the directions (in either MB or GB, selected from the drop-down list). This field is available only when you select <b>Total</b> in the <b>Quota Type</b> field.

### Designing the Guest Access Login Page and Email Templates

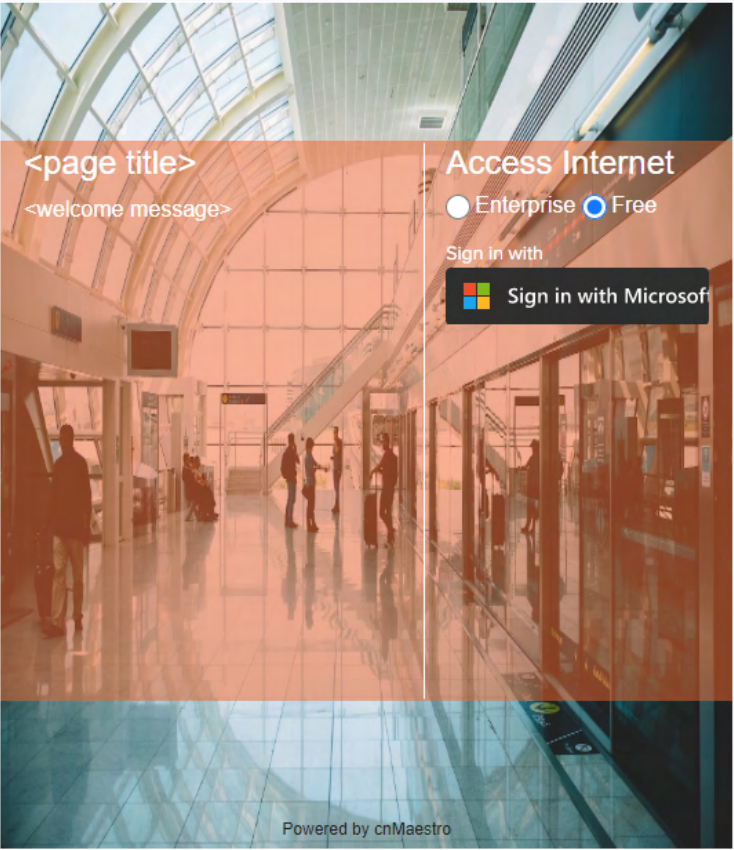

To design the guest login page for users to see when requesting access, navigate to **Network Services > Guest Access Portal > Design > Login Page**, complete the following parameters, and click **Save**:

Guest Access Portal > AZURE\_TEST\_MARCH\_1

## Paid Access<sup>X</sup>

Paypal has been added as a payment gateway service where end users can purchase Internet connectivity using a credit card or their existing PayPal accounts. For purchasing Internet plans, clients are directed to PayPal portal where they purchase the plan and then they are automatically redirected to guest access portal where the purchased voucher is displayed. The user should ensure to save this Voucher information if s/he plans to use it on multiple devices.

## Voucher Access Type Configuration

### Important Points to Remember

- Vouchers can only be generated after enabling Vouchers and creating at least one Voucher plan.
- A maximum of 50,000 Vouchers per portal can be created on cnMaestro.

**Note**

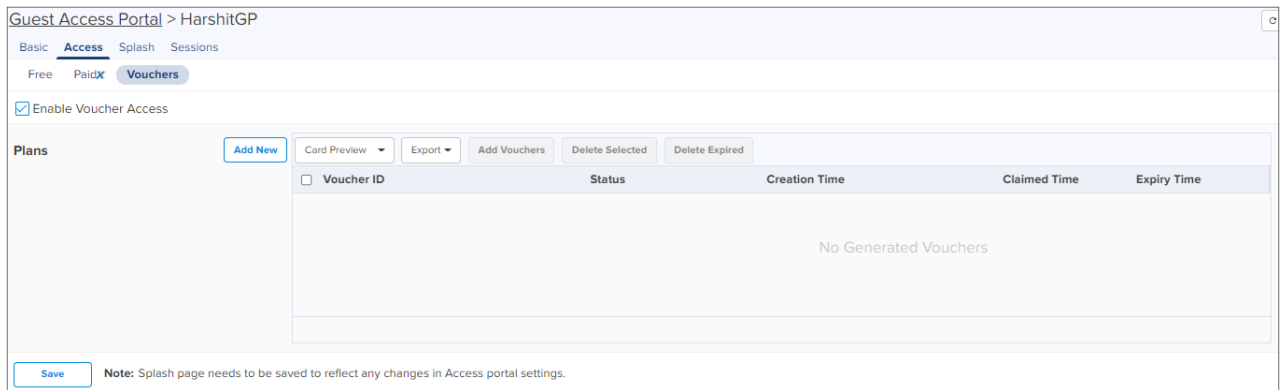

User is allowed to add only 1000 vouchers at a time. In order to create 50,000 vouchers user needs to add 50 times.

- A maximum of 1,000 Vouchers per portal can be created on cnMaestro Cloud (<https://cloud.cambiumnetworks.com/>).
- Total number of generated Vouchers = Vouchers Unclaimed + Vouchers Claimed + Vouchers Expired.
- The admin can export all/valid/current page Voucher codes as PDF/CSV document.

Voucher contains options to add new plans and Vouchers. Based on user requirements, the plans can be created with different validity and rate limits.

## 1. Create a plan

- Navigate to **Network Services > Access Control Portal** page and select **Access Control** tab.
- Enable **Vouchers**.
- Click **Add New Plan** button. The window with general and design parameters for the plan is displayed.

**Table 126** *Voucher Access Type Parameters*

Parameter	Description
Design	<ul style="list-style-type: none"> <li>• <b>Color:</b> There are options to modify colors for the title, message, code, and background.</li> <li>• <b>Background Image:</b> You can browse and select a background image for this page.</li> <li>• <b>Title:</b> The title of the voucher plan.</li> <li>• <b>Message:</b> Detailed information about the plan.</li> <li>• <b>Access Code Message:</b> 8 digit access code will be provided to use the voucher.</li> </ul> <p>With all the above parameters, administrators can create their own design for the card with text, color, and message to be displayed on card.</p>
General	<ul style="list-style-type: none"> <li>• <b>Name:</b> The name of the plan.</li> <li>• <b>Session Duration:</b> The duration for which the client is allowed network access.</li> <li>• <b>Voucher Expiry:</b> The expiry time for the generated Vouchers. Once this time lapses, the Vouchers cannot be used.</li> <li>• <b>Client Rate Limit:</b> The uplink and the downlink values in kbps to limit the data transfer rate to or from the client. If a client rate limit parameter is blank, no limits are applied.</li> <li>• <b>Voucher Device Limit:</b> Limit the devices to use the voucher.</li> </ul>

2. Once a plan is configured, Vouchers can be generated for it. Each Voucher is a unique, randomized alphanumeric code.

**Figure 489 Select a plan**

**Figure 490 Add Vouchers**

3. Once the plan is created and the Vouchers are generated, the following page is displayed.

Voucher ID	Status	Creation Time	Claimed Time	Expiry Time

**Figure 491** Sample Voucher Code

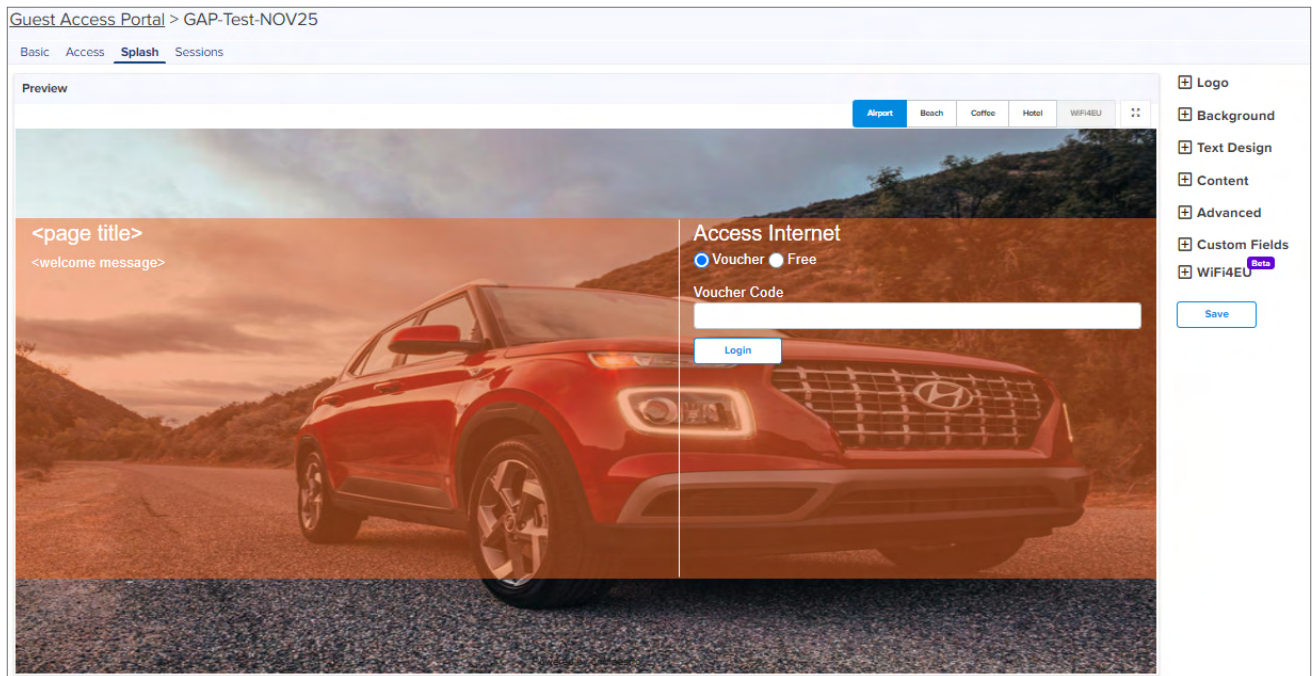

**Note**

The modified values in the Access Portal page is reflected on the design page only when the design page is saved after making the changes.

## Design Page

The Design page refers to the page to which a wireless client is redirected when it connects to the guest portal. Administrators can create their own Design page by modifying the default logo, background, and text to be displayed in the Design page with different colors and fonts.

- If **Free** is selected in **Access Portal**, the client only sees free access related parameters.
- If **Voucher** is selected in **Access Portal**, the client only sees Voucher related parameters with a text box to enter the **Voucher code**.
- If both **Free** and **Voucher** are selected, then the client sees both Free and Voucher related parameters.

**Table 127** Design Page Parameters

Parameter	Description
Accept Terms Message	Text to appear as the accept terms message.
Advanced	Expand <b>Advanced</b> option. Browse and select the advanced fields.
Background	Browse and select the image that needs to be displayed as the background. <ul style="list-style-type: none"> <li>• Recommended image resolution—1024 pixels × 800 pixels</li> </ul>

Voucher Code	Enter the text to appear in Voucher Code, Voucher Label, Enter Voucher Code Message, and Voucher Code Error Message.
Voucher Code Error Message	Enter the text to appear in Voucher Code Error Message.
Voucher Label	Enter the text to appear in Voucher Label.
Failure	Enter the text to appear in Google Authentication Failure Message, Twitter Authentication Failure Message, and Facebook Authentication Failure Message.
WiFi4EU	WiFi4EU provides free, high-quality Internet access only across the European Union.

## WiFi4EU

WiFi4EU provides free, high-quality Internet access across the European Union. Administrators can enable the WiFi4EU checkbox to provide access to the free internet.

**Table 128** WiFi4EU Parameters

Parameter	Description
General	<ul style="list-style-type: none"> <li>• <b>Network UUID:</b> Universally Unique Identifier (UUID) that the EC attribute is generated when the network installation is created in the Installation.</li> <li>• <b>Language:</b> Allows to select the preferred language.</li> <li>• <b>Enable Self Test Mode:</b> Allows the browsers background script verification.</li> <li>• <b>Show Logo:</b> Displays the WiFi4EU logo provided by the European union.</li> </ul>

## Sessions

Sessions tab contains Client MAC address, Access Point MAC address, Access Type as Free (Google or Facebook) or Voucher, WLAN-SSID of client connected AP, Remaining time and Disconnect option.

Administrator can check how many clients are connected, Access Type (Free/Voucher) of the client, and can disconnect the clients.

The screenshot shows the 'Guest Access Portal' interface for 'Raja-GA-Test'. It features a navigation menu with 'Basic', 'Access', 'Design', 'Sessions', and 'Guests X'. The 'Sessions and Login Events' section is active, displaying two tables:

- Client Session:** A table with columns: Client MAC, Access Type, SSID, Access Point, Remaining Time, Voucher Code, and Disconnect. It currently shows 'No Data Available'.
- Client Login Events:** A table with columns: Client MAC, Portal, Access Type, SSID, Access Point, Voucher Code, Login Time, Email, and Mobile Number. It contains 10 rows of login data from 13 Nov 2023 to 16 Nov 2023.

**Client Login Events** table creates events of client login sessions. It maintains the login events for 7 days. This table has Client MAC address, Portal Name, SSID, Access point MAC, Voucher code (if client connected with Voucher), Access type (Google/Facebook/Voucher).

Admin can export the client login events as PDF / CSV.

**Table 129** Sessions Parameters

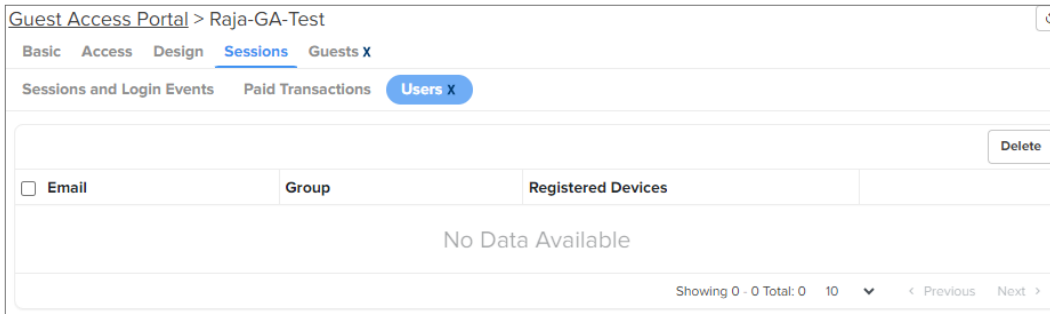

Parameter	Description
Access Point	MAC address of the Access Point.
Access Type	Access type as Free or Voucher.
Client MAC	MAC address of the client.
Disconnect	Displays if the client is disconnected from the network.
Remaining Time	The time left for the client to access the Internet. It depends upon the session duration configured in the Access Portal.
Voucher	Displays the valid applied voucher.
WLAN	SSID of the network.

**Note**

For **Free** access method, the client MAC address is displayed even after the free session duration expires. Delete the MAC address of the client after the Renewable Frequency completes.

**Users** table displays details of users accessing the network using Enterprise Google-based access.

**Table 130** *Users Table Parameters*

Parameter	Description
Email	Email address of the registered user.
Group	Name of the group to which the user belongs.
Registered Devices	MAC address of the registered devices.

## Guests X

The Guests page allows you to view details of self registered guests connecting to the wireless network. However, to view this page, you must first enable and configure self registration under **Network Services > Guest Access Portal > Access Type > Enterprise X > Self Registration**.

You can also add new guest details on this page. These users can directly access the wireless network after entering the required details in the access portal.

To add a new user, complete the following steps:

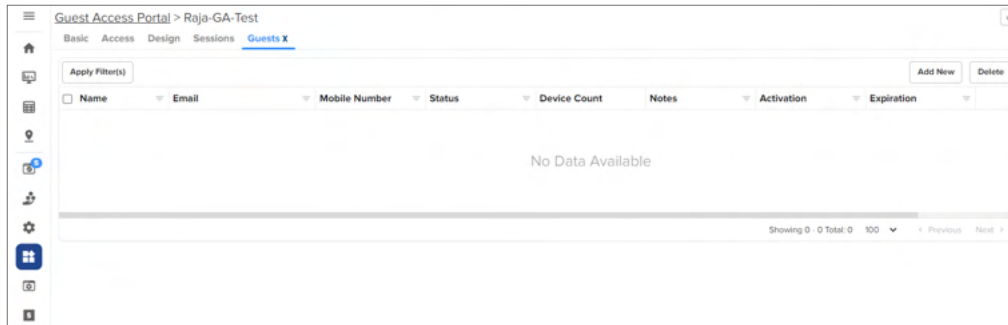

1. Click **Add New** on the **Guests** page.

The **Add New User** window is displayed.

2. Configure the name and email address of the guest in the **Name** and **Email** fields.  
Add a description, if required, in the **Notes** field.
3. Click **Add**.

The details of the Enterprise self registered guests that are connected to the Wi-Fi network are displayed in

the table

The screenshot shows a web interface for 'Guest Access Portal' under the 'Raja-GA-Test' configuration. The 'Guests' tab is active, showing a table with columns: Name, Email, Mobile Number, Status, Device Count, Notes, Activation, and Expiration. The table is currently empty, displaying 'No Data Available'. There are 'Add New' and 'Delete' buttons at the top right of the table area. The interface also includes a sidebar with navigation icons and a top navigation bar with tabs for Basic, Access, Design, Sessions, and Guests X.

**Table 131** *Guests Table Details*

Parameter	Description
Name	Name of the guest that was entered at registration.
Email	Email address of the guest.
Status	Displays the whether the guest is connected or offline.
Device Count	Displays the number of devices that the guest has connected to the network.
Notes	Displays the comments or description provided when adding the guest.
Activation	Displays the date and time when the guest first connected to the network.
Expiration	Displays the date and time when the guest disconnected from the network. For currently connected guests, this field displays the date and time of session expiration.

## Mapping the device to Guest Access Portal in cnMaestro

The administrator needs to configure the name of the Guest Access Portal in the device which redirects the device to cnMaestro for client connectivity.

### Note

The client gets the fully configured **Design** page for login only if the Access Point is onboarded to the server.

## Configuration at device level

To configure the Guest Access at device level, perform the following:

1. Login to the device.
2. Navigate to **Configuration > WLAN > Guest Access**.

WLANs > Radio\_Off

Configuration APs

WLAN

## Access Types

The following table describes the parameters described in configuring SMS authentication parameters:

Parameter	Description	SMS Gateway Provider				
		Fast SMS	SMS Country	SMS Gupshup	Twilio	Victory Link SMS
Enable	It indicates to enable the SMS Authentication feature.	✓	✓	✓	✓	✓
Username	Indicates the username of the vendor.	✓	✓	✓	X	✓
Sender ID	It is the name or number which flashes on the recipients mobile phone when they receive SMS. This is Optional not mandatory.	✓	✓	✓	X	✓
API Key	It's a token which is provided by vendors.	✓	X	X	X	X
Account Type	It shows type of accounts such as International, OTP, Promotional and Transaction.	✓	X	X	X	X
OTP Template	The template with which SMS has to be sent.	✓	✓	✓	✓	✓
Password	It indicates the password.	X	✓	✓	X	✓
Country Code	It enables to select country code based on deployments.	X	✓	✓	X	X
Auth Token	It acts as a password.	X	X	X	✓	X
Account SID	It acts as a username.	X	X	X	✓	X
From	It enables to select the country code.	X	X	X	✓	X
Language	It indicates the Language.	X	X	X	X	✓

OTP Template

Your OTP is %code%

ⓘ The OTP template should include %code% as displayed in the sample text. Template may need to be approved. It's advised to contact respective SMS Gateway Provider. %code% will be replaced by the OTP code in the SMS.

To configure SMS Authentication on cnMaestro, perform the following:

1. Enable SMS Authentication feature.
2. In SMS Gateway provider, select your required gateway from the drop-down.
3. Enter the **User Name**.
4. Enter the **Sender ID**. This field is optional. This allows user to send SMS through the ID which he chooses.
5. Enter **API Key**.
6. Select your **Account Type** from the drop-down.

7. Enter the **OTP Template**. The OTP template should include “%code%. %code% replaces the OTP code in the SMS.

## Guest Access using Social Login

### Configuration

To achieve cnMaestro Guest Access using Social Logins like Google, Twitter, Facebook, and Office 365, perform the following steps:

To create Guest Access profile on cnMaestro, do the following:

1. Login to cnMaestro and navigate to **Network Services > Guest Access Portal > Add Portal**.
2. Enter Portal Name, Description, enable logging for client login events.
3. Click **Save**.

4. Click **Edit Guest Portal Details**.

<input type="checkbox"/>	Guest Portal Name	Description	Managed Account	Event Logging	Free Access	Paid Access	Paid Access	Paid Access	Voucher Access	
<input type="checkbox"/>	<a href="#">GAP_Test_NOV25</a>		Base Infrastructure	Yes	Yes	No	No	No	Yes	
<input type="checkbox"/>	<a href="#">nbi_base_portal</a>		Base Infrastructure	No	Yes	No	No	No	Yes	
<input type="checkbox"/>	<a href="#">1_GAP_Test</a>		Base Infrastructure	Yes	No	No	No	No	No	
<input type="checkbox"/>	<a href="#">2_GAP_Test_1</a>		Base Infrastructure	Yes	No	No	No	No	No

## API Key Generation

Perform the following steps to create APIs for cnMaestro to integrate with Google, Twitter, Facebook, and Office 365:

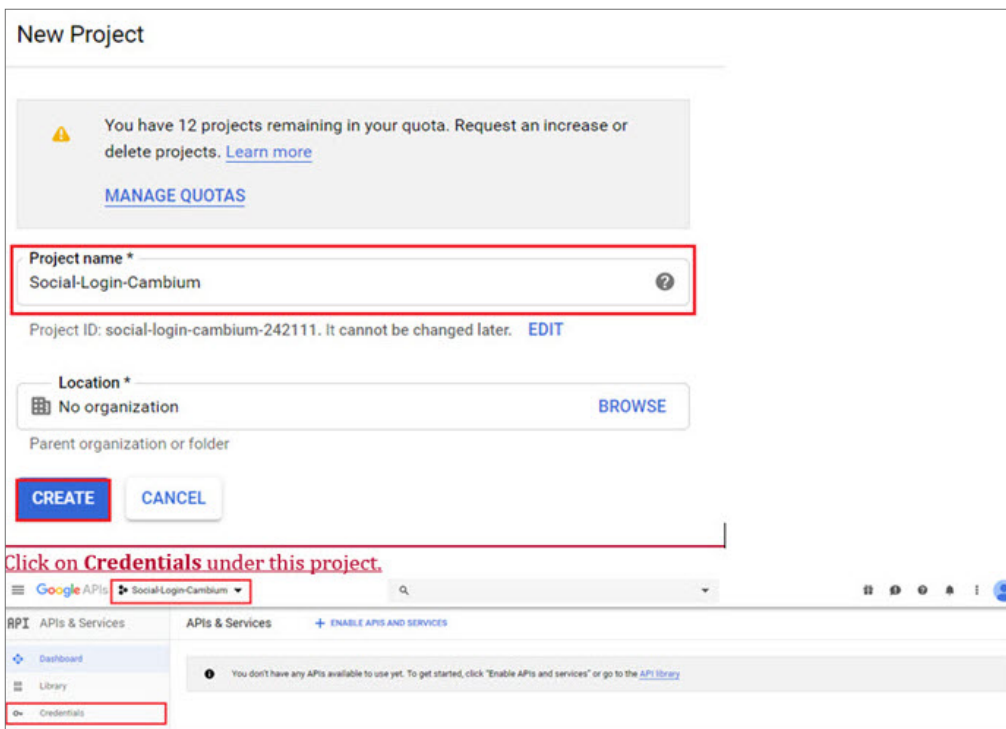

- [Google](#)
- [Twitter](#)
- [Facebook](#)
- [Office 365](#)

## Google

1. Login to Google Account and navigate to <https://console.cloud.google.com/>.
2. Click **Select a Project** and create a **New Project**.

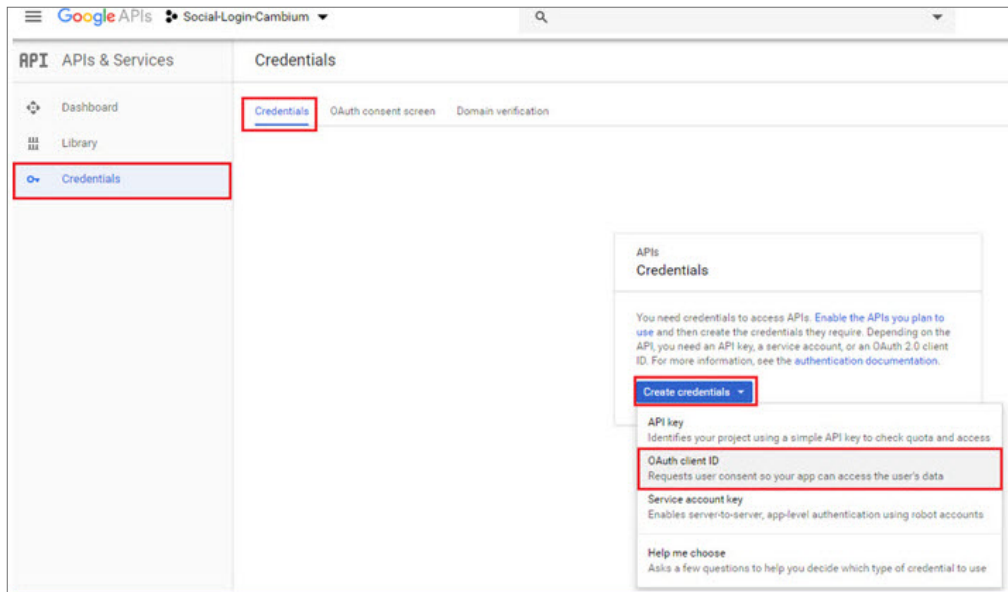

3. Give a name to the Project and click **CREATE**..

4. Click **Credentials** under this project.

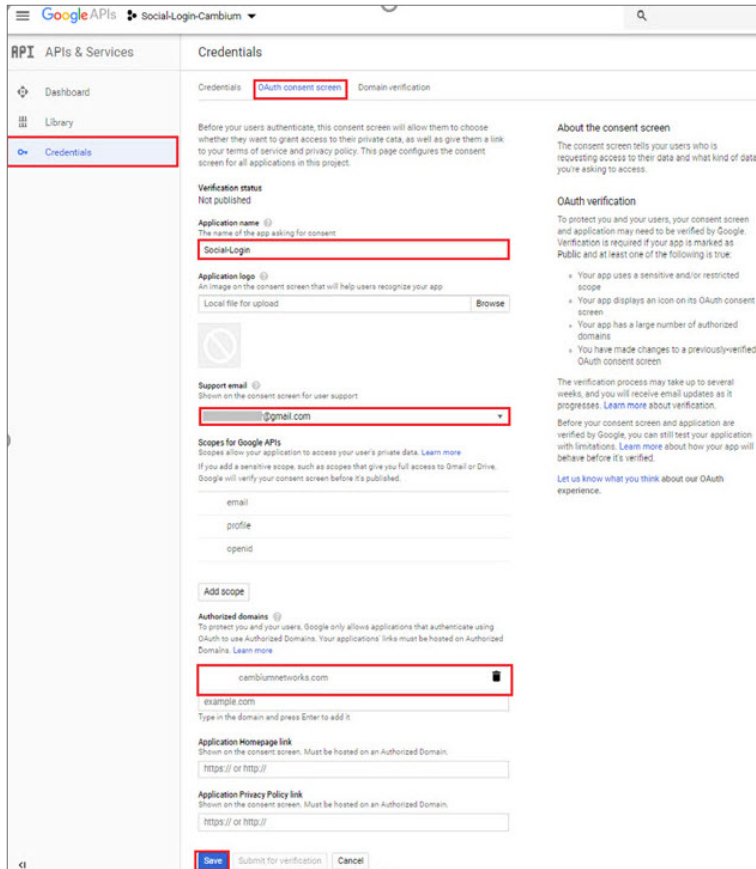

5. Under **Credentials** tab, create OAuth Client ID.

6. Click **Configure Consent Screen**

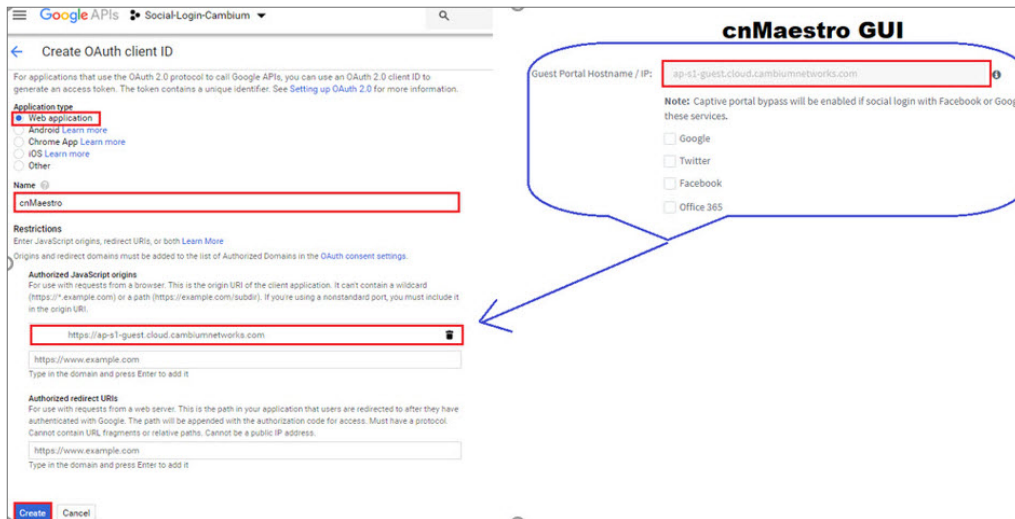

7. Assign a name to the application, map to an email address, add cambiumnetworks.com to the authorized domain and click **Save**.

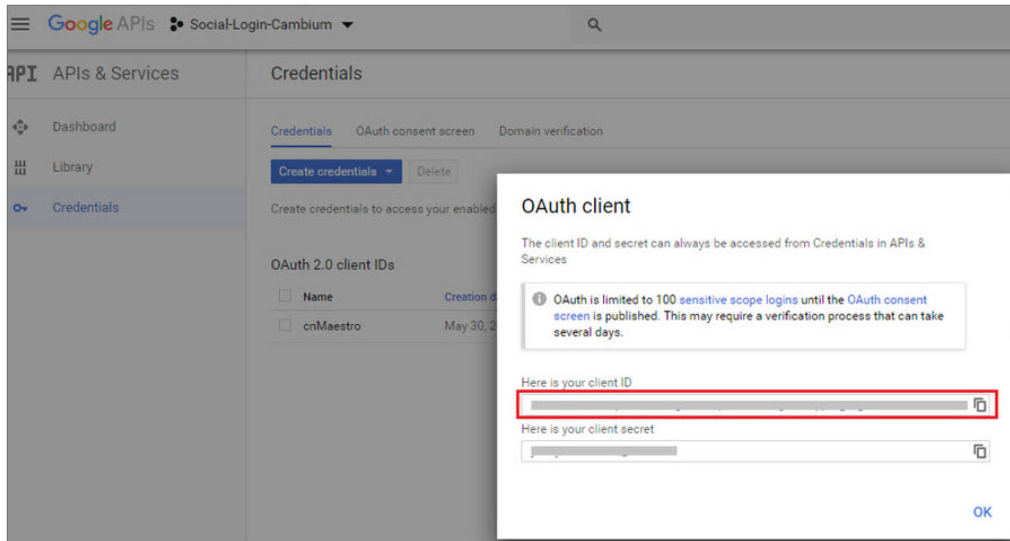

8. Once clicked **Save** for above page it redirects to creation of OAuth Client ID.

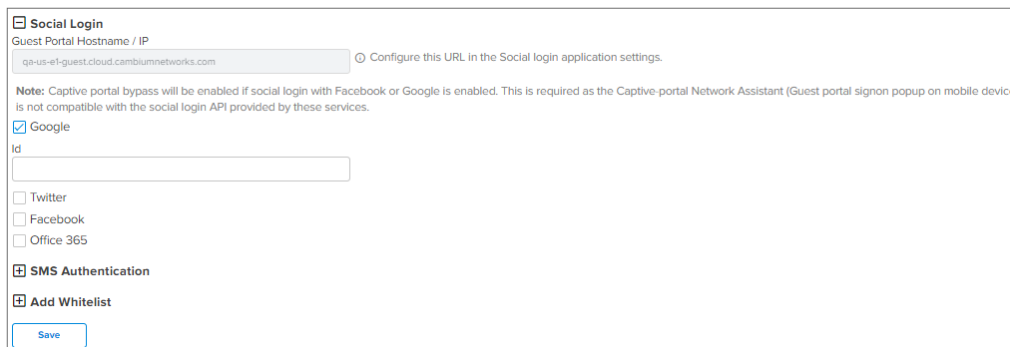

9. Select **Application type** as **Web Application**, give a Name, add Guest Portal Hostname URL/IP which you will get from cnMaestro UI and click **Create**.

10. Clicking Create on above page it redirects to the screen showing Client ID and Client Secret.

11. Copy the Client ID and paste it to the cnMaestro enabling Google under Social Logins and click **Save**.

## Twitter

1. Login to Twitter Account and access <https://developer.twitter.com/en/apps> and click **Create an app**.

App details    Keys and tokens    Permissions

**App details**  
The following app details will be visible to app users and are required to generate the API keys needed to authenticate Twitter developer products.

**App icon** Upload  
Maximum size of 700x, JPG, GIF, PNG

**App name (required)**  Maximum characters: 32

**Application description (required)**  
Share a description of your app. This description will be visible to users so this is a good place to tell them what your app does.

**Website URL (required)**

**Allow this application to be used to sign in with Twitter** [Learn more](#)  
 **Enable Sign in with Twitter**

**Callback URLs (required)**  
OAuth 1.0a applications should specify their oauth\_callback URL on the request token step, which must match the URLs provided here. To restrict your application from using callbacks, leave these blank.  
  
[+ Add another](#)

**Terms of Service URL**

**Privacy policy URL**

**Organization name**

**Organization website URL**

**Tell us how this app will be used (required)**  
This field is only visible to Twitter employees. Help us understand how your app will be used. What will it enable you and your customers to do?

**cnMaestro GUI**

## Sample Template

Sample of client login page is displayed below:

## Guest Access Portal Logout

To logout from cnMaestro Guest Access Portal perform as follows:

1. Navigate to **Services > Guest Access Portal** page and select the respective **Guest Portal Name**.
2. Select **Access** tab.
3. Select **Enable Logout functionality for the guest client** check box.
4. Click **Save**.

A screenshot of the 'Guest Access Portal > HarshitGP' configuration page. The 'Access' tab is selected, and the 'Free' option is chosen. The 'Enable Logout functionality for the guest client' checkbox is checked. The 'Renewal Frequency' and 'Session Duration' fields are both set to 10 minutes. The page includes sections for Client Session, Client Rate Limit, Client Quota Limit, Social Login, SMS Authentication, and Add Whitelist, along with a 'Save' button.

The users can access and use the Guest Access Portal at any time within the specified **Renewal Frequency** and **Session Duration** provided.

## SMS Authentication

The gateway provider sends a text SMS containing the OTP to the end user's phone number. Once OTP is received the client can enter the OTP and get Internet access.

Twilio, SMS Country, and SMS Gupshup are the SMS gateway providers that support the SMS OTP. Also there is a generic SMS gateway option, which provides flexibility to configure any preferred SMS gateway by cnMaestro users. Configuring SMS Gateway through this generic SMS gateway does require a little more involvement to review the integration specifications of the given SMS gateway. Please follow the guidelines as mentioned on the [Generic SMS Gateway configuration](#) section.

## Generic SMS Gateway configuration

SMS Service providers expose a SMS API which typically works over HTTP GET or HTTP POST requests. Most of the SMS Gateways use username and password in the API requests to validate a given SMS send a request and some use special authorization token in the HTTP Headers.

Apart from that many API have specific tokens that need to be passed into the request along with the authentication part. To start off one has to first go through the SMS API document of the given SMS provider and understand all components do that need to be provided in the HTTP request and then build the corresponding cnMaestro configuration.

In general, all SMS API documents show example curl commands which can be used to create an SMS request with the server. Curl examples demonstrate the required components in the request and help to find the right configuration for the cnMaestro Guest Portal Generic SMS API.

The cnMaestro Generic SMS API configuration is split into multiple components which makes it easy to configure the static and the dynamic parts of the SMS API request. It also provides a way to handle the SMS API response and validate the API success or failure case. To handle the reply type, refer the **Advanced** options.

### SMS Gateway provider name

Provide the SMS Gateway name which is used for reference purposes. This is not part of API request so please provide a meaningful name to identify this SMS Gateway service provider.

### HTTP Request type

Based on the SMS gateway provider and the API document information, identify the SMS API. The SMS API uses HTTP GET or HTTP POST requests for communication with the SMS gateway server.

#### Example HTTP GET API request

```
https://smsapiserver.com/service/sms/send?user=xxx&password=yyyy&message="Your OTP is ABCD"&mobileNumber=123456789&dnd=yes&sid=SenderId&v=1.1&messagType=N
```

Curl command to do HTTP GET request

```
Curl -v https://smsapiserver.com/service/sms/send?user=xxx&password=yyyy&message=' Your OTP is ABCD' &mobileNumber=123456789&dnd=yes&sid=SenderId&v=1.1&messagType=N
```

#### Example HTTP POST request

##### HTTP POST URL

<https://smsapiserver.com/service/sms/send>

##### HTTP POST Form Content

```
user=xxx&password=yyyy&message="Your OTP for Internet Access is QW123"&mobileNumber=123456789&dnd=yes&sid=SenderId&v=1.1&messagType=N
```

Curl command to do HTTP POST request

```
curl -v "https://smsapiserver.com/service/sms/send" -H "Content-Type: application/x-www-form-urlencoded" -X POST \
--data-urlencode 'user=xxx' \
--data-urlencode 'passwd=yyyyy' \
--data-urlencode 'mobilenumber=1234567789' \
--data-urlencode 'message=Your OTP for Internet access is QW123' \
--data-urlencode 'sid=Sid' \
--data-urlencode 'v=1.1' \
--data-urlencode 'mtype=N' \
--data-urlencode 'dnd=yes' \
--data-urlencode 'DR=Y'
```

If the SMS Gateway is using an authorization token, then below example curl request shows how the **Authorization** field is added into a HTTP header.

```
curl -v -H "Authorization: Bearer nZYIoU7QoUxfD03ct1CC2YvInqI7DmUAH6RYz01K1" \
"https://smsapiserver.com/service/sms/send?\
from=Test&\
to=123456789&\
message='Your OTP for Internet access is QW123'&\
format=json"
```

All the SMS API have components as follows:

- Static components which are part of the request.
- Two dynamic components which are part of the mobile number, to which the SMS needs to be sent and the message which contains the OTP.

## Static components

### API URL

Based on the above curl request example the URL configures as <https://smsapiserver.com/service/sms/send> where the request needs to be sent.

### API URL information

From the example curl request please find the static components of the URL. Based on our above example this configures as user=xxx&password=yyyyy&dnd=yes&sid=SenderID&v=1.1&messagType=N.

Remove the message and mobile number query strings from that URL and configure the rest. This is what a static component is for a given SMS API so identify what all options are required for the SMS API request and add it in the format: key1=value1&key2=value2....

### HTTP request header key

Based on the above example, If the SMS Gateway Provider API uses some HTTP header field like authorization token, etc. The corresponding HTTP header field name will be configured as **Authorization**.

### HTTP request header key value

Based on the above example, the SMS gateway API configuration settings expose some authorization token or auth token, and the provided HTTP header key value will be configured as Bearer nZYIoU7QoUxfD03ct1CC2YvInqI7DmUAH6RYz01K1 in this configuration.

## Dynamic components

### Message parameter name

From the example curl request or the SMS gateway provider the parameter name used for the message key component where the OTP is added. It could be something like `messageTextMsg` or whatever custom parameter name is used for sending the message component.

For example curl request, we have used “message” and this is what configures based on the example curl request.

### Mobile number parameter name

From the example curl request or the SMS gateway provider the parameter name used for the mobile number key component where the OTP has to be sent. It could be something like `Tolmobile/mobile number` or whatever custom parameter name is used for sending the mobile number component.

In our example curl request, we have used `mobile number` and this is what configures based on the example curl request.

## Advanced options

If you care for adding functionality for parsing the SMS API response on the `cnMaestro` and find if the request was successful or if the server returned an error. Then one can use this advanced configuration to let `cnMaestro` parse the SMS API reply.

The usual HTTP response code is anyway handled by default and this advanced config parses the reply content is configured. This should be configured by advanced users only and in case if there is any failure seen in SMS functionality then disable this and report the issue to Cambium Networks support.

### Reply type

The SMS gateway API sends back a response to let the client know about the request results, this result could be in text format or in json/xml format. So based on the SMS API document select the reply type here as **TEXT**.

### Success

Configure the text to match the success case as follows:

- Typically, servers may respond with a text message in reply like `success` or `sent`, then configure the exact message which should be matched in the response.
- If a server response is like `success`, `sent message to xxxxx`, then configure just `success` which matches in the reply.

### Error

Configure the text which matches the failure case as follows:

- Typically, servers may respond with a text message in reply like **Error** or **Failure**, then configure the exact message which should be matched in the response.
- If a server response is like **ERROR**, `failed to send SMS to xxxxx`, `out of credit`, then configure just **ERROR** which matches in the reply to mark it as an error.

## Reply Type JSON

### JSON reply success key name

Please look for the SMS gateway provider API document in detail and find the JSON examples for the reply and identify the key which contains the successful response status value.

cnMaestro guest portal generic SMS supports nested JSON too and one has to configure the complete path for the given result key which contains the SMS message sent status. Example JSON replies are given below to be configured for this configuration:

### Example 1

```
{
  "messages": {
    "to": "123456789",
    "status": {
      "id": 0,
      "groupId": 0,
      "groupName": "ACCEPTED",
      "result": [
        {
          "status": "MESSAGE_ACCEPTED"
        }
      ],
      "description": "Message accepted"
    },
    "smsCount": 1,
    "messageId": "2250be2d4219-3af1-78856-aabe-1362af1edfd2"
  }
}
```

Success key name to be configured based on the above example `messages.status.result[0].status`.

### Example 2

```
{
  "count": 1,
  "list": [
    {
      "id": "1460978572913968440",
      "points": 0.16,
      "number": "48500500500",
      "date_sent": 1460978579,
      "submitted_number": "48500500500",
      "status": "QUEUE"
    }
  ]
}
```

Success key name to be configured based on the above example `list [0]. Status`.

### Example 3

```
{
  "status": "Sent"
}
```

Success key name to be configured based on the above example is `status`.

## JSON reply success key value

The success status can be single or multiple values based on the SMS Gateway provider and SMS gateway can respond back with a status as a message successfully sent or successfully queued, which is also a success case that the queued message sends out shortly.

Based on our examples the status or the result field can be mapped to multiple values like as follows:

- Sent
- Queued
- Success
- Message Accepted

So in this configuration one can add multiple such values that should be matched for the success case for the value as received for the JSON reply success key name field.

