

Focus on your hospitality business rather than the network

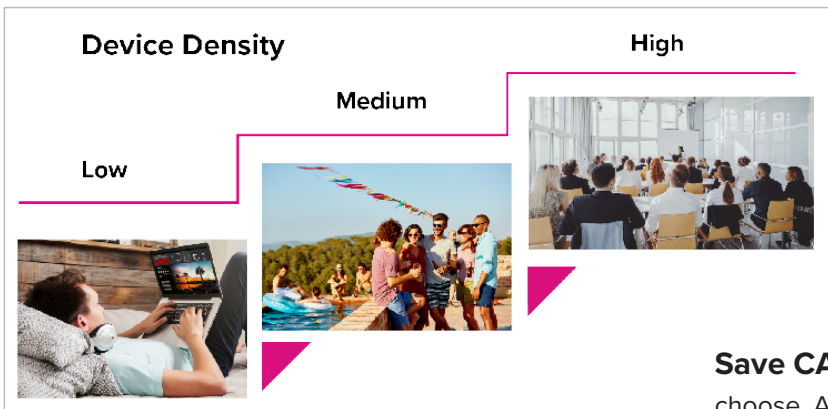

Delivering an excellent Wi-Fi experience for guests

is table stakes. The factors that impact performance and cost can be overwhelming:

- Steady advances in Wi-Fi frequency standards
- The need to overlay touchless experiences on the same network
- Type of property (single building vs. campus, conference vs. residential)

Cambium and our partners deploy and manage Wi-Fi that meets your specific needs. They use our ONE Network platform to bring together a broad portfolio of network edge technologies and software. You can focus more on your business rather than the network.

In most hospitality venues, 95% of the Wi-Fi devices are in-room wall-plates, general purpose indoor devices, high-density conference room radios or outdoor access points. Cambium Networks' Wi-Fi portfolio spans all these use cases at different performance levels. In addition, we offer multi-gigabit wireless backhaul (aka wireless fiber) where trenching fiber across a campus is not economically viable.

Save CAPEX or future proof? Now you don't have to choose. Avoid wasting capital on idle radios. Like a chameleon, our software defined radios can evolve with the device population. As the old devices fade away and the new arrive, the radios adjust the capacity across the frequencies accordingly. You get every ounce of capacity out of your capital investment. Today.

Of course, operating cost is the other side of the economic equation. Network intelligence and automation make it as easy as possible to manage the network remotely in the cloud. Advanced analytics enable the administrator to customize experiences, optimize the network for voice calls, resolve issues quickly and even proactively prevent incidents. The result is lower costs for you.

The bottom line is, you need connectivity that just works.

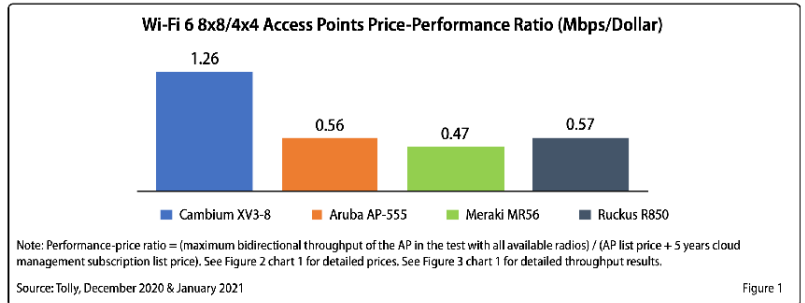

Efficiently deliver managed Wi-Fi experiences for the hospitality industry

Economics always rule in managed services. Whether it's getting the maximum performance for each dollar of capital invested or keeping operating costs to a minimum. While technology efficiency is the key to the CAPEX side of the equation, simplicity of planning, deployment and operation is essential for OPEX control.

Why MSPs Choose Cambium Networks for Hospitality Wi-Fi

- Simple Onboarding for Users and Devices
- Application Intelligence at the Edge
- Ultra-Long Range Outdoor Wi-Fi
- High-Density Access Points
- Scalable and Secure Roaming
- Proven Best in Class Total Cost of Ownership

Cambium's approach to building networks leverages our decades-long foundation of providing wireless network solutions that deliver:

- ONE converged IT Experience that simplifies operations
- Best-in-class operational efficiency delivered by intelligent automation
- Consistently predictable performance enabled by application optimization

Building Blocks for a Great Hospitality Network

High Performance Wi-Fi	Wireless Aware Switching	Multi-Gigabit Wireless Backhaul
<p>Complete Wi-Fi 5 / 6 / 7 Portfolio AI-Based Analytics, Security Scanning, Auto RF Control, Software-Defined Radios</p> <p>Unique high-density indoor and long-range outdoor APs reduce total cost of ownership</p>	<p>Enterprise Access and Distribution Switches Options: 1/2.5GigE Access, 1/10GigE uplinks, 30/60/90W PoE, Redundant/Removable P/S, Fiber Aggregation</p> <p>Simplify and automate configuration with Policy Based Automation</p>	<p>Outdoor Fixed Wireless Broadband Fiber-Like Performance up to 3.8 Gbps symmetrical, 6 and 60 GHz, Mesh and Point-to-Point Connections</p> <p>80%+ savings vs. trenching/fiber</p>

cnMaestro™ Cloud Management

Single Pane of Glass Management for the Cambium ONE Network

Zero-Touch Provisioning, AI-Based Remote Troubleshooting, EasyPass Guest Access Services, Application Visibility and Control, MSP Multi-Tenancy, REST APIs and Webhooks, SAML SSO, 24x7 Support

Full-featured **X** and License-Free **Essentials** Versions