### JSON reply failure key name

Look for the SMS Gateway Provider API document in detail and find the JSON examples for the reply and identify the key which contains the Error/Failure response status value.

cnMaestro guest portal generic SMS supports nested JSON too and one has to configure the complete path for the given result key which contains the SMS message sent failure field. Example JSON replies are given below to be configured for this configuration:

#### Example

```
{
  "invalid_numbers": [
    {
      "number": "456456456",
      "submitted_number": "456456456",
      "message": "Invalid phone number"
    }
  ],
  "error": 13,
  "message": "No correct phone numbers"
}
```

JSON reply failure key name to be configured based on the above example is error.

### JSON reply key value

The error/failure status can be single or multiple values based on the SMS Gateway provider and SMS gateway can respond back with a status as a message sent error or multiple error codes for the corresponding error.

Based on our examples the error can be mapped to multiple values like 13|12|-1 etc. So in this configuration, one can add multiple such values which should be matched for the failure case for the value as received for the JSON reply failure key name field. reply type **XML**.

## Reply type XML

### XML reply success element

Look for the SMS gateway provider API document in detail and find the XML examples for the reply and identify the elements which contain the successful response status value.

cnMaestro guest portal generic SMS supports nested XML too and one has to configure the complete path for the given result element which contains the SMS message sent status. Example XML replies are given below to be configured for this configuration:

#### Example 1

```
<items>
<item id="0001" type="result">
<status>Success</status>
</item>
```

```
</items>
```

Success Element Name to be configured based on the above example is items/item/status.

### Example 2

```
<?xml version="1.0" encoding="utf-8"?>  
<int xmlns="http://tempuri.org/">-11</int>
```

Success Element Name to be configured based on the above example.

### XML reply success element value

The success status can be single or multiple values based on the SMS Gateway provider and SMS gateway can respond back with a status as a message successfully sent or successfully queued, which is also a success case that the queued message sends out shortly.

Based on our examples the status or the result field can be mapped to multiple values like as follows:

- Sent
- Queued
- Success
- Message Accepted

So in this configuration one can add multiple such values that should be matched for the success case for the value as received for the XML Reply Success Element field.

SMS message sent failure field. Example XML replies are given below to be configured for this configuration:

### Example 1

```
<items>  
<item id="0001" type="result">  
<error>-12</status>  
</item>  
</items>
```

XML Reply Failure Key Name to be configured based on the above example is items/item/error.

### Example 2

```
<items>  
<item id="0001" type="result">  
<status>Error</status>  
</item>  
</items>
```

XML Reply Failure Key Name to be configured based on the above example is items/item/status.

### Example 3

```
<?xml version="1.0" encoding="utf-8"?>  
<int xmlns="http://tempuri.org/">-11</int>
```

XML Reply Failure Key Name to be configured based on the above example is int.

## XML reply failure element value

The error/failure status can be single or multiple values based on the SMS Gateway provider and SMS gateway can respond back with a status as a message sent error or multiple error codes for the corresponding error.

Based on our examples the error can be mapped to multiple values like 13121-1 etc so in this configuration, one can add multiple such values which should be matched for the failure case for the value as received for the XML reply failure element field.

## EasyPass

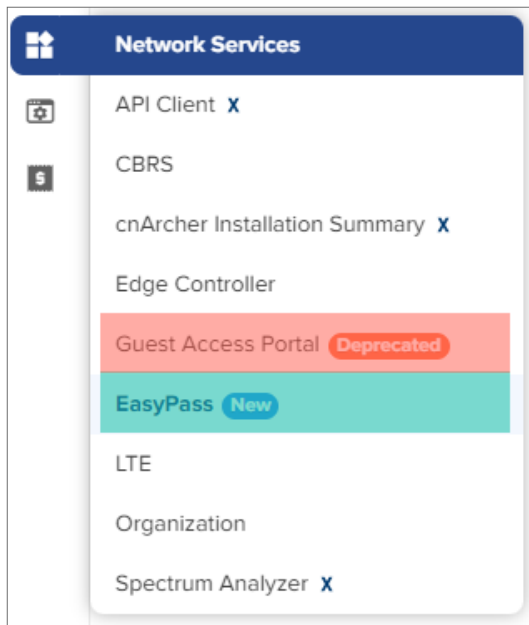

cnMaestro supports a guest access solution which provides an intuitive interface for various guest access methods used in the customer deployments. It allows the clients to connect to the internet through free tiers, vouchers, or paid access types. It also creates a separate network for guests by providing internet access to wireless devices such as mobile phones, tablets, and laptops.

### Note

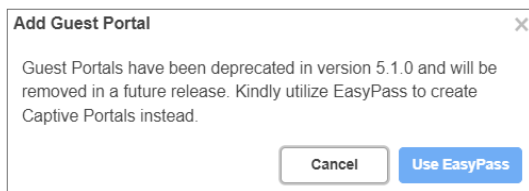

From cnMaestro 5.1.0 release onwards, the **Guest Access Portal** configuration wizard is deprecated and a new wizard, **EasyPass**, is introduced (as shown in [Figure 493](#)).

**Figure 493** Network Services > EasyPass

When you create a new portal in the **Guest Access Portal** page, a window appears notifying that guest portals are discontinued and **EasyPass** must be used (as shown in [Figure 494](#)).

**Figure 494** The Add Guest Portal window

The EasyPass access services provide secure and controlled access to users and visitors on your Wi-Fi network.

[Table 132](#) lists the supported devices and their compatibility with EasyPass.

**Table 132** List of supported devices - EasyPass

Device	EasyPass support
Wi-Fi 5	Yes
	<b>Note:</b> Azure and GSuite are not supported.
Wi-Fi 6	Yes
Wi-Fi 7	Yes
Xirrus APs	No

**EasyPass** portal types are grouped into the following categories:

- [Guest/Public Access](#)
- [Employee/Student Access](#)
- [Combined](#)

Each category serves a different purpose and provides distinct features to accommodate various user requirements and access levels.

## Guest/Public Access

This category includes the following portal types:

- One Click— All guests have access after agreeing to terms of use without needing to create an account. The **Social Login** options are integrated with One Click.
- Self Registration X— Guests must register themselves when connecting to the Wi-Fi network for the first time. The administrator can configure the self-registration process to determine whether sponsor approval is required. The sponsor approval can also be configured as manual or automatic confirmation. Additionally, the **SMS Gateway Provider** option is available as a self-registration method.
- Sponsored Guest X— Guests must provide their email address and their sponsor's email address to request internet access.
- Voucher— Users can access the network using a pre-assigned voucher. A voucher allows network administrators to create unique guest keys in bulk for retailers, hotels, conventions, and enterprises providing temporary visitor Wi-Fi access. These keys can be exported into a CSV file and integrated with other systems as point-of-sale (POS), property management, ticketing, or registration systems. Voucher also allows administrators to set a device limit for guests. If a guest tries to connect with more devices than allowed, the system alerts the guest with a warning message. Guests can manage their devices by deleting some of the device accounts without IT assistance.
- Paid X— IP Pay and Quickpay payment methods allow users to purchase internet services using a credit card. For purchasing internet plans, users are directed to a portal where they purchase the plan and then they are automatically redirected to the guest access portal where the purchased voucher is displayed. The users must save the voucher information if they use it on multiple devices.
- WiFi4EU— Provides free internet access only across the European Union (EU) to citizens and visitors through free-of-charge Wi-Fi hotspots in public spaces such as parks, squares, administrations, libraries, and health centers.

### Note

X indicates that the feature is available only in cnMaestro X.

## Employee/Student Access

This category includes the following portal types:

- Microsoft Azure X—A single sign-on process allows seamless access to Microsoft Azure X by integrating Wi-Fi and authentication.
- Google Login X—A single sign-on process allows seamless access to Google Login X by integrating Wi-Fi and authentication.

### Note

Azure and Google Workspace are available on 6.x and later versions supporting firmware AP.

## Combined

This category includes the following portal types:

- One Click + Voucher—Combines the benefits of both One Click access and voucher-based promotions, providing users with an easy and cost-effective way to access services.
- One Click + Paid X—Combines the benefits of One Click access with paid access to services.
- Voucher + Paid X—Combines the benefits of voucher-based promotions and paid access to services.

### Note

- Using **Essentials**, you can create a maximum of four EasyPass portals.
- Using **cnMaestro-X**, you can create a maximum of 500 EasyPass portals.

## Implementation of EasyPass portals for various types of users

[Table 133](#) lists the various types of users for whom the EasyPass portals can be implemented or best suited:

**Table 133** *Implementation of EasyPass portals for various types of users*

EasyPass portal type	BYOD Employee or Student	Co-working Space User	Business Visitor	MDU Resident	Residence Hall Student	Hotel Guest	Retail Customer	Convention/Fair Attendee	Sports Event Fan	Public Wi-Fi user
Self Registration X		✓				✓	✓	✓	✓	✓
Sponsored Guest X			✓							
Voucher			✓			✓	✓	✓		
One Click							✓	✓	✓	✓
Paid X		✓				✓		✓		✓
WiFi4EU										✓
Microsoft Azure X	✓				✓					
Google Login X	✓				✓	✓				

## EasyPass configuration

You can configure EasyPass using the cnMaestro UI. The EasyPass configuration process involves the following tasks:

- [Creating a portal](#)
  - [Creating One Click portal](#)
  - [Creating Self Registration X portal](#)
  - [Creating Sponsored Guest X portal](#)
  - [Creating Voucher portal](#)
  - [Creating Paid X portal](#)
  - [Creating WiFi4EU portal](#)

- [Creating Microsoft Azure X portal](#)
- [Creating Google Login X portal](#)
- [Creating One Click + Voucher portal](#)
- [Creating One Click + Paid X portal](#)
- [Creating Voucher + Paid X portal](#)
- [Configuring common parameters](#)
  - [The Basic screen parameters](#)
  - [The Limits screen parameters](#)
  - [The Design screen parameters](#)
  - [The Voucher screen parameters](#)
  - [The Plans screen parameters](#)
- [Accessing the common tabs](#)
  - [Sessions](#)
  - [Guests](#)
    - [Adding a new guest user](#)
  - [Vouchers](#)
  - [Paid Transactions X](#)
  - [Users X](#)

## Creating a portal

Complete the following steps to create a portal:

1. From the home page of cnMaestro UI, navigate to **Network Services > EasyPass**.

The **Network Services > EasyPass** screen appears.

**Figure 495** *The EasyPass screen*

2. Click the **Add Portal** button.

The **Select Portal Type** window appears.

### Note

The options in the **Select Portal Type** window are different for **cnMaestro Essentials** and **cnMaestro X**.

[Figure 496](#) displays the options available for cnMaestro Essentials.

Figure 496 The Select Portal Type window—cnMaestro Essentials

Figure 497 displays the options available for cnMaestro X.

Figure 497 The Select Portal Type window—cnMaestro X

**Note**

The **WiFi4EU** option is applicable only to users in the EU region. Users from Asia-Pacific (APAC), Americas, and other non-EU regions do not have access to this option.

3. In the **Name** field, enter a name for the portal. For example, **test1**.

A name once created for the portal cannot be changed.

The **Name** field supports:

- A minimum of five and maximum of 64 characters.
  - Only alphanumeric, underscore (\_), and dashes (-).
4. Select the required option from the **Managed Account** drop-down list. For example, **Base Infrastructure**.

**Note**

- When creating the EasyPass service, select the required managed account to which the service must be mapped.

5. Select the required option from the **Select Portal Type** window.
6. Click the **Save and Continue** button.

The portal is created and the **Basic** screen appears.

For information on parameters of the **Basic** screen, see [The Basic screen parameters](#).

7. Click the next tab.

Depending on the option you select, you will either see a **Limits** screen or portal-specific screen.

- For a **Self Registration X** portal type, follow the additional steps described in [Creating Self Registration X portal](#).
- For the **Sponsored Guest X** portal type, follow the additional steps described in [Creating Sponsored Guest X portal](#).
- For the **Voucher** portal type, follow the additional steps described in [Creating Voucher portal](#).
- For the **WiFi4EU** portal type, follow the additional steps described in [Creating WiFi4EU portal](#).
- For the **Microsoft Azure X** portal type, follow the additional steps described in [Creating Microsoft Azure X portal](#).
- For the **Google Login X** portal type, follow the additional steps described in [Creating Google Login X portal](#).

8. Configure the parameters of the **Limits** screen.

For information on parameters of the **Limits** screen, see [The Limits screen parameters](#).

9. Click the **Design** tab.

The **Design** screen appears.

10. Configure the parameters of the **Design** screen.

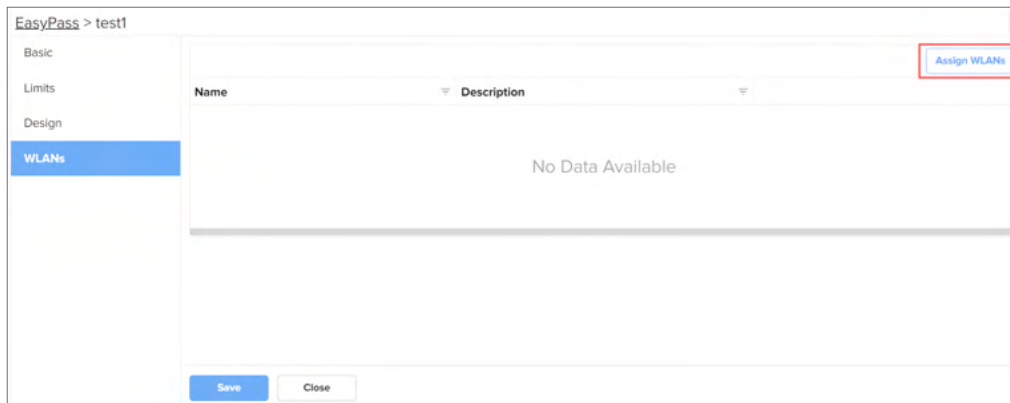

For information on parameters of the **Design** screen, see [The Design screen parameters](#).

11. Click the **WLANS** tab.

The **WLANS** screen appears.

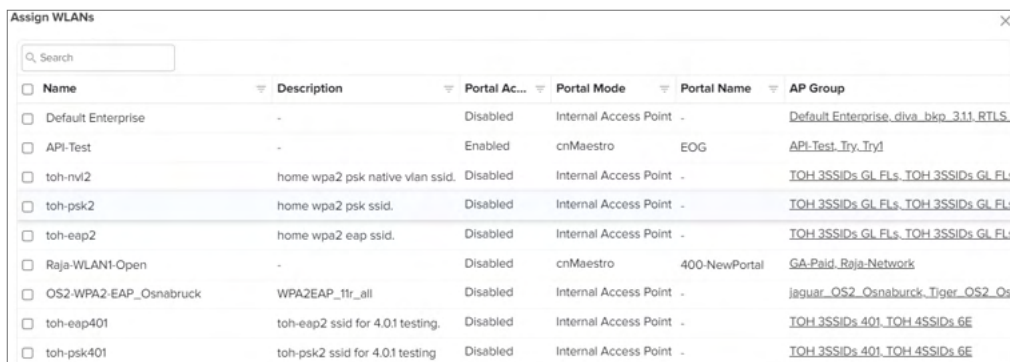

**Figure 498** The WLANs screen

12. Click the **Assign WLANs** button.

The **Assign WLANs** window appears.

**Figure 499** The Assign WLANs window

13. Select the required WLAN(s) and click **Assign**. For example, **testWLAN**.

The selected WLAN is added to the WLANs page.

**Figure 500** Assigned WLAN

- Use the unlink (⊖) icon to unlink a WLAN.
- Use the **Save** button to apply the changes.
- Use the **Close** button to exit from the portal.

These buttons are available across all portal types.

**Note**

- The **Voucher**, **One Click + Voucher**, and **Voucher + Paid X** portal types have some common parameters that you must configure on their respective **Voucher** screens. For information on parameters of the **Voucher** screen, see [The Voucher screen parameters](#).

- The **Paid X**, **One Click + Paid X**, and **Voucher + Paid X** portal types have some common parameters that you must configure on their respective **Plans** screens. For information on parameters of the **Plans** screen, see [The Plans screen parameters](#).

14. Click **Save**.

## Configuring common parameters

The following are the common parameters required for creating various portal types in EasyPass:

- [The Basic screen parameters](#)
- [The Limits screen parameters](#)
- [The Design screen parameters](#)
- [The Voucher screen parameters](#)
- [The Plans screen parameters](#)

### The Basic screen parameters

[Figure 501](#) displays the **Basic** screen parameters.

**Figure 501** *The Basic screen*

[Table 134](#) describes the **Basic** screen parameters that appear across all portal types on their respective **Basic** screens.

**Table 134** *The Basic screen parameters*

Parameter	Description
Description	A brief description of the portal.
Client Login Event Logging	Indicates whether the <b>Client Login Event Logging</b> parameter is enabled or disabled. By default, this parameter is disabled.
<b>Show Advanced</b>	
This section consists of settings related to the landing page and pre-login allowed domains.	
Landing Page	Determines where the users are directed to after they have viewed or interacted with a splash page or login screen. Enter the complete URL with the protocol. For example, <b>https://www.google.com</b> <b>Note:</b> If the landing page field is kept blank, the users are automatically redirected to

**Table 134** *The Basic screen parameters*

Parameter	Description
	the URL they were trying to access.
Pre-Login Allowed Domains	<p>Allows the administrators to specify domains that are allowed for access before the user logs in.</p> <p>Enter the IP address or domain name.</p> <p><b>Note:</b> You can add multiple IP addresses or domain names.</p>

**Note**

After configuring the **Basic Screen** parameters, proceed to step 7 described in the [Creating a portal](#) process.

## The Limits screen parameters

[Figure 502](#) displays the **Limits** screen parameters.

**Figure 502** *The Limits screen*

[Table 135](#) describes the **Limits** screen parameters that appear across all portal types on their respective **Limits** screens.

**Table 135** *The Limits screen parameters*

Parameter	Description
Session Expiry	<p>The specified duration after which a user's session automatically expires, disconnecting the user from the Wi-Fi network.</p> <p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• 15 Minutes</li> <li>• 1 Hour</li> <li>• 1 Day</li> <li>• 1 Month</li> <li>• End of Day (Midnight)</li> <li>• End of week (Saturday)</li> <li>• Custom</li> </ul> <p>By default, <b>15 Minutes</b> is selected.</p> <p>Select the required option from the drop-down list.</p>
Lockout Time	The lockout time restricts the ability to create a new session for the specified duration when a session expires.

**Table 135** *The Limits screen parameters*

Parameter	Description
	<p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• None</li> <li>• 15 Minutes</li> <li>• 1 Hour</li> <li>• 1 Day</li> <li>• 1 Month</li> <li>• End of Day (Midnight)</li> <li>• End of week (Saturday)</li> <li>• Custom</li> </ul> <p>By default, <b>None</b> is selected.</p> <p>Select the required option from the drop-down list.</p> <p><b>Note:</b> The <b>Lockout Time</b> parameter is not available for Self Registration X, Sponsored Guest X, Voucher, Paid X, Microsoft Azure X, and Google Login X portal types.</p>
Client Rate Limit	<p>Indicates the client rate limit.</p> <p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• Limited—When the <b>Limited</b> option is selected, the <b>Downlink</b> and <b>Uplink</b> parameters appear.</li> <li>• Unlimited</li> </ul> <p>By default, <b>Unlimited</b> is selected.</p>
Downlink	<p>This parameter is applicable only when <b>Client Rate Limit</b> is set to <b>Limited</b>.</p> <p>Downlink of client rate limit in Kbps.</p> <p>Maximum value: 1000000</p>
Uplink	<p>This parameter is applicable only when <b>Client Rate Limit</b> is set to <b>Limited</b>.</p> <p>Uplink of client rate limit in Kbps.</p> <p>Maximum value: 1000000</p>
Client Quota Limit	<p>Indicates the client quota limit.</p> <p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• Limited—When the <b>Limited</b> option is selected, the <b>Total</b> parameter appears.</li> <li>• Unlimited</li> </ul> <p>By default, <b>Unlimited</b> is selected.</p>
Total	<p>The total client quota in MB or GB.</p> <p>You can either select <b>MB</b> or <b>GB</b> option from the drop-down list. By default, <b>MB</b> option is selected.</p> <p><b>Note:</b> This parameter supports:</p> <ul style="list-style-type: none"> <li>• A minimum of 1 MB and a maximum of 8000000 MB.</li> </ul>

**Table 135** *The Limits screen parameters*

Parameter	Description
	<ul style="list-style-type: none"> <li>A minimum of 1 GB and a maximum of 8000 GB.</li> </ul>
<p><b>Note:</b> An additional parameter, <b>Device Limit</b>, must be configured for the following portal types in the <b>Limits</b> screen:</p> <ul style="list-style-type: none"> <li>Self Registration X</li> <li>Microsoft Azure X</li> <li>Google Login X</li> </ul> <p>The <b>Device Limit</b> parameter must also be configured for the following portal types:</p> <ul style="list-style-type: none"> <li>Voucher— Use the <b>Vouchers</b> tab to configure the <b>Device Limit</b> parameter.</li> <li>Paid X— Use the the <b>Add New Plan</b> window of the <b>Plans</b> screen to configure the <b>Device Limit</b> parameter.</li> </ul>	
Device Limit	<p>Specifies the number of devices that the guest can connect to the wireless network.</p> <p>Default value: 1</p> <p>Maximum value supported: 10</p>

**Note**

After configuring the **Limits screen** parameters, proceed to step 9 described in the [Creating a portal](#) process.

The Design screen parameters

[Figure 503](#) displays the **Design** screen parameters.

**Figure 503** *The Design screen*

[Table 136](#) describes the common **Design** screen parameters that appear across all portal types on their respective **Design** screens.

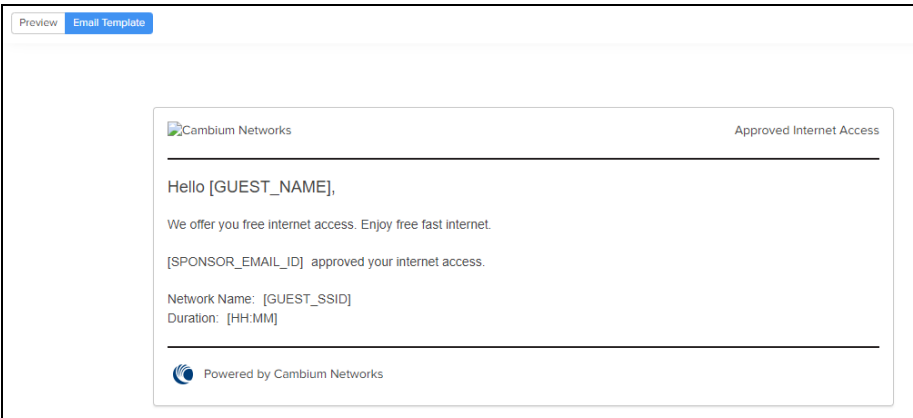

**Table 136** *The Design screen parameters*

Parameter	Description
Logo	Logo for the design page.
Text Style	<p>Text style for the design page.</p> <p>The following options are supported:</p> <ul style="list-style-type: none"> <li>Arial</li> </ul>

**Table 136** *The Design screen parameters*

Parameter	Description
	<ul style="list-style-type: none"> <li>• Times New Roman</li> <li>• Verdana</li> <li>• Tahoma</li> </ul>
Color	Color for the design page.
Title	Title for the design page.
Message	Welcome message for the design page.
Terms and Conditions	Terms and Conditions for the design page.
Show Powered By	<p>Indicates that a service is provided by an organization.</p> <p>You can disable this parameter.</p> <p>By default, this parameter is enabled.</p>
Custom fields	<p>Select the required field(s) to include in the design page by clicking the <b>Add Custom Field</b> button.</p> <p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• Date</li> <li>• Email</li> <li>• Name</li> <li>• Number</li> <li>• Phone</li> <li>• Text</li> </ul>
Connect	<p>An option to provide access for users to the internet.</p> <p>Click the <b>Connect</b> button to access the internet.</p> <p>This is the default option available on the design page.</p>
Social Login	<p>You can enable the required social login option(s).</p> <p>The following options are supported:</p> <ul style="list-style-type: none"> <li>• Google</li> <li>• Facebook</li> </ul> <p>When social login option(s) are enabled, the design page contains <b>Sign in with Facebook</b> and <b>Sign in with Google</b> options.</p>  <p><b>Note:</b> When <b>Sign in with Facebook</b> and <b>Sign in with</b></p>

**Table 136** *The Design screen parameters*

Parameter	Description
	<b>Google</b> options are enabled, they replace the default <b>Connect</b> option.
Device-specific view options of the design page 	The view options on the design page are tailored for various devices.  The following options are supported: <ul style="list-style-type: none"> <li>• Desktop View</li> <li>• Tablet/iPad View</li> <li>• Mobile View</li> </ul> By default, Desktop View is selected.  <b>Note:</b> The device-specific view options are available across all portal types on their respective <b>Design</b> screens.
<b>Note:</b> For the <b>Self RegistrationX</b> portal type, you must also configure additional parameters using the <b>Preview</b> tab and the <b>Email Template</b> tab.	
<b>Preview tab</b> The <b>Preview</b> tab is selected, by default. The following fields appear on the design page.	
Email	Enter the email ID. This field is mandatory.
Password	Enter the password. This field is mandatory.
<b>Email Template tab</b> When you click the <b>Email Template</b> tab, the following email template appears:	
	
<b>Note:</b> For the <b>Sponsored Guest X</b> portal type, configuration of additional parameters is required to identify users, create personalized accounts, verify email ownership, and send targeted notifications to guests. Additionally, these fields are necessary to notify users of important updates, promotions, or account-related changes. Configure the following additional parameters:	
Guest Name	Enter the guest name.
Guest Email	Enter the guest email ID.
Sponsor Email	Enter the sponsor email ID.
<b>Note:</b> For the <b>Voucher</b> portal type, configure the following additional parameter:	
Voucher Code	Indicates a voucher code.

**Table 136** *The Design screen parameters*

Parameter	Description
	Enter a voucher code. This is a mandatory field.
<b>Note:</b> For the <b>Paid X</b> portal type, configure either of the following options:	
Select a Plan	Select the required plan from the drop-down list.
Payment Code	The payment code of the plan. Enter the payment code.
<b>Note:</b> For the <b>Microsoft Azure X</b> portal type, the following option is available:	
Sign in with Microsoft	Use this option to sign in with Microsoft.
<b>Note:</b> For the <b>Google Login X</b> portal type, the following option is available:	
Sign in with Google	Use this option to sign in with Google.
<b>Note:</b> For the <b>One click + Voucher</b> portal type, configure either of the following options:	
Free	You can select this option to provide free access to the internet.
Voucher	You must enter a voucher code when you select this option.
<b>Note:</b> For the <b>One click + Paid X</b> portal type, configure either of the following options:	
Free	You can select this option to provide free access to the internet.
Paid	When you select this option, you can either use <b>Select a Plan</b> or <b>Payment Code</b> option.
<b>Note:</b> For the <b>Voucher + Paid X</b> portal type, configure either of the following options:	
Voucher	When you select this option, you must enter a voucher code.
Paid	When you select this option, you can either use <b>Select a Plan</b> or <b>Payment Code</b> option.

**Note**

After configuring the **Design screen** parameters, proceed to step 11 described in the [Creating a portal process](#).

## The Voucher screen parameters

[Table 137](#) displays the **Voucher** screen parameters that appear across **Voucher**, **One Click + Voucher**, and **Voucher + Paid X** portal types on their respective **Voucher** screens.

**Table 137** *The Voucher screen parameters*

Parameter	Description
Voucher Plan Name	Name of the voucher plan. <b>Note:</b> This parameter supports: <ul style="list-style-type: none"> <li>A minimum of one and maximum of 64 characters.</li> <li>Only alphanumeric, underscore (_), and dashes (-).</li> </ul> This parameter is mandatory.

**Table 137** *The Voucher screen parameters*

Parameter	Description
Quantity	Quantity (in integers) of the voucher. Minimum value: 1 Maximum value: 2000
Voucher Message	Message for the voucher. This parameter supports a minimum of one and maximum of 128 characters.
Session Expiry	For information on this parameter, see <a href="#">Table 135</a> .
Voucher Expiry	The expiry time of the voucher. The following options are supported: <ul style="list-style-type: none"> <li>• 15 Minutes</li> <li>• 1 Hour</li> <li>• 1 Day</li> <li>• 1 Month</li> <li>• End of Day (Midnight)</li> <li>• End of week (Saturday)</li> <li>• Custom</li> </ul> By default, <b>1 Day</b> is selected. This parameter is mandatory.
Client Rate Limit	For information on these parameters, see <a href="#">Table 135</a> .
Downlink	
Uplink	
Client Quota Limit	
Total	
Device Limit	
Bind Voucher to Device	Allows you to associate a voucher with a specific device. By default, this parameter is disabled.
Unlimited	Enable or disable the parameter. By default, this parameter is disabled. If you enable the check box, you can connect unlimited number of devices.

### The Plans screen parameters

[Figure 504](#) displays the **Plans** screen parameters that appear across **Paid X**, **One Click + Paid X**, and **Voucher + Paid X** portal types on their respective **Plans** screens.

**Figure 504** *The Plans screen*

Name	Price	Duration	Uplink	Downlink	Client Quota	Device Limit
No Data Available						

**Note**

Before selecting a payment gateway, you must add a plan.

To add and manage a plan, complete the following steps:

1. Click the **Add Plan** button (as shown in [Figure 504](#)).

The **Add New Plan** window appears.

**Figure 505** *The Add New Plan window*

**Add New Plan**

Plan Name\*

Plan Cost\*    -    +    USD

Session Expiry\*  
15 Minutes

How long will guests be able to access the Wi-Fi? Once a guest's session expires, they will need to register again.

Client Rate Limit\*  
Unlimited

Client Quota Limit\*  
Unlimited

Device Limit  
 Unlimited

Cancel    Add

[Table 138](#) describes the common **Plans** screen parameters that appear across **Paid X**, **One Click + Paid X**, and **Voucher + Paid X** portal types on their respective **Plans** screens.

**Table 138** The Add New Plan window parameters

Parameter	Description
Plan Name	Name for the plan. This parameter supports a minimum of one and maximum of 32 characters. <b>Note:</b> Alphanumeric and special characters are supported. This parameter is mandatory.
Plan Cost	Cost for the plan. This parameter is mandatory.
Currency	Currency for the plan. By default, <b>USD</b> is selected.
Session Expiry	For information on these parameters, see <a href="#">Table 135</a> .
Client Rate Limit	
Downlink	
Uplink	
Client Quota Limit	
Total	
Device Limit	
Unlimited	Enable or disable the parameter. If you disable the check box, you must specify the device limit. If you enable the check box, you can connect unlimited number of devices.

2. Click the **Add** button (as shown in [Figure 505](#)).

The plan is added.

**Figure 506** Plan added

**Note**  
Use the edit (✎) icon to modify a plan.

3. Select the required payment gateway option from the **Payment Gateway** drop-down list (as shown in [Figure 507](#)).

**Figure 507** Payment gateway options

The following options are supported:

- IP Pay
- Quickpay

**Note**  
Set the mandatory fields for the selected payment gateway option(s).

[Figure 508](#) displays the parameters available for the **IP Pay** payment gateway.

**Figure 508** *The IP Pay option*

When you select the **IP Pay** option, you must configure the parameters described in [Table 139](#).

**Table 139** *Parameters specific to the IP Pay option*

Parameter	Description
Callback URL	A URL that is called back by the payment gateway after a transaction is processed. Configure the Callback URL in the IPPay application settings.
Paypage URL	A URL that users are redirected to when they are asked to pay for a transaction. This URL typically points to a payment page where the user can enter the payment information. Enter the paypage URL. This parameter is mandatory.
Paypage API	A paypage API to create and manage payments, and retrieve payment information. Enter the Paypage API. This parameter is mandatory.
Merchant ID	A merchant ID to identify the merchant. Enter the merchant ID. This parameter is mandatory.
Customer ID	A customer ID to identify the customer. Enter the customer ID. This parameter is mandatory.
<b>Note: Terminal ID</b> and <b>Password</b> fields are populated, by default.	
Terminal ID	A terminal ID to identify the terminal and authenticate transactions processed through it.

**Table 139** Parameters specific to the IP Pay option

Parameter	Description
Password	A password to authenticate the user.
<b>Note:</b> The parameters of the <b>IP Pay</b> option are also applicable to <b>One Click + Paid X</b> and <b>Voucher + Paid X</b> portal types.	

[Figure 509](#) displays the parameters available for the **Quickpay** payment gateway.

**Figure 509** The Quickpay option

When you select the **Quickpay** option, you must configure the parameters described in [Table 140](#).

**Table 140** Parameters specific to the Quickpay option

Parameter	Description
Callback URL	A URL that is called back by the payment gateway after a transaction is processed. Configure the Callback URL in the QuickPay application settings.
<b>Note:</b> <b>Merchant ID</b> and <b>Merchant key</b> fields are populated, by default.	
Merchant ID	A merchant ID to identify the merchant.
Merchant key	A merchant key to authenticate the merchant's identity.
Payment Window Agreement ID	Payment window agreement ID. Enter the payment window agreement ID. This parameter is mandatory.
Payment Window API Key	Payment window API key. Enter the payment window API key. This parameter is mandatory.
<b>Note:</b> The parameters of the <b>Quickpay</b> option are also applicable to <b>One Click + Paid X</b> and <b>Voucher + Paid X</b> portal types.	

## Accessing the common tabs

The following common tabs are available for various portal types in EasyPass:

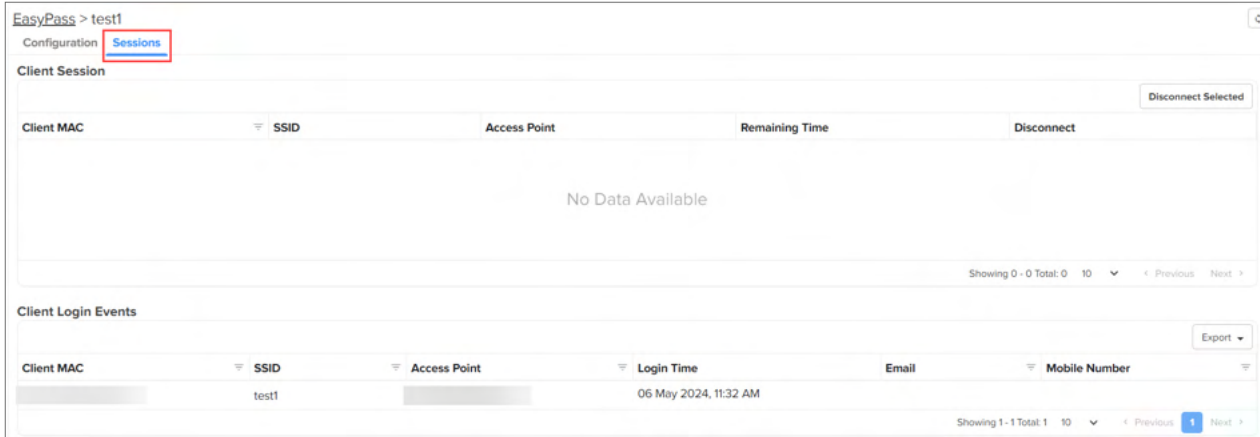

- [Sessions](#)
- [Guests](#)
  - [Adding a new guest user](#)
- [Vouchers](#)
  - [EasyPass](#)

- [Paid Transactions X](#)
- [Users X](#)

## Sessions

You can access the **Sessions** page using the **Sessions** tab from, as shown in [Figure 510](#), from any of the portals.

**Figure 510** *The Sessions page*

The **Sessions** tab includes two sections:

- Client Session—Administrators can view the details of all client sessions.
- Client Login Events—Administrators can view the details of all the sessions of client login events.

### Note

- The **Client Login Events** section displays the client login events only if the **Client Login Event Logging** check box is selected on the **Basic** screen. This checkbox is available across all portal types.
- The **Client Login Events** section displays the login events for 7 days.

Administrators can export the client login events using the following options:

- Export page as CSV
- Export page as PDF
- Export all as CSV

## Guests

The **Guests** page allows you to view details of self-registered guests connecting to the wireless network.

You can access the **Guests** page using the **Guests X** tab (as shown in [Figure 511](#)).

**Figure 511** *The Guests page*

### Note

The **Guests** tab appears only for the **Self Registration X** portal type.

## Adding a new guest user

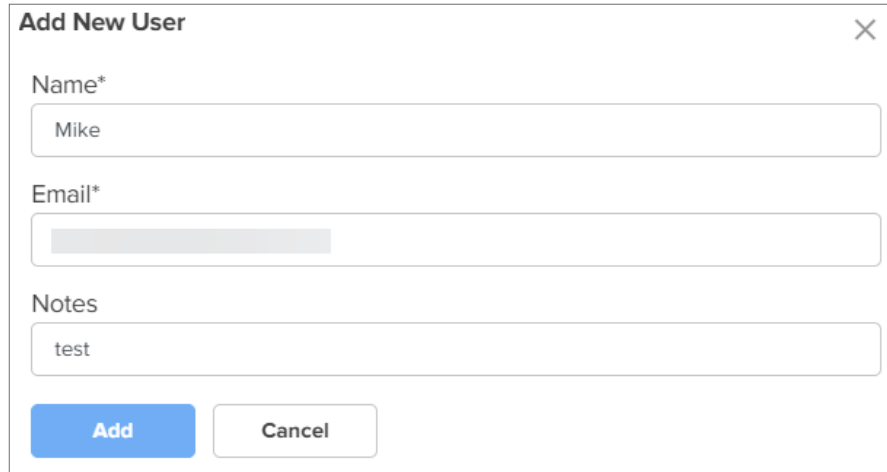

You can also add a new guest user from the **Guests** page.

Complete the following steps to add a new user:

1. On the **Guests** page, click **Add New**.

The **Add New User** window appears.

**Figure 512** The Add New User window

**Add New User** [Close]

Name\*

Mike	[Redacted]	Enabled	0	test	06 May 2024, 03:08 PM	06 May 2024, 03:23 PM

Showing 1 - 2 Total: 2 10 < Previous 1 Next >

You can view the details of the self registered guest connected to the Wi-Fi network (as shown in [Figure 514](#)).

### Note

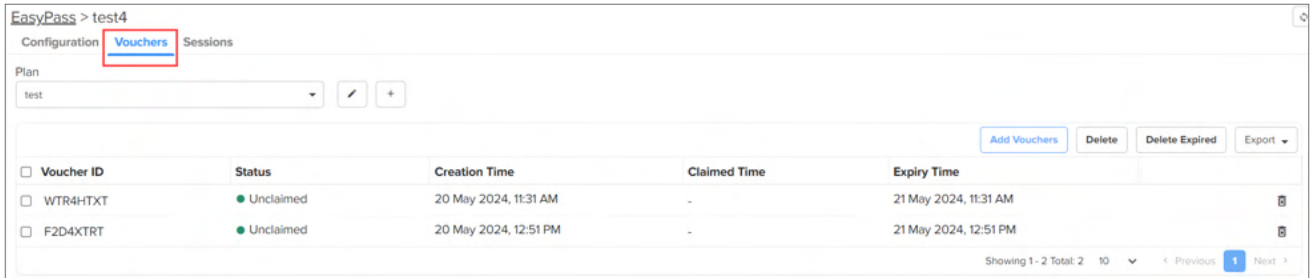

- Use the disable access (🔒) icon to disable access.
- Use the reset password (🔑) icon to reset a password.
- Use the extend session (🕒) icon to extend a session.
- Use the edit (✎) icon to edit the user details.
- Use the delete (🗑️) icon to delete a user.

## Vouchers

You can access the **Vouchers** page using the **Vouchers** tab (as shown in [Figure 515](#)).

You can view a list of created vouchers, edit an existing voucher plan, and add a new voucher plan using the **Vouchers** tab. You also have options to add vouchers and delete all expired voucher(s).

**Figure 515** *The Vouchers tab*

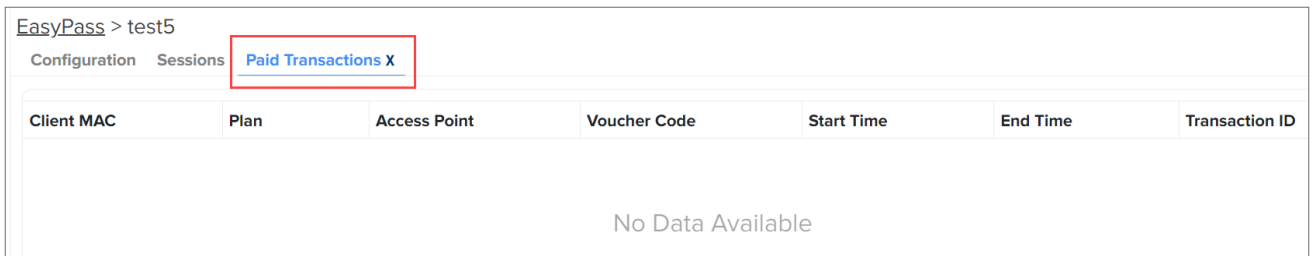

### Note

The **Vouchers** tab appears only for the **Voucher**, **One Click + Voucher**, and **Voucher + Paid X** portal types.

## Paid Transactions X

You can access the **Paid Transactions X** page using the **Paid Transactions X** tab (as shown in [Figure 516](#)).

**Figure 516** *The Paid Transactions X tab*

### Note

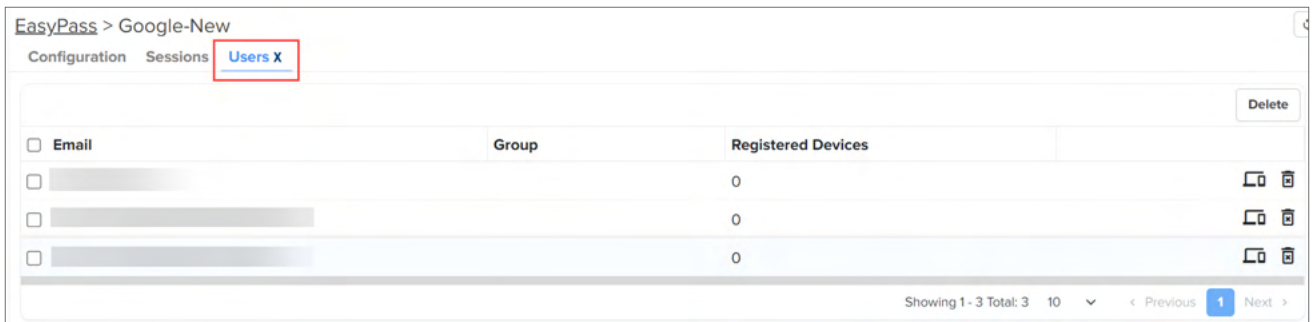

The **Paid Transactions X** tab appears only for the **Paid X**, **One Click + Paid**, and **Voucher + Paid X** portal types.

## Users X

You can access the **Users X** page using the **Users X** tab (as shown in [Figure 517](#)).

Figure 517 The Users X tab

**Note**

The **Users X** tab appears only for the **Microsoft Azure X** and **Google Login X** portal types.

## Creating One Click portal

You can create a One Click portal to provide guests with quick Wi-Fi access, adherence to policies, customized brand experiences, and secure Wi-Fi management with timing controls.

Figure 518 The One Click option

**Note**

To create a One Click portal, complete the initial steps described in [Creating a portal](#) and continue with the next steps to configure the parameters of the **Basic** screen, **Limits** screen, **Design** screen, and **WLANs** screen.

## Creating Self Registration X portal

You can create a self-registration portal to provide guests with easy account management, minimize IT involvement, offer SMS integration, email password delivery, sponsor workflow approvals, and enhance security and access control.

This section includes only the additional parameters that you must configure for the Self Registration X portal.

Figure 519 The Self Registration X option

**Note**

To create a Self Registration X portal, complete the initial steps described in [Creating a portal](#) and continue with the next steps to configure the parameters of the **Basic** screen, **Self Registration** screen, **Limits** screen, **Design** screen, and **WLANs** screen.

Follow these additional steps to create a Self Registration X portal:

1. From the **Basic** screen, click the **Self Registration** tab.

The **Self Registration** screen appears.

**Figure 520** *The Self Registration screen*

2. Configure the parameters described in [Table 141](#).

**Table 141** *The Self Registration screen parameters*

Parameter	Description
Approval required	Enable or disable this option. By default, this option is disabled.  When this parameter is enabled, you must provide the approver email ID(s) in the <b>Approver Emails</b> field.  When this parameter is enabled, you have an option to select the required mode.
Approver Emails	This parameter is applicable when the <b>Approval required</b> check box is selected.  Indicates the approver email ID(s) that must be provided.  This parameter is mandatory.
Mode	This parameter is applicable when the <b>Approval required</b> check box is selected.  The following options are supported: <ul style="list-style-type: none"> <li>• Manual—The sponsor receives an email with a link to approve the access request from the guest. Once the sponsor approves, the guest receives an email confirmation with password to access the network.</li> <li>• Auto—If the guest provides a configured sponsor's email, the password to access the network is automatically emailed to the guest and the sponsor is also notified through email.</li> </ul>
<b>Receive password via text</b>	
By default, the guests receive the password through email address and text message.	
Enable	Select the <b>Enable</b> check box. This parameter is disabled by default.  When you select the <b>Enable</b> check box, the <b>SMS Gateway Provider</b> option is enabled.
SMS Gateway Provider	Select the required SMS gateway option to be used to send the OTP to the guest's mobile device.

**Table 141** The Self Registration screen parameters

Parameter	Description
	<p>By default, the <b>Twilio</b> option is selected.</p> <p>The following gateway options are supported:</p> <ul style="list-style-type: none"> <li>• Fast SMS</li> <li>• Generic SMS API</li> <li>• SMS Country</li> <li>• SMS Gupshup</li> <li>• SMSAPI</li> <li>• Twilio</li> <li>• Victory Link SMS</li> </ul> <p>Each of these gateway options can be configured with their respective parameters. For more information on the gateway options, see <a href="#">SMS Gateway Providers</a> section.</p>

## SMS Gateway Providers

This section describes the different types of SMS gateway providers.

## Creating Sponsored Guest X portal

You can create a sponsored guest portal to enable non-IT staff to create, delete, or extend the validity of guest accounts.

This section includes only the additional parameters that you must configure for the Sponsored Guest X portal.

**Figure 528** *The Sponsored Guest X option*

### Note

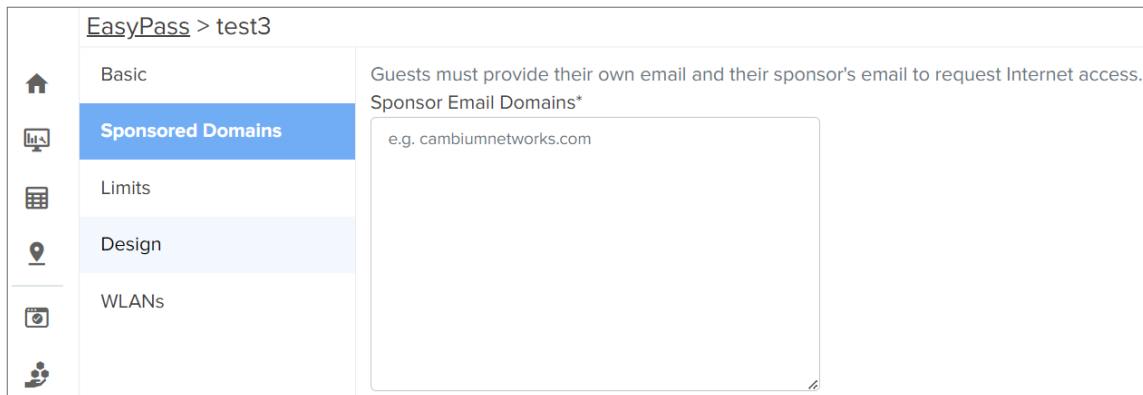

To create a Sponsored Guest X portal, complete the initial steps described in [Creating a portal](#) and continue with the next steps to configure the parameters of the **Basic** screen, **Sponsored Domains** screen, **Limits** screen, **Design** screen, and **WLANs** screen.

Follow these additional steps to create a Sponsored Guest X portal:

1. From the **Basic** screen, click the **Sponsored Domains** tab.

The **Sponsored Domains** screen appears.

**Figure 529** *The Sponsored Domains screen*

2. Configure the parameters described in [Table 149](#).

**Table 149** *The Sponsored Domains screen parameters*

Parameter	Description
Sponsor Email Domains	Sponsor's domain(s). This parameter is mandatory.

## Creating Voucher portal

You can create a voucher portal to create unique guest keys in bulk for retailers, hotels, conventions, and enterprises providing temporary visitor or guest Wi-Fi access.

This section includes only the additional parameters that you must configure for the Voucher portal.

Figure 530 The Voucher option

**Note**

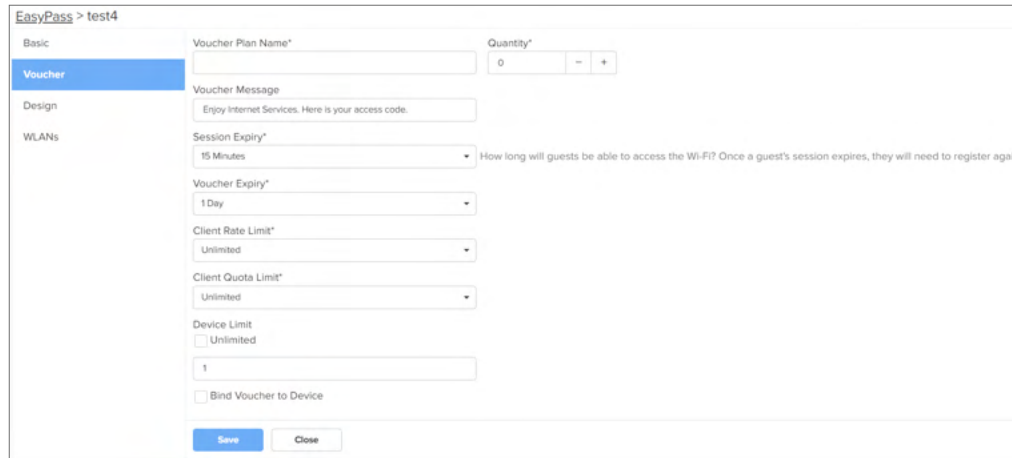

To create a Voucher portal, complete the initial steps described in [Creating a portal](#) and continue with the next steps to configure the parameters of the **Basic** screen, **Voucher** screen, **Design** screen, and **WLANs** screen.

Follow these additional steps to create a Voucher portal:

1. From the **Basic** screen, click the **Voucher** tab.

The **Voucher** screen appears.

Figure 531 The Voucher screen

2. Configure the parameters described in [Table 137](#).

## Creating Paid X portal

You can create a Paid X portal with IP Pay or Quickpay gateway for smooth internet connectivity purchase, and improving user experience.

Figure 532 The Paid X option

**Note**

To create a Paid X portal, complete the initial steps described in [Creating a portal](#) and continue with the next steps to configure the parameters of the **Basic** screen, **Plans** screen, **Design** screen, and **WLANs** screen.

## Creating WiFi4EU portal

You can create a WiFi4EU portal to provide free Wi-Fi access across the European Union (EU) to citizens and visitors in public spaces such as parks, squares, administrations, libraries, and health centers.

This section includes only the additional parameters that you must configure for the WiFi4EU portal.

**Figure 533** *The WiFi4EU option*

### Note

To create a WiFi4EU portal, complete the initial steps described in [Creating a portal](#) and continue with the next steps to configure the parameters of the **Basic** screen, **WiFi4EU** screen, **Limits** screen, **Design** screen, and **WLANS** screen.

Follow these additional steps to create a WiFi4EU portal:

1. From the **Basic** screen, click the **WiFi4EU** tab.

The **WiFi4EU** screen appears.

**Figure 534** *General parameters*

The screenshot shows a web interface for configuring a WiFi4EU portal. The browser address bar shows "EasyPass > test6". On the left, there is a navigation menu with tabs for "Basic", "WiFi4EU" (which is selected and highlighted in blue), "Limits", "Design", and "WLANS". The main content area is titled "WiFi4EU" and contains several configuration fields:
 

- Language:** A dropdown menu currently set to "English".
- Network UUID:** An empty text input field.
- WiFi4EU network UUID:** A text area containing explanatory text: "WiFi4EU network UUID: the Universally Unique Identifier (UUID) that the EC attributed to this WiFi4EU network installation. It is generated when the network installation is created in the installation."
- Captive Portal URL:** A text input field containing the URL "https://ga-us-e1-guest.cloud.cambiumnetworks.com/42b2a7c".
- Captive portal name:** A text area containing explanatory text: "Captive portal name: the Uniform Resource Locator (URL) of the captive portal page wherein the snippet will be integrated. The EC will verify the compliance of this page with the WiFi4EU requirements. Please copy this URL and configure in WiFi Installation Report->Add WiFi4EU network->URL of the Captive Portal."
- Metrics Snippet Script URL:** A text input field containing "https://collection.wifi4eu.ec.europa.eu/wifi4eu.min.js". To the right of this field is the instruction: "Configure complete URL including the protocol for loading metrics snippet i.e. wifi4eu.min.js."
- Enable Self-test Modus:** A checkbox that is currently unchecked.
- Show Logo:** A checkbox that is currently unchecked.

 At the bottom of the form are two buttons: "Save" (in blue) and "Close".

2. Configure the parameters described in [Table 150](#).

**Table 150** *General parameters - WiFi4EU*

Parameter	Description
Language	Select the preferred language from the drop-down list.
Network UUID	Universally Unique Identifier (UUID) that the EC attributed to the WiFi4EU network installation.
Enable Self-test Modus	Allows the browsers background script verification.
Show Logo	Displays the WiFi4EU logo provided by the European union.

## Creating Microsoft Azure X portal

Creating a **Microsoft Azure X** portal allows you to combine Wi-Fi access with authentication using Microsoft Office 365 credentials, making it easier for users to connect to the Wi-Fi network and access domain resources.

This section includes only the additional parameters that you must configure for the Microsoft Azure X portal.

**Figure 535** *The Microsoft Azure X option*

### Note

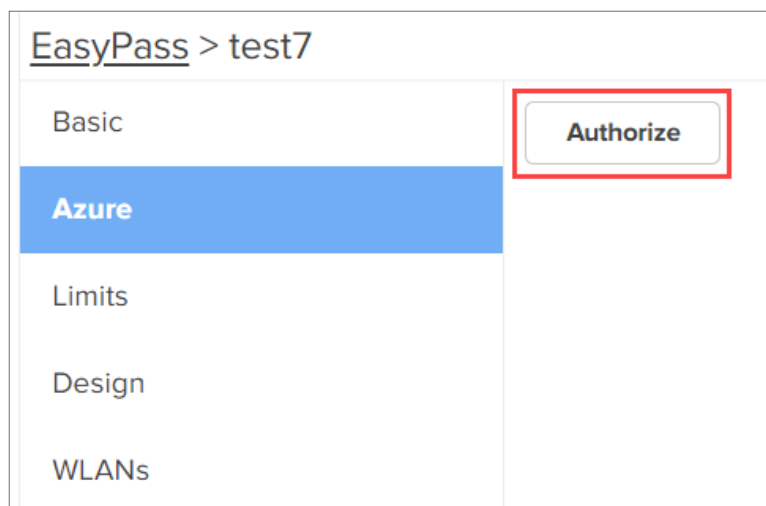

To create a Microsoft Azure X portal, complete the initial steps described in [Creating a portal](#) and continue with the next steps to configure the parameters of the **Basic** screen, **Azure** screen, **Limits** screen, **Design** screen, and **WLANs** screen.

Follow these additional steps to create a Microsoft Azure X portal:

1. From the **Basic** screen, click the **Azure** tab.

The **Azure** screen appears.

**Figure 536** *The Azure screen*

### Note

Only Microsoft Azure administrator role users can perform the **Authorize** step.

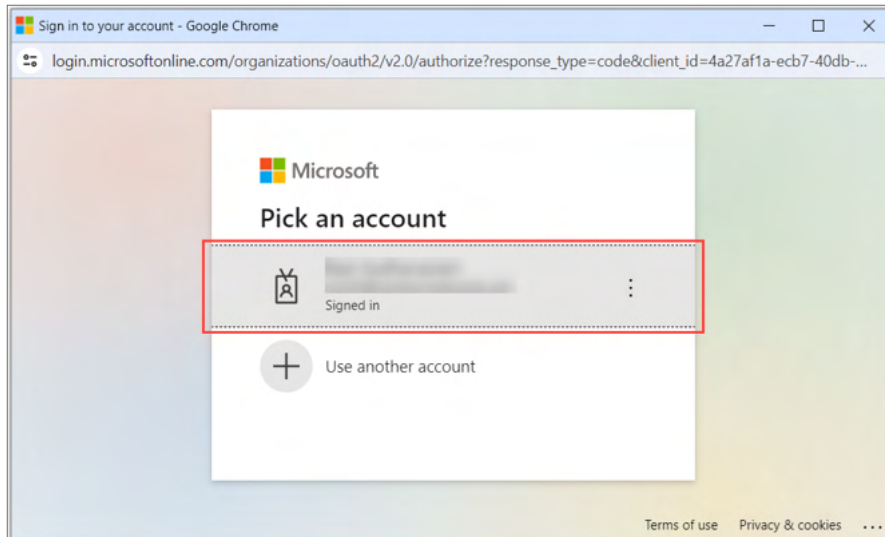

The **Authorize** step allows the EasyPass Azure application to:

- Make API calls to Microsoft Azure customer
- Sign in users
- Periodically sync the customer Azure directory
- Ensure only active user sessions are maintained or enforce relogin if user group information changes

2. Click the **Authorize** button.

The following screen appears, as shown [Figure 537](#).

**Figure 537** Sign in to your account page

**NOTE:**

For information on how to integrate Active Directory with Azure, see [Azure AD Integration](#).

## Creating Google Login X portal

Creating a **Google Login X** portal enables users with a Google account to connect to the wireless network by synchronizing the active directory. When enabled, if a guest who is part of the supported group tries to connect to the Wi-Fi network, the AP provides access to the guest.

**NOTE:**

You must have a Google Workspace account before creating a Google Login X portal.

This section includes only the additional parameters that you must configure for the Google Login X portal.

**Figure 538** The Google Login X option

**Note**

To create a Google Login X portal, complete the initial steps described in [Creating a portal](#) and continue with the next steps to configure the parameters of the **Basic** screen, **Google** screen, **Limits** screen, **Design** screen, and **WLANS** screen.

Follow these additional steps to create a Google Login X portal:

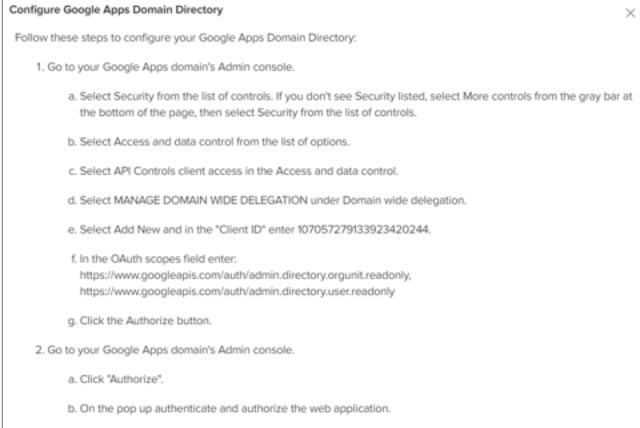

1. From the **Basic** screen, click the **Google** tab.  
The **Google** screen appears.

**Figure 539** *The Google screen*

2. Configure the parameters described in [Table 151](#).

**Table 151** *The Google screen parameters*

Parameter	Description
Enable Directory Synchronization	<p>Select the check box to enable the directory synchronization.</p> <p>When you select the <b>Enable Directory Synchronization</b> check box, the following screen appears:</p>  <p>When you click the <b>Follow these steps</b> link, the following window appears describing how to configure the Google Apps domain category.</p> <p>Follow the steps to configure your Google Apps domain directory.</p>  <p><b>Note:</b> For information on how to integrate Active Directory with Google Workspace, see <a href="#">Google Workspace AD Integration</a>.</p> <p>When you clear the <b>Enable Directory Synchronization</b> checkbox, you must configure the <b>Allowed Domains</b> parameter.</p>
Allowed Domains	<p>Enter the required domain(s).</p> <p>This is a mandatory parameter.</p>

## Creating One Click + Voucher portal

Creating a One Click + Voucher portal combines the benefits of both One Click access and voucher-based promotions, providing users with an easy and cost-effective way to access services.

Figure 540 The One Click + Voucher option

**Note**

To create a One Click + Voucher portal, complete the initial steps described in [Creating a portal](#) and continue with the next steps to configure the parameters of the **Basic** screen, **One Click** screen, **Design** screen, and **WLANS** screen.

## Creating One Click + Paid X portal

Creating a One Click + Paid X portal combines the benefits of One Click access with paid access to services.

Figure 541 The One Click + Paid X option

**Note**

To create a One Click + Paid X portal, complete the initial steps described in [Creating a portal](#) and continue with the next steps to configure the parameters of the **Basic** screen, **Plans** screen, **One Click** screen, **Design** screen, and **WLANS** screen.

## Creating Voucher + Paid X portal

Creating a Voucher + Paid X portal combines the benefits of voucher-based promotions and paid access to services.

Figure 542 The Voucher + Paid X option

**Note**

To create a Voucher + Paid X portal, complete the initial steps described in [Creating a portal](#) and continue with the next steps to configure the parameters of the **Basic** screen, **Voucher** screen, **Plans** screen, **Design** screen, and **WLANS** screen.

# MarketApps<sup>X</sup>

This section includes the following topics:

- [Overview](#)
- [Adding a new MarketApp](#)
- [Managed Wi-Fi App](#)
  - [Basic tab](#)
  - [Settings tab](#)
  - [Design tab](#)
- [Self-Service Personal Wi-Fi App](#)
  - [Basic tab](#)
  - [Personal Wi-Fi configuration](#)
- [How to configure units by property managers](#)

## Overview

MarketApps is an advanced service within cnMaestro that is designed to enhance network management through tailored applications. It offers specialized tools that empower Managed Service Providers (MSPs) to deliver greater value to their customers and end users by addressing their specific needs and challenges.

MarketApps introduces two new apps for the Multi-Dwelling Unit (MDU) market within MarketApps—**Managed Wi-Fi** and **Self-Service Personal Wi-Fi**. These applications simplify management of Wi-Fi services for property managers, residents, and service providers, by featuring an intuitive and streamlined workflow.

## Target audience

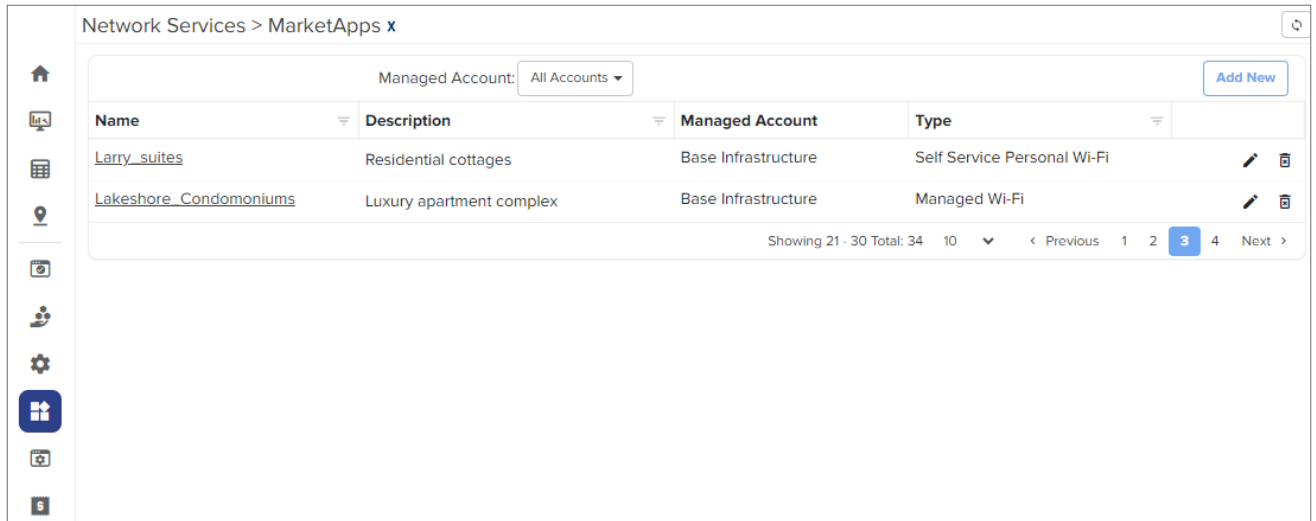

- **Property managers**—MarketApps empowers property managers to centrally administer Wi-Fi access across their properties. They can set up community-wide Wi-Fi networks and manage personal Wi-Fi networks for local residents.
- **Residents**—Residents can set up and manage their own Wi-Fi networks within the community, ensuring personalized and secure internet access.
- **Solution providers**—MarketApps helps the solution providers to offer tailored Wi-Fi solutions, enhancing network performance and user satisfaction in multi-dwelling units and apartment complexes.

## Benefits

- **Centralized management**—Property managers can oversee and control Wi-Fi access across multiple units or buildings from cnMaestro.
- **Customization**—Residents can set up personal Wi-Fi networks with customized SSIDs and passwords, enhancing their user experience.

To access MarketApps, navigate to **Network Services** > **MarketApps** in cnMaestro.

Figure 543 MarketApps

Showing 21 - 30 Total: 34 10 < Previous 1 2 3 4 Next >

## Adding a new MarketApp

To add a new MarketApp, complete the following steps:

1. Navigate to **Network Services > MarketApps** in cnMaestro.
2. Click the **Add New** button on the top right corner.
3. A new window **Select App Type** appears.

Select App Type

Name\*

Managed Account

### Managed Wi-Fi

Apps for property managers and residents (Personal Wi-Fi optional).

### Self Service Personal Wi-Fi

Simple App for residents only.

4. Enter a name for the new Market App in the **Name** field.
5. Choose the type of managed account for the app from the **Managed Account** drop-down box.
6. Select the required app.
7. Click **Save and Continue**.

The respective app screens appears as discussed in the sections below.

## Managed Wi-Fi App

The Managed Wi-Fi App in MarketApps enables property managers to centrally administer and manage Wi-Fi networks within their properties. This feature provisions both community-wide Wi-Fi networks and personal Wi-Fi networks for residents, allowing control and customization.

**Figure 544** *Managed Wi-Fi App type*

**Select App Type**

To configure the Basic tab, complete the following steps:

1. **Name**—Displays the chosen name for the Wi-Fi network.
2. **Managed Account**—This field is pre-populated based on previous selections.
3. **Description**—Enter a brief description that clearly explains the intended purpose or specific details of this Wi-Fi configuration.
4. Click **Save**.

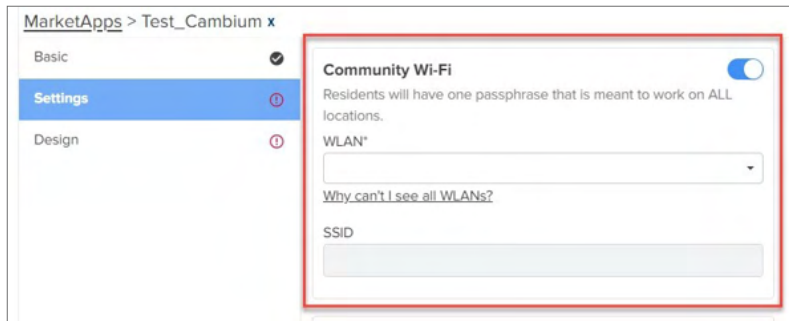

## Settings tab

The Settings tab in MarketApps enables you to configure advanced settings for your Wi-Fi network. You can set up Community Wi-Fi, Personal Wi-Fi, or other options based on your specific requirements.

## Community Wi-Fi

Community Wi-Fi in MarketApps allows property managers to set up and manage a single SSID for all residents within a property. This configuration is designed to provide centralized control over Wi-Fi access while ensuring uniform connectivity for all users.

**Figure 546** Community Wi-Fi settings

To configure Community Wi-Fi under the Settings tab in Managed Wi-Fi, complete the following steps:

1. Select the **WLAN** for the community-wide Wi-Fi network.

### Note

Valid WLANs must satisfy the following conditions:

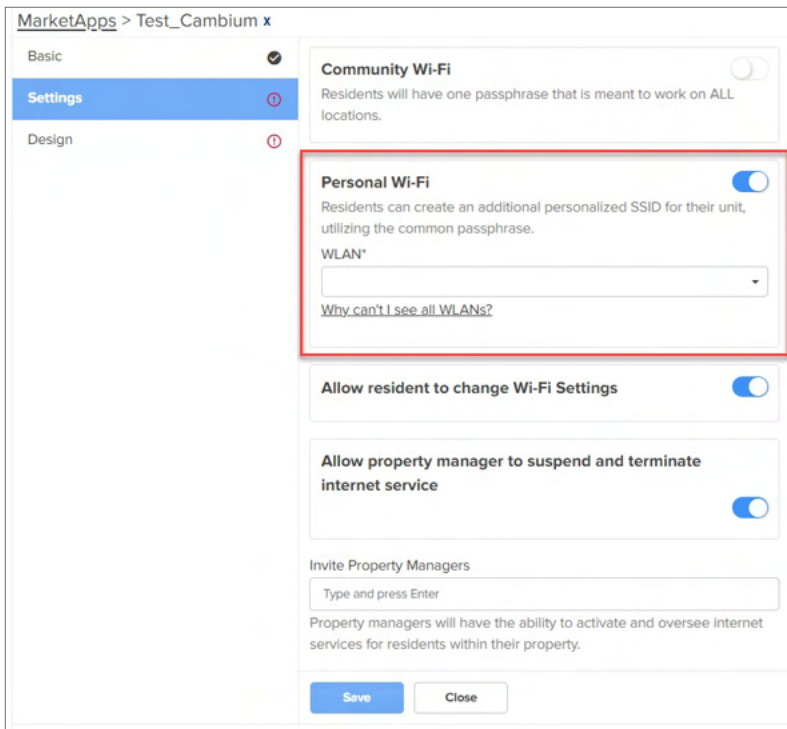

- WLAN's Personal SSID must be disabled.
- Local ePSK table must not have any existing entries.
- WLAN Security settings must be configured as **WPA2 Pre-Shared Keys**, **WPA3 Pre-Shared Keys**, or **WPA2/ WPA3 Pre-Shared Keys**.
- WLAN should not be mapped to any existing MarketApps or EasyPass.

2. Select the SSID for the community Wi-Fi from the **SSID** drop-down list.
3. Click **Save**.

## Personal Wi-Fi

The Personal Wi-Fi option in MarketApps allows residents to set up and manage their own personalized Wi-Fi networks within the community. This feature provides flexibility and customization for individual units, enhancing the user experience by allowing residents to manage their SSIDs and passwords.

Figure 547 Personal Wi-Fi settings

To configure Personal Wi-Fi under the Settings tab in Managed Wi-Fi, complete the following steps:

1. Select the WLAN for the personal Wi-Fi network from the **WLAN** drop-down list.

**Note**

Valid WLANs must satisfy the following conditions:

- WLAN's Personal SSID must be enabled.
- WLAN Security settings must be configured as **WPA2 Pre-Shared Keys, WPA3 Pre-Shared Keys, or WPA2/ WPA3 Pre-Shared Keys.**
- WLAN should not be mapped to any existing MarketApps or EasyPass.

2. **Allow Resident to Change Wi-Fi Settings**—Solution providers can enable or disable the option for residents to configure their own personalized settings.
3. **Allow Property Manager to Suspend and Terminate Internet Service**—Solution providers can enable or disable the option for property managers to suspend or terminate internet service.
4. Enter the property manager's email address in the **Invite Property Managers** text box to send an invitation. Property managers can activate and oversee internet services for residents within their property.
5. Click **Save**.

**Note**

Solution providers can select Community Wi-Fi, Personal Wi-Fi, or both options, depending on their requirements.

## Design tab

The Design tab in MarketApps allows you to customize the branding and appearance of the property manager and resident portals, ensuring a cohesive and professional user experience.

**Figure 548** Design tab parameters

The screenshot shows the configuration interface for 'Test\_Cambium x' in the MarketApps system. The 'Design' tab is selected, and the following parameters are visible:

- Login Page Title\***: Welcome to Test\_Cambium
- Property Name\***: Cambium (Note: Name will be displayed for email communications)
- Logo**: Select File button. Note: We recommend uploading a transparent PNG cropped to the edges of your logo. Image maximum size should be 200x200 pixels.
- Color Theme**: #25478d (Note: Choose a custom accent color for the portal page.)
- Privacy URL**: (Note: Privacy Policy that accounts has to acknowledge on their first access to the service.)
- Terms and Conditions URL**: (Note: Terms and Conditions that accounts has to acknowledge on their first access to the service.)
- Show "Powered by"**:

At the bottom, there are 'Save' and 'Close' buttons. To the right, a preview of the login page is shown, featuring a 'Welcome to Test\_Cambium' header, an 'Email ID' input field, a 'Send me one time link' button, and a footer labeled 'Resident Portal'.

**Table 152** Design tab parameters

Parameter	Description
Login Page Title	Customize a welcome message displayed on the login page
Property Name	Specify the property name used for internal identification and email communications.
Logo	Upload a logo file (PNG recommended) cropped to the edges and sized up to 200x200 pixels.
Color Theme	Customize the portal's color scheme with a chosen accent color.
Privacy URL	Provide the URL to your Privacy Policy that users must acknowledge on first access.
Terms and Conditions URL	Provide the URL to your Terms and Conditions that users must acknowledge.
Show "Powered by"	Enable this option to display the Powered by message.
Sample screen	The sample screen section includes three views: <ol style="list-style-type: none"> <li><b>Property Manager</b>—Displays the Property Manager interface where users can enter their email and request a one-time link for access.</li> <li><b>Resident Portal</b>—Shows the Resident Portal interface where users can input their email to receive a one-time link for accessing their personal Wi-Fi settings.</li> <li><b>Email</b>—Provides a view of the email format that users receive, which contains a link to access the Wi-Fi Manager App.</li> </ol>

## Self-Service Personal Wi-Fi App

The Self-Service Personal Wi-Fi App in MarketApps allows residents to independently manage and customize their Wi-Fi networks within residential properties. This feature provides residents with the capability to create and personalize SSIDs for their units, enhancing their control over network settings.

**Figure 549** *Self-Service Personal Wi-Fi App*

The screenshot shows a 'Select App Type' dialog box. At the top, there are two input fields: 'Name\*' with the value 'Cambium\_Test' and 'Managed Account' with a dropdown menu showing 'Base Infrastructure'. Below these are two app options. The first is 'Managed Wi-Fi' with a description: 'Apps for property managers and residents (Personal Wi-Fi optional)'. The second is 'Self Service Personal Wi-Fi' with a description: 'Simple App for residents only.' This second option is highlighted with a red rectangular border. At the bottom of the dialog are two buttons: 'Cancel' and 'Save and Continue'.

## Basic tab

The configuration steps for the Basic tab are the same as those detailed earlier in the documentation. For information on setting the network name, managed account, and description, refer to the [Basic tab](#) configuration steps.

## Personal Wi-Fi configuration

Residents can create personalized SSIDs for their units, allowing them to customize their network identification.

**Figure 550** *Personal Wi-Fi settings*

The screenshot shows the 'Personal Wi-Fi' settings page. On the left is a navigation menu with 'Basic', 'Settings' (highlighted in blue), and 'Design'. The main content area has a title 'Personal Wi-Fi' and a sub-header 'Residents can create personalized SSID for their unit.' Below this is a 'WLAN\*' dropdown menu, which is highlighted with a red border. Underneath the dropdown is a link that says 'Why can't I see all WLANs?'. Further down, there are two toggle switches: 'Allow resident to change Wi-Fi Settings' and 'Enable Open SSID', both of which are turned on. Below the second toggle is another 'WLAN\*' dropdown menu, also with a 'Why can't I see all WLANs?' link below it. At the bottom of the page are two buttons: 'Save' and 'Close'.

To configure Personal Wi-Fi, complete the following steps:

1. Select the WLAN for the personal Wi-Fi network from the **WLAN** drop-down list.

**Note**

Valid WLANs must satisfy the following conditions:

- WLAN's Personal SSID must be disabled.
- WLAN Security settings must be configured as **WPA2 Pre-Shared Keys, WPA3 Pre-Shared Keys, or WPA2/ WPA3 Pre-Shared Keys**.
- WLAN should not be mapped to any existing MarketApps or EasyPass.

2. **Allow Resident to Change Wi-Fi Settings**—Solution owners can enable or disable the option for residents to configure their own personalized configuration.
3. **Enable Open SSID** option allows residents to connect to the internet, scan the QR code, and access the resident portal to change their Wi-Fi SSID and password. Administrators can set rate limits for this SSID from the WLAN settings page.
4. Select the WLAN for the Open SSID network from the **WLAN** drop-down list.

**Note**

Valid WLANs must satisfy the following conditions:

- WLAN's Personal SSID must be disabled.
- WLAN Security settings must be configured as Open or OWE.
- WLAN should not be mapped to any existing MarketApps or EasyPass.

5. Click **Save**.

## How to configure units by property managers

This sections contains the following topics:

- [Units managed in the Managed Wi-Fi App](#)
  - [Assign Unit](#)
  - [Send Portal Link](#)
  - [Suspend](#)
  - [Extend](#)
  - [Terminate](#)
  - [View options in the Property Manager App](#)
- [Units managed in Self-Service Personal Wi-Fi App](#)

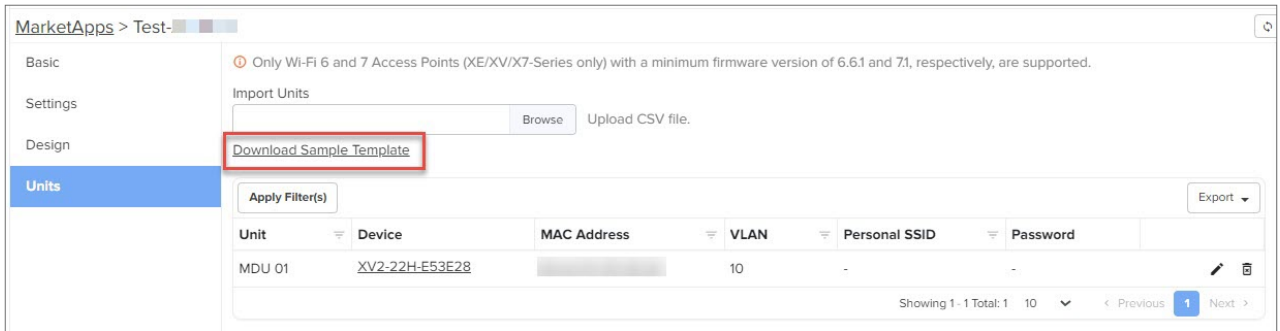

### Units managed in the Managed Wi-Fi App

Managed Wi-Fi enables property managers to configure and oversee network settings for units using cnMaestro.

To set up and manage your Wi-Fi networks, complete the following steps:

1. Navigate to the **Unit** tab and click on the **Download Sample Template** option to get the sample file.

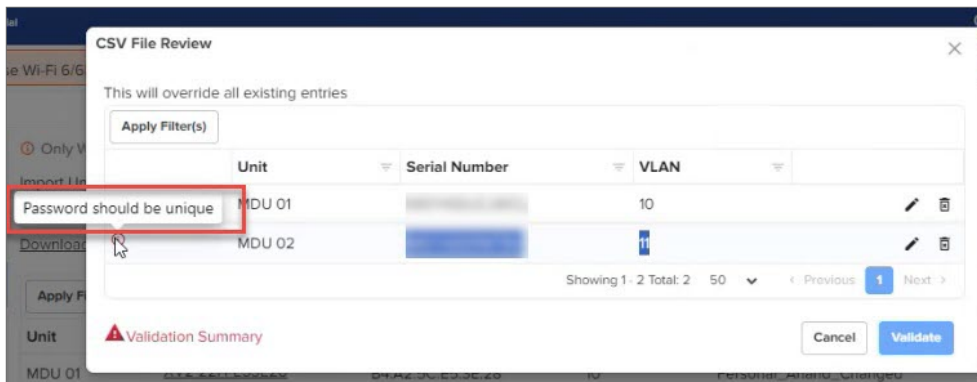

2. An example of the sample template and parameters is shown below:

Unit	Serial Number	MAC Address	VLAN	Personal SSID	Password
Unit name	Serial number of device	MAC Address of device	VLAN ID	SSID for the personal Wi-Fi	Password for Wi-Fi
MDU 01	B1000D000000	B1:00:0D:00:00:00	10	SSID 01	Pa\$\$Word123
MDU 02	B1000D000001	B1:00:0D:00:00:01	13	SSID 02	Pa\$\$Word123

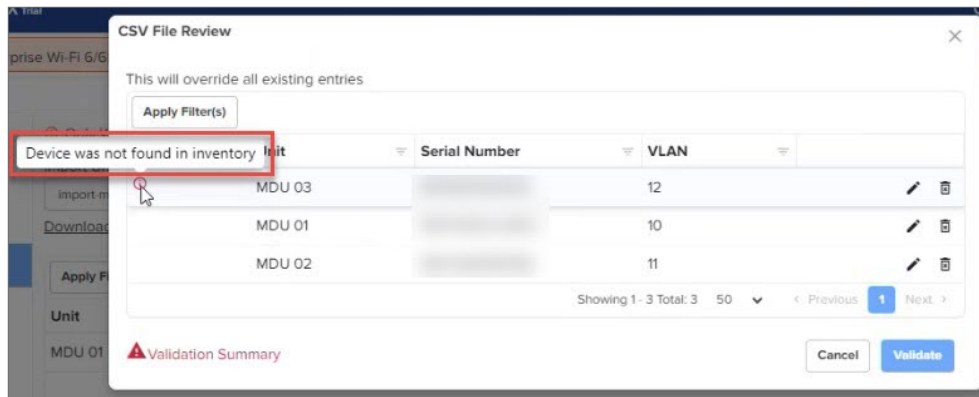

Parameter	Description
Unit	Enter the name or number of the unit (for example, MDU01 and MDU 02 are apartment numbers).
Serial Number	Enter the serial number of the device.
VLAN	Enter the VLAN ID assigned to the unit.
Personal SSID	Enter the SSID for the personal WiFi network.
Password	Enter the password for the Wi-Fi network.

3. After entering the details, save the Excel file with a new name to ensure you have a copy of the filled template and import it to cnMaestro. Note this step is crucial to avoid overwriting the original template.
4. During the import, you might encounter validation error messages. Here are some common error messages and their solutions:
  - a. **Password should be unique**—Ensure each unit has a unique password. Modify the password in the template so no two units share the same password.

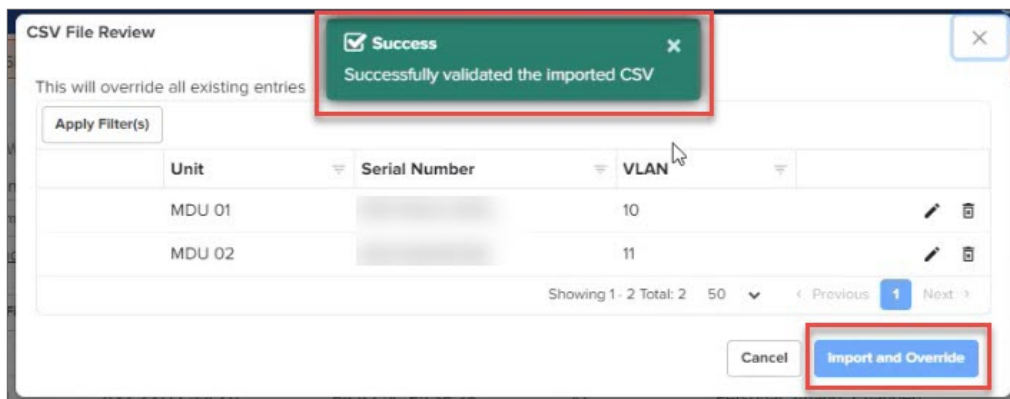

- b. **Device not found in inventory**—Ensure the serial number and MAC address entered correspond to devices that are already registered in the cnMaestro inventory. Make sure to import the details only after

onboarding the device.

- c. **Validates the unit**—Ensure the unit is less than 32 characters and contains only alphanumeric characters, underscores (\_), hyphens (-), and spaces.
  - d. **Checks for duplicate units**—Ensure each unit is unique.
  - e. **Validates the password**—Ensure the password is between 8 and 64 characters long and does not include ", ' , / , ? , = , - , + , or spaces.
  - f. **Validates the SSID**—Ensure the SSID is less than 32 characters and contains only alphanumeric characters, underscores (\_), hyphens (-), and spaces.
  - g. **Validates the VLAN**—Ensure the VLAN is an integer between 1 and 4094.
  - h. **Check if the device is already linked to another EasyApp**—Ensure devices are not linked to another application.
  - i. **Checks for duplicate devices**—Ensure each device is unique.
  - j. **Ensures that there is a device present**—Verify a device is specified as it is required.
  - k. **Validates that the AP group is linked to the personal WLAN**—Ensure the device has an AP group linked with the personal WLAN.
  - l. **Ensures the SSID is not duplicated**—Ensure each SSID is unique.
5. Once the file imports correctly, you can see the Successfully validated the imported CSV message as shown in the below figure.

6. Click **Import and Override** to finalize the import process.

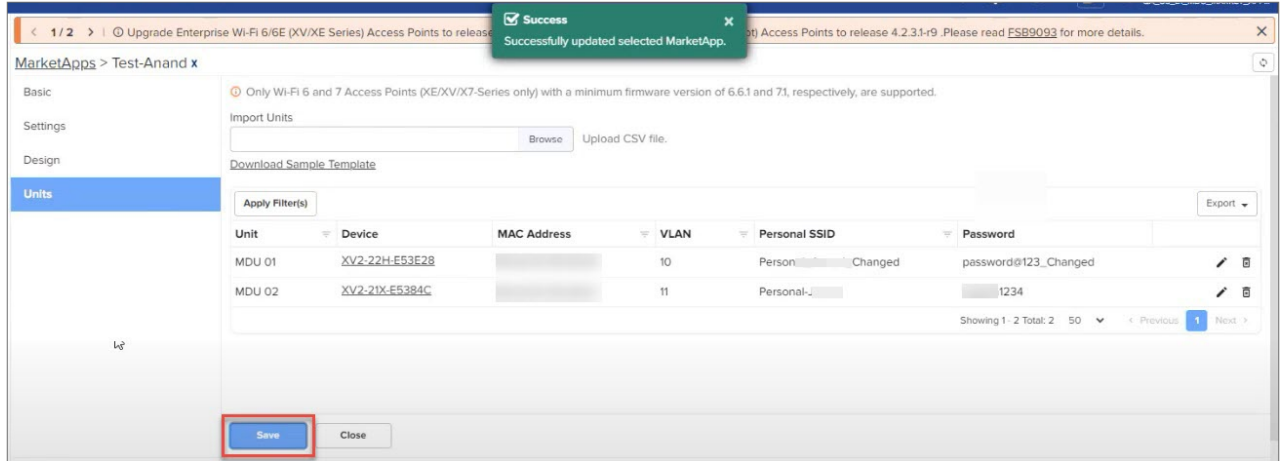

#### Note

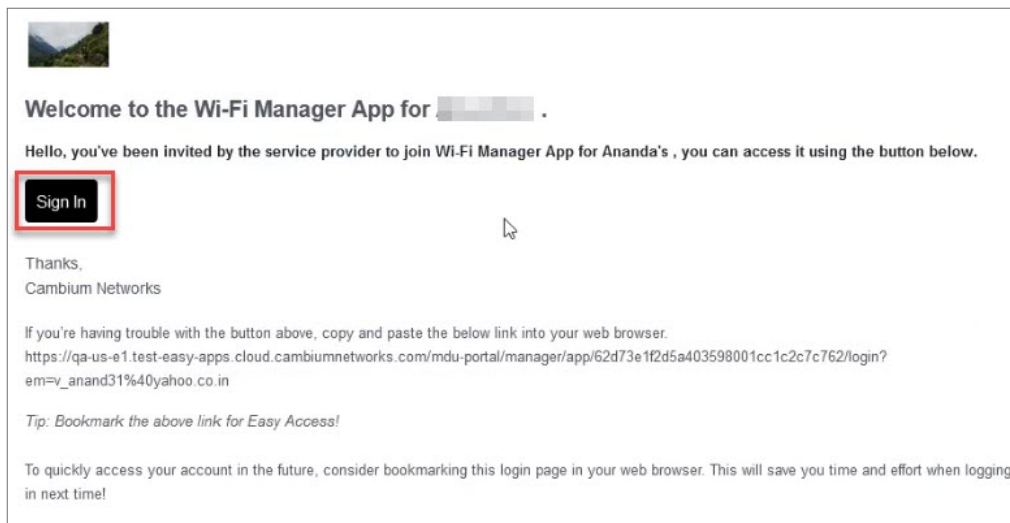

After importing, note the following points:

- Ensure the SSID name and password in the Excel sheet remain unchanged unless updated by the customer.
- Residents can modify their SSID and password through the resident portal later on.
- If **Allow residents to change Wi-Fi settings** (Figure 547) is enabled, tenants can change their SSID and password settings, and these changes do not get overwritten later.

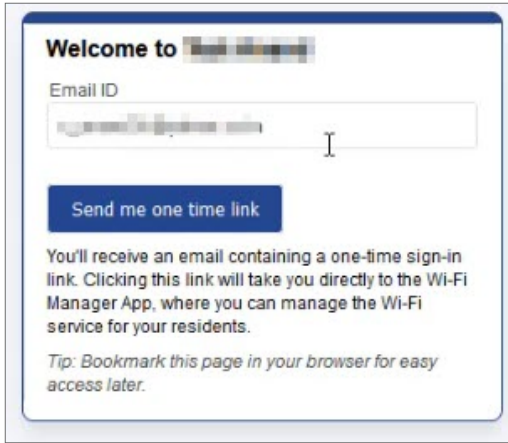

7. Once the devices are successfully added, click **Save**.

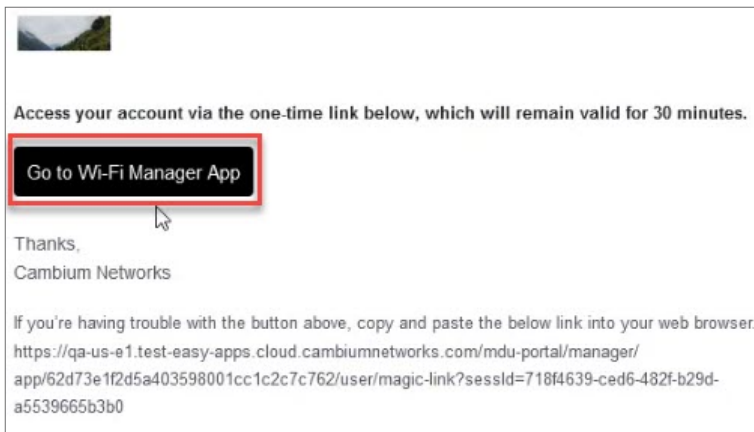

8. The property manager receives an email titled **Welcome to the Wi-Fi Manager APP** and can **Sign In**.

9. The property manager enters the same email ID provided in the Managed Wi-Fi settings.

10. clicks **Send me a one-time link**.
11. The property manager receives an email containing a one-time link for logging into the property manager app.

12. Click **Go to Wi-Fi Manager App**.
13. The Property Manager app interface is shown below.

**Table 153** *Wi-Fi Manager App Interface*

Options	Description
Show All Units	Provides a drop-down menu with the following options: <ul style="list-style-type: none"> <li>• <b>Show Assigned</b>—Filters the list to display only the assigned units.</li> <li>• <b>Show Unassigned</b>—Filters the list to display only the unassigned units.</li> <li>• <b>Show Suspended</b>—Filters the list to display only the suspended units.</li> </ul>
Search	Allows searching for units or residents by entering the unit number or resident name.

Options	Description
Assign Unit	Assigns a unit to a resident.
Send Portal Link	Sends a link to the resident for accessing the portal.
Suspend	Suspends a unit, making it temporarily inactive.
Extend	Extends the duration of a unit's assignment.
Terminate	Terminates a unit's assignment, making it available for reassignment.

## Assign Unit

The Assign Unit option allows property managers to allocate specific units to residents. This feature simplifies tenant management and facilitates communication between managers and residents.

To assign a unit, follow these steps:

- a. Click on **Assign Unit** in the Property Manager app.
- b. A new window titled **Assign Unit** appears.

The screenshot shows a modal window titled "Assign Unit" with a close button (X) in the top right corner. The form inside includes the following fields and values:

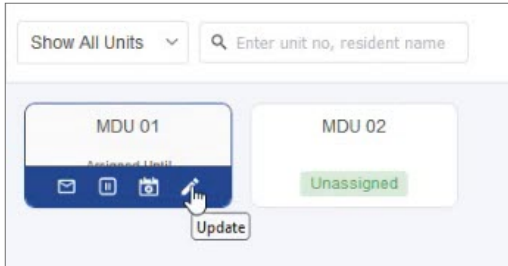

- Unit\***: MDU 01 (dropdown menu)
- Full Name\***: [Redacted]
- Email ID\***: [Redacted]
- Description**: A's Home
- Start Date**: 07 / 25 / 2024 (calendar icon)
- End Date**: 07 / 26 / 2024 (calendar icon)
- Duration**: 2 Day(s)

At the bottom of the dialog, there are two buttons: "Cancel" and "Assign Unit".

- c. Select the unit from the **Unit** drop-down menu.
- d. Enter the resident's **Full Name**.
- e. Enter the resident's **Email ID**.
- f. Provide a **Description**.
- g. Set the **Start Date** for the assignment.
- h. Set the **End Date** for the assignment.
- Note:** Minimum duration is one day.
- i. Review the **Duration** displayed in days.
- j. Click **Assign Unit** to finalize the assignment.
- k. A message confirms **Assign Unit action completed successfully**.

- l. After updating, if the property manager wants to change any of these parameters, they can do so by clicking the cursor below the unit as shown.

- m. A new window titled **Update** appears.

- n. The property manager can update any details and then click **Update**.

## Send Portal Link

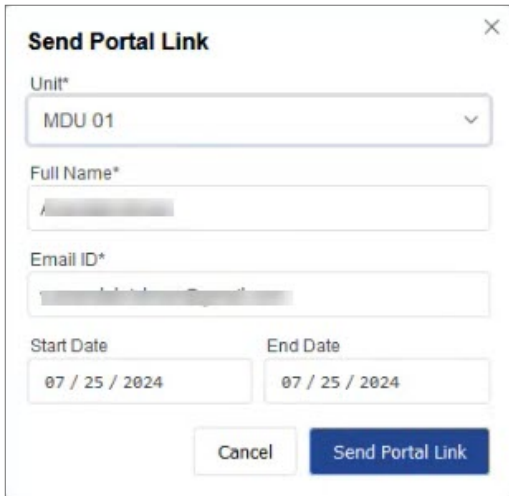

This feature allows you to send the portal link associated with a specific unit to residents or other designated recipients.

To send a portal link, complete the following steps:

- a. Click on the **Send Portal Link** in the Property Manager app.
- b. A new window titled **Send Portal Link** appears.

- c. Select the unit number or name from the **Unit** drop-down.
- d. A new window titled **Send Portal Link** appears.

- e. Click **Send Portal Link** to send the portal link.
- f. A message confirms **Send Portal Link action completed successfully**.

- g. An email is sent to the resident to log in to the resident portal.

## Suspend

The Suspend option allows you to temporarily suspend a unit in the Property Manager app.

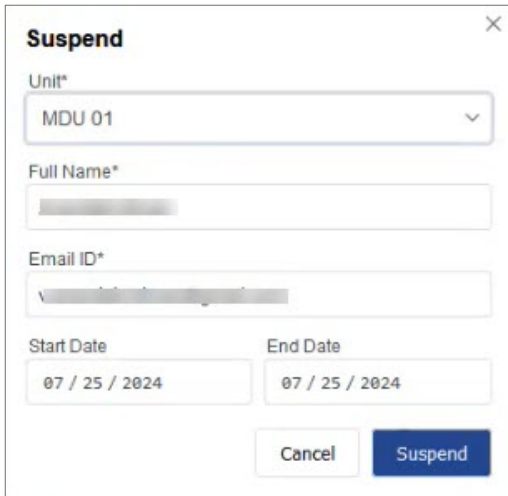

To suspend a unit, complete the following steps:

- a. Click on **Suspend** in the Property Manager app.
- b. A new window titled **Suspend** appears.

- c. Select the unit number or name from the **Unit** drop-down.

- d. A new window titled **Suspend** appears.

The Suspend dialog box contains the following fields and controls:

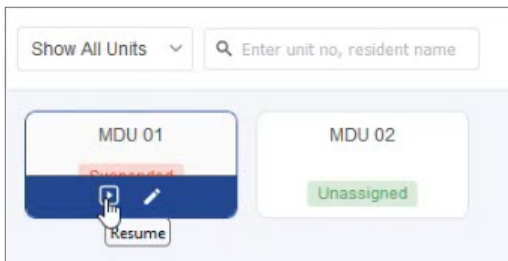

- Unit\***: A dropdown menu with "MDU 01" selected.
- Full Name\***: A text input field with a blurred value.
- Email ID\***: A text input field with a blurred value.
- Start Date**: A date picker showing "07 / 25 / 2024".
- End Date**: A date picker showing "07 / 25 / 2024".
- Buttons**: "Cancel" and "Suspend" (highlighted in blue).

- e. Click **Suspend** to confirm.

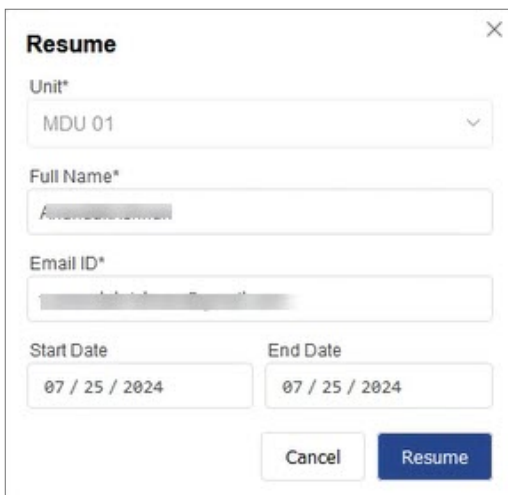

- f. A message confirms **Suspend action completed successfully**.

- g. After a unit is suspended, the property owner can resume the unit by clicking the cursor below the unit as shown below.

- h. A new window titled **Resume** appears.

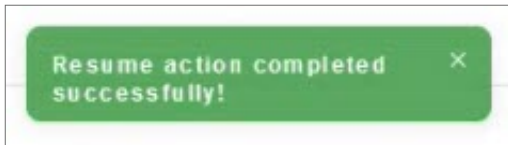

The Resume dialog box contains the following fields and controls:

- Unit\***: A dropdown menu with "MDU 01" selected.
- Full Name\***: A text input field with a blurred value.
- Email ID\***: A text input field with a blurred value.
- Start Date**: A date picker showing "07 / 25 / 2024".
- End Date**: A date picker showing "07 / 25 / 2024".
- Buttons**: "Cancel" and "Resume" (highlighted in blue).

- i. Click **Resume** to confirm.

- j. A message confirms **Resume action completed successfully**.

## Extend

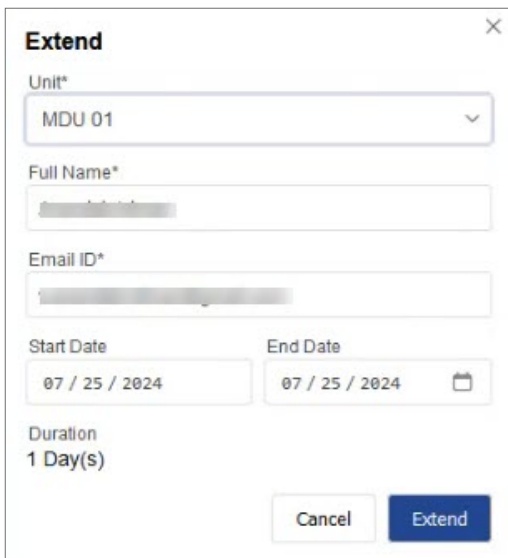

Extend allows you to prolong the duration of a unit's assignment period within the Property Manager app.

To extend a unit, complete the following steps:

- a. Click on **Extend** in the Property Manager app.
- b. A new window titled **Extend** appears.

- c. Select the unit number or name from the **Unit** drop-down.
- d. A new window titled **Extend** appears.

- e. Set the **End Date** for the assignment.
- f. Review the **Duration** displayed in days.
- g. Click **Extend** to confirm.
- h. A message confirms **Extend action completed successfully**.

## Terminate

Terminate allows you to end the assignment of a unit within the Property Manager app.

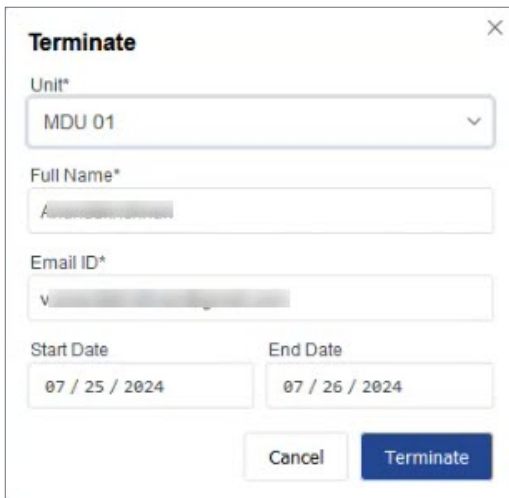

To terminate a unit, complete the following steps:

- a. Click on **Terminate** in the Property Manager app.
- b. A new window titled **Terminate** appears.

The screenshot shows a dialog box titled "Terminate" with a close button (X) in the top right corner. Below the title is a label "Unit\*" followed by a dropdown menu. The dropdown menu is open, showing a search bar with a magnifying glass icon and a list of items. The item "MDU 01" is highlighted, and a mouse cursor is pointing at it.

- c. Select the unit number or name from the **Unit** drop-down.
- d. A new window titled **Terminate** appears.

The screenshot shows the "Terminate" dialog box with the "Unit\*" dropdown menu set to "MDU 01". Below this are several input fields: "Full Name\*" (with a blurred value), "Email ID\*" (with a blurred value), "Start Date" (07 / 25 / 2024), and "End Date" (07 / 26 / 2024). At the bottom right, there are two buttons: "Cancel" and "Terminate".

- e. Click **Terminate** to confirm.
- f. A message confirms **Terminate action completed successfully**.

The screenshot shows a green notification message box with a close button (X) in the top right corner. The text inside the box reads "Terminate action completed successfully!".

## View options in the Property Manager App

In the Property Manager app, there are three different view options to manage units efficiently. These view options can be accessed using icons located at the top right corner of the Property Manager app interface as shown in [Figure 551](#).

**Figure 551** View options in the Property Manager App

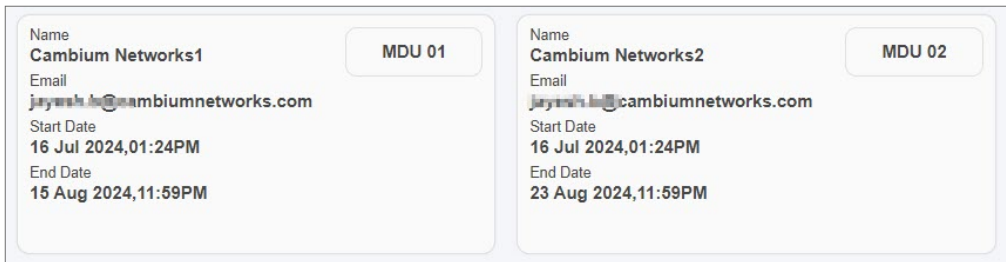

1. **Thumbnail View**—This view displays units as thumbnails or small images, providing a visual representation of each unit.

Beneath each thumbnail, you can access options such as Send Portal Link, Suspend, Extend, and Update by hovering your cursor over the unit.

2. **Title View**—Units are listed with their names or titles, showing unit name, email ID, start date, and end date for quick reference.

3. **Table View**—Table View presents units in a structured table format with columns for Unit, Status, Name, Email, Start Date, and End Date, allowing for detailed management and organization of unit information.

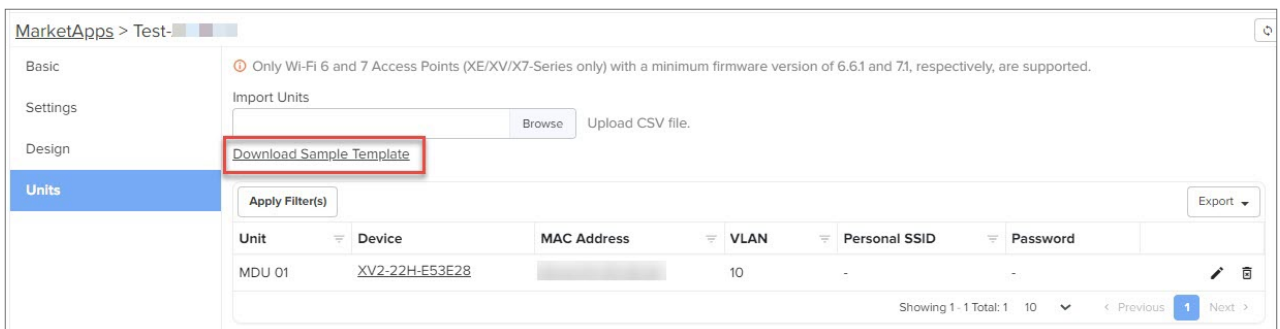

Unit	Status	Name	Email	Start Date	End Date	
MDU 01	● Assigned	Cambium Networks1	██████████@cambiumnetworks.com	16 Jul 2024,01:24PM	15 Aug 2024,11:59PM	✉️ ⏸️ 📅 ↻️ ✎️
MDU 02	● Assigned	Cambium Networks2	██████████@cambiumnetworks.com	16 Jul 2024,01:24PM	23 Aug 2024,11:59PM	✉️ ⏸️ 📅 ↻️ ✎️

## Units managed in Self-Service Personal Wi-Fi App

Self-Service Personal Wi-Fi App allows users to configure their personal Wi-Fi networks using cnMaestro.

To set up and manage your personal Wi-Fi network settings, complete the following steps:

1. Navigate to the **Unit** tab and click on the **Download Sample Template** option to get the sample file.

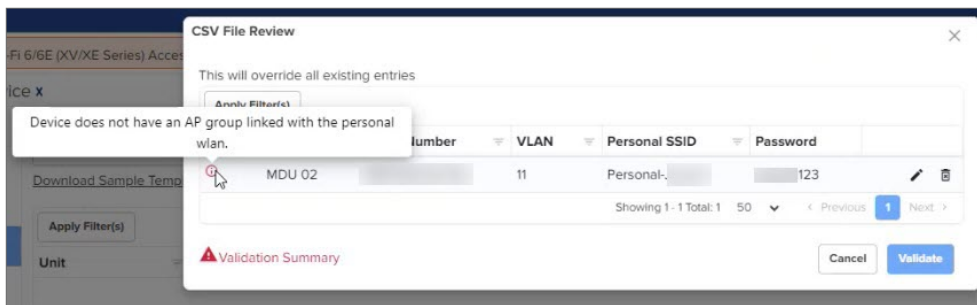

2. An example of the sample template and parameters is shown below:

Unit	Serial Number	MAC Address	VLAN	Personal SSID	Password
Unit name	Serial number of device	MAC Address of device	VLAN ID	SSID for the personal Wi-Fi	Password for Wi-Fi
MDU 01	B1000D000000	B1:00:0D:00:00:00	10	SSID 01	Pa\$\$Word123
MDU 02	B1000D000001	B1:00:0D:00:00:01	13	SSID 02	Pa\$\$Word123

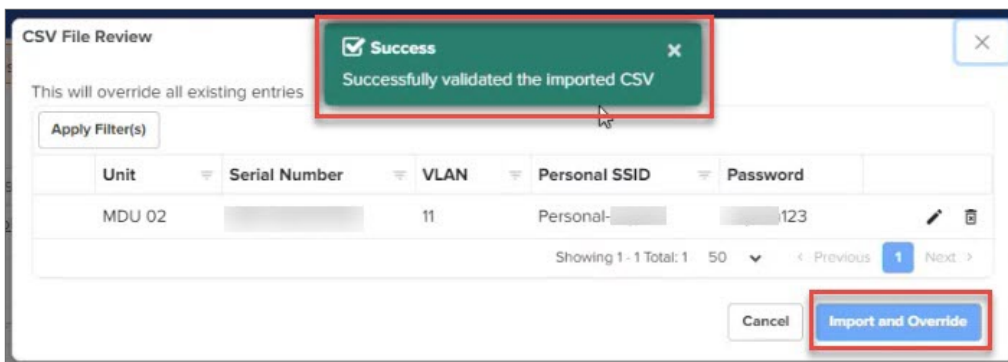

Parameter	Description
Unit	Enter the name or number of the unit (For example, MDU01 and MDU 02 are apartment numbers).
Serial Number	Enter the serial number of the device.
VLAN	Enter the VLAN ID assigned to the unit.
Personal SSID	Enter the SSID for the personal WiFi network.
Password	Enter the password for the Wi-Fi network.

- After entering the details, save the Excel file with a new name to ensure you have a copy of the filled template and import it to cnMaestro. Note this step is crucial to avoid overwriting the original template.
- During the import, you might encounter validation error messages. Here are some common error messages and their solutions:
  - Device does not have an AP group linked with the personal wlan**—Ensure each device is only linked to one application at a time. Verify the device has an AP group associated with the personal WLAN before proceeding with the configuration.

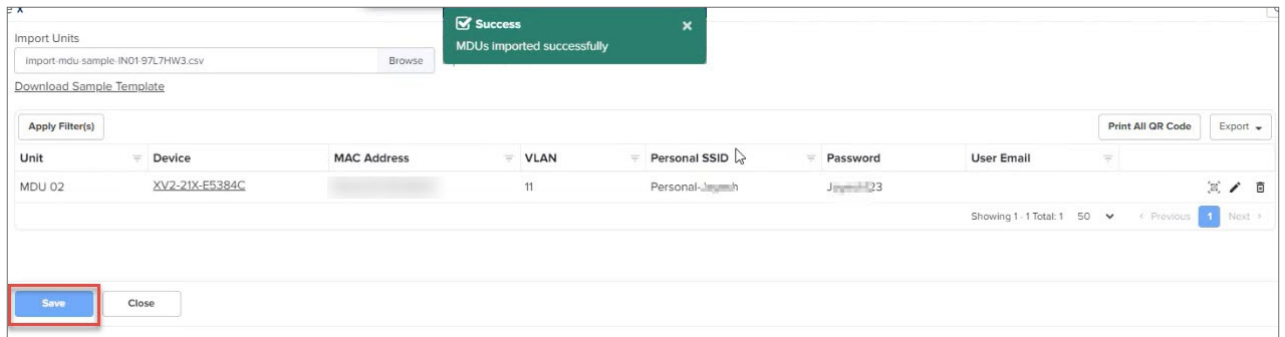

All the error messages are similar to those described in the [Units managed in Managed Wi-Fi](#) sections.

- Once the file imports correctly, you can see the **Successfully validated the imported CSV** message as shown in the below figure.

- Click **Import and Override** to finalize the import process.

7. Once the devices are successfully added, click **Save**.

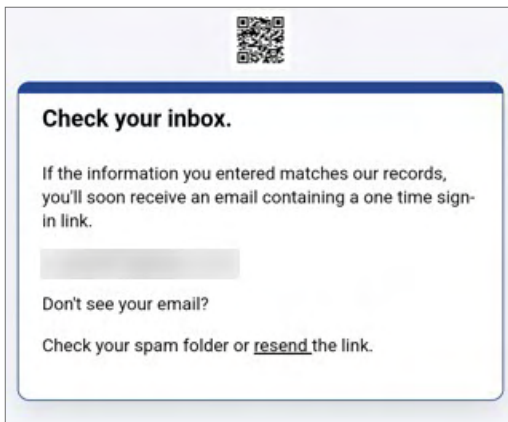

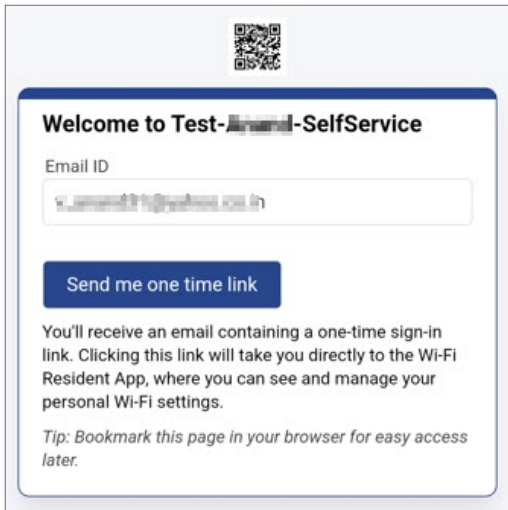

8. Click the **Print All QR Code** option on the right side to open a QR scan page.

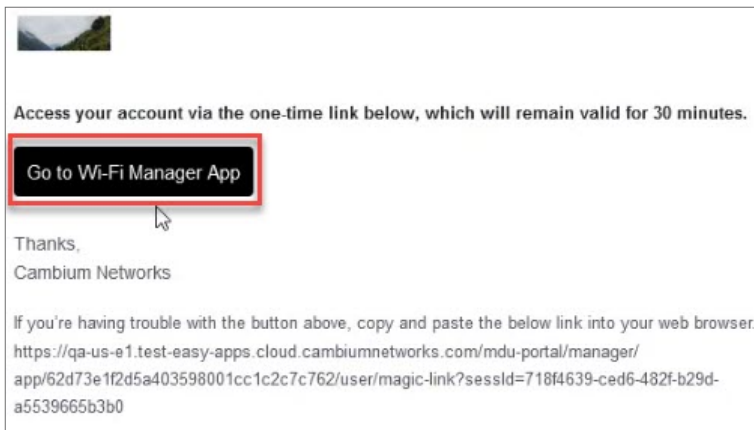

9. Scan the QR code using your mobile device to get a link.

10. Enter your email ID and click **Send me a one time link**.

11. Open the email and click **Go to the Wi-Fi Manager App**.

12. You see a page titled **Welcome to APP** and click on **Change**.

13. A new window titled **Change Wi-Fi Settings** appears. Change your Personal Wi-Fi Network Name and Wi-Fi password in the respective fields.

14. Click **Update**.
15. You receive a message says **Wi-Fi settings updated successfully**.

16. Scan the QR code to verify that your Personal Wi-Fi Network Name and Wi-Fi password have been updated.

## RADIUS Proxy X

### Note

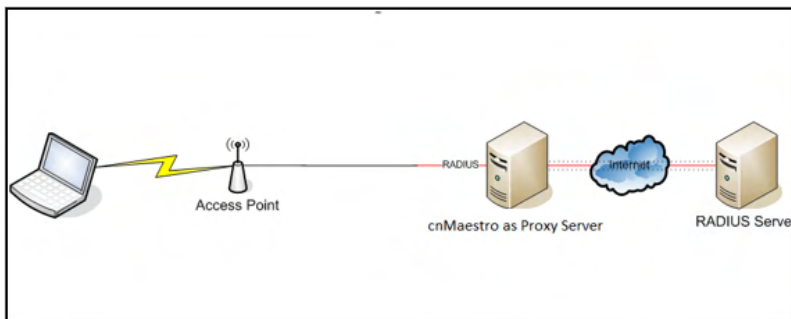

- **RADIUS Proxy** is not supported in cnMaestro Cloud.
- It is available only as a cnMaestro X feature.

## Overview

cnMaestro can act as a proxy server to authenticate **RADIUS** requests for cnPilot Wi-Fi devices. In this scenario, cnMaestro acts as a Network Access Server (NAS) for the RADIUS server.

The Access Point sends RADIUS packets to cnMaestro, and cnMaestro sends them to the RADIUS server. cnMaestro can act as a proxy for either authentication or accounting messages, as show in [Figure 552](#).

**Figure 552** RADIUS Proxy on cnMaestro On-Premises

Minimum version requirements are as follows:

- Minimum cnPilot AP release version required: 3.3.

## RADIUS Proxy Configuration

To configure RADIUS Proxy on cnMaestro, perform the following:

1. Navigate to **Shared Settings > AP Groups and WLANs** page.
2. Select **Enterprise WLAN** to edit, and then select **AAA Servers**.
3. Under AAA servers, select **Proxy RADIUS through cnMaestro** check box.
4. Configure **Authentication Server** details.
5. Configure **Accounting Server** details.
6. Configure **NAS-Identifier**.

### Note

Include **NAS-Identifier** attribute to use the RADIUS request packets and default the system name.

7. Push the configuration from cnMaestro to AP.

## Citizens Broadband Radio Service (CBRS)

This chapter details cnMaestro support for the Citizens Broadband Radio Service (CBRS) subscription which is required to manage CBRS-compliant devices in the 3.6 GHz band (3550 MHz to 3700 MHz).

This topic describes the following sections:

- [Enabling CBRS in Cloud](#)
- [Management Tool](#)
- [Domain Proxy View](#)
- [Actions for Existing CBRS On-Premises Users](#)

## Enabling CBRS in Cloud

1. Login to a cnMaestro Cloud NMS account or Cloud Anchor account (if hosting on an On-Premises instance).
2. Navigate to **Network Services > CBRS** page.
3. Select the preferred SAS vendor from the **Spectrum Access System (SAS)** drop-down list.

**Figure 554** Network Services > CBRS > Account tab

The screenshot shows the 'Network Services > CBRS' page. It includes a header with the breadcrumb 'Network Services > CBRS'. Below the header, there is a text block: 'Enable Citizens Broadband Radio Service subscription for the CBRS-compliant devices in 3.6 GHz band (3550 MHz to 3700 MHz). [Learn more](#)'. This is followed by a 'Spectrum Access System (SAS)' section with a dropdown menu labeled 'Please select a SAS vendor'. Below the dropdown are two checkboxes: 'I accept the [CAMBIUM NETWORKS, LTD. "CBRS" TERMS OF SERVICE](#)' and 'I accept the [CBRS Service payment terms](#)'. At the bottom of this section is an 'Enable' button.

4. Read both the terms and conditions, and accept them by selecting the checkboxes.
5. Click **Enable**.
6. In the **Billing Information** window configure the following details:

The screenshot shows the 'CBRS Account' window. It contains the following fields and options:

- A message: 'We require a Business Contact and a Technical Contact for your account. [Learn more](#)'
- Business Contact**
  - First Name
  - Last Name
  - Email
  - Phone
  - Street Address
  - City
  - Zip Code/Postal Code
  - State (dropdown)
  - Country (dropdown, currently set to 'United States')
- Technical Contact**
  - Same as Business Contact
  - First Name
  - Last Name
  - Email
- SAS Portal Contact**
  - Text: 'Cambium will set up a SAS portal account on your behalf. Please indicate whether you want us to use your Business Contact or Technical Contact for this purpose. Note that Google requires a Gmail address for registration.'
  - Radio buttons:  Business Contact,  Technical Contact,  Other
  - Email (if not Business Contact or Technical Contact)

At the bottom are 'Save' and 'Cancel' buttons.

- **Business Contact**
  - First Name
  - Last Name
  - Email

- Phone
- Street Address
- Zip Code
- Country
- State

- **Technical Contact**

Enable **Same as Business Contact** or enter a separate Technical Contact.

- First Name
- Last Name
- Email

- **SAS Portal Contact**

Cambium Networks creates the SAS portal account on behalf of the operator.

7. Click **Save**.

The CBRS account is enabled.

After you save the CBRS account, you must complete the following steps:

1. The **Account** page displays the following information and configurable parameters:

- Token
- Status
- Total Devices
- SAS
- Contact Details
- Payment Details

Services > CBRS

Account Management Tool Domain Proxy View

Please contact Cambium Support to disable CBRS operations or to change SAS Vendor. [Learn more](#)

Add Payment Method

Add Credit Card Details  Add ACH Payment Details

a. **Token:**

Token used for authenticated communication with SAS through Cambium Domain Proxy. It gets generated automatically once CBRS is enabled for the Cloud account.

b. **Status:**

Displays the account status.

Pending Status	Success Status
<p>Status</p> <ul style="list-style-type: none"> <li>✓ Account Created</li> <li>✗ Payment Method Verification Pending</li> <li>✗ SAS-ID Allocation Pending</li> </ul> <p>● Effective Jul 07 2020 16:54:10 (&lt;1m)</p> <p>Total Devices </p> <p>0 APs, 0 SIMs</p>	<p>Status</p> <ul style="list-style-type: none"> <li>✓ Account Created</li> <li>✓ Payment Method Verified</li> <li>✓ SAS-ID Allocated</li> <li>✓ Account Enabled</li> </ul> <p>● Effective Mar 19 2020 15:02:02 (110d 2h 0m)</p> <p>Total Devices </p> <p>3 APs, 68 SIMs</p>

- i. **Account Creation:** Displays as **Account Created** once the account is enabled. Refer to **Step f** for entering contact information and enabling account.
- ii. **Payment Method:** Displays as **Verified** once the Payment Details are approved. Refer to **Step g** [Payment Details](#).
- iii. **SAS ID:** Once the payment details are verified, the SAS ID is allocated automatically.

**Note**

When the SAS ID allocation is pending or unavailable in the server,

even after the payment details are configured and verified,  
It may take up to one day for the SAS ID to be allocated.

iv. **Effective:**

- **Grey:** indicates the **Pending Status**.
- **Green:** indicates **Success Status**.
- **Red:** indicates the account has been **Deactivated**.

- c. **Total Devices:** Displays the count of **Total Devices** registered with the SAS using the **Token ID**. **Usage History** provides the list of devices registered with **Month** and **Year**.

**Note**

Initially the device counts will be 0 APs and 0 SMs.

- d. **SAS:** Displays the SAS vendor preferred by the operator.

**Note**

Contact Cambium support to disable CBRS operation or to change SAS Vendor.

- e. **SAS:** An operator needs to select which SAS vendor they prefer.

f. **Contact Details:**

For new CBRS account migrations, this information would have already been entered in [Citizens Broadband Radio Service \(CBRS\)](#). Review and update if necessary, else refer to [Payment Details](#).

Cambium Networks selectively communicates with both the **Business Contact** and the **Technical Contact** with changes of interest: such as SAS administrator updates, CBRS initiative changes from the CBRS Alliance and WinnForum, and announcements of new Cambium Network CBRS features and options.

**Business Contact**

Cambium Networks communicates with the **Business Contact** for all commercial aspects of the CBRS Service such as invoicing, payment, change in terms, change in pricing, and other details. This page requires:

- **First Name**
- **Last Name**
- **Email**
- **Phone**
- **Street Address**
- **City**
- **Zip code/Postal Code**
- **State**
- **Country**

## Technical Contact

Cambium Networks communicate with the **Technical Contact**: such as software updates, release notes, learning guides, technical issues, etc.

- **First Name**
- **Last Name**
- **Email**

## SAS Portal Contact

Cambium Networks sets up the SAS portal account on behalf of the operator. Please select whether to use the **Business Contact**, **Technical Contact**, or **Other**.

### Note

Google requires a Gmail address for registration.

- Click **Update**.

The screenshot shows the 'Services > CBRS' account management page. It includes a 'Token ID' field, account status (Account Created, Payment Method Verified, SAS-ID Allocated, Account Enabled), and a 'Total Devices' section with a 'Change Filter' button. The 'Spectrum Access System (SAS)' section is expanded to show 'Federated Wireless (Developer-KCS)'. Under 'Contact Details', there are three sections: 'Business Contact' (with fields for First Name, Last Name, Email, Phone, Street Address, City, State, Country), 'Technical Contact' (with fields for First Name, Last Name, Email), and 'SAS Portal Contact' (with radio buttons for Business Contact, Technical Contact, and Other, and an email field). The 'Payment Details' section is partially visible at the bottom.

### Note

Clicking **Update** on the **Account Page** overwrites the current entries.

## g. Payment Details

Select one of the payment methods below:

- [Add Credit Card Details](#)
- [Add ACH Payment Method](#)

**Payment Details**

To update your payment method, make a selection under "Add Payment Method" and enter the new payment method details, then click "Submit".

Credit Card

\*\*\*\*\*1111 (expiration 1/2023)

Add Payment Method

Add Credit Card Details  Add ACH Payment Details

### Add Credit Card Details

Enter the following and click **Submit**:

- 16 digit Credit **Card Number**.
- **Expiration Date** and **Year** on the card.
- **CVV** and **Cardholder Name**.

**Payment Details**

To update your payment method, make a selection under "Add Payment Method" and enter the new payment method details, then click "Submit".

Credit Card

\*\*\*\*\*1111 (expiration 1/2023)

Add Payment Method

Add Credit Card Details  Add ACH Payment Details

**Please Fill in Your Credit Card Details**

## Management Tool

The Management Tool allows one to register CBRS devices to the SAS provider before physically connecting CBRS-compliant devices to the network. The following Cambium CBRS-compliant devices operate in 3.6 GHz band frequency, ranging from 3550 to 3700 MHz:

**Note**

The CBRS Multi-Grant feature was first supported in cnMaestro 3.0.2 and PMP 20.2.

- PMP 450b 3 GHz
- PMP 450m AP 3 GHz
- PMP 450i AP and SM 3 GHz
- PMP 450 AP and SM 3.6 GHz
- PTP 450i BHM and BSHS 3 GHz
- PTP 450 BHM and BHS 3.6 GHz
- LTE 3 GHz cnRanger 201 SM
- LTE 3 GHz cnRanger 210 RRH

The CBRS procedure can be performed by an authorized CPI (Certified Professional Installer). CPIs are required to enter necessary credentials to update the CBRS parameters.

A CBRS sector view is shown below:

Network Services > CBRS

Account Management Tool Domain Proxy View

SAS Admin Tool helps CPI (Certified Professional Installer) to manage CBRS-compliant devices prior to installation.  
CPI info is never stored either in the client side or server side.  
After adding a new sector or AP, click on that newly added AP to allow you to start the tool.

Device Name	Device Type	Health	User ID	Tool Frequency (MHz)	Operating Frequency (M...	Grant Type	Sector ID	Spectrum Reuse ID	Include User ID
<input type="checkbox"/> 33d	PMP 450 Connectorized	Offline		3570 - 3590	N/A	Multigrant		N/A	N/A
<input type="checkbox"/> 33d	PMP 450 Connectorized	Offline		3560 - 3580	N/A	Multigrant		N/A	N/A

## Creating a Management Tool Sector

A sector can be created by two ways:

- Add AP/BHM/RRH: Add all parameters manually of an AP/BHM/RRH.
- Import Sector: Upload a file with details from all sector devices.

### Add AP/BHM

1. Navigate to **Services > CBRS > Management Tools** and click **Add AP/BHM/RRH**.
2. Enter all parameters under the following categories when the user selects the **Mode** as **AP/BHM**:

- **Common parameters:** Device Name, Mode, Device Type, MAC Address, and MSN.
- **Location related parameters:** Latitude, Longitude, Height, and Height Type, Horizontal Accuracy, and Vertical Accuracy.
- **Antenna related Parameters:** External Antenna Gain, Beamwidth, Azimuth, and Down Tilt.
- **Co-Existence related parameters:** Sector ID, Spectrum Reuse ID, and Include User ID.

**Note**

**Include User ID** parameter is applicable only for PMP devices, when SAS is **Federated Wireless**.  
Select **Yes** or **No** to Include the user ID.

- **Add CPI Certificate:** Certificate File, File Password, CPIR Name.

3. Click **Add** to add a sector.

**Add RRH**

1. Navigate to **Services > CBRS > Management Tools** and click **Add AP/BHM/RRH**.
2. Enter all parameters under the following categories when the user selects the **Mode** as **RRH**:
  - **Common Parameters:** Device Name, Mode, Device Type, MAC Address, and MSN.
  - **Location Related Parameters:** Latitude, Longitude, Height and Height Type, Horizontal Accuracy, and Vertical Accuracy.
  - **Antenna Related Parameters:** External Antenna Gain, Beamwidth, Azimuth, and Down Tilt.
  - **ECGI Related Parameters:** PLMN ID, ECI (eNode ID + PCI), and ECGI.

- **Co-Existence Related Parameters:** Sector ID and Spectrum Reuse ID.
- **Add CPI Certificate:** Certificate File, File Password, CPIR Name.

The screenshot shows a web form titled "Add AP-Bandwidth" with several sections of configuration options:

- Common parameters:** Device Name, Model, Device Type, Preamble ID, MAC Address, MSN, User ID.
- Location related parameters:** Latitude, Longitude, Height, Height Type, Horizontal Accuracy, Vertical Accuracy.
- Antenna related Parameters:** Integrated Antenna Gain (dBi), External Antenna Gain (dBi), Beamwidth (degrees), Azimuth (degrees), Down Tilt (degrees).
- ECG related Parameters:** PLMN ID, ECG (Whole ID = PCI), ECG.
- Co-Existence related parameters:** Sector ID, Spectrum Reuse ID.
- Add CPI Certificate:** Certificate File, File Password, CPIR Name.

At the bottom of the form are "Add" and "Cancel" buttons.

3. Click **Add** to add a sector.

**Note**

Refer to [CBRS Device Parameters](#) for additional details.

### Import Management Tool Sector

To import a sector:

1. Navigate to **Services > CBRS > Management Tool** and click **Import Sector** button.

1. Click **Download Template** if user does not have an Import Sector template. Users can download two different template formats:
  - a. PMP: Excel or ODS
  - b. LTE: Excel or ODS
2. Click **Import Excel** to select **Import Sector** template file. File must be Microsoft Excel format (.xlsx) or OpenDocument Spreadsheet (ods) format.
3. Enter CPI credentials:
  - a. Upload CPI Certificate File by clicking **Import Certificate**.
  - b. Enter CPI File Password.
  - c. Enter CPI Registered Name.
4. Enter the **Sector ID**.
5. Select **Spectrum Reuse ID** from the drop-down.
6. Select **Include User ID**.

Selecting **Yes** in the **Include User ID** parameter prefixes the **User ID** to the **Sector ID** and **Spectrum Reuse ID** in the registration message of the SAS.

**Note**

- **Include User ID** is applicable only for PMP devices, when SAS is selected as **Federated Wireless**.
- See the [CBRS Consolidated Procedures Guide](#) and the [Cambium PMP Release 20.3](#) training slides for more details on when to select **Yes** or **No**.

7. Click **Import**.  
Import status is displayed as **Success**, **Info**, and **Invalid**.

8. Details of **Success**, **Info**, and **Invalid** section can be seen by clicking expand (▼) arrow.

Invalid: 1 Device(s) are not valid.	
MAC	Error
0a-00-3e-45-11-e4	Serial Number is invalid

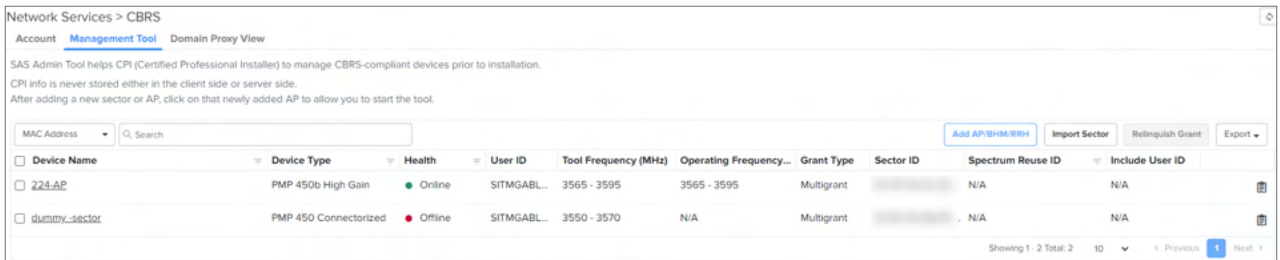

9. If the device is already claimed, it can be onboarded by clicking the onboard link.

<b>Info:</b> 2 MAC(s) already claimed. Please <a href="#">onboard</a> these devices, if not onboarded yet.
--

## Management Tool Sector Statistics

To view Sector Statistics:

1. Navigate to **Services > CBRS > Management Tool**.
2. Click **View Sector Statistics**  under **Status**.

Network Services > CBRS  
Account Management Tool Domain Proxy View

SAS Admin Tool helps CPI (Certified Professional Installer) to manage CBRS-compliant devices prior to installation. CPI info is never stored either in the client side or server side. After adding a new sector or AP, click on that newly added AP to allow you to start the tool.

Device Name	Device Type	Health	User ID	Tool Frequency (MHz)	Operating Frequency...	Grant Type	Sector ID	Spectrum Reuse ID	Include User ID
224-AP	PMP 450b High Gain	Online	SITMGABL...	3565 - 3595	3565 - 3595	Multigrant		N/A	N/A
dummy_sector	PMP 450 Connectorized	Offline	SITMGABL...	3550 - 3570	N/A	Multigrant		N/A	N/A

Showing 1 - 2 Total: 2 10 < Previous 1 Next >

3. **Sector Statistics** window pops up.

224-AP Sector Statistics	
<b>Device Information</b>	
Registered	2
<b>Grant Information</b>	
Granted	4
Authorized	4

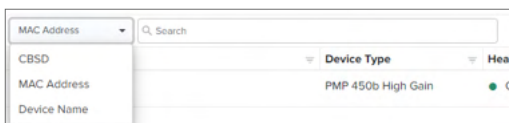

### Note

Refer to the [CBRS State Diagram](#) for additional details.

## Search Management Tool Sector

To search for a sector:

1. Navigate to **Services > CBRS > Management Tool**.
2. Select **CBSD** or **MAC**.
  - For **CBSD**: Search by CBSID ID.
  - For **MAC**: Search by MAC Address.
3. Enter text in search box to display filtered records.

MAC Address	Search	Device Type	Health
		PMP 450b High Gain	Online

### Note

- If an AP device is entered into Search, it displays both AP devices and the related SM

devices.

- If an SM devices is entered into Search, it displays only SM devices.

Device Name	Device Type	User ID
450i-AP Integrated	PMP 450i Integrated	SF5W5D
Lab-setup-AP	PMP 450 Connectorized	SF5W5D
ak-1	PMP 450i Connectorized	SF5W5D

1. Filter AP or sectors can be cleared by clicking  or **Clear** button.

## Sector View

1. Click a sector from the Sector AP column to get the list of devices.

Sector AP	Device Type
"208.41"	PMP 450 Integrated

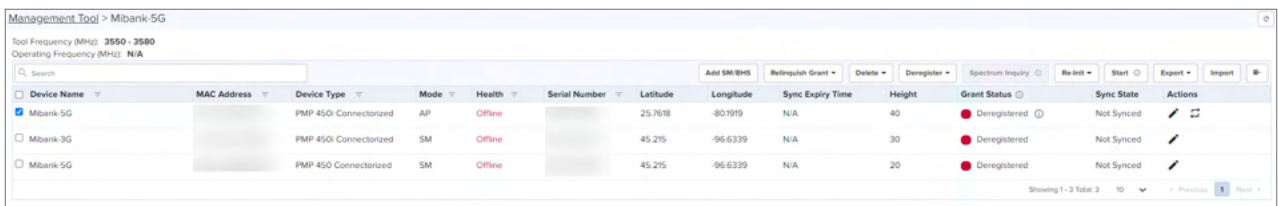

2. All devices of the sector are displayed.

Device Name	MAC Address	Device Type	Mode	Health	Serial Number	Latitude	Longitude	Sync Expiry Time	Height	Grant Status	Sync State	Actions
<input checked="" type="checkbox"/> Mibank-5G		PMP 450i Connectorized	AP	Offline		25.7638	-80.1919	N/A	40	Deregistered	Not Synced	 
<input type="checkbox"/> Mibank-3G		PMP 450i Connectorized	SM	Offline		45.215	-96.6339	N/A	30	Deregistered	Not Synced	
<input type="checkbox"/> Mibank-5G		PMP 450i Connectorized	SM	Offline		45.215	-96.6339	N/A	20	Deregistered	Not Synced	

## Sector Details View

- The Sector Details view displays the following fields by default:
  - Device Name, Device Type, Mode, Health, MSN, Latitude, Longitude, Sync Expiry Time, Height, Registered, Sync State, Actions.

Device Name	MAC Address	Device Type	Mode	Health	Serial Number	Latitude	Longitude	Sync Expiry Time	Height	Grant Status	Sync State	Actions
<input checked="" type="checkbox"/> Mibank-5G		PMP 450i Connectorized	AP	Offline		25.7638	-80.1919	N/A	40	Deregistered	Not Synced	 
<input type="checkbox"/> Mibank-3G		PMP 450i Connectorized	SM	Offline		45.215	-96.6339	N/A	30	Deregistered	Not Synced	
<input type="checkbox"/> Mibank-5G		PMP 450i Connectorized	SM	Offline		45.215	-96.6339	N/A	20	Deregistered	Not Synced	

### Note

If the device is **Config\_Synced**, the CBSD state of the device will be updated from the device in real-time.

- SM can be added in the sector by manually entering all parameters using **Add SM** button or uploading a file containing all SM details using **Import SMs** button.
- Action column can edit or delete any device in the sector. **Edit** and **Delete** buttons are available depending upon the device state. Refer to [Edit device](#) and [Delete device](#) for more details.
- To include additional fields to be displayed in the **Sector Details** view, select required fields in the column

selector()

**General**

<input checked="" type="checkbox"/> Device Name	<input checked="" type="checkbox"/> MAC Address
<input checked="" type="checkbox"/> Device Type	<input checked="" type="checkbox"/> Mode
<input checked="" type="checkbox"/> Health	<input checked="" type="checkbox"/> Serial Number
<input type="checkbox"/> CBSID ID	<input checked="" type="checkbox"/> Sync Expiry Time
<input type="checkbox"/> Horizontal Accuracy	<input type="checkbox"/> Vertical Accuracy
<input type="checkbox"/> ECGI (E-UTRAN Cell Global Identifier)	<input checked="" type="checkbox"/> Grant Status
	<input checked="" type="checkbox"/> Sync State

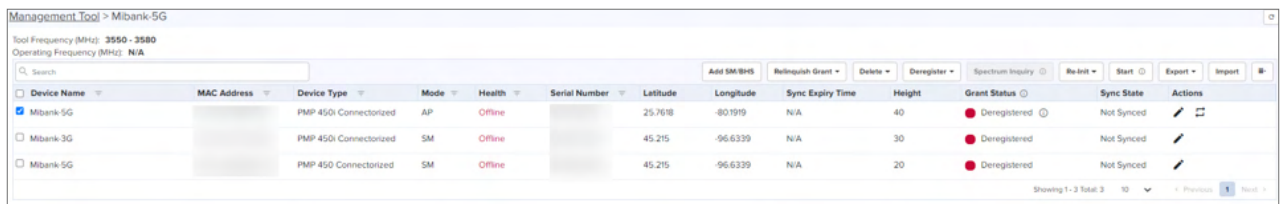

**Location**

<input checked="" type="checkbox"/> Latitude	<input checked="" type="checkbox"/> Longitude
<input checked="" type="checkbox"/> Height	<input type="checkbox"/> Height Type

**Antenna**

<input type="checkbox"/> Integrated Antenna Gain (dBi)	<input type="checkbox"/> External Antenna Gain (dBi)
	<input type="checkbox"/> Beamwidth (degree)
<input type="checkbox"/> Azimuth (degrees)	<input type="checkbox"/> Down Tilt (degrees)
<input type="checkbox"/> Max EIRP (dBm)	<input type="checkbox"/> Requested EIRP (dBm)
<input type="checkbox"/> Granted EIRP (dBm)	<input type="checkbox"/> SAS Recommended EIRP (dBm)

- User can use following button to control the CBRS procedure:

Management Tool > Mibank-5G  
 Tool Frequency (MHz): 3550 - 3580  
 Operating Frequency (MHz): N/A

Device Name	MAC Address	Device Type	Mode	Health	Serial Number	Latitude	Longitude	Sync Expiry Time	Height	Grant Status	Sync State	Actions
<input checked="" type="checkbox"/> Mibank-5G		PMP 450i Connectorized	AP	Offline		25.7678	-80.1919	N/A	40	<span style="color: red;">●</span> Deregistered	Not Synced	 
<input type="checkbox"/> Mibank-3G		PMP 450i Connectorized	SM	Offline		45.215	-96.6339	N/A	30	<span style="color: red;">●</span> Deregistered	Not Synced	 
<input type="checkbox"/> Mibank-5G		PMP 450i Connectorized	SM	Offline		45.215	-96.6339	N/A	20	<span style="color: red;">●</span> Deregistered	Not Synced	 

Showing 1 - 3 Total 3 10 < Previous 1 Next >

- **Start** and **Stop**: manage to start and stop CBRS procedure of a sector.
  - **Reinitialize**: restarts the CBRS procedure and reinitializes the devices.
  - **Deregister**: deregisters the device (single or multiple).
  - **Spectrum Inquiry**: checks the availability of frequencies.
  - **Delete**: deletes the device (single or multiple).
  - **Unblock**: clears the de-registered state on an LTE, allowing a registration or reregistration request.
  - **Export**: exports the sector data in .xlsx format.
  - **Import**: imports the SM in the sector.
  - **Relinquish Grant**: relinquishes grants generated in Wide-Grant mode.
- Once the sector is authorized (AUTHORIZED state),  button transfers grant details from the Management Tool to real devices.

### Add SM or BHS

1. Navigate to **Services > CBRS > Management Tool** > select a sector.
2. Click **Add SM** or **BHS** to add SM in a sector.

The screenshot shows a dialog box titled "Add SM/BHS" with the following fields and sections:

- Common parameters:** Device Name, Device Type, 4SS Connected (dropdown), MAC Address, MSN.
- Location related parameters:** Latitude, Longitude, Height, Height Type (dropdown), Horizontal Accuracy, Vertical Accuracy.
- Antenna related Parameters:** Integrated Antenna Gain (dB), External Antenna Gain (dB), Beamwidth (degree), Azimuth (degrees), Down Tilt (degrees).
- Add CPI Certificate:** Certificate File (with "Import Certificate" button), File Password, CPIR Name.

Buttons: Add, Cancel.

3. Enter all parameters under following categories:

- **Common parameters:** Device Name, Device Type, MAC Address, and MSN.
- **Location related parameters:** Latitude, Longitude, Height and Height Type, Horizontal Accuracy, and Vertical Accuracy.
- **Antenna related parameters:** Integrated Antenna Gain, Beam width, Azimuth, and Down Tilt.
- **Add CPI Certificate:** Certificate File, File Password, and CPIR Name.

4. Click **Add** to add an SM.

### Import SMs

1. Navigate to **Services > CBRS > Management Tool** and select a sector.
2. Click **Import** button to import SMs into a sector.
3. Enable the **ReImport Devices** to overwrite the previous imported data and deregister all existing devices.

4. Click **Download Template** if user does not have Import Sector template. Users can download two different template formats:
  - PMP: Excel or ODS
  - LTE: Excel or ODS
5. Click **Import Excel** to select Import Sector template file. File must be Microsoft Excel format (.xlsx) or Open Document Spreadsheet (ods) formats.
6. Enter the following CPI credentials:
  - Upload CPI Certificate File by clicking **Import Certificate** button.
  - Enter CPI File Password.
  - Enter CPI Registered Name.

7. Click **Import**.

Import status will be shown under **Success**, **Info**, and **Invalid** sections.

8. Details of **Success**, **Info** and **Invalid** can be seen by clicking **▼**.

MAC	Error
0a-00-3e-45-11-e4	Serial Number is invalid

9. If the devices is already claimed, it can be onboarded by clicking the **onboard** link.

10. Once the user clicks **Import**, a job is scheduled.

## Export Sector

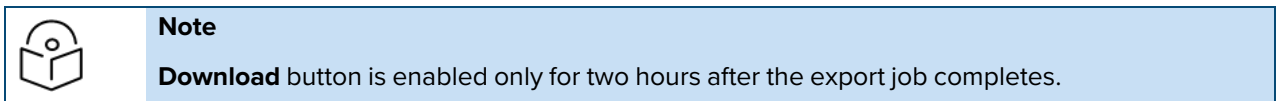

1. Navigate to **Services > CBRS > Management Tool** and then select a sector.
2. Click **Export** button to export the sector (export as xlsx).

3. Once the user clicks **Export**, a job is scheduled.

4. Once the Job status is Completed, **Download** the Sector xls.

5. User can use the .xlsx file for importing back into the sector. To import, save the file as shown in the below figure.

## Edit Device

1. Navigate to **Services > CBRS > Management Tool** and select a sector.
2. Click **Stop** button if the CBRS procedure is running.
3. Click **Edit** button to edit device parameters.
4. Enter CPI credentials:
  - Upload CPI Certificate File by clicking **Import Certificate** button.
  - Enter CPI File Password.
  - Enter CPI Registered Name.
5. After editing the device. The device should go to derigestered state.

6. Click **Save**.

## Delete Device

1. Navigate to **Services > CBRS > Management Tool** and select a sector.
2. Click **Stop** button if the CBRS procedure is running (the CBRS procedure is running if the START procedure described below has been invoked, and if all devices in AUTHORIZED state).
3. Deleting SM:
  - Select SM to deregister if it is not in UNREGISTERED state (Refer to the [CBRS State Diagram](#)).
4. Once the SM selected click **Delete** and display popup **All** or **Selected**. click **Selected**:
  - **All**: Deletes all registered SM devices.
  - **Selected**: Deletes the selected devices.

Device Name	MAC Address	Device Type	Mode	Health	Serial Number	Latitude	Longitude	Height	Grant Status	Sync State	Actions
Mibank 5G		PMP 450 Connectorized	AP	Offline		25.7618	-80.1919	0	Deregistered	Not Synced	[Edit] [Refresh]
Mibank 3G		PMP 450 Connectorized	SM	Offline		45.215	-96.6339	30	Deregistered	Not Synced	[Edit] [Refresh]
Mibank 5G		PMP 450 Connectorized	SM	Offline		45.215	-96.6339	20	Deregistered	Not Synced	[Edit] [Refresh]

5. Click **Yes** to confirm.

- Once the user clicks **Yes**, a job will be scheduled.

- Deleting AP:

All SMs of the sector must be deregistered and deleted before deleting the AP. Refer to the [Deregistration](#) procedure to deregister all SM devices.

- Select the AP of the sector to delete.
- Click **Delete**.

**Note**

If the procedure is started for the device and it is registered, then, while deleting the device, you must select the **Deregister** checkbox, otherwise the deletion will fail.

### Unblock Device

- Navigate to **Services > CBRS > Management Tool** and select a sector.
- If LTE device is **Config Synced**, and if device deregister flag is enabled, unblock removes the deregistration flag on the device.
- Once the device is selected, click **Unblock** and choose **All** or **Selected** from the drop-down.
  - All**: Unblocks all registered devices.
  - Selected**: Unblocks the selected devices.

- Click **Selected** display the **Please Confirm** window.

- Click **Yes** to confirm the action.

### Start CBRS Procedure

The Start button starts the CBRS procedure for a sector.

1. Navigate to **Services > CBRS > Management Tool** and select a sector.
2. Click **Start** to start CBRS procedure of a sector.
3. Once the user clicks start, the **Spectrum Inquiry** window pops up.

**SAS provided spectrum availability view**

Sorted By Ranking

Sorted By Frequency

**Co-Existence Configuration**

Sector ID: 0a-00-3e-45-4a-06 | Spectrum Reuse ID: Balaji | Edit

**Spectrum Reuse ID Statistics**

Spectrum Reuse IDs already defined in your Network

Spectrum Reuse ID	Center Frequency (MHz)/Channel Bandwidth (MHz) [Sector Count]
Balaji	3550-3580 / 30

**EIRP computation**

Center Frequency (MHz)\*: Please Select | Channel BW (MHz)\*: Please Select | SAS Allowed Total MaxEIRP (dBm): [ ] | Calculate Max EIRP

**Note**

- Multi-Grant is enabled by default.
- **Sorted By Ranking** is applicable for users selecting Google or Federated Wireless SAS.
- User can enable or disable the multigrant only if the device version is less than 21, if device version is 21 and above only multigrant is possible.

4. User can disable the Multi-Grant feature by disabling the checkbox **This feature will enable multi grant on the tool**. For more details refer [Multiple Grant](#).
5. Click **Edit** to edit **Co-Existence Configuration** and **EIRP Computation**.
  - **Spectrum Reuse ID Statistics** displays the devices running on different sector, channels, and bandwidth based on the **Spectrum Reuse ID**.
6. Once the Spectrum Inquiry is verified, click **Save**.

The Sector is created displays as shown below:

Device Name	MAC Address	Device Type	Mode	Health	Serial Number	Latitude	Longitude	Sync Expiry Time	Height	Grant Status	Sync State
Mibank-5G		PMP 450i Connectorized	AP	Offline		25.7638	-80.1979	N/A	40	Deregistered	Not Synced
Mibank-5G		PMP 450i Connectorized	SM	Offline		45.215	-96.6339	N/A	30	Deregistered	Not Synced
Mibank-5G		PMP 450i Connectorized	SM	Offline		45.215	-96.6339	N/A	20	Deregistered	Not Synced

### Note

- If the device is already synced with the Management Tool, the CBRS Start and Stop procedures are not applicable for all the synced devices.
- If user does not see the **Start** button, it means the CBRS procedure is already running.
- If all devices of the sector are in AUTHORIZED or HALT status and the user tries to start the CBRS procedure, the **Start** button will go to Stop state (as CBRS procedure is completed for all devices).

## Multi-Grant

Multi-Grant feature divides selected channel bandwidth into multiple of 10 MHz channels. If the selected channel bandwidth is 5 MHz or low/high frequency contains 5 MHz raster, the slice would be in 5 MHz channel. Each slice will initiate a separate Grant procedure.

To enable Multiple Grant for a new sector:

1. Navigate to **Services > CBRS > Management Tool** and select a sector.
2. Click **Start** to start CBRS procedure of a sector.
3. Once the user clicks **Start**.

The Spectrum Inquiry window pops up as shown below.

### Note

- Multi-Grant is enabled by default.
- Include User ID is applicable only for PMP devices, if user selects SAS is either Federated Wireless.

- Click **Edit** to edit Co-Existence Configuration and EIRP Computation.
  - Spectrum Reuse ID Statistics displays the devices running on different sector, channels, and bandwidth based on the Spectrum Reuse ID.
- Accept the checkbox process of the Co-Existence parameters.

**Note**  
 The Federated Wireless or Google SAS might need hours to fully process the Co-Existence parameters in the Registration, (before they are properly reflected in the Spectrum Inquiry Response). For more details see the CBRS Standalone Procedures Guide.

- Once the Spectrum Inquiry is verified, click **Save**.

A Sector created with Multiple Grants will be displayed as shown below:

Device Name	Device Type	Mode	Health	MSN	Latitude	Longitude	Sync Expiry Time	Height	Grant Status	Sync State	Actions
devicesno	PMP 450 Conn...	AP	Offline		44.4	-110.4	2d 21h 5m	1	🟢🟢🟢🟢🟡	Not Synced	✎ 🗑
devicesdev	PMP 450 Conn...	SM	Offline		44.444	-110.444	2d 21h 32m	1	🟢🟢🟢🟢🟡	Not Synced	✎

- To view the Grant Status click the info (i) icon.

**Grant Status**

- Authorized**  
 Last Heartbeat: Apr 07 2021 22:38:58  
 Frequency (MHz): 3645 - 3650  
 Channel BW (MHz): 5  
 Granted EIRP (dB/MHz): 11.2
- Authorized**  
 Last Heartbeat: Apr 07 2021 22:38:58  
 Frequency (MHz): 3650 - 3660  
 Channel BW (MHz): 10  
 Granted EIRP (dB/MHz): 11.2
- Authorized**  
 Last Heartbeat: Apr 07 2021 22:38:58  
 Frequency (MHz): 3660 - 3670  
 Channel BW (MHz): 10  
 Granted EIRP (dB/MHz): 11.2
- Authorized**  
 Last Heartbeat: Apr 07 2021 22:38:58  
 Frequency (MHz): 3670 - 3675  
 Channel BW (MHz): 5  
 Granted EIRP (dB/MHz): 11.2

## Relinquish Grant

Relinquish Grant relinquishes all grants of selected sector. This will make devices enter the Registered state. The device will start Multi-Grant procedure if Multi-Grant feature is enabled on it.

To Relinquish Grant Perform as follows:

- Navigate to **Services > CBRS > Management Tool** and select a sector with Single Grant.
- Once the SM is selected, click **Relinquish Grant** to display **All** or **Selected**. Click **Selected**.
  - All**: relinquish all the registered devices.
  - Selected**: relinquish the selected device.

Management Tool > Mibank-5G

Tool Frequency (MHz): 3550 - 3580  
Operating Frequency (MHz): N/A

Device Name	MAC Address	Device Type	Mode	Health	Serial Number	Latitude	Longitude	Height	Grant Status	Sync State
<input type="checkbox"/> Mibank-5G		PMP 450i Connectorized	AP	Offline		25.7638	-80.191	40	Selected	Not Synced
<input type="checkbox"/> Mibank-3G		PMP 450i Connectorized	SM	Offline		45.215	-96.6339	30	Deregistered	Not Synced
<input checked="" type="checkbox"/> Mibank-5G		PMP 450i Connectorized	SM	Offline		45.215	-96.6339	20	Deregistered	Not Synced

Showing 1-3 Total: 3

3. Click **Yes** to confirm the action.

**Please Confirm**

This action will perform relinquish on 1 device(s) having single grant. After relinquishing the grant, the AP will request multiple grants.

Live update information may take up to several minutes to show the changes.

Do you want to proceed?

**Note**

Live update information may take upto several minutes to display the changes of reflected relinquish status.

4. Once the user clicks **Yes**, **Wider Grant** gets converted to the **Multiple Grants** as shown below:

Management Tool > devicesno

Tool Frequency (MHz): 3645 - 3675  
Operating Frequency (MHz): N/A  
Job Status (Procedure): Completed

Device Name	Device Type	Mode	Health	MSN	Latitude	Longitude	Sync Expiry Time	Height	Grant Status	Sync State	Actions
<input checked="" type="checkbox"/> devicesno	PMP 450 Conn...	AP	Offline		44.4	-110.4	2d 2h 5m	1	1 2 3 4 5	Not Synced	
<input type="checkbox"/> devicesmdev	PMP 450 Conn...	SM	Offline		44.444	-110.444	2d 2h 32m	1	1 2 3 4 5	Not Synced	

Showing 1-2 Total: 2

## Stop CBRS Procedure

The **Stop** button stops the CBRS procedure for a sector.

1. Navigate to **Services > CBRS > Management Tool** and select a sector.
2. Click **Stop** button to stop CBRS procedure.

**Note**

- If the device is already synced with the Management Tool, the CBRS Start and Stop procedures are not applicable to the synced devices.
- If user does not see the **Stop** button, it means the CBRS procedure is already in stopped state, **Start** and **Stop** are toggles.
- If all devices of the sector are in AUTHORIZED state, the CBRS procedure will automatically stop.

## Reinitialize CBRS Procedure

The **Re-init** button allows the user to start the CBRS procedure for a sector and reinitialize selected devices (Reinitialize = Start of sector + Reinitialization of user selected devices). At least one device must be selected in order to enable the **Re-init** button. Clicking **Re-init** reinitializes selected devices to UNREGISTERED (irrespective of previous CBRS state).

1. Navigate to **Services > CBRS > Management Tool** and select a sector.
2. Click **Stop** if the CBRS procedure is already running.
3. Select one or more devices to be reinitialized.

**Note**

You might notice some delay in enabling **Re-init** button after pressing **Stop**. It is due to a delay in properly stopping the CBRS procedure.

4. Click **Re-init** to start the reinitialization procedure
5. Confirmation window pops up:
  - Click **Continue** or
  - Select **Spectrum Inquiry** to edit the **EIRP values** as shown in [Start procedure.](#)

**Note**

- Synced devices cannot be reinitialized.
- Reinitialize modifies or corrects the parameters. For example, if a device is in HALT state due to a parameter error, the user can stop the CBRS procedure and reinitialize the device after modifying device parameters.

**Deregistration**

The deregistration procedure allows user to deregister the devices from the SAS server .

1. Navigate to **Network Services > CBRS > Management Tool** and select a sector.
2. Click **Stop** button if the CBRS procedure is already running.
3. Select one or many devices which need to be deregistered.
4. Click **Deregister** button to deregister selected devices.

Once the user clicks **Deregister**, a job is scheduled.

5. If the deregistration fails, the reasons will be indicated under .

**Spectrum Inquiry**

1. Navigate to **Services > CBRS > Management Tool** and select a Sector.
2. Click **Spectrum Inquiry** button.
3. **Spectrum Inquiry** status button is enabled once the device is registered (REGISTERED state) to the SAS.
  - If the selected SAS is not Google, EIRP is unsupported, and Spectrum Inquiry is displayed as shown below:

- If the user is selected SAS is **Google**, it supports **EIRP**. Spectrum Inquiry displays as below:

- **GAA**: General Authorized Access
- **PAL**: Priority Access License

Spectrum availability can be checked by hovering over frequencies.

## Device Sync

The Sync procedure allows user to transfer grant information from Management Tool to respective device.

For a PMP sector, the Sync action can only be performed on an AP or BHM. The SM and BHS gets synced automatically when it comes online.

For an LTE sector, which supports a Cambium SM with a 3rd party BBU and RRH, the sync action will sync the Cambium SMs in this sector.

1. Navigate to **Services > CBRS > Management Tool** and select a sector.
2. Click **Sync** button to perform sync procedure.
3. Click **Yes** on the pop-up or click **NO** to cancel the sync procedure.

Once **Yes** is clicked, the Management Tool will check the accessibility of AP/BHM before proceeding with sync.

### Note

- PMP SM cannot be manually synced. It is only synced automatically.
- Once the device is synced, for both PMP and LTE devices, primary management is transferred from the tool to the device itself. However, some actions and procedures are still supported on the tool. See the [CBRS Consolidated Procedures Guide](#) for more details.
- Sync procedure copies complete CBRS parameters to device and enables CBRS to transmit with configured parameters.

## Live Status Update

Once the device is **Config synced**, CBRS details like CBSID ID, Grant ID, CBSID Grant State, and Last Heartbeat Time are read from the device every 5 minutes.

Management Tool > 27\_183

Tool Frequency (MHz): 3650 - 3670  
 Operating Frequency (MHz): 3650 - 3670  
 Job Status (Procedure): Completed

Device Name	Device Type	Mode	Health	MSN	Latitude	Longitude	Sync Expiry Time	Height	Grant Status	Sync State	Actions
27_183	PMP 450i Conn...	AP	Online		45.114386	-96.642475	N/A	22	Authorized	Config Synced	
75_184	PMP 450 Integr...	SM	Online		45.114385	-96.642474	N/A	22	Authorized	Config Synced	

Showing 1 - 2 Total 2 | Previous 1 Next

It displays the possible single Grant state such as:

- Authorized
- Deregistering
- Grant
- Grant Suspended
- Grant Terminate
- Registered
- Registering
- Relinquished Spectrum
- Relinquishing Spectrum
- Unregistered
- Unknown

## Domain Proxy View

### Note

**Domain Proxy View** is available only on cnMaestro Cloud and the Cloud Anchor account.

In Domain Proxy view, Sectors and Non-Sector page helps check CBRS-complaint devices connected through this server and On-Premises server using the token ID of this server. This page displays all the devices connected to CBRS.

Network Services > CBRS

Account Management Tool Domain Proxy View

**Sector** Non Sector

Lists all registered CBRS-compliant devices within 3.6 GHz band (3550 MHz to 3700 MHz) on SAS. Devices may be registered through cnMaestro or through AP and might not be managed by cnMaestro.

MAC Address  Search

Device Name	Device Type	Mode	User ID	Center Frequency (MHz)	Channel BW (MHz)	CBSD ID	Active S/W Version
PMP_678954	PMP	AP		3580	20		-

Showing 1 - 1 Total 1 | Previous 1 Next

- **Sectors Page:** displays the devices according to the parenting AP list.
- **Non-Sector Page:** displays each individual AP and SM of **LTE** and **PMP**.

## Searching a Domain Proxy Sector

To search a sector:

1. Navigate to **Services > CBRS > Domain Proxy View > Sector** page.
2. Select search option **CBSD or MAC**.

- For **CBSD**: Search by CBSID ID
- For **MAC**: Search by MAC ID.

Network Services > CBRS

Account Management Tool Domain Proxy View

Sector Non Sector

Lists all registered CBRS-compliant devices within 3.6 GHz band (3550 MHz to 3700 MHz) on SAS. Devices may be registered through cnMaestro or through AP and might not be managed by cnMaestro.

MAC Address Search

Device Name	Device Type	Mode	User ID	Center Frequency (MHz)	Channel BW (MHz)	CBSD ID	Active S/W Version
PMP-678954	PMP	AP		3580	20		-

Showing 1 - 1 Total: 1 < Previous 1 Next >

3. Enter text in search box.

**Note**

- If AP device is entered , it displays the both AP devices and the related SM device in the search result.
- If SM devices is entered , it displays only the SM devices in the search result.

4. Filtered device can be cleared by clicking **Clear** button.

## Domain Proxy Sector view

1. Click a Sector from Sector AP column to get the list of devices.
2. All the devices of the sector will be displayed.

Network Services > CBRS

Account Management Tool Domain Proxy View

Sector Non Sector

Lists all registered CBRS-compliant devices within 3.6 GHz band (3550 MHz to 3700 MHz) on SAS. Devices may be registered through cnMaestro or through AP and might not be managed by cnMaestro.

MAC Address Search

Device Name	Device Type	Mode	User ID	Center Frequency (MHz)	Channel BW (MHz)	CBSD ID	Active S/W Version
PMP-678954	PMP	AP		3580	20		-

Showing 1 - 1 Total: 1 < Previous 1 Next >

3. CBSID state shows current status of device and whether it is registered or deregistered with SAS.
4. Click **Deregister** to deregister the device from CBRS.
5. The Sectors view displays the following columns by default:  
Device Name, Device Type, Mode, User ID, Center Frequency (MHz), Channel BW (MHz), CBSID ID, and Active S/W Version.

## Searching a Domain Proxy in Non Sector View

To search for a device in the non-sector view, complete the following steps:

1. Navigate to **Services > CBRS > Domain Proxy View > Non Sector** page.
2. Select one of the following search options from the drop-down list—**CBSD**, **MAC Address**, or **Heartbeat Status**.
  - For **CBSD**, search by the CBSID ID
  - For **MAC Address**: search by the MAC address of the device
  - For **Heartbeat Status**, search by the heartbeat status of registered devices:

- Heartbeating
- Not Heartbeating for Last 24 Hours
- Not Heartbeating for Last 7 Days
- Not Heartbeating for Last 30 Days
- Not Heartbeating for Last 60 Days
- Not Heartbeating for Last 90 Days

Network Services > CBRS

Account Management Tool Domain Proxy View

Sector Non Sector

Last Heartbeat timestamp will be updated every 12 hours.

MAC Address [Search]

Device Name	MAC Address	Device Type	Mode	Health	Serial Number	CBSD ID	Latitude	Longitude	Height	Registered	Heartbeat Status	Last Heartbeat	
-	-	-	SM	Offline	-	-	-	-	-	No	-	-	Deregister
PMP-894356	-	PMP	SM	Offline	-	-	-	-	-	No	-	-	Deregister
PMP-678954	-	PMP	AP	Offline	-	-	44	-110	13	No	-	-	Deregister

Showing 1 - 3 Total: 3 < Previous 1 Next >

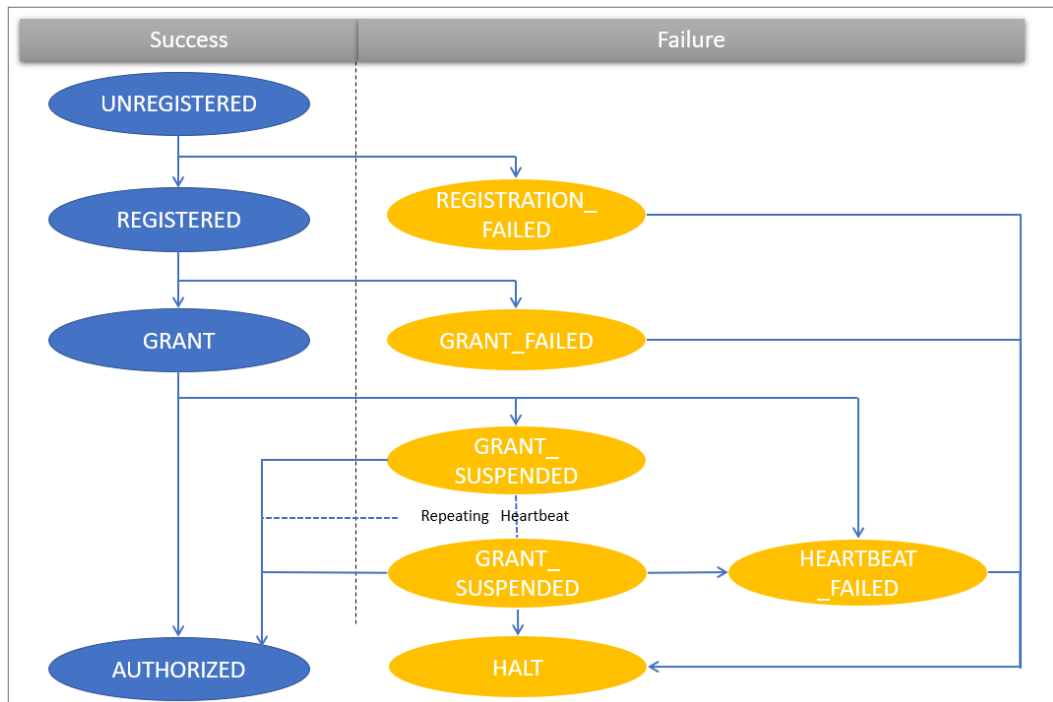

### Note

Information in the **Heartbeat Status** and **Last Heartbeat** columns is displayed only for registered devices.

cnMaestro checks the heartbeat status of a CBRS device every 12 hours. The following statuses are updated in the **Heartbeat Status** column, based on whether the device is online or offline:

- **Heartbeating:** When the device is online and the heartbeat check is successful. Also, the last successful heartbeat time is updated in the **Last Heartbeat** column.
- **Not Heartbeating:** When the device is offline for 24 hours or more.

### CBRS State Diagram

**Note**  
 GRANT\_SUSPENDED is a temporary suspend state where HEARTBEAT message is sent for an extended period of time prior to obtaining the AUTHORIZED state.

### CBRS Device Parameters

Category	Parameter	Details
Common	Channel BandWidth (MHz)	Channel Bandwidth of AP or BHM in MHz.
	Center Frequency (MHz)	Center frequency of AP or BHM in MHz.
	Device Name	Name given to device on SAS Admin (A maximum of 120 characters are supported. However, this name is not copied to the device when synchronized.)
	Device Type	Drop-down selection of supported devices types.
	MAC Address	MAC address of the device.
	MSN	Serial number of device.
	User ID	Unique identifier is assigned by the SAS. The User ID is part of the registration request message. The wrong User ID leads to REGISTRATION_FAILED.
Location	Height	Device antenna height in meters.
	Height Type	Should be AGL or AMSL as follows: <ul style="list-style-type: none"> <li>• AGL height is measured relative to the ground level.</li> <li>• AMSL height is measured relative to the mean sea level.</li> </ul>
	Horizontal Accuracy	A positive number in meters to indicate the accuracy of the device antenna horizontal location.
	Latitude	Latitude of the device antenna location in degrees.
	Longitude	Longitude of the CBSD antenna location in degrees.
	Vertical Accuracy	A positive number in meters to indicate the accuracy of the device antenna vertical location.
Co-Existence Related Parameters	Sector ID	The default AP MAC address (allows editing the default MAC).
	Spectrum Reuse ID	The Spectrum Reuse ID defined in the network.
	Include User ID	Prefixes the User ID to the Sector ID and Spectrum reuse ID.
ECGI Related Parameters	PLMN ID	Public and Mobile Network Identifier.
	ECI	E-UTRAN Cell Identifier. It is a length of 28 bits and contains the eNodeB-ID.
	ECGI	Enter the both PLMN ID and ECI parameters and it displays in the ECGI field.
	Azimuth (degrees)	Boresight direction of the horizontal plane of the antenna in degrees with respect to True North.

Category	Parameter	Details
Antenna Parameters	Beamwidth (degree)	3-dB antenna beam width of the antenna in the horizontal-plane in degrees.
	Downtilt (degrees)	Antenna downtilt in degrees.
	External Antenna Gain (dBi)	Peak gain of external antenna connected to device in dBi.
	Integrated Antenna Gain (dBi)	Peak gain of integrated antenna in dBi.
Add Certificate	Certificate File	CPI (Certified Professional Installer) certificate.
	CPIR Name	CPI registered name.
	File Password	CPI private password.

## Actions for Existing CBRS On-Premises Users

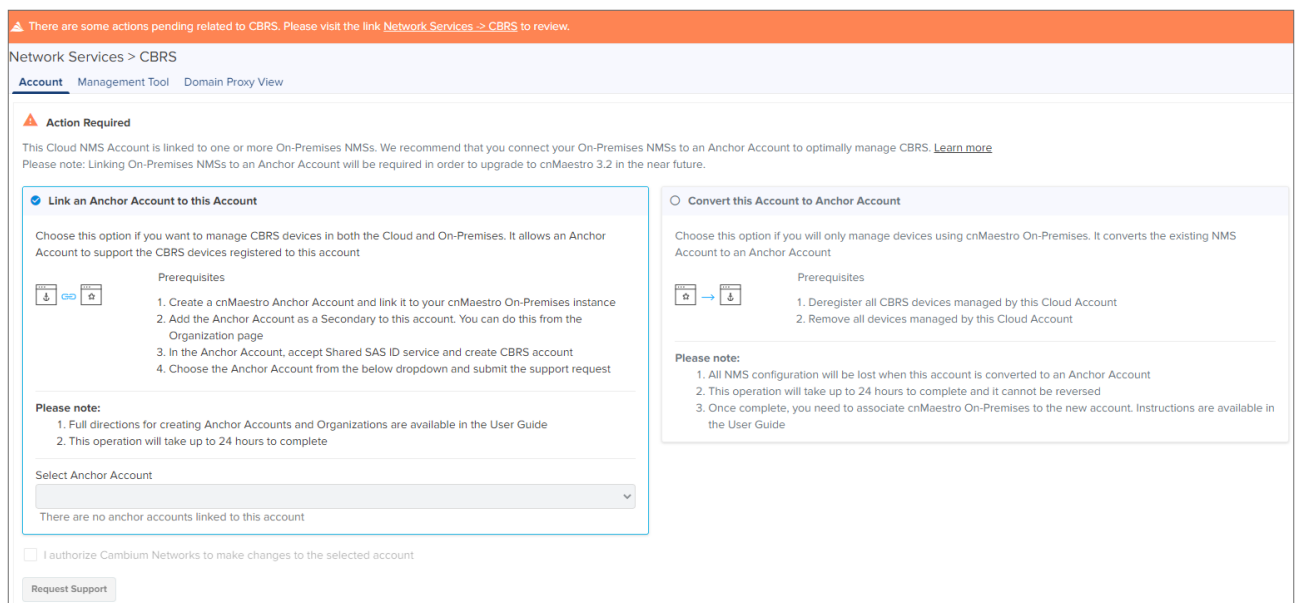

Current CBRS On-Premises customers maintain their CBRS billing and SAS configuration in an NMS Account. This must be updated to support Anchor accounts. To create an anchor account, refer to [Manage Instances](#).

If an action is required for existing Cloud NMS users, the UI will display the following notification:

After clicking the notice, navigate to **Services**.

- **Link an Anchor Account to this Account:** Select if managing CBRS devices in both Cloud and On-Premises. It creates an Organization that shares configuration between a Primary NMS account and a Secondary Anchor account (without deregistering existing CBRS devices).
- **Convert this Account to Anchor Account:** Select only if managing devices On-Premises and NMS do not have any devices. It converts the existing NMS Account to an Anchor Account.

## Link an Anchor Account to this Account

Select this to manage CBRS devices in both Cloud and On-Premises. An Anchor account must be created to manage the CBRS On-Premises devices without deregistration.

### Note

Cambium recommends selecting this option when the user is managing devices in both cnMaestro Cloud and On-Premises.

Before linking an Anchor account, please do the following:

- Ensure the cnMaestro Anchor account is linked to the cnMaestro On-Premises instance(s).
- Add the Anchor account as a Secondary account to Primary NMS account. Refer to Create Organization.

To convert the existing account:

1. Navigate to **Services > CBRS > Account** page.

There are some actions pending related to CBRS. Please visit the link [Network\\_Services -> CBRS](#) to review.

Network Services > CBRS

Account Management Tool Domain Proxy View

**Action Required**

This Cloud NMS Account is linked to one or more On-Premises NMSs. We recommend that you connect your On-Premises NMSs to an Anchor Account to optimally manage CBRS. [Learn more](#)

Please note: Linking On-Premises NMSs to an Anchor Account will be required in order to upgrade to cnMaestro 3.2 in the near future.

**Link an Anchor Account to this Account**

Choose this option if you want to manage CBRS devices in both the Cloud and On-Premises. It allows an Anchor Account to support the CBRS devices registered to this account

Prerequisites

1. Create a cnMaestro Anchor Account and link it to your cnMaestro On-Premises instance
2. Add the Anchor Account as a Secondary to this account. You can do this from the Organization page
3. In the Anchor Account, accept Shared SAS ID service and create CBRS account
4. Choose the Anchor Account from the below dropdown and submit the support request

**Please note:**

1. Full directions for creating Anchor Accounts and Organizations are available in the User Guide
2. This operation will take up to 24 hours to complete

Select Anchor Account

There are no anchor accounts linked to this account

I authorize Cambium Networks to make changes to the selected account

Request Support

**Convert this Account to Anchor Account**

Choose this option if you will only manage devices using cnMaestro On-Premises. It converts the existing NMS Account to an Anchor Account

Prerequisites

1. Deregister all CBRS devices managed by this Cloud Account
2. Remove all devices managed by this Cloud Account

**Please note:**

1. All NMS configuration will be lost when this account is converted to an Anchor Account
2. This operation will take up to 24 hours to complete and it cannot be reversed
3. Once complete, you need to associate cnMaestro On-Premises to the new account. Instructions are available in the User Guide

2. Select **Anchor Account** from the drop-down list.

### Note

Users are allowed to select only one Anchor account from the drop-down list.

3. Enable **I authorize Cambium Networks to make changes to the selected account.**
4. Click **Request Support** and a **Success** window pops up.

**Success**

Anchor Account request sent successfully.  
You will be updated via email.

### Note

The Cambium Support team validates the request and creates an Organization from the NMS and Anchor accounts within 24 hours. Alternately, you can create the Organization yourself using the directions specified earlier in this document.

## Convert this Account to Anchor Account

Select this to manage CBRS devices in On-Premises only. It converts an existing NMS account to an Anchor account.

### Note

Cambium recommends selecting this option when the user only plans to manage devices using cnMaestro On-Premises. Cloud account devices must be deregistered and deleted from the NMS account and registered back to On-Premises before the conversion.

To convert the existing account:

1. Navigate to **Services > CBRS > Account** page.

< 1 / 2 > | Your account is under the data retention period until 07-Aug-2021. Please renew the subscriptions at the earliest to avoid loss of long term historical data and configuration data related to cnMaestro X features.

Network Services > CBRS

Account Management Tool Domain Proxy View

**Action Required**

This Cloud NMS Account is linked to one or more On-Premises NMSs. We recommend that you connect your On-Premises NMSs to an Anchor Account to optimally manage CBRS. [Learn more](#)

Please note: Linking On-Premises NMSs to an Anchor Account will be required in order to upgrade to cnMaestro 3.2 in the near future.

Link an Anchor Account to this Account

Choose this option if you want to manage CBRS devices in both the Cloud and On-Premises. It allows an Anchor Account to support the CBRS devices registered to this account

Prerequisites

1. Create a cnMaestro Anchor Account and link it to your cnMaestro On-Premises instance
2. Add the Anchor Account as a Secondary to this account. You can do this from the Organization page
3. In the Anchor Account, accept Shared SAS ID service and create CBRS account
4. Choose the Anchor Account from the below dropdown and submit the support request

**Please note:**

1. Full directions for creating Anchor Accounts and Organizations are available in the User Guide
2. This operation will take up to 24 hours to complete

Select Anchor Account

There are no anchor accounts linked to this account

I authorize Cambium Networks to make changes to the selected account

Request Support

Convert this Account to Anchor Account

Choose this option if you will only manage devices using cnMaestro On-Premises. It converts the existing NMS Account to an Anchor Account

Prerequisites

1. Deregister all CBRS devices managed by this Cloud Account
2. Remove all devices managed by this Cloud Account

**Please note:**

1. All NMS configuration will be lost when this account is converted to an Anchor Account
2. This operation will take up to 24 hours to complete and it cannot be reversed
3. Once complete, you need to associate cnMaestro On-Premises to the new account. Instructions are available in the User Guide

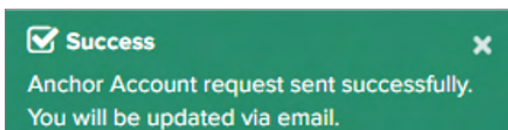

2. Select **Convert this Account to Anchor Account**.

### Note

- Deregister and remove all devices from the NMS account before the conversion.
- All NMS configuration will be lost when the account is converted to Anchor, including:
  - Guest Access Portal
  - Templates
  - Performance Graph Data, etc.
- The process of converting an NMS account to an Anchor account cannot be reversed.

3. Provide your consent by selecting the **I authorize Cambium Networks to make changes to the selected account** checkbox.
4. Click **Request Support** and the following success message is displayed.

The Cambium Support team validates the request and creates an Organization from the NMS and Anchor accounts within 24 hours.

# Organizations for CBRS

An Organization allows multiple accounts to share CBRS billing and SAS ID. The Primary Account owns this configuration, and the Secondary Account can optionally share it. Both accounts must authorize the sharing.

## Note

- There is only one Primary Account in an Organization.
- CBRS configuration can be set in the Primary Account and optionally shared to Secondary Accounts.

This chapter provides the following information:

- [Create an Organization](#)
- [Remove Accounts](#)
- [Disable Secondary Account Services](#)
- [Edit Services](#)
- [Share CBRS Configuration with the On-Premises Instance](#)
- [Organization History](#)

## Create an Organization

### Primary Account

Perform the following steps on the Primary Account:

1. Navigate to **Network Services > Organization > Accounts**.

The screenshot shows the 'Accounts' page under 'Services > Organization'. It includes a breadcrumb trail 'Accounts > History', a description of the Organization feature, and an 'Account Information' section. The 'Account ID' is displayed as '000676a3d519bea9d5b22b5a57063914'. Below the ID are two instructions: one for making the account a secondary account and another for making it a primary account. An 'Add secondary account' button is visible at the bottom of the section.

2. Click **Add Secondary Account**.

The screenshot shows the 'Add Secondary Account' dialog box. It contains a text input field for 'Secondary Account ID' with a red border, a 'Close' button, and a note: 'Copy the Account ID from the secondary account'.

Navigate to the planned Secondary Account and copy the Account ID of the Secondary Account using the Copy to Clipboard.

3. Paste the copied **Account ID** in the **Secondary Account ID** text box.
4. Once the Secondary Account is validated, the **Cambium ID** is displayed as shown below.

### Add Secondary Account

Secondary Account ID

**Add**    Close

7. Click **Add**. It displays the **Success** message as shown below:

**Success** ✕

Account added! Login to the secondary account and approve this request.

**Note**  
The Secondary Account administrator must approve this request from the Primary Account to join the Organization.

8. 1. In the **Secondary Accounts** table, the **Approval Status** is displayed as **Waiting for approval**.

Services > Organization

**Accounts**    History

Organization enables you to manage multiple accounts and have a single point of CBRS payment subscription.

**Account Information - Primary Account**

Account ID: 000676a3d519bea9d5b22b5a57063914

Account Type: Network Management System

**Secondary Accounts**

Cambium ID	Account ID	Account Type	Approval Status	Enabled Services
DOCUMNETATION2	7972ccc4d7dd0da4af1617c8c85a4d01	NMS	Waiting for approval	Shared SAS ID*, Unified Payments*

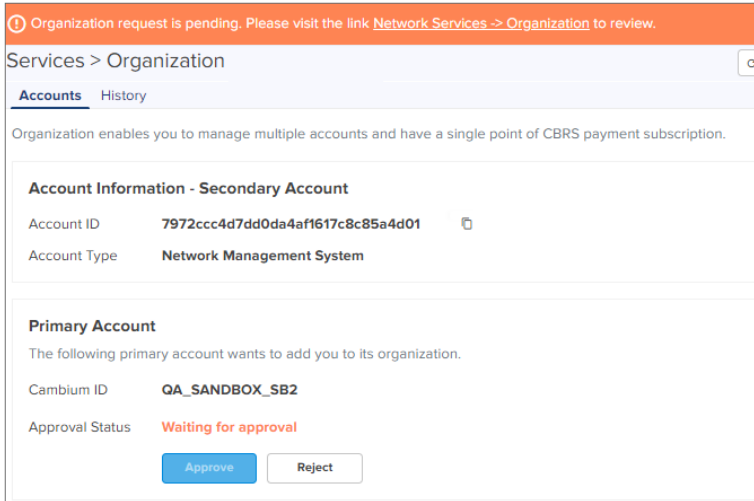

\* - Service has not been accepted by the secondary Account

## Secondary Account

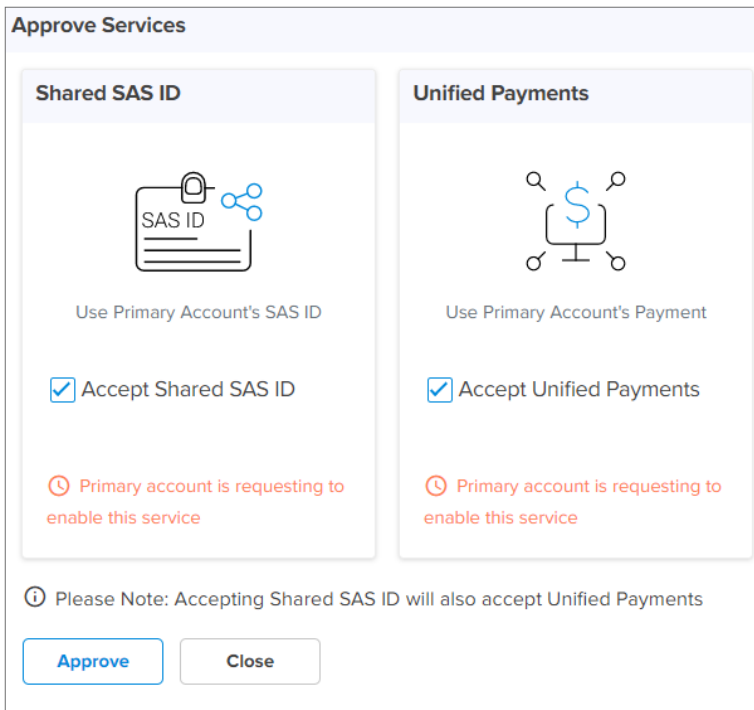

Login to the Secondary Account to complete Organization creation. The Secondary Account must approve the request and authorize the shared services. The Secondary Account can also request additional services (which must be approved by the Primary Account).

Perform the following steps in the Secondary Account:

1. Navigate to **Network Services > Organization > Accounts**.
2. Click **Approve**.

3. The **Approve Services** window pops up. Review the services requested and click **Approve**.

## Additional service requests from the Secondary Account

Additional services can be added after the Secondary Account joins the Organization, such as including the Unified Payments Service.

Perform the following steps on the Secondary Account:

1. Navigate to **Network Services > Unified Payments** and click **Enable**.

**Note**

This generates a request to the Primary Account to provide support for Unified Payments.

Network Services > Organization

**Accounts** History

Organization enables you to manage multiple accounts and have a single point of CBRS payment subscription.

4. Enter the **Reason**.

5. Click **Proceed**.

#### Without Active Services

- If services such as **Shared SAS ID** or **Unified Payments** are inactive in the Secondary Account, it can be deleted without any approval.
- The following message displays if successful.

#### With Active Services

- If services such as **Shared SAS ID** or **Unified Payments** are active in the Secondary Account, the services need to be disabled from the Secondary Account, and the request must be approved by the Secondary Account administrator.

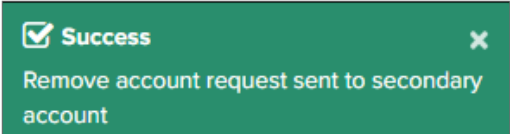

**Note**

- User needs to disable the active services such as [Shared SAS ID](#) and [Unified Payments](#) before removing the Secondary Account, or an Error message is shown.
- Shared SAS ID can be removed by contacting Cambium support to deactivate the current CBRS account to stop using Shared SAS ID.
- Active Services will be highlighted in **Green** color.

- The following message displays if successful.

- In the **Secondary Accounts** table, the UI displays the **Approval Status** as **Delete Pending**.

Services > Organization

5. Click **Enable** to reactivate the services.

### With active shared SAS ID services

**Note**

Active Services are highlighted in **Green** color.

The Secondary Account user can disable the **Shared SAS ID** services.

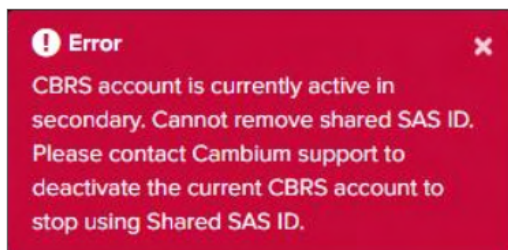

1. Navigate to **Services > Organization > Accounts** and select **Services**.

2. Click **Disable** in the **Shared SAS ID**.
3. Click **Yes** in the **Please confirm** window.

4. If CBRS account is active in Secondary Account, while disabling it displays the following error message.

If an **Error** message pops up, the user needs to raise a request to Cambium Support for the SAS vendor cancellation. Cambium Support will disable the CBRS services and deregister all devices associated to the Secondary Account.

Once disabled, the Secondary Account user can view the SAS vendor page and create a new CBRS account as shown below.

5. The following message displays if successful.

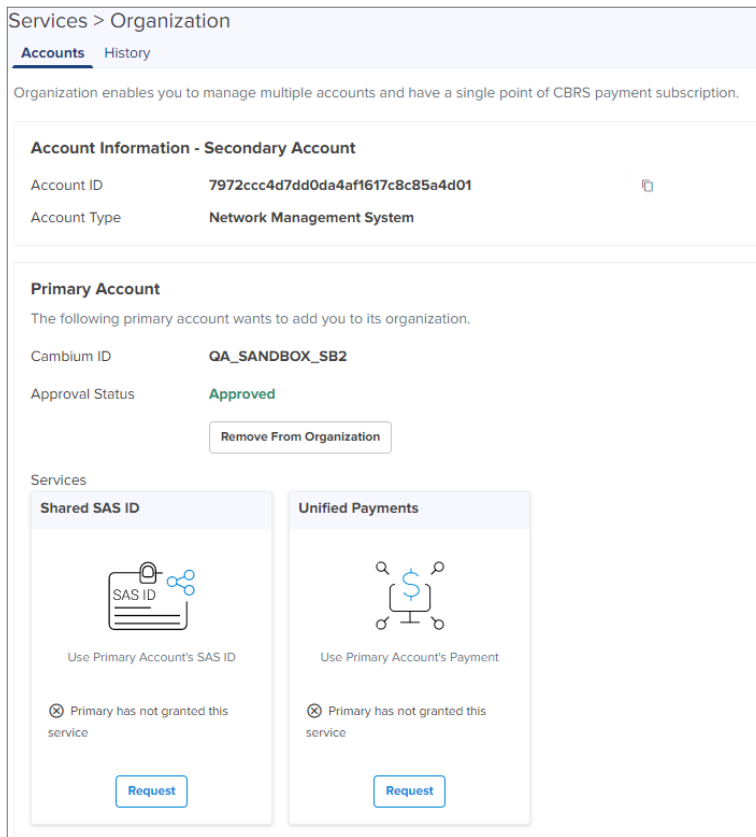

## Request services from Secondary Account

If the services are disabled, the Secondary Account needs to make a request to the Primary Account to activate them.

To request activation, perform the following on the Secondary Account:

1. Navigate to **Network Services > Organization > Accounts**.
2. Click **Request**.

3. Click **Yes** in **Please confirm** window.

4. It displays the **Success** message as shown below:

5. Once requested, login to the **Primary Account** page and **Approve** the request.

The Primary Account administrator must approve this request from the Secondary Account in order to enable the services.

## Review service request in Primary Account

Perform the following steps on the Primary Account.

1. Navigate to **Services > Secondary Accounts** tab.
2. Click **Review** in **Pending Service Request**.

There are some actions pending in the organization page. Please visit the link [Network Services -> Organization](#) to review.

## LTE

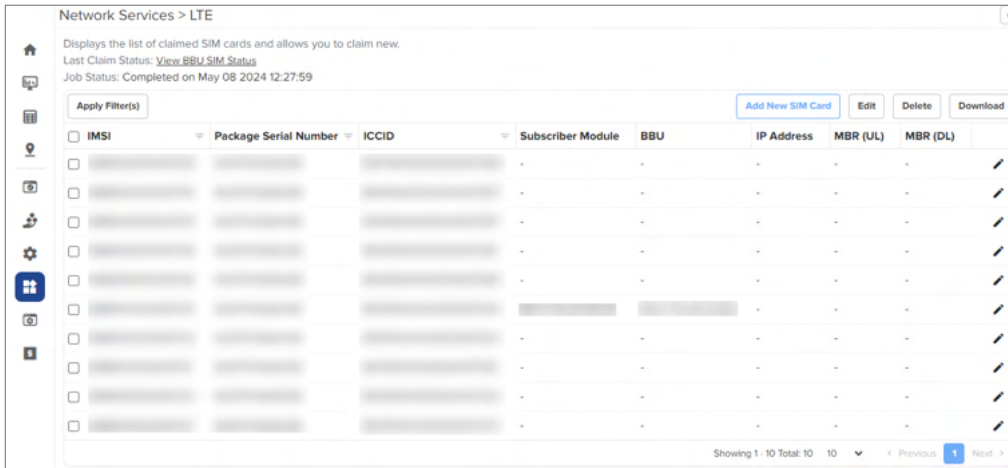

cnMaestro supports LTE as part of its cnMaestro deployment. LTE allows customers to onboard the SM with IMSI into cnMaestro.

System access in cnRanger is dependent on installation of SIM credentials on every BBU in the operator network. To ease the operations aspects of SIM card management, cnMaestro provides utilities for claiming, managing, and distributing Cambium Networks cnRanger SIM card credentials (3<sup>rd</sup> party SIM cards are not currently supported on cnRanger).

## Adding SIM Cards

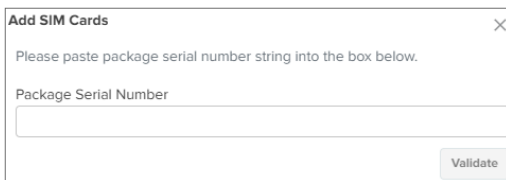

To add a SIM card, complete the following steps:

1. Navigate to **Network Services > LTE**.

The screenshot shows the 'Network Services > LTE' interface. It displays a table of claimed SIM cards with columns for IMSI, Package Serial Number, ICCID, Subscriber Module, BBU, IP Address, MBR (UL), and MBR (DL). The table is currently empty, and there are buttons for 'Add New SIM Card', 'Edit', 'Delete', and 'Download'. The status bar at the bottom indicates 'Showing 1 - 10 Total: 10'.

2. Click **Add New SIM Card**. The following window appears.

The 'Add SIM Cards' dialog box prompts the user to 'Please paste package serial number string into the box below.' It features a text input field labeled 'Package Serial Number' and a 'Validate' button.

3. Enter appropriate **Serial Number** of SIM package and click **Validate**.
4. After successful validation of the serial number, click **Add**.

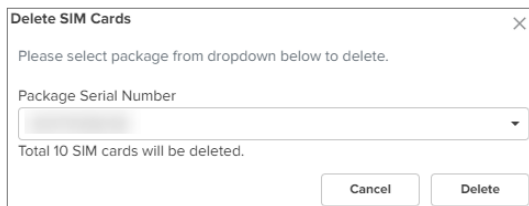

#### Note

User can download the .CSV file from the Cloud account once the Serial Number is validated from the cnMaestro Cloud database.

## Delete SIM Cards

To delete a SIM card from the list, click **Delete**. The following window appears.

The 'Delete SIM Cards' dialog box prompts the user to 'Please select package from dropdown below to delete.' It features a dropdown menu labeled 'Package Serial Number' and a 'Delete' button. A message at the bottom states 'Total 10 SIM cards will be deleted.'

#### Note

IMSI numbers get deleted with the mapped Serial Number.

## Update SIM Details

User can edit the SIM details as follows.

1. Navigate to **Network Services > LTE**.

The screenshot shows the 'Network Services > LTE' interface. At the top, it displays the title and a brief description: 'Displays the list of claimed SIM cards and allows you to claim new.' Below this, there are links for 'Last Claim Status: View BBU SIM Status' and 'Job Status: Completed on May 08 2024 12:27:59'. A navigation bar includes an 'Apply Filter(s)' button and three action buttons: 'Add New SIM Card', 'Edit', and 'Delete', along with a 'Download' button. The main area contains a table with the following columns: IMSI, Package Serial Number, ICCID, Subscriber Module, BBU, IP Address, MBR (UL), and MBR (DL). The table lists several rows of SIM card data, each with an edit icon (pencil) in the rightmost column. At the bottom right, a pagination control shows 'Showing 1 - 10 Total: 10' and navigation arrows for 'Previous' and 'Next'.

2. Click the edit (  ) icon for the IMSI that you want to edit.

The **Update SIM Details** window pops-up.

The 'Update SIM Details' window is a modal form with a close button (X) in the top right corner. It contains the following fields: 'IMSI' with the value '888900000009729', 'IP Address', 'MBR (UL)', and 'MBR (DL)'. At the bottom, there are two buttons: 'Save' and 'Cancel'.

3. Enter a valid **IP Address**.
4. Enter the **MBR (UL)** and **MBR (DL)**.
5. Click **Save**.

## Viewing BBU SIM Status

Allows the users to view the status of the SIM connected to the BBU.

1. Navigate to **Network Services > LTE**.

Network Services > LTE

Displays the list of claimed SIM cards and allows you to claim new.

## Managing Edge Controller

This chapter provides the details about how Edge Controllers are configured to discover PTP 820/850 devices in a network using SNMP protocol. To view the onboarded Edge Controllers in cnMaestro, perform the following steps:

1. Navigate to **Network Services > Edge Controller**.

A list of onboarded Edge Controllers in a table format is displayed, as shown in [Figure 555](#).

**Figure 555** Edge Controllers

Network Services > Edge Controller

Name	IP Address	Status	Managed Account	Version	Duration	Topology Sync
<a href="#">Centos-7</a>	10.110.221.35	Online (19h 10m ago)	Base Infrastructure	1.0.0-b36	11d 9h 1m ago	Success (4m ago) <span>↻</span> <span>✎</span> <span>🗑️</span>
<a href="#">Centos-8</a>	10.110.221.34	Online (7h 36m ago)	Base Infrastructure	1.0.0-b39	9h 57m ago	Success (< 1m ago) <span>↻</span> <span>✎</span> <span>🗑️</span>

Showing 1 - 2 Total: 2 Previous 1 Next

The following parameters are available to view in a table format: Name, IP Address, Status, Managed Account, Version, Duration, and Topology Sync Status. You can perform the following actions in the Edge Controller page.

- Topology Sync
- Edit
- Delete

Select the required Edge Controller name in the page, to perform the following actions:

- [Topology Sync](#)

- [Edit](#)
- [Delete](#)

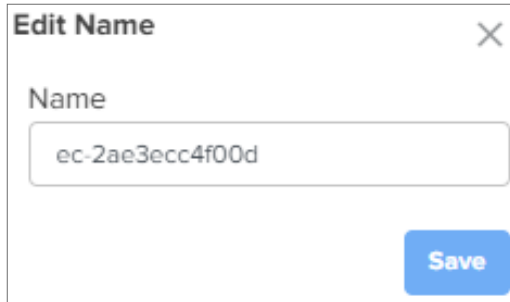

## Topology Sync

Click on the **Topology Sync** (🔄) icon to run topology synchronization for the required Edge Controller.

## Edit

1. Click the edit (✎) icon in the Edge Controller page.

The **Edit name** window appears, edit the name of the Edge Controller.

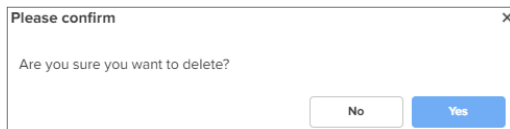

2. Click **Save**.

## Delete

1. Click the delete (🗑) icon in the Edge Controller page.

The delete confirmation window appears.

2. Click **Yes**.

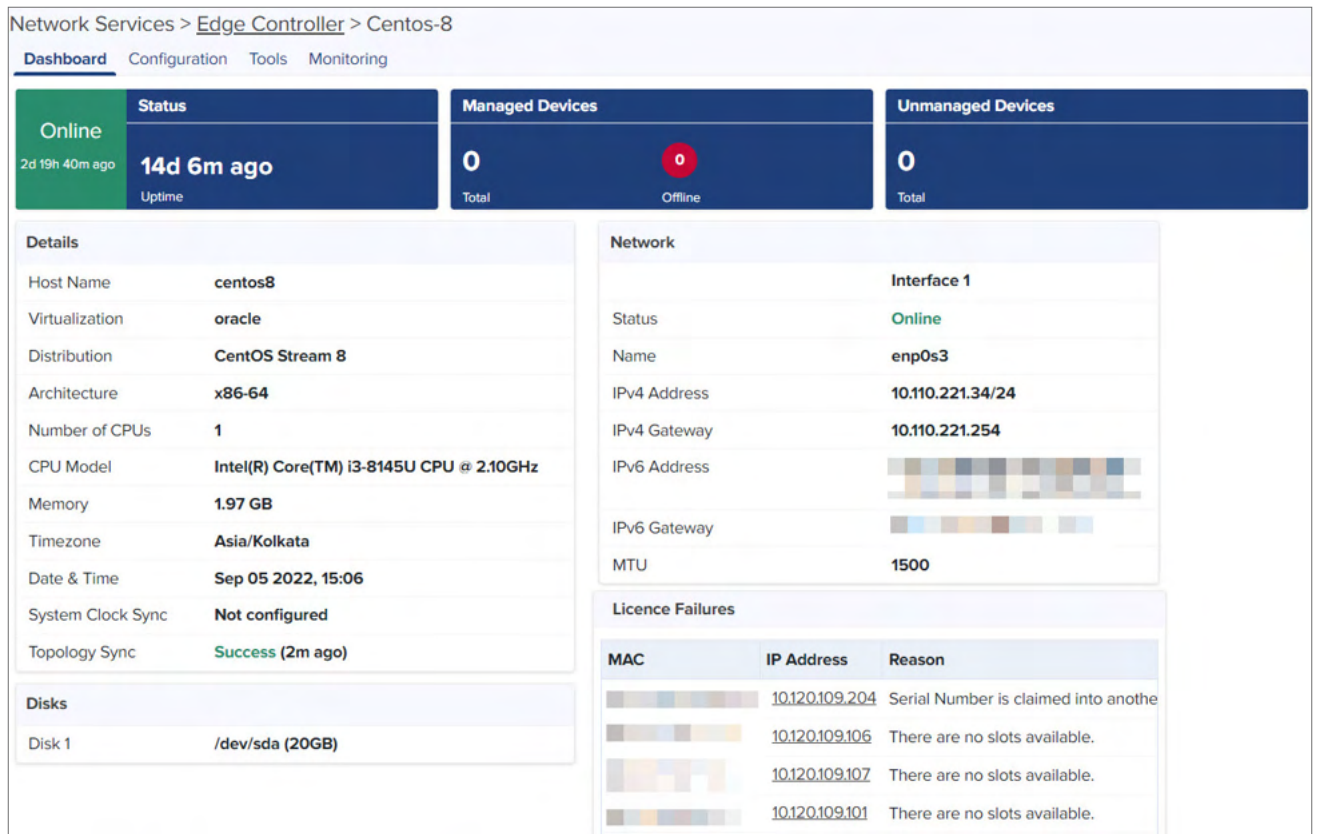

In the Edge Controller page, you can navigate to the following tabs:

- [Dashboard](#)
- [Configuration](#)
- [Tools](#)
- [Monitoring](#)

To view the Edge Controller dashboard, click on the name of the Edge Controller. The Edge Controller dashboard page appears as shown in [Figure 556](#).

**Figure 556** The Edge Controller dashboard

## Dashboard

The dashboard page displays status of managed and unmanaged PTP 820/850 devices, details of Edge Controller, disk space availability, and network details of Edge Controller as shown in [Table 154](#).

**Figure 557** Edge Controller and PTP 820/850 devices status

Field	Description
Date & Time	Current date and time.
System Clock Sync	Configuration of System Clock Synchronization.
Disk	Current Disk space usage.
Status	Status of Network Interface Online or Offline.
Name	Name of the Network Interface.
IPv4 Address	Configured IPv4 Address.
IPv4 Gateway	Configured IPv4 Gateway.
IPv6 Address	Configured IPv6 Address.
IPv6 Gateway	Configured IPv6 Gateway.
MTU	Maximum Transmission Unit of network interface of Edge Controller.
License Failures	Displays MAC, IP Address, and Reason. The reasons for license failure are as follows:  When the discovery exceeds the slot availability.  When the individual devices are already onboarded in other Cloud account.
Topology Sync	Status of Topology Sync.
Version	Software version of the device.

## Configuration

In the **Configuration** page, you need to configure SNMP rules to discover and onboard PTP 820/850 devices. The **SNMP** tab in the **Configuration** page displays **Configuration Status**. The **Configuration Status** displays when the Edge Controller is **In Sync** or **Not Sync** with cnMaestro. The synchronization status is shown in days, hours and minutes. **Next discovery** and **Previous discovery** ran is displayed in minutes as shown in [Figure 558](#).

**Figure 558** Configuration Status

## Rules

To add a new rule, perform the following steps:

1. Click **Add New**.

The **Add New Network Discovery Rule** window appears.

Subnet\*

Allowed IPv4 subnets are /24 or smaller. Eg. 10.0.0.0/25

Network Address Range

Port

161

Versions

v2c  v3

Read-Write Community

.....

Show

Add

2. Type **Subnet** range in CIDR format (for example, 10.204.88.0/28) to discover PTP 820/850 devices.  
The range of IP addresses in the **Network Address Range** field is displayed.
3. Type **Port** number.
4. Choose SNMP **Version**:  
For SNMP version **v2c**, perform the following:
  - a. Enter preferred community string when you create a SNMP discovery rule.
  - b. Click **Add**.

#### Note

Default community string is private.

For SNMP Version **v3**, perform the following:

- a. Choosing SNMP v3 version allows you to enter the parameters as shown in the following figure.

Versions

v2c  v3

Username\*

Context Name

Authentication Protocol

None  SHA  MD5

Authentication Password\*

Show

Privacy Protocol

None  AES 128  DES

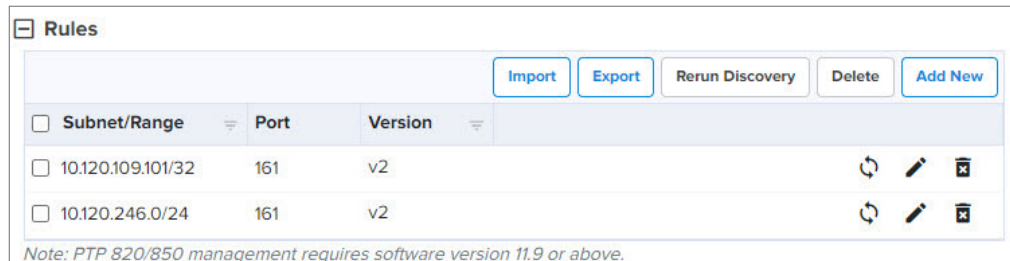

Privacy Password\*

Show

Add

- b. Enter the following fields:
  - **Username.**
  - **Context Name** field is optional.
- c. Choose any one of the **Authentication Protocol**.
  - None
  - SHA
  - MD5
- d. Choose any one of the **Privacy Protocol**.
  - None
  - AES128
  - DES
- e. Type **Privacy Password**.
- f. Click **Add**.

SNMP Rules added are listed in the Rules table as shown in the following figure.

<input type="checkbox"/>	Subnet/Range	Port	Version	
<input type="checkbox"/>	10.120.109.101/32	161	v2	
<input type="checkbox"/>	10.120.246.0/24	161	v2	

*Note: PTP 820/850 management requires software version 11.9 or above.*

5. Click **Rerun Discovery** to start SNMP discovery for the rules added in the table or select specific **Subnet/Range** in the table and manually run **Rerun Discovery** () icon.

## Import

To import SNMP rules, perform the following steps:

1. Click **Import**.  
Import window appears.
2. Browse to **Select File** or **Download Sample Template** to change or configure the SNMP as per the requirements in **Downloaded Sample Template**.

3. Click **Import**.

## Export

To export SNMP rules, perform the following steps:

1. Select one or more SNMP rules required to export.
2. Click **Export**.

3. It exports the rules in the CSV file format as shown in the following figure.

### Note

By default all SNMP rules are exported, if none of the rules are selected from the table.

	A	B	C	D	E	F	G	H	I	J	K	L	M	N
1	Subnet	Port	Version	Community	Username	Contextname	Authentication Protocol	Authentication P	Privacy Protocol	Privacy Password				
2	10.120.109.101/32	161		2 private										
3	10.120.246.0/24	161		2 private										
4														

## Delete

To delete SNMP rules in the table, perform the following steps:

1. Select one or more SNMP rules in the table.
2. Click **Delete**, to delete one or more entries in the table or click **Delete** (🗑️) icon to delete specific rule in the table.

## Edit

To edit SNMP rule in the table, perform the following steps:

1. Click Edit (✎) icon to edit SNMP rule.

**Edit Network Discovery Rule** window appears. Edit the required field values.

2. Click **Save**.

## Blacklist

To blacklist PTP 820/850 devices, perform the following steps:

1. Click **Add New**.

Add Blacklist IP Address window appears.

2. Type **IP Address**.
3. Click **Save**.

Blacklisted IP Addresses are displayed in the table.

4. Select one or more blacklisted IP addresses in the table.
5. Click **Delete**, to delete one or more entries in the table or click **Delete** (X) icon to delete specific blacklist entry in the table.

## Advanced Settings

In **Advanced Settings** section, configure the following parameters:

### Note

- By default, **Auto Discovery** option is disabled.
- By default, **Auto Discovery Interval** option is 24 hours, when enabled and fields are auto-filled.

Enable **Auto Discovery** if you want to run SNMP discovery rules manually and perform the following steps:

1. Select **Auto Discovery Interval** option from the drop-down.
2. Enter **Timeout** in seconds between 5 to 60 seconds.
3. Enter **Retries** values between 0 and 3.

### Advanced Settings

Auto Discovery

Auto Discovery Interval (Hours)

1

Should be between 1 and 24 hours

Timeout (Seconds)

20

Should be between 5 and 60 seconds

Retries

1

Should be between 0 and 3

4. Click **Save**.

## Tools

The Tools page allows you to perform the following actions:

- [Diagnostics](#)
- [Operations](#)
- [Services](#)

## Diagnostics

Diagnostics page allows you to gather technical support dump which can be downloaded and sent to Cambium Networks support team.

### Technical Support Dump

The Technical Support Dump gathers important runtime and configuration information from the Edge Controller. It can be sent to Cambium Support to aid in resolving issues.

1. Navigate to **Edge Controller > Tools > Diagnostics**.
2. Click **Download** under Technical Support Dump.

## Diagnostics

The screenshot shows the 'Diagnostics' page in the Edge Controller interface. It includes a breadcrumb trail: Network Services > Edge Controller > ec-2ae3ecc4f00d. The page has tabs for Dashboard, Configuration, Tools, and Monitoring, with 'Tools' selected. Under 'Tools', there are sub-tabs for Diagnostics, Operations, and Services, with 'Diagnostics' active. The 'Technical Support Dump' section explains that it gathers runtime and configuration information and can be sent to Cambium Support, with a 'Download' button. The 'Logging Severity' section allows changing the logging level, with a dropdown set to 'Debug' and a 'Save' button. The 'Service Logs' section has dropdowns for 'Select Service' (Edge Agent) and 'Select Duration' (Last 5 minutes), with a 'Show Logs' button. Below is an 'Output' window showing a log of ping messages between an agent and a handler.

```
{ "file": "msg_handler.go:63", "func": "edgeagent.(*Agent).writer", "level": "debug", "msg": "Sending Ping...4743", "name": "agent", "time": "2024-05-09T20:46:28Z" }
{ "file": "msg_handler.go:96", "func": "edgeagent.(*Agent).reader.func3", "level": "debug", "msg": "Received Pong...4743", "name": "agent", "time": "2024-05-09T20:46:28Z" }
{ "file": "msg_handler.go:63", "func": "edgeagent.(*Agent).writer", "level": "debug", "msg": "Sending Ping...4744", "name": "agent", "time": "2024-05-09T20:46:53Z" }
{ "file": "msg_handler.go:96", "func": "edgeagent.(*Agent).reader.func3", "level": "debug", "msg": "Received Pong...4744", "name": "agent", "time": "2024-05-09T20:46:53Z" }
{ "file": "msg_handler.go:63", "func": "edgeagent.(*Agent).writer", "level": "debug", "msg": "Sending Ping...4745", "name": "agent", "time": "2024-05-09T20:47:18Z" }
{ "file": "msg_handler.go:96", "func": "edgeagent.(*Agent).reader.func3", "level": "debug", "msg": "Received Pong...4745", "name": "agent", "time": "2024-05-09T20:47:18Z" }
```

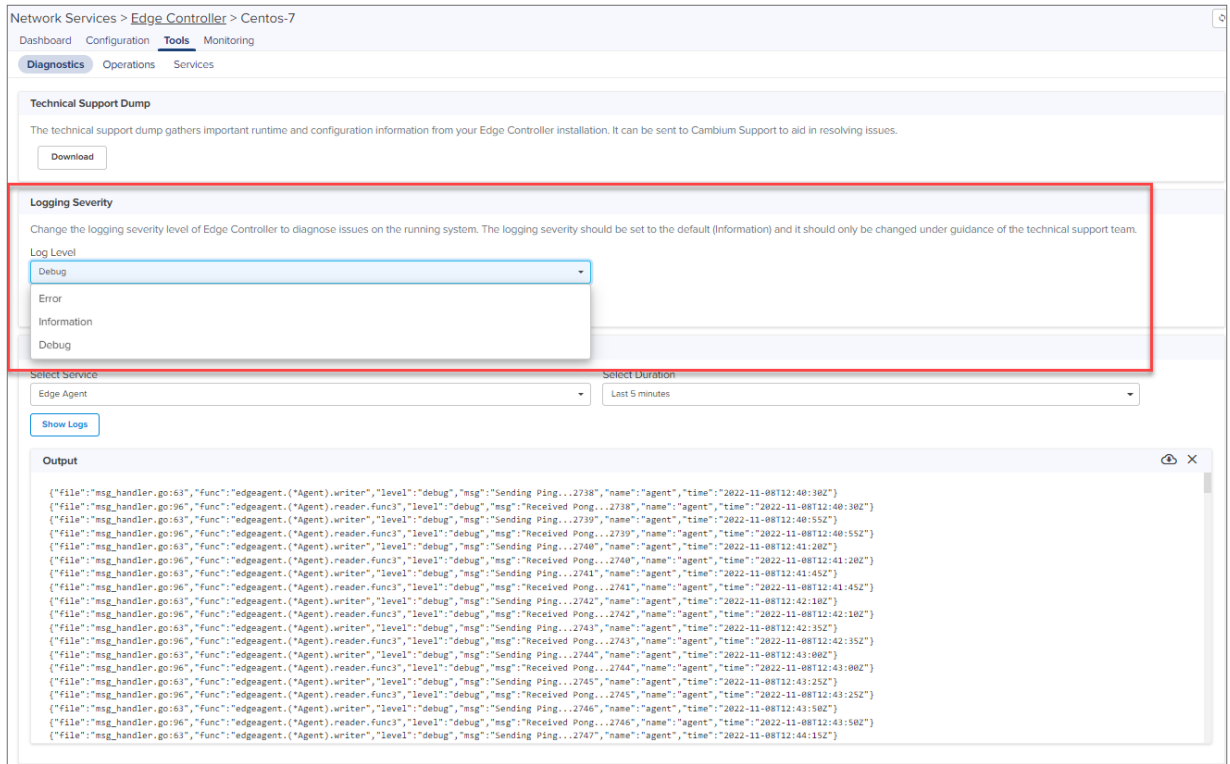

## Logging Severity

The Logging Severity level of Edge Controller diagnose issues on the running system. The logging severity should be set to the default (Information) and it should only be changed under guidance of the technical support team.

1. Navigate to **Edge Controller > Tools > Diagnostics**.
2. In **Logging Severity** section, select one of the log level from **Log level** drop-down.
  - Error
  - Information

- Debug

3. Click **Save**.
4. Click **Reset** to revert to the previous **Log level** option.

## Service Logs

The Service Logs allows you to diagnose any issues in the services running in the Edge Controller.

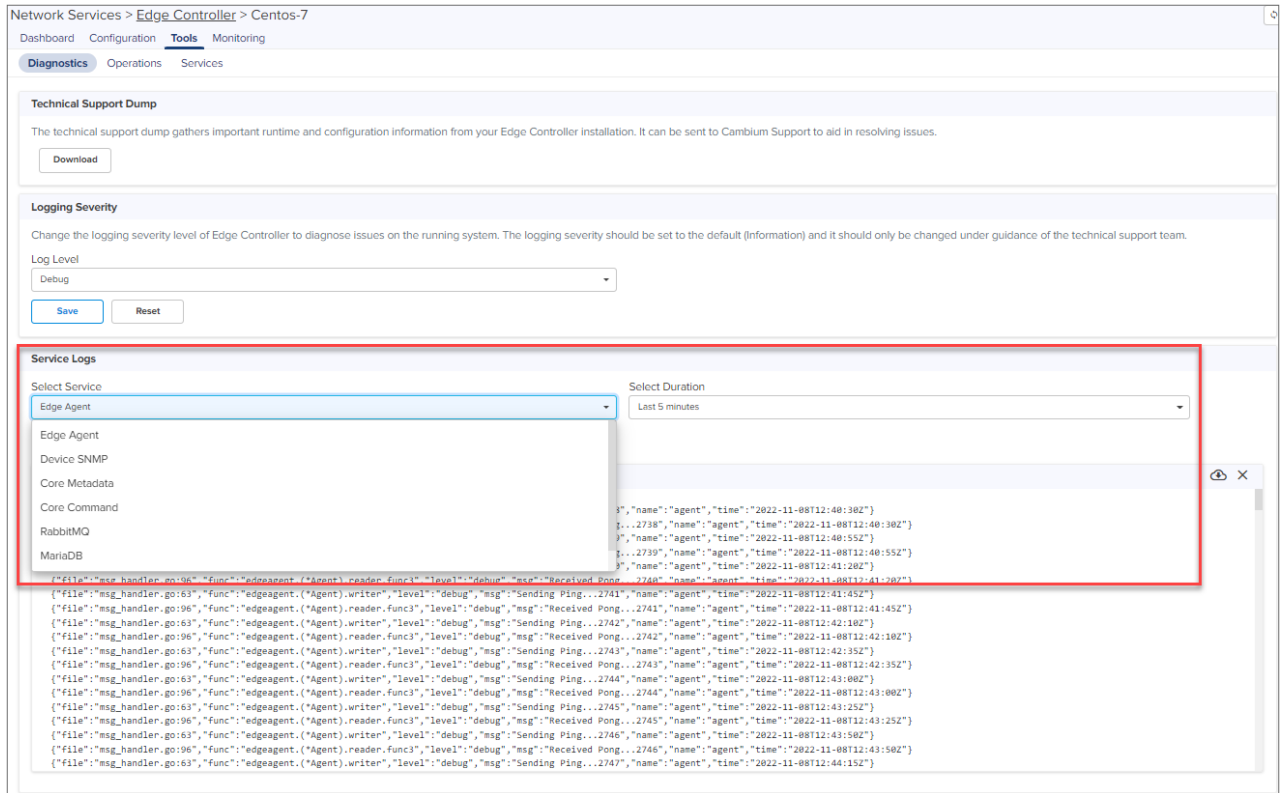

1. Select **Service** and **Duration** from the drop-down.

The following list of service and duration (5 minutes, 15 minutes, 30 minutes and last 1 hour) are available from the drop-down:

- Edge Agent
- Device SNMP
- Core Metadata
- Core Command
- RabbitMQ
- MariaDB
- SFTP

2. Click **Show Logs**.

The output for the selected criteria appears as shown:

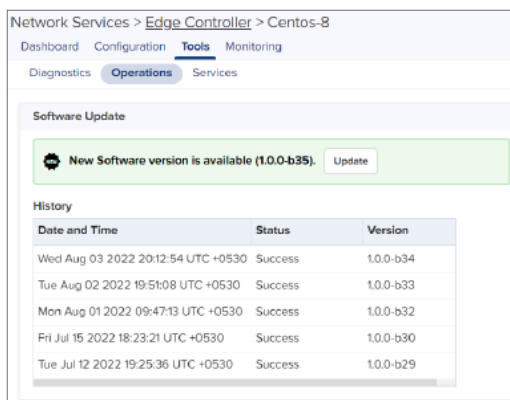

3. Click download (📄) icon to download the generated output.
4. Click clear (✕) icon to clear the output.

## Operations

In the **Operations** page, you can view the current software version of the Edge Controller. You can also view history of the last five software updates.

1. 1. Navigate to **Tools > Operations**.
2. 2. Click **Check for new software update**, checks for any new available software update.

## Services

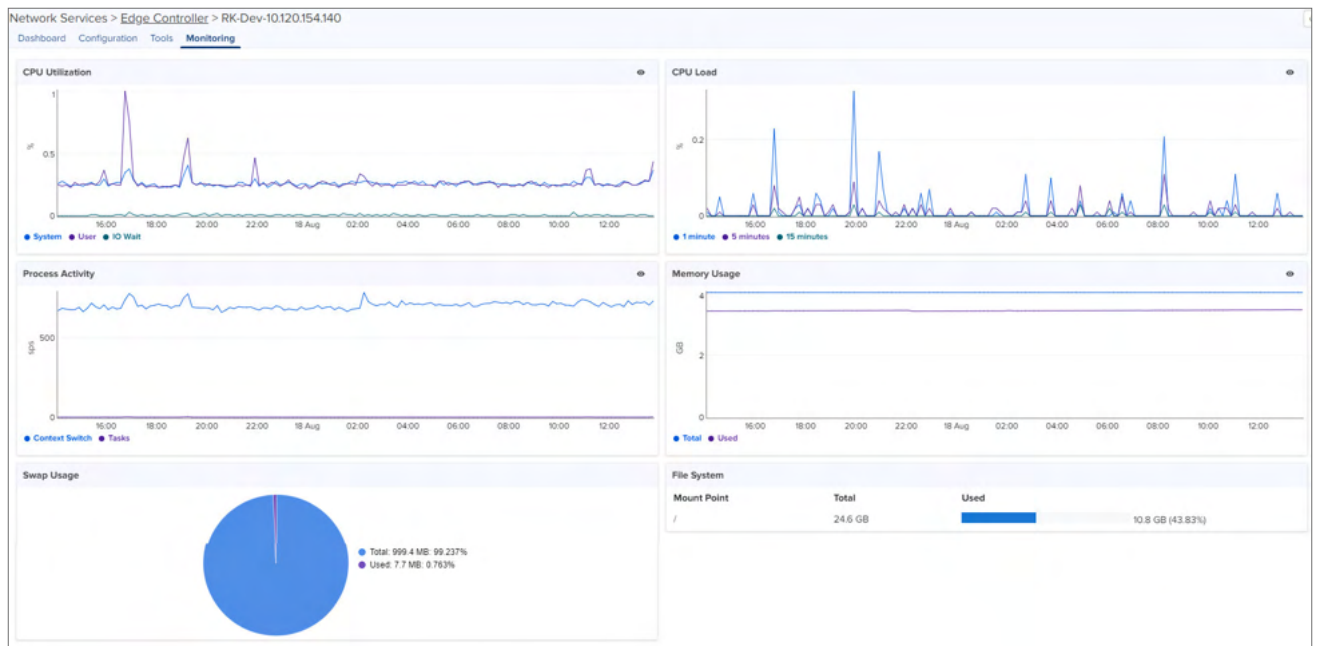

In **Services** page you can view the services running in the Edge Controller.

Figure 559 Services

Name	Version	Status	Uptime	CPU	Memory
ec-rabbitmq	3.10.5	Running	41d 19h 10m	0.27%	3.23% [127.6MiB]
ec-device-snmp	1.0.0-b37	Running	31d 20h 38m	0.02%	1.45% [57.29MiB]
ec-core-command	1.0.0-b7	Running	41d 19h 10m	0.00%	0.19% [7.566MiB]
ec-edgeagent	1.0.0-b35	Running	4d 19h 20m	0.04%	0.27% [10.7MiB]
ec-mariadb	10.6.8	Running	41d 19h 10m	0.01%	2.65% [104.5MiB]
ec-core-metadata	1.0.0-b8	Running	41d 19h 10m	0.00%	0.28% [11.2MiB]
ec-sftp	v1.3	Running	34d 21h 42m	0.00%	0.15% [5.883MiB]

## Monitoring

In the **Monitor** page, you can view details of CPU utilization, CPU Load, Process Activity, Memory Usage, Swap Usage, and File System.

## cnArcher Installation Summary

cnArcher is a mobile application used to install PMP Subscriber Modules (SMs), ePMP (SMs), and cnRanger SMs. The installation summary provides an overview of the data collected by cnArcher during the installation process.

### Note

- cnArcher Installation Summary is a cnMaestro X feature.
- cnArcher Installation summary of PMP SM is available for users in cnMaestro Cloud and OnPremises from 3.1.0 release.
- cnArcher Installation summary of ePMP SM is available for users in cnMaestro Cloud and OnPremises from 3.1.1 release.
- ePMP PTP 550 (two radio devices) and ePMP Elevate are not supported for cnArcher Installation

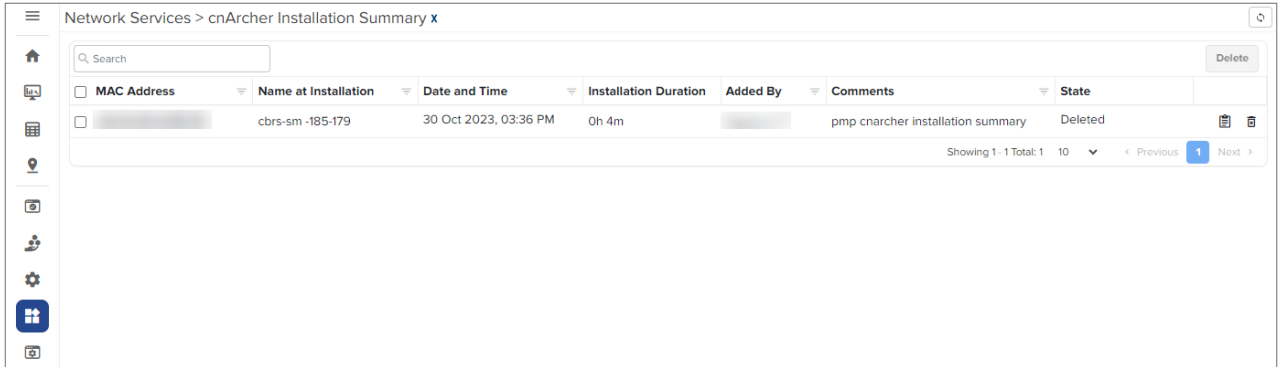

## Summary.

To view the installation summary:

1. Navigate to **Network Services > cnArcher Installation Summary**.

The **cnArcher Installation Summary** page appears.

2. You can **Search** cnArcher Summary details by using **MAC Address, Name at Installation, Date and Time, Added By,** and **Comments**.

**Table 155** *Fields in cnArcher Installation Summary*

Field	Description
MAC Address	MAC address of the device.
Name at Installation	Name given to the device when installed.
Date and Time	Date and time of installation.
Installation Duration	Duration of installation.
Added By	Name of the user adding the device.
Comments	Comments about the installation.
State	Current state of the device such as Managed or Deleted.

3. Click **View Details**  icon to view detailed Installation Summary.

Installation Summary : cbrs-sm -185-179 on 30 Oct 2023, 03:36 PM

**Table 156** Summary fields in cnArcher Installation

Field	Description
SM Name	Name of the device.
MAC Address	MAC address of SM.
MSN	Serial number of device.
Product	Device model and type.
Software Version	Software version of device.
RSSI	Receiver Signal Strength Indicator (RSSI) of SM.
SSR	Signal Strength Ratio (SSR).
External Antenna	Peak gain of external antenna connected to the device.
Start Timestamp	Start time of the summary.
End Timestamp	End time of the summary.
Added By	Name of the user adding the device.
Comment	Comments about the installation process.

## Configuration

**Table 157** Configuration fields in cnArcher Installation

Field	Description
IP Address/Setting	IP settings such as for DHCP or Static IP allocation.
Subnet	Subnet mask of the device.
Gateway	IP address of the gateway.
DNS	Name of the DNS server.
Management VLAN	Configured Management VLAN.
Data VLAN	Configured Data VLAN.
Security	Security settings.
PSK	Type of PSK (Pre-Shared Key): WPA or WPA2.
Status	Current SM state such as Onboarded or Already Onboarded.
Software Update	Software version provided to upgrade.
Template	Name of the configuration template to apply.
Onboarding Details	Onboarding details related to SM.

## Photos and Location

**Photos and Location** displays the photos taken during installation. You can view a maximum of four photos at a time.

## Link Test Result

**Link Test Result** displays the link related test results with respect to throughput.

**Table 158** *Link Test Results fields*

Field	Description
Time	Time at which the link test was performed.
Mode	Modes such as Extrapolated Link Test or Link Test with Bridging.
Throughput Uplink/Downlink	Uplink and Downlink Throughput.
Modulation Uplink/Downlink	Uplink and Downlink Modulation.

## AP Scan Result

**AP Scan Result** displays a list of scanned APs.

**Table 159** *Fields in AP Scan Result*

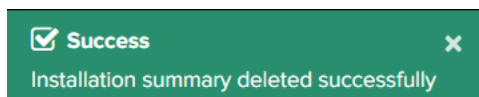

Field	Description
AP MAC	MAC address of the AP.
AP Bandwidth	Bandwidth of the AP.
AP Frequency	Frequency of the AP.
Registered	Details of the registered SM.

1. Click the delete (🗑️) icon to delete single or multiple entries from the **cnArcher Installation Summary** page.
2. Click **Yes** to delete.

**Please confirm**

Are you sure you want to delete?

3. A confirmation message is displayed on a successful delete.

**Note**

cnArcher uploads Installation Summary with cnMaestro when Internet connection is available to users mobile device. This feature is support only in Android.

## Spectrum Analyzer<sup>X</sup>

The Spectrum Analyzer feature monitors and analyzes wireless spectrum for PMP AP and SM devices, allowing users to optimize network performance.

**Note**

- The Spectrum Analyzer is a cnMaestro X feature.
- Spectrum Analysis is supported on devices running PMP software version 22.1.0 and above.
- Spectrum Analyzer feature is available for users in cnMaestro Cloud and On-Premises.

To view Spectrum Analyzer page:

1. Navigate to **Network Services > Spectrum Analyzer**.
2. You can view the Spectrum Analyzer details by using **Name, Status, Type, Sector Count, Start Time, and End Time**.

Network Services > Spectrum Analyzer x

**Table 160** Fields in Spectrum Analyzer

Field	Description
Name	The user-defined name for the spectrum analysis job or scan.
Status	The current status of the spectrum analysis.
Type	The type of analysis performed (for example, Now, Weekly).
Sector Count	The number of sectors or wireless areas analyzed in the spectrum scan.
Start Time	The scheduled start time for the spectrum analysis job.
End Time	The scheduled end time for the spectrum analysis job.

3. Click **View Result** 📊 icon on top right corner to view the detailed Spectrum Analyzer summary.

**Table 161** *Job Summary parameters*

Field	Description
Name	The user-assigned name for the analysis job.
Tower Count	The number of towers included in the analysis.
AP Count	The number of APs in the analysis.
SM Count	The number of SMs in the analysis.
Bands	The frequency bands under analysis.
Scanning Bandwidth	The width of the frequency band being scanned.
Duration	The duration of the analysis job.
Scan Range	The spectrum range analyzed.
Scan Status	The current status of the analysis job.
Schedule	The scheduling details for the analysis job.

**Table 162** *Filters parameters*

Field	Description
Date and Time	The specific date and time when the spectrum analysis is conducted.
Bands	The frequency bands included in the analysis.
View Options	The viewing options for analyzing the spectrum. <ul style="list-style-type: none"> <li>• Uplink (AP)</li> <li>• Downlink (SM)</li> <li>• Downlink (Average SM)</li> <li>• Unavailable Channels</li> </ul>
Data Path	The data path used for the analysis. <ul style="list-style-type: none"> <li>• <b>Combined:</b> Combines data from Path A and Path B for analysis.</li> <li>• <b>Average:</b> Calculates the average and maximum values for the analysis data.</li> </ul>

4. **Scan Result** displays the scanning result graph.
5. To view the last scan results at the device level:

- a. Navigate to PMP device **Dashboard > Spectrum Analyzer Last Scan**.

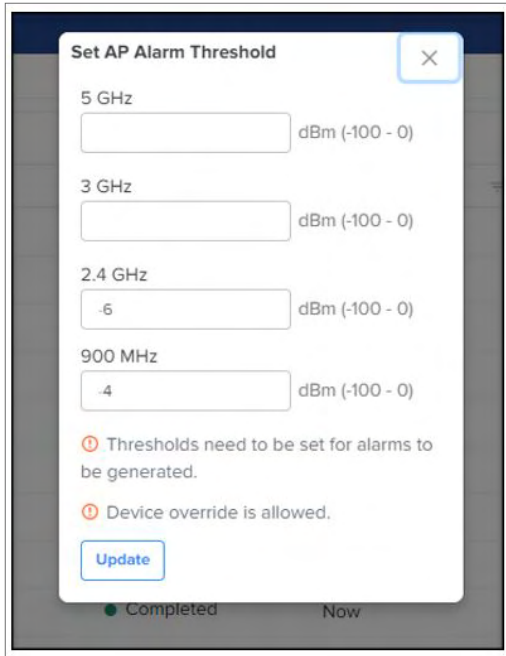

- b. The dashboard automatically generates the appropriate graph for AP and SM based on the device type.  
 c. The default data path for displayed graphs is **Combined**, and users can customize it to their preferences.  
 d. The dashboard displays **Noise Floor**, which provides noise floor information for both **Path A** and **Path B**. These two graphs are displayed for both AP and SM that are part of the scan.

- e. **Unmapped APs** display any APs that are not assigned to a tower.  
 f. Click **Delete**  icon on the top right corner to delete a job.

**To set Alarm Threshold:**

1. Navigate to **Network Services > Spectrum Analyzer**.
2. Click on the **Set Alarm Threshold** on the top right corner of the Spectrum Analyzer page.

3. Users can set band-specific alarms by configuring threshold values and alarm triggers for specific frequency bands (for example, 5 GHz, 3 GHz, 2.4 GHz, and 900 MHz).
4. These alarms are applied globally to all PMP devices operating in the same frequency band.
5. After configuration, the alarms are displayed on the alarm page, enabling easy monitoring and timely responses to network issues.
6. User can override alarm threshold for AP at the device level:
  - a. Navigate to **Dashboard > Override Alarm Threshold**.

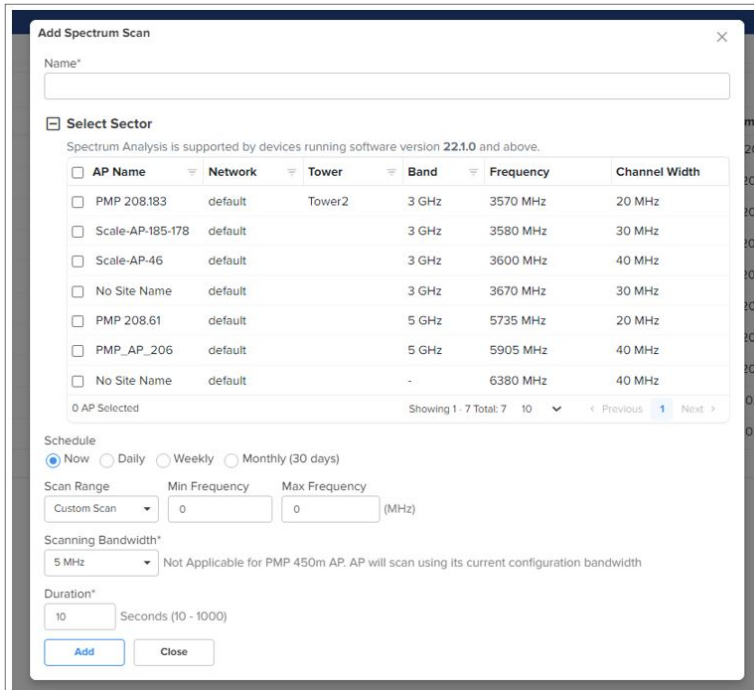

- b. Before overriding, users can review the global alarm threshold values that apply to the entire network.

- c. Choose the specific AP device for which you want to set custom alarm thresholds.
- d. Configure and set individual threshold values for the selected device, overriding the global thresholds only for that specific device.

**To create a new job:**

1. Navigate to **Network Services > Spectrum Analyzer**.
2. Click on **Add New** on the top right corner of the Spectrum Analyzer page.

**Table 163** Add Spectrum Scan parameters

Field	Description
Name	Job name to distinguish the analysis job within the Spectrum Analyzer.
Schedule	Scheduling options, including: <ul style="list-style-type: none"> <li>• <b>Now:</b> Immediate execution of the spectrum analysis.</li> <li>• <b>Daily:</b> Set up a daily schedule for the analysis job.</li> <li>• <b>Weekly:</b> Configure a weekly schedule for the analysis job.</li> <li>• <b>Monthly:</b> Create a monthly schedule for the analysis job.</li> </ul>
Scan Range	The desired scan range from a drop-down with two options:

**Table 163** Add Spectrum Scan parameters

Field	Description
	<ul style="list-style-type: none"><li>• <b>Full Scan:</b> Performs a comprehensive analysis of the entire spectrum.</li><li>• <b>Custom Scan:</b> Set the Min Frequency and Max Frequency to precisely choose the frequency range for a more accurate spectrum analysis.</li></ul>
Scanning Bandwidth	The specific scanning bandwidth from the available options to adjust the spectrum analysis.  <b>Note</b> Scanning Bandwidth is not applicable for PMP 450m AP.
Duration	The analysis duration in seconds, ranging from 10 to 1000 seconds.

3. After creating the job, it appears on the home page with a **Scheduled** status.

# Administration

This section includes the following topics:

- [Managing Users](#)
- [Cloud Anchor Account](#)
- [Settings](#)
- [Audit Logs](#)

## Users

This chapter provides the following details:

- [Managing Users](#)
- [Session Management](#)

## Managing Users

cnMaestro allows you to add Users using the **Administration > Users** page.

### Note

- cnMaestro X account supports up to 200 users.
- cnMaestro Essentials account supports only up to 10 users.

**Figure 560** Adding Users

Username	Invited Email	Role	Email	Status
		Administrator		Active
		Super Administrator		Active
		Super Administrator		Active
		Super Administrator		Active
		Monitor		Active
		Super Administrator		Active
		Administrator		Active
		Administrator		Active
		Monitor		Active
		CPI		Invited

## Role-Based Access

cnMaestro supports the following user Roles:

- **Super Administrator** – Super Administrators can perform all operations.
- **Administrator** – Administrators can modify cnMaestro application functionality, but they are not able to edit User, API, or Server configuration.
- **Operator** – Operators are able to configure device-specific parameters and view all configuration.
- **Monitor** - Monitors have only the view access.
- **CPI** - CPI can perform onboarding the devices using the CBRS tool and has the view access only.

**Note**

- cnMaestro allows one to limit the number of concurrent sessions for each Role and display current active user sessions.
- CPI role is authorized only when the **CBRS** is Enabled.

## Role-Mappings

The table below defines how Roles are authorized to access specific features.

**Table 164** *Role-Mappings*

Feature	Description
Access Control Policies	Configure policies to control users connectivity to the network. <ul style="list-style-type: none"> <li>• Super Administrator - All</li> <li>• Administrator - All</li> <li>• Operator - All</li> <li>• Monitor - None</li> <li>• CPI - None</li> </ul>
Application Operations	Application level operations such as to create, update and delete operations for Networks, Towers/Sites. Bulk device configuration. <ul style="list-style-type: none"> <li>• Super Administrator - All</li> <li>• Administrator - All</li> <li>• Operator - None</li> <li>• Monitor - None</li> <li>• CPI - None</li> </ul>
Application Settings	Change global application configuration and onboarding key. <ul style="list-style-type: none"> <li>• Super Administrator - All</li> <li>• Administrator - All</li> <li>• Operator - None</li> <li>• Monitor - None</li> <li>• CPI - None</li> </ul>
Assists	Scan device configurations and generate assists scores, which in turn helps in isolating configuration issues in a deployment. <ul style="list-style-type: none"> <li>• Super Administrator - All</li> <li>• Administrator - All</li> </ul>

**Table 164** Role-Mappings

Feature	Description
	<ul style="list-style-type: none"> <li>• Operator - All</li> <li>• Monitor - All (<b>Fix Now</b> is not allowed)</li> <li>• CPI - All (<b>Fix Now</b> is not allowed)</li> </ul>
Citizen Broadband Radio Service Subscription (CBRS)	<p>Support CBRS-compliant devices in the 3.6 GHz band (from 3550 MHz to 3700 MHz)</p> <ul style="list-style-type: none"> <li>• Super Administrator - All</li> <li>• Administrator - All</li> <li>• Operator - None</li> <li>• Monitor - None</li> <li>• CPI - All</li> </ul>
cnArcher Installation Summary	<p>View installation summary of PMP ePMP, and cnRanger SMs installed using the cnArcher Mobile Application.</p> <ul style="list-style-type: none"> <li>• Super Administrator - All</li> <li>• Administrator - All</li> <li>• Operator - All</li> <li>• Monitor - None</li> <li>• CPI - View</li> </ul>
Configuration/Software Update	<p>Manage configuration/software update jobs.</p> <ul style="list-style-type: none"> <li>• Super Administrator - All</li> <li>• Administrator - All</li> <li>• Operator - All</li> <li>• Monitor - None</li> <li>• CPI - None</li> </ul>
Custom Applications	<p>Configure applications with a specific IP address or a domain name, and apply filter rules.</p> <ul style="list-style-type: none"> <li>• Super Administrator - All</li> <li>• Administrator - All</li> <li>• Operator - All</li> <li>• Monitor - None</li> <li>• CPI - None</li> </ul>
Device Operations	<p>Device operations such as reboot device, link test, connectivity test, tech support file download, and Wi-Fi performance test.</p> <ul style="list-style-type: none"> <li>• Super Administrator - All</li> <li>• Administrator - All</li> <li>• Operator - All</li> </ul>

**Table 164** *Role-Mappings*

## Creating Users and Configuring User Roles

To add an administrator:

1. Navigate to **Administration > Users** page.
2. Click **Add User** button. The following window is displayed:

3. Enter the email address in the **Email** box.

- To configure the User Role, select any one of the role for the user from the **Role** drop-down list:
  - Super Administrator
  - Administrator
  - Operator
  - Monitor
  - CPI
- Click **Send** button to add this user.

To edit or delete a user, click the Edit icon or the Delete icon against the user in the **Administration > Users** page.

## Whitelisting specific domains

Using the **Administration > Users** page, you can allow (or whitelist) a specific domain (for example, gmail.com). When users from the whitelisted (or allowed) domain are added, an invite email is sent directly to them. When the users accept the invite, they are allowed to access a particular cnMaestro UI account.

You can also blacklist or disallow a specific domain to prohibit all users of that domain from accessing the UI account.

### Note

- Domain whitelisting is not applicable to NFR User accounts.
- For users from the whitelisted domains, you can create the MSP user account.

To whitelist or blacklist a specific domain, perform the following steps:

- Navigate to **Administration > Users** page.

The **Manage Users** page appears.

Administration > Users

[Manage Users](#) [Session Management X](#)

Invite others to manage this account. Up to 200 users can manage an account. [Learn more](#)

Apply Filter(s) Allowed Domains Add User Invite Cambium Support Delete

<input type="checkbox"/>	Username	Invited Email	Role	Email	Status	
<input type="checkbox"/>			Super Administrator		Active	
<input type="checkbox"/>			Super Administrator		Active	
<input type="checkbox"/>			Super Administrator		Active	
<input type="checkbox"/>			Super Administrator		Active	
<input type="checkbox"/>			Super Administrator		Active	
<input type="checkbox"/>			Super Administrator		Active	

- To add a new domain (for example, a gmail ID), click on the **Add User** button.

The **Add User** window appears. You must set the fields, as described in the [Creating Users and Configuring User Roles](#) section. The **Add User** window also displays that the email ID used is a new domain, as shown in the following example (in this case, gmail.com is the new domain):

3. Select the **Allow users in "gmail.com" domain** check box (the domain name varies based on the email ID you add).

The new domain is added to the database.

When users who belong to this allowed domain (for example, gmail.com) are added (using the **Add User** button), an invite email is directly sent to the users. When the users accept the invite, they can access a particular cnMaestro UI account. The **Allow users in "gmail.com" domain** checkbox is available only when you are adding a new domain.

4. To blacklist or disallow a specific domain, click on the **Allowed Domains** button on the **Manage Users** page.

The **Allowed Domain** window appears with a list of whitelisted domains.

5. Uncheck the required domain check box to blacklist that specific domain.
6. 1. Select **Update**.

All users from that blacklisted domain are not allowed to access the UI. To allow the blacklisted domain, you must check the required domain check box on the **Allowed Domain** window.

## Session Management

View and optionally log out current cnMaestro administrator sessions. The users with Super Administrator role can logout all other users sessions and the users with Administrator role can logout Operator and Monitor accounts.

### Sessions

Displays the detailed information on the user sessions.

# Cloud Anchor Account

This chapter provides the following details:

- [Manage Instances](#)
- [Inventory](#)
- [Administration](#)
- [Network Services](#)
- [Manage Subscriptions](#)

## Manage Instances

Registration of On-Premise customer accounts to Cloud is addressed by this feature. This will allow us to do many synchronization things in On-Premises instances, similar to Cloud will have the inventory stats from instances.

Manage Instances describes the following

- Onboarding
- On-Premises Instances
- Notifications

## Onboarding

To onboard the devices to the Cloud Anchor Account, you need to create the Cloud account before connecting to cnMaestro On-Premises:

1. Log in to the cnMaestro UI, <https://cloud.cambiumnetworks.com>.

2. In **Account Type**, select **Anchor**.

**Create a New Cloud Account**

A Cloud Account allows you to manage your devices. Create an account for your company.

You can also be invited to manage an existing account: contact the administrator of the account to receive an email invitation.

**Cambium ID**

Create a Cambium ID. For example: ACME\_Premises\_123

The Cambium ID is a string that uniquely identifies this account. It consists of letters, numbers, and underscores, and it is used to onboard devices. It is also written to devices managed by cnMaestro (and can be accessed in their UI). Once set, the Cambium ID can only be changed by contacting Cambium Support.

**Friendly Name**

cambiumnetworks

A friendly name for this account. This could be the name of the company.

**Country**

India

The country where devices in this account are located.

**Time Zone**

Etc/GMT+12 (UTC 12:00)

The time zone used to calculate daily statistics.\*

**Account Type**

**NMS**  
Use cnMaestro cloud for device management

**Anchor**  
Host a copy of cnMaestro in your own data center, connected to this account.

Select the type of account. If you plan to host private copies of cnMaestro in your data center, then select the Anchor choice. This account will allow your local cnMaestro servers to connect to the cnMaestro Cloud to simplify firmware upgrades, license management etc.

**Onboarding Key**

Please enter the Onboarding Key

Allow cnMaestro On-Premises instances to onboard into this account. You need to add the Cambium ID and onboarding key through cnMaestro On-Premises UI.

I agree to the [cnMaestro Terms of Service](#).

3. Enter the On-Premises **Onboarding Key**.
4. Click I agree to the cnMaestro **Terms of Service**.
5. Click **Create Account**.
6. When the Anchor Account is created, an Onboarding Key must be set to allow On-Premises instances to connect.
7. Navigate to the **Manage Instances** page as shown below and allows you to change the **Onboarding Key** and **Disable Onboarding**.

This key needs to be entered in the cnMaestro On-Premises UI to connect to the Anchor Account.

**Manage Instances**

**Onboarding** On-Prem Instances Notifications

Allow cnMaestro On-Premises instances to onboard into this account.  
You need to add the Cambium ID and onboarding key through cnMaestro On-Premises instance UI.

**Cambium ID: HKR\_SRV\_6\_ANCHOR**

## On-Premises Instances

Once the On-Premises server has been onboarded with the Key, it will be included in the **On-Prem Instances** page. Multiple On-Premises installations can be added to a single Anchor Account.

## Administration

Administration provides the following details:

- Users
- Audit Logs

## Users

cnMaestro allows to add Users using the **Administration > Users** page. A maximum of ten users are currently allowed in the system.

Figure 561 Adding Users

## Role-Based Access

On successful authentication, every request from this user is processed in light of their Role.

cnMaestro supports the user Role:

- **Super Administrator** – Super Administrators can perform all operations.

## Creating Users and Configuring User Roles

To add an administrator:

1. Navigate to **Administration > Users** page.
2. Click **Add User** button. The following window is displayed:

3. Enter the ID in the **Email** text box.
4. Click **Send** button to add this user.

To delete, click the delete icon against the user in the **Administration > Users** page.

## Session Management

View and optionally log out current cnMaestro administrator sessions. The users with Super Administrator role can logout all other users sessions and the users with Administrator role can log out Operator and Monitor accounts.

Administration > Users

Manage Users Session Management X

## Network Services

Network Services provide the following details:

- CBRS
- Organization

### CBRS

Citizens Broadband Radio Service subscription for the CBRS-compliant devices in 3.6 GHz band (3550 MHz to 3700 MHz).

For further information, refer to [CBRS](#).

### Organization

An Organization allows multiple accounts to share CBRS billing and SAS ID. The Primary account owns this configuration, and the Secondary account can optionally share it. Both accounts must authorize the sharing.

For further information, refer to [Organization](#).

## Manage Subscriptions

Manage Subscriptions provide the following details:

- Subscriptions
- Devices
- On-Premises Instances

### Subscriptions

Subscriptions page describes about the usage summary and a list of pending, active, and expired subscriptions. It aids planning for renewals and the purchase of new subscriptions.

Manage Subscriptions

It also supports editing the system generated subscription names to more user-friendly names for ease of tracking.

To edit the **Subscriptions** perform the following steps:

1. click edit (✎) icon.

Edit window pops up as shown below.

**Edit** ✕

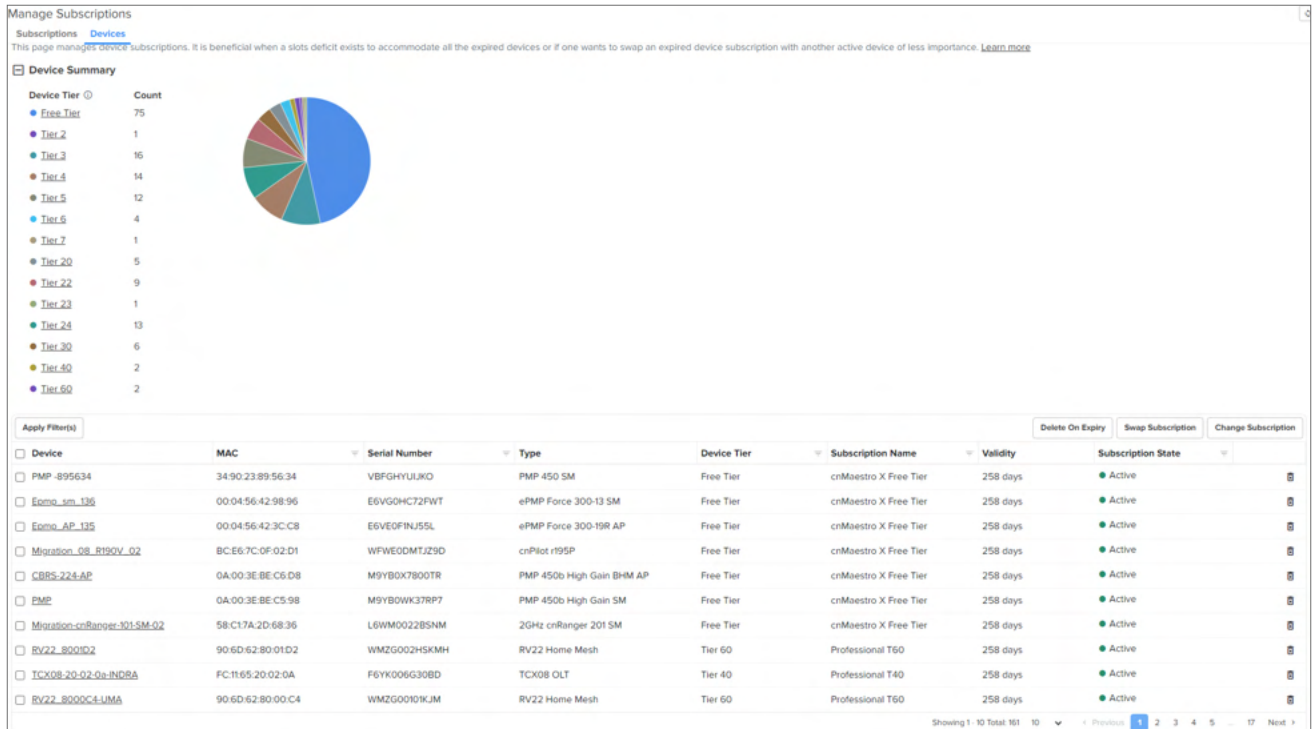

Name

Description

2. Enter **Name** and **Description**.
3. Click **Save**.

## Devices

Devices page manages device subscriptions. It is beneficial when a slots deficit exists to accommodate all the expired devices or if one wants to swap an expired device subscription with another active device of less importance. For more info refer to Subscription Management.

## Audit Logs

**Note:**

Audit Logs are supported only for cnMaestro X subscribers.

Audit Logs record administration activities through both the Web UI and the RESTful API. Audit Log entries usually include destination and source addresses, a timestamp and user login information. User can access Audit Logs in the **Administration > Audit Logs** page.

**Figure 562** Audit Logs

Result	Time	Type	Module	Action	Source	IP Address	Description
Success	10 May 2024, 02:35 AM	Operations	Infrastructure	Download			Successfully initiated Edge controller techdump for ec-2ae3ecc4f00d
Success	09 May 2024, 09:16 PM	Security	Administrator	Login			logged in successfully
Success	09 May 2024, 09:14 PM	Security	Administrator	Logout			logged out

Success	09 May 2024, 08:53 PM	Operations	Device	Delete			Device deletion initiated for MAC - [redacted]
Success	09 May 2024, 08:53 PM	Operations	Device	Delete			Device deletion succeeded for MAC - [redacted]

The following table describes the Audit Logs parameters and their descriptions.

**Table 165** Audit Log Parameters

Parameter	Description
Action	Displays the action performed by the user (create, delete, download, etc).

**Table 165** *Audit Log Parameters*

Parameter	Description
Description	Textual description of the task.
Export	Enable export as CSV or PDF.
IP Address	IP address of the Web browser or API application.
Module	Module generating entry (AAA, administrator, alarm).
Result	The result of the audit log as <b>Success</b> or <b>Failed</b> .
Source	Administrator or API client name.
Time	The time when the action was performed.
Type	Type of the log entry (configuration, operation, onboarding, security).

## Log Action

An action log contains a set of transactions. Each transaction contains one or more Actions. Each Action has a name and input parameters. Some Actions have output parameters.

The following Actions will be supported for individual Audit Log entries. Each activity performed in the server is detailed in this table.

**Table 166** *Log Action Parameters*

Parameter	Description
Claim	Claim a device in the network operator.
Cloud-Connect	Provides the status of the On-Premises to Cloud account connection.
Create	Create an object in the network device.
Delete	Delete an object in the network device.
Download	Download a file.
Edit	Edit an existing device detail.
Link Test	Perform a Link Test.
Login	Login to a device.
Logout	Logout from a device.
Mail	Mail ID of a device.
Move	Move a device from the server.
Reboot	Reboot a device.
Reset	To reset a device
Upload	Upload a file on the server.

## Audit Modules

Auditing activity is mapped to individual modules within cnMaestro. A breakdown of the available modules is listed below.

Module	Type (s)	Description
ACL	provisioning	Adding Editing Removing the ACL Entries.
administrator	provisioning operations security	User Management: Login, Users, Roles, Email, etc.

Module	Type (s)	Description
alarm	provisioning	Alarms and Alarm History.
api	provisioning	API Management: API Clients and Webhooks.
auditing	provisioning	Auditing Infrastructure.
auto-provision	provisioning	Auto-Provisioning.
CBRS	Services	CBRS.
Cloud- Sync	Services	Synchronizing the Cloud to On-Premises Instances.
data-tunnel	provisioning	Data Tunneling.
device	provisioning operations	Device management.
Email-Notifications	operations	Add or edit Email notification.
guest-portal	provisioning	Guest Portal.
infrastructure	provisioning	Site, Network, Tower Management.
jobs	provisioning operations	Jobs Infrastructure.
license	licensing	Update license details.
MSP	operations	Operations covering Managed Services and Managed Account.
onboard	provisioning operations	Onboarding Queue.
report	provisioning operations	Data Reports.
Profile	provisioning	Create or update a profile.
SIM	provisioning	SIM claim and delete.
system	provisioning operations security	System Services: VM management, change log level, system upgrade, system monitoring, software images, system settings.
template	provisioning	Template-Based Configuration.
tools	provisioning operations	Technical support dump, networking operations, etc.
webhooks	provisioning	Webhooks configuration and management.
Wi-Fi	provisioning operations security	AP Groups, WLANs: edit W-Fi configuration objects.

## Settings

### Email Notifications

The Email Notifications feature allows the Super Administrator and the Administrator users to add subscribers (Email IDs) for receiving different types of alerts by means of Emails.

### Note

- Only 2 email recipients can be added per cnMaestro Essentials account.
- Up to 10 email recipients can be added per MSP, Base Infra, and system level scope.

For example, if there is one MSP, you can create 10 recipients at MSP, 10 at Base Infra, and 10 at system level (All accounts scope).

The severity of alerts are classified as follows:

- Critical
- Major
- Minor

The content of the email alert will be in JSON or HTML format. The subscriber will get email alert only when the global setting is enabled.

**Figure 563** *Email notifications page*

## Adding Recipient to Subscriber Table

1. Navigate to **Administration > Settings > Notifications** page.

**Figure 564** Adding Subscribers

The screenshot shows the 'Administration > Settings' page with the 'Notifications' tab selected. Under 'Settings', the 'Enable email notification' checkbox is checked. Below this, there is a section for 'Subscribers' with a table and an 'Add Recipient' button highlighted in a pink box. The table has columns for Email, Content Type, Severity, Status, Scope, Last Modified, and Ignore Notification. The table contains 8 rows of subscriber data.

Email	Content Type	Severity	Status	Scope	Last Modified	Ignore Notification
[Redacted]	html	Major	Active	All Accounts	May 07 2024 14:44:24	PMP SM Offline, cnPilot Home Offline, ePMP ...
[Redacted]	json	Major	Active	All Accounts	May 07 2024 14:44:24	PMP SM Offline, cnPilot Home Offline, ePMP ...
[Redacted]	html	Minor	Active	All Accounts	May 07 2024 14:44:24	PMP SM Offline, cnPilot Home Offline, ePMP ...
[Redacted]	html	Minor	Active	All Accounts	May 07 2024 14:44:24	PMP SM Offline, cnPilot Home Offline, ePMP ...
[Redacted]	json	Major	Active	All Accounts	May 07 2024 14:44:24	
[Redacted]	json	Minor	Active	[Redacted]@MSP	May 07 2024 14:44:24	
[Redacted]	html	Major	Active	All Accounts	May 07 2024 14:44:24	PMP SM Offline, cnPilot Home Offline, ePMP ...
[Redacted]	html	Major	Active	All Accounts	May 07 2024 14:44:24	PMP SM Offline, cnPilot Home Offline, ePMP ...

2. Click **Add Recipient**.

The following window is displayed:

The 'Add Email Subscriber' dialog box is shown. It has a close button (X) in the top right corner. The 'Active' checkbox is checked. The 'Severity' dropdown is set to 'Major'. Below it, the text reads 'All alarms of chosen severity or greater will be sent.' The 'Email' field is a text input with the placeholder 'Enter Email ID'. The 'Content Type' section has two radio buttons: 'HTML' (selected) and 'JSON'. The 'Managed Account' dropdown is set to 'All Accounts'. The 'Ignore Notification' section has three checked checkboxes: 'cnPilot Home Offline', 'ePMP SM Offline', and 'PMP SM Offline'. At the bottom, there are 'Cancel' and 'Add' buttons.

3. Enter the Email ID of the subscriber in the **Email** textbox.
4. Select the severity level from the **Severity** list.
5. Select the Managed Account type from the **Managed Account** list.
6. Choose **HTML** or **JSON** radio button for the **Content Type**.
7. Select the appropriate option (s) for **Ignore Notification**.
8. Click **Add** and the entry reflects in the subscriber table.

All alarms of chosen severity and above are sent through email as explained below:

- If severity **Critical** is selected, then we receive only critical alarms.
- If severity **Major** is selected, then we receive critical and major alarms.
- If severity **Minor** is selected, then we receive critical, major, and minor alarms.

## HTML Email Example

## Account Type

cnMaestro supports three separate account types, based upon the composition of devices installed. The type is set when the account is created initially, but it can be changed later through the **Administration > Settings** page.

For more information, refer [Navigating the cnMaestro UI](#).

# Managing Device software images under Automatically Update Device Software section

cnMaestro cloud allows one to update the device software during onboarding and for managed devices. Adding update device software is a manual process as follows:

1. Navigate to **Administration > Settings > Software Images > Automatically Update Device Software** tab.
2. Select the version file and then click **onboarding/Managed Devices** checkbox.

**Note**  
Enable the onboarding checkbox, in order to avoid the failure of onboarding devices with minimum supported version rather than the recommended version.

3. Enable the checkbox as follows:
  - Enable **Managed Devices** flag only for Wi-Fi devices (E-Series, R-Series and XE/XV/X7-Series).
  - Enable **Sequential Site Update** and **Both Partitions** flag only for only E-Series and XE/XV/X7-Series devices.
4. click **Apply Settings**.

**Note**

- Once auto software update job for managed devices is triggered, it will automatically abort any manually scheduled software update jobs.
- In order to avoid failures in onboarding devices having minimum supported version other than recommended version, enable the onboarding check.

# Appendix

This section includes the following topics:

- [Network Port Requirements](#)
- [XMS-Enterprise to cnMaestro X](#)
- [Converting Tier 2 Unused Slots](#)

## Network Port Requirements

### Network Port Requirements for Outbound

The following table provides information about network port requirements for outbound:

**Table 167** *Outbound Port Details*

Port Number	Port Type	Purpose
443	TCP	HTTPS Web Access and Device communication

## XMS-Enterprise to cnMaestro X

This section describes the process of migration from XMS-Enterprise (XMS-E) to cnMaestro X.

Before you begin migration, upgrade the following to the latest version:

- XMS-E to version 8.4.0
- Xirrus APs to version 8.7.0

Perform the following steps for migration:

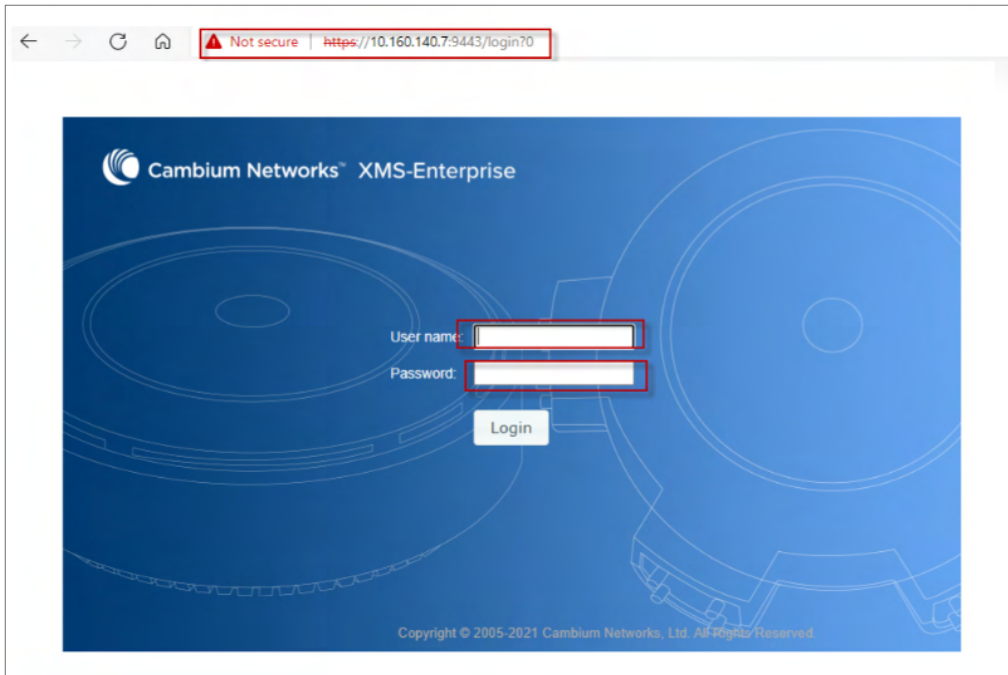

1. In XMS-E, perform the following actions:
  - [Export Golden Configuration](#)
  - [Migrate to cnMaestro X](#)
2. In cnMaestro X, perform the following actions:
  - [Create Wi-Fi AP Group](#)
  - [Approve APs into Wi-Fi AP Group](#)
  - [Import and Apply AP configuration](#)

### XMS-E System

To login to XMS-E, complete the following steps:

1. Launch the Web login page.
2. Enter the username and password.

3. Click **Login**.

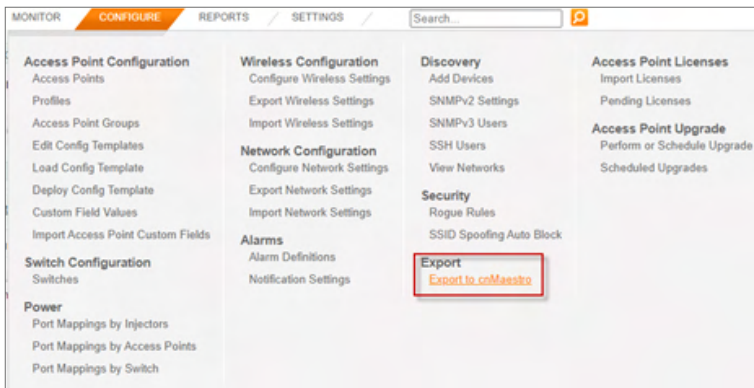

## Export Golden Configuration

Export Golden Configuration for one of the APs. It is saved as a zipped file in the local file system.

To start export golden configuration in XMS-E, navigate to **Configure** tab > **Export**.

1. Select **Export to cnMaestro**.

2. Select the AP to create the golden configuration for a group of APs and click **Next**.

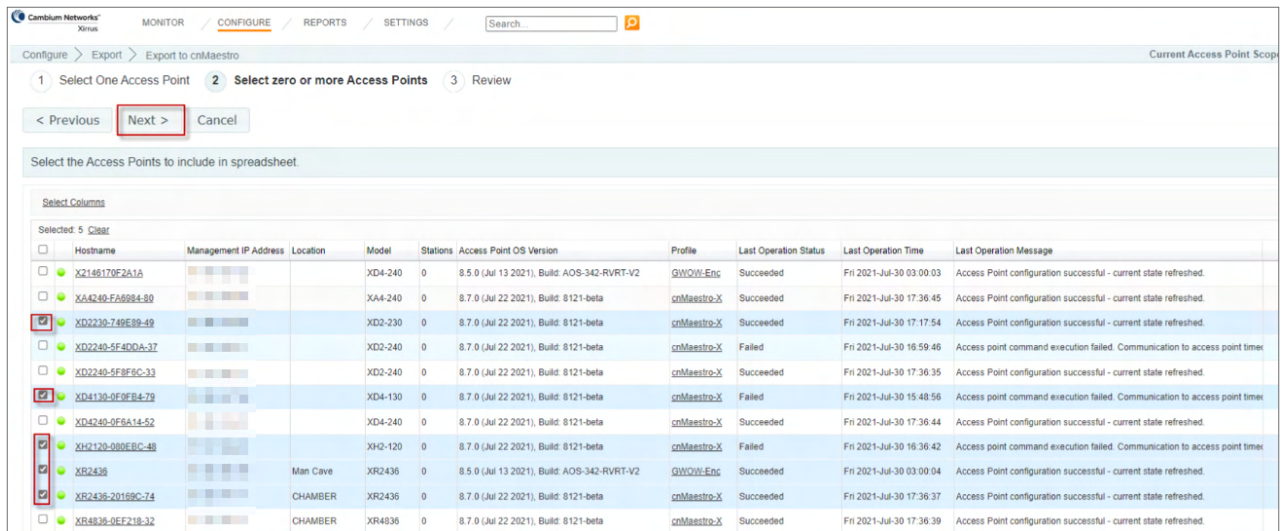

### Note

- Select the AP with the maximum radios and the highest capability.
- During the migration of an AP from XMS-E to cnMaestro, the AP configurations are not modified.

3. Select group of APs to be added to the spreadsheet and click **Next**.

4. Click **Export**.

In Local System unzip the directory and files to local directory.

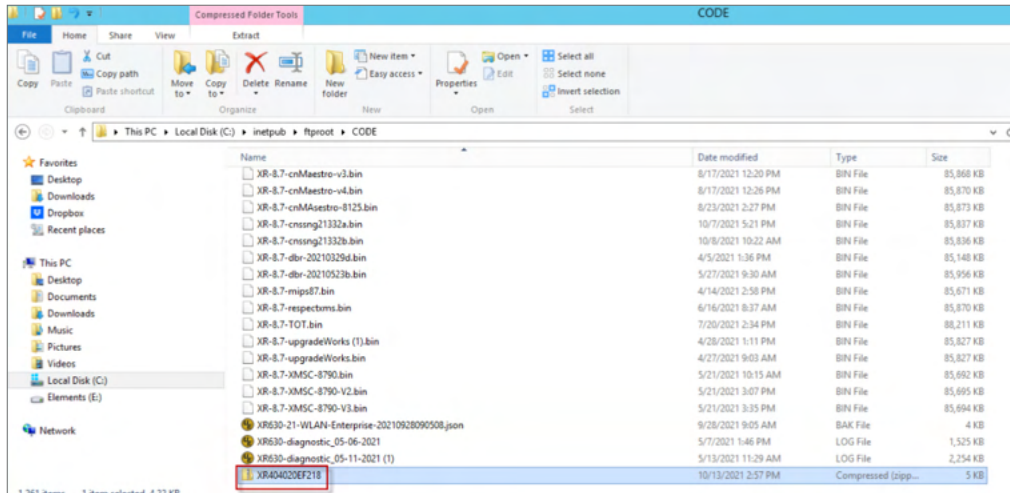

5. Download the zip files from the browser window.

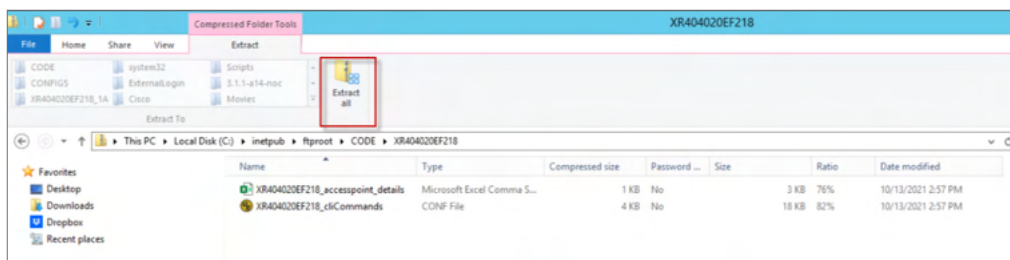

6. Go to the folder where the zipped files are saved and extract the contents to a folder.

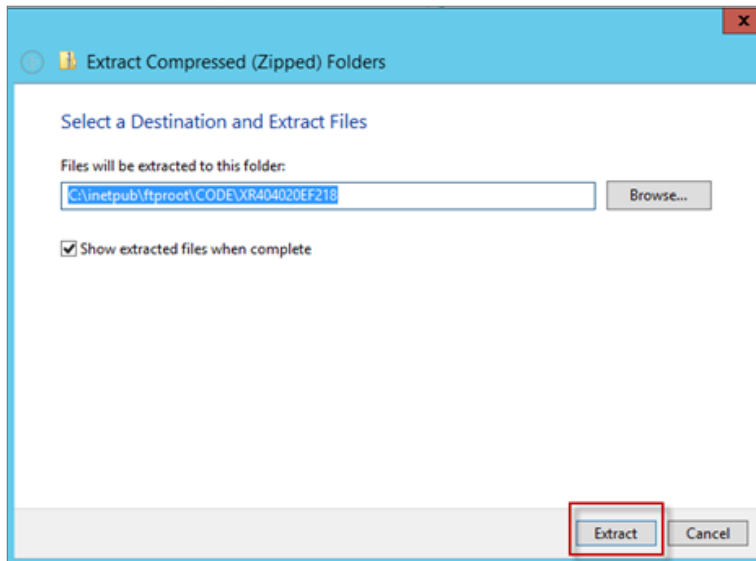

7. Open the directory path where the file has been stored and double-click on the zipped file.

8. Click **Extract all**.

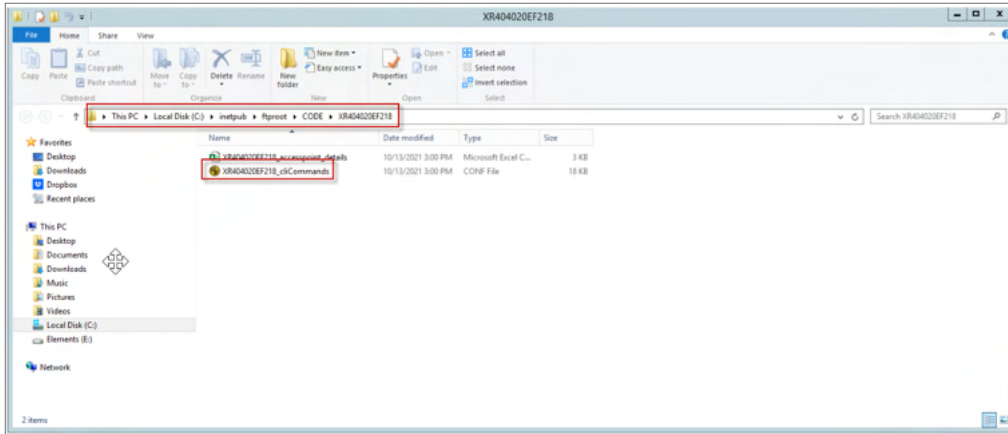

9. Extract the folder to the path.

10. Make a note of the folder or file location as you will require this file later.

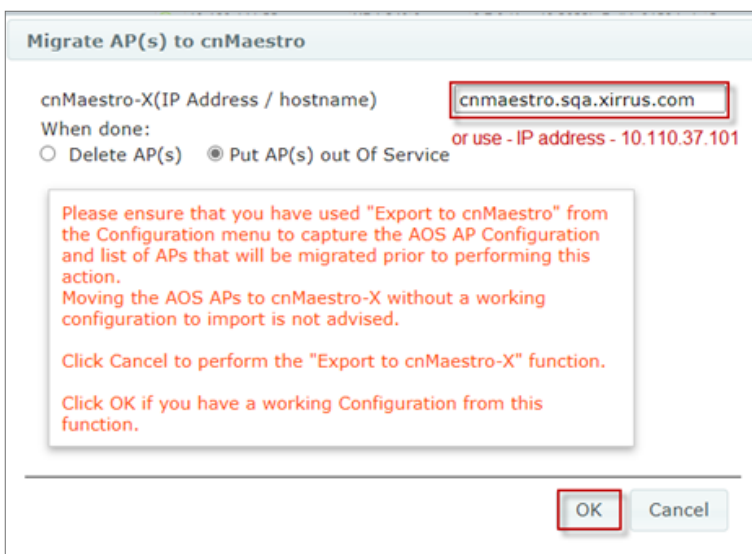

## Migrate to cnMaestro X

Select APs to migrate to cnMaestro X. Perform the following steps:

1. Navigate to the **More** menu > select **Migrate APs to cnMaestro**.

2. Enter the IP address or Hostname mapped in DNS for cnMaestro X.
3. Select **Delete AP** or **Put AP(s) out of Service** and click **OK**.

### Note

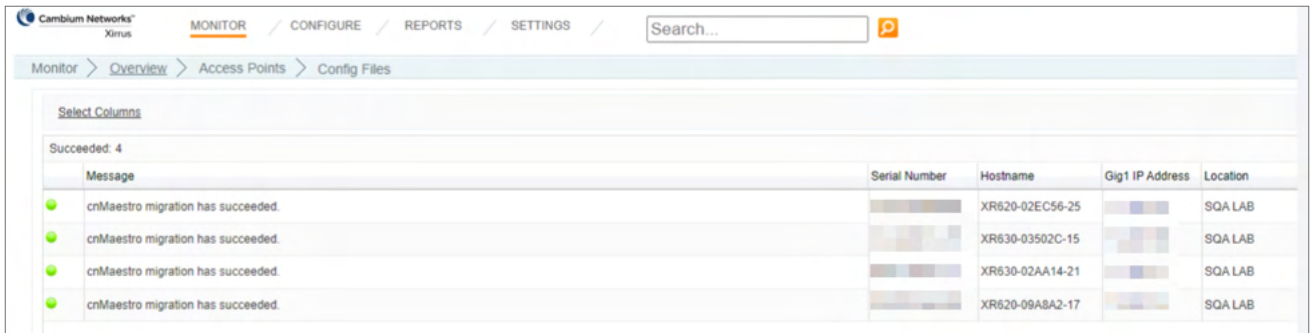

- Out of service APs are not removed from XMS-E, so if there is an issue, select the **Return APs to**

**Service** option and they will return to XMS-E.

- You must reset using the `snmp trap host 1 Xirrus-XMS AP CLI` command on the AP for the return to service to work.
- If you select **Delete APs**, they will be removed and you must rediscover them on the network to return them to XMS-E.
- You should also remove the Device Network from the Device discovery section to clean up XMS-E.

A success message from XMS-E for each of the APs migrated to cnMaestro X is displayed.

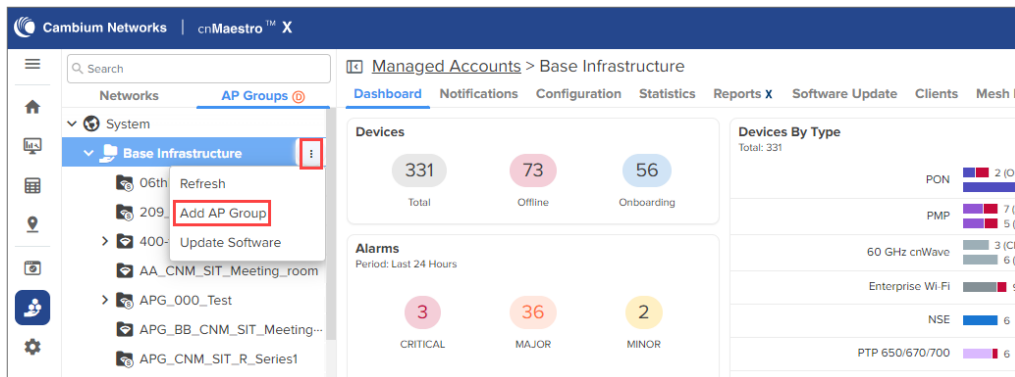

The screenshot shows the 'Monitor > Overview > Access Points > Config Files' page. A 'Select Columns' dropdown is open, and a table displays four successful migration messages. The table has columns for Message, Serial Number, Hostname, Gig1 IP Address, and Location.

Message	Serial Number	Hostname	Gig1 IP Address	Location
cnMaestro migration has succeeded.		XR620-02EC56-25		SQA LAB
cnMaestro migration has succeeded.		XR630-03502C-15		SQA LAB
cnMaestro migration has succeeded.		XR630-02AA14-21		SQA LAB
cnMaestro migration has succeeded.		XR620-09A8A2-17		SQA LAB

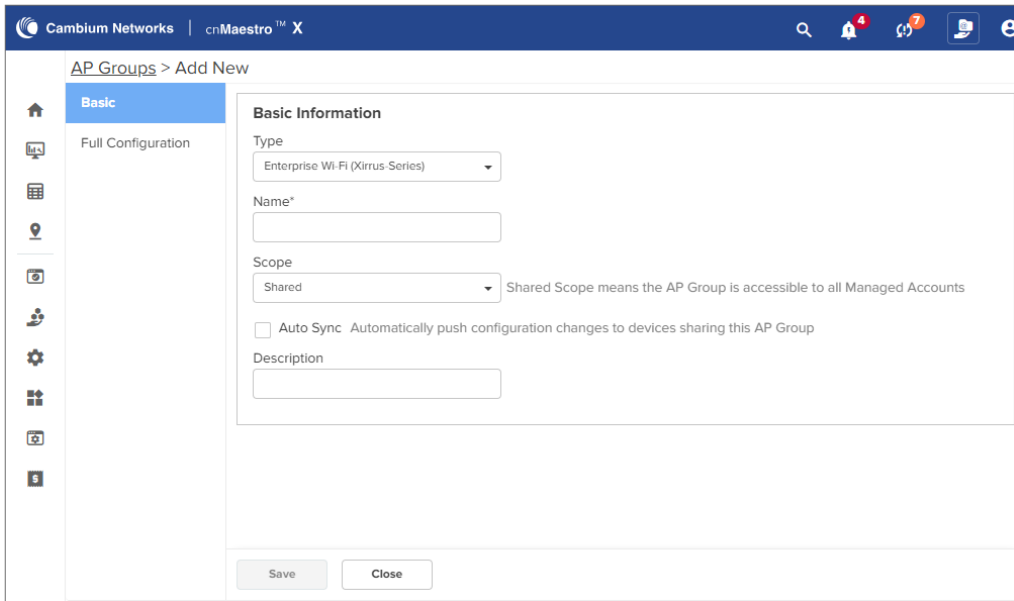

## Create Wi-Fi AP Group

Create Wi-Fi AP Group and Import CLI command file from exported directory.

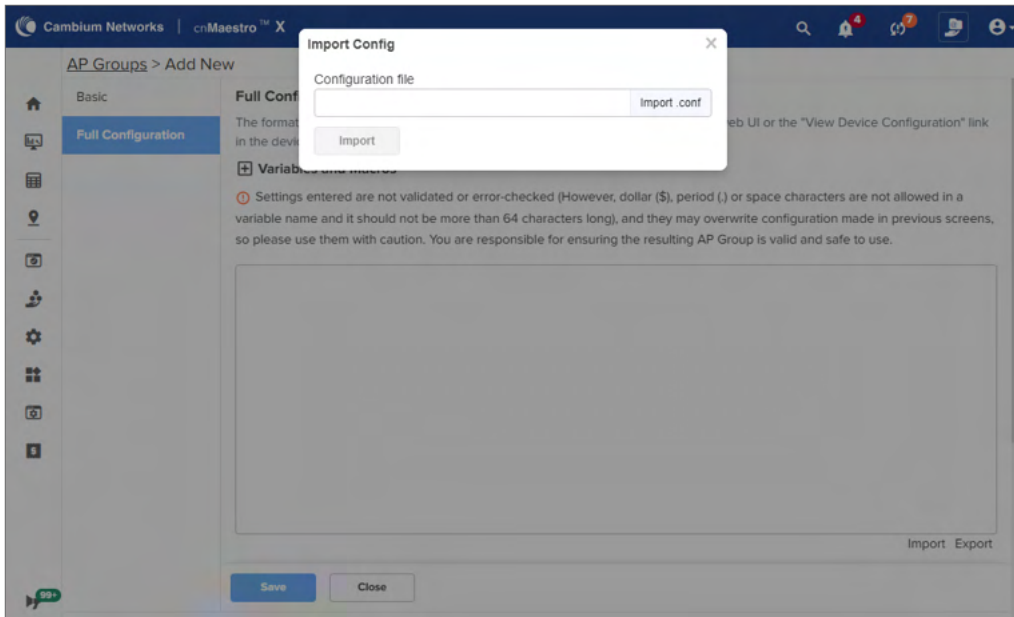

1. Navigate to **Wi-Fi AP Group > Base Infrastructure** > click action (  ) icon to add **Add AP Group**.

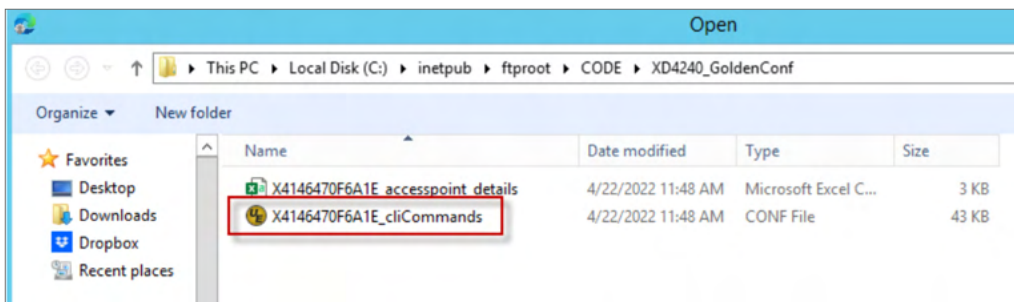

2. In the **Basic Information** page, select Type as **Enterprise Wi-Fi (Xirrus-Series)** from the drop-down.
3. Select the **Auto-Sync**.
4. Click **Save**.

5. In the **Full Configuration** page, click the **Import** option.

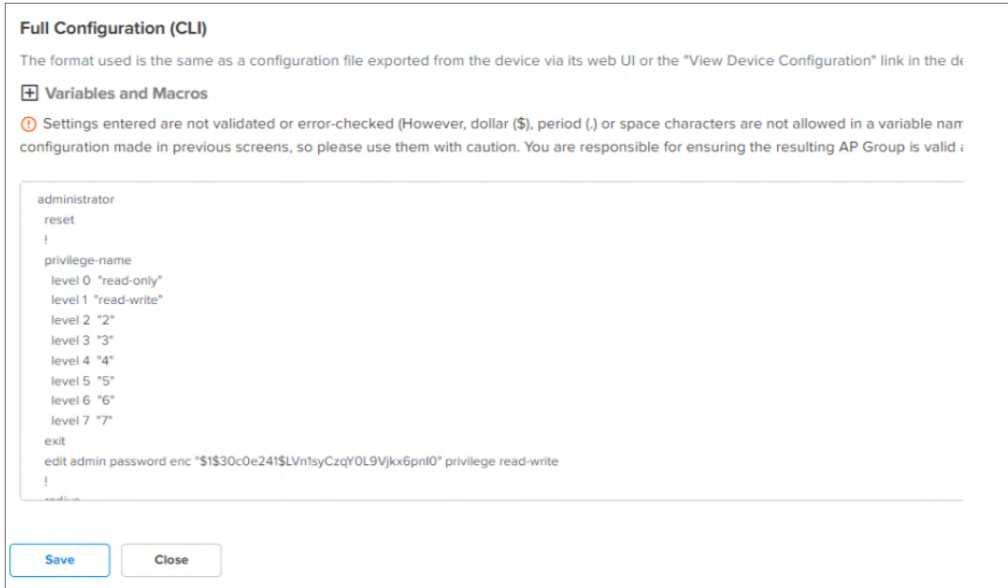

6. Select the CLI command file from the unzipped directory.

7. Click **Import**.

The configuration file is displayed.

8. Click **Save**.

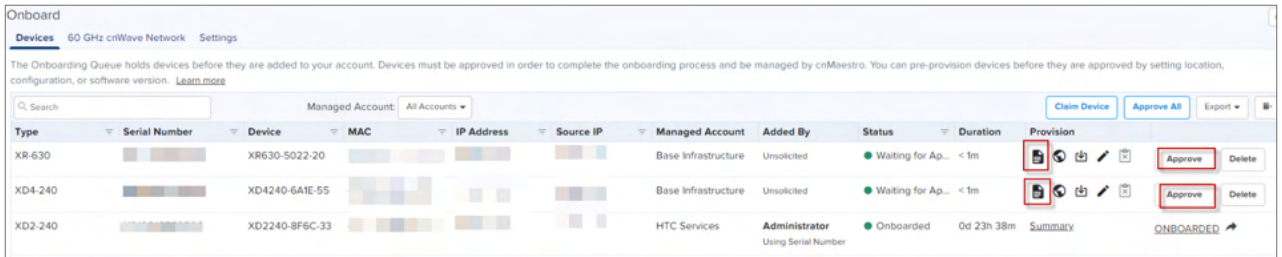

### Approve APs into Wi-Fi AP Group

APs pending for approval in cnMaestro X based on the **Migrate APs to cnMaestro X** steps as described above.

You can claim APs to approve from the **Onboard > Devices** page.

Perform the following steps to approve APs from the **Onboard > Devices** page.

1. Navigate to the **Onboard > Devices** page and click **Approve All** (to approve all devices at once) or **Approve** (to approve devices individually.)

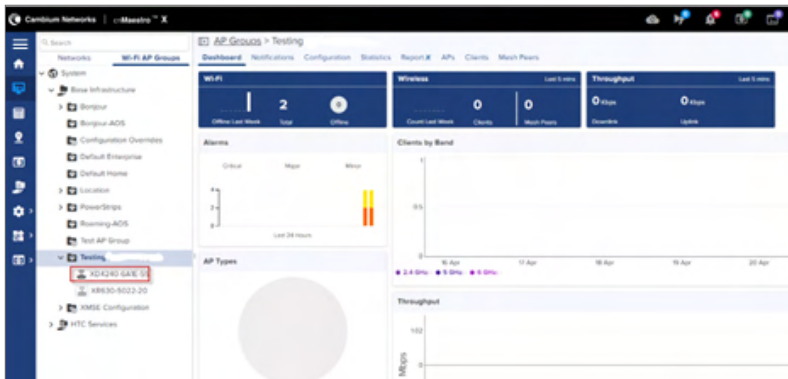

2. Enter the required details, provision the device for location, and assign to an AP Group.

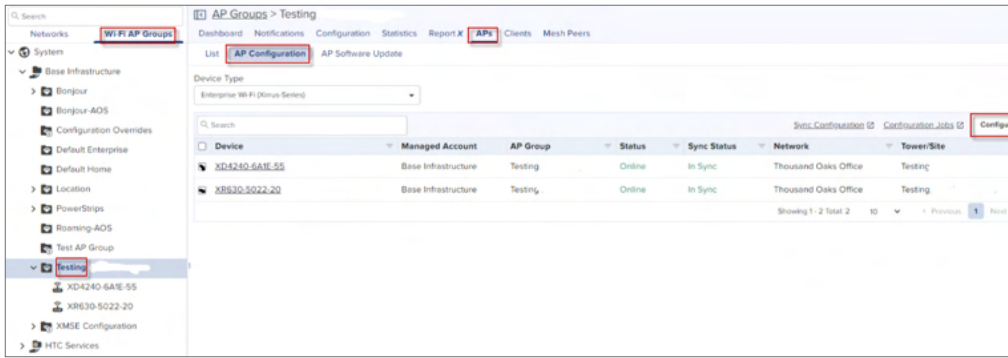

3. Click **Save**.
4. In the **Onboard > Devices** page, select **Approval All** (to approve all devices at once) or **Approve** (to approve devices individually.)

## Import and Apply AP configuration

APs imported are ready for basic configuration. Import AP configuration using the CSV file from the exported directory.

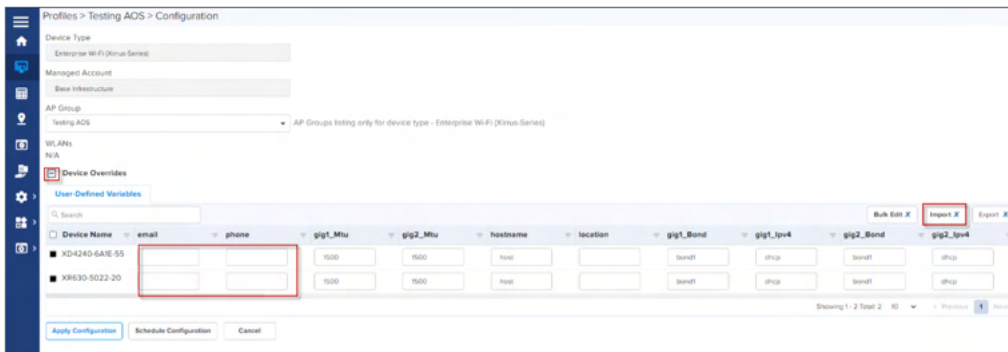

1. Navigate to **Wi-Fi AP Group > select AP Group > AP Configuration**.
2. Select all APs to configure, click **Configure**.

3. In Device Override table, verify AP details and click **Import**.

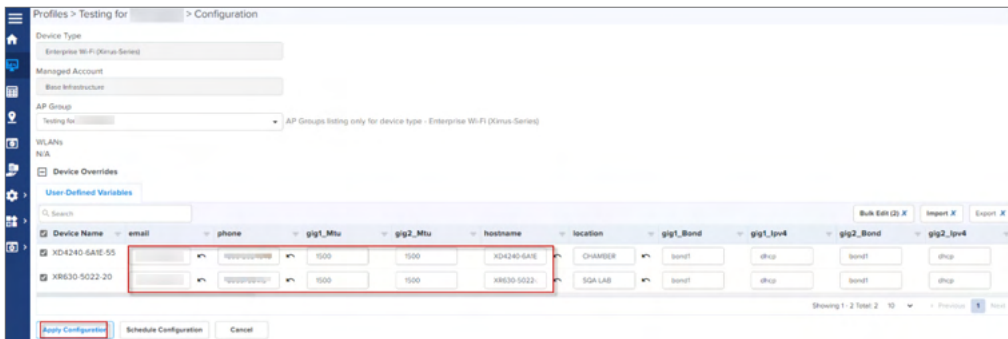

**Note**  
Email and Phone fields are auto populated from the .csv file.

4. Select the .csv import file from the unzipped directory folder and click **Apply**.

All the configuration values from the CSV file are populated for each AP. The data is auto populated to the **User Defined Variables** tab. The APs receive complete configurations including all IAP settings.

5. Click **Apply Configuration**.

**Apply Configuration** ✕

Stop update on critical error

10 Devices to update in parallel (1-500)

Notes

Apply Configuration to 2 device(s)
Cancel

When the APs are completely configured, **Sync Status** is displayed as **In Sync**.

Device	Managed Account	AP Group	Status	Sync Status
<input type="checkbox"/> XD4240-6A1E-55	Base Infrastructure	Testing	Online	Not In Sync
<input type="checkbox"/> XR630-5022-20	Base Infrastructure	Testing	Online	Not In Sync

You have to refresh the page to view the updated **Sync Status**.

Device	Managed Account	AP Group	Status	Sync Status	Network	Tower/Site

<input type="checkbox"/> XR630-5022-20	Base Infrastructure	Testing AOS	Online	Not In Sync	Thousand Oaks Office	Testing_for_...

## Converting Tier 2 Unused Slots

Cambium Networks has introduced new product family-based cnMaestro X SKUs and pricing for devices such as Fixed Wireless Broadband APs, cnRanger, cnReach, cnVision, PMP, ePMP, and PTP. Earlier, the Tier 2 subscription was used to control these devices (pricing). To simplify the purchase and onboarding for these devices, Cambium Networks has decided to remove the Tier 2 subscription and introduce new four tiers (Tier 21, Tier 22, Tier 23, and Tier 24).

The Tier 2 subscription is no longer valid now. Due to Tier 2 subscription removal, there can be unused Tier 2 slots in your account (purchased during the Tier 2 subscription). As a solution, Cambium Networks provides an option to convert these unused Tier 2 slots into new tiers based on the device family and requirements. You can manually convert the unused Tier 2 slots to Tier 21, Tier 22, Tier 23, and Tier 24 using the ⓘ icon located on the **Manage Subscriptions** page (cnMaestro UI). This solution helps in better mapping and device management.

### Note

The Convert Tier 2 option is effective from March 1, 2024 for Fixed Wireless Broadband APs, cnRanger, cnReach, cnVision, and PTP devices. You must convert the unused Tier 2 slots in your account to the new Tier 2x slots before onboarding the devices.

When you convert the unused Tier 2 slots into new tiers, you cannot change the new tiers back to Tier 2.

You can convert the unused Tier 2 slots to new tiers, for example, as described in [Table 168](#).

**Table 168** Example of converting unused Tier 2 slots

New Tier	Device Family and Type	
Tier 21	cnVision	FLEXr, HUB360
	ePMP	All AP Models
Tier 22	PMP	All AP Models except 450m and 450mv
Tier 23	PMP	450m
Tier 24	cnRanger	All BBU Models
	cnReach	All cnReach Models
	PTP	All PTP Models

To manually convert the unused Tier 2 slots for a device family, complete the following steps:

1. Log in to your respective cnMaestro UI account.

The **Home** page appears with a banner, as shown in [Figure 566](#).

**Figure 566** The Tier 2 conversion-specific banner

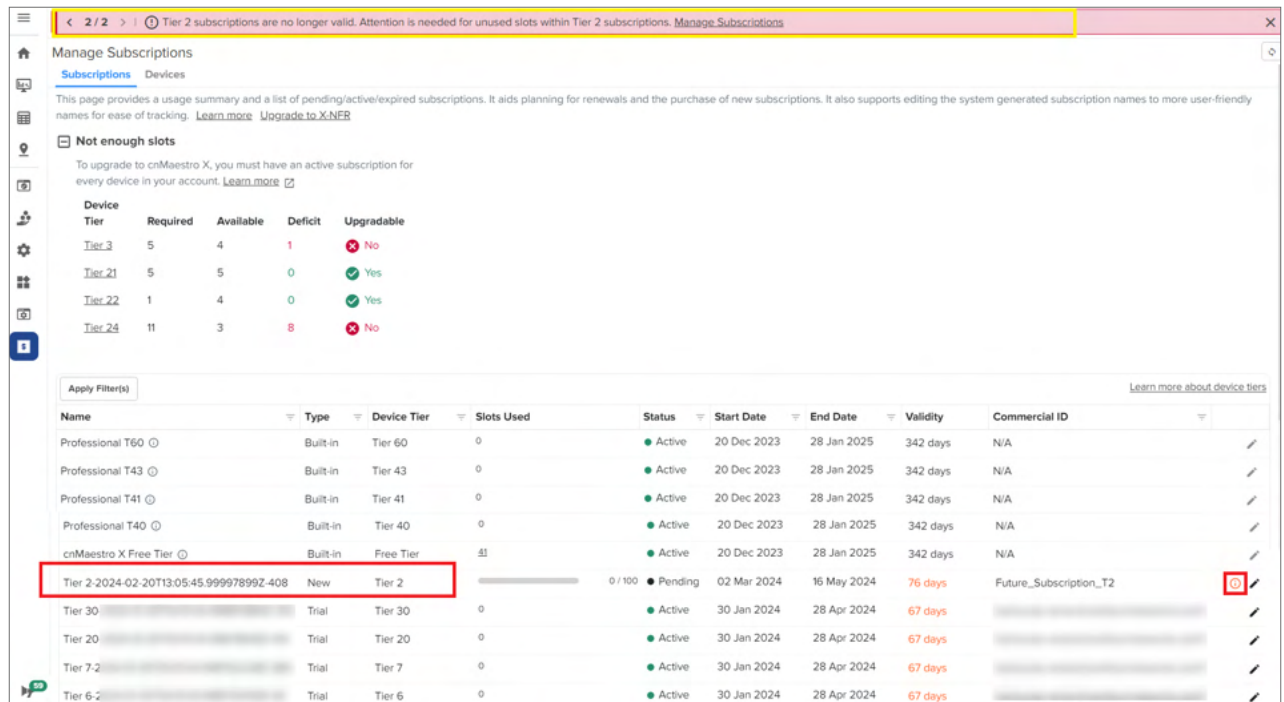

2. From the home page, navigate to the **Manage Subscriptions** page.

The **Manage Subscriptions** page appears (as shown in [Figure 567](#)), displaying the same banner and details of tiers.

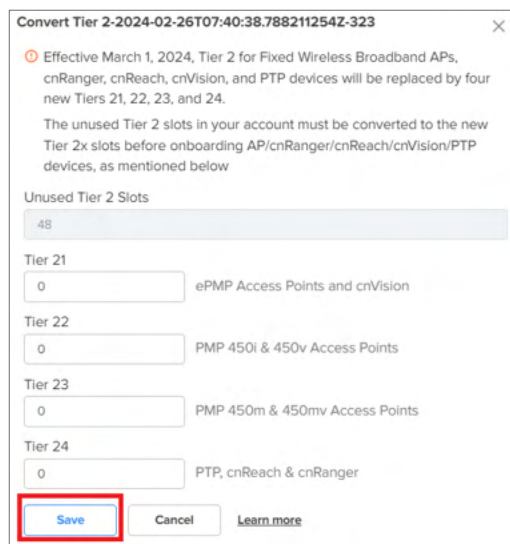

**Figure 567** The Manage Subscriptions page with tier information

3. Select the Tier 2 subscription and click the corresponding **i** icon (as shown in [Figure 567](#)).

The Tier 2 subscription window appears with details of unused slots and options to convert to new tiers (Tier 21, Tier 22, Tier 23, and Tier 24).

**Figure 568** The Convert Tier 2 window

4. Check the unused slot count and enter a valid value (in integers) in Tier 21, Tier 22, Tier 23, or Tier 24 text boxes (based on your requirements).
5. Click the **Save** button (as shown in [Figure 568](#)) to apply the changes.

# Cambium Networks

Cambium Networks delivers wireless communications that work for businesses, communities, and cities worldwide. Millions of our radios are deployed to connect people, places, and things with a unified wireless fabric that spans multiple standards and frequencies of fixed wireless and Wi-Fi, all managed centrally via the cloud. Our multi-gigabit wireless fabric offers a compelling value proposition over traditional fiber and alternative wireless solutions. We work with our Cambium certified Connected Partners to deliver purpose built networks for service provider, enterprise, industrial, and government connectivity solutions in urban, suburban, and rural environments, with wireless that just works.
